But if the Child-bed Purgations are not kindly, we muſt conſider whether their fault conſiſt in Quantity, or in Quality.

If they offend in Quantity, ſo as to be too little, ſo that the woman be purged either not at al, or not ſufficiently: After al Remedies fit to procure theſe Purgations have been given in vain, and the Morbifick matter appears digeſted, eight, ten, or twelve daies being paſt ſince ſhe was brought to bed, according to the more or leſs urgency of the Diſeaſe, ſhe may be purged gently, wholly abſtaining from al ſtronger Purgatives.

If other Purgations offend only in Quality, ſo that a white flux, or ſome other unnatural color do proceed from her, the Matter being ripe, ſhe may in the laſt part of her Lying-In, be ſafely purged.

But this muſt evermore be generally obſerved, That by how much the longer a Childing Woman is diſtant from the day of her bringing to bed, by ſo much the more ſafely ſhe may be purged, and contrarywiſe: For Experience hath taught us, That women wanting their Child-bed Purgations, if after the ſeventh or ninth day they are taken with a looſneſs, they commonly ſcape. But if the Looſneſs ſeize upon them upon the firſt daies, viz. on the ſecond, third, or fourth, for the moſt part they die.

And ſo have we finiſhed the Cures of Womens Sickneſſes; all Praiſe and Honor be given to God therefore.

The End of the Fifteenth Book.

THE

THE SIXTEENTH BOOK OF THE PRACTICE OF PHYSICK.

Of Diſeaſes of the Joynts, and Rhewmatick Pain of the whol Body.

The PREFACE.

THough all Diſeaſes of the Joynts depend upon the ſame Cauſes, differing only in reſpect of the place affected, and are wont to be cured with the ſame Medicines; yet is there ſome difference between the Sciatica, or Hip-Gout, and the pains of other Joynts, by reaſon of the ſtructure and largeneſs of thoſe parts, of which the Huckle or Hip-bone, is articulated, and made up; in reſpect of which, it requires ſome diverſity in certain Medicines: therefore it is that I have reſolved to treat of the Sciatica by it ſelf. And becauſe the Rhewmatick pain incident to the whol Body hath great Affinity with the running Gout which afflicts only the Joynts, I have thought good to annex the Explication thereof in this place; ſo that this Book will conſiſt only of three Chapters: Of which, The Firſt will treat of the Pains of the Joynts in General: The Second, of the Pains of the Huckle-bone, called Sciatica: The Third, of thoſe Rhewmatick Pains which ſeize all Parts of the Body.

Chap. I. *Of Pain in the Joynts, called* Arthritis, *or the Gout.*

ARthritis, or the Gout, is a pain in the Joynts which comes for the moſt part by fits, ſtirred up by an Influx of Humors into the ſaid Joynts.

The parts pained are, Membranes, Tendons, Nerves, and al the Nervous parts that are neer the Joynts, which are ſtretched by the Humor which flows into them, or by their ſharpneſs are pricked and twitched: but the Ligaments which ſpring out of the Bones, are void of ſence. Now the Humors which cauſe the Gout, do ſeldom flow into the very Cavities of the Joynts, and that only in an old Gout, and where the Cavities are wider than ordinary, as it happens in an old Sciatica, in which ſomtimes the Thigh-bone fals out of its place, the Ligaments and other parts binding the Joynts together, being looſened, and then the Cavity of the Joynt is filled with a ſnotty kind of flegm, as we ſee in *Hippocrates*, Apor. 59. Sect. 6.

It is wont here to be demanded, why the Humors flowing into Nervous and Membranous Parts, and distending and twitching them, they should not cause a Convulsion. We answer, that the Parts affected in the Gout are chiefly Membranes, which being no instruments of motion, they cannot cause a Convulsion, though never so much stretched or twitched. And although Tendons and Nerves ordained for motion should be likewise pained, yet do they not cause a Convulsion, because to make a Convulsion the Muscles must be drawn back to their Head, and that retraction ought to be made by a contraction of the nerves which are inserted into them; but when they are gone out from the muscles, or are come unto their extremity, though they be distended, yet can they not contract the Muscles.

Authors do commonly make four sorts of Gouts, according to the diversity of the Joynts affected; *Chiragra*, or the Hand-Gout, when the Pain is in the Hands; *Sciatica* and *Ischias* when it is in the *Hip*. *Gonagra* when it is in the knees; and *Podagra* or the Foot-Gout when it is in the Feet. And the Pains of the other Joynts go under the common name of *Arthritis*: though Authors have imposed proper names upon every one of them drawn from the Parts affected; calling the Pain in the Joynts of the Jaw-bone *Syagonagram*; in the Neck *Trachelagram*, in the Back-bone *Rachyagram*; in the Shoulder *Homagram*; in the Elbow *Pechyagram*. But these names have not been entertained by Practitioners. Therefore its sufficient to refer the Pains of those Parts to the general name of *Arthritis*.

There are besides, other differences of the Gout; as that some Gouts are General, occupying all or most of the Joynts of the Body; others particular, residing only in some one Joynt: some are ingrafted and Hæreditary from the Parents, others are adventitious caused by external Causes and Errors in Diet,

Now the Humours which breed the Gout, may have their Course not only into the Joynts but sometimes also into other Parts of the Body as the head, Teeth, Sides, yea and the internal Parts as the Liver and Spleen and stir up divers Pains in these parts, which Pains are not to be termed the Gout, though they are Caused by the same matter which Causes the Gout.

Again all Pains seated in the Joynts merit not the name of Gouts, for sometimes there are Swellings in the Joynts especially in the knees, from which Pains arise, occasioned by thick, flegmatick, and Melancholick humors, which Pains continue very long but are not to be reckoned among the Gouts, but have a distinct nature of their own. Which difference will more clearly appear by the different Characters of the Gout, which we shall describe in our Diagnosis thereof, that is in the Art of discerning the Gout from other Diseases by certain signes and tokens.

The next and immediate Cause of the Gout is a serous or wheyish Humor, either by its quantity stretching those sensible Parts which are about the Joynts, or by its sharpness twitching the same. That this matter is wheyish is hereby known, because thick Humors could not so easily flow into the Joynts, and they would make a more Visible swelling in the Joynts, which is wont to be very little, yea in the beginning there appears no Swelling at all, though there be a most bitter Pain; add that the Tumor which is in the Gout, never comes to suppuration or ripens of matter, which often happens in other thicker Humors, if they have never so little Blood mingled with them, But in the Gout the Blood is drawn to the Joynts, as appeares by the Inflammation of the Parts; yet there never happens any suppuration or growing to a mattery Head, because Serosities or wheyish Humors rule the roast, and they hinder Suppuration.

But this wheyish Humor is seldom pure and sincere, but hath other Humors or their serosities and thinner Parts Joyned with it; whereupon great variety arises, according to the greater or lesser acrimony of the Humors mixed with the wheyish Humor, according to which the Pain is more or less; the Tumors is sometimes notably great and sometimes not visible; some are of a red colour, others yellow or white; in some the malady is soon ended, in others it continues long; sometimes a mighty and fervent heat possesses the Parts, otherwhiles little or none is discerned; sometimes hot things laid on do good, other whiles they do hurt and cold things help. Howbeit, it cannot be denied but that the wheyish Humor may of it self have more or less acrimony, according as it hath more or less Salt mixed with it: for seeing the serous or wheyish Humor, is wont to dissolve and drink up those heterogeneous salts, which are multiplied in the Body by reason of the multiplicity of meats we use (whence it is that all the serum or wheyish Humor in us is salt) according as this Humor is more or less salt, and according as the salts mixed therewith have more or less sharpness, more or less Pain is wont to be caused.

And because in the Gout, as in every Fluxion, four things are considered, the matter flowing, the Part sending that matter, the Part receiving the same, and the waies by which the Fluxion is made; seeing we have spoke of the matter flowing, we are now to speak of the other four.

Touching the Part sending the Humor there is disagreement among Physitians. *Fernelius* would have all the material cause of the Gout (which he takes to be thin and flegmatick) to flow from the Head; not from the brain it self, (whose excrements are either voided by the nostrills, or flowing

through

through the palate, are driven to the mouth, throat, weſand or ſtomach) but from the external Parts of the Head, ſituate without the ſcull. For ſeeing very many veines derived from the external Jugulars do run thither, he ſaies they do there lay down their thin and wheyiſh excrements, and ſeeing the Skin of the Head is thick and compact, and the Humors cannot eaſily breath through the ſame, in proceſs of time they grow there to a quantity, and as he conceives from thence they flow through the ſurface of the Body, under the Skin, into the Joynts. But others do conceive, that the Head is the fountain of the flood of Gouty Humors, but they conceive thoſe Humors flow from the inner Parts of the Head viz. From the Brain. Finally others there be that give ſentence, that theſe faulty Humors do flow from the bowells conteined in the lower belly, namely from the Liver, Splen, Womb and others, and alſo from the whol Body, through the Veins and Arteries into the Joynts. All which Opinions in my Judgment are Partly true and Partly falſe. We Judg they are true in that, they ſay the Humors which cauſe the Gout do flow from the Head by the inward and outward Parts, and from the bowells and the whol Body by the Veins and Arteries: and falſe we ſay they are, becauſe they ſay that only the internal Parts of the Head, or only the external, or only the inferior Bowells do furniſh the Gouty Humor. For ſeeing the whol Body is paſſable to and fro by Humors, all Parts of the Body may ſend their ſuperfluities to the Joynts, if they be diſpoſed to receive them. Now that diſpoſition of the Joynts which makes them fit to receive a Fluxion of Humors (that I may take this occaſion to open the condition of a receiving Part) is their weakneſs, either native from the Parents, or ariſing from other Preternatural Cauſes, which we ſhall ſpeak of by and by. Seeing therefore it is eſtabliſhed by Phyſitians as a moſt ſure maxim, that the ſtronger Parts of the Body empty their excrements into the weaker, we may avouch that all the Parts afore aid may diſcharge their excrements upon the Joynts, if they being weakned, cannot ſufficiently reſiſt the ſame. And that the Opinions aforeſaid may be ſeverally refuted: *Fernelius* indeed doth clearly enough demonſtrate, that Humors collected without the Scul, do flow upon the ſurface of the body, and under the Skin creep into the Joynts, ſeeing ſometimes the Pain begins in the Head, goes thence into the Neck, thence to the ſhoulders, and at length into the Joints. But that Humors do never flow from other places and Parts into the Joynts, he no waies proves, neither is any man able to prove after him. In like manner, they which ſay that ſuch Fluxions come only from the brain, ſeem to contend againſt ſenſe; For ſo much as thoſe Parts which compaſs the Joints about, do receive Veins and arteries, by which blood is brought unto them to nouriſh them withall, why may not alſo the wheyiſh Humor collected in the greater veſſells be carried unto the ſame Parts by the ſame waies? *Galen* hath taught this preciſely, in his Comments upon the Aphor. 10. Sect. 3 where he ſhews, that in the knobbs and Pains of the Joynts the profound Parts of the body are purged, the vicious Humors being driven from the principal Parts of the body into the Circumference. This is ſeen by the Feaver which is oftentimes raiſed in the beginning of the Gout; for it is cauſed by wheyiſh excrements conteined in the Veins, put into a commotion and working, when nature ſees her ſelf to expell the ſame, and ſeeing ſhe cannot drive it all forth, ſhe diſcharges the ſame into the weaker and ignobler Parts. Alſo the third Opinion, which *Sennertus* defends, is Void of reaſon, and is herein faulty, becauſe it denies that Gouty defluxions do ever come from the brain. For ſeeing all Parts of the Body both inward and outward, do receive Fluxions from the Brain, how can the Joynts be free from them? And if Humors cauſing a Catarrh do often flow by the Veins and arteries, whence Rhewmatick Feavers daily ariſe; and the Humors conteined in the Veins and Arteries (as *Sennertus* himſelf affirms) do eaſily flow unto the Joynts, it is a clear demonſtration, that a Fluxion is made from the brain into the Joynts. Alſo plenty ful Piſſing declares that Humors flow from the brain through the Veins, when the ſaid Piſſing is cauſed by ſome commotion of the brain by reaſon of long abiding in the Sun, or in a very cold air; for then the wheyiſh Humors conteined in the brain are agitated by thoſe Procatarctick Cauſes, and driven into the Veins and Arteries, through which they flow unto the Kidney's and the Bladder, and thence comes ſo plentiful making of water.

The next and immediate Internal Cauſe of the Gout hath hitherto bin ſufficiently expounded; now let us proceed to the external and Procatarctick Cauſes or occaſions thereof: which we may for clearneſs ſake diſtinguiſh into three Tribes or Rankes, The firſt Tribe is of them which afford matter convenient to breed the Gout. The ſecond is of thoſe which do weaken and looſen the Joynts. The third is of them which promote the flux of the Morbifick Humor into the Joints.

To the firſt Tribe are referred al things which encreaſe raw and wheyiſh Humors, or any bad Humors whatſoever: as meates of groſs ſubſtance hard to be digeſted, and ſuch as afford many excrements, frequent Gluttony and Drunkenneſs; immoderate Carnal Embracements; which is the reaſon that Gout is called the Daughter of *Bacchus* and *Venus*; Idleneſs and a ſedentary life, and intermiſſion of ſuch exercites as men have been formerly accuſtomed unto; long ſleep and unſeaſonable watching; intermiſſion of ſuch naturall and artificial Evacuations as men have been accuſtomed unto; fear, Sadneſs and continual Care,

To

To the ſecond Tribe are referred vehement motion and Labour; frequent uſe of carnall conjunction, eſpecially of that which is celebrated ſtanding; refrigeration and humectation of the Joints; frequent Bathing; Contuſion, Luxation and Fracture of the Joints.

To the third Tribe are referred, Cold air ſqueezing out the Humors, and Heat melting, diſſolving and agitating the ſaid Humors and opening the ſecret Paſſages; meats of a fervent and tart nature which attenuate the Humors; thin and ſtrong Wine; Immoderate exercife, unbridled Lechery, vehement anger and other immoderate paſſions of the Mind.

The Signs do either foretell the Gout at Hand, or declare the ſame to be preſent.

Signes of the Gout at Hand: a Sence in the Joints more exquiſite and quick than ordinary ſo that the lighteſt thing will hurt them; as for example the hard fitting of a new Shoe, Long walking, a ſmal blow, or a light hitting againſt a ſtone, or ſome other hard thing. A Feaver commonly uſhers in the Gout, which is caused by wheyiſh Humors and others contained in the Veins and arteries, being diſturbed and agitated, whiles nature endeavours to expell them to thoſe leſs noble Parts. But the neerer approach of the Gout, and its beginning as it were, is ſignified by a ſtupidity, and ſence of crawling Pimmes in the Joynts, and a kind of unuſual Heat felt in them.

The Gout is known to be preſent by an actual pain tormenting the Joynts, which commonly is attended with redneſs and ſwelling; which if it appear not at the very firſt; yet is it ſeen preſently after. The pain doth uſually ſeize upon the great Toe, eſpecially on the left foot, and oftentimes it ſpreads it ſelf from thence into other Joynts. The Feaver which comes before the pain, doth ſometimes continue; and ſometimes it goes not before, but comes together with the pain.

The Signs of the Cauſes are likewiſe to be conſidered: For although the Humor cauſing the Gout be principally wheyiſh, yet is it needful to know what other Humors are mixed therewith, that we may fit out Medicines thereunto.

And in the firſt place, Choller abounding with the wheyiſh Humor, is known by a vehement and cutting pain, a ſmal ſwelling, a reddiſh or paliſh color, great heat, and the Feaver intenſe and perſevering in its ſtate or height; thin Urine, yellow and reddiſh; cold things help, and hot things hurt.

Signs of flegm abounding with the Whey, are, a ſoftiſh and ſomwhat looſe ſwelling of the parts affected, which if a man preſs with his finger, there remains a pit; the pain is not ſo great, Urines are thick and troubled; Cold things hurt and hot things help; little or no heat is felt: the color is white, little differing from the Natural color of the part.

Signs of Melancholly abounding are, an obſcure color of the part like Lead, deep pain, a thin and watry Urine, a wearineſs of the whol Body, and the temper thereof inclining to Melancholly.

As for the Prognoſtick. The Gout is no dangerous Diſeaſe, but very troubleſom by the vehemency of pain, and of a very long continuance; ſo that for the moſt part it accompanies a Man during his life, to his old Age; yea, and it doth cauſe ſome to live long, becauſe Nature at certain ſeaſons drives unto the Joynts vitious Humors, which might cauſe other Diſeaſes; and by ſo doing frees the nobler parts of the Body from bad Humors.

Yet doth it often fall out in weak bodies, or ſuch as are decayed with Age, that when Nature can no longer expel ſuch Humors as are collected in the inner parts of the Body, deadly Diſeaſes do thereupon ariſe; as moſt ſharp Feavers, Inflamations of the Bowels, Apoplexies, Convulſion, Phrenzies, Difficulty of Breathing, and inability to breath, unleſs ſitting upright, Pantings of the Heart, and other moſt grievous Infirmities.

Although a Diſpoſition rooted in the Bowels tending to breed Goutiſh Humors, and Natural weakneſs of the Joynts cannot be perfectly taken away; yet may the Invaſions of the Gout be very much retarded, and kept off; ſo that ſome only by abſtaining from Wine, others by uſual Purges frequently repeated, have kept themſelves for many yeers free from the Aſſaults of this Diſeaſe.

Hippocrates in the Second Book of Predictions, affirms, That many Gouty perſons may be cured, diſtinguiſhing them from ſuch as cannot be cured, in theſe words: *Touching the Gout, this I ſay; All that are aged, or have ſtony knots about their Joynts, or live miſerably, being coſtive, cannot be cured by Art of Man that I know of. Such are well cured by a Dyſentery, when it ſeizes upon them; and by other fluxions of Humors to the inferior parts. But he that is yong, and hath no ſtony knots about his Joynts, and lives accurately, being inclined to labor, and having a belly well inclined to ſtool; this man having a skilful Phyſitian may be cured.*

An hereditary Gout may well be accounted incurable.

If the Veins of Gouty perſons do ſwel with black blood, their Gout leaves them; out of *Avicenna*. Becauſe the Humors which were wont to flow into the Joynts, are derived to the external parts of the Skin.

If the Gout, being accuſtomed to return at certain ſeaſons, ſhal not return, it portends grievous, and oftentimes deadly Diſeaſes, unleſs the Morbifick matter by a diligent prevention ſhal be taken away.

way. For if through weakneſs of Nature, the matter which is gathered together within, ſhall not be expelled, it breeds the greateſt and moſt dangerous Diſeaſes imaginable.

Whoſoever they bee that have the Gout within the ſpace of forty daies the Inflammation is allaied, and they are freed. *Hippocrates* in the 49. Aphoriſm of the fifth Book or Section. For in ſuch Parts as have little Natural heat, the matter offending requires a long time before it can be diſcuſt. Howbeit this period of *Hippocrates* is not certain and perpetual; for ſome are healed ſooner, and ſome later; which depends upon the quantity, thickneſs, or rebellion of the Morbifick cauſes; the ſtrength or weakneſs of the Parts affected and the obedience of the Patients in Point of keeping the Diet, and uſing the Medicaments appointed for them.

The Cure of all Gouts conſiſts herein, viz. That the flux of Humors into the Joints may be ſtaied, that which allready is come in and abides in the Joints may be removed, and that the Pain may in the mean while (if it be ſharp) be abated; all which may be performed by the following Medicaments.

And in the firſt place, Letting of Blood will be very convenient, if there be no want of Blood in the Patient, and if flegm do not abound; becauſe the Blood is agitated by the motion of the Humors flowing into the Joints, and does as it were boil, and is by Pain drawn into the Part affected: wherefore it is neceſſary to draw the ſame back, into that Part of the Body which is oppoſite to the Part affected: and therefore if the right Arm be Diſeaſed, a Vein muſt be opened in the left; if the right Foot be Pained a Vein muſt be opened in the right Arm; and if the left Foot in the left Arm. And Blood is to be taken away at the firſt beginning of the Diſeaſe, and as much as needs muſt be taken at one time, if the Patients ſtength will bear it: if not, it muſt be done at ſeverall times, till the plenitude of Blood be ſufficiently diminiſhed.

One thing we muſt allwaies remember, that copious Blood-letting in ſuch as can bear it eaſily, does exceedingly ſhorten the Diſeaſe, if it be done at the beginning of the Diſeaſe, at leaſt by Piece-meal, drawing now a little and then a little.

Alſo Purging muſt be uſed at the beginning of the Diſeaſe, as ſoon as may be: for ſo both that Humor which is influx and is ready to flow, will be drawn from the way to the Joints and be brought into the Gutts. But in this purgation two things are worthy of obſervation, being frequently noted by *Solenander* a famous practitioner.

The firſt is, that this Purgation be not made by ſome mild lenitive Medicaments, whereby the Humors are rather ſtirred than Evacuated, and are precipitated into the Joints, whereupon a more greivous Pain and ſwelling is wont to follow ſuch purges; but with ſome ſtrong purgative, which may force out the ſtirred Humor and turn the cauſe thereof from the Joints. The other is, that the Medicaments being given, the Joints above the Knees and elbows, be Plaſtered with ſome defenſative, by which the Humor which is put in motion by the Medicine may be intercepted, ſo that it may not too much nor too forcibly fall down into the Joints.

To which intent let an Ointment be made of Bole, Pome-Granate Rinds, Balauſtians, Roots of Biſtort and Tormentill, red Roſes with the white of an Egg, and Vinegar; which being ſpread upon ſnipps of cloath as broad as ones Hand and indifferent long, let them be wrapped about the Parts aforeſaid. If theſe ſimples be not to be had at preſent, wet them only with Vinegar and water and let them lie on at leaſt an whol day. If the Fluxion be vehement, uſe a liniment of Bole, Dragons Blood, the white of an Egg and Oyl of Roſes made with Oyl of unripe olives: or at leaſt uſe it without Oyl adding a ſmall quantity of the Oyl aforeſaid or of *Unguentum Comitiſſæ*, leaſt growing dry and hard it cauſe Pain.

And for to procure ſuch a purgation as we have ſpoken of, let the skilful Phyſitian preſcribe a Medicament fitted to the Nature of the Patient and ſuch Humors as are redundant in his Body: or ſome of thoſe Speciſick Purgations which we ſhall propound in our Doctrine of Preſervation from the Gout.

Vomiting is likewiſe profitable in this Caſe, for ſuch as are eaſie to vomit; becauſe it brings out the evil Humors by a ſhorter way, and ſo there is no ſuch fear leaſt they ſhould ruſh into the Part affected. But gentle Vomits are to be uſed, which do only evacuate thoſe Parts which are near the ſtomach. For if they be vehement, and draw Humors out of the Veins, they may precipitate the ſaid Humors unto the Joynts. Then after vomitings, purgation muſt be procured downwards; yea and if one purgation will not ſerve turn, it muſt be repeated.

After ſufficient Purgation, it will be very good to procure ſweat; for ſo the wheyiſh matter will be diſcuſſed by the habit of the Body. But, ſeeing when the Gout gives its firſt Onſet, there happens a kind of boiling and working of the Blood, and commonly there is a Feaver, hot ſudoroſicks will not be convenient, but only ſuch as are temperate; amongſt which *Sennertus* commends Harts-Horn, either crude, or prepared without burning, either alone, or with Carduus Water; as likewiſe *Antimonium Diaphoreticum*. In an old Gout without a Feaver, a Decoction of China Salſa Parilla or Saſſafras may be given, qualified with coolling Herbs, as Cichory, Endive, Sorrel and Borrage.

Borrage. Or after the Sweat is wiped off, it may ſuffice to give the Patient Chicken-Broth, altered with the Herbs aforeſaid.

Martinus Rulandus did uſe this following Sweating Medicine with happy ſucceſs:

Take *Tops of Centaury two handfuls: Aſarum Roots two ounces: Boyl them in ten pints of Water to five pints, and ſtrain the Liquor. Give the Patient eight ounces of this Liquor hot, in the morning ſome daies together; and let him ſweat upon it.*

But *Foreſtus* commends the Roots of the greater Burdock; becauſe it cuts, diſcuſſeth, and provokes both Sweat and Urine. And he reports that a certain Gouty perſon that kept his bed, and could not ſtir a Limb, drank hot Beer in which the great Burdock Root had been boyled; after the drinking whereof, when the Phyſitians could do him no good with all their Medicines, he piſſ'd a great deal of white Matter like Milk, and was freed from his pains.

Hercules Saxonia puts a great many Loaves hot out of the Oven round about the Patients Body, by which means Sweat is plentifully procured, and the pains removed.

Alſo a Decoction of Elder, Bay-leaves, Sage, Roſemary, and ſuch like Herbs wil do much good, the Patient receiving the vapor of this Decoction in a ſweating Tub, which wil make the ſweat to come luſtily.

Alſo the Waters of Natural hot Baths do provoke ſweat, and do readily diſcuſs the Matter contained in the Joynts. And therefore when the ſick are not able to go unto them, their Water is wont to be brought unto them and heated in a Caldron for them to bath in. *Eraſtus* in his 15. Counſel, prefers this above al others, for eaſing the pains, but he boyls ſo much Salt in the Water, as gives it an evidently brackiſh taſt.

In the beginning of the Fluxion of Gouty Humors, in the ſpaces free from Purgations, ſuch things muſt be given as ſtop the Flux, which have been propounded by me in the Cure of an hot Catarrh; eſpecially Juleps of Waters, or Decoctions and Syrups which do cool and thicken.

Yea, and the truth is, We are ſometimes compelled to uſe Narcotick or Stupefactive Medicaments; for they both ſtop the flux of Humors, and they mitigate the rage of the pains. Of theſe ſort of Medicines new Venice Treacle is moſt convenient, which may often be repeated without danger from half a dram to a dram. Unto which may profitably be added, a little Bole-Armoniack to ſtop the flux of Humors. Howbeit, inſtead of Treacle, Laudanum Opiatum, and other Narcoticks, may conveniently be ſubſtituted.

After due Evacuations have been celebrated, and other things given inwardly which reſpect the antecedent Cauſe, we muſt proceed unto local Applications, ſuch as mitigate the pain, and diſcuſs the contingent Cauſe: Which are not preſently to be uſed before the univerſal Remedies aforeſaid have been firſt applied; for otherwiſe they are wont to do more hurt than good. For either the Matter which Nature intended to drive into the Joynts, is driven back into the inner parts of the Body, whereby grievous Symptomes are raiſed; or it is forced into the Joynts, and the pain is exaſperated; or the part is effeminated, and made lax, and ſo the fluxion is encreated.

Which Cautions being commonly neglected, and external things untimely and heedleſly applyed; the Patients receive commonly more hurt than good thereby. And thoſe external Medicines do either reſpect the pain alone, or the Cauſe likewiſe of the pain, viz. The Humor which hath took its courſe into the part, and cauſed both the pain and Swelling.

Such things as mitigate pain, are very neceſſary in this caſe, becauſe the extremity thereof weakens the Patient, and draws the Humors to the parts affected. Furthermore, by the uſe of Anodines, the parts are relaxed, and the Humor which before did flow into the more deep parts about the Joynt, is diffuſed to the more ambient parts and external. Whence it is that the pains of the Gout are moſt vehement before the part ſwels; but after it is ſwollen they are mitigated. Now there are many Anodine, or Pain-charming Medicaments propounded by Authors to be applied to thoſe parts which are troubled with the Gout. But the chief are theſe which follow:

Luke-warm Milk applied to the part affected, by wetting Linnen Cloaths therein, and laying them on, doth aſſwage the pain; as alſo if the part be ſprinkled and bedewed therewith, eſpecially when it comes freſh from the Dug; which *Amatus Luſitanus* doth very much commend, in the 41. Cure of his ſixt Century, in theſe words: *One mightily tormented with the Gout, cauſed a ſhee Goat to be brought into his Chamber, and her Milk to be milked out upon his pained Joynt; by which he perceived the pains evidently leſſened. And there is good reaſon for it: For Milk newly milked, doth aſſwage, mitigate, and leſſen pains. It is a Medicine commonly uſed by the Great Turk: by you who ſeek Profit and Honor, highly to be priged.*

Of Milk likewiſe is made the Cataplaſm of white Bread Crums boyled therein, adding the Yolks of Eggs, and a little Saffron.

Alſo the Leaves of Henbane, or Violets, are boyled in Milk, or in Vinegar and Water, and profitably laid upon the part affected.

Alſo a Cataplaſm is made of the Pap of Marſh-mallow Roots mingled with Milk.

Alſo

Alſo a Cataplaſm is made of the Pulp of Caſſia alone, or mingled with Oyl of Roſes, or the following Ingredients:

Take *Crums of white Bread boyled in Milk, half a pound: Pulp of Caſſia three ounces. Make them into a Pultiß.* Or,

Take *the Pulp of Caſſia four ounces: new Venice Treacle half an ounce: Barley and Oaten meal, of each three ounces: the Crum of white Bread four ounces: Cows Milk two or three pints. Boyl all into the form of a Pultiß, which apply warm to the parts pained. If you ſhall add half an ounce, or an ounce of Vitriol calcined and finely poudered, you will make it far more excellent.*

In the beginning of the Gout, which ſeizes only the great Toe, lay on this following:

Take *two whites of Eggs: a little Salt beaten to Pouder: a few drops of Vinegar of Roſes. Mix all, and apply it upon Tow, or courſe Flax to the part affected.*

Other Cataplaſms are likewiſe made of greateſt efficacy, compounded on this manner:

Take *Water of white Mullein, and of Fern Root and Branch, of each half a pint: calcined Vitriol exquiſitely poudered, one ounce and an half: Meal four ounces: Saffron two drams. Make all into a Pultiß.*

Take *Mallows, leaves and Roots, as much as you pleaſe, Boyl them in a new Earthen Veſſel, with equal parts of Wine and Vinegar, till a third part be conſumed; then ad as much courſe Rye Bran as will make it into a Pultiß; which being well wrought together and ſpread upon a Linnen Cloth, let it be applied to the parts pained, as hot as the Patient can endure it.* Solenander doth exceedingly commend this Pultiſs.

Foreſtus relates that a Cataplaſm made of Duck-weed and Chamomel Flowers boyled in Milk, adding a little Barley Meal, wil do miracles.

Montagnana affirms this following to be moſt excellent in extream pains.

Take *the Yolks of ten Eggs; beat them in a Frying Pan with half a pound of Oyl of Roſes. Let them boyl gently till they grow thick, adding two drams of Saffron; and lay it on hot.*

In the beginning of the Flux, many lay on a Cataplaſm of Salt and Soot, wrought into a Body with whites of Eggs.

Or of two ounces of Chamomel Flowers: red Roſe Leaves one ounce and an half: Mullein flowers half an ounce: Pouder them, and boyl them in ſweet Milk to the ſtiffneſs of a Pultiſs, adding three or four Yolks of Egs.

Or of Barley Meal, and Bean Meal, of each one handful: Flowers of Chamomel and Roſes, of each half a handful: Mullein Water, and Willow Water, or Plantane Water and Wine, of each as much as ſhal ſuffice. Incorporate all together in form of a Pulciſs.

Alſo divers Fomentations may be made to be applied to the place affected, after this manner:

Take *of the Leaves of Mullein ſix pounds: red Wine a Quart. Beat the Leaves and ſteep them in the Wine for three daies. Diſtil them, and bathe and foment the parts affected therewith warm, with Linnen Cloaths dipped therein.* Or,

Take *Flowers of Mullein as much as you pleaſe; fill a glaſs Bottle therewith, and ſtop the mouth, and ſet it in the Sun; for ſo they will turn to Liquor, which being applied to the part affected, with Linnen, mitigates the pain.*

Sal ſaturni, that is, Salt of Lead diſſolved in ſubtil Spirit of Wine, eaſeth pains wonderfully.

Frog-ſpawn-Water ſtilled in *May*, applied to the parts pained, doth wonderfully aſſwage the pains, and tempers the Inflamation and redneſs of the part. Theſe following Simples may profitably be mingled therewith.

Take *Frog-ſpawn-Water, Water of Tapſus Barbatus, or of Mullein, and of Fern, of each one pound and an half. Infuſe therein Lapis tutiæ, and Litharge of Gold, of each two ounces: Vitriol calcined, and Allum, of each one ounce. Foment the pained Parts herewith warm.*

An Infuſion of Litharge made in Vinegar, the Vinegar being a little evaporated, till it grow ſweetiſh, doth much good to an hot Gout.

Oyl of Calves Feet is excellent to allay the pains of the Gout, and it is thus prepared:

Let the Calves Feet be beaten, and the Bones broken, then boyl them all to a Pap. Take the Oyl which ſwims on the top of the Water, mingle it with Aqua vitæ, and Salt, and therewith bath or anoint the parts pained.

Alſo Oyls and Fats are by many uſed. But ſeeing the Inflamation which befals thoſe Members which are troubled with the Gout, doth draw very neer the Nature of an Eryſipelas, or red fiery ſwelling, oftentimes thoſe fat things may do more hurt than good; for by ſtopping the pores, they may keep in the Humor, and ſo encreaſe the pain.

According as *Sennertus* makes relation of a man troubled with the Gout, who found great good by very new Sheeps-milk Cheeſe laid upon the pained part: for as ſoon as the Cheeſe being heated by

the pained part, began to melt and ſhed its Butter, the pains were encreaſed. Yet in ſome Bodies, Oyl of Roſes, and ſuch like, may do good, eſpecially mixed with other Medicaments; becauſe according to the different Natures of Mens Bodies, ſeveral things do good to ſeveral perſons. And therefore we muſt be furniſhed with a mighty company of Medicaments, that upon al occaſions we may have change; becauſe there is ſcarce any one ſo effectual, as to do good to al that are troubled. Take theſe following for an Example or Pattern.

Take *Crum of the whiteſt Manchet half a pound: Boyl it in new Milk to the conſiſtence of a Pultiſs; then ad of the Mucilage of Marſh-mallow ſeeds two ounces: Meal of Line ſeed and Fenugreek ſeed, of each two drams: Flowers of Chamomel, and of Melilot poudered, of each one ounce: Saffron one dram: Oyl of Roſes one ounce:* Mix *all into a Cataplaſm.*

Or to the Cataplaſm of white Bread Crum before deſcribed, Oyl of Roſes may be added.

Alſo Liniments and Oyntments are wont to be made to mitigate pain.

Take *Yolks of Eggs two or three: diſſolve them with Oyl of Roſes, or Violets, or Wine, and apply them luke-warm.*

Balſamum Saturni prepared with Oyl of Roſes or Violets, allaits pain moſt effectually.

Take *Ceruſs two ounces; diſſolve it in Endive Water and a little Vinegar make thereof a Liquid Oyntment.*

Of the ſaid Ceruſs is made a Plaiſter of great efficacy which may be laid on in the beginning of the Diſeaſe, even whiles the Tumor and Inflamation is preſent. Its compoſition is thus.

Take *Common Oyl one pound, Wine a pint and an half: Boyl them till half the Wine be conſumed. Then ad a pound of Ceruſs finely Poudered and two drams of Camphire. Boyl them to the Conſiſtence of an Emplaiſter. When there is great Inflamation, Vinegar muſt be uſed inſtead of Wine. Spread this plaiſter upon Linnen Cloathes that it may the more commodiouſly be wrapped about the Parts affected.*

A Living whelp laid to the pained Part, doth very much aſſwage the pain.

When the pain rages extreamly we may have recourſe to Narcoticks; howbeit they muſt not lie long upon the Part, becauſe they are adverſe unto the naturall heat and to the nerves.

Take *Henbane Leaves two Handfuls: Nightſhade and Houſleek of each one Handful. Garden Poppy-Head one pugil, Mandrak Roots one ounce. Chamomel Flowers and violet Flowers of each one pugil, make a Decoction in Water or Milk with which let the Part be bathed.*

Beat the reſidue after the Liquor is ſtrained out, and add of the Flower of Lin-Seed one ounce and an half. Wheat meal two ounces: Oyl of chamomel three ounces: and make a Pultis. Or,

Take *Spirit of Wine ſomwhat Yellow by infuſion of Saffron four ounces: camphire one ſcruple: Boyl them a little, then diſſolve therein, one dram of Opium: With that Liquor let the pained Part be bathed: It is a ſafe and moſt effectual Medicine.*

Green Tobacco Leaves bearen and laid on do eaſe the Gout, and are ſaid to be of a ſtupefactive Nature.

As for the Efficient Cauſe of the pain, to the Humor flowing into the Part repelling Medicaments muſt be oppoſed; and to that which is allready in, deriving and reſolving Medicaments muſt be applied.

Howbeit repelling Medicines are diſallowed in this Caſe, eſpecially alone and without the commixture of other things. For if they ſhal wholly ſtop the influx of the matter into the Parts affected, it is to be Feared leaſt they retiring to the inward Parts, ſhould cauſe dangerous diſeaſes, unleſs they happen to be tranſlated to ſome other Joynt. Again the Humor which hath already flowed into the Part, is the more driven inward, by which means, the Pains become more violent. But yet, if in the beginning of the Gout there be a great afflux of Humors eſpecially hot ones, which threatens ſharp Pains to follow, it will be convenient in ſome meaſure to repreſs the ſame, by applying repellers, not alone, but mixed with ſuch things as mitigate Pain, after univerſal and ſufficient Evacuations. For then ſuch things as do overmuch relax, do help forward the afflux of Humors. And therefore, we may ad unto the foreſaid cataplaſmes and other remedies Plantane, Lettice, Purſlane, Houſleek and ſuch like as alſo a little Vineger. As for example.

Take *Barley Meal three ounces: Boyl it in Water and Vineger, add two Yolks of Eggs, Saffron twenty grains: Make all into a Pultis.* Or,

Take *Red Roſes an Handful: Barley and Fenugreek Meal of each one ounce: Red Sanders one dram and an half: Chamomel Flowers one pugil: when they are Boyled and beaten, add two Yolks of Eggs, Vineger four ounces: Oyl of Roſes as much as ſhall ſuffice; make all into a Pultis.*

Among remedies which derive the Humor from the Part affected are Horſe-Leeches, after ſufficient Evacuation applied thereunto: for then they do much good, eſpecially when the Veins in the Part affected, do ſeem diſtended and ſwelling with Blood.

Now reſolving Medicaments are wont to be uſed in divers forms as of Waters, Oyls, Unguents, Balſoms, Fomentations, Fumigations, Cataplaſmes, Plaiſters and the like, compounded after this manner.

Take

Take *Vitriol white and green, of each one ounce: camphire two drams: aqua vitæ and white Wine, of each one pint: Mix them and apply them with cloathes dipped in them.* Or,

Slake Lime in Urine, purifie the Liquor and foment the Pained place therewith It is likewise good if it be done with Vineger and Lime.

Martinus Rulandus in the Centuries of his Cures, doth mightily cry up his Gout-quelling Water, but never describes the same. But Libavius, Petreus and others suppose it was thus made.

Take *Fountain Water a Pint, Aqua fortis half an ounce: Sublimate one dram: Boyl them a quarter of an hour. Wet linnen cloaths in this Liquor and apply them luke-warm to the Part affected.*

Quercetanus in his *Pharmacopœia* propounds these following,

Take *Pickle of salt, and the Urin of a Boy of each Equal Parts. Still them and Wet Linnen Cloathes in the Water and apply to the place affected, often changing the cloathes for fresh ones.*

Take *Green Elder Leaves and flowers of each one pound: beat them and steep them in Aqua vitæ for two or three daies: still them in a Glass or Copper vessel, till they be dry.*

Take *Spirit of Wine rectified two pounds: of the finest honey one pound. Distill them in* Balneo Vaporoso: *So you shall still two Liquors; The first is watrish; The second much stronger, and Sulphureous, which you shall keep by it self. To the remaining materialls add an ounce and an half of whol Oriental saffron: Venice turpentine two ounces: Castoreum six drams: Tartar calcined till it be white, half a pound; dissolved salt an ounce: Phlegm of vitriol not separate from its spirit four ounces, Lie made of Vinetree-Ashes two pound: steep them together twenty four hours. Then still them til they become dry: keep the Liquor which comes likewise by it self. To the Dreggs remaining pour on the former Water which you kept: Steep them and still them. Lastly put all the distilled Waters together and distill them in* Balneo Vaporoso.

Quercetanus saies, That this Water is of wondrous efficacy, and that it was communicated unto him by a certain most famous German, as a special guift, affirming, that this was the very Water of *Rulandus*. And he averred that he had seen the rare effects thereof in easing the Pains of the Gout, if Linnen cloathes being moderately warmed and dipped therein, be applied to the Part affected,

The same *Quercetanus* in his Councel touching the Gout, doth brag that he reserves to himself his Gout-quelling Water, as a Master-peice for such an old soldier as himself to boast of which he saies is made of plain Fountaine Water, wherein he doth divers times quench certain Metallick substances, which are wont to be taken inwardly when rightly prepared: whose spirits being impressed into the foresaid Water, do contribute thereunto the power of penetrating unto the Roots of the Disease, and of truly resolving the Tartarous, stony matters, with the salts, which are combined in the Joynts, from whence such intollerable Pains do arise.

Peradventure this that follows it not unlike it, nor a whit inferior in Virtue.

Take *Unslaked Lime four pound: Slak it in River-water as much as you please, and let it stand in a Wine Cellar three daies, that the Salt may be better extracted out of the Chalk or Lime. Afterward let them Boyl a little and strain the Liquor through an Hippocras Bag. In twenty pints; of the strained Liquor, quench seven or nine times: first Plates of steel red hot; & then Plates of Copper red hot; and thirdly to the quantity of ten ounces of Vitriol calcined till it be white; fourthly Antimony melted in a Crucible to half a pound; fifthly Litharge or Ceruse heated in a Crucible, half a pound; white Precipitate once washed and no more one ounce and an half. Brass burnt and finely Poudered, half an ounce: After the quenching of these minerals, let the water stand still in a Wine Cellar, the space of ten daies. Afterward, Boyl it a little, and strain it through an Hippocras Bag. In this Water being hot, doubled cloathes must de dipt and frequently applied to the Gouty Part.*

Among Fomentations easie to make, that is commended, which is made of Salt Ammoniack seven times sublimed, and fidly dissolved in Wine or Water. or of the Urin of a young man in good health, Boyled till half be consumed and laid on with Raggs;

Solenander Writes in his 24. Counsel, Section the 4. That a certain Gouty old man was wont to make himself this Medicine. When the swelling and Pain was great and the place red, he took Salt, the Urin of a Boy and Vinegar. In these being mingled together, he Wet a Linnen cloath and squeesed it and laid it on, this he did divers times and so the Pain was much abated,

As we said before, that Anodine or Pain-quelling Oyls did little good in the Gout, the same must here be said of resolving Oyls, because they close the pores of the skin and so hinder the freedom of transpiration and encrease the heat, neither can they by reason of their clammy substance peirce into the innermost Parts of the Joint, so to temper and resolve the Salt, sharp and Tartarous Humors which lurk in them, Yet if the foresaid Oyls shall be Distilled in a Retort, they will become very fit for this use, because they will be very searching and no waies clammy. Among these the most excellent are Oyl of Cheiry, Saint Johns Wort and of the Yolks of Eggs, which being mixed together,

and ſtilled by a retort, are very profitable to eaſe Pain and to diſcuſs the Cauſe thereof.

Alſo *Mathiolus* his Oyl of Scorpions ſtilled after the manner aforeſaid, is moſt excellent.

Oyl of Wax is likewiſe effectual to the ſame purpoſe.

But Oyl of Mans Bones made after the ſame manner that Oyl of Tiles is made, is preferred before all others, and commended not only by the Chymiſts, but alſo by the Dogmatical Doctors, as *Crato*, *Platerus*, and others. The manner of making it is this: Mans Bones freſh and unbroken are broken and burnt, and caſt into old Oyl: afterward, they being full of the Oyl, are beaten and caſt into a Retort, and ſo by the force of the fire, an Oyl is drawn out.

Where Mans Bones are not to be had, the Bones of other Animals may ſerve the turn.

This following wil alſo be very good:

Take *Maſtich, Frankinſence, Mirrh, Ammoniacum, Opopanax, Bdellium, Mummy, of each two ounces: Vitriol one pound: Honey two pound: Tartar one ounce and an half: Spanish Wine four pound. Diſtil out of all an Oyl, with which let the pained part be anointed with a feather.*

To eaſe the pain, and to reſolve the Matter of the Gout, a Liquor made of Snails is likewiſe commended, which is thus compounded:

Put an handful of Snails into an Hippocras Bag, and caſt upon them an handful of common Salt upon the Salt, a handful of Dwarf-Elder, or Danewort ſeeds very finely poudered: And ſo one after another of Snails, Salt, and Seeds, until you have made four or five Lay's of every one in particular. Let the Bag hang in a moiſt Celler; and after a few daies there will drop a ſlippery Liquor and fat; which ſet in the Sun for four daies, and then ſmear the place affected therewith.

A reſolving Unguent may be made after this manner:

Take *Chamepitys, common Wormwood, and Roſemary tops, of each a handful: Chamomile flowers, Melilot flowers, and Roſe Leaves, of each one pugil: Oyl and Wine, of each half a pound. Let them boyl till the Wine be conſumed: the Liquor being ſtrained, add thereto as much Wax as ſhall ſuffice to make it into an Oyntment. Let the Part affected be anointed herewith warm; and in twenty four hours the Part doth ſwell, and the pain ceaſeth.*

Alſo divers Pultiſſes reſolving and eaſing pain, may be made. The principal are theſe:

Take *Wheaten Bran a pound: Salt one ounce: Soap as much as ſhall ſuffice. Boyl all to a Cataplaſm, or Pultiß.* Or,

Take *Bean Meal half a pound: Boyl it in a ſufficient quantity of Wine, adding thereto a little Aqua vitæ and Butter. Make it into a Pultiß.* Or

The Leaves of Dwarf-Elder, or Tree-Elder being beaten, may be applied; or they may be fryed with Butter in a Frying-Pan like a Pan-cake.

Briony Root bruiſed with Aqua vitæ, is alſo very effectual.

Alſo ſome commend Aron, Cuckoo-pintle, or Prieſts-pintle Roots, being mingled with Cow-dung.

This following is commended by *Solenander*, becauſe it reſolves without any great heating, eaſeth the pain, and ſtrengthens the Joynts. And it may be ſafely applied after the beginning of the fit, about the fift day of the Diſeaſe.

Take *Pouder of red Roſes two ounces: Maſtich one ounce: Camphire half a dram: Barley meal half a pound. Boyl all in white Wine, evermore ſtirring the ſame, till it come to be thick, and lay it on warm.*

Emplaſters are likwiſe wont to be of great uſe in this Caſe. The chief are theſe which follow.

Take Frankincenſe, Mummy, Colophony, of each one ounce: Maſtich, Mirrh, white Coral, *each half an ounce: Mans Fat ſix drams: Gum Ammoniacum, and Bdellium diſſolved in Vinegar, of each three Drams: Turpentine half an ounce: Oyl of Foxes, and of Roſes, of each as much as ſhall ſuffice to make all into a Plaiſter.*

Take *Florentine Orice Roots, and Hermodactils poudered, of each ſix drams:* Emplaſtrum Oxycroceum, & de Mucilaginibus, *of each two ounces: Rozin of Pine one ounce. Melt them together, adding Oyl of worms as much as ſhall ſuffice, and make thereof a Plaiſter.*

Emplaſtrum Diapalma, or *Diacalciteos*, is very much uſed, both alone, or with Camphire added thereunto, after this manner:

Take *of the Rowl of Diapalma Plaiſter half a pound: Camphire two drams. Mix them together, and apply them to the parts affected.*

Or in Form of a Cerecloth.

Take *of the Rowl of Diacalciteos Plaiſter half a pound: Plaiſter of Sulphur an ounce: Storax and Benzoin, of each half an ounce: Tacamahacca two ounces: Oyl of St. Johns wort, of Worms, of each an ounce: Liquid Storax an ounce and an half: New Wax, as much as ſhall ſuffice. Melt all together, and dip your cloth therein, twice or thrice, make it ſmooth and dry, and uſe it for your uſe.*

But yet the ſame Plaiſter mingled with theſe things following, ought to be reckoned amongſt the moſt excellent Medicines for the Gout.

Take *Diacalciteos Plaiſter diſſolved in harſh red Wine, and boyled till the Wine be conſumed, one pound: Myrtles, red Roſes, Maſtich, Tartar of red Wine poudered, of each two drams: Chamepitys, or Ground-pine, and right ſweet Chamomel poudered, of each half a dram. Make of all a Plaiſter, to be applied after the ſwelling is much abated.*

And at laſt, in a very old and ſetled pain, eſpecially from a cold Cauſe, ſome lay Veſicatories to raiſe Bliſters upon the parts affected. *Sennertus* makes mention of them, but ſo as that Anodines be mixed with them. But the moſt wiſe *Varandæus*, my Maſter, did with happy ſucceſs uſe the common Veſicatory Plaiſter, which is kept in our Shops, ſimply, and by it ſelf without any mixture; wherewith he cured a great and rebellious Swelling upon the Knee, when other Phyſitians had in vain uſed many Purgations, a Sudorofick Diet-Drink, and many External Medicines.

In the uſe of all the fore-recited Medicaments, this one thing is diligently to be noted, That we muſt take our hints from ſuch things as we find do help or harm the Patient: foraſmuch as the Natures of Men are divers, their Complexions divers, and divers kinds of Excrements are bred in ſeveral Men, whence it is that the ſame Diſeaſes do extreamly differ in ſeveral perſons: therefore what profits one man, doth another no good at all; which often comes to paſs in curing the Gout. And for this Cauſe, every Practitioner muſt have an abundance of Medicines, that when one hath been applied in vain, he may uſe another and another, making alwaies choyce of ſuch as a rational Method ſhall moſt approve of.

When the Gout becomes ſtony and knotty, it is extreamly hard to cure, eſpecially if it be of long ſtanding. But new knobs may with Emollient and Reſolving Foments, Unguents, aud Plaiſters, be diſſolved. The moſt Specifick or Appropriate, are theſe which follow.

Galen exceedingly commends a Plaiſter compounded of old ſtrong Cheeſe, made into a Plaiſter with the Decoction of a poudered Sows peſtle or Leg.

Others boyl poudered Sows Legs, till they come to a ſlimy ſubſtance or Gelly. Afterwards they mingle therewith two parts of old Cheeſe, pouder of Water-creſſes one part, and ſo make a Plaiſter thereof. Or,

Take *Juyce of Tobacco three ounces: yellow Wax two ounces: Roſin of the Line-tree an ounce and an half: Turpentine one ounce: Oyl of Chamomel as much as ſhall ſuffice. Make all into a ſoft Cerate or Plaiſter.* Or,

Take *of thoſe Eaſtern Berries, which the French call* Coques de Levant, *and Mirrh, of each half a pound. Pouder them, and mix them together with ſtrong Vinegar into the form of a Cataplaſm.*

Gum Ammoniacum diſſolved in Vinegar, doth powerfully ſoften.

Rulandus anoints thoſe hard Swellings in the morning, at noon, and in the Evening with Oyl or Balſom of Sulphur hot, and then he laies on a Plaiſter hot, of *Emplaſtrum Diaſulphuris.*

But this Plaiſter following, is your rare Plaiſter, becauſe beſides eaſing the pain, it draws the gritty, ſtnoy ſubſtance out of the Joynts likewiſe.

Take *Roman Vitriol one pound: Roch Allum half a pound: Salt four ounces. Calcine all theſe together in a Crucible or Earthen pot, letting it to ſteem ſo long till the ſpirits ſhall begin to go away. Which when you perceive by their ſmel to riſe, leave preſently your calcining, and let all cool, and then pouder them.*

Take *of this Pouder, and Barley Meal, of each a like quantity; mingle them with Wine Lees to the form of a Pultiß, which ſpread upon a rag as thick as a knife, and apply to the place affected. When it is dried, diſſolve it again with Lees of Wine, and apply it again, until in the firſt place the pain be diſcuſſed; and in the next place, until all the ſtony ſubſtances be conſumed out of the knobbed and knotted Joynts. In the mean while it fals out often that the Skin will break, which need not affright us; for either afterwards the Ulcers cloſe of their own accord, or at leaſt by laying Wax upon them in manner of a Plaiſter, they are cloſed up, the Joynts having regained their motion with activity.*

Finally, If the Gout be very exceeding old, and perfectly knotted, by the preceding Cure a mitigation of pain is to be hoped, but the ſtony ſubſtances wil hardly give way; therefore with a gentle Cauſtick the Skin is to be opened, and then the ſtones are to be taken away with a drawing Plaiſter of Gums.

The Cure of the Gout when preſent, is performed by the Remedies aforeſaid. But becauſe this Diſeaſe is wont to return by fits, eſpecially in the Spring and Fall, we muſt now ſhew the way to prevent the ſame. Which Prevention ought to aim at the hindering of any Gouty Matter, like to fall into the Joynts, from gathering in the Body; or if any be collected, that it may be carried away.

And

And finally that the Joynts may not be ſo diſpoſed to receive the Humor which flows into them. The collection of Matter will be hindred, by an excellent Diet, and by Medicines rectifying the diſtempers of the Bowels. The Matter collected will be carried away by Evacuating Medicaments. And the Joynts will not ſo eaſily receive if they be fortified with corroborating Medicaments.

As for the Matter of Diet, although in this Caſe it be of very great, yea greateſt moment, yet the Nature of this work will not give me leave to deſcribe the ſame.

I ſhall only ſpeak of the Patients Drink ſo as to ſay, that Wine is extream hurtful to all Goury Perſons, and many have recovered only by abſtaining therefrom. Yet if the Patient in regard of ſome other Infirmity cannot wholly abſtain from Wine, let him drink weak Wine, or well allaied with Water. *Hollerius* inſtead of Wine commends thin Metheglin viz. Of forty or forty eight Parts of Water to one of Honey. Yet this ſuites not with ſuch as abound with bitter-choller and thoſe that are dry and thirſty.

This following Diet drink ſuits all Natures, and hath done much good to very many perſons.

Take *Salſa parilla Roots two ounces: Liquoriſh one ounce: Cinnamon and Annis Seeds half an ounce: Make all into a very fine Pouder. Of this Pouder mix one ſpoonful with ſo much ſmal Beer or ale as the Patient is wont to drink at a Meal. Brew them together out of one Pot into another three or four times. Then ſtrain the Liquor for the Patients ordinary drink. Doing the like for every Meal.*

And as for Evacuations, Bleeding muſt be firſt practiſed eſpecially in the ſpring and fall, in ſuch as abound with Blood and whoſe Blood is wont to work and ferment or be very hot.

But Purgation is not only to be uſed ſpring and fall, but four times in a year, yea and every month in every Cacochimical Body that is which abounds much with evil Humors. To which purpoſe many forms of Purgations are handed to and fro, of a ſpecial property for this Diſeaſe. Theſe that follow are the chief, which are ſo to be uſed by the diſcreet Phyſitian, as that he muſt make many changes, both in reſpect of the materials and the Doſe, according to the various Conſtitutions of the Patients,

Take *Senna cleanſed, Turbith, Hermodactiles and Pouder of a Mans Skull that hath never been in the Earth of each one dram: Diagridium half a dram: Make all into a Pouder of which give one dram: at a time, in Groundpine Water, or in Broth.* Or,

Take *Salſa parilla one ounce: Senna ſix drams: Turbith, Hermodactiles, Jalap, Mechoacan of each half an ounce: Agarick Trochiſcated two drams: Diagridium and Cinnamon of each half a dram: Make all into a Pouder. Steep a dram thereof in white Wine all night, in the Morning let the Patient drink Pouder and Wine.*

Electuarium Caryocoſtinum is by Petrus Bagerus exceedingly commended, and is approved by al Practitioners, and it is deſcribed in the *London Diſpenſatory* in Folio 111. and in that of *Bauderon.* It is given to half an ounce: But in hot Conſtitutions it may do harm.

Rhaſis Commends his Pils ſo far as to ſay, that they can make ſuch as are fain to Ride, to go on Foot again. Thus they are made.

Take *Aloes of the beſt half an ounce: Red Roſes two ſcruples: Hermodactiles white and purged from their outmoſt Skin or ſhel, one dram and an half: Diagridium one dram: With Water of Ground-Pine and honey of Roſes make all into a Maſs of Pils. the doſe one dram.*

Theſe alſo are good which follow.

Take *Aloes, Hermodactiles of each half an ounce: Groundpine, or Chamepitys two drams: Chamædris or Germander, Stœchados of each one dram: Saint Johns Wort Seeds, half a dram: With Veniice Turpentine make a Maſs of Pils, which becauſe they Purge little may be given the oftener.*

Alſo Evacuation by Vomit is very good for Prevention if the Patient can bear it well; which is declared by Altaharavius a famous Phyſitian in theſe words. *A Vomit is better than a purg to Root out ſuch ill Humors of a groſs Nature as are below the Knee even to the Foot; as in the Knee-Gout, Sciatica and ſuch like.*

Now Vomiting may be procured every Month two daies together becauſe the ſecond day drives out the Reliques of the firſt. And ſome have obſerved that vomiting is more ſucceſsful than ordinary when is in a Sign that chews the Cud, ſuch as the Bul & the Goat or Capricorn. It is good to Vomit the Moon after Supper the Patient having eaten divers Meats, Fat, ſharp of Salt or Spice &c. and others in great Quantity, and afterward rubbing his ſtomach and putting his finger into his throat. And if that will not do, he muſt take a Vomit, eſpecially of Aſarum and Broom Boiled together and the Decoction drunk, which are otherwiſe good in the Cure of the Gout,

That Evacuation likewiſe which is made by ſweat, Purges the Blood from wheyiſh excrements, and draws out the antecedent Cauſe of the Gout. To this Purpoſe a Sudorifick Diet drink may be ordered for the Patient Spring and Fall, of a Decoction of Salſaparilla, China, Saſſafras, or of Guaiacum, as the temper of the Patient ſhall adviſe,

But

But ſome late Phyſitians have brought into uſe, a Decoction which carrieth away the Matter meerly by inviſible Tranſpiration through the Pores of the Skin, without any ſweat at all, which hath done a world of good. Its Compoſition and uſe is thus:

Take *Sarſaparilla, Crude Antimony, Nut-ſhels, of each ſix ounces: China Root one ounce: A little Braſil Wood: Water nine pints: Boyl them to four pints and an half. Let the Antimony and Nutſhels be poudered and tied in a cloth, which muſt be ſo hanged in the pot that it touch not the bottom. Let him take a good draught of the ſtrained Liquor, on mornings three hours before dinner; in the afternoon four hours after dinner, and three hours after ſupper, for fifteen daies together. Bleeding and univerſal Purgation being premiſed.*

Of the Grounds remaining in the Strainer with like quantity of Water, may be made a Diet-Drink for ordinary uſe inſtead of Beer. Boyl the Water half away, and ad Coriander and Liquoris as much as ſhall ſuffice to give it a good ſmack.

To prevent the Gout, and to root the ſame out of the Bowels, ſome Practitioners commend the uſe of Gout-quellers given an whol yeer together, whereby they avouch many have been perfectly cured. Among many of their Receipts, this is the Principal.

Take *Salſaparilla four ounces: St. Johns-wort ſeeds, Groundpine, and Germander Leaves, of each three ounces: round Birthwort ſix drams: Angelica three drams: Cinnamon three drams: Cloves four ſcruples: Saffron two ſcruples. Let all be finely poudered and incorporated with Spaniſh Honey clarified as much as ſhall ſuffice. Make all into an Electuary, which let the Patient uſe a yeer together, taking every day in the Spring, Fall, and Winter, one dram and an half; in the Summer only one dram. Let the Patient forbear to take it in the Dog-daies. Let him wholly abſtain from Wine and Lechery.*

Peradventure the Decoction of Germander may be of the Nature of the Gout-quelling Medicaments our Practitioners talk of; which was therefore commended to the Emperor *Charls* the Fifth exceedingly by the Phyſitians of *Genoa*; and *Solenander* doth teſtifie, That very many who drank this Medicine threeſcore daies together, were perfectly cured. The Compoſition of this Decoction is thus:

Take *Germander gathered when it flowers, and well preſerved, one handful: Ripe Wine not very ſtrong, nor very ſmal, three pints: Boyl them in a double veſſel five hours. Let the Patient take a draught of the ſtrained Wine, and compoſe himſelf to ſweat. This is to be done after the Patient hath been purged.*

And it is here to be noted touching thoſe hot Medicines, that they are not only unprofitable for hot Conſtitutions, but they cauſe ſuch Reſolutions of Humors or Joynts, or other inconveniences, as can never be cured, and therefore they muſt be given with great Caution.

Peradventure this following Electuary may be uſed with more ſafety and ſucceſs, which doth purge the Body by little and little from all ſuperfluities without heating the ſame.

Take *Senna half an ounce: Turbith, Hermodactils, of each ſix drams: Lignum Guajacum, Saſſaphras, and Salſaparilla, of each half an ounce: China Roots one ounce and an half: Nephritick Wood two ounces: the three Sanders, of each one ounce: Annis Seed two drams: Honey very well clarified fourteen ounces: make all into an Electuary. The Doſe is one dram every day in the whol yeer, except the Dog-daies.*

Among the common People, ſome hold it for a great Preſervative from the Gout, to ſwallow three Cloves of Garlick whol every morning for a month together. For they heat and ſtrengthen the Stomach, without heating the Liver, or other Bowels; for they are voided forth with the Excrements whol, but boyled and wrapped in clammy Flegm, which they bring from the Stomach and Guts.

In the Gout proceeding of Chollerick Humors, Waters of Medicinal Wels, which are Acid, Vitriolate, and cooling, ſuch as that of *Tunbridg* in *Kent*, Blackbois not far from *Lewes* in *Suſſex*, one in the Pariſh of *Sandherſt* in *Kent*, do very much good. So that by the uſe of ſuch Waters, ſome perſons have been for a long time freed from the Gout.

To the ſame purpoſe *Hippocrates* commends in his Book of Diſeaſes, the uſe of Aſſes Milk, which Experience ſhews hath done good to many Gouty perſons.

And in a word, All things which are good againſt an hot diſtemper of the Liver, and to ſtrengthen that Bowel, wil be good in this Caſe, as they are deſcribed before in the Cure of the hot diſtemper of the Liver.

But if a wheyiſh Humor flowing from the Brain be Cauſe of this Diſeaſe, as moſt commonly falls out, the greateſt care muſt be had of the Brain; viz. That its diſtemper may be corrected, and that the Humors bred therein may be derived and diſcuſſed. To which intents; Iſſues, Veſicatories, Medicines to be drawn up into the Noſe, Maſticatories, Pouders, Spiced Caps, will be very ſerviceable; and other Remedies propounded in the Cure of Diſeaſes of the Brain.

The

The laſt Point of Prevention, is to ſtrengthen the Joynts that they may not ſo eaſily receive the Humor flowing in. Yet it is to be noted, that ſtrengthening Medicaments, are not only but hurtfull alſo, unleſs the antecedent Cauſe, and the Humor ready to flow into the carefully removed by the foreſaid Medicaments. Otherwiſe thoſe ſtrengtheners, either able to hinder the influx of the Humors into the Joynt: or if they do hinder the ſame, the retire to the more noble Parts of the Body and raiſe much worſe Diſeaſes.

Among the principal ſtrengtheners the preſſings of Grapes viz. their Seeds &c. are reckoned diſcuſs the reliques of the Morbifick Matter by their actual heat, and by their aſtringency, much ſtrengthen the Parts. *Duretus* upon *Hollerius* doth thus commend them. *But the uſe of Grape Kernells doth exceedingly profit in the time of Vintage. If the preſſings of the brought out of the Wine Preſs into a Barn and being covered with Blankets do there grow hot them let the Patient thruſt his Feet, Legs, Thighs, Arms, or his whol Body. I have* (ſaith he) *an hundred times, there is no better thing under the Cope of Heaven.*

And *Solenander* in his Counſel 21. Sect. 4. Doth give the foreſaid Medicine this commendation. *But among the beſt and ſafeſt remedies, (which do alſo ſtrengthen the Parts affected, and do the innate heat,) is this to be reckoned, and diligently once every yeer (for oftner it cannot practiced, viz. That in Vintage time, the Feet and hands affected, be whelmed in preſſ Grapes hot from the preſs, or made hot with warm Wine, every Morning for fifteen daies. could name a worthy Perſonage, to whom I have communicated this Medicament, and receiv him a very conſiderable Gratuity; therefore who could not go at all, and by this Medicine and Bleſſing, he was reſtored. And by how much the Grapes are riper, by ſo much the more goo the preſſings do in this Caſe.*

Sulphureous and Nitrous bathes ſuch as the Balerucane in *France*, do not only diſcuſs the of the Gout, by provoking ſweat, as was ſaid before; but alſo by ſtrengthning the Joynts, much conduce to the Prevention thereof; as alſo being uſed by way of Embrocation, that Head being wet therewith or it being pumped upon the Heat, Cotton wet therein be at laſt and made faſt. The mire of the ſaid Bathes applied to the weak Parts, doth likewiſe ſtre them.

Where the benefit of Natural bathes cannot be had, the Feet may be waſhed and other Part mented, with a Decoction of nerve Herbs, ſome aſtringents being added thereto, as Balaust Mirtill. Cypreſs Nutts, Allum, and Salt, with Iron-quenched Water and red Wine.

Alſo Oyntments are commended, being frequently uſed, made after this manner.

Take *Oyl of Mirtles or Roſes two ounces: Salt two drams: Mix them and make a L ment.* Or,

Take *Oyl of unripe Olives Oyl of Maſtick one ounce: Salt fried in a pan two drams: Armoniack three drams: Dragons Blood, Hipociſtis, Frankinſence, Maſtich, of each dram and an half: Let each Particular be firſt finely Poudered by it ſelf, then with the Oyl them into the form of an Oyntment.*

The Plaiſter called Emplaſtrum Diapalma is very good to ſtrengthen the Joynts: and its in all Gouts whatever the Humor be which offends. and *Solenander* writes in Counſel 25. S that he hath known ſome, who had wont to be often troubled with the Gout, and by the con uſe of this Plaiſter, with frequent purges taken at certain diſtances of time, they were freed from Pains for five years together. And this Plaiſter doth not daub and foul, doth not raiſe Itch or ples, nor is it troubleſome by its ſmel or any other evil quality. And it is fitted to the ſhape member. When the Feet are troubled ſhoes are made of thin Leather which being ſmeared w plaiſter are put upon the Feet. The like ſpread with this Plaſter may be applied to the Wri other Parts. But the truth is, the ſame Plaſter boyled in Wine and mingled with Pouder of M Roſes, Tartar, Chamepitis or Groundpine and Chamomel, ſo as we deſcribed before in the Cu is much better for the ſame uſes. And we have ſeen Gouty perſons, who contiually wore Plaiſter upon their Feet and Wriſts, with moſt happy ſucceſs.

Chap. 2. *Of the Hip-Gout, or* Sciatica.

THe Pain of the Sciatica or Hip-Gout, doth herein cheifly differ from other ſorts of the because in thoſe the Pain poſſeſſes only the Joints; but this, it is not only in the Hip, holds the top of the Buttock alſo, the Loins and the *Os ſacrum*, and reaches into the Thig Leg even to the very Foot. Which comes to paſs by reaſon of Nerves ariſing out of the Loi *Os ſacrum*, which are carried unto the Hip, and are from thence derived and ſpread unto the Th Leg and Feet.

The Cauſe of this Pain is the ſame which was propounded in other ſorts of the Gout.

It

The knowledg of this Diſeaſe is taken from the Part affected: from whence it alſo took its name, for the Pain doth eſpecially affect the Region or Part of the Huckle-bone, for it hath this property, that no Humor, nor Inflamation or change of the color appears as is wont to be in other ſigns of the Gout: becauſe the flowing Humors do inſinuate themſelves into more profound or deep Parts, & into ſuch as are larger, and covered with much fleſh, and they are not diffuſed into the ſurface of the body nor the very Skin as in other Gouts.

This peculiar Prediction belongs to the Hip-Gout, that if it continue long it puts the Hip out of Joynt: for a wheyiſh and flegmatick Humor doth inſinuate it ſelf into the Hollow of the Joynt which is very large, and if it bide there long, its thinner Part is diſcuſſed, the thicker remaining, which becomes ſnotty and ſoftens and looſens the bands which knit together the bones which belong unto that Joynt; ſo that the Bone of the Hip falls from its Socker, whence follows Luxation, and thereupon limping or halting, and a Conſumption of the whol Thigh; becauſe the Bone being ſlipt out of its ſeat, doth preſs upon the Muſcles, Veins and Arteries, by which means motion is hindered and Blood and ſpirits cannot conveniently flow into the inferior Parts. The foreſaid Doctrine is confirmed by two Aphoriſmes of *Hippocrates*, viz. The 59. of the 6. Section. Such whoſe Hip after long pains, ſlips out of Joynt and in again, they have Snotty excrements in that Part. and the 60. Aphoriſm of the ſame Section; Such as being troubled with long Pains of the Sciatica, come to have their Hip diſjointed, their Thigh Conſumes and they halt, except they be burnt.

The Cure of the Hip-Pain hath many things common with the other ſorts of Gouts; yet in many things it differs becauſe of the ſtructure and Largneſs of the Joynt; therefore it is to be diſtinguiſhed from the former Gouts, and to be handled in this Chapter by it ſelf.

And in the firſt place a Cliſter or Gentle Purgative being premiſed, the Vein of the Arme on the ſame ſide muſt be opened for revulſion ſake: afterward for derivation ſake, the Vena poplitis muſt be opened about the Knee, or that Vein near the outward Anckle-bone, which is called the Sciatica Vein, becauſe of the great good which the opening therefore is wont to do in this Diſeaſe; which alone being opened doth often heal this Diſeaſe.

It is wont to be opened on the Leg of the ſame ſide the Gout is on, yet hath it done much good being opened on the contrary ſide, and hath been ſeen ſuddenly to take the Pain quite away.

Galen *in his Book of Blood-letting, Section* 18. *I remember* (ſaith he) *that I have Cured divers troubled with the Sciatica in one day, opening a Vein in their Thighs; viz. the Cauſe being, not from cold, but fullneſs of thoſe Veins which are in the Hip; ſo that a Vein opened about the Ham or Knee, is more Proper and commodious in ſuch caſes, than in the Ankles.*

Alſo Blood drawn out of the Hemorrhoids by Leeches, doth wonderfully help thoſe that are Hip-Gouty, becauſe the Blood conteined in the Veins of the Hip is thereby drawn out: for there is the greateſt Content & fellow-feeling that can be between theſe Parts by means of their Veins.

Strong Purgations are proper in this caſe; for lighter purges do rather precipitate the Humors into the Parts affected. And therefore the Arthritical Pouders are moſt convenient, Carpocoſtinum, Pils of Hermodactils and ſuch like. The Chimiſts do ſometimes ſucceſſfully uſe Mercurial and Antimonial purges in ſtrong Bodies.

Mercurius dulcis wich Scammony or other purgatives given frequently, doth powerfully eradicate the Humor cauſing this Hip-Gout.

Many preferr Vomiting Medicaments before purgatives, becauſe they Evacuate the Humors by a place more remote from the Part affected. *Rondeletius* prefers Afarum before other Vomitories.

After ſufficient Purgation, we muſt proceed to local Medicaments. And as for repelling Medicines, they are no waies convenient, becauſe it is to be feared leaſt the Humors be ſo much the more fixed into the Part affected; but at the beginning Reſolving things muſt be applied; firſt milder and leſs hot, leaſt they ſhould attract the Humors more into the Part affected; after ſuch as are more vehement, in this manner.

Take *Briony Roots two pounds: Dwarf-Elder Roots one pound: Juniper Berries half a pound: Leaves of Groundpine, Mint, Marjarom, Sage, Roſemary, flowers of Chamomel and Melilot of each four handfuls: Make a Decoction for a bath to ſit in, which let the Patient ſit in twice a day for two or three daies together. At the beginning the Decoction may be made of Water alone afterward in Water and White Wine.*

With the ſame or like Decoction hot, may the Part Pained be fomented frequently.

Alſo Bags may be prepared of Salt, Millet and Bran fried with rich Canary in a frying Pan and laid on Warm.

Or, Bags very effectual may be made only of Juniper Berries beaten and fried in a Pan as aforeſaid.

Alſo anointings will be convenient of Oyl of Chamomel, Oyl of Dill, Orice, Nard and Rue;

which by relaxing the exterior Parts, will draw the motion of the Humors to themwards, by which means the inner parts wil be leſs affected.

Oyl of Scorpions of *Mathiolus* anointed on, wil be very effectual.

To reſolve more powerfully, The *Aqua Balſami Guidonis*, being anointed on, wil be exceeding good.

Oyntment of Marſh-mallows doth looſen the external parts, and doth gently diſcuſs the Morbifick Matter; therefore towards the beginning, the whol Thigh may be anointed therewith, and the Legg to the Foot by a flaming fire.

In the Progreſs of the Diſeaſe, this following being hotter and ſtronger, may be uſed.

Take *Oyl of Worms, Tiles, Turpentine, of each two ounces: Oyl of Foxes one ounce: Gum Ammoniack, and Sagapenum diſſolved in Aqua vitæ, of each ſix drams: Fat Caſtoreum three drams: Euphorbium two drams: Wax as much as ſhall ſuffice. Make all into an Oyntment.*

Spaniſh Soap, or Caſtle Soap diſſolved in Spirit of Wine, is moſt excellent, ſmeared on by the fires ſide.

Oyl of Tiles or Bricks alone, being anointed hot, after ſix Cupping-Glaſſes have been faſtened upon the pained place, and about the ſame; and after the anointing, the place being covered with very hot Linnen Cloaths, hath in one day cured a very ſtubborn Sciatica.

Lacuna in his Comments upon *Dioſcorides*, doth commend the following Oyntment as wonderful:

Take *the Juyce of the Roots and Leaves of Dwarf-Elder, or Danewort, of each one ounce: Oyl of Chamomel ſix ounces: Boyl them to the conſumption of the Juyces. Then add Wax as much as ſhall ſuffice, and a few drops of Vinegar to make the vertue pierce. Make of all an Oyntment.*

A Cataplaſm of the Herb Iberis, wild Creſſes, or Sciatica Creſſes, is much commended by Authors, becauſe this Herb is very effectual in the Cure of this Diſeaſe. It may be made after this manner:

Take *of wild Creſſes four handfuls: boyl them in Wine, and beat them, adding thereto Meal of Lupines, Vetches, and of Beans, of each three drams: Pouder of dried Rue, Chamomel flowers, and Coſtus Root, of each one dram: Oyl of Turpentine half an ounce: Oyl of Earth-worms as much as ſhal ſuffice. Make all into a Cataplaſm.*

Platerus witneſſeth that it hath done much good, when green Sage hath been put on an hollow hot Tile, and often ſtirred leſt it burn; and thus being half boyled and ſprinkled with Vinegar, and a Cloth put about the Tile, and the ſame put under the Hips, the vapor thereof hath been received into the part affected.

Alſo a Loaf very hot out of the Oven, cut in the middle, ſprinkled with Aqua vitæ, and laid on, wil be very helpful.

To draw the Morbifick Matter outwards, a Cupping-Glaſs is good, four times faſtened upon the higheſt part of the pained place, which appertains to *Os ſacrum*, without Scarrification.

To the ſame intent, eight or ten Leeches faſtened to the part affected do much help, which are allowed and approved of by *Paulus* and *Aurelianus*. And *Zacutus Luſitanus* ſaies that in ten hours ſpace he therewith took away the pain of the Sciatica, which no other Remedies could help.

Plaiſters are likewiſe frequently uſed, and in this Caſe may do much. But in the uſe of them, this is alwaies to be obſerved, as it hath been ſaid generally of the reſt; that at the firſt mild ones be applied, which if they do little good, we may ariſe to more vehement. Which order we will likewiſe obſerve in our ſetting down the making of ſuch Plaiſters.

Take *Pitch uſed in Ships, two ounces: Brimſtone poudered very fine three drams: Maſtich two drams: Turpentine half an ounce. Mix them, and make of all a Plaiſter, adding as much Wax as ſhall be requiſite.*

Take *Ship-Pitch two ounces: Gum-Ammoniack, Bdellium diſſolved in Vinegar, of each one ounce: Live Brimſtone, Turbith, Hermodactils, of each half an ounce: Caſtoreum one dram: Turpentine a little: Wax as much as ſhall ſuffice. Make of all a Plaiſter.*

Take *Gum Ammoniack, and Sagapenum diſſolved in Vinegar, and then thickened again, of each two ounces*: Emplaſtrum Diachylon cum Gummis, *one ounce and an half. Melt all together. Then add Cinnabaris, Cinoper or Minium, and burned Braſs, of each one ounce: Orpment and Verdegreece, of each two drams. Make all into a Maſs or Plaiſter. If it raiſe Bladders, lay a Linnen Cloth between the Plaiſter, and the part affected.*

If the Diſeaſe do pertinaciouſly continue, we muſt proceed to a Veſicatory, which doth draw out the Morbifick Matter, being applied to the part affected. Wherefore a Bliſtering Plaiſter muſt be

be laid on, either alone, or that it may work more gently, with ſome of the foreſaid, mingled in equal proportions, for ſo it may be endured upon the part a longer time. Or this following may be made freſh.

Take *Ship-Pitch, Wax, white Pitch, of each one ounce and an half: Colophonia, Frankincenſe, Maſtich, of each two drams: Euphorbium, Ladanum, Quick Sulphur, Opopanax, Ammoniacum, Bdellium, Galbanum, Sagapenum, of each half an ounce: Storax, and Benjamin, of each two drams: Cantharides three drams: Galangal, Cloves, of each two drams: Liquid Storax, as much as ſhall ſuffice. Make all into a Plaiſter.*

In an old Diſeaſe, an Iſſue in the Leg on the pained ſide, doth derive the Matter away, and ſomtimes cures the Diſeaſe. *Zechius* will have it made in the outſide of the Leg. And if there be ſuſpition of a Catarrh from the Brain, another muſt be made in the hinder part of the Head. For that hath ſomtimes cured an old Sciatica when nothing elſe would do it. And then likewiſe other Remedies, correcting the Brains diſtemper, muſt not be neglected.

Zacutus Luſitanus tels of his making an Iſſue behind the Ears with wonderful ſucceſs, when the Humor came from the Head. Of this he makes a peculiar ſtory, Obſervat. 160. Book 2.

During the whol Courſe of the Cure, frequent Clyſters are to be injected, that part of the Morbifick Matter may be derived unto the Guts. Alſo to diſcuſs the next and immediate Cauſe of the pain, this following hath ſomtimes been uſeful.

Take *Rich Canary half a pint: Walnut Oyl, and Oyl of Rue, of each three ounces: Oyl of Turpentine half an ounce. Mix all, and make thereof a Clyſter, to be caſt in ſo often as the pain ſhal require.*

And this following Clyſter doth wonderfully draw the Humors from the part affected, in regard of its Neighborhood to the Guts.

Take *Pulp of Coloquintida one dram: Lean Bran an handful: white Wine a pint and an half: Boyl all to a pint. Of the ſtrained Liquor make a Clyſter, and let the Patient keep it an hour.*

The Hip-Gout is ſomtimes bred of Choller, and hot Humors, which is known when the pain is very ſharp, and pricks, the pains are greater every other day, the party is lean, the Conſtitution of Body Chollerick, Age youthful, Country and Seaſon hot, the pain is encreaſed by heating things, Chollerick Diſeaſes have preceded, an hot Diet, and vehement Exercite; and then the Medicines muſt be fitted for Choller, and an hot diſtemper. Wherefore, Bleeding is good, Purgations of Choller, ſomtimes Lenitive, ſomtimes ſtrongly purging with Diagredium, that the Morbifick Matter may be brought forth; cooling Juleps, emollient Clyſters cooling, Milk, Bathing, and other Remedies propounded in an hot diſtemper of the Liver. Alwaies being careful to avoid things Opening, and to chuſe rather ſuch as do incraſſate or thicken, ſuch as we propounded for a thin and hot Rhewm.

The Pain being extream, ſome Narcoticks may be given, eſpecially Syrup of Poppies, whereby the pain is allaied, and the flux of Humors ſtopped, by the Humors being thickned.

But *Laudanum Opiatum* is far more powerful, given to the quantity of three or four grains; which alſo diſſolved in a Clyſter of Broth or Milk, uſing a Purging Clyſter before it, doth often take away the pain in a moment.

The external Medicaments muſt be gentler, as Oyl of Lillies, Violets, Chamomel, and ſweet Almonds: Pultiſes, of Lettice, Nightſhade, Endive, Barley Meal, with the foreſaid Oyls; and towards the declining of the Diſeaſe, Fomentations, Liniments, Milder Plaiſters, and leſs Heating.

The Matter cauſing the Sciatica, comes ſomtimes to maturity, ſo as to make an Impoſthume. Which *Hippocrates* ſhews in the third Book of his Epidemicks in the Hiſtory of *Eupolemus*, who had ſuch an Impoſthume, which killed him with a Conſumption. If the Impoſthume be opened, there remains a filthy ill conditioned Ulcer, which likewiſe pines the Patient away. Yet *Zacutus Luſitanus* glories, that he had often cured the Sciatica with an Ulcer, in Obſ. 126. Book 1. Which Obſervation ought to be read and diligently meditated upon.

Chap. 3. *Of Rheumatick Pains of the whol Body.*

AFter Gouty Diſeaſes properly ſo called, it is worth our while to treat of the Rhewmatick Diſeaſe, becauſe of the likeneſs between theſe Diſeaſes, which verily is ſo great, that the generality of Phyſitians, which know not the Nature of this Rhewmatiſm, are wont to call it the univerſal Gout. For in both Diſeaſes the Joynts are pained: but therein is the difference; In that in the Gout, only the Joynts are pained; But in this *Rheumatiſmus*, or Rheumatick Malady, not only the Joynts, but alſo the whol Body, viz. The middle ſpaces between the Joynts, namely, the

Muſcles and their Membranes, and eſpecially the Skins which cover the Bones, and the whol habit of the Body; yea verily, and ſomtimes the inward parts of the Body, as the Stomach, Womb, Lungs, are troubled with this Rheumatick Diſeaſe.

And although the Grecks cal a Catarrh by the name of *Rheuma*; yet this Rheumatiſm we ſpeak of, differs from a Catarrh, being indeed contained under the general term of Flux of Rheum, yet of a different Nature from that kind of Flux which is commonly called a Catarrh, which comes only from the Brain, and troubles no more than one or two parts; whereas this Diſeaſe we treat of, comes from the internal Bowels by the Veins and Arteries, and is ſhed into the whol Body.

This is no new Diſeaſe, yet is it not ſufficiently deſcribed by the Antients. We have a rude Draught thereof in *Hippocrates*, in his Book, *de locis in Homine*: and in *Galen*, Book 1. of the difference of Feavers; and the firſt *de compoſitione Med. ſecundum Genera*. But the moſt notable and cleer place of al, explaining this Diſeaſe, is in the firſt Book of the Differences of Feavers, in Chap. 7. the words are theſe: *Underſtand thou, That the Rheumatick Diſeaſe ſo called, is cauſed by ſome ſuch way as this*; viz. *The whol Body being weak, and the principal Parts thereof, though they have but little blood, yet finding themſelves burdened, they thruſt the ſame and expel it to the fleſhy parts of the Skin.* Whereby it appears that the true Nature of this Rheumatick Diſeaſe, according to *Galens* Doctrine, conſiſts herein; That the whol Body is ſo weak, that when any principal Part is burdened with blood, although it be in no very great quantity, it tranſmits the ſame to the fleſhy parts and habit of the Body.

But that is not ſimply to be underſtood which is ſaid by *Galen*, That the principal Parts being burdened with blood, do thruſt the ſame unto the fleſhy Parts of the Body. For ſo Inflamations and Swellings would ariſe in thoſe parts. Whereas Experience ſhews, that in this Diſeaſe called *Rheumatiſmus*, for the moſt part there appears no Swelling, no Inflamation, no change of color in the parts pained.

The next and immediate Cauſe therefore of this Diſeaſe, is a wheyiſh Humor, which by reaſon of its thinneſs doth not ſwel the parts, and becauſe of the ſubſtance thereof, not apt to turn into Matter or Quittor, it never makes any Impoſthume, but only a certain Inflamatory diſpoſition, ariſing from the fervor of the wheyiſh Humor.

Now the Primary Original of this Diſeaſe ought to be aſcribed to the Liver, which being affected with an hot diſtemper, and being weakened, breeds not blood convenient for to nouriſh, and affects the whol Body with the like weakneſs, whereby it becomes exceedingly diſpoſed to receive all ſuperfluities. And from the ſame Diſtemper and weakneſs of the Liver, great quantities of evil Humors do ariſe, which being long detained in the Veins and Arteries, they become vitiouſly corrupted, and are there diſſolved and turned into the Nature of Whey, and Blood-watry Liquors, and as an heavy burden, are by Nature caſt off into the ignoble Parts, ſhe being not ſtrong enough to drive them out of the whol Body. Now theſe wheyiſh and blood-watry Humors being very ſharp, do prick and cut (as it were) thoſe parts unto which they are carried, from whence pains and torments do ariſe. And although we conceive the Liver to be the primary Cauſe, and Original of this Diſeaſe, yet it is apparent that theſe Humors do ſomtimes flow immediately from the Brain, becauſe the pains do often begin in the Neck, and afterwards do deſcend unto the Shoulders and Arms. But the firſt Generation of theſe ſharp Humors was in the over-heated Liver, which being tranſlated from thence into the Brain, do from thence afterward fal down into the inferior parts.

And although theſe Humors are expelled by the Veins in manner of a Criſis, yet is not their motion ſo ſudden, but is performed by little and little; viz. When thoſe evil Humors and corrupted, do boyl or work in the Veins, and are afterward leiſurely by the Veins expelled and vomited as it were; for which cauſe this motion is wont fitly to be called, the Vomiting of the Veins.

That a ſerous or wheyiſh Humor is the principal Cauſe of theſe pains, many Reaſons do convince. Firſt, becauſe ordinarily they cauſe no ſwelling nor change of color in the part affected; howbeit, ſomtime when the Humor doth much abound, it raiſeth the part into a little, and very red Swelling, which nevertheleſs is eaſily diſcuſſed. Secondly, Becauſe theſe pains are exceeding movable, and do ſeize now this, now that part of the Body, and are ſuddenly gone from one part into another, the former part being quickly wel, and free from al pain; which ſudden mutations cannot come but from an Humor very apt to move, and exceeding thin. Thirdly, Becauſe this Diſeaſe is often terminated by Sweating. Fourthly, Becauſe there appear many tokens of abundant Seroſities in ſuch as are troubled with this Diſeaſe; Thin and abundant Urines beyond the Quantity of what they drink, and abundance of Wheyiſh Humors appearing in the Blood that is taken from them.

And although a wheyiſh Humor be the principal, and moſt frequent Cauſe of theſe Rheumatick Pains, yet probable it is, that wind doth ſomtimes concur in the production of theſe pains. Which we may conjecture by the quick Paſſage of the pain from one place to another, and becauſe there is no weight or heavineſs felt in the parts pained. This is the Opinion of *Avicenna*, who ſeems to deſcribe this Diſeaſe, and to aſſign windy Vapors for the Cauſe thereof: Fen. 1. Book, 3. Tract. 2. Chap. 7.

Chap.7. in theſe words. *In pain Cauſed by winds, the extenſion of the part is encreaſed & the heavineſs diminiſhed ſomtimes it is with pricking, & ſomtimes with Corroſion; and in a flatuous Pain there is no Heavineſs. And ſomtimes there is a Change of the Pain from one place to another.* Theſe are the words of Avicenna: unto which he Joyns theſe following, which ſeem to come nearer the deſcription of this Diſeaſe we treat of. *And the wind is ſomtimes in the Coates and fibres of the Members, as in the Collick from wind; or in the Coats of the Muſcles and under the membranes, and upon the Boner, or in the Circumference of the Muſcles, between the ſoft fleſh and the Skin, or lurking in the Member it ſelf,*

And if any ſhall object, that Diſeaſes ariſing from wind, do not endure ſo long, becauſe windy Vapours are ſoon diſcuſſed. We ſhall anſwer, that a wind contained in the Parts Pained is eaſily diſcuſſed, whence comes often change of Pains from one Part to another; but there is a ſeminary in the Veins from whence winds may perpetually ariſe, & afterwards be carried to the Parts aforeſaid. Now this Seminary of winds is a thick, viſcid Humor and flegmatick, which the Blood taken from them doth often teſtifie to be redundant in ſuch as are troubled with theſe Pains; it being frequently thick and clammy like Glew, in appearance like crude and putrid flegm.

The knowledg of this Diſeaſe may eaſily be learned out of what hath been ſaid: yet ſhall we diſcourſe thereof a little more fully. Firſt therefore, the Parts affected with theſe Pains viz. the Muſcles and their Membrans, and the Membranes which infold the bones, do diſtinguiſh this Diſeaſe from all other. For allthough the Pains of the Lechers Pocks, do poſſeſs both the Joynts and the ſpaces between the Joynts, and ſpecially the membranes covering the bones; yet they differ herein, becauſe they do not ſo univerſally infeſt the whol Body, neither are ſo continual night and day, for they vex the Party only in the nights and very little in the day time; neither do they hinder the Patients from their buſineſs commonly; whereas this Rheumatick Pain, doth Nail them to their Beds, ſo as they can hardly ſtirr themſelves; neither can thoſe that look to them, once ſo much as move without great trouble and encreaſe of their Torments. And finally other ſigns of the Whores Pox have preceded or are preſent, as Gonorrhea, the Whores Boil, Putrefaction of the Privities and ſuch like.

Other ſymptomes alſo there are accompanying this Diſeaſe, which help much to the knowledg thereof. For if you lay your hand upon the Part pained, you feel a kind of ſharpneſs with Heat, commonly there is a Feaver Joyned therewith, but it is very ſmall; and ſome times there is none at all. The Blood which is taken away is evidently corrupted, thick and clammy like glew, and after many times bleeding, it is ful of wheyiſh moiſture, and ſo changed, that it hath not the appearance of Blood. When the Pain is quite gone or intermits there remains no weakneſs in the Part, as is uſuall in the Gout. Purging Medicaments at the beginning do no good, nor things outwardly applied to the Part affected; they do rather augment the Diſeaſe and the Pain: but when the Diſeaſe begins to decline, both are profitable.

As for the Prognoſtick, this Diſeaſe is ſeldom or never deadly, but is verv troubleſome to the Patient by its length: for it continues two or three months, if it be without a Feaver; nay verily; ſomtimes if it be not rightly cured, it continues for a yeer or yeers. *Franciſcus Portus* who in an elegant verſe writ ten Poems of Phyſick ſpeaking of this Diſeaſe relates that he was troubled with this Diſeaſe about two yeers ſpace, which at length he overcame by the earneſt Endeavous of ſix Phyſitians of *Paris*, the moſt famous in their times, viz. *Baſinus*, *Belly-Quercus*, *Sanjacobæus*, *Seguinus* and *Hollerius*.

If this *Rheumatiſſas* do begin with a Feaver, it is wont to be the ſhorter, but it torments the Patient with more direful and cruel Pains: and then it finiſheth within twenty or forty daies, or at leaſt, it is much leſſened.

This Rheumatick Pain coming upon the Neck of other Diſeaſes as an Apoplexy or convulſion, doth make the Caſe leſs Dangerous, the morbifick matter being tranſlated from the internal Parts to the habit of the Body.

Sweates happening in the Declination of the Diſeaſe are good.

Thick and abundant Urins in the Declination, do bring an end to the Diſeaſe.

For the Cure of this Diſeaſe the Morbifick matter muſt be revelled, mitigated and Evacuated, the diſtemper of the Bowells muſt be corrected, and the ſtrength of all the Parts both the ſending and receiving muſt be maintained.

All which may be done by theſe following Remedies

Take *Leaves of Mallows, Violets, Betes, Lettice, Borrage, of each one Handful. Anis-Seeds two drams: Boil all to twelve ounces, in the ſtrained Liquor diſſolve Honey of Violets and Sweet Butter of each two ounces: Make thereof a Cliſter. Give it at a convenient Hour, and repeat every day, or every other day during the whol Courſe of the Diſeaſe.*

When the Cliſter is come away open a Vein in either Arm and take away eight or nine ounces of Blood. It Matters not on which Arm the Vein be at firſt opened, becauſe Blood-letting muſt be often

often repeated and the Veins of both Arms divers times opened. Blood muſt therefore be drawn every day from the beginning of the Diſeaſe til the Diſeaſe come to remit & the Pains to leſſen neither matters it though the Patient be let blood ten or twelve times one after another in ſo many daies becauſe it is a peculiar property of this diſeaſe, that the Patients ſtrength is not diminiſhed by frequent bleeding, as in other Diſeaſes it is wont to fall out. My manner therefore is in theſe Diſeaſes when I appoint Bleeding ſo often, leaſt the freinds and attendants or the Patient ſhould be affrighted with ſo frequent Blood-letting, to add this reſtriction, that Blood-letting be continued every day, til either the Pain be diminiſhed or the Patient much weakened. And ſeeing no weakneſs follows the continual uſe of this Evacuation the Patients do willingly undergo the ſame, and are eaſily perſwaded to repeat the ſame. Now the condition of the Blood is it which makes this eaſie bearance, which in this Diſeaſe comes alwaies away very much corrupted. Experience ſhows how profitable this frequent Blood-letting is; for by the conſtant continuance thereof, the Diſeaſe which is wont (as was ſaid in the Prognoſtick) to be long, is often maſtered in a ſhort time. And experience ſhews that large Bleeding at the Noſe, if it happen to one that hath this Diſeaſe, it perfectly Cures that party, *Hippocrates* ſeem es to hint at this in Aphor 74. Sect. 4. *Thoſe who are likely to have an Impoſtume about their Joynts, are freed from that danger, if they void much thick and white Urin, ſuch as in painfull Feavers, ſome begin to make upon the fourth day: and if withall their Noſe Bleeds, the Diſeaſe will very ſoon break.* For the falling down of Humors into the Joynts tending to an Impoſtume, hath ſome Analagy with this Rheumatick Diſeaſe we treat of. Alſo the ſame *Hippocrates* ſeems to propound a certain adumbration of this Diſeaſe in the ſecond of his Predictories, and aſcribes the cauſe thereof to the ſuppreſſion of ſome uſuall Hemorrhage or Bleeding, in theſe words. *They who have Pains and ſwellings about their Joynts, which are allaied not as the Gout uſes to be, in ſuch you ſhall find their Bowells large, and a white ſettling in their Urin &c.* afterward he adds; now this Diſeaſe beſides thoſe who in their Child-Hood and in their youth have been accuſtomed to Bleed at Noſe, which cuſtome hath left them.

Whiles theſe bleedings are Practiſed, Cliſters (as was before ſaid) muſt be given every day or every other day; alſo Juleps muſt be given, which have power to correct the diſtemper of the Bowells, and to mitigate the Acrimony and agitation of the Humors. To this intent Red poppy water is very profitable in this Diſeaſe it is to be given alone morning and Evening ſix ounces at a time, with Syrup of Lemmons and Pomegranates in form of a Julep; howbeit it is no leſs effectual alone without the Syrups.

For ordinary Drink let the Patient uſe a Ptiſan Drink of Barley, Graſs and Liquoris; or of the Decoction of Sorrel Roots, or of the tincture of Roſes: abſtaining from Wine which is the great *Vehiculum* or Spreader of all Flowing Humors.

Purgation in the Beginning, Augment, and ſtate of this Diſeaſe doth no good at all; nay verily it doth hurt, for it ſets the Humors on running, and encreaſes the Pains; as it is wont to fall out in all Inflammatory diſpoſitions. But in the Declination it is neceſſary and frequently to be Celebrated, and that with gentle Medicaments, that the evil Humors abounding in the whol body may be Evacuated by Degrees. To which purpoſe this following potion may be preſcribed.

Take *Senna and Tamarinds of each half an ounce: Annis Seed and Cream of Tartar, of each one dram: Sorrell Leaves half a Handful. Boyl all to three ounces: In the ſtrained Liquor diſſolve Manna and Syrup of Roſes of each one ounce: Make a potion, to be iterated divers times, as the Phyſitian ſhall think fit.*

If the form of a Bole be more deſireable, it may thus be made;

Take *Caſſia new drawn ſix drams: Catholicum doubled three drams: Rhubarb in Poudr and Cream of Tartar of each one dram; with Sugar make a Bolus.*

If you would purge more effectually add to the potion or the Bole a ſcruple of Jallap.

If theſe Purgations ſhall not ſuffice to eradicate this Diſeaſe (which is often very rebellious) we muſt proceed to ſtronger Purgatives, as *Electuarium Diephoenicon, Diaprunum Solutivum*, and ſuch like provided there be no Feaver. I have allwaies cured this Diſeaſe (when the foreſaid Medicaments could not do it) which *Mercurius Dulcis* ſix times ſublimed, being given divers times to the Quantity of a ſcruple with ten graines of Scammony or Roſin of Jallap. An example of which kind of Cure is to be ſeen in my obſervations, viz. in Obſ. 41. Cent. 3. One only Cliſter of Vomiting Wine Cured this Diſeaſe in a certain Gentle Woman, as you have it in Obſ. 22. of the ſame Century.

Touching Sweat-Drivers, the ſame is to be ſaid which was ſaid of purges; viz. that they in the Beginning, Augment and ſtate, do no good; nay do very much harm; which the common ſort of Practitioners find by experience, who being deluded with the likeneſs of a true Cararrh, and wearied with the ſtubbornneſs of the Diſeaſe, do flie to Sudoroſicks, by which the Diſeaſe is doubled and the Pains encreaſed. But in the Declination, after due Purgations, no Feavers being preſent, they may do much good, and they may be made of a Decoction of China, or Salſa-Parilla; or ſweat

may

may be procured in a Laconick Bath with ſpirit of Wine or ſome appropriate Decoction.

After ſufficient Evacuations; yea rather while they are celebrated, we muſt be careful to ſtrengthen the whol body and the principal Parts thereof; which Indication *Galen* in 1. of the Difference of Feavers Chap. 6. where he expounds the Nature of this Diſeaſe, ſaies, is to be preferred before all others, in theſe words. *Juſtly therefore the aim of a Phyſitian in cureing theſe kind of Patients, is not Evacuation, but Roboration of the whol Body.* Which is not ſo to be underſtood, as if no Evacuation were fit in theſe Caſes (for the ſame *Galen* begins the Cure of this Diſeaſe by Blood-letting) but that we muſt make more and more often uſe of ſtrengtheners, and leſs and ſeldomer uſe of Evacuations. Yet ſure enough it is, that the Parts cannot be ſtrengthened, unleſs the ſuperfluity of Excrements, by which they are burthened be purged out.

Now theſe ſtrengtheners we ſpeak of, muſt be of a cooling Virtue; ſeeing (as was ſaid) the over hot diſtemper of the Liver gives beginning to this Diſeaſe. There is great plenty of ſuch Medicaments in Authours: Of theſe I ſhall propound four, which I account moſt effectuall and leaſt ingrateful to the Patient.

The firſt is the Tincture of Coralls, two ounces of which the ſick may take in a morning, two houres before Meat, every day on which no other Medicaments are adminiſtred.

But becauſe the Tincture of Coralls cannot long be kept, it is reduced into a Syrup for longer keeping, with Sugar, of which two ſpoonfulls may be taken in the morning: but the Efficacy thereof is much leſs, than of the ſimple Tincture.

The ſecond, is the Conſerve of the fruit which grows upon the Roſe-briar or the Eglantine Briar, which is moſt pleaſing to the taſte, cooles the Liver, and by a gentle aſtriction corroborates the ſame. The Patient may take thereof the Quantity of a Cheſtnut, morning and evening.

The third is the Electuary of *Triaſantalon* with a four-fold proportion of Rhubarb, made into Lozenges; two drams whereof the Patient may take every day and drink a little ordinary drink thereupon.

The fourth is A Tincture of Roſes, a Cup whereof the Patient muſt drink, once, twice, thrice a day far form Meals. It is thus made.

Take *Red Roſe Leaves dried one ounce: Water, Blood Warm three Pints: ſpirit of Sulphur or Vitriol one dram and an half: Infuſe them ſix hours: To the ſtrained Liquor ad white Sugar half a pound: keep it in a Glaſs for Uſe*

The foreſaid Remedies or ſome of them muſt be uſed in Courſe one after another, leaſt Nature be too much accuſtomed to one, and ſo the leſs altered thereby,

When the Diſeaſe is Cured, the Patient muſt be cautious for a time leaſt new matter being collected a Relapſe ſhould happen. The Prevention therefore hereof, wil chiefely conſiſt in a ſtate or periodical Purgation, to be iterated once or twice every month; which may fitly be done by this Magiſterial Syrup following, which will do more good by altering and ſtrengthening the Liver than by purging.

Take *Juyces newly preſt and cleared by ſettling, out of Endive, Cichory, Egrimony, Fumitory, Hopps, and Bugloſs three pints: Juyce of Apples that are Odoriferous, as Permaines and Pipins, two pints, Senna ſix drams: Epithimum two ounces: Rhubarb elect, and Agarick newly trochiſcated of each one ounce: Mace and Cloves of each half a dram: Infuſe and Boyl all according to Art, till there remain fifteen ounces of the Liquor, wherein diſſolve of white Sugar the ſame Quantity and make a Syrup perfectly boyled. Of wich let the Patient take two ounces once or twice in a month, with Chick or Veal Broth, qualified with the Leaves of Borrage and Cetrach and Agrimony.*

Allo ſpring and fal 'twil be good to open a Vein.

Futthermore, to temper the fervency of the Liver, a Bath of Luke-warm Water will be good, which muſt be frequently repeated, the whol Summer through: or for more Conveniency a Tub to ſit in may ſuffice.

To the ſame intent Conſerve of Bramble-Roſe or Eglantine Roſe-Berries will be good, of an Electuary of the ſame virtue, and Lozenges made of the Species *Diatrion Santalon*, being frequently uſed.

Hereunto muſt be added a good Diet of Meats affording good Juyce and eaſily digeſted, as Partridges, Capons, Chickens and Pullets; eſpecially broths and the Juyces of fleſh preſſed forth, and ſuch like, all which muſt be taken in no great Quantity, that they may be more eaſily digeſted.

The End of the Sixteenth Book.

THE

THE SEVENTEENTH BOOK OF THE PRACTICE OF PHYSICK.

Of FEAVERS.

The PREFACE.

WE find by many *Authors great Volumns written touching the Theory and Cure of Feavers*; *in which, innumerable Controverſies, and difficult Diſputations are handled. Which as they are in the Schools very uſeful, yea, and neceſſary*; *ſo are they tedious to moſt Phyſitians, who having left the Univerſities, do give themſelves unto the Practice of Phyſick: For they deſire a ſhort and cleer Explication of the Theory of Diſeaſes, which may ſuffice to declare their Nature, Cauſes, and Signs, both Diagnoſtick and Prognoſtick, with their right Method of Curing, which is the only thing they regard. It being my endeavor in this whol Work to ſatisfie their Deſires, I have baniſhed all Controverſies, briefly expounding the deciſion of Queſtions only which ſeem moſt neceſſary for a Practitioner. This we have likewiſe done in our Doctrine of Feavers*; *and letting paſs all tedious Controverſies, which are continually handled in the Schools*, uſque ad Nauſeam; *we have declared only ſuch things as principally regard Practice. And this Book for better Methods ſake, I have diſtributed into three* Sections, *following that General Diviſion of Feavers, into Simple, Putrid, and Peſtilential. So that the firſt Section of this Book ſhall treat of Simple Feavers: The ſecond of Putrid: And the third of Peſtilential.*

SECT. I.

Of Simple Feavers.

The PREFACE.

THat *which we call a Simple Feaver, is ſubdivided into three ſorts*; *of which, one is called* Ephemera; *another* Synochus ſimplex, *or* Imputris; *and another* Hectica. *And therefore we ſhall divide this Section into three Chapters: The firſt of* Febris Ephemera: *The ſecond of* Synochus ſimplex: *The third of* Febris Hectica. *Wherein we ſhall declare their Nature and Cure.*

CHAP.

Chap. 1. *Of the Feaver* Ephemera.

THis Feaver is commonly bred of external Cauſes, and of vehement Motions of Body and Mind, as Anger, Cares, Labor Pain, Watching, and Faſting, by which the Spirits are inflamed; alſo by Sleep and Sorrow, by which the hot Humors and Vapors are kept within the Body. Alſo by being heated with the Sun, Fire, or Stove, by which means, hot air being drawn in with the breath, and received by the Pores of the Body, it doth inflame the Spirits. Alſo by Surfetting, Drunkenneſs, and eſpecially by over large taking in of Meats and Drinks, that are of an hot Nature, as Peppered Meats, and ſtroog Wines, by which more Vapors are raiſed than can exhale. Alſo by Retention of hot Excrements, and that not only of the Dung and Urine, but eſpecially of thoſe Sooty Vapors which are wont to paſs through the Pores of the Skin, if thoſe Pores be ſhut up with cold, an Alluminous Bath, and ſuch like Cauſes.

Alſo this Ephemera Feaver is bred of internal Cauſes, as from a Bubo, and other Swellings of the Thighs or Arms, eſpecially whiles they break; from an hot fiery Swelling of the Extremities of the Body, when hot Matter ſhut up together in one certain place, doth offend the Heart, not by its putrefaction, but heat alone. Alſo by ſome ſmal Obſtruction of the Veſſels, by which means the ſooty exhalations being retained do cauſe a Feaver; as is wont to happen in Diſtillations, when they ariſe in hot Natures, and a thick habit of Body.

This Feaver is known, both when ſome of the Cauſes ſpecified hath gone before; and alſo by a ſwift, frequent, and great Pulſe; breathing frequent and great, Headach and Heat; there is neither cold nor ſhaking, no ſence of wearineſs, nor want of Appetite. Yet may there be ſomtimes a ſhivering or ſhaking fit, namely, when the Feaver is occaſioned by the heat of the Sun, or by cold. Feeling the Patients Hand we find a mild and gentle heat; the Urine is concoct, like that of one in health, unleſs by ſome Obſtruction or Crudity it be changed. It is commonly terminated in the ſpace of twenty four hours, with an eaſie gentle Sweat; yet it reacheth ſomtimes unto the third day, which if it paſs it degenerates into a ſimple Synochus, a Putrid, or an Hectick Feaver.

For the Cure of this Feaver, the Ancients did chiefly uſe a bath of luke-warm Water, which they did alſo frequently uſe in their Health. But ſeeing it is in theſe times out of uſe, neither is it in practice in the Cure of theſe Feavers. Neither is it counted ſafe, in regard of a Plethorick or Cacochymical Conſtitution of Body, Putrefaction, or flux of Rheum, which may be in ſuch bodies, or may be feared wil happen.

But this Feaver is better cured by a Cooling and Moiſtening Diet; as Barley Cream, Cooling Broths, Smal Drink and Sugar, common Ptiſan Drink, or Fountain Water with Syrup of Lemmons, Maiden-hair mixed therewith.

But the Cure admits ſome variation, according to the Nature of the Cauſe. So if it ſpring from the Heat of the Sun or Air, a cooling Diet is good, and the Patient muſt be conveighed into a cool lodging; and Vinegar of Roſes muſt be applied to his Forehead, to the Temples and former part of the Head it ſelf, if there be pain, as commonly there is when the Feaver comes from the heat of the Sun.

If it come from being in the Cold, eſpecially if the Patient being hot with Exerciſe went preſently into the Cold, Sweat muſt be provoked, eſpecially towards the end of the Fit.

If it come from the Skins thickneſs and cloſing up of the pores, the ſame Cure muſt be uſed; and to both theſe Cauſes, ſmal Wine very well allaied with Water may be convenient, becauſe it opens the pores, and helps to ſweat.

If the Diſeaſe was cauſed by Labor, the Patient muſt reſt and be nouriſhed more liberally with Meat of eaſie Digeſtion. If from wearineſs, the Patient muſt be artificially rubbed. Tranquillity of mind, and cheerfulneſs, muſt be oppoſed to Anger; and Choller muſt be tempered with Meat and Drink of a cooling Nature. To Sadneſs, Recreation of the Mind is a Remedy, and the uſe of thin ſmal Wine. If the Feaver was cauſed by watching, let the Patient ſleep by application of things convenient: If by faſting, let the Patient eat cooling Meats of good Juyce: If by over eating or drinking, let the Patient abſtain from Meat and Drink, not omitting ſuch things as ſtrengthen the Stomach, both inwardly given, and outwardly applied: alſo with an Emollient and Laxative Clyſter, part of the Crudities is to be taken away. If Putrefaction be feared, Vomit may be procured, or a Purge given. If the Feaver ariſe of Obſtructions, we muſt conſider whether the Patient be Plethorick or Cacochymical, viz. Whether the whol Maſs of blood be over great, or only ſome bad Humors abound in the blood. If the Patient be too ful of blood, blood-letting muſt be advited; if evil Humors only abound, a Purge muſt be preſcribed. And if the Obſtruction wil not eaſily be removed, this Feaver changeth into ſome of the other ſorts of Feavers, whoſe Cures ſhal be deſcribed in their proper places.

Chap. 2. *Of the Feaver* Synochus Simplex.

THe Cauſes of the Feaver *Ephemera* aforeſaid, if they light upon a Plethorick Body, and thick skinned, they cauſe the Feaver *Synochus Simplex*. Yet may this Feaver ariſe only from abundance of Blood ſtuffing the Veins, and yielding many Vapors more than can breath through the pores of the Skin.

This Feaver is known by a thick and ſwelling habit of Body, the color of the Body and Face is ruddy; the Head is pained with a ſtretching or diſtending kind of pain; the Patient is ſleepy, hath a beating in the Temples, is unquiet, hath a ſtraitneſs in the Cheſt with difficulty of breathing; the Pulſe is great, even, frequent, full; the Veins ſtrut with blood, whence a ſtretching kind of wearineſs doth proceed; the Urine is thick, little differing in color from a Natural Urine, only ſomwhat redder; the heat is to ones hand mild, tempered with a ſteamy Vapor; the Feaver holds an even progreſs, for either it holds one and the ſame tenor, or it leſſens by degrees, or it encreaſeth equally, never remitting or ceaſing. Whence there are reckoned three Differences of this Feaver: For that which continually encreaſeth, is called *Epacmaſtica*; That which continually decreaſeth, is called *Paracmaſtica*; That which keeps one and the ſame tenor, is called *Homotonos*, or *Acmaſtica*. It laſts til the fourth day, and ſometimes til the ſeventh; and then it is terminated by bleeding, or ſweating; and if it be further prolonged, it degenerates into *Synochus Putrida*.

The Cure of this Feaver is performed, by blood-letting, by cooling, and by opening the pores of the Skin. *Galen* in the ninth Book of his Method, Chap. 4. cures this Feaver by two Remedies only; viz. Letting of Blood til the Patient faint away; and by giving a great quantity of Water to the Patient to drink.

Blood-letting is abſolutely neceſſary in this Diſeaſe, becauſe it is bred by fulneſs of blood; and a Vein muſt preſently be opened at what hour ſoever the Phyſitian is called, unleſs the Patients Stomach be ful of Meat, the digeſtion whereof muſt be expected for certain hours. And although Blood muſt be plentifully drawn, and *Galen* reports in the fore-cited place, That he cured the moſt of ſuch as had this Feaver, ſuddenly, by letting them bleed til they fainted away; which bleeding was attended by a looſneſs, vomiting of Choller, and plentiful Sweat. Yet in theſe daies of ours, that ſame large blood-letting is out of date; which is not without danger, ſeeing *Galen* himſelf relates in his Book of Curing by Phlebotomy, Chap. 12. That it befel three Phyſitians, while they were practiſing this large Blood-letting that inſtead of fainting away, their Patients died out-right. It is better therefore at ſeveral times to take away ſo much blood, as the Nature of the Diſeaſe doth neceſſarily require.

Before Blood-letting, if the Patient be Coſtive, or the Guts abound with Crudities, an Emollient and Laxative Clyſter muſt be given.

As for the point of cold Water, *Galen* orders it to be given in ſo great quantity, that the Patient grow pale, tremble, and be cold all over; and ſo he ſaies, it extinguiſheth the fiery heat, it ſtrengthens the ſolid parts, and drives out unprofitable Humors by ſtool, by urine, and by ſweat. But he ſaies there muſt be many Cautions in the uſe thereof; viz. That it be given in the Vigor of the Feaver, the ſigns of Concoction appearing; that the Patient have been uſed to drink cold Water in time of health, have ſtrong bowels, and full of juyce, a fleſhy and wel-ſet Body; have a conſtant and vigorous ſtrength; be not full of thick and clammy Humors, have no tumor in any bowel, nor ſtomach, throat, or ſinews weak. Otherwiſe, if theſe conditions be wanting, it is to be feared leſt the Patient fall into ſhortneſs of breath, Dropſie, Trembling, Convulſion, Lethargy, or ſome other grievous Diſeaſe. This kind of Medicine is likewiſe grown out of date in our times, ſeeing it is hard to obſerve all thoſe conditions, and ſo many dangers attend the undue uſe thereof. For it is better to uſe other more ſafe Medicines which cool the whol Body, and the Blood; as Juleps, and opening Emulſions, Epithems, Liniments, and a Diet altogether cooling. Juleps are made of the Decoction of Barley, or Sorrel, or Cichory; or with Water of Cichory, Endive, Sorrel, Lettice, adding Syrup of Juyce of Cichory, Lemmons, Pomegranates, Vinegar, &c. Whereunto alſo for the greater cooling and opening, may be added ſome drops of Spirit of Vitriol, or Sulphur. If the diſtilled Waters ſeem too crude or raw, let them boyl with a little Species Triaſantalon, or Diamargaritum frigidum.

Emulſions may be made after this manner:

Take *ſweet Almonds blanched and ſteeped in Roſe Water, one ounce: the four greater cool Seeds, and Seeds of white Poppy, of each two drams. Beat them in a Marble Mortar, powring on by little and little, a pint and an half of Barley Water. In the ſtrained Liquor diſſolve Sugar of Roſes three ounces. Make an Emulſion of Almond Milk for three Doſes. Which will be convenient, and is to be preferred before Juleps, if there be want of Reſt.*

Epithems

Epithems to be laid upon the Region of the Heart and Liver may be thus made:

Take *Water of Roſes, Bugloſs, and Lettice, of each three ounces: Vinegar of Roſes one ounce: Pouder of the Electuary Diamargaritum frigidum one dram and an half: Camphire ſix grains. Make an Epithem, lay it upon the Region of the Heart.*

Take *Water of Endive, Cichory, Sorrel, of each four ounces: Vinegar of Roſes an ounce and an half: the three Sanders two drams and an half. Make an Epithem for the Region of the Liver.*

A cooling Ointment may be anointed upon the Liver and Loyns, of Vinegar of Roſes, *Unguentum Roſatum, Unguentum Refrigerans Galeni*, or *Ceratum Santalinum*, waſhed in Vinegar, tempered with Water.

If the Diſeaſe ſeem to lengthen, after bleeding we muſt purge, leſt the wheyiſh and Chollerick Excrements putrefie, and thereby a putrid Feaver ariſe. But we muſt uſe ſuch Medicines as purge without heating and agitation of Humors, as Caſſia, Manna, Syrup of Roſes, Tamarinds, Catholicon, and ſuch like.

Ad hereunto a convenient Diet, viz. Cooling, moiſtening, and thin, of Broths made with cooling Herbs, Prunes, and ſharp Apples boyled, and Panadaes.

Let the Patients Drink be, a Decoction of Barley, Water boyled, and Water with Bread boyled in it, or mixed with Syrups of Maiden-hair, or of Pomegranates.

Chap. 3. *Of an Hectick Feaver.*

AN Hectick Feaver occupies the ſolid Parts of the Body, which conſtitute the Habit thereof, and are commonly called Spermatical, or fleſhy; in regard of which parts it is more fixed and rooted than other Feavers which are in the Spirits, or Humors. For which cauſe it is alſo termed Habitual, becauſe it is become Habitual, and can hardly be removed from its ſubject.

There are many Diviſions of this Feaver. For firſt of all, there is a Primary Hectick, which begins of it ſelf; and another Secondary, which follows other Feavers. Secondly, an Hectick Feaver is ſimple and ſolitary, or joyned with a putrid Feaver. Thirdly, ſome Hecticks begin at the Heart; others from other Parts, as the Lungs, Liver, Spleen, Kidneys, Womb, and other Parts inflamed, ulcerated, corrupted, or poſſeſſed with ſome other grievous Diſeaſe. And this Feaver though it have its habitual ſeat in the Heart, and the whol Body; yet is it commonly termed Symptomatical, becauſe of its firſt Original which it hath from other parts.

Galen makes three Degrees of an Hectick Feaver. The firſt is the very beginning of an Hectick; in which the Body is hardly extenuated; yet the moiſt Humidity of the Body is inflamed, conſumes, and dries. The ſecond comprehends the Augment, and therein is an evident extenuation of the Body, the fleſhy and fat ſubſtance of the Body perishing. The third contains the ſtate of the Diſeaſe, and its laſt age; for it never comes to a declination, becauſe therein, viz. in that degree it is incurable: for then the fibrous and membranous ſubſtance of the Body is conſumed, and the whol Body is ſo extenuated, that the Face of the Patient is like that deſcribed by *Hippocrates*, nothing but skin and bone. This laſt Degree is called *Maraſmus*, or rather *Hectica Maraſmodes*; becauſe in a true *Maraſmus*, cold is joyned with dryneſs.

The Cauſes of an Hectick Feaver are divided into an Internal, and External. To the External are referred, what ever Cauſes may occaſion any of the other Feavers, if the Action of Heating be continual and vehement, or the Patients Body be apt to entertain this kind of Feaver. Such are, the heat of the Sun, or of the Fire, vehement Exerciſe, Meats and Drinks that are heating, immoderate Evacuations, as in a Looſneſs and bloody-flux, vehement paſſions of Mind; and finally, faſting in a Chollerick Body that is hot and dry of Conſtitution; ſeeing *Galen* affirms, that thoſe Phyſitians that were wont to enjoyn their Patients to faſt three daies together, did bring Chollerick Conſtitutions by that means into burning and hectick Feavers.

The Internal Cauſes are, burning and peſtilential Feavers, which do ſpeedily conſume the moiſture of the Heart; alſo a long ſlack Feaver. Alſo ſome peculiar Diſeaſe of any of the bowels, as an Inflamation or Ulcer; or putrefaction of ſome Humor contained therein; or finally, the corruption of the Member it ſelf, which are wont to cauſe a lingring Feaver, and an hectick.

Of theſe Infirmities peculiarly poſſeſſing ſome certain Members of the Body, and cauſing an Hectick, we have Examples manifeſt enough. For, as for what concerns Inflamations, *Galen* ſaith he ſaw a woman that by reaſon of an Inflamation in her Midrif, fel into an Hectick Feaver. And we dayly obſerve in the Conſumption of the Lungs, or *Phthiſis*, a complicated Hectick Feaver. The putrefaction of Humors contained in ſome bowel, fals out in great obſtructions, or cold ſwellings. The corruption of ſome Member is often ſeen in the Lungs; ſomtimes in the Liver, in ſuch men as are given to Wine, and who uſe much hot Spices; for a certain filthy corrupt blood is bred in

their Liver, by which the ſubſtance thereof is corupted. *Fernelius* ſaies, he ſomtimes met with this kind of Feaver, and that it is a ſign thereof, when the Patients extreamly covet Wine; but abominate all kind of Fleſh.

A Simple Hectick Feaver is known, becauſe it is continual, without any fits, allwaies alike, neither encreaſing nor decreaſing, ſave that it is ſomwhat augmented, an hour two or three after Meat. The heat under the ſhort Ribs, is at firſt laying on the hand mild, afterward ſharp, biting and dry. The Pulſe, is little, frequent and quick; the ſick perceive not any Feaver, they are lazy, and loath to ſtir, and when they ſtir it is with Pain, becauſe their ſtrength is in a languiſhing condition. Their arteries are hotter than the Parts circumjacent, which may be preceived by the touch after the Patient hath waſhed in cold Water. The Urin is like that of one in health both in point of color and ſediment. In the progreſs of the Diſeaſe Oyly ſubſtance Swims on the top, and the ſediment is like to Meal, which is a ſign that the ſubſtance of the Body doth melt,

More particularly, we may know not only the ſeveral degrees of an hectick, but foreſee it before it comes after this manner.

An hectick Feaver at hand, is known, if the cauſes have preceded; viz. if there have been a burning Feaver, in a body naturally hot, dry, and of a thin contexture, in an hot ſeaſon of weather, it is to be Feared, the Patient wil fal into an hectick, and ſuch remedies as may prevent the ſame are to be uſed.

The firſt degree of an Hectick Feaver if it be Joyned with a putrid Feaver, is very hardly known: if it be alone, not very eaſily. In the firſt day, there are al the ſignes of *Febris Ephemera*. In the ſecond, the dryneſs is augmented, not the heat. On the third day it repeats not, it is not evidently augmented nor diminiſhed. And at length one hour or two after Meat, the Heat ſeems ſomwhat encreaſed.

In the ſecond degree, the Patient perceives no Feaveriſhneſs, only ſome alterations after Meals. There is a manifeſt dryneſs, a ſmaller and ſwifter Pulſe, with a certain hardneſs.

The ſigns of the third degree are moſt manifeſt; the Eyes are hollow, dry and have dry excrements in them, the bones evidently ſtick out, the lively colour of the Face is extinguiſhed: the whol Skin is dry, the Midrif vehemently contracted, ſo that the Patients ſeem to have no Guts. Their Pulſe is perceived under the ſtomach, in all extenuated perſons.

And becauſe a putrid Feaver is many times coupled with an Hectick, they are both exactly to be diſtinguiſhed, becauſe it is of great moment in regard of the Cure, which in this caſe is very much differing. Now this coupling may be known by Comparing the ſigns of an Hectick propounded, with the ſigns of a putrid Feaver, which ſhall be hereafter deſcribed in their proper place.

The firſt degree of an Hectick Feaver is eaſily Cured, the third is incurable; the ſecond is of a middle Nature, and look how much the nearer it approaches to the firſt or third by ſo much is it eaſier or harder to be Cured. An Hectick Feaver happens moſt commonly from the eighteenth yeer to the thirty five, for in that Age the Heat is moſt intenſe, and ſooneſt conſumes the Body. But they who before this Age or a little after are taken with an Hectick Feaver, do more eaſily eſcape and are ſomtimes Cured perfectly; or by a palliative Cure their life is protracted a long time, eſpecially if they be Women.

For the Cure of this Diſeaſe, we muſt firſt conſider whether it depend upon any Diſeaſe of ſome particular Part or not: for then the Cure muſt be directed to that Diſeaſe: as alſo if it be ſingle or combined or complicated with a putrid Feaver. And in this caſe the putrid Feaver is firſt to be Cured by Bleeding, Purging, and by Opening Medicaments and ſuch as hinder putrefaction: the Hectick Feaver in the mean while not being neglected. But if the Hectick Feaver be ſingle and alone the Cure muſt be effected only with cooling, moiſtening and reſtaurative things; the matter of muſt be taken from Diet and Medicine.

Diet, here, as in all Chronick Diſeaſes, can do much; nay in this Diſeaſe it can do more than all Medicines. Therefore the Patients Diet muſt be by the Phyſitian exactly ordered, viz. That it may be directed ſo as to cool and moiſten the whol Body. If therefore the Air where the Patient is, be moderately cold or temperate, let him uſe the ſame; if not, let it be corrected, ſo as that it may incline to cold and moiſt. For this Reaſon *Galen* in the 10. of his Method Chap. 8. in the Summer when the Air is hot, orders the ſick to abide in a Room under the Ground, that is very cold and blown through with the Wind, open towards the North. By which Remedy alone, we have ſeen a man extreamely conſumed, reſtored within a month. Again the heat of the Air in the Patients Chamber muſt be altered, by cold Water being powred out of one veſſel into another, by the very noiſe whereof Sleep is cauſed; alſo by moiſtening the Pavement often with cold Water Sprinckled thereupon, or by cooling Hearbs, ofttentimes freſh ſtrowed therein: and by forbidding any number of people to come in, which among other things, doth likewiſe heat the Chamber. And *Galen* gives order that when the Air is coldeſt it ſhould be received by the ſick namly by drawing it in by the mouth, becauſe it exceedingly cools the heat of the heart; but it is not good for the Body of the ſick, leaſt it ſtop the pores of the Skin and hinder the breathing forth of excrements.

excrements. But *Galen* affirmes that the breathing in of the cool Air doth the Patients more good, than they can receive hurt, by the ſtopping of their pores, if that ſhould happen: but that may be hindered by warm cloathing of the Body. Yet it is to be obſerved, that if the Hectick Feaver ariſe from an Ulcer in the Lungs; that the cold Air is not good in that reſpect, but rather temperate, a little inclining to heat, and dry. For which Cauſe *Galen* ſent thoſe that had conſumptions of their Lungs to the Mount Tabias where the Air was more dry than ordinary.

The Meates of the Patient muſt be cooling and moiſtening and quickly nourithing, as Chicken-Broaths and Broaths of Hens, Capons, Veal, Kid, Wether Mutton; Yolks of Eggs, with French Barley, Lettice, Purſelane, Endive, Borrage, Sorrel; The fleſh of Calves, Kidds, Piggs, Pheaſants, Partriches, Young Hares and ſuch like. Panadaes, Barly Cream, Water-Gruel, Rice-Pottage, with Sugar and a few Almonds or rather with the greater cooling Seeds. Boyled Meats are fitter than Roaſted which are ſooner Inflamed and turned to Choller; the boyled do more moiſten. But if the Patient be more delighted with Roaſt-Meats; they muſt be very moderately Roaſted, and tempered afterwards with Juyce of Lemmons, Citrons, Orenges, or of unripe Grapes, without Salt.

Fiſhes may be eaten, becauſe they cool and moiſten but ſuch as are taken out of ſtony places are to be preferred, and ſuch as have a tender friable fleſh, haunting the Sea or Pure Waters.

Among fruits, Apples are commended becauſe they breed cold Blood. alſo Pears are convenient, Damask Prunes, and French Prunes boiled in Sugar; alſo Raiſons cleanſed, which being prepared after this following manner, do nouriſh the body without heating.

Take *Raiſons of the Sun cleanſed one pound: Let them be tempered in endive, bugloſs and Roſe-Water and very diligently waſhed, that the Laxative power may be taken away. Afterward let them be lightly boyled in the ſame Waters, adding a little Sugar, wherewith let them be preſerved for uſe: let the Patients take of them in the mornings and allwaies after Meat.*

And becauſe Perſons that are Hectical, have the Feaveriſh heat fixed in the ſolid Parts of their bodies, by which the Nutriment is eaſily and ſuddainly conſumed and diſſipated: therefore Practitioners are wont to preſcribe unto them, Meats ſolid and of a clammy ſubſtance, as the Feet of Living Creatures, The fleſh of Snails, Crabbs, Tortoiſes, and of Froggs. For ſeeing theſe ſorts, of fleſh are moiſt and clammy they eaſily adhere unto ſuch Parts of the body as want nouriſhments neither are they eaſily conſumed by the Feaveriſh heat: and ſo they hinder the drying up of the ſolid Parts of the body. Yet ſome do reject theſe Meats, becauſe hard of digeſtion and troubleſom to the ſtomach. But this difference is thus reconciled. In the beginning of an Hectick, while the digeſtive faculty is yet ſtrong, theſe thick and clammy nutriments are convenient: but in a confirmed Hectick they are not to be given becauſe hard to digeſt. Add hereunto, that they may be ſo prepared and qualified, as that they may eaſily be digeſted; as by being boyled to a gelly, or giving only what is ſtrained out of them being beaten into a maſh. Among other things the land Tortoiſes are mightily praiſed for an Hectick, not only for a ſingle Hectick, but when Joyned with a Conſumption; and they are prepared divers waies. For either they are boyled in Water till they are diſſolved then caſting away the ſhells, the fleſh is ſeparated from the bones and boyled again with Cichory, Sorrel, Borrage, French barley, and prunes in a ſingle Hectick: but in an Hectick of the Lungs it is Boiled with Bramble Leaves, Purſlain, and Plantan. Let the Patient drink the broath and eat the Fleſh twenty daies together. Or the Juyce is preſſed out of the Fleſh being beaten. Or little Loaves are made of the Fleſh of the Tortoiſes boiled in Barley Water, with ſweet Almonds, pine kernells, the cooling Seeds and Sugar. Which are lightly baked in an Oven and are given the Patient at Dinner and Supper. They may be thus made.

Take *of the Fleſh of Land-Tortoiſe Boyled in Barly-Water four ounces: ſweet Almonds ſteeped in Roſe-water ſix ounces: Pine-Kernells ſo ſteeped two ounces, of the four greater cool Seeds, of each one ounce: Annis Seed not Poudered, but lightly baked in an Oven one dram and an half: Cinnamon two drams: Sugar diſſolved in Roſe-Water, to the Quantity of all the reſt. Make thereof little Morſells.*

Inſtead of Tortoiſes the Fleſh of a Capon is uſed and of a Partridg, and March-Pane is made thereof, good to reſtore Hectick Perſons, after this Manner.

Take *Pulpe of a Capon and Boyled Partridg of each three ounces, ſweet Almonds ſteeped in Roſe-Water four ounces: Pine-Kernells one ounce and an half: Seeds of white Poppy two drams: Gum Arabick and Traganth of each one dram and an half: Pearled Sugar Cakes two ounces: with a little Roſe-Water make a March-pane, and gild it with Gold.*

To ſuch as have weak ſtomachs, Gellies, broaths, and Reſtorative ſtilled Waters are given. A Gelly may be made after this Manner.

Take *a choiſe Capon, a Knuckle of Veal, or a Wethers Thigh, two Calves Feet, or ſix Wethers Feet. Boyl all in fountain Water, till it be ſufficiently waſted. Strain and ſqueeſe out the Juyce and Broath and take off the Fat. In the ſtrained Liquor diſſolve a pound of white Sugar, ſix whites of Eggs, a little ſaffron or Cinnamon. Stir them together let them Boyl lightly, and*

ſtrain

their Liver, by which the ſubſtance thereof is corupted. *Fernelius* ſaies, he ſomtimes met with this kind of Feaver, and that it is a ſign thereof, when the Patients extreamly covet Wine; but abominate all kind of Fleſh.

A Simple Hectick Feaver is known, becauſe it is continual, without any fits, allwaies alike, neither encreaſing nor decreaſing, ſave that it is ſomwhat augmented, an hour two or three after Meat. The heat under the ſhort Ribs, is at firſt laying on the hand mild, afterward ſharp, biting and dry. The Pulſe, is little, frequent and quick; the ſick perceive not any Feaver, they are lazy, and loath to ſtir, and when they ſtir it is with Pain, becauſe their ſtrength is in a languiſhing condition. Their arteries are hotter than the Parts circumjacent, which may be preceived by the touch after the Patient hath waſhed in cold Water. The Urin is like that of one in health both in point of color and ſediment. In the progreſs of the Diſeaſe Oyly ſubſtance Swims on the top, and the ſediment is like to Meal, which is a ſign that the ſubſtance of the Body doth melt,

More particularly, we may know not only the ſeveral degrees of an hectick, but foreſee it before it comes after this manner.

An hectick Feaver at hand, is known, if the cauſes have preceded; viz. if there have been a burning Feaver, in a body naturally hot, dry, and of a thin contexture, in an hot ſeaſon of weather, it is to be Feared, the Patient wil fal into an hectick, and ſuch remedies as may prevent the ſame are to be uſed.

The firſt degree of an Hectick Feaver if it be Joyned with a putrid Feaver, is very hardly known: if it be alone, not very eaſily. In the firſt day, there are al the ſignes of *Febris Ephemera*. In the ſecond, the dryneſs is augmented, not the heat. On the third day it repeats not, it is not evidently augmented nor diminiſhed. And at length one hour or two after Meat, the Heat ſeems ſomwhat encreaſed.

In the ſecond degree, the Patient perceives no Feaveriſhneſs, only ſome alterations after Meals. There is a manifeſt dryneſs, a ſmaller and ſwifter Pulſe, with a certain hardneſs.

The ſigns of the third degree are moſt manifeſt; the Eyes are hollow, dry and have dry excrements in them, the bones evidently ſtick out, the lively colour of the Face is extinguiſhed: the whol Skin is dry, the Midrif vehemently contracted, ſo that the Patients ſeem to have no Guts. Their Pulſe is perceived under the ſtomach, in all extenuated perſons.

And becauſe a putrid Feaver is many times coupled with an Hectick, they are both exactly to be diſtinguiſhed, becauſe it is of great moment in regard of the Cure, which in this caſe is very much differing. Now this coupling may be known by Comparing the ſigns of an Hectick propounded, with the ſigns of a putrid Feaver, which ſhall be hereafter deſcribed in their proper place.

The firſt degree of an Hectick Feaver is eaſily Cured, the third is incurable; the ſecond is of a middle Nature, and look how much the nearer it approaches to the firſt or third by ſo much is it eaſier or harder to be Cured. An Hectick Feaver happens moſt commonly from the eighteenth yeer to the thirty five, for in that Age the Heat is moſt intenſe, and ſooneſt conſumes the Body. But they who before this Age or a little after are taken with an Hectick Feaver, do more eaſily eſcape and are ſomtimes Cured perfectly; or by a palliative Cure their life is protracted a long time, eſpecially if they be Women.

For the Cure of this Diſeaſe, we muſt firſt conſider whether it depend upon any Diſeaſe of ſome particular Part or not: for then the Cure muſt be directed to that Diſeaſe: as alſo if it be ſingle or combined or complicated with a putrid Feaver. And in this caſe the putrid Feaver is firſt to be Cured by Bleeding, Purging, and by Opening Medicaments and ſuch as hinder putrefaction: the Hectick Feaver in the mean while not being neglected. But if the Hectick Feaver be ſingle and alone the Cure muſt be effected only with cooling, moiſtening and reſtaurative things; the matter of muſt be taken from Diet and Medicine.

Diet, here, as in all Chronick Diſeaſes, can do much; nay in this Diſeaſe it can do more than all Medicines. Therefore the Patients Diet muſt be by the Phyſitian exactly ordered, viz. That it may be directed to as to cool and moiſten the whol Body. If therefore the Air where the Patient is, be moderately cold or temperate, let him uſe the ſame; if not, let it be corrected, ſo as that it may incline to cold and moiſt. For this Reaſon *Galen* in the 10. of his Method Chap. 8. in the Summer when the Air is hot, orders the ſick to abide in a Room under the Ground, that is very cold and blown through with the Wind, open towards the North. By which Remedy alone, we have ſeen a man extreamely conſumed, reſtored within a month. Again the heat of the Air in the Patients Chamber muſt be altered, by cold Water being powred out of one veſſel into another, by the very noiſe whereof Sleep is cauſed; alſo by moiſtening the Pavement often with cold Water Sprinckled thereupon, or by cooling Hearbs, oftentimes freſh ſtrowed therein: and by forbidding any number of people to come in, which among other things, doth likewiſe heat the Chamber. And *Galen* gives order that when the Air is coldeſt it ſhould be received by the ſick namly by drawing it in by the mouth, becauſe it exceedingly cools the heat of the heart; but it is not good for the Body of the ſick, leaſt it ſtop the pores of the Skin and hinder the breathing forth of excrements.

excrements. But *Galen* affirmes that the breathing in of the cool Air doth the Patients more good, than they can receive hurt, by the ſtopping of their pores, if that ſhould happen: but that may be hindered by warm cloathing of the Body. Yet it is to be obſerved, that if the Hectick Feaver ariſe from an Ulcer in the Lungs; that the cold Air is not good in that reſpect, but rather temperate, a little inclining to heat, and dry. For which Cauſe *Galen* ſent thoſe that had conſumptions of their Lungs to the Mount Tabias where the Air was more dry than ordinary.

The Meates of the Patient muſt be cooling and moiſtening and quickly nourithing, as Chicken-Broaths and Broaths of Hens, Capons, Veal, Kid, Wether Mutton; Yolks of Eggs, with French Barley, Lettice, Purſelane, Endive, Borrage, Sorrel; The fleſh of Calves, Kidds, Piggs, Pheaſants, Partriches, Young Hares and ſuch like. Panadaes, Barly Cream, Water-Gruel, Rice-Pottage, with Sugar and a few Almonds or rather with the greateſt cooling Seeds. Boyled Meats are fitter than Roaſted which are ſooner Inflamed and turned to Choller; the boyled do more moiſten. But if the Patient be more delighted with Roaſt-Meats; they muſt be very moderately Roaſted, and tempered afterwards with Juyce of Lemmons, Cittons, Oranges, or of unripe Grapes, without Salt.

Fiſhes may be eaten, becauſe they cool and moiſten but ſuch as are taken out of ſtony places are to be preferred, and ſuch as have a tender friable fleſh, haunting the Sea or Pure Waters.

Among fruits, Apples are commended becauſe they breed cold Blood. alſo Pears are convenient, Damaſk Prunes, and French Prunes boiled in Sugar; alſo Raiſons cleanſed, which being prepared after this following manner, do nouriſh the body without heating.

Take *Raiſons of the Sun cleanſed one pound: Let them be tempered in endive, bugloſs and Roſe-Water and very diligently waſhed, that the Laxative power may be taken away. Afterward let them be lightly boyled in the ſame Waters, adding a little Sugar, wherewith let them be preſerved for uſe: let the Patients take of them in the mornings and allwaies after Meat.*

And becauſe Perſons that are Hectical, have the Feaveriſh heat fixed in the ſolid Parts of their bodies, by which the Nutriment is eaſily and ſuddainly conſumed and diſſipated: therefore Practitioners are wont to preſcribe unto them, Meats ſolid and of a clammy ſubſtance, as the Feet of Living Creatures, The fleſh of Snails, Crabbs, Tortoiſes, and of Froggs. For ſeeing theſe ſorts, of fleſh are moiſt and clammy they eaſily adhere unto ſuch Parts of the body as want nouriſhments neither are they eaſily conſumed by the Feaveriſh heat: and ſo they hinder the drying up of the ſolid Parts of the body. Yet ſome do reject theſe Meats, becauſe hard of digeſtion and troubleſom to the ſtomach. But this difference is thus reconciled. In the beginning of an Hectick, while the digeſtive faculty is yet ſtrong, theſe thick and clammy nutriments are convenient: but in a confirmed Hectick they are not to be given becauſe hard to digeſt. Add hereunto, that they may be ſo prepared and qualified, as that they may eaſily be digeſted; as by being boyled to a gelly, or giving only what is ſtrained out of them being beaten into a maſh. Among other things the land Tortoiſes are mightily praiſed for an Hectick, not only for a ſingle Hectick, but when Joyned with a Conſumption; and they are prepared divers waies. For either they are boyled in Water till they are diſſolved then caſting away the ſhells, the fleſh is ſeparated from the bones and boyled again with Cichory, Sorrel, Borrage, French barley, and prunes in a ſingle Hectick: but in an Hectick of the Lungs it is Boiled with Bramble Leaves, Purſlain, and Plantan. Let the Patient drink the broath and eat the Fleſh twenty daies together. Or the Juyce is preſſed out of the Fleſh being beaten. Or little Loaves are made of the Fleſh of the Tortoiſes boiled in Barley Water, with ſweet Almonds, pine kernells, the cooling Seeds and Sugar. Which are lightly baked in an Oven and are given the Patient at Dinner and Supper. They may be thus made.

Take *of the Fleſh of Land-Tortoiſe Boyled in Barly-Water four ounces: ſweet Almonds ſteeped in Roſe-water ſix ounces: Pine-Kernells ſo ſteeped two ounces, of the four greater cool Seeds, of each one ounce: Annis Seed not Poudered, but lightly baked in an Oven one dram and an half: Cinnamon two drams: Sugar diſſolved in Roſe-Water, to the Quantity of all the reſt. Make thereof little Morſells.*

Inſtead of Tortoiſes the Fleſh of a Capon is uſed and of a Partridg, and March-Pane is made thereof, good to reſtore Hectick Perſons, after this Manner.

Take *Pulpe of a Capon and Boyled Partridg of each three ounces, ſweet Almonds ſteeped in Roſe-Water four ounces: Pine-Kernells one ounce and an half: Seeds of white Poppy two drams: Gum Arabick and Traganth of each one dram and an half: Pearled Sugar Cakes two ounces: with a little Roſe-Water make a March-pane, and gild it with Gold.*

To ſuch as have weak ſtomachs, Gellies, broaths, and Reſtorative ſtilled Waters are given. A Gelly may be made after this Manner.

Take *a choiſe Capon, a Knuckle of Veal, or a Wethers Thigh, two Calves Feet, or ſix Wethers Feet. Boyl all in fountan Water, till it be ſufficiently waſted. Strain and ſqueeſe out the Juyce and Broath and take off the Fat. In the ſtrained Liquor diſſolve a pound of white Sugar, ſix whites of Eggs, a little ſaffron or Cinnamon. Stir them together let them Boyl lightly, and*

ſtrain

ſtrain them through an Hippocras bag twice or thrice. At length put it into Porrengers, or other Veſſels in which it will become a Gelly. If the taſt of Saffron or Ginnamon be diſpleaſing, or you deſire to have your Gelly more cooling, add inſtead thereof the Juyce of a Lemmon, or of one Citron.

Reſtorative Broths may be made divers waies; this is far the beſt of all, which follows:

Take *a well fleſhed Capon; pull, draw, and cut him in pieces, and take away the fat and skin: add, if you pleaſe, ſome Veal, or Weather Mutton cut into bits, and freed from the Fat. Put them into a ſtone Veſſel well glazed; in which, about the middle, there muſt be a grate of Wood, or other materials, on which the pieces aforeſaid muſt be ſo laied that they may not come at the bottom. Then cover the Pipkin with its cover, and cloſe it up well with paſte, and let it ſtand in boyling* Balneo Mariæ *five hours. There will drop into the bottom a cleer tranſparent Liquor; of which three or four ſpoonfuls, may be given in Broth, or by it ſelf, three or four times in a day.*

Such Diſtillations of Fleſh by Deſcent, are very convenient for Hectical Perſons; but thoſe that are made by Aſcent, although they refreſh the Spirits, yet do they very little nouriſh; neither do they reſtore the ſolid ſubſtance of the Body.

Let the Patients Drink be, Barley Water, either by it ſelf, or with Syrup of Vinegar, or Pomegranates mingled therewith, or Water in which a piece of Bread hath been boyled, ſweetened with a little Sugar. But if the Patients Stomach be very weak, weak Wine wel allaied with Water may be allowed, which helps the concoction and diſtribution of Nouriſhment. *Galen*, Meth. 10. Chap. 5, 6. gives cold Water, with which he boaſts he had ſaved many from the Maraſmus. Howbeit, great Caution is to be uſed in the giving thereof; for when the Body is very much pined away, it is to be feared leſt the ſmal heat of the Patient ſhould be wholly extinguiſhed. And therefore it is only good when an Hectick is feared, or in the beginning thereof, and to ſuch as are accuſtomed thereunto, and while the Body is yet ſufficiently ful of blood.

Motion of the Body is not good, but the Patient muſt be enjoyned to reſt; howbeit before Meat, if ſtrength wil bear it, ſome light exercise wil be good; or inſtead thereof, a few light frictions or rubbings may ſerve turn, eſpecially preſently after ſleep, beginning at the inferior parts of the Body; for they provoke the Humors outward. And the Patient muſt be rubbed no longer than til a light redneſs begin to appear upon the Skin; for to rub longer would dry the Body. Carnal Embracements muſt be above al things avoided, which do very much conſume the ſubſtance of the Body.

Let the Patient ſleep, neither very long, nor very little. For long ſleep encreaſeth the heat of the Bowels, by the retiring of the Natural warmth inwards: too ſhort ſleep dries the body more. But there is leſs inconvenience from ſleeping a little over largely, than too ſcantily, becauſe ſleep doth exceedingly moiſten, which in this Feaver is very much to be deſired. Let the Patient ſleep in a ſoft bed, and that a Flock-bed, not a Feather-bed, and large enough. Let the Patients Linnen be often changed, which muſt be ſprinkled with Roſe-Water before they be put on.

If there be Coſtiveneſs, the Belly muſt be provoked with a Suppoſitory, or a Clyſter of Chicken Broth, with Barley, Mallows, and Violet Leaves boyled in it; adding Caſſia, Honey of Roſes, Butter, and the Yolks of Eggs.

Finally, The Mind muſt be preſerved in peace and cheerfulneſs, avoiding vehement Perturbations, as Anger, Sadneſs, Fear.

As for point of Meditaments fit for Hectick Perſons, they are Internal or External. Among Internal, in the firſt place Purgers muſt be conſidered; and becauſe addition is more neceſſary than detraction in this Diſeaſe, Purgers can hardly be convenient, unleſs a putrid Feaver be joyned with the Hectick. Yet if the firſt Region of the Body ſeem filled with Excrements, becauſe of Crudities ariſing from a weak Stomach, Purgation may ſafely be uſed with Caſſia, Manna, or Syrup of Roſes. May verily, if ſtrength be not deficient, the Infuſion of Rhubarb may be given, with a Decoction of Prunes, Tamarinds, Myrobalans, Buglos, and Violets.

But Altering Medicines may be reduced into the form of Juleps, Broths, and Emulſions, after this manner:

Take *Waters of Endive, Lettice, Sorrel, of each four ounces: Syrup of Violets, Water Lillies, Apples, of each one ounce. Mix all into a Julep for three Doſes, to be taken at ſeveral times in one day, and to be continued for divers daies together.* Or,

Take *whol Barley one pugil: Leaves of Endive, Cichory, Lettice, Pimpernel, of each one handful: Flowers of Borrage, Buglos, Violets, and Water-lillies, of each one Pugil: Damask Prunes three pair: Boyl all to a pint and an half. In the ſtrained Liquor, diſſolve ſimple Syrup of Cichory, and of Water-lillies, of each two ounces. Make of all a Julep for four Doſes.*

Of the ſame Simples with a Chicken or a Pullet, may be made a Broth for the ſame uſe. Or,

Take *Roots of China one dram and an half: Entire Barley two pugils: the four greater cool Seeds half an ounce. Beat all together, and therewith fill the Belly of a Capon, or yong Pullet, and make Broth; to which add Sugar of Roſes half an ounce. Let the Patient take of this broth a long time together. It reſtores fleſh and fatneſs.*

Take

Take *ſweet Almonds blanched and infuſed in cold Water one ounce: the four greater cool Seeds, and of white Poppy ſeeds, of each one dram. Beat all together in a marble mortar, powring on by little and little a pint of barley Water. In the ſtrained Liquor diſſolve Sugar Cakes made with Pearl four ounces. Make hereof an Almond* Milk *for three Doſes.*

If we be minded more powerfully to cool, we muſt add to every Doſe of the Julep or Emulſion, two ſcruples or one dram of Sal prunella.

In the uſe of Refrigerating things, this is to be obſerved, That we uſe not the more powerful all of a ſudden, or frequently; for they might extinguiſh a weak heat. But it is better to cool by little and little, than ſuddenly. And Moiſteners are alwaies ſafer than Coolers, becauſe they exercite their Operations ſlowly.

While the foreſaid Remedies are uſing, we muſt be careful to ſtrengthen the Bowels, by a convenient Opiate, which may be made after this manner:

Take *Conſerve of the flowers of Borrage, Bugloſs, and Violets, of each one ounce: Conſerve of the flowers of Water-lilly half an ounce: Powder of the Electuary* Diamargaritum frigidum *four ſcruples: Shavings of Ivory, Bones found in hearts of Stags, of each half a dram: Pearls prepared, and Coral prepared, of each one ſcruple: three Leaves of Beaten Gold: With Syrup of Apples, make of all an Electuary.*

In extream conſumption of the Fleſh, nouriſhing Clyſters are frequently to be injected, of the Broth of a Chicken, or Weathers Head, with Sugar and the Yolks of Eggs. But their Quantity muſt be ſmal, or elſe compreſſing the Guts, they wil provoke the Expulſive Faculty to drive them out.

But among other Medicines moſt convenient for Hectical Perſons, Milk is a principal one, it being endued with all the qualities which can be deſired in this Diſeaſe, namely, of cooling and moſtening; it nouriſheth much, and is eaſily diſtributed into all parts of the Body. In the uſe whereof, the ſame Cautions muſt be obſerved, which were ſet down in the Cure of a Conſumption.

Among External Remedies, a Bath of freſh Water is principal; for it powerfully cools and moiſtens, and relaxeth the external Parts that they may more readily receive Nourithment. Among the Ancients the uſe of Baths was moſt frequent, and there were four parts of the bathing place: In the firſt ſomwhat warm, they put off their Cloaths: In the ſecond there was a bathing Veſſel of hot Water: In the third a bathing Veſſel of cold Water: In the fourth the Sweatineſs and Moiſture was dried off. *Galen* in 10. Meth. Chap. 19. doth thus moderate the uſe of theſe parts of the Bath; That the Patients ſhould be brought into the firſt part of the Bath, which was heated with the vapor of the bath, that the pores of their bodies might be opened; then being anointed with freſh ſweet Oyl, they were to be plunged in the hot Water to moiſten their bodies; and then they were of a ſudden to be thrown into the cold Water, quickly to be taken out again, and to be dried and anointed with Oyl, that the pores being cloſed, the moiſture may be received from the hot bath, might be retained. But inaſmuch as the Induſtrious Diligence of the Ancients in the uſe of bathing, is long ſince out of uſe; and our Practitioners have likewiſe left this Method of bathing Hectical perſons, which they judg unſafe, ſeeing it is to be feared, leſt by the ſudden receiving of the cold Water, the Patients Body ſhould be hurt, and the Patient not be able to endure the ſudden ſence of contrary qualities. So that our Practitioners do more adviſedly, and more compendiouſly, whiles they conveigh the Patients into a bath of Water moderately hot, in the morning, after a ſtool procured by Nature, or by Art, and two or three hours after they have eaten ſome broth, or milk, or the Yolks of Eggs; wherein they abide ſo long, till it grow luke-warm of it ſelf, and at laſt cold. For ſeeing *Galen* conceives the uſe of a cold bath after an hot to be ſo neceſſary, that without it the hot bath doth no good: the uſe of a cold bath is ſupplied, if the Patients ſtay ſo long in the bath til of it ſelf it grow luke-warm, and cold. But this Caution is to be obſerved, That whereas a three-fold quality may be had in the ſame bath, the Patient muſt abide in the hot a little while, in the luke-warm longer, in the cold leaſt of al.

And although the Ancients were wont to make their baths of ſimple Water; yet is it good to make them more moiſtening by boyling therein Emollient and moiſtening Herbs, as Mallows, Marſh-mallows, Violet Leaves, &c. or with barley and beaten Almonds, eſpecially in the Summer, becauſe a bath of Decoction of Herbs is ſooner corrupted. After bathing, the ſick is ſoftly to be wiped with hot Cloaths: then to be anointed with Oyl of Violets, ſweet Almonds, with freſh Butter; and after ſome time of reſt, let the Patient eat ſome broth, or other food.

A bath of Water and Oyl, is exceedingly cried up by *Zacutus Luſitanus*, in the 35. Obſervation of his third Book of wonderful Cures; wherewith he ſaies a yong woman was cured, whom a bath of ſimple Water and Goats Milk could not help. The reaſon of which great good, he renders to be this; Becauſe a bath made of freſh Water, with ſtore of Oyl in it, doth ſoften the diſtended ſtiff parts, doth moiſten the dry and withered: and by opening the pores obſtructed, and through dryneſs contracted, it draws the Nouriſhment to the outmoſt, and moſt diſtant parts of the body.

When

When the Patient cannot use baths, apply an Epithem to the Heart and Liver, in this manner compounded.

Take *Waters of Roses, Water-lillies, and Purslain, of each three ounces: Juyce of Pome-Granates an ounce: Powder of* Diamargaritum frigidum *two drams: Bones out of the Stags Heart one scruple: Camphire four grains: Make an Epithem for the Heart.*

Take *Waters of Endive, Lettice, Cichory, of each three ounces: Vinegar of Roses one ounce: the three Sanders, of each two scruples: Burnt Ivory one scruple. Make an Epithem to be applied to the Liver.*

Also the Region of the Liver may be anointed with Oyntment of Roses, or *Ceratum Santalinum.* But Oyls and Unguents must be sparingly used, because they may sometimes encrease the Feaver.

Among the Symptomes which are wont to come upon this Disease, the chief is a Looseness, which is wont to bring the Patients to their death. This is to be bridled with a Decoction of French-barley toasted, for their ordinary drink, Syrup of Quinces, dried Roses, Chalybeate Milk, Rice boyled in Milk, and such like.

SECT. II.

Of Putrid Feavers.

The PREFACE.

Putrid Feavers are divided, into Continual, or intermitting. The continual Putrid Feavers are generated when a putrid Vapor, or a preternatural Heat, which ariseth from putrefied Humors, doth perpetually afflict the Heart, and stirs up therein a continual Heat; from whence likewise is perpetually diffused a Feaverish Heat into the whol body. But the intermitting Feavers are caused, when the said Vapors are carried unto the Heart, only at certain distances of time. Continual Feavers are again divided into Essential, and Primary, or Symptomatical. Those are called Essential and Primary, which spring from a putrefaction inflamed in the common Veins, and not in any particular part of the Body. Those are Symptomatical that arise from the putrefaction or suppuration of som particular part inflamed; out of which part by communion of the Vessels, a putrid vapor may continually be carried unto the Heart: Such feavers are seen in the Pleurisie, Inflamation of the Lungs, Inflamation of the Liver, and in the Inflamation of other Internal Parts. Again, the Primary continual Feavers are two-fold; for some are without any Exacerbation or Fits, and remission, but continue alike from the beginning to the end, and are called Sunochi, *or* Continentes. *But others have manifest Exacerbations or fits, and remissions, and are called* Sunecheis, *or* Continuæ, *by the name of the kind. And these again from the difference of their Exacerbations or fits, and remissions, are divided into three sorts. For some are called continual Tertians, which have their Exacerbations or fits every third day; others continual Quotidians that are exasperated every day; others continual Quartans, that are exasperated every fourth day. The intermitting Feavers or Agues, are likewise divided into Tertians, Quotidians, and Quartans, according as their Fits are wont to return every third, every fourth, or every day. There are other Differences of Feavers likewise, which are either Accidental, or arise from the Composition of those aforesaid; all which we shall Particularly and briefly Explain.*

Chap. 1. *Of Continual Putrid Feavers.*

ALthough there are divers sorts of a continual putrid Feaver, yet have I determined to describe the Cure of them all together, because in a manner the same Remedies are suitable to all, of which some differ only in more or less, and are accordingly to be varied; which depends more upon the Judgment of a Physitian, and his Dexterity attained by Practice, than upon particular Precepts, Yet shall I as neer as I can, observe what is peculiar to every sort of Feaver, in its peculiar place.

Feavers Putrid, Continual, and Primary, or Essential, are wont to be bred of the putrefaction of Humors, which are contained in the Veins and greater Arteries: And according to the various Nature of putrefying Humors, several Species do arise.

Synochus

Synochus Putrida is diſtinguiſhed with no fits or exacerbations, but its whol time is taken up as it were with one fit, which reaches from the beginning to the end of the Diſeaſe and of this as of a ſimple Feaver there are made three differences. The firſt whereof is, that which continues all alike during from the beginning to the end. The ſecond is that which encreaſes by degrees. The third is that which decreaſes by little and little. The firſt is named *Acmaſtica* or *Homotones*, and it happens when the whol courſe of the Diſeaſe the manner of putrefaction is one and the ſame. The ſecond is called *Epacmaſtica*, when more putrefies than is diſſipated. The third is called *Paracmaſtica* when leſs putrefies than is diſſipated. Yet although theſe kind of Feavers do perpetually increaſe or decreaſe, or keep the ſame Tenor: yet doth not this hinder but that they have four times, if they terminate in health; but ſome have them longer, others ſhorter, if they be conſidered according to the vehemency of the *Symptomes*. So that which is called *Homotonos*, hath a very breif beginning and Augmentation, but a long ſtate. The Epacmaſtick hath a long augment: the paracmaſtick a long decumation, but the other times do quickly paſs away. Yet we muſt know, that the times of Putrid Feavers are two wayes conſidered; either with reſpect to the Symptomes, or with reſpect of coction and crudity; which two in other Feavers do commonly coincide or happen at one and the ſame time: But in theſe continent Feavers called *Synochoi* it is not ſo. For their times ought not ſo much to be defined by the increaſe and decreaſe of the Symptomes, as by the ſigns of Concoction or non Concoctions, which appear cheifly in the Urines.

Now *Galen* propounds two ſorts of this continent Feaver called *Synochus*: one ſpringing from Blood putrefying, of which he treates in the ſecond of his Method Chap. 7. and 9. as alſo in the 9. of his Method Chap. 3. and 5 another ariſing of choller putrefying in the greater veſſells, of the kind of burning Feavers, which he explaines in his ſecond of the Differences of Feavers and the ſecond of Criſes Chap. 6. The firſt is called *Synochus Sanguinea*; and the other *Synochus Biliosa*. For although the whol Maſs of Humors contained in the Veins do go under the name of blood, yet do we acknowledg four Parts thereof, of which the more temperate is ſpecialy called Blood; the hotter Part Choller; the rawer and colder, flegm; and the thicker and more dreggy Melancholy. So then; if that more temperate Part, which is more eſpecially called Blood, do ſurmount the reſt in quantity, and the whol Maſs putrefy, that Feaver is cauſed which we term *Synochus Sanguinea*. But if the thinner and hotter Part of the Blood, which is of the nature of Yellow Choller, do exceed the reſt, and putrefy, that Feaver is cauſed, which we term *Synochus Biliosa*.

Synochus Putrida is ingendred by the ſame cauſes which are wont to produce the ſimple *Synochus*. And ſo not only the ſhutting the pores of the Skin, but the obſtruction of the veſſells alſo, by reaſon of much Blood and thick and clammy Humors, is wont to cauſe this Feaver. For ſeeing by ſuch like obſtructions the Tranſpiration of Fuliginous Vapours is hindered, putrefaction is bred in the blood redounding within the Veins.

A continual tertian, which every third day doth more afflict the Patient than ordinary, takes its Riſe from bad and Chollerick Blood putrefying in the *Vena Cava*. And the Cauſes thereof are all ſuch things as multiply this Humor in the Body, as an hot and dry diſtemper of the Liver, Meats hot and dry, Youthfull Age; faſting or very ſpare Diet; vehement and frequent exercile; hot and dry conſtitution of the Air; over great watchings and ſuch like.

A continual Quotidian (which the Barbarous writers term *Latica* or lurking, becauſe it hath a certain, hidden and concealed heat) is produced by flegmatick blood putrefying within the Veins; & therefore it hath its exacerbations or fits every day. It is wont to aſſail flegmatick bodies, as of Infants and Children and old men, as alſo of ſuch as are of a fat and corpulent conſtitution given to idleneſs and cramming of bellycheat, and inhabiting moiſt places. This kind of Feaver happens but ſeldom becauſe flegm is hardly putrefied.

A continual Quartan, is that which is exaſperated every fourth day, being Cauſed of Melancholly Blood putrefying in the branches of *Vena Cava*. And all things may Cauſe this Feaver, which are apt to breed Melancholly Blood and to cauſe the ſame to putrefy. Howbeit this kind of Feaver is moſt rarely obſerved.

The accidental differences of Feavers are taken from their evil Symptomes, which are wont to be complicated with the Eſſentiall, and from them they are named. Among theſe are wont to be reckoned *Febris Ardens* that is the Burning Feaver, *Colliquans* the *Melter* or diſſolving Feaver; the Shivering Feaver *Horrifica*, *Aſſodes* the tumbling, toſſing and vomiting Feaver; *Hydros* the ſweating Feaver; *Syncopalis* the ſwouning Feaver *Epiala* the Feaver which makes the Patient hot and cold at one and the ſame time.

Cauſus or *Febris Ardens* the burning Feaver, is properly that, which is perpetually accompanied with theſe two ſymptomes viz. an ardent burning heat, and an unquenchable thirſt though the Patient drink never ſo much. *Galen.* 3. Epidem. Com. 3. text 34. It is divided by the ſame *Galen* in *Com.* 4. *de Vict: Rat:* in *acutis text.* 13. into a Ligitimate or baſtard burning Feaver. The Legitimate or exquiſite burning Feaver is that, which hath the two ſymptomes afore-

foresaid, allwaies, and evidently conjoyned therewith. The bastard, in which those symptomes are less vehement, the thirst less Urgent, and the body not so burning. The Ligitimate is Caused by a Chollerick Humor putrefying within the large Vessels near the heart; the bastard is caused by Choller mingled with Flegm or Salt Flegm putrefying in the Vessels aforesaid. Whence it appeares that a Ligitimate burning Feaver is no other, but a continual *Tertian* Feaver, whose Matter is more sharp and plentiful than ordinary and conteined in the larger Vessels which are neer the Heart; whereas the Matter causing a simple continual Tertian is in Vessels Remoter from the Heart. Again there are two sorts of an exquisite burning Feaver the one from the beginning to the end hath one only accession or fit, which we before named *Synochus Biliosa*, and it is likewise called *Synochus Ardens*; which is caused when the Humor putrefying doth occupy all the Vessels which are most neere the Heart: the other is named *Ardens Periodica* and conteines in it self divers fits or accessions; it is caused by the same Choller conteined in the Vessels neer the Heart, but not in all or not so neer as in *Synochus Ardens*. So that a Continual Tertian, *Synochus Ardens*, and *Ardens Periodica*, do differ one from another, only as the Choller causing them is more or less sharp, plentiful, and neer the Heart.

Febris Colliquans, the Melting Feaver is of the kind of burning Feavers, which in regard of the exceeding heat, doth suddainly melt the Fat, Flesh, and substance of the solid Parts, and sometimes the Blood conteined in the Veins, and dissolve the same, by insensible Transpiration, Sweats, Urines or Stools. It is wont to be caused by a thin, sharp and Chollerick Matter, which is vehemently inflamed, and *Galen* teaches that often times there is adjoyned thereunto a malignant and pestilential Quality. Comment in 3. *Epid. Sect.* 3. *Sent.* 57.

Horrifica Febris, in Greek *Phricodes*, is that Feaver in which the Patient doth often undergo shaking fits, it is caused by a mingled Matter, viz. Partly Chollerick and Partly Flegmatick or wheyish, which being unequally moved is wont to excite those Horrors or Shakings; either because the thin sharp and wheyish Matter, doth twitch and nip as it were the sensible and membranous Parts; or the inflamed Choller doth putrefy and put in motion the crude Humors; or because Nature doth in Vain seek to shake of the crude undigested Humor whereupon the Heat being driven Back to the Centre the Extream Parts of the Body are cold; and afterwards, when the same blazes out again, they grow hot.

Assides Febris, the Feaver so called, is a kind of burning Feaver, in which the sick do tumble and toss and are exceeding unquiet, much oppressed with the disease, being for the most Part subject to stomach sickness and vomiting. Because it is wont to arise from the vexation of the Stomach by sharp and Chollerick Humors, biting the orifice or Coats thereof.

The Feaver *Elodes*, is that in which the Patient prepetually Sweats: and it is caused by a mighty Putrefaction or Maligunty of Humors, dissolving the Substance of the Body.

The Feaver *Syncopalis*, is that in which the Patient often Swoones and Faints away. *Avicenna* makes two sorts hereof, one of thin sharp and Venemous Choller: another of much Flegm, or abundance of crude Humors. The former is called *Syncopalis Minuta*, because it arises from a little Quantity of Humor, but thin and malignant. The latter *Avicenna* doth call *Syncopalis Humorosa vel Repletionalis*, because of a great Quantity of crude and Flegmatick Humors abounding therein and there is also Joyned a weakness of the mouth of the stomach, by which means especially the sick persons come to Swoon so often.

That Feaver is by *Galen* termed *Epiala* 2. *de diff. Feb. cap.* 2. *& Lib. de inæquali intemperie cap.* 8. in which at the same time, through the whol Body in the smallest particles thereof there is felt both cold and heat. For, albeit one and the same Part cannot be the subject of contrary qualities: yet is that which hath been said of this Feaver to be understood of the smallest particles in respect of sense, but not indeed and in truth. *Galen* shewes that this Feaver is caused two waies; the one is by means of Glassy Flegm mingled with bitter Choller and so diffused into the whol body. For Choller causes a sence of heat and the Flegm a sence of cold. The other is by means of Glassy Flegm alone, but partly putrefied and partly void of putrefaction. For, inasmuch as Glassy Flegm is extream cold and clammy, it doth not readily putrefy, nor al at once, but only by peecemeal; so that one portion thereof being putrefied the other remains unputrefied. That Part of the said flegm therefore, which is not putrefied being shed among the sensitive Parts, causes a sence of cold, by reason of the extream coldness thereof; and that which is putrefied causes a sence of heat. And so the whol body at one and the same time feels both cold and heat. *Platerus* also hath invented a way how this Feaver may be bred, viz. when intermitting Feavers, or Agues, do one fal upon the Neck of another the same day in the same Patient, so that the cold fit of the latter Ague begins, ere the hot fit of the former be ended; or else when intermitting Feavers concide with those which are continual, so that the heat of the continual Feaver and the cold of the Intermitting, happen at one and the same time.

There are likewise other accidental differences of continual Feavers, which because they are wont

to

to be reckoned among the Symptomatick Feavers; they ſhal be diſcuſſed forthwith in the Deſcription of the ſaid Symptomatick Feavers.

Now although the Cure of Symptomatick Feavers depend upon the Cure of thoſe Diſeaſes in particular, from whence they ariſe, yet muſt we declare their Nature, leaſt they come to be confounded with Eſſential or Primary Feavers.

Thoſe therefore are called Symptomatical Feavers, which ariſe from the Inflamation and putrefaction of Humors contained in ſome of the Bowels. Of which kind are thoſe Feavers which accompany the Pleuriſy, Inflamation of the Lungs, Frenzy, Squinzy, Inflamation of the Liver, and other Inflamations, Ulcers or Impoſtumes of the internal Parts.

And it is diligently to be obſerved, as a thing of great moment in Practice and by few taken notice of, that al Feavers perpetually which are Joyned with Inflamations of the Parts of the Body, are not Symptomatical; But that ſome of them are eſſential & the foreſaid Inflamations do follow upon them. For it often falles out that Blood corrupted or filled with evil Humors, after it hath raiſed a Feaver, comes to be agitated by Nature and her as hurtful to her expelled to the weaker Parts, or to ſuch as are moſt convenient to receive them: whereupon an Inflamation is cauſed in thoſe Parts, which doth not cauſe the Feaver, but is rather a Conſequent thereof. So we may often ſee in the Courſe of our Practice, the Patients ſick of a continual Feaver, for a day or two before Pain in the ſide and other Signes of a Pleuriſy appears So many on the third or fourth day fal into a Phrenſy; ſo, al Gouty perſons in a manner, before they are troubled with Pain, ſwelling and Inflamation of their Joynts, are wont to have a continual Feaver for a day or two. So they which have the Roſe or Saint *Anthonies* Fire, have a Feaver ſomtime, before the ſwelling break forth. The ſame thing appears by the Urine, which in ſuch Inflamations as theſe, do ſhew manifeſt ſigns of putrefaction in the Veins. For in the beginning they appear crude and undigeſted, and in the progreſs, they ſhew tokens of concoction dayly encreaſing. Alſo Blood is often taken away very corrupt. Which things would not happen if ſuch Feavers were only Symptomatical, ſimply depending upon thoſe Inflamations.

And theſe Feavers whether they be Symptomatical or primary and attended by Inflamations of the Parts, have their accidental differences. For if the Inflamation be of Blood, the Feaver is called *Phlegmonodes*: if it be of Choller, *Typhodes*. And peculiarly an *Erysipelas* or Chollerick Inflamation of the ſtomach and Guts brings the Feavers called *Zipyria*, in which the outward Parts are very cold and the inward Parts burn. For the inward burning doth drew the Blood and ſpirits to the Part inflamed; whereby the heat is ſo encreaſed, that the inward Parts ſeem to be burned with unquenchable thirſt, but the outward are cold, being deſtitute of heat and ſpirit.

Lenta Febris, the ſlow or Lingring Feavers, is wont alſo to be reckoned amongſt Symptomatical Feavers, which ariſes from ſome hidden obſtruction and putrefaction, ſticking ſo cloſe to ſome Bowel and ſo impacted, that the ſubſtance of the Bowel is for the moſt Part Vitiated. And when a portion of the putrid Humor is ſhed into the Veins and mixed with the Blood, it ſtirs up a ſlow Feaver, and ſo mild, that it troubles the Patient with no greivous ſymptom, yea and the Patient is ſcarſe ſenſible of any Feaver. Yet ſome notes of putrefaction appear in the Pulſe and Urin. And ſomtimes this *Febris Lenta* is bred of the putrefaction and corruption of ſome of the bowells; becauſe by the Veins inſerted into that Bowel, putrid and hot Vapors do breath unto the Heart. Such a kind of Feaver is often bred in the Conſumption of the Lungs, which degenerates into an Hectick. It is alſo ſomtimes cauſed when the ſubſtance of the Liver or ſpleen corrupts: or when putrefaction ſettles upon the Meſentery, the Caul or the Pancrea, or other Parts; or alſo ſomtimes when the Child or After-birth are corrupted in the Womb. And hence not only ſlow Feavers, but ſomtimes alſo acute ones do ariſe, according to the different Nature of the putrefactions. And finally, to this kind of ſlow Feavers, thoſe are to be referred, which are found in Cachectical perſons, and in Maids which have the Green-Sickneſs; which *Fernelius* conceives do ariſe from a light putrefaction of wheyiſh flegm ſhed abroad in the Body.

Beſides theſe forenamed differences of continual Feavers, which are moſt frequent, and are commonly ſet down by Authors; there are alſo ſome other, ariſing from peculiar and extraordinary Cauſes, which ſomtimes we meet with in our Practice. The Caſe of a certain Infant may ſerve for example, propounded by *Zechius* in his 46. Counſel. The Infant was ſcarce two yeares old, and had a continual Feaver, with moſt greivous Symptomes viz. Unquietneſs, convulſions, and continual ſtomach Sickneſs encl ning to Vomit; and it was conjectured that there was ſome Malignity adjoyned, becauſe ſuch greivous ſymptomes did not anſwer to that Feaver. For al the external Parts were cold, though the inner Parts were burned with heat, as appeared by the heat about the breſt and under the ſhort Ribs, and alſo from the dryneſs and blackneſs of the Tongue. The Cauſe of which was blood putrifying contained in the ſtomach. For this Infant being tongue-tied, was lately cut by a Chirurgion, in which work ſome Veins or other was opened which ſhed ſome blood into the ſtomach, which putrefying there, by ſending forth hot, putrid, and as it were poiſonous Vapors into the heart and Brain, was the Cauſe of al the ſymptomes aforeſaid. But how,

this cauſe was found out and removed, it is worth the while here to recite, out of the Story of *Zechius*. *So often* (quoth he) *as I diligently conſider with my ſelf, how hard a thing it is to underſtand internal Diſeaſes, and their cauſes, I come eaſily to be of the mind that* Hippocrates *in his ſecond Book of vulgar Diſeaſes, Sect. 4. did not without greateſt premeditation leave in writing; then in the Curing of all hidden Diſeaſes, the Phyſitian muſt diligently enquire the firſt aſſault of the Diſeaſe, that is to ſay, the firſt occaſion of the Patients illneſs. For of that for the moſt part depends the knowledg both of the Cauſe and Cure. See an Example hereof: This Diſeaſe of the Gentlemans Child was very acute, and the Cauſe very hard to find, had not I diligently asked of the Parents touching the conditions of the Child and the Nurſe; who told me that two daies before its being firſt ill, a certain Chyrurgeon had cut the Membrane, whereby the Tongue of it was faſtened to the parts beneath it. And when I again asked them, if preſently after this was done, they had cauſed the Child to be held forward, or if any blood had come out of its mouth; they ſaid no, it was neither ſo held, neither came any blood from the mouth of it. Whereupon I preſently conjectured, that blood was fallen from the place cut into the Stomach, and there putrefied, and was the cauſe of the Diſeaſe, and Symptomes aforeſaid. Neither did my Opinion deceive me; for having given it Oyl of ſweet Almonds to make it vomit, it uttered a conſiderable quantity of clotted blood, and matteriſh. Alſo it voided with a Clyſter many clodders of blood. And preſently, by the bleſſing of God Almighty, the Feaver was abated, and all Symptomes began to ceaſe. Whereupon it fell greedily and luſtily on ſucking its Nurſe, and all the following night it ſlept quietly, and was afterward perfectly well.*

The Diagnoſtick Signs of putrid continual Feavers, do ſome of them ſhew the continuity, others the putrefaction, and the reſt the peculiar differences of them.

The continuity is eaſily known, in that the Feaver is continual, and hath no intermiſſion.

The putrefaction is ſignified by a ſharper heat than ordinary, and more biting, and by a ſharp and biting Sooty vapor, produced by the exhalation of putrid Humors. The pulſe is not only great and frequent, and oftentimes inequal; but it hath this peculiar property, That the Syſtole is quicker than the Diaſtole; becauſe the Expulſion of Sooty Excrements is more neceſſary than refrigeration. The Urins are in the beginning crude, or very little digeſted The Exacerbationsor fits keep their certain times, which yet is not to be underſtood of the Feaver Synochus. A cold ſhaking fit at the beginning of the Diſeaſe. Hereunto are added various Symptomes, commonly accompanying putrid Feavers, as ilneſs of ſtomach, vomiting, heavineſs of the body, pain of the head, raving, giddineſs of the head, hiccoughs, anxiety, heart-burning, thirſt, roughneſs and blackneſs of the tongue, ſtretching of the parts under the ſhort ribs, and the reſt. Before which preceded, wearineſs without labor, purſineſs, troubled ſleeps, watchings, tenſion of the parts under the ſhort ribs, difficult breathing, pain and pulſation of the head, ſtomach-ſickneſs, want of Appetite, plenty of ſtinking Excrements, frequent yawnings and reachings, or ſome of theſe.

But the peculiar Differences of continual putrid Feavers, may be diſcerned by theſe Signs following:

A continual putrid Feaver, called *Synochus putrida*, hath the ſame ſigns which were propounded in *Synocha ſimplici*, but more vehement; for the heat is more ſharp, the watchings, head-ach, thirſt, diſquiet, and other Symptomes are more vehement; alſo the pulſe is unequal, ſo that the Syſtole appears greater than the Diaſtole, the Urines are crude, red, and thick.

The Signs of a Feaver from Choller, are burning pain, a pulſe mighty frequent and ſwift, a ſharp Urine, fiery, in the beginning alwaies crude, without Sediment; Stomach-ſickneſs, Chollerick vomitings and Stools Chollerick, much anxiety, mighty thirſt, bitterneſs of the mouth, drineſs and blackneſs of the tongue, watchings, raving, and ulcerous kind of wearineſs, foregoing, paleneſs of Face, or a citrine Color, youthful Age, temperature hot and dry, Summer ſeaſon, hot and dry Diet, Chollerick Evacuations ſuppreſſed. And a continual Tertian is diſtinguiſhed from a *Synochus biliosa*, or continent Feaver ſpringing of Choller, becauſe it hath Exacerbations or fits every third day, but the *Synochus biliosa*, keeps ſtil one and the ſame tenor.

The Signs of a continual Quotidian are, Heat at firſt rather vaporous than biting, afterwards ſomwhat ſharp, but unequal, becauſe of the thickneſs of the Humor which is difficultly diſſolved; the Urines are at firſt white, watry, troubled; afterward ſomwhat red and thick; the Pulſe is ſeldomer, ſlower, and leſs than in the reſt of theſe Feavers; thirſt little or none; ſeldom ſweat, unleſs there be ſalt flegm; the Face of the Patient is ſomwhat bloat or blown up, lax, flaggy, and as it were Lead colored; Drowzineſs, want of Appetite, flegmatick Excretions, a cold and moiſt Temperament, old Age, Winter Seaſon, Cold and Moiſt Diet, Evacuations ſuppreſt, and a dayly Excretion of the Diſeaſe.

A continual Quartan is known by theſe Signs. The Heat is leſs ſharp than in Feavers of Choller, yet ſharper than in Feavers of Flegm; likewiſe Thirſt greater than in a Quotidian, and leſſer than in a Tertian; a Pulſe in the beginning ſlow, rare, languiſhing; afterward ſtronger, frequenter, and very

very unequal. The Urine in the beginning thin, afterwards various; the body dry and lean, of a tawny or swarthy color; Temperament cold and dry; Age inclining; Autumn of the Yeer, or very changable weather; a life intangled with many Cares and Studies; suppression of the Hemorrhoids, Swelling of the Spleen, and Exacerbation or vehemency more than ordinary of the Feaver every fourth day.

The Signs of a *Causus* or burning Feaver proper to that Disease, were propounded before, viz. a burning heat of the Body, and an unquenchable Thirst. Yet it is to be marked, if any Cough arise, that the Patients Thirst is thereby diminished, viz. by such moisture as is drawn by the Cough out of adjacent parts; howbeit, the Cough is never wholly taken away while the Feaver lasts. The other Signs are all such as we have before shewed, do signifie a Feaver from Choler. Yet the signs which signifie a bastard burning Feaver, are much more remiss than the foresaid.

A melting Feaver is known by a sudden Consumption of the Body, and growing lean; the Eyes are hollow, the Temples fallen, Nose sharp, Stools red, fat, stinking, clammy, corpulent, sincere, chollerick, and frothy; the Urines, fat and Oyly.

The Shivering Feaver, and the tumbling and tolling Feavers are to be known, by what is said of them in their Descriptions.

In the Feaver called *Elodes*, the Skin is ever moist with a clammy moisture, and the heat to feel to, is not very sharp. Malignity is distinguished from the largeness of putrefaction; because in case of malignity, the Urines are in a manner Natural, or appear not much different from the Natural; or somwhat swins in the Urines like a Spiders Web, when the Fat melts; or it with the Urine there comes away somwhat like Vetches or Barley, which signifie a melting of the flesh; or finally, abundance of Urine coming divers daies together, when the blood and humors are melted. Add hereunto an extream decay of strength; a smal contracted Pulse, not very frequent. In great putrefaction the Urines are thick and troubled, the Pulse great, tort, and frequent.

Syncopalis Febris, viz. the Swooning Feaver, is known by fainting fits, and swoonings frequently befalling the sick. And that sort called *Minuta*, is distinguished from that *Humorosa*, because in the former are seen the signs of a Chollerick, in the Latter of a Flegmatick Feaver, as they were lately set down.

The Feaver *Epiala* is known only hereby, That at the same time, heat and cold is felt in the whol Body.

Finally, Symptomatick Feavers, and such as are called *Comitatæ*, are known by what hath been said of them in their Historics, or Descriptions.

Now in every of these sorts of continual putrid Feavers, the Prognostick Signs are to be described, by which their events may be presaged.

And first for *Synochus Putrida*, seeing it is of the kind of acute Feavers, it is not without danger. Yet if signs of Concoction do evidently appear upon the fourth day, and no error be committed, it will terminate towards health the seventh day. But if the Signs of Concoction appear later, it may reach unto the eleventh or fourteenth day. But if no signs of Concoction appear, and the sick have a round swollen Face like a Globe, it signifies the Disease will be long. By how much the Urine is redder at the beginning, other signs corresponding, by so much safer it is, and signifies the Disease wil soon come to an end, if there appear therein signs of Concoction; but with signs of Crudity it threatens death, especially if the party be weak. White Urine is the worst of all, and commonly portends death. Among the Differenees of *Synochus*, *Paracmatica* is more secure, *Acmatica* more dangerous, *Epacmastica* most dangerous of all. Furthermore, an exquisite *Synochus*, and benign rightly Cured, is safe; a bastard one that hath malignity in it, with cruel Symptomes, and strength decayed, is dangerous.

Chollerick Feavers, inasmuch as they are acute, are also dangerous; and that more or less, according to the more or less distemper, vehemence of the Symptomes, and validity of the Patients strength. The distemper is measured not only absolutely by the degree of Heat it feels, but also comparatively, with reference to the Natural Constitution of the sick party; so that look how much the heat is encreased above the Natural temper of the Patient, so much the greater is the danger. So a burning Feaver in an old Man, or in Winter, is for the most part deadly. The vehemence of Symptomes, is considered in actions Animal, Vital, and Natural; in Excrements, qualities changed, and proper adjuncts; whose enumeration requires a work by it self, according as we have expounded them, in the third Section of our *Semiotica*, or Doctrine of Signs, out of *Hippocrates* his Aphorisms, Prognosticks, Predictions, and his Coic Prænotions, which may easily be transferred to this place. And finally, the strength of the Patient must be compared with the vehemence of the Symptomes; For if the strength be lusty, and likely to hold out against the Cruelty of the Adversaries, there is good hope; if not, we may justly fear the Patients death.

A continual Quotidian, is wont to be long by reason of the thickness and contumacy of the Humor; but if divers Evacuations happen in its course, it is wont to be the shorter. We must measure the

danger

danger thereof, by comparing the vehemence of the Symptomes, with the Patients ſtrength. And the cheife care ought to be leaſt it degenerate into a Cachexy or dropſy, by reaſon of the obſtructions of the Liver and ſpleen, which happen in theſe long Feavers.

A Primary continual Quartan is moſt rare, yet ſomtimes an intermittent Feaver or Ague degenerates thereunto, and then for the moſt Part deadly.

The melting, ſhaking, Tumbling, Sweating and Swouning Feavers, ſeeing they borrow their Names from ſuch bad ſymptomes as they are attended with; they are in regard of ſuch ſymptomes extream dangerous, and for the moſt Part is deadly.

Finally, the Prognoſtick of Symptomatick Feavers, is to be gathered from the Excellency of the Parts affected, vehemence of the Symptomes and Validity of the Patients ſtrength.

Now in the Cure of al putrid Feavers, we muſt take our Hints or Indications from the Feaver, from its Cauſe and from the Patients ſtrength. The two former indicate their own ablation or removal; the third, its own Preſervation. Which muſt be done by aſſiſtance of thoſe ordinary Medicinal Utenſils viz. Diet, Manual Operation, and Medicaments.

The Diet in all Chollerick Feavers ought to be cooling and Moiſtening, in flegmatick and Melancholick more warming and attenuating. Let therefore the Air be cold and moiſt, which being drawn in by the Lungs unto the heart, doth exceedingly temper the burning heat thereof. Yet muſt not the Patient be laid bare to the cold Air, becauſe tranſpiration, which is exceeding needful, would by that means be hindered; and the ſooty Vapours and ſweats would be driven back again into the Body. Howbeit the ſick muſt be covered only with light and ſoft Coverings, and not loaded with over many blankets or Rugs. alſo the Feather-bed muſt be taken away and a ſlock-bed put in place, upon which alſo in the extremity of Summer a covering of Leather wil conveniently be laid on. Let the bed be wide, that the ſick may change place therein. Let the Patients Linnen Shifts be often changed contrary to the vulgar opinion; provided they be not newly waſhed, nor ſmel of Soap, and that the Time of the Criſis be not at hand, in which nothing is to be ſtirred, leaſt the motion of Nature be hindred and diſturbed. The Sun-beams are to be kept out of the Patients Chamber, and ſtore of Company is to be avoided. Water is often to be powred out of one Veſſel into another, in the ſick Perſons chamber. The Pavement of the Chamber is to be ſprinkled with Water, Vinegar and Roſe-Water mingled; or with cooling Herbs and flowers; as Vine Leaves, Willow Leaves, Leaves of Water Lillies, Flags; Roſes, and flowers of Violets and of Water Lilly; which muſt be kept at hand in good Quantities in a cool place, and be often freſh ſprinkled and ſtrowed about the Patients Chamber; for when theſe Herbs and flowers are dried, they heat the Chamber. If the Chamber be cold, as in winter, it muſt be a little tempered with a fire avoiding Smoak. Howbeit in flegmatick Feavers the Air muſt be Moderately hot and dry.

As for Point of Nouriſhment, the Diet ought to be thin and ſpare in acute Feavers. And therein the Antients were ſo ſevgrely diligent, as to place the greateſt Part of the Cure in ordering the Diet, enjoyning ſuch as were ſick of a moſt acute Feaver, to keep a moſt thin and ſlender Diet; and giving them nothing but a ptiſan drink of Barley Water, as moſt convenient for perſons in a Feaver; ſeeing it cooles, and Moiſtens; withal extenuating and opening and hindering no Evacuation. And they had two kinds of Ptiſans. One ſimply ſo called, or whol Ptiſan not ſtrained; the other was ſtrained, which we cal Barley Cream. Barley cleanſed of the Husks boyled in fair Water, to a Conſiſtency or Pottage, is the whol Ptiſan; this being ſtrained with preſſing, is called Cream or Juyce of Barley.

But in our Times, at leaſt in our Country, by the refractoryneſs of Women [who fear nothing but that the ſick perſon ſhal be ſtarved, as al their care in a manner is to cram their Children with meat like Pudding Bags, how empty their Brains be of wit, or their Hearts of Grace and wiſdome, matters not] and the Indulgence of Phyſitians [who the beſt of them ſmel too ſtrong of the Mountebank] it is grown into a faſhion in al Feavers, yea the moſt acute and violent, to allow the ſick at al times broaths of the fleſh and Hens Chicken, Capons mutton; and that for the moſt Part they give every third or at moſt every fourth hour. And in the Summer the fleſh of a pullet, kid or Lamb is added to the former Diet. And ſomtimes again broaths are made of nothing but a chick with cooling Herbs, as Lettice, Endive, Sorrel and Purſlan. Or to ordinary broaths is added Juyce of Oranges, Lemmons, or Pome-Granats, when the heat of the Feaver is very great, or the putrefaction very intenſe.

Moreover in Feavers not ſo very acute Panadaes are given twice or thrice in a day made of waſhed bread and broath. Alſo Barley broaths are ſomtimes uſed of the Ptiſan of the Antients being ſtrained, with the broath of the fleſh aforeſaid, and Sugar; or without broath, adding ſweet Almonds. But theſe for the moſt Part do oppreſs the ſtomach, and therefore the uſe of ſimple broaths and Panadaes ſeems more convenient. Howbeit very profitable it it to boyl a little Barley with fleſh and thereof to make broaths.

In

In long Feavers, a fuller Diet is fitting, of the fleſh of Chickens, Veal, Hens and Pullets, Capons, Partridges, Mutton, or of the Juyce preſſed out of them, Gellies made with them, and ſuch like.

Concerning the time of giving the Patients meat, this is principally to be obſerved, that they never eat in the time of the Exacerbation or fit but in the time of the Feaver. But if the Exacerbation be very long, let the Patient eat in the declination thereof.

For drink, the Ptiſan of the later Phyſitians, made of the Decoction of Barley with Liquoris, is uſually given in all Feavers. To which if the Feavers be very burning may be added a little Lettice, Sorrel, Tamarinds. But more ordinarily are added the Roots of Graſs or Sorrel which makes the Water look of an Elegant Colour like Wine. But in long Feavers may be added ſweet fennel Roots, Parſley Roots, Annis Seed, Coriander Seed, or Cinnamon, as oft as the ſtomach through weakneſs is offended with drinking.

Take *of the ordinary Ptiſan-drink of Barley and Liquoris two pints: ſpirit of ſulphur as much as ſhall ſuffice for to make it pleaſantly tart. Harts-Horn burnt till it be white one ounce: Let the Patient uſe it for ordinary drink, ſhaking the Veſſel before it be powred forth.*

Alſo Water that hath had a peice of bread boyled in it either by it ſelf or ſweetned with Sugar is good; or mingled with a little Vineger; or Water alone, boyled to take away the Cruditie; wherewith ſomtimes a little Suger is mixed, and ſomtimes a little of the Juyce of Lemmons, Pomgranats, Barberries, Cherries, or of their Syrups; or as much ſpirit of ſulphur or Vitriol as may ſerve for a great full Acidity; or a little *Sal Prunellæ*, if need be of potent refrigeration.

Water is commended wherein are ſteeped Tamarinds, Berberies, or Prunes.

A Decoction of french Prunes is very pleaſing to the taſt.

Or Barley is boyled with Tamarinds, and towards the End, the broath is Aromatized with yellow Sanders and Cinnamon. Which drink doth not only Quench thirſt, but looſens the belly, and cools and ſtrengthens the Liver.

Take *Sugar eight ounces: Sal Prunellæ one ounce: Make it into a Pouder, to be taken with the Patients ordinary drink. Whereunto if thirſt be extream, the ſpirit of vitriol may be added.*

Touching ſpirit of Vitriol and of Sulphur, this is diligently to be obſerved, that in putrid Feavers the uſe thereof is great, becauſe they have a mighty cooling, opening, and putrefaction quelling faculty; prohibit the Inflamation of the Humors, and quench thirſt. Howbeit in the Pleuriſy, Inflamation of the Lungs, Spitting of blood, Conſumption of the Lungs and other Diſeaſes thereof (unles they ſpring from thick flegm ſtopping the Veſſels thereof) Inflamation of the ſtomach, Dyſentery or bloody flux, Piſſing of blood, Ulcers of the Kidneys and Bladder, they do very much hurt and therefore we muſt abſtain form them.

In Feavers ariſing from very thin and hot Choller, or Joyned with a ſharp thin diſtillation, ſharp things are not convenient; but rather ſuch as gently thicken, as Syrup of Violets, of dried red Roſes, with Barly Water, or Bread boyld-Water, or ſimple Water boyled, or ſmal beer, mixed therewith.

Where thick and clammy humors abound, the Syrup of Vineger will be very profitable. in ſtead of thoſe laſt named.

Alſo ſomtimes Conſerve of Roſes, Violets, or Borrage is wont to be mingled with cleer Water boyled, with Barley Water, and to be ſtrained through an Hippocras bag for ordinary drink, unto which ſome drops of ſpirit of Vitriol may profitably be added. Or a Tincture of Roſes is made after this manner, moſt delightful in colour and in taſt.

Take *Red Roſes one ounce: Bloodwarm Water three pints: ſpirit of ſulphur or Vitriol one dram and an half: Let them ſtand infuſing cold for three or four hours. To the ſtrainings add, white Sugar, four ounces: Roſe-Water half a pint: Make thereof a clear Julep for ordinary drink.*

Alſo Julepus Alexandrinus, is very good, and extream pleaſant. It is thus made.

Take *Fountain Water one pint: Roſewater, Juyce of Lemmons, and white Sugar, of each four ounces: Boyl them over a light fire till you have taken away the Scum.*

As for other things pertaining to Diet, Sleep is extream good and watchings bad. Yet over much Sleep doth overwhelm the natural heat and hinder the Evacuation of excrements. Reſt is neceſſary in acute Feavers; but in long Feavers, light and gentle exerciſe is good. Alſo we muſt endeavor, that nothing be retained which ought naturally to be expelled; howbeit al immoderate Evacuations, which exhauſt the ſtrength, are to be ſtopped; and al vehement Perturbations of mind, muſt be turned out of Doors.

Among manual Operations, Blood-letting holds the cheifeſt place. for it doth not only diminiſh plenitude, whether it be a ſimple fulneſs ſo as to ſtretch the Veſſels, or only a fulneſs with reference to the ſtrength of the Patient; whether it be in the whol body or in ſome Part; but alſo revels the influx of Humors Cauſing obſtructions; cools the whol body and makes it perſpicable; keeps back putrefaction, and furthers the concoction of putrefying Humors. Preſently therefore, and at the beginning

beginning of the Diſeaſe, blood muſt be drawn (unleſs weakneſs hinder, as in the Swooning Feaver, and other like Caſes) and that after the Belly hath been looſened with a Clyſter, or a Suppoſitory. How much blood ſhould be taken, is gathered from the Patients ſtrength, from the greatneſs of the Plethora, Cuſtom of the Patient to bleed or not to bleed, and other circumſtances. The Antients in the *Synochus Putrida*, and the burning Feaver, did let blood til the Patient fainted away. But it is much more ſafe (as we have ſaid in the Cure of a ſimple Synochus) to take away at ſeveral times ſo much as ſhall be ſufficient; then ſuddenly to put the Patient in danger of death. *Avicenna* in a burning Feaver, and in a continual Tertian, doth forbid letting blood, unleſs the Urine be thick and red. For he fears leſt Choller ſhould be the more inflamed, which he ſaith is bridled by Blood. But the wiſer Phyſitians do explode this Opinion of his, ſeeing theſe kind of Feavers are often terminated even by Nature her ſelf, by bleeding at the Noſe; and they do ſometimes cauſe Frenzies, and other Inflamations: and finally, becauſe Blood-letting doth potently refrigerate, doth rather ſtop than further the Ebulition, or boyling and working of the Blood, and Choller comes away as wel as Blood when a Vein is opened; ſo that in that Maſs of Blood, which is in the greater Veins remaining, there is the ſame proportion of blood to Choller which there was before. Nay verily, when a Vein is opened, if the ſick party be any thing luſty, and the blood flow amain, only the putrid Blood which is offenſive to Nature is voided, the purer remaining in the Veins; which few Authors have taken notice of, although it be in the courſe of Practice every where obſervable. For if the Blood flow out of the Vein drop by drop, it is the pureſt Blood, becauſe it comes out of the Vein by its own proper motion. But if it ſpring out with a forceable ſtream, it appears foul and corrupted, Nature expelling the worſer part of the Maſs of Blood. Howbeit Blood is more ſparingly to be taken from ſuch as are of a very Chollerick Conſtitution, in the middle of Summers Heat, and the Dog-Daies, than in other Natures and times. But in Flegmatick and Melanchollick Feavers, Blood muſt be taken away in leſſer quantity: and evermore great regard is to be had to Coindicants, and Contraindicants; foraſmuch as Quotidian Feavers do for the moſt part happen unto Children, or old Perſons in cold Countries and cold Seaſons of the yeer; which conſiderations do leſſen the Quantity of Blood, which otherwiſe the Diſeaſe, or its Cauſe require, ſhould be taken away. When the Feaver is cauſed by over much labor, blood muſt be taken away more ſparingly. If a Feaver happen by over great uſe of Carnal Embracements, Blood-letting is pernicious.

Concerning the time of Blood-letting, it is to be noted, That a Vein muſt not be opened preſently after the Patient hath eaten; but after Digeſtion is paſt, and after the Patient hath been at ſtool. Again, Blood is to be let when the Feaver is moſt remiſs, and not in the vigor thereof, for then Nature is not able to bear both the violence of the Diſeaſe, and the loſs of Blood. As for the repletion of Blood-letting, if the ſame be neceſſary, to cauſe Evacuation, it muſt be repeated the ſame day; if for Revulſions ſake, on another day. For where Evacuation is neceſſary, eſpecially in acute Diſeaſes, the Body muſt be ſuddenly changed into another condition; alſo it often happens, that a Diſeaſe is quickly paſt its firſt time or beginning, ſo that afterward we cannot ſo conveniently open a Vein. But in Revulſion we have reſpect to the motion of the Humors, which is then beſt ordered, when it is done at divers times, ſome ſpace being interpoſed, whereby Nature becomes accuſtomed to a contrary motion. For in the ſpace between Bleedings, the Blood which was ſhed into the parts, regurgitates into the Veins, and by another Blood-letting is profitably drawn forth. We underſtand that Blood-letting muſt be iterated, if that blood which was firſt drawn forth, were very much corrupted; and there is reaſon to think, that there is yet a great quantity thereof abiding in the Veins.

Yea verily, Although the Blood at firſt ſeem pure, and uncorrupted, yet muſt we not deſiſt from taking the ſame away, but continue ſo doing until it appear more impure and corrupted. And truly that Precept delivered by *Hippocrates*, in his 4. *de Victus Rat. in Morbis acutis*, in the Cure of a Pleuriſie, may very profitably be obſerved in acute Feavers, viz. That Blood-letings be ſo long continued, til the blood change color; ſo that if at firſt corrupt blood come away, we muſt let it run till it appear more pure; and on the other ſide, if at the firſt the blood appear laudable, we muſt ſuffer to flow, til that which is impure and corrupted be come away.

Yet is there ſome diverſity to be obſerved in both Caſes. For if at firſt good Blood come away; blood ought to be again taken from the ſame Vein; that putrid blood reſiding in the innermoſt parts of the Body, may the ſooner be drawn forth. But if at firſt corrupt blood be taken away, blood is next time to be taken out of the other Arm, and afterwards out of the former again, and ſo in courſe as oft as need ſhal require.

But if the Symptomes declare, that the Putrefaction is in the inner branch of the *Vena Cava* deſcendent; as heat and pain in the Loyns, redneſs and thickneſs of the Urine: after two or three Blood-lettings in the Arms, it wil be convenient to draw Blood out of the *Vena Saphena*, two or three ſeveral times.

If

If in the latter Blood-lettings, ſome part of the Blood ſeem laudable, and not ſo putrid as before; it's a ſign that Nature doth repair and reſtore new good blood inſtead of the corrupt blood which hath been taken away. Contrarily, If the more is taken away, the worſe it comes, its a ſign the Diſeaſe grows worſe, and that Putrefaction is encreaſed; whence there is reaſon to fear a ſtupefaction of the Internal Parts.

The Vein in the bending of the Arm, or the Baſilica, or the Mediana, is for the moſt part to be opened, in the right Arm moſt commonly, ſomtimes in the left, viz. when more diſtention is felt under the ſhort Ribs on the left, than on the right ſide. Yet ſomtimes a Vein is profitably opened in the Foot, if Revulſion be neceſſary and the Patient weak, the Matter of the Diſeaſe being in the Head, and the ſick perſon moleſted with Head-ach, and want of reſt.

Frictions are ſeldom uſed in putrid Feavers, unleſs it be in the Swooning Feavers; the Cure of which we ſhall ſet down in the Cure of the Symptomes of Putrid Feavers, towards the end of the next Chapter.

But Cupping-Glaſſes are more frequently uſed, as being the Subſtitutes of Blood-letting, in whoſe ſtead they ſerve, when Weakneſs or Age of the Patient will not permit a Vein to be opened.

Medicinal Remedies are comprehended under a double kind; whereof ſome are Evacuative, others Alterative. Under the Evacuative, we comprehend Purgatives, Vomitories, Sudoroficks, and Diureticks. Under the Alterative, we comprehend Coolers, Attenuaters, Cutters, Openers, and Strengtheners. Of all which we ſhal ſet down the Compoſition and uſe in order, according to the uſual Method of Practice.

And that we may begin with Purgatives, its a great Queſtion among Authors, Whether or no they ought to be uſed in the beginning of Feavers? Which Controverſie, omitting all Circumlocutions, is thus determined. In reſpect of the Matter immediately producing a continual putrid Feaver, which is contained in the greater Veins, Purgation is not convenient in the beginning; unleſs the ſaid Matter do heave and work, being ſo ſtirred by Nature, provoked by the ill quality thereof, and endeavoring to expel it, that thereby it becomes more diſpoſed for expulſion, and there be danger by the foreſaid working thereof, leſt it ruſh into ſome noble part; howbeit this ſeldom happening, for the moſt part the Concoction thereof is to be expected, before we undertake to evacuate the ſame by Purging Medicines. But in reſpect of the Matter contained in the firſt Region, if it be very much, and do encreaſe the Feaver, oppreſs Nature, and divert her from concocting of that which is in the Veins; Purgatives may be given the next day after Blood-letting, but they muſt be gentle, ſuch as evacuate only the firſt Region. Now that naughty Humors and Excrementitious do abound in the firſt Region, that is to ſay, in the Stomach, Guts, Meſentery, or about the Midrif, may be known by Stomach-ſickneſs, Bitterneſs of the Mouth, Thirſt, Pain of the Stomach, or ſome other part contained in the lower Belly, Looſneſs of the belly, and other Symptomes; in regard of which Purgation is ſomtimes to be practiſed before Blood-letting. Now the Medicines for this intent, muſt be Caſſia, Manna, Tamarinds, *Catholicum*, *Electuarium lenitivum Diaprunum ſimplex*, *Syrupus Roſaceus*, *de Cichorio cum Rhabarbaro*; which may divers waies be compounded after this manner:

Take *Caſſia newly drawn one ounce: Tamarinds half an ounce. With Sugar make it into a Bolus.* Or,

Take *Catholicum ſix drams: Elect. lenitive, or Diaprunes ſimple, half an ounce: Cream of Tartar one dram. Make all into a Bolus.* Or,

Take *Leaves of Endive, Cichory, Sorrel, of each half a handful: Tamarinds half an ounce: Boyl all to three ounces. In the ſtrained Liquor diſſolve Catholicum half an ounce: Manna and Syrup of Roſes, of each an ounce. Mix all into a Potion.*

If you deſire your Medicine a little ſtronger, you may ad a dram or four ſcruples of Rhubarb infuſed in Endive or Cichory Water with yellow Sanders. Yea, and ſomtimes if the Feaver be not very ſtrong, two or three drams of Senna may be added to the Decoction.

Some reject Rhubarb, becauſe it heats; alſo Manna, and Syrup of Roſes, becauſe being ſweet, they are ſoon turned into Choller. But with cooling Waters or Decoctions Rhubarb being infuſed, or Manna and ſuch like diſſolved, can do no hurt; eſpecially if to the ſaid Decoctions, Tamarinds be added, which are much commended to this intent, or if the Pulp thereof be given diſſolved in the Potion.

Some in Chollerick Feavers do uſe the Whey of Goats Milk, and that very pertinently; for it tempers the heat of the Feaver, evacuates Choller, and ſtrengthens the Bowels. In a Cup of Whey they ſteep all night one dram, or one dram and an half of Rhubarb, or they add two or three ounces of Syrup of Roſes, and ſo give it in the morning; and afterward they give the Patient a quart of Whey more to drink, that all the Whey may not be infected with the taſt of the Medicament.

That kind of Purgation which is practiſed in the beginning of putrid Feavers, the Vulgar Phyſitians call Minorative purgation; and that which is practiſed when the morbifick matter is concocted, they call eradicative purgation: which is alſo convenient in the beginning (as was ſaid) in the Judgment of *Hippocrates*, if the matter be turgent. Now this ſame turgeſcence, and boyling as it were of the matter is known hereby, becauſe the Patient perceives in divers Parts light Pains which ſoon go away and ſhift ſuddenly from place to place; and hath divers collours of the Face and other Parts, ſo that ſomtimes there is a redneſs and then again a paleneſs in ſome Part of the Face. And in a word the Patient is exceedingly tormented with anxiety and unquietneſs, continually tumbling and toſſing.

Howbeit that Rule of *Hippocrates* touching the uſe of Purgation, when the morbifick matter doth ferment and work in the Patients body, is not obſerved in ordinary Practice: but when the Humors appear in their fermentation and Motion, we do more ſafely apply our ſelves to Blood-letting; and by that means we do more readily preſent the ruſhing of the ſtirred Humors into any noble Part, which being agitated by the Purgation may more eaſily flow into the ſaid Parts.

Somtime alſo in the beginning of theſe Feavers Vomit is to be procured, viz. when the Patient is much vexed with illneſs of ſtomach and with vomiting for then Nature endeavours to evacuate the morbifick matter upwards, and the Phyſitian ought to aſſiſt her endeavours. And many times it falls out, that great Quantity of matter is conteined in the ſtomach and Parts thereabout, which muſt be Evacuated as ſoon as poſſible may be, by Vomit; ſeeing no concoction can be expected of ſuch excrementitious matter in ſo great a Quantity; and what ever the Patient eats or drinks is changed into ſuch a like Humor and encreaſes the Matter which is cauſe of the Diſeaſe. For *Fernelius* hath well obſerved in his third Book of the Method of Healing, Chap. 3. that all ſuperfluity of Humors in the ſtomach, ſpleen, Pancreas, Melentery, and the Cavity of the liver, is conveniently emptied out by a Vomit, which ſomtimes will not be removed with Medicines that work downwards, though divers times adminiſtred. And it comes often to paſs, that the Matter being Vomited up, the Feaver is taken away at the firſt, which otherwiſe would have proved long, in caſe that matter had been tranſmitted into the more inner Parts of the body, and very wel mixed with the blood.

Now of the three degrees which we reckon of Vomitories, the mildeſt is to be Choſen, as Barley Water Luke-warm with Oyl of Almonds or common Oyl, or with a little Quantity of white Vinegar. Alſo Syrup of Vineger, or Oxymel ſimple which Chicken broath or a Decoction of Dil Seed, Raddiſh or Orach, whereunto alſo Oyl may be added. All which are to be given to the Quantity of a pint or more; for in a leſs Quantity they abide in the ſtomach. And ſeeing theſe weaker ſorts of Vomits are of little efficacy, we may ſomtimes apply our ſelves to thoſe of the middle Rank; which ſhall be propounded hereafter, in the Cure of a Tertian Ague

And not only in the beginning of the Diſeaſe before Blood-letting, but alſo in the whol Courſe thereof, Clyſters muſt be given every day or every other day, if the Belly be not of it ſelf very free, made of a Decoction of Emollient and refrigerating things, ſuch as French Barley, Prunes, Mallowes, Violet Leaves, Mercury Leaves, Beares-Foot, Orach, Lettice, Endive, Houſeleek, Water-Lillies: diſſolving therein *Catholicum*, *Caſſia*, Diaprunum ſimple, Red-Sugar, Honey of Violets, and Honey of Mercury; Oyl of Water-Lillies, Violets &c. But in a violent hot Feaver, it is better not to add the Oyls, becauſe they are eaſily enflamed.

Obſerve in the firſt place, that not above three or four blades of Houſeleek muſt go into one Clyſter, becauſe it cools moſt potently, and being taken in greater Quantity, may hurt the Guts.

Obſerve ſecondly, that in all Feavers of Choller, Clyſters are not to be injected actually hot, but only Blood-warm.

In Feavers that ſpring from flegm, Decoctions for Clyſters are made of the Emollient Herbs with Annis Seed, Seeds of Fennel and of Carthamus; flowers of Chamomel and Melilote; diſſolving therein Hiera Picra, Diaphœnicum, Honey of Roſes, Honey of Mercury, Oyl of Chamomel, Dil, or common Oyl.

And becauſe, as we noted before, abſolute and perfect Purgation, which they cal Eradicative, is not to be attempted till the Morbifick Cauſe be ripened and digeſted; the Phyſitian from the beginning of the Diſeaſe, after the firſt Blood-letting, and when the paſſages neareſt the ſtomach are cleanſed, ought to uſe ſuch Medicaments as prepare crude Humors for digeſtion and Evacuation, and withal temper the Feaveriſh Heat, hinder Putrefaction, and open obſtructions; ſuch as are Juleps, broaths, Emulſions and other things which ſhal be hereafter deſcribed.

Juleps are compounded in a Chollerick matter offending, of Syrups of Lemmons, Pomegranats, Sowr-Grapes, Vinegar ſimple, of the Juyce of Sorrel of Cichory ſimple, with Waters of Endive, Sorrel, Graſs and Cichory.

Or better, of the Decoction of the Roots of Sorrel and Cichory, of the Leaves of Sorrel, Maiden-Hair,

Hair. Garden Endive, Dandelion, the four cool Seeds, Tamarinds, with the Syrups aforesaid.

And sometimes that we may cool more effectually, a dram of *Sal Prunella* is added, for every Dose of the Julep, or so much spirit of Vitriol or Sulphur, as shall suffice for a moderate sharpness.

Sowr things are never to be omitted in Feavers springing from Choller; because bitter things are sweetened by Sowr and acid things: which if they are Sowr in an high degree, as spirit of Vitriol and of Sulphur, they deface the bitterness even of Aloes and Coloquintida. Now yellow Choller being plundred of its bitterness, is dead. And Harmless.

Juleps also of great Virtue, may be made of Juyces and which are very grateful to the taste, after this manner.

Take *Juyce of Apples that smel sweet, newly drawn out and setled four ounces: Juyce of Lemmons three ounces: Rose-Water two ounces: Juyce of Pomegranats one ounce: finest Sugar half a pound: Make of al a clear Julep for three Doses.*

If very thin Choller and sharp be in motion and cause either a Loosness or some other grievous fluxion; Juleps must be compounded which thicken, of Waters of Lettice, Purslain, Plantan, flowers of Water Lilly, Red Poppy and Violets with the Syrups aforesaid.

Yet we must observe that Syrup of Violets and other of the sweeter sort of Syrups, are not to be given alone; both because they loosen the stomach; as also because, ere they can Pass into the Veins, they are turned into an hot Vapor, which doth afterwards cause thirst to encrease. And therefore there must evermore some Quantity of sharp Syrup be mixed with the sweet Syrups aforesaid, that they may more easily peirce into the Veins, and the better resist the Heat of the Feaver.

In the Progress of the Feaver, when Coction begins to appear, to the foresaid Decoctions must be added Roots of Asparagus and Liquoris; Leaves of Agrimony, Pimpernel, Liverwort and Maiden-Hair.

In Flegmatick and Cronick Feavers, things more cutting, attenuating and opening are prescribed beginning with the more weak, such as are Syrup of Vineger, of Maiden-Hair, Syrupus Bizantinus, with a Decoction of Egrimony, Maiden-Hair, Betony, Liquoris, Raisens. And in the progress of the Feaver unto the former we add Syrup of the opening Roots, Vineger compound, of Hyssop, Oxymel simple, and compound. And to the Decoction we add the five opening Roots, Leaves of Hyssop, Carduus benedictus and (if the matter be very impact, Clammy and roapy) of Germander and Centory. Whereunto if Salt of Tartar and spirit of Vitriol be added, they work more happily.

In Feavers springing from Melancholy, such things are added which do moisten, as Syrup of Violets, of bugloss, of Borrage and Apples, towards the Beginning: and afterwards Fumitory, of Epithymum, of the five opening Roots, Oxymel of Squils; with a Decoction, first of Bugloss, Borrage, Cetrach or wall-fern, Maiden Hair, Fumitory, Hops; and afterward Dodder, Scordium, Centory, Bark of Capers, of the Ash-tree and of Tamarisk.

And finally in bastard Feavers, which arise from the mixture of different evil Humors, the Medicines aforesaid must be mixed together; yet so that such as respect the most predominant Humor be put in the greatest Quantity.

For the more nice and dainty sort of Patients, Medicinal broaths are prescribed instead of Juleps: and also that the sick may not grow weary of the same kind of Medicine too long used; and those broths are made of such of the Roots and Herbs aforesaid as are most pleasant to the taste with a chick, or part of an Hen or Capon: unto which sometimes may be added one dram of *Sal Prunella*, or some drops of spirit of Vitriol, when we would have it more cooling than ordinary.

Howbeit in slow and long lasting Feavers, caused by rebellious obstructions hard to be cleared, Germander though bitter and Cichory, Endive and Dandelyon, though bitter, may be boyled in Broaths; and *Montanus* in his Counsels, doth cry up Cichory and Germander boyled in Broaths as an admirable Remedy for such as have a long Feaver with obstructions.

In Feavers from flegm a Decoction of Chamomel is excellent. *Zacutus Lusitanus.* Observat. 26. in the third Book of his *Praxis admiranda.*

Also emulsions or Almond-Milks are very good in putrid Feavers, and are commonly more pleasing than Juleps. They are most in use when the Feaver is Joyned with a dry distemper of the Bowels, or a thin Catarrh, or an Inflamation of the Lungs and Parts serving to breath withal; or for variety, least the Patient should be over tired with continual use of Juleps. Now the Composition of these emulsions, hath been described in the foregoing cures.

Cold Water given in great Quantity in continual putrid Feavers, was wont to be in use among the antients, and is commended by very many latter Physitians. But as we said the use hereof was dangerous in the simple *Synochus*; so in this Case, we think the discreet Physitian shal do best to forbear the same, for the reasons we delivered, in our Chapter of the simple *Synochus.*

Yet will it be sometimes good, in extream heat of a Feaver to give a good draught of cold Water,

to ten or twelve ounces with a few drops of Spirit of Vitriol: For hereby ſometimes the ſame effects are wrought, which *Galen* attributes to cold Water being drunk, the quantity of three or four pints at a time; When as notwithſtanding there are none of thoſe dangers to be feared, which *Galen* himſelf confeſſeth did ſometimes happen upon the prepoſterous drinking down of ſo great a quantity of cold Water as he adviſeth. For the Spirit of Vitriol cauſeth that the Water breeds no Obſtructions, but rather opens the ſame, quickly piercing and paſſing through the Bowels, not biding in the Hypochondria's as plain and ſingle cold Water is wont to do; but is very like the acid Mineral Fountains and Wells, which though they are drunk in great quantity, do not lie heavy in the parts about the ſhort Ribs, but are quickly piſſed forth, and very good againſt Obſtructions.

To ſtrengthen Nature, which in every violent Feaver is much dejected, Electuaries are good, and ſtrengthening Conſerves and Preſerves, compounded of Conſerve of Roots of Bugloſs, Leaves of Sorrel, Wood-ſorrel, Stalks of Lettice, Flowers of Bugloſs, Borrage, Violet, Cichory, and Roſes, Pulp of Citrons. Whereunto are added the Pouders of Coral, Pearls, Ivory, Harts-horn, *Diamargaritum frigidum*, *Diatriaſantalon*, *Diarrhodon Abbatis*, *Confectio Alkermes*, & *de Hyacintho*; which are commonly after this manner compounded:

Take *Conſerve of Flowers of Borrage, Bugloſs, Roſes, of each an ounce: Confectio Alkermes one dram and an half: Pouder of Diamargaritum frigidum, Ivory, Coral prepared, and Pearls prepared, of each ten grains: Sugar of Roſes, the weight of all the reſt: three Leaves of beaten Gold. Make of all an Electuary covered over with Gold, of which let the Patients take often by it ſelf out of a ſpoon, drinking a little of their ordinary Drink after it, or mingle ſome of it with their ordinary Drink, and with their Broths.*

Take *Conſerve of Cichory, Sorrel, Lettice, and of the ſharp Pulp of a Citron, of each half an ounce: Pouder of yellow Sanders, and of Pearls prepared, of each one ſcruple: Spirit of Vitriol half a ſcruple. With Syrup of Violets make all into an Electuary.*

Take *Conſerve of the Flowers of Bugloſs, Roſes, and Violets, of each one ounce: Waters of Endive, Sorrel, and Borrage, of each three ounces. Mix them together, let them ſtand over the warm Embers and heat; then ſtrain the Liquor through a ſearſe; then add Confectio Alkermes two drams: Pouder of the Electuary Diamargaritum frigidum half a dram: Coral prepared, Pearls prepared, and Shavings of Ivory, of each one ſcruple: Syrup of Lemmons and Pomegranates, of each three ounces. Mix all; give one ſpoonful at a time.*

For the more dainty and nice ſort of People, in great debility of Natural ſtrength, this following Julep very pleaſant to the taſt may be compounded:

Take *Waters of Sorrel, Orange flower, and Roſes, of each one ounce and an half: Syrup of Lemmons and Pomegranates, of each one ounce: Confectio Alkermes one dram: mix them. Let the Patient take thereof frequently in a ſpoon.*

Altering Medicines having been uſed for ſome daies together, and ſuch as prepare bad Humors, when the Feaver begins to decline, we muſt ſet our ſelves to purge out the ſaid Humors, when the ſigns of Concoction do appear, avoiding the Critical daies. And this muſt be done with Medicines a little ſtronger than thoſe which were given at the beginning; of which ſort are, Senna, Rhubarb, Agarick, Catholicum duplex, and ſuch like; whoſe Matter and Doſe muſt by the skilful Phyſitian be accommodated to the Humors offending, and the Nature of the Patient. And ſome Phyſitians are ſo bold as to proceed to Scammoniate Medicaments, as *Diaprunum ſolutivum*, *Diaphœnicon*, *Electuarium de ſucco*, *Roſarum* & *Diacarthamum*. Which notwithſtanding are very ſeldom to be uſed in continual Feavers, becauſe Scammony is wont very much to inflame the Humors, and to cauſe vehement thirſt; and that eſpecially in burning Feavers, in which Scammoniate Medicaments are very hurtful. Yea verily, and Rhubarb it ſelf, although a gentle and moſt excellent Medicament, is by ſome ſuſpected as not ſafe in very Chollerick Feavers, becauſe of its notable heating and drying faculty. Howbeit the hurtful faculty thereof may in great part be corrected, by infuſing the ſame in Cooling Waters, and by mingling therewith a Decoction of Tamarinds and cooling Herbs; and by adding thereto Caſſia, Syrup of Roſes, Syrup of Cichory with Rhubarb, and ſuch like.

If the Feaver do ſtil continue, Purgation muſt be ever and anon repeated, uſing between whiles preparatives & digeſtives, til the whol ſeminary of evil humors be taken away. For otherwiſe, if we ceaſe Purging before the Feaver be perfectly abated and gone; the Patient will be in danger of a Relapſe. Yet this Rule needs ſome reſtriction. For if after many Purgations, a lingring feaver continues, which doth by little and little pine the Patients, and ſeem to caſt them into a Conſumption; it will be the beſt courſe to leave Purging, and ſeek to conquer the Feaver only by Alteratives and Diet. For it ſomtimes falls out, when there is ſome evil diſpoſition of the Bowels, cauſing a protraction of the Feaver, that ſo long as Medicaments are given, ſo long the Diſeaſe continues, becauſe that Nature is weakened. Which afterwards (Purgation being omitted) gathers ſtrength, concocts the Cauſe of the Diſeaſe, and being concocted, expels the ſame.

But if a lingring Feaver arise from Obstructions, as is often seen in Children, frequent and very gentle Purging, which draws away the Humors by little and little, is wont to remove the Disease; especially if the Purgation be compounded with Rhubarb, which both opens obstructions, and strengthens the bowels. The Commendations whereof celebrated by *Montanus* in his tenth Counsel of Feavers, is worthy to be set down in this place. He setting down the Cure of a Boy that had a lingring Feaver arising from Obstructions: *Among other things, I shall commend* (saith he) *one which I have by long Experience found never to fail, viz. That he take every day the Infusion of Rhubarb in Endive Water. For I never knew Feaver from Obstructions, which was not cured by this Medicament, provided it were constantly taken without weariness, or giving over. For I have somtimes seen most gross Humors impacted into the narrow passages of the Body, and such Obstructions, as by reason of the weakness of Natural heat could hardly be removed; cured by Rhubarb. My Course therefore hath been to take one pint of Endive Water, and therein to infuse a dram of Rhubarb tied in a thin piece of Linnen. Of which Infusion, having lightly pressed out the Rhubarb, I give four ounces in the morning; and this is the Dose for Children. Neither do I cease giving this Medicament, until I see the Feaver and Obstructions wholly gone. For they will doubtless be cured, if all other things be rightly ordered, and suitable to the Cure.* So far *Montanus*. But we are wont ordinarily to use a Diet Drink made with Rhubarb, which to such Children as are troubled with a lingring Feaver and Obstructions, I am wont to give for their ordinary Drink with good success. It is thus made: Half a dram or a dram of Rhubarb (according as the Child can endure the taste thereof) grosly poudered and tied in a Rag, is infused in two or three pints of smal Beer or Ale an whol day, cold: Of this the Child drinks for a month together, or longer if the stubbornness of the Disease require the same. Whereunto, if the Feaver be very remiss, and the Child flegmatick, a little Wine, or stronger Beer or Ale may somtimes be added, to quallifie the unpleasing taste of the Rhubarb.

After Purgation of the Morbifick Matter, Nature is for the most part accustomed in the declination of the Disease, to purge away the reliques of the Matter offending by Urine, which we may discern, because the Urines are then more thick, or more plentiful than ordinary; which endeavor of Nature must be assisted by Diuretick Medicaments which are most temperate, such as are Emulsions, and the Openers formerly set down in Juleps or Broths; whereunto, if the Feaver be very gentle, some Roots of Fennel and Parsley, or Leaves of Wormwood, may be added, and that especially in Feavers of Flegm, and continual Quotidians.

But if Nature do expel the Reliques of the Morbifick Matter to the habit of the Body, Sudoroficks are to be used; not those hot ones, which are more properly called Sudoroficks; but others more temperate, which are the same in a manner with the Diureticks, and being of an attenuating faculty, do dispose the Humors in such sort, as Nature may more easily expel them by what place or way soever she is most enclined. Howbeit, to these may be added, Cardius Water, Spirit of Vitriol, and other things which shall be more fully described, when we shall treat of Malignant Feavers.

Besides inward Medicaments, divers things are also outwardly applied, to temperate the Feaverish heat, to confirm the strength of the principal parts, or to open the Pores of the Skin, and draw out the smoaky Vapors, and Feaverish Heat: viz. Epithems, Liniments, and other things to be applied unto the Region of the Heart, Liver, and other parts. Which are invented to mitigate the Heat, and are not to be applied save in the state or declination of the Disease, when the Heat diffuseth it self to the exterior parts; not in the beginning or augment, while it resides yet about the bowels; not yet when the Crisis is at hand.

An Epithem to be applied to the Region of the Heart may be thus compounded.

Take the Waters of Bugloss, Sorrel, Water-lillies, Roses, of each three ounces: Vinegar of Roses, or juyce of Lemmons one ounce: the Powders of Diamargaritum frigidum, and Triasantalon, of each one dram: Camphire and Saffron, of each five grains: mix all. Make hereof an Epithem to applied warm with Scarlet Cloth.

For the more strengthening, and to make it smel the sweeter, ad three ounces of Orange flower Water, and one dram of Confectio Alkermes.

Where we desire yet more potently to strengthen, solid Epithems are applied unto the Heart, made after this, or the like manner:

Take *Conserves of Bugloss and Roses, of each one ounce: Confectio Alkermes two drams: Powder of Diamargaritum frigidum one dram and an half. With juyce of Lemmons, or Rose Water, make a solid Epithem, to be applied after the liquid one aforesaid.*

Or one yet more Cordial, may in form of a Liniment, be thus made:

Take *Confectio Alkermes, and de Hyacintho, of each three drams: Powder of Triasantalon, and Diamargaritum frigidum, of each two drams. With Water of Roses make all into the form of a Liniment or Ointment, wherewith anoint the Region of the Heart.*

Also

Also to strengthen to and drive out the Sooty Vapours and the Feaverish heat, young Pidgeons are very good, being split throughthe Back bone, and applied to the Region of the Heart, which likewise are oftentimes sprinkled with cordial Pouders as Diamargaritum frigidum and Triasantalon. Or before they be applied, the Region of the Heart is smeared with *Confectio Alkermes* and the cordial Liniment aforelaid.

Also to the Liver, Epithems are wont to be applied, which are made commonly after this manner.

Take *Waters of endive, Cichory, Sorrel and Roses of each three ounces: Lettice Water two ounces: Vinegar of Roses half an ounce: Pouder of the Electuary Triasantalon one dram and an half: Spodium half a dram: Camphire ten grains: Make of all an Epithem.*

For to cool more powerfully, an Epithem may sometimes be made of Juyces, after this manner.

Take *Juyce of Cichory and Endive of each half a pound, Juyce of Lettice and Vinegar of Roses of each two ounces: Pouder Triasantalon two drams: Mix all and make thereof an Epithem.*

Now it is very profitable to apply cooling Epithems not only to the Liver, but to the whol Region of the Hypochondriaes; for they do not only further Coction, but also help the distemper of the bowels; and hinder the principal Parts from a deadly Consumption.

The Region of the Liver may likewise be anointed with this following Oyntment, which also may be applied to the Reins and Loins.

Take *Oyntment of Roses one ounce and an half: Ceratum Santalinum one ounce: Juyce of Endive one ounce and an half: Oyl of Roses and Wax, as much as shall suffice, to make a Liniment. Whereunto add a little Vinegar of Roses, at the time of anointing.*

Also cooling things are profitably applied to the stones because of the great consent between them and the principal parts of the body; they therfore being cooled, the heat of the whol body is in great measure extinguished. To which purpose such an Epithem as this following may be made.

Take *Waters of waterlilly, Plantain, Roses, and Cichory of each three ounces. Vineger of Roses one ounce and half. White wine two ounces. Mix all and dip a cloath therein cold, and warp the same about the Stones.*

Also the cooling of the hands and feet doth great good, because of the Consent they have with the whol body, by reason of the Arteries Veins and Nerves, which end in those parts.

Neither need we fear least it should hinder the voidance of excrements by the pores, because they are few that come that way; so that there comes more good than hurt by the cooling of those parts.

The Patients may therefore hold in their hands balls of marble, Ivory, Brass or Lead. Or they may hold their hands in cold Water, with a little Wine and Vineger mingled therewith. To the soales of their Feet may be applied the Leaves of Lettice, of Water Lilly, wet in Water and Vineger. Or to wash both, Hands and Feet, the following Decoction may be provided.

Take Leaves of Lettice, Violets, House-Leek, Purslain; Vine Leaves, and Willow-Leaves of each one handful. Heads or Leaves of Poppy (if the Patient rest not) an handful: Vineger one ounce: white Wine two ounces: Fountain Water as much as shal suffice. Make of al a Decoction. Hereunto may be added, if you please, a little Quantity of Lie, for to strengthen the Joynts. Herewith let the Hands and Arms, the Legs and Thighs of the Patient be washed warm, twice in a day, or once at bed time.

We are furthermore to note, that the Antients frequently used baths of fresh Water to cure putrid Feavers, as we may see in *Galen* in his Book *de Marcore. Cap.* 7. and in the 11. of his Method Chap. 9. and 20. and in his 1. to *Glauco* Chap. 9. and those baths were either cold in a vehement Feaver such as is an exquisite burning Feaver; or Blood warm in the declination of Feavers when the signs of Concoction appeared. But in this Age of ours, these kind of baths cannot be used, without danger, and they are convenient only in one Case; viz. when the Feavers become very lasting and possessing a body hot and dry and lean, seems likely to turn to an Hectick.

And one thing yet more I shal ad for a Conclusion of all, that if the Feaver terminate with some Crisis, the reliques of the Morbifick matter, must be taken away with a Purge; especially if the Crisis were by way of Sweat or bleeding. For by those Evacuations only the thinner portion of the matter is voided forth, but the thicker being left behind, as afresh inflamed and brings the Patient into a Relaps. Only therefore that Critical Evacuation which is wont to proceed by way of Stool, is secure from a Relaps. Yet must we not so confide therein as to abstain utually from al Purgation. For the Parts about the Midriff are yet foul, and do corrupt the nutriment which comes into those Quarters, from whence proceeds either a relapse into the former, or some new Disease. Therefore it is for the best way (as some latter Physitians have observed) by repeating once and again a gentle Purge, so to clense away al the remainders of the morbifick Cause, that all fear of a Relapse and al occasion of another Disease may be taken away.

Chap.

Chap. 2. *Of the Symptomes which accompany Putrid Feavers.*

ALL Authours in a manner who have writ of Feavers, have deſcribed thoſe Symptoms which either accompany or follow upon them, with their Cures at the end of their work, that ſo they might be beſt accommodated to al kinds of Feavers. Which Counſel of theirs though I ſhal not diſallow, yet I have thought it much more commodious for the ſervice of Practitioners, to Joyn them immediately after the Doctrin of putrid Feavers, ſeeing in thoſe kind of Feavers they are wont to be moſt vehement and frequent, and require peculiar Remedies.

So that although very many Symptoms are wont to be Cured by the Remedies aforeſaid, accommodated to the Cauſe and the Diſeaſe: yet very many there are more offenſive than the Diſeaſe it ſelf, which are here breifly to be diſcribed.

Head-ach, Want of Sleep and Ravings, are Cured in a manner with the ſelf ſame remedies viz. Revellers, repellers, derivers, reſolvers and anodines. Revellers are emollient Clyſters and ſuch as are Laxative, Gentle Purgations, Blood-letting, Cupping-Glaſſes, and waſhing the Feet. Repellers are frontals, Vinegars, Roſes, Unguents. Or Liniments; Derivers are opening of the forehead Vein, and Veſicatories. Reſolvers are certain Oyls, and certain Live Creatures applied to the Head, which likewiſe are Anodines. And while the foreſaid Remedies are uſed, Juleps are given and Emulſions, to temper and qualifie hot and ſharp Humors. After all theſe come narcotick Medicines, which are not to be uſed, but upon extream neceſſity when other things wil do no good. The matter of al which Medicaments, is ſet down in our Chapters of the Phrenſy and Head-ach proceeding from an hot Cauſe. But in the adminiſtration of the ſaid Medicaments, one thing muſt be diligently noted, that they be not to be uſed, when the Criſis of the Feaver is near: for they would then diſturb the motion of Nature and hinder the Criſis. Which is to be underſtood as of al the reſt, ſo more eſpecially of the narcoticks.

Againſt want of ſleep and Ravings, a Cataplaſm laid to the Soals of the Feet wil be very good, being made of freſh gourds beaten, the Leaves of the larger Houſe Leek, of Lettice and ſuch like. As alſo to waſh the Feet with a Decoction of refrigerating Herbs. For by this means the Coldneſs is communicated through the Nerves unto the Brain.

Convulſions in Feavers, eſpecially Malignant ones, do ſomtimes happen, by reaſon of Malignant Vapors which vex and fret the Skins which cover the Brain called Meninges. Againſt which convulſion fits we muſt uſe revelling Clyſters and Cupping-Glaſſes; alſo often give in Juleps or broaths Epileptick Pouders and finally anoint the Patients back-bone with Oyl of Chamomel, Violets, Sweet Almonds and of the Jndian Nut.

When profound ſleep happens to ſuch as are in Feavers the ſame Remedies are given which have been deſcribed in the Cure of ſleepy Diſeaſes, only obſerving this one thing; that we give no very hot Medicine inward.

The thirſt of Perſons Feveriſh is cheifly allaied with refrigerating and moiſtening drinks. But if thirſt be ſo Violent that moderate drinking cannot aſſwage it (and to drink over much doth much hurt and oft times endangers the Patients Life) we muſt by other means deceive and aſſwage the ſame.

Firſt therefore, let the Patients draw in the cold Air, and abide in Silence not ſpeaking a word, let them keep their mouths cloſe and breath through their Noſtrils, and give themſelves to ſleep.

Let them waſh their mouths with Barley Water Blood-warm, or with Water wherein hath been boyled Jujubees, Sebeſtens, Prunes, Lettice, Purſlain and ſuch like.

Let them hold in their Mouths a peice of Liquoris Scraped and ſteeped in Vineger and Water, or let them waſh their Mouths with Barley Water either ſimple or with a little Vineger in it, or a little Juyce of Lemons, Pomegranats, or a little ſpirit of Vitriol.

Or let them hold in their mouths the Kernels of Pomegranats, or a Slice of a Citron, or a Lemmon, or an Orange, Steeped in Roſe-Water with Sugar; or Stalks of Lettice, Endive, or Purſlain; Leaves of Sorrel, Bits of a Gourd, Cowcumber or Melon firſt Steeped in cold Water; Or Acid Cherries, or red Currence, or Reſ-berries, or Tamarinds, or a peice of Chryſtal, or the Stones of ſharp Prunes upon which a little of the Pap Hangs, and ſuch like.

Alſo Sugar Diſſolved in Roſe-Water with a little ſpirit of Vitriol, and dried again, is very good to quench thirſt.

If thirſt cannot be taken away with theſe lighter things they muſt be permitted to drink, not in the beginnings of the Exacerbations, or fits nor in the Augment, but very ſpareingly, but in the Vigor and eſpecially when it is towards declining: for then large allowance of drink doth carry the heat outwards;

wards, and ſometimes moves ſweat; eſpecially in the fits of Agues, in the declination of which, it is many times good for the Patient to drink unto ſatiety. Several Materials convenient to make Drinks in theſe kind of Feavers, are ſet down in the foregoing Chapter.

But if thirſt be cauſed by a Chollerick Humor contained in the Stomach, the ſaid Humor muſt be voided by Vomit or Stool. Vomit may be procured, if the Patient be Stomach-ſick, with an ounce and an half of Syrup of Vinegar Simple, with five ounces of Barley Water, or of the Decoction of Rhadiſhes. If that will not do, purge the Patient with a Bolus of one ounce of the pulp of Caſſia, and three drams of the pulp of Tamarinds, or with two ounces of Manna, diſſolved in a Decoction of Prunes or Tamarinds; or the following Potion may be given.

Take *Caſſia new drawn ſix drams: Mucilage of the ſeeds of Flea-bane half an ounce: the Decoction of Barley, Prunes, and Tamarinds, four ounces: Syrup of Roſes one ounce. Mix all into a Potion.*

The Heat, Dryneſs, and Roughneſs of the Tongue and Throat, is cured by divers Remedies, applied to thoſe parts, and contained in the mouth, compounded after this manner:

Take *of the Mucilage of Quince ſeeds one ounce: the ſeeds of Mallows half an ounce: Powder of Diatragacanthum frigidum, and Sugar Candy, of each one dram: white Sugar, as much as ſhall ſuffice. Make of all a Lohoch.* Or,

Take *of the Mucilage of Fleabane ſeeds, or Quince ſeeds extracted with Roſe Water, or Lettice Water half an ounce: Syrup of Violets, Lemmons, or Pomegranates, an ounce and an half: mix them. Let the Patients take now and then a little, and hold it in their mouths.* Or,

Take *Cucumer ſeeds half an ounce: Quince ſeeds two drams: Gum Tragacanth one dram and an half: Beat the ſeeds and diſſolve the Gums in the white of an Egg. Mix all, and make thereof little Cakes, for the Patients to hold in their mouths.* Or,

Take *Seeds of Fleabane, and of Quinces, of each one dram and an half: Gum Tragacanth half a dram: Sugar Candy three drams. With Mucilage of Gum Tragacanth make all into little Cakes. Or with a thin Rag make Nodules, which ſhall be ſteeped in Roſe Water, and held in the Patients Mouth.*

If the roughneſs be very hard to remove, make a Gargariſm of the Decoction of Barley, Roots of Marſh-mallows, Leaves of Lettice, Purſlain, Violet flowers, adding thereto Honey of Roſes, Syrup of Violets, or Sugar Candy, or Oxymel ſimple, and ſuch like.

If filth cleaves to the Tongue, as it moſt times happens, it muſt be oftentimes wiped with a rough Cloth dipped in a mixture of Water and Vinegar. Whereunto alſo ſometimes may be added, the Juyce of Houſleek, and Sal prunella.

If the Heat be more vehement, with great blackneſs of the Tongue, more refrigerating Medicines muſt be mixt with the moiſtening ones, after this manner:

Take *Juyce of Lettice, Houſleek, and Lemmons, of each an ounce: Mucilage of Quince ſeeds and Sugar Candy, of each half an ounce: white Sugar as much as ſhall ſuffice. Make all into a Lohoch.* Or,

Take *Green Houſleek one handful: Vinegar of Roſes three ounces: Barley Water one pint: Boyl all till the third part be waſted away. In the ſtrained Liquor diſſolve of Sal prunella one dram and an half: Allum a ſcruple: Syrup of Violets and Mulberries, of each one ounce: Make of all a Gargariſm. Or Sal prunella alone may be diſſolved in Houſleek Water, and the Tongue and Throat waſhed therewith, which is very good; alſo ſome Portion thereof may be ſwallowed to cool the mouth of the Stomach, when it is likewiſe inflamed.*

Alſo outwardly, let the Neck and Throat be anointed with Oyl of Violets, and freſh butter, waſhed in Roſe Water, with which the Throat being as it were ſcorched and parched, may be moiſtened.

For Cooling, the Oyntment of Roſes, and *Galens* cooling Oyntment may be uſed, with others of like Nature. But the Leaves of Lettice and Purſlain being bruiſed and encloſed between two Linnen Cloths, and ſo applied to the Neck and Throat, are much more effectual. Alſo thoſe kind of Bugs which we call Sows, may be bruiſed and laid on in the ſame manner.

In great Heat of the Breaſt, ſuch as is wont to happen in Feavers, the whol Breaſt muſt be anointed with Oyl of Violets, Water-lillies, and of ſweet Almonds. Yea, and if the Heat be very vehement, Fomentations ought to be applied to the ſaid part made of a Decoction of French barley, Lettice, Water-Lillies, Borrage, Violets, and ſuch like; after which, irrigations ought to be uſed of the Oyls aforeſaid. Seeing that, according to the Preſcript of *Galen* and *Avicenna*, in ſuch like Feavers, great care is to be had of the breaſt, as of the Furnace of Heat. Now theſe kind of Remedies, according to the Rule of *Trallianus*, are ſeldom to be cold, becauſe they drive the Heat inward; nor luke-warm, becauſe they relax; but ſuch things ought to be applied to the breaſt, as are actually hot, and potentially cold.

Pain

Pain in the Loyns is cauſed in Feavers by hot and plentiful blood boyling and working in the *Vena Cava*, and it muſt be eaſed by Emollient Clyſters and Cooling, and Emulſions made of the Cold Seeds, adding Sal Prunella; and by anointing the Loyns with *Galens* Cooling Oyntment, with Juyce of the larger Houſleek, and Camphire, or *Unguentum Populeon*, or Oyl of Roſes, Lillies, and Poppies; or with an Epithem made of Plantane Water, Roſe Water, Vinegar of Roſes, and Camphire; or with a Mixture of Roſe Water, Oyl of Roſes, and Vinegar: all which are to be applied actually cold in the Summer, and a little leſs than blood-warm at other Seaſons of the Yeer.

Diſquietneſs, and tumblings, and toſſings, which are wont to happen in the Feaver *Aſſodes*, and in the Fits of a Tertian Ague, are beſt cured by purging away the Chollerick Humor which vexes and frets upon the Stomach, and other ſenſible parts, and that by Vomit or Stool, according as Nature ſeems more or leſs to affect the one or other way; alſo it may be drawn downwards by Clyſters, and preſently all Art is to be uſed to make the Patient reſt, and cold Drink is given, as alſo cooling Juleps, whereunto ſometimes Syrup of Poppies, or a little Laudanum may profitably be added.

Swooning Fits are wont to happen in thoſe kind of Feavers which are commonly called *Febres Syncopales*, or Swooning Feavers, of which there are two kinds, as was ſaid before; and the one is called *Minuta*, the other *Humoroſa*. The Cure of which Feavers, much differing from the Cure of other Putrid Feavers, we have reſerved unto this place, in regard of the ſaid Symptome of Swooning.

The *Minuta Syncopalis*, which is bred of Chollerick Humors, ſharp and venemous, muſt be cured after this manner. Let the Air be cold and moiſt, and a little aſtringent, that diſſipation of the ſubſtance of the Body, may be thereby prevented. Let the Patients Diet be thin, cooling, and reſtorative, of the Broth of Chickens boyled with Sorrel, Purſlain, &c. To which may be added, Roſe-water, Juyce of Pomegranates, and a little Sugar. Bread ſteeped in the Juyce of Pomegranates, or of Oranges may be given, if a more liberal Diet is to be granted, as alſo Cream of Barley, or Panada's with Juyce of Lemmons or Pomegranates. Alſo Reſtorative Broths of preſſed Fleſh with the foreſaid Juyces. To the ſtronger ſort are given the Yolks of Eggs with Juyce of ſowr Grapes, the Stones of Cocks, the Fleſh of Pullets, Hens, Partridges, qualified with the aforeſaid Juyces.

Let the Patients drink with their Meat, if they have no Inflamation of any bowel, thin Wine not very old, nor yet new and windy; or Beer that is indifferent ſtrong, not new, or very ſtale. When they eat not, or otherwiſe if there be Inflamation, let their Drink be Barley Water, or Water in which a piece of a Loaf hath been boyled, with Syrup of Pomegranates, Lemmons, Citrons, Julep of Roſes, &c.

Sleep is good out of the Paroxyſm, but in the ſame it hurts. And finally, ſpecial Care muſt be taken that nothing provoke the Patient to Anger, Sadneſs, and the like Paſſions.

In the Paroxyſm, Reſolution of the Spirits muſt be prevented by blowing cool Air with Fans upon the Patients, and by ſprinkling them with ſweet ſmelling Waters. Their Face muſt be ſprinkled with cold Water, or Water of Roſes, and Vinegar minled. With which the Stones of Men, and the Dugs of Women muſt be bathed cold.

If Heat and Spirits will not be revoked from the Heart to the outward Parts of the Body, it is to be revelled and forced back by binding of the extream Parts, and by nipping and pinching them; alſo pluck the Patients often by the Noſe, pluck them by their Hair, and call upon them often by their Chriſten Name. Give of the Crum of White-bread ſteeped in the Juyce of Pomegranates, or thin fragrant Wine, tempered with Roſe-Water; and when neceſſity urges, ſome Cinnamon Water mingled with Roſe Water. In the mean ſpace, Reſtorative Broths are not to be omitted, wherewith Confectio Alkermes, and ſuch like may be mingled. Alſo Cordial Potions are often to be given out of a Spoon, made after this manner:

Take *Water of Roſes two ounces: Orange flower Water one ounce: Cinnamon Water half an ounce: Confectio Alkermes one dram: Pearls prepared, and Coral prepared, of each half a ſcruple: Sugar Cakes made with Pearl ſix drams: Mix all, and make thereof a Julep, or Cordial Potion. To theſe may be added the Electuaries, and Conſerves, and Preſerves, deſcribed in the foregoing Chapter.*

Alſo the inner ſide of a Loaf hot out of the Oven ſprinkled with Roſe water and Vinegar, may be applied to the Patients Noſtrils, and Mouth.

To the Heart, Cooling and ſtrengthening Epithems may be applied.

To ſtraiten the Pores, and prevent the Evaporation of the Patients ſtrength and Spirits, wrap them in Linnen ſprinkled with Pouder of Roſes, Balauſtians, and Sanders; or let their ſhifts be ſprinkled with Roſe water, and a little Vinegar.

Let their whol Body, eſpecially the Back be anointed with this following Liniment.

Take *Oyl made of unripe Olives, one ounce and an half: Mirtles, Quinces, and Mucilage of*

Seeds of Flea-bane, of each ſix drams: Gum Arabick diſſolved in Roſe-Water two drams, white Wax as much as ſhal ſuffice make all into a Liniment.

A ſpecial regard is to be had of the ſtomach, becauſe the Humor offending is cheifly there collected. Now the region thereof muſt be anointed with Oyl of Roſes and Quinces: and then alſo may be laid on a Toaſt of Bread, wet in Juyce of Quinces and unripe Pomegranats. Or if it be afflicted with great heat, foment the ſtomach blood-warm, with a Decoction of Purſlain and Roſes, or with Juyce of Night-ſhade, Purſlain, Sowr-Grapes adding thereto Oyl of Roſes and Quinces.

The Swooning Fits being removed and the Patient ſtrengthened, we muſt bend our minds to remove the Feaver and its Cauſe. Which may be done, by Alteratives and Evacuators proper for turning Feavers, which we have deſcribed in their proper place: viz. Where the Cure of burning Feavers is ſet down.

The Cure of the ſecond ſort of Swooning Feavers, which is called *Febris Syncopalis Humoroſa*, which is cauſed by abundance of Flegmatick aud crude Humors, is in a manner contrary to the Cure of the *Minuta* newly deſcribed. For the Air ought to be temperate, inclining to heat, light, pure and dry. Meats, of good Juyce eaſily digeſted, prepared with Hyſſop, Fennel and ſuch like Herbs. Let their drink be thin and not very ſtrong. Let their ſleep and Watchings be Moderate.

But Frictions or artificial Rubbings of the Body, and by *Galen* much extolled in this Caſe. In the 12. Method Cap. 3. They muſt be uſed from the beginning of the Diſeaſe, with Courſe Cloaths, beginning above and ſo Rubbing downwards; firſt on the Thighs and Legs; afterwards on the Arms, ſhoulders and Back. Let the Cloaths with which the Frictions are performed be firſt Smoaked with Storax, *Lignum Aloes*, Frank-Incenſe Cloves &c. When after friction the Limbs are luſtily warm, anoint them with Oyl of Dil, of Chamomel, of Orice, of Caſtus and others of a reſolving Faculty. Such Frictions as theſe are highly commended, becauſe they call the natural Heat and ſpirits together with the Humor offending which did Choak the natural ſtrength, into the outward Parts.

In the fit the Sick-party muſt be rowzed, by pulling the Noſe, Rubbing the Eares, plucking off of Hairs, Loud calling &c. Alſo ſweet Smelling things muſt be Applied to the Mouth and Noſtrils, as Cinnamon and Orange flower Water, Vinegar wherein Cloves have been ſteeped, inſide of a white Loaf dipt in *Hippocras* alone, or Cinnamon Water, or the following cordial Water.

Take *Waters of Bawm, Roſe-Mary and Orange flowers of each one ounce; Cinnamon Water half an Ounce*: Confectio Alkermes *one dram*: *Syrup of preſerved Citron Peels and of Gilly-flowers of each one ounce*: *Mix all into a potion or Julep, which the Patient muſt often take of, by a Spoonful at a time. Alſo Electuaries may be made after this manner.*

Take *Conſerve of flowers of Bugloſs, Roſemary, and of Citron Peels preſerved, of each half an ounce*: *preſerved Nutmeg three drams*: Confectio Alkermes *two drams*: *Species of Diambra and Diamoſchum dulce of each one ſcruple*: *With the Syrup of preſerved Citron Peels, make all into an Electuary.*

Unto the Heart Epithems may be applied and young Pidgeons to the ſtomach and Stones; Fomentations may be applied, and other things adminiſtred, which have been propounded in caſe of decay of ſtrength.

While theſe things are in doing, frictions muſt ever and anon be repeated, which muſt in this Diſeaſe never be omitted.

When the Patient hath a little gathered ſtrength, the Morbifick Matter is to be drawn out by Clyſters and Purgations (in which *Hiera cum Agarico*, in regard of the ſtomach, is very profitable) which ought to be gentle and frequent, yet ſo as fitting Preparatives be adminiſtred between Purge and Purge.

Want of Appetice is common in a Manner to al Feavers: for when the ſtomach is inflamed, thirſt is encreaſed, but Appetite of eating diminiſhed. Yet ſomtimes Appetice is ſo dejected that the Patients can hardly ſup a little broath. Which Loathing of Meat is cauſed by Vicious Humors collected in the ſtomach or ſoaked into the coats thereof; or of corrupt and Malignant Vapors which infeſt the ſtomach. It ought to be Cured by Evacuation of the Morbifick Matter by Vomit or Stool, and firſt with an infuſion of Rhubarb and Tamarinds. But in the declination, if the Feaver be not ſtrong, with *Hiera Picra* diſſolved in a Decoction of Barley, Vetches, Wormwood and other detergent things. Afterwards we muſt uſe Clyſters, which occaſionally do revel from the ſtomach. Alſo acid and refrigerating things are frequently to be given, as Syrup of Lemmons, Pomegranats, ſome Cherries &c. given alone or with cold Water. In the declination or when the Feaver ceaſes, Syrup of Roman Wormwood may profitably be given, either alone or mixed with acid Juyces or Syrups. Let Meats that are grateful be preſented to the ſick. For as *Hippocrates* teaches in Aphor. 38. Sect. 2. The Pleaſanter Meat and drink, though ſomwhat the worſe, is to be preferred before that which is bitter and not ſo pleaſant. Alſo let them eat but little and ſeldom, for much

and

and frequent eating cauſes Want of Appetite even in thoſe which are wel. And let their Meats be ſauced (provided they have no cough) with Juyce of unripe Grapes, Vinegar of Roſes and Juyce of Lemmons. If the ſick do ſo abhorer al Meats that they can take nothing at al, let them have nourithing Clyſters given them twice or thrice in a day; the excrements being firſt avoided by a cleanſing Clyſter. When the Feaver is wholly allaied and gone, if want of Appetite do remain, let the ſick perſon Moderately exerciſe, and uſe Capers, Saxifrage, Olives; let him change place and go into a colder Air. And finally if theſe helps ſuffice not let the Patient uſe Wormwood Wine and pils of *Hiera Picra*, which do powerfully cleanſe away ſuch Humors as are faſt ſticking in the Coats of the ſtomach.

Hiccupings and Vomitings which betide perſons in Feavers are oppoſed by divers Medicaments, the materials whereof are to be ſought for in our cures of thoſe Infirmities of Vomiting & Hiconping & to be Judicially accomodated to ſuch perſons as in Feavers are troubled with thoſe Symptoms. But ſpecial care is to be taken that a critical Vomiting be by no Means ſtopped. Hiccoughing ſomtimes proceeds from immoderate uſe of refrigerating things, as *Lemnius* witneſſes, whoſe words *Schenkius* doth thus relate. *Hiccoughing in Feavers doth ſomtimes follow over abundant uſe of Refrigerating Juleps; and I have ſeen many ſo affected by the unadviſed Raſoneſs of Phyſitians, which Symptom contrary to the expectation of all Men, I Cured by giving the Patient Wine to drink.*

A Looſneſs befalling one that hath a putrid Feaver, if it be critical (that is proceeding from the Conqueſt of Nature over the Morbifick Matter and tending to expel the whol or Part thereof) it muſt not be ſtopped; neither muſt a Symptomatick Looſneſs be preſently ſtopped, at the very firſt, if it do not very much weaken the Patient, leaſt the Vitious Humor do flow back again to ſome principal Parts. When it is ſeaſonable to ſtop it, it muſt be done with a gentle aſtringent Purge, with cleanſing and Corroborating Clyſters; by Medicines taken in and outwardly Applied, which do thicken, ſtrengthen and bind. All which may be taken out of our Cure of a Diarrhœa or Looſneſs: beginning with the gentler and proceeding if need be to the more ſtrong by Degrees.

Sweats if they be not Critical (that is cauſed by Nature expelling the Humor offentive) but Symptomatical [that is, cauſed by the vehemency of that Diſeaſe diſſolving the Body, and hurrying the Humors through the Skin] and doth very much weaken the Patient, they muſt be ſuppreſſed by cooling the Air, with ſprinkling cold Water and the leaves of the Willow and Vine-tree upon the pavement; and if need be by opening the Windows; the Body being cooled and ayred by little and little, the Cloths being light upon the Patient, and a Flock-bed being put inſtead of a Feather-bed: alſo by often ſprinkling the Patients Face with Water and Vinegar mingled together, and finally by the uſe of cooling Aſtringent Medicaments; ſuch as are cooling Epithemes applyed to the Heart, Liver, and whol Belly, and often changed. Oyntments made of Oyl of Roſes, of Mirtles, of Mucilages, and Aſtringent Pouders, are to be anointed upon the whol Body; but eſpecially upon the Backbone. Pouders of Roſes, Balauſtians, Pomegranate rinds, Myrtle, Maſtich, Terra Samia &c. Muſt be ſprinkled upon the Neck, Throat, under the Arm-pits, and in the Groins. Or let the Patient be wrapped in a Linnen Cloth, ſprinkled with a mixture of Vinegar and Water, and the aforeſaid pouders ſtrewed thereon; being in the mean time careful that no Inflamation, or Tumor be in the Parts about the ſhort Ribs: for then we muſt abſtain from Aſtringent things, at leaſt ſuch as are ſtrong. The Sweat muſt nõt be wiped off, but ſuffered to dry about the Pores of the Skin, ſo to ſtop them that more may not follow.

Alſo we muſt give in at the Mouth, Medicaments that thicken and ſtrengthen, as Barley Water boiled with Lettice and cooling Seeds; Reſtorative Broths, with Juyce of Pomegranates, ſowr Grapes, Pouders of Corals, Pearls, ſhavings of Ivory, Sanders, or Baulauſtians. Juleps of the Waters of Roſes, Lettice, Purſlain, with Syrup of Pomegranates, dryed Roſes, or Quinces. Conſerved Electuaries, of Conſerve of Roſes, Corals, Pearls, Terra Sigillata, pouders of Diamargaritum frigidum, and ſuch like.

AN APPENDIX.

In the Cure of moſt acute and pernicious Feavers, one thing is diligently to be noted that ſuch Feavers ſeldom happen without ſome inward and peculiar diſorder and commonly Inflamations of ſome of the inward Bowels as Liver, Spleen &c. So that we muſt evermore be careful of the Parts under the ſhort Ribs, of the Head, the Breaſt, the Womb; Reins and bladder: that by al means poſſible we may hunt out, which of thoſe is much out of order, and as much as may be reſtore the ſame to its Natural Conſtitution.

Chap. 3. *Of a Tertian Ague.*

AN Ague, or Intermittent Tertian Feaver, is cauſed by an Excrementitious Chollerick Humor, contained in the firſt Region of the Body, and there putrefying.

A Tertian Ague is either Legitimate and Exquiſite, or Illegitimate and baſtard.

A Legitimate or Exquiſite Tertian Ague, is terminated in twelve hours, and is cauſed by the putrefaction of Natural Choller. But a baſtard Tertian hath fits that laſt above twelve hours. But if it exceed twenty four hours, it is termed *Tertiana extenſa*, a ſtretched Tertian. And it is cauſed either by Preternatural Coller putrefying, or by Natural Choller mingled with other Humors, eſpecially with flegm.

Alſo Tertian Agues are Simple, or Double, or Triple. A Simple Tertian, is that whoſe Fits come every other day. A Double Tertian is that whoſe Fits come every day. And although herein it differ not from a Quotidian or every day Ague, yet they are known one from the other by their proper Signs, ſhewing the abundance of Flegm or Choller in the Patient; of which Signs in their place. Somtimes notwithſtanding in a double Tertian there are two fits in one day, the other day remaining free; and this ſome latter Phyſitians do call two Tertians, and make it to differ from a double Tertian. Which Diſtinction notwithſtanding is of ſmal moment. A Triple Tertian is when there are three fits in the compaſs of two daies. This is a moſt rare and ſeldom ſeen ſort of Feavers. Yet *Galen* propounds one ſingle Example thereof, and I ſaw another in the yeer 1637. in a certain Gentleman, who once in ſixteen hours had a fit of a Tertian Ague. And all the fits did every one of them terminate in the ſpace of ten or twelve hours, by ſweat. Now theſe divers Paroxyſms are made by a different matter putrefying in different places, ſo that each one hath as it were its peculiar Chimney where it is firſt kindled.

Now the Humors cauſing Tertian Agues, are collected chiefly in the firſt Region of the Body, viz. In the Liver, the bladder of Gall, the Stomach, the Meſentery, the Pancreas, or in the Veins of thoſe Parts.

Their Cauſes, are all ſuch things which ingender Excrementitious Choller, viz. An hot and dry diſtemper of the Spleen, youthful Age, Hot Conſtitution of the Air, Watchings, Cares, Anger, Faſtings, uſe of hot Meats, over much Exerciſe. To theſe are added, for the breeding a baſtard Tertian, ſuch Cauſes as engender Flegm and Melancholly. Hereupon, ſuch as have hot Livers, and by Glutinous and bad Diet, do breed many Crudities, are ſubject to baſtard Tertians, by reaſon of the mixture of Choller with crude Humors. And hence alſo it is, that in Summer time, crude Humors bred through weakneſs of the Natural Heat, by eating of Fruits, and over much drinking, being mixed with Choller, do breed baſtard Tertians.

The Signs to know an Exquiſite Tertian by, are theſe: That this Feaver alwaies begins with great ſhaking Fits, whereas in a Quotidian Feaver or Ague, there is only a light ſhivering or coldneſs. After the cold ſhaking Fit, follows great Heat, ſharp and biting, Intollerable Thirſt, great and frequent breathing, want of Sleep, Head-ach, and ſomtimes Ravings. After the ſhaking fit, ſomtimes there follows a vomiting of Chollerick Humors, or a purging by Stool. The Urine is ſomtimes Yellow, Yellowiſh-Red, or Red. The Fits laſt not above twelve hours, and they are terminated by Sweat. Alſo the Cauſes fore-cited, breeding Choller, have preceded.

In a baſtard Tertian, all the foregoing Signs are more remiſs than they are in an Exquiſite one, but more intenſe than in a Quotidian Ague. And according as there is more or leſs flegm mingled with the Choller, the Fits come neerer to thoſe of an Exquiſite Tertian, or of a Quotidian; but in reſpect of the vehemency of the Symptoms, and the length of the Fit it ſelf. So that the Paroxyſms of a baſtard Tertian may be lengthened out to ſixteen, eighteen, or more hours. Although they may be ſomtimes ſhorter, becauſe of the paucity of the Matter, and be terminated within the ſpace of eight, ten, or twelve hours.

The Prognoſtick of this Diſeaſe, is taken out of *Hippocrates*, in Sect. 4. Aph. 59. *Exquiſite or exact Tertian Agues laſt but for ſeven fits at moſt.* And in Aphor. 43. of the ſame Section, *All Intermitting Feavers are void of danger.* Which is to be underſtood only of ſuch Tertians as are void of all malignity. For there are Malignant and Peſtilent Tertians, which though they have evident Intermiſſions; yet do they often kill the Patients. Furthermore, many things fall upon the Neck of a Tertian, which may breed danger, although the Feaver of it ſelf be not dangerous.

Haly writes, and common Experience ſhews, That if ſuch as are ſick of a Tertian Ague, have Ulcers, Scabs, or Puſtles breaking out in their Lips, it is a token the Ague wil leave them. For it is a kind of Critical Evacuation in thoſe parts.

A Looſneſs

A Looſneſs befalling one that hath a Tertian Ague, the matter being digeſted, ends the Diſeaſe. And this is the way by which alone Nature doth perfectly expel the Cauſe of theſe Feavers. For ſeeing the Original Cauſe of theſe Feavers is contained in the Gall-Bladder, or the Liver, or the Meſentery, and other Parts in the firſt Region of the Body; although that which ſteems and vapors therefrom in every fit, do get into the habit of the Body, and is purged away, either by Sweats, or by inſenſible Tranſpiration, or by Puſhes and Pimples; yet the groſs parts and ſetlings of the Humor abiding in their place, which unleſs by the benefit of Nature, or Medicaments it be purged away by ſtool, it is wont to be the Cauſe either of a long Ague, or of Obſtructions, or of a Relapſe, or of other ſtubborn Diſeaſes.

Agues are wont to be of ſmal durance and little danger, if the habit of the whol Body be good, if the bowels be wel affected, if it be Spring or Summer, if the Patient eat little, and drink ſparingly. And contrarywiſe, they are wont to be long and more rebellious, if there be an evil diſpoſition of the Liver or Spleen. if the Patient abound with flegmatick Humors or Melancholick, if the Winter or Autumn be in their full force, if the Patients do eat much, or by much drinking do oppreſs their Natural Heat.

The Cure, as in other Feavers, is to be directed to the Feaver, its Cauſe, and ſtrength of the Patient. The Feaver calls for Coolers; the Cauſe requires Coolers likewiſe, and withal ſuch things as digeſt and purge the Humor offending; the Patients ſtrength calls for things that corroborate and vigorate the ſame.

And in the firſt place, A Cooling Diet muſt be appointed, and which moiſtens; it muſt be the very ſame in an exquiſite Tertian, which we before preſcribed in our Cure of Continual Feavers. But in a baſtard and ſingle Tertian, a fuller Diet ſomwhat, is to be enjoyned, eſpecially if the Diſeaſe prove to be long; for then ſolid Meats are to be given on the wel-day, and five or ſix hours before the fit. But in a double Tertian, as in an exquiſite Tertian, the Sick muſt be nouriſhed only with broth, and other ſupping things.

This is a moſt pleaſant Drink out of *Foreſtus*, for thoſe which have a third day Ague.

Take *Fountain Water two pints*: *Cinnamon half an ounce*: *Sugar three ounces*: *Let all be ſtrained cold and raw, through an Hippocras Bag.*

The Patient muſt not eat when the Fit is coming, according to that ſaying of *Hippocrates*, in Aphor. 11. Sect. 1. For Nature (as *Galen* ſhews in his Commentary on that place) by Concocting of newly eaten Meat, is called away from Concoction of the Morbifick Humors. Add hereunto, That in the fit of an Ague, the whol body is filled with a filthy vapor, which doth mar, and for the moſt part corrupt that meat which is eaten neer the fit. But if the fit prove ſo long, or the Patients body ſo hot and dry, ſo lean and thinly woven together, with wide pores, that it is ſoon diſſolved and diſſipated, and cannot hold out to the end of the fit; the Patient in ſuch a caſe may be allowed to eat in the fit, and it wil be better to eat when the fit is in the ſtate or height, than at any other time. Howbeit, in the beginning alſo, and in the augmentation, neceſſity compelling, Meat may be given. For ſo *Galen* in the tenth of his Method, Chap. 5. was compelled to give Meat even in the beginning of the fits, unto ſuch as had this kind of Ague, being of a hot and dry temperature, unto whom faſting is extreamly hurtful, leſt they ſhould fall into ſwooning fits. And in imitation of him, *Amatus Luſitanus* in the 68. Cure, of the fourth Century, to one that was full of, and vomited pure Choller, and by that means fell into ſwooning fits, he gave bread dipt in water, and ſprinkled with Juyce of ſowr Grapes in the beginning of the Ague fit; by which means he hindered the aforeſaid Symptomes.

There is one thing yet further to be obſerved both in this, and all other Agues, That the Patient do neither eat, drink, nor ſleep, before the fit. But it wil be good that the Patient go to ſtool, by means of a Clyſter, provided the ſame be adminiſtred before the beginning of the fit.

Having therefore ordered a convenient Diet, we muſt forthwith proceed to evacuate the Morbifick Matter, which ſeeing it ſticks in the firſt Paſſages, it muſt be voided not only by Clyſter, but by Purges and Vomitories.

Clyſters in an exquiſite Tertian, muſt be made of an Emollient and Cooling Decoction, with Caſſia, Catholicum, Diaprunum ſimple, and purgative. But in a baſtard Tertian, let the Decoction be of Emollient and Cutting ſimples, diſſolving therein Diaphœnicon, Honey of Roſes, &c.

Purgative Medicaments in an exquiſite Tertian, muſt be the ſame which have been propounded in continual Feavers. But in a baſtard Tertian, there muſt be added Agarick, Senna, Catholicum, Diaphœnicon, and others, ſuch as the Judicious Phyſitian ſhall conceive moſt ſuitable to the conſtitution of the ſick. And in every ſort of Agues, Cream of Tartar may profitably be added to the Medicaments, becauſe it opens Obſtructions, is potently clenſing, and yet cools withal. Purging Medicines are to be given on the day of Intermiſſion, and that in the morning, as commonly is uſed; if the time of Intermiſſion fall within thoſe hours: if not, the middle ſpace between the two fits muſt be choſen. And at any hour of the day or night, we may give a Purge, provided it be far from the Fit, and the Stomach have digeſted what was laſt eaten.

But

But in a double Tertian, 'tis an hard matter to chooſe a convenient time to give a Purge, becauſe many times, not above three or four hours do fal between two fits. Yea, And ſomtime the fits are ſo long, that the one begins before the other be ended, which makes them be called *Febres Subintrantes*, encroaching or intruding Feavers. For then the ſpeedineſs of the occaſion or opportune time, requires the uttermoſt diligence of the Phyſitian. Now the more commodious hour of giving the Medicine, is thus to be choſen. In a double Tertian not encroaching, the Medicament muſt be given in the end of the Fit, at ſuch a diſtance from the following Fit, that the working of the Phyſick may be over ere the other Fit come. But in an encroaching Ague, when the latter Fit interfers with the former, the Medicament muſt be given in the beginning of the declination, as ſoon as it begins never ſo little to remit. And in both Caſes the Patient muſt drink Broth, three hours after the Medicament is taken; yet ſo, as that there muſt be remaining three hours from the Broth-taking before the next Fit begin. So that the Medicament, is to be given at leaſt ſix hours before the next Fit.

As for Vomits, What was ſaid of them in the Cure of Continual Feavers, may be here very commodionſly applyed; becauſe the abundance of evil Humors conteined in the Stomach, Meſenterie, and Cavity of the Liver, which is wont to cauſe theſe Feavers, is brought away by Vomit; which ſomtimes cannot be moved by purging Medicines given again and again, as *Fernelius* hath well obſerved. And therefore, If in the beginning of the Fit, the Patient be vexed with Vomitings, the Phyſitian ſhall do well to follow that motion of Nature. And ſeeing the gentleſt ſorts of Vomits, will not ordinarily ſerve the turn, we muſt proceed to the middle ſort, ſuch as is eſpecially *Aſarum*, of the pouder whereof, half adram, two ſcruples or one dram, is given in Broth, or ſome other convenient Liquor. Others give the Decoction thereof, which is made of three drams of Aſarum Roots, boiled in Chicken Broth, or in Barley Broth made with Raiſons. The Chymiſts do give white Vitriol prepared, and Salt of Vitriol, and alſo *Aqua Benedicta*, which is made of *Crocus Metallorum*. Which, as other Medicaments made of Antimony, as they do ſomtimes happily rid away ſuch morbifick Matter as is lodged in the firſt paſſages about the Stomach and Meſenterie, &c. So do they require a prudent and ſkilful Phyſitian to adminiſter them; otherwiſe they are like a ſharp Knife in the hand of an Infant, or like a Sword in the hand of a Mad-man.

The firſt paſſages of the Body, or firſt Region thereof, being purged, at leaſt with one Purge, a Vein is to be opened in the Wel-Day. Yea verily, And if the Patient be Plethorick, the Urins red and thick, the Cure is well begun by Blood-letting, for the Purge will afterwards work the better.

If the Blood appear very Hot, Aduſt, or Putrid, Bloodletting muſt be repeated; which yet is left to the Judgment of the Phyſitian, according as he finds the Patients conſtitution.

After Purgation and Phlebotomie, we muſt endevor to prepare the Humors, by Juleps ſuch as were ſet down in the Cure of Continual Feavers; the matter whereof muſt be varied, according as Flegm or Melancholly is mingled with Choller, as was obſerved in the place aforeſaid.

In the mean time, whilſt the Medicines aforeſaid are making, the Feaveriſh heat is to be allaied with cooling Epithems applyed to the heart & Liver, ſuch as were propounded in Continual Feavers, with this Caution, that they be never laid on, but in the height of the Hot-Fit, or rather when it firſt begins to abate.

To the Liver alſo and the Loins, Oyntment of Roſes, or the cooling Oyntment of *Galen* may be applyed.

Alſo Emollient and cooling Clyſters, will be very good at the end of the Fit, as well as in the beginning.

The matter being prepared certain daies, by the uſe of Juleps, Purgation muſt be again uſed, with Senna, Rhubarb, Catholicum, Syrup of Roſes; adding thereto Agarick, if Flegm abound. And And if the Patient be ſtrong; we may add *Diaprunum Solutivum*, *Electuarium de Succo Roſarum*, or *Diaphœnicon*.

The Body being again purged, after the uſe of Juleps, if the Fits return and ſeem longer than they were before, it is a ſign that groſs Humors, and ſuch as ſtick faſt in the Body, do nouriſh the Feaver, and breed Obſtructions: In regard of which, cleanſing, opening and cutting things are to be uſed The Principal of which is Wormwood, which is exceedingly commended by *Galen*. In his 1. Book *ad Glauconem* Chap. 9. and Century, which in regard of the rare vertues it has in curing Agues, is called *Febrifuga*, that is to ſay Ague-Queller. But becauſe theſe Herbs are hot, they may be qualified by the Commixture of cooling things, after this manner.

Take *Roots of Graſs, Cichory, Aſparagus, of each one ounce: Leaves of Agrimony, Sorrel, Cichory, Endive, of each one handful: vulgar Wormwood and Centaury, of each an handful: Boil all to a pint. In the ſtrained Liquor diſſolve three ounces of Syrup of Lemmons. Make all into a Julep for to be taken at three times in the morning.*

The Juleps being finiſhed, a Purgation muſt be again adminiſtred or a Vomitory, if Nature affect to diſcharge her ſelf that way. For then, the ſigns of Concoction appearing, theſe Feavers are ſomtimes.

ſometimes happily Cured by Vomiting. And *Galen* in his firſt Book ad *Glauconem* Chap. 10. Writes that many are Cured of this kind of Ague only by a Vomit yea verily and daily experience ſhews, that *Aqua Benedicta* doth eradicate theſe Feavers or Agues for the moſt Part, unleſs ſome contumacious obſtructions of the Bowels do hinder. Many Experiments hereof are propounded by *Martinus Rulandus* in the Centuries of his Cures. But, it is, as was ſaid before, a vehement Medicament, and not to be given without extream Caution. Some give an ounce of *Aqua Benedicta* with the Infuſion of half an ounce of Senna, and ſo it works more by Stool than by Vomit.

Others uſe Cambogia, others *Mercurius Dulcis* with Scammony. Which Medicaments, ſeeing they do potently Evacuate, do often Pluck theſe kind of Feavers away by the Roots, but they are to be given only to ſuch as are ſtrong of Conſtitution.

To theſe Medicaments exquiſite Tertians and Baſtard ones too, are wont to give place. But if the Agues do yet ſtubbornly reſiſt (as it ofttimes fals out) Solemn Purgation muſt be made with an Apozem to be taken three daies, made of the Materials of the foreſaid Juleps, adding thereto Senna, Rhubarb, Agarick, Syrup of Roſes of Cichory with Rhubarb and ſuch like. Yea verily and althoug the Ague be gone before the uſe of this Apozem, if a Voluntary Looſneſs do not befal the Patient. For the ſolution of an Ague by Sweat or inſenſible Tranſpiration, as not to be truſted unto, gives ſuſpition of a Relapſe; becauſe by them the thinner Part only of the Humor is Evacuated, the thicker being left behind: which can no other wayes be Evacuated, ſave by Stool.

Before the Apozem aforeſaid be uſed, if there be a Diſtenſion in the Parts under the ſhort Ribs, let this following Emollient, attenuating and ſtrengthening fomentation be applied.

Take *Roots of Marſh-Mallows, Graſs and Aſparagus, of each one ounce: Roots of Enula Campana and the middle Bark of Tamarisk of each half an ounce: Leaves of Mallows, Violets, Agrimony, Maiden-Hair and Wormwood, of each an handfull: Lin-Seed and Fœnu-Greek Seed, of each one ounce: Flowers of Chamomel, Melilot, Roſes of each a pugil: Boyl all in three Parts of Water and one of white Wine, put in towards the concluſion, with two ounces of Vinegar: with this Decoction foment the Parts under the ſhort Ribs Morning and Evening, for two daies before the uſe of the Apozem.*

After Fomentation, anoint the ſaid Parts with this following Oyntment.

Take *Oyl of Lillies, Sweet Almonds and Tamarisk of each one ounce: Oyntment of Marſh-Mallows two ounces: and a little Wax. Make all into a Liniment.*

If after al theſe remedies, the ſtubborn Ague do yet lengthen the time and keep its ground; and the Patients Face appear ſwoln, and paliſh, alſo their Legs ſwel towards night: they are to be plied with ſuch Medicines as are commonly preſcribed for obſtructions of the Liver. Among the reſt, *Montanus* doth very much commend the Decoction of Cichory and Germander in Broath; which he ſaies is admirable in long Feavers that are cauſed by obſtructions.

Yet, it is to be noted; that the length of a Tertian Ague is ſome times cauſed by an hot and dry diſtemper of the Liver, whith perpetually produces a Chollerick Humor, the Cauſe of new Fits. Which is often obſerved in many, which being of a dry and meagre conſtitution of body and wholly Chollerick, have had a Tertian Ague three or four months together, eſpecially in the more hot ſeaſon of the yeer, without any tenſion of their Bowels, or any aboundance of Humours. To ſuch as theſe, ſtrong purgers, and ſtrong aperitives or heaters do hurt. But ſuch as theſe are to be plied with a cooling and moiſtening diet, with Juleps and Broaths of the ſame Nature. And the ſuperfluous Humors are to be Purged away by little and little with Emollient and Refrigerating Clyſters, with Caſſia, Tamarinds, Catholicon and Syrup of Roſes. But in this caſe eſpecially great miracles are performed by a bath of Blood-warm Water, which doth extinguiſh the hot and dry diſtemper which is imprinted upon the Bowels. Let the Patient uſe theſe baths, on the Well-day, but without ſweating.

Somtimes alſo the Length of Tertian Agues ariſes from the evil diſpoſition of ſome of the Bowels, eſpecially of the Liver and Mezentery; which cannot be Cured by purgations though never ſo oft repeated, becauſe that evil Quality remaining ſtil in the Liver, cauſes new Morbifick Matter daily to breed, which produces new Fits. Which evil Diſpoſition or Quality of the Bowels, is taken away by Diureticks, Sudoroſicks, and other reſolving Medicaments.

With which faculties theſe following ſimples are endued viz. Wormwood, Centory, Carduus, Roots of Dictamnus, of pimpernel, Tormentil &c. Of which are made Decoctions, Pouders, and ſuch like, which muſt be given for divers daies together before the Fit.

A dram of Uenice Treacle is ordinarily given with white Wine, before the Fit, three times one after another.

Some give a walnut preſerved in Sugar or Honey after the ſame manner.

When the Heat of Uenice Treacle is feared, it is at firſt given by it ſelf, and a draught of Plantain-Water

Water is given after it. My Maſter *Varandæus* did often uſe this as a Specifick Medicine.

A Cup of *Hippocras* given before the Fit wil work the ſame effect, with which pleaſant Medicine many have been Cured.

Yet muſt it carefully be obſerved, that theſe remedies muſt not be given, till the Patient hath been diligently Purged.

Zechius Frequently uſed theſe following Pils, which are moſt effectual for opening Obſtructions, ſtrengthening the Liver, and taking away the diſtempers of the Bowels.

Take *Troches of Rhubarb, of Eupatorium, and of Wormwood, of each half a dram: Powder of Diarrhodon Abbatis one ſcruple: with Syrup of Wormwood make a Maſs of Pils. Of which let the Patient take one dram in the morning three daies together, drinking after them a draught of Broath made with Cichory and Maiden-Hair.*

Montanus was wont to give many daies together a ſcruple of Troches of Rubarb or of Wormwood, with Broath in which Barley, Parſeley Roots, Cichory and Borrage have Boyled.

Let the Region of the Liver be anointed morning and evening before Meals, with a Liniment made of two ounces of *Ceratum Santalinum*, Juyce of Cichory half an ounce: Juyce of Wormwood two drams: and a little Vinegar of Roſes.

In like manner let the Region of the ſtomach be anointed with this Liniment.

Take *Nard Oyl, Oyl of Wormwood and of Quinces of each half an ounce:* Gallia Moſchata *one ſcruple: white Wax as much as ſhall be requiſite. Make al into a Liniment.*

Beſides the Medicaments hitherto propounded, which reſpect a regular and Methodical Cure; there are many other ſpecifick and Empirick Medicaments, both internal and external; both commended by Practitioners, and frequently uſed by the common People; out of the almoſt infinite number whereof I ſhal here ſet down ſuch as are the choiceſt. And among theſe Medicines may be reckoned, ſuch things as were before propounded, to amend the evil Quality of the Liver and Meſentery which is wont to make long Agues: whereunto, theſe things following may profitably be added.

And in the firſt place, Spirit of Sulphur in a Legitimate Tertian, or one very neer Legitimate, after bleeding and Purging, being given with Purſlain Water in the vigor of the Fit, doth powerfully extinguiſh the heat of the Feaver; and if the Humor be thin, drives the ſame out by ſweat, that there remaines no matter for a new Fit, and ſo is the Diſeaſe Somtimes pluckt up by the Roots. It is given from half a ſcruple to a ſcruple, with four ounces of Purſlain Water.

And ſomtime the ſaid ſpirit is mingled with Salt of Wormwood, which is alſo of great Efficacy in the Cure of Agues the Compoſition is thus.

Take *Salt of Wormwood half a dram: Spirit of Sulphur a ſcruple: Carduus Water four ounces: Mix them. Let the Patient take it when the Fit Approaches and he covered with many Cloathes.*

Some Affirm that the Juyce of Plantain Clarified and drunk to the Quantity of four ounces, an hour before the Fit, doth Cure a Tertian Ague. Some give it with Vineger and Saffron after this manner

Take *of the Juyce of Plantain four ounces: Vinegar of Roſes half an ounce: Saffron three grains: Mix them and give the Patient to drink, two hours before the Fit.*

Manardus prefers a Decoction of Chamomel, or the diſtilled Water thereof, to the Quantity of four ounces, two hours before the Fit.

A Medicine commonly uſed, and often ſucceſsful, is, a little Potion made of Roſe-Water, Plantain Water and Aqua Vita of each a ſpoonful; given before the Fit.

Theſe following are outwardly applied.

Take *Leaves of Hyſſop and Tanſie cut ſmal, of each a pugil; Mirrh two drams: Mace, Nutmegs, Cloves and Cinnamon, of each half a dram: Venice Turpentine and Juyce of Tanſey, of each one ounce: Mix all and ſpread them upon a Roſe-Cake, fried in a frying Pan with Canary Wine, which being covered with a Linnen Cloath muſt be applied hot to the Region of the ſtomach, an hour before the Fit.* Or,

Take *Wormwood and Green Mint of each a pound: Cruſt of Bread toaſted and ſteeped in Vinegar half a pound: pulp of Quinces, or Conſerve of Quinces made with Honey two ounces: Maſtich half an ounce: Mace and Nutmeg of each two drams: Let al be beaten and luſtily wrought together, with Oyl of Quinces. Make hereof a Cataplaſm to be applied before the Fit. It provokes ſweat and takes away the Pains of the ſtomach.* Or,

Take *Nutmeg, Cloves, Cinnamon, of each three drams: Mirrh and Ginger of each two drams: Make al into a Powder; mix it with Liquid Pitch and make thereof a Plaiſter for the ſtomach.*

Alſo this following Cataplaſm may profitably be applied to the Liver.

Take *white Sanders and Red of each one dram: Barley Meal two drams: Aloes half an ounce: Flowers of Violets and Roſes dried of each one dram: With Juyce of Wormwood and*

Vinegar

Vinegar make a Cataplasm, to be applied to the Region of the Liver one hour before the Fit.

Neither are those Medicines wholly to be rejected which the common people are wont to apply unto the Wrists of such as have Agues. For not only the Opinion of People is hereby satisfied, who conceive that many are cured with these Remedies; but somwhat they may effect, by communicating their vertues unto the Heart by those notable Arteries which are scituate in the Wrists. The chief of which kind of Medicines are these that follow.

Take *Leaves of Plantane, Celondine the great, of each one handful: Cobwebs, Nettle Seeds, Soot from the Chimney, and common Salt, of each one dram: the strongest Vinegar as much as shall suffice. Make of all a Cataplasm to be applied to the Wrists a little before the fit, and to be repeated fresh three or four times.*

Mous-Ear beaten with Salt and Vinegar, is by some accounted of great efficacy, being applied to the Wrists before the fit.

Of some, the smallest sort of Housleek or Mous-tear is commended, being used after the same manner.

Others commend the Leaves of Shepheards-purse beaten with Salt and Vinegar.

Platerus applies unto the Wrists the inner bark of the Nut-tree steeped in Vinegar; which he saith, had been by him used with success.

Finally, Others apply such things as are apt to blister the Skin, as Garlick, Onions, Crow-foot, and the like; which are less safe than the former, and very troublesom to the Patient.

Chap. 4. *Of a Quotidian Feaver.*

A Quotidian Ague is so called, because its fits do return every day. Wherein it agrees with a double Tertian, and a triple Quartan, but is distinguished from them by signs proper to it self. This Feaver is most rarely seen, so that among six hundred Patients that have Agues which come every day, scarce one of them is troubled with a Quotidian or every day Ague.

This Ague is caused by flegm putrefying in the first Region of the Body: And therefore all such things as multiply flegm in the Body, may cause this Ague, such as are, a cold and moist distemper of the Bowels, old Age, Childs Age, an idle life, Autumn Season, Meats cold and moist, long Sleeps and such like.

The Diagnostick Signs are such as testifie flegm to abound in the Body; as greatness of bulk, softness and fatness, white color, or pale, dull sence, profound sleep, and dreams of Water. Also this Feaver for the most part comes in the night, and that without shaking, only with a coldness or light shivering, because the Morbifick Matter being benign, and not much an Enemy to Nature, doth less provoke her; and therefore the heat is not suddenly drawn inward as in a Tertian Ague, but retires by little and little. The time of Coldness being over, Heat is slowly and unequally kindled, so that the Patient feels sometimes heat, and then cold, and then heat again. Also the heat is mild, and not at all scorching, and thirst little. The Urines are at first white, thin, and undigested; and in the process they appear more thick, and better colored. The Pulse is smal, seldom, and slow. The Parts about the short Ribs do swel, and are commonly puffed up, and distended. The fits do commonly last twelve hours, and do not end but so as to leave some Feaverish heat behind them; because this Feaver is like a fire of green wood, which is both long in kindling, and leaves much smoak behind it. Sometimes the fit is extended to twenty four hours, and it seems to be a continual Feaver.

Now these Signs are very variable, and appear more intense or remiss, according as the flegm is either simple, or mingled with other Humors; and likewise according to the different kind of the flegm which putrefies. So that, according to *Galen* in his Book of Plenitude, Chap. 11. Salt flegm makes the Patients thirsty; acid or sowr flegm makes them hungry; sweet flegm makes them sleepy; tastless flegm makes them without appetite to Meat: and likewise Feavers which are caused by acid or Glassie flegm, are wont to come with a shaking fit.

This Feaver is wont to be perpetually long, because of the thickness and contumacy of the Morbifick Matter, and lasts forty dates, and sometimes three or four months. Neither is it without danger, seeing it may degenerate into a Cachexy, Dropsie, Lethargy, and other grievous Diseases. The longer or shorter durance of this Feaver, is known by the signs of Crudity and Concoction, and also by the Evacuations, which for the most part Nature endeavors by Vomit, Stool, or Sweat: For those Evacuations appearing, shew the Disease shorter: but if Nature endeavor no Evacuation, the Disease will prove the longer.

A Quotidian Ague that comes in the day time, is less dangerous than that which comes a nights, as *Hippocrates* doth teach us in 3. *Epidem. Sect.* 5. T. 64. He calls the former a Diurnal, the latter a Nocturnal. The reason of which Prognostick, is because that the Diurnal have longer fits; for reaching unto night, in which the pores of the Skin are closed, the putrid vapors are kept within, not having

having freedom to breath forth by which means, the fits are lengthened, and as *Hippocrates* himself ſaith, do very often bring the Patient into a Conſumption. Ad hereunto, That ſeeing the Intermiſſion happens in the night, we are forced to give the Patient Meat in the night, which is unſeaſonable, and hinders the Patient from ſleeping; by which means great weakneſs is cauſed, and the Patient is much hurt, and the Functions of the Body quite put out of frame.

The Cure muſt be in a manner the ſame with that which was propounded for a baſtard and lingring Tertian, yet ſo as that among ſuch things as prepare the Humors, and open Obſtructions, we make choyce of ſuch, which have a greater power to attenuate and cut the Humors. Alſo in this Feaver a ſpecial care is to be had of the Stomach, which for the moſt part is grievouſly afflicted; and therefore muſt be recreated with ſtrengthening Medicaments, both given in, and outwardly applied. The Cataplaſm of Mint and Wormwood, propounded in the Cure of a Tertian Ague, is very good in this caſe.

Zacutus Luſitanus propounds two Medicines, with which he glories that he had vanquiſhed moſt ſtubborn Quotidian Agues. The one is a Decoction of Chamomel, made after this manner:

Take *Flowers of Chamomel three pugils: Tops of Roman Wormwood two pugils. Boyl all in three pints of Water to a pint and an half. Add to the ſtrainings four ounces of Sugar. Let the Patient drink five or ſix ounces every morning.*

The other is a Decoction of China and Guajacum drunk twenty five daies together; which though Phyſitians are afraid to uſe in ſuch Feavers as theſe, becauſe of the over-great heating and drying Faculty; yet is it mightily commended by ſuch as have writ whol Books of the Spices and Drugs of *India*. Yet we muſt remember that *Zacutus Luſitanus* practiced Phyſick in a Country cold and moiſt, where theſe Medicines may more ſafely be uſed. And therefore in other Countries that are hotter, they muſt not be given ſave unto very Flegmatick and Cachectical Bodies.

Chap. 5. *Of a Quartan Ague.*

A Quartan Ague is that which hath its Fits returning every fourth day, and it is cauſed by Melancholly putrefying in the firſt Region of the Body.

Now Melancholly is of two ſorts; Natural, and Preternatural. The Natural is bred of the thicker and more earthy part of our Nouriſhment, being cold and dry. The Preternatural, is cauſed by aduſtion of Choller, and is therefore hot and dry. Hence ariſe two ſorts of Quartan Agues; for that which is bred of Natural Melancholly, is called a legitimate Quartan; that which is bred of Preternatural Melancholly, is called a baſtar Quartan. Howbeit, the baſtard Quartan may alſo come of Natural Melancholly, being mingled with ſome portion of Choller.

Again, A Quartan Ague is either Single, Double, or Triple. A Single Quartan is when one Fit alone comes every fourth day. A Double is when two Fits happen upon two daies one immediately after the other, and the third day is free. A Triple Quartan is when the Fits come every day, as they do in a Quotidian, and in a Double Tertian. Now theſe Double and Triple Quartans come of Melancholly putrefying in divers parts of the Body.

The Signs to know this Ague by, are firſt, ſuch things as argue that Melancholly abounds in the Patient. Unto which muſt be added the coming of the Fit upon the fourth day, which is the peculiar ſign. Alſo the form of the fit differing from the fits of other Agues, doth diſcover this Diſeaſe. For it begins with yawning and ſtretchings, together with heavineſs of the whol Body; after which follows cold, and then ſhivering and ſhaking, in which the Patients ſeem to have their bones broken. Alſo the heat is kindled by little and little in a cold and thick Matter. The Pulſe is ſeldomer and ſlower than in other Feavers. The Urines are at firſt white, thin, and watry; but in the progreſs they are more colored, and thicker. Now theſe ſigns appear in a legitimate Quartan. But in a baſtard Quartan, the vehemence of the Symptomes being greater, doth argue the Humor to be thinner and hotter. But a baſtard Quartan is not diſtinguiſhed from a legitimate, herein alone, in that in a baſtard Quartan, the heat, thirſt, watchings, and other Symptoms, are more vehement; but in that the legitimate begins of it ſelf, without any Feaver foregoing; but a baſtard Quartan ſucceeds other Feavers and Agues, by reaſon of the aduſtion of the Humor which cauſed thoſe Diſeaſes, by means of which aduſtion, it degenerates into Preternatural Melancholly.

A Double Quartan is eaſily known by the Courſe of the fits. And a Triple Quartan is diſtinguiſhed from a Double Tertian, and a Quotidian, not only by the Signs of Melancholly abounding, and by the form of the Fits; but alſo becauſe it was firſt a Single, or a Double Quartan before it came to be a Triple Quartan. For very rarely, or never doth a Quartan Ague begin with a Triple; but a Simple or Double Quartan degenerates into a Triple.

As

As for what concerns the Prognoſtick; this kind of Ague is wont to be longeſt of all others; and that which begins in the fal of the leaf continues al Winter commonly, and goeth not away til the Spring come. Yea and ſome Quartans continue a yeer or yeers. Summer Quartans are the ſhorteſt. In al of them we muſt have a continual eye to the ſigns of concoction which ſignifie the ſolution of the diſeaſe to be at hand; and with theſe, for the patient to make black urine is a good token.

A legitimate Qurtan is longer than a baſtard Quaartan becauſe the former proceeds from a thicker, the latter from a thinner Humor

This kind of Ague is wont to be very ſafe from danger, eſpecially the legitimate, being accompanied with no grevious affection of any of the bowels. but the baſtard Quartan is more dangerous. and if the Liver, Spleen, or any other part be greviouſly damnified, it degenerates into a Dropſie,

Aged perſons above ſixty years, being taken with a Quartan Ague, do for the moſt part dy of it: becauſe their naturall heat is too weak to overcom ſo contumacious an Hûmor

An intermiting Quartan, being changed into a continual, is for the moſt part deadly. Becauſe that Feaver whoſe motion was outward, is changed into one whoſe motion is inward. Which moſtly falls out in the Winter, the cold meeting with the humours which were but outward and beating them back into the innermoſt Cloſets of the Body. The which alſo come to paſs by unſeaſonable uſe of ſharp and vehement purges. For thereby of ſimple Quartans, double, triple and continual are generated.

A Quartan Ague coming upon one that hath the falling ſickneſs cures the ſame, according to *Hippocrates* in the 70 Aphoriſm of the 5 Section. *Thoſe that have Quartan Agues are not much troubled with Convulſions. And if haveing firſt Convulſions, a Quartan Ague follows, they are freed from their Convulſions*, Now the reaſon which *Galen* in his comment gives hereof, is; becauſe the thick matter which cauſed the Convulſions is by the long heat of this Ague, attenuated and digeſted. Alſo by the ſhaking of the Body in the cold Fits, the ſaid Humor is more eaſily ejected. we muſt alſo add, that the evil Humors lurkeing in the Brain and other parts, as alſo in the veins, is tranſferred to the Hypochondria and more ignoble parts, where the Melancholly Quartanary Humors are ſeated, and ſo leaves the parts aforeſaid.

A bloody flux coming upon a quartan Ague, tends to health according to *Hippocrates* in the 48 Aphoriſm of the ſixt ſection. *To ſuch as are ſplenetick a Dyſenterie is good.* Now in a quartan Ague, commonly the Spleen is miſaffected, and a melancholy humor is common to a quartan Ague and a miſaffected Spleen. but this muſt be underſtood of a ſhort dyſenterie for a long one is wont to be mortal as we have it in the 43. Aphoriſm of the ſaid ſection. *Such as being troubled with the Spleen have a flux of the Belly with pain, if it turn into a long Dyſenterie or Bloody flux, they fall either into a Dropſie or a Lienterie and dy.*

To bleed at the noſe in a quartan Ague, is a very bad ſign. Becauſe the Humor which cauſes a quartan is too thick and too cold to be voided that way; and becauſe ſuch bleeding is ſymptomatical, and if it continue wil breed a dropſie; it muſt preſently be ſtopped by opening the baſilica vein, out of which the putrid blood may flow, becauſe the pure blood comes from the Noſe

The quartan Ague hath a double cure according to the two kinds thereof. For the remedies uſed in a baſtard quartan, muſt be far different from thoſe which are uſed in a legitimate one.

And that we may begin with a Legitimate quartan; we muſt preſently ſet our ſelves to vanquiſh the cauſe thereof, not regarding the Feaver. And ſeeing the cauſe thereof is an humor cold and dry, thick and earthly; we muſt uſe medicaments that do heat, moiſten, and attenuate. Alſo the Peccant Humor muſt be at ſeaſonable times evacuated which notwithſtanding will require a long time to do; becauſe of the extream contumacy of the Humor and length of the diſeaſe. But before theſe medicines be uſed, we muſt appoint the patient a convenient diet. Let the patient therefore uſe meats of good juyce, eaſy to digeſt, of thin ſubſtance, and moderately heating and moiſtening; as the fleſh of young Animals and mountain Birds, new Egs ſoft boiled, Fiſhes that are taken in ſtony Rivers. In the ſtate of the diſeaſe we may allow the patient Salt Fiſh, Capars and Olives. *Galen* 1. *an Glauco.* Grants likwiſe Peper and Muſtard. Among Herbs Borrage is commended and Bugloſs, Pimpernel and Spinach, Fennell and Perſly Roots, but eſpecailly Turneps, which muſt be firſt boiled in water and afterwads in fat broath which is very good for ſuch as have the quartan. *Crato* in his Councels collected by *Scholtzius* brags that he had cured many of the quartan Ague by the ſecond broath of turneps ſeaſoned with Butter and Sugar. Of fruts, Apples and ſtewed Prunes, Raſons of the ſun, fat Figs, Almonds

monds, Dates, Pine-kernels are good. And finally, to Spice their Meats, let them uſe Cinnamon, Nutmeg, and Saffron.

Let the Patient abſtain from Meats which are thick of ſubſtance and clammy and are long in paſſing through; ſuch as the Fleſh of Swine, Beef, Deer, Hares and Water fowl, from Peaſe and Beans, Colewort, Courſe Branny Bread, Cheeſe, Nuts, Walnuts and Chaſtnuts; from Fleſh much Salted, or dried in the Smoak; from fruits, Raw Herbs, from Vinegar, Verjuice, becauſe they are thought as al other ſowr things to ferment Mellancholy and make it work

Let their drink be ſmal Ale or bear of moderate ſtrength and meanly hopped neither new nor hard, Pure and wel Clarifiedwhite Wine or Clarret that is not ſtrong, with Water in which the Bark of Tamarisk or the Leaves of Egrimony have been ſteeped, or a Decoction of *Salſa Parilla*, or Barley Water that hath Steel quenched in it.

Let them eat ſparingly, no more than may barely preſerve ſtrength; for too larg feeding breeds crudities which makes the Diſeaſe of long continuance. But above al, they muſt be very ſpare in drinking, becauſe nothing makes this Diſeaſe more rebellious and hard to Cure than over much drink and moiſt things, for they fil and Swel the ſpleen. *Crato* forbids al uſe of drink in the fit, which to forbear doth much as he ſaies help the Cure. On the fit-day, the Patient muſt eat ſix hours before the fit comes. And afterward nothing muſt be taken til the fit be over. Long ſleep is good, becauſe it moiſtens, but it muſt be forborn in the beginning of the Fit. On the daies of Intermiſſion light exerciſe before Meat, is good; or in place thereof, frictions of the whol Body, after the Patient hath been at Stool. If thee Patient be coſtive, a Clyſter or Suppoſitory muſt be given. Finally let the Patient be as cheerful as may be and avoid ſadneſs

The Patients Diet being thus ordered; firſt a gentle Purgation muſt be adminiſtred, by a Clyſter and a purging Medicament. the Clyſter may be thus Made.

Take *Roots of Bugloſs two ounces: of the four Emollient Herbs, mercury and beetes of each one handful: Fat Damask Prunes five Pair: of the four larger cool Seeds and Annis Seed of each two drams: Epithymum three drams: Boyl all to a pint and an half: in the ſtrained Liquor diſſolve Catholicum one ounce: Oyl of Violets and Chamomel of each one ounce and an half: Red Sugar one ounce: Make of all a Clyſter, which muſt be given the day before the following Potion, at a ſeaſonable time.*

Take *Senna half an ounce: Annis Seed a dram: Leaves of Borrage and Fumitory of each one handful. Liquoris three drams: Boyl all to three ounces: in the ſtrained Liquor diſſolve Manna and Syrup of Roſes of each one ounce: Make all into a potion.*

Galen in 1. *ad Glauco. Ch*: 11. Bids us give only gentle and benign Medicaments in the beginning of this Ague, otherwiſe, it is to be feared, that if we uſe ſtronger Medicaments, of a ſimple Quartan, we ſhal make a double, a triple or a Continual Feaver.

After the firſt Purge aforſaid, Blood muſt be drawn from the *Baſilica Vena* of the left Arm. Yet, if the Liver be affected, it may be drawn from the right Arm. And their Opinion is Ridiculous, who ſay that we muſt expect Concoction before we let Blood, becauſe then the Blood will be more thin and apt to flow: for it is better digeſted and prepared, if firſt ſome Quantity thereof be taken away. Neither muſt we give eare to them which ſay, that Blood-letting is not to be allowed of in a Quartan Ague, unleſs redundancy of Blood do ſhew it ſelf by the Swelling of the Veins and by other ſigns. For there is evermore at the beginning a Plethora ad Vires viz. Such a fullneſs of Blood as the Strength of the Patient cannot mannage, unleſs a Quartan do follow ſome other long Feaver. But that Precept of *Galen* formerly mentioned in 1. *ad Glauconem*, is worthy of al Commendation, which ſaies that if the Blood which firſt comes away be Black and impure, that then the greater Quantity is to be taken away: but if it be Red and Pure, little muſt be taken, and the Patient muſt not be let Blood any more. The wel daies are fitteſt both for Bleeding and purging. Yet ſome let Blood upon the fit day, five or ſix hours before the Fit. which is not Annis, becauſe the Humors beginning then to be moued, are more eaſily drawn out. *Zacutus Luſitanus* ſaies, that it is very good to let Blood when the *Moon* is in the ful. For then, by reaſon of the *Moons* influence, that earthy Melancholick Humor doth Boyl and become more fluid and Apt to come away with bleeding. And he doth Teſtifie that many have by bleeding at that time been helped, and ſome perfectly cured, who could not by any other means receive Help. But Botallus contrary to the mind of *Galen* and al other Phyſitians, doth aver that frequent Blood-letting doth cure the Quartan Ague, yea when it threatens a Dropſie; and he endeavours to confirm his Opinion by reaſons and examples. Which notwithſtanding is to be rejected as a Paradox, ſeeing the Refrigeration of the whol Body cauſed by much Beeding, makes the Morbifick matter more thick and contumacious.

The flux of the Hemorrhoids, is very good in Quartan Agues, and many are thereby Cured. For ſeeing the Hemorrhoid Veins are branches of the Meſaraick Veins, in which the matter of this Diſeaſe is conteined, when they are opened they Evacuate the immediate cauſe of this Diſeaſe. If

therefore

therefore a flux of the Hemorrhoids happens in ſuch as have been accuſtomed thereunto, it muſt not be ſtopped. If it be too ſparing, it muſt be furthered. As alſo if Nature ſeem to incline that way (which is known by itching of the Fundament, and by ſome drops of blood coming that way) the Blood muſt be made to come by application of Leeches.

But in ſuch as have not been uſed to have their Hemorrhoid Veins opened, after bleeding in the Arm, it is good to let them blood in the Ankle Vein; by which oftentimes the Ague ceaſes; or at leaſt that Bleeding, with other Remedies, will haſten the Cure; eſpecially in Women whoſe Courſes are ſtopt, or flow not ſufficiently.

The opening of the Vein between the little Finger and the Ring Finger, called *Vena Salvatella*, is approved by the Antients, and many later Phyſitians, who ſaid it cures the Quartan Ague. But very many others reject this Conceit, as being founded upon no reaſon, becauſe the foreſaid Vein is a Branch iſſuing from the Arm Veins. Yet being commended by others with many Experiments, I conceive it ought not wholly to be neglected. Some hold, it ought to be opened in the Conjunction of the Moon with the Sun; others when the Moon inclines two hours before the Fit, at three ſeveral times, in three immediately ſucceeding Fits, which in ſome perſons hath happened very well.

After theſe firſt Evacuations, we muſt bend our ſtudy to concoct and prepare the Humors, with certain Juleps, compounded after this, or ſome ſuch manner:

Take *Roots of Aſparagus, Bruſcus, Cichory, Bugloſs ſteeped in white Wine, of each one ounce: Bark of Tamarisk half an ounce: Leaves of Borrage, Bugloſs, Ceterach, Maiden-hair, Fumitory, Germander, Ground-pine, of each one handful: Liquoris one ounce: the three Cordial Flowers, of each one pugil. Boyl all to a pint and an half. In the ſtrained Liquor diſſolve* Syrupus Byzantinus, *and Syrup of Maiden-hair, of each two ounces. Make thereof a Julep to be taken at four times, four mornings together. Which muſt alſo be continued many daies, for the Matter being contumacious, requires long preparation. Or if the Patient be nice, and ſqueezy, Broths muſt be made of part of the foreſaid Simples, chuſing ſuch as are moſt grateful to the taſt, whereunto, as alſo to the Juleps, Cream of Tartar may profitably be added.*

With theſe Preparative Medicaments, between whiles, Purgatives muſt be given; ſo that every third or fourth day the Patient muſt take a Purge, with this Caution, That as long as the Matter is very crude, we uſe mild Purgatives: and when Concoction begins to go well forwards, we muſt then give ſuch Purgers as are a little ſtronger. Now the Materials for theſe Purgations are very well known, ſo we need not reckon them up.

It is ſometimes good to preſcribe an Apozem both Purgative and Preparative, for four or five Doſes, that a good part of the Morbifick Matter may be cleanſed away. Which Apozeme may be made of the Materials of the foreſaid Juleps, adding Purgatives thereunto. But if the thickneſs and contumacy of the Humors, with the cold diſtemper of the Bowels, do ſeem to threaten that the Diſeaſe will be long and bring a Dropſie, we muſt then fly to ſuch Medicaments as do powerfully cut and divide the ſaid Humors; of which this following Apozeme may be compounded.

Take *of the five opening Roots ſteeped in white Wine, of each one ounce: Enula Campana, Gentian, Ariſtolochia, and Aſarum Roots, of each half an ounce: Leaves of Germander, Agrimony, Hops, Borrage, Ceterach, Wormwood, and Centaury, of each one handful: Liquoris, and Raiſons ſtoned, of each one ounce: Senna one ounce and an half: Epithimum one ounce: Agarick newly trochiſcated three ounces: Ginger and Cloves, of each one dram: Boyl all to a pint and an half. In the ſtrained Liquor diſſolve Syrup of Cichory with Rhubarb five ounces: Troches of Capars, and Salt of Wormwood, and of Tamarisk, of each one dram. Make of all an Apozeme, for five Doſes to be taken in the morning.*

In this Chronick and laſting Diſeaſe, an obſtinate Perſeverance is neceſſary, that the perpetual viciſſitude of Medicines may concoct and purge away the Cauſe thereof. For this is in a manner the only Cauſe why many that have Quartan Agues remain uncured, becauſe after the uſe of a few Medicines they grow weary, and wholly reject and diſdain all the reſt.

For a continual Uſe therefore, certain Purgatives are alwaies to be in a readineſs. Which may be made in the form of a Magiſtral Syrup, or of Pils, or in any other form.

A Magiſtral Syrup may be made of the Materials of the Apozeme Aforeſaid, adding a triple quantity of the Purgative Ingredients.

Pils for frequent uſe may be thus compounded:

Take *Aloes diligently ſteeped with the Juyce of Wormwood, half an ounce: Gum Ammoniack diſſolved in Vinegar, and afterward thickened, two drams: choyce Mirrh a dram and an half: Gummy, Turbith, and Agarick newly made into Cakes, of each two drams: Diagridium one dram: Salt of Wormwood and Tamarisk, of each two ſcruples: Saffron half a ſcruple. With Oxymel ſimple, make all into a Maſs of Pill-ſtuff. Let the Doſe be half a dram, or two ſcruples, twice in a week.*

If the Patient be of an hot Conſtitution, theſe following Pills may be uſed.

Take

Take *Polypody of the Oak half an ounce*: *Roots of Aſarum, and ſeeds of Broom, of each one dram*: *Criſtal of Tartar one dram and an half*: *Flowers of Bugloſs and Borrage, of each half a pugil. Boyl all in a ſufficient Quantity of Water, Of the Liquor ſtrained, and very well clarified, take half a pint*: *Juyce of odoriferous Apples very well clarified four ounces. Infuſe therein Senna one ounce*: *Turbith and Agarick, of each three drams*: *Mace, Cloves, Cinnamon, and Epithimum, of each one dram. Let them digeſt together three daies in* Balneo Mariæ, *then ſtrain and preſs them out. And add yet of Extract of Aloes made with Endive and Sorrel Water one ounce*: *Mirrh diſſolved in Wine over the fire and ſtrained two drams*: *Salt of Tartar one dram*: *Let all evaporate and thicken over a gentle fire, adding towards the concluſion, of the Pouders of Diarrhodon Abbatis, and Lætificans Galeni, of each one ſcruple*: *Salt of Wormwood and Tamarisk, of each half a dram*: *Extract of Saffron half a ſcruple. Make a Maſs of Pill-ſtuf for the uſe aforeſaid.*

Alſo a Purging Medicament very familiar, and moſt eaſie to prepare, but very profitable, may be made of three ounces of the Decoction of Wormwood, wherein two drams of Senna hath been infuſed, which muſt be taken now and then.

Theſe Purging Medicines are wont to be given the day before the fit, becauſe the Patients are then ſtronger than at other times. Yet many contend that they ought to be given before the fit, becauſe the matter being agitated by the fit, is made more apt for Expulſion. This Opinion they underprop with the Authority of *Hippocrates* in his Book *de Affectionibus*, who would have a Medicine Purging downwards to be given at the beginning of the Fit. And although in *Galens* Judgment, that is none of *Hippocrates* his writings, but of his Son in Law *Polypus*; yet they conceive it ought not therefore to be of no Authority, ſeeing *Polypus* alſo was a very Learned Man, and frequent Experience confirms this Opinion; as the ſaid Experience is ſet down by *Arculanus*, *Genitilus*, *Amatus Luſitanus*, and others, who have ordered that the Purging Medicament ſhould be given four hours before the Fit. Which practice notwithſtanding, hath need of much warineſs and prudence in the Phyſitian, ſeeing the ſhaking fit intercepts the evacuation, and in the Ague Fit the Humors are moved with a motion quite contrary to that wherewith the Purge doth move them; by which means great diſturbances may fall out in the Patients Body. Wherefore this courſe is not to be followed but in ſtrong Bodies.

The Conſent of Phyſitians is greater and more general touching the giving of Vomits in the beginning of the Ague Fits, becauſe Nature is at that time more prone to that kind of Evacuation. Neither is it to be doubted, that a Vomiring cauſed in the beginning of the Fit, and at the ſame time often repeated, doth make the Diſeaſe gentler and ſhorter. The Materials of Vomitories are ſet down in our Cure of a Tertian. But in a Quartan Ague, Aſarum is preferred before the reſt, one dram being given in Pouder, in white Wine, and three or four times repeated.

In the Intervals of purging, Clyſters muſt frequently be given, which do accuſtom Nature to expel the hurtful Humors into the Guts, and do by little and little bring away ſome of the morbifick matter contained in the Meſeraick Veins.

The Diſeaſe continuing (as for the moſt part it is long and laſting) we muſt ſometimes reſt, and abſtain from Phyſick a month, or thereabouts; that Nature in the mean time may gather ſtrength, be wearied with continual uſe of Medicaments, and may ſet her ſelf to concoct the morbifick matter. And afterward we muſt return to our Preparatives and Purgatives.

Howbeit, in a long Ague, we muſt not alwaies uſe the ſame Medicaments; leſt Nature be over much uſed thereunto, and the Patient become weary of them. Alſo becauſe from more gentle Aperitives and Purgatives, we muſt paſs on to ſuch as are ſtronger. Various ſorts of Purgatives have been already propounded. And theſe following Aperitives beſides the Apozems aforeſaid, and the Juleps, may be uſed in the progreſs of the Diſeaſe, when the Signs of Digeſtion begin to appear.

Take *White Wine three pints*: *Enula Campane Roots three ounces*: *Bark of Capar Roots half an ounce*: *Tops of common Wormwood dried one ounce*: *Infuſe them three daies in* Balneo Mariæ. *Keep all together without ſtraining, and give of this Wine to the Patient two or three ounces in the morning, two hours before meat.* And theſe following Pils may be uſed either alone, or with the ſaid Wine.

Take *Roots of Gentian two drams*: *round Birthwort Roots one dram and an half*: *Mugwort one dram*: *Briony dried three drams*: *Mirrh and Saffron, of each one dram*: *Aſarum Roots two drams*: *Aloes one ounce*: *With Oxymel of Squils make all into a Maſs of Pill-ſtuf. Let a dram be given every day by themſelves, or a little before the taking of the Wine aforeſaid.*

To theſe Pils, Steel prepared may profitably be added, if the Patient be able to walk after the taking of them. For the uſe of Steel in all Chronick Feavers is very profitable, becauſe it potently opens Contumacious Obſtructions, which are wont to foſter thoſe Diſeaſes.

Or

Or to open and ſtrengthen at once, the following Electuary may profitably be preſcribed.

Take *Conſerve of Elecampane Roots, Conſerve of Wormwood, and Maiden-hair, of each one ounce: Preſerved Citron Peels half an ounce: Confectio Alkermes three drams: Preſerved Myrobalans, two: Powder of Diarrhodon Abbatis two drams: Salt of Wormwood and Tamariſk, of each one dram: Saffron two ſcruples. With Syrup of preſerved Citrons, make all into an Opiate: of which let the Patient take the quantity of a Cheſtnut every morning, two hours before meat. Or if in the morning the Patient take ſome other Medicine, then may the Electuary be taken two hours before Supper.*

To the ſame intent is commended as a moſt excellent Remedy, the Extract of Germander mixt with Salt of Tamariſk made into Pils.

Add hereunto, Diſcuſſers, and Diaphoreticks, which are very uſeful to diſcuſs the reliques of the declining Diſeaſe, when ſigns of Concoction appear. For they do not only diſcuſs the ſaid reliques, but they do likewiſe correct that diſtemper which is bred by ſo long a Diſeaſe, and amend the ill habit of the Body; and ſtrengthen the Stomach, Liver, and other Bowels, weakened by the length of the Diſeaſe. Among theſe Medicaments, Venice Treacle challengeth the firſt place, being by older and later Phyſitians commended to this Uſe. It is given one hour before the fit, one dram in weight, with Wine, or in a Decoction of Germander. Or if its heat be feared, it may be given with a Decoction of Agrimony, or with the Juyce or Water of Plantane. This Medicine muſt be repeated before divers Fits one after another. It may alſo be given in the mornings for ſome daies together on the well-daies. But a little before the fit, it operates happily, becauſe it hinders the encreaſe of cold, and doth more commodiouſly diſcuſs the Humor, which is cauſe of the fit, now beginning to work in the Veins, and by this means it diminiſheth the fit, and if the morbifick matter be little, takes it quite away. Here, notwithſtanding, great Caution is to be uſed, leſt Treacle, or other ſuch hot Medicines, ſhould be given when the Humors are yet crude; for they diſſolve the putrid Humors, from whence ariſeth a confuſion in the Body, and an encreaſe of the Ague Fits; ſo that a ſingle Quartan comes to degenerate into a Double, and Triple, yea, into a Continual Feaver. As it happened to *Eudemus* the Peripatetick, as *Galen* relates in *Lib. de Præcog. ad Poſth. Cap.* 2. & 3. in whom was a ſingle Quartan, the Phyſitians of *Rome* having given him Treacle unſeaſonably, was changed into a Triple. Howbeit, afterwards when the Signs of Concoction appeared, *Galen* gave him of the ſame Treacle, and cured him.

Among other Diaphoreticks, ſome commend the Roots of China, and Salſa parilla, whoſe firſt and ſecond Decoction being given twenty daies together, doth ſomtimes cure contumacious Quartans. But they work more effectually, if with the Primary Decoction, Purgatives be mingled.

Other Remedies are alſo given before the Fit, which are accounted ſpecifical, and appropriate to this Ague, and being given towards the declination, they do very often keep back the fits, and cure the Quartan. The chief of this ſort, are theſe which follow:

Take *Green Leaves of Plantane one handful: Green Sorrel half a handful: Vinegar and Treacle, of each three ounces. Diſtil them, and let the Patient take of the diſtilled Liquor three ounces, half an hour before the fit.* Or,

Take *Sugar-candy three drams: Ginger two drams: Camphire one dram. Make all into a Pouder. Give one dram in warm Water.*

Ten Grains of Saffron in pouder, given with white Wine before the fit, doth much weaken the ſame.

Seed of wild Rue given before the Fit in white Wine, cures.

Heurnius aſſures us that with the following Troches, many have been cured, even in the Winter, with once taking.

Take *Seeds of Rue, Parſley, Mirrh, and new Andromachus Treacle, of each one dram: Opium half a ſcruple: Make all up into little Cakes or Troches. And let the Patient take one of thoſe Cakes in Water, before the fit. Narcoticks do indeed much abate the fits; but unleſs the greateſt part of the morbifick Humor have been before abated, and the Obſtructions much leſſened, they may do hurt, becauſe they may retain the vitious Humors in the Body, and breed Obſtructions, and other worſe Diſeaſes. But given in a ſmal quantity, and mingled with things which open and cut, as in theſe Troches, they can do leſs hurt.*

Alſo to reſtrain the Fit, gentle Purgers are profitably given an hour before it comes, which do revel the Humors, more by ſoliciting and provoking Nature, than by their purging. To which intent, ſuch as theſe which follow are preſcribed.

Take *Senna, Polipody of the Oak, Time, Epithimum, of each one dram: Borrage flowers a pugil. Make a Decoction to three ounces. Give it an hour before the Fit.*

Or,

Take *Senna three drams: Turbith one dram: Cinnamon half a dram: Saffron and Ginger,*

of

of each ten grains: Sugar, the weight of all the reſt. Make of all a Pouder, divide it into three parts. Give the Patient one part before the fit, in white Wine.

Quercetanus in his Diſpenſatory, doth exceedingly commend *Camillus* his Pils of Sagapenum; of which he gives only one at the beginning of the fit, for divers daies together; and a little after he anoints their Back-bone with a Liniment compoſed of Treacle, *Aqua vitæ*, Oyl of Bays, or of Spike. And two or three hours after the Pils are taken, he gives Broth with opening Roots, Borrage, Bugloſs, Time, and an odoriferous Apple boyled in it.

Now theſe anointings of the Back-bone, are very good to mitigate the cold fit, and muſt often be uſed, although the foreſaid Pils are not uſed. For they are frequently uſeful, when the ſhakings are vehement and importunate. And theſe Anointings are made, not only with the foreſaid, but with very many other Medicaments; as with Oyl of Dill, Chamomel, Orice, Coſtus, Rue, the Peppers, and other hot things, with *Aqua vitæ*, Treacle, Cloves, Caſtoreum, Muſtard ſeed, Peppers, and other things mixed therewith. Now theſe Liniments are more effectual, if the back-bone be anointed therewith by the fire-ſide, an hour before the coming of the fit; and the ſick party be preſently thereupon conveighed to a hot bed, and hot Tiles ſprinkled with odoriferous Wine, and wrapped in Linnen Cloths, be applied to the Soals of the Feet, and Palms of the Patients Hands.

While the aforeſaid Medicaments are uſed, a ſpecial care muſt be had of the Spleen, becauſe that part is alwaies affected in this Diſeaſe: And therefore thoſe Medicaments which ordinarily are preſcribed for Obſtructions of the Spleen, viz. Fomentations, Liniments, and Plaiſters.

Yea verily, and ſomtimes a Bath of luke-warm Water, after many Evacuations have been celebrated, is good, not only to mollifie the Spleen, but alſo to moiſten the whol body, and to further the Coction of the morbifick matter. The bath may be uſed on the daies of intermiſſion, giving diligent heed that it be no other than luke-warm. For if it ſhould be hotter, it is to be feared, leſt the Humors being thereby diſſolved, ſhould run on a ſudden into divers parts of the Body, and breed dangerous, very dangerous Impoſthumes.

Finally, Such things as are wont to be laid to the Wriſts, are not to be neglected, ſeeing Authors of good account do make ſome reckoning of them. For *Rondeletius* affirms, That he hath uſed this following Medicament, with great ſucceſs.

Take *Leaves of Elder, Sage, Doves-foot, Rue, of each half a handful: Marigolds a third part: a handful of Salt, and a little Wine. Beat all together, and apply to the Wriſts before the Fit.* Crato *applies the Roots of Nettles being beaten and moiſtened or ſteeped in Vinegar, to the Arteries of the Wriſts, and of the Feet.* And Sennertus *relates that a certain Citizen having had a Quartan Ague the whol Autumn and Winter, and at laſt being afflicted with moſt ſharp pains in his left ſhoulder, by the perſwaſion of a certain woman, he applied Cronfoot to his wriſt, which raiſed a Puſh, and freed him both from his pain and Feaver.*

A Baſtard Quartan is cured with the ſame Medicines in a manner, which have been propounded for the Cure of a Tertian; adding to the Decoction of Juleps and Apozems, ſuch things as do peculiarly regard Melancholly aduſt. Whereunto may be added al the more temperate, and leſs heating Medicaments, which have hitherto been propounded for a Legitimate Quartan.

In the beginning therefore it is good to uſe Borrage, Bugloſs, Fumitory, Hops, Sorrel, Cichory, Ceterach, Scolopendria, Agrimony, and Odoriferous Apples. Whoſe Decoctions, diſtilled Waters, and ſomtimes their clarified Juyces may be preſcribed in the form of a Julep, an Apozeme or Magiſtral Syrup.

But in the Progreſs of the Diſeaſe, it will be good to add unto the Simples aforeſaid, the Bark of Capar Roots, of Tamarisk, Enula Campana, Polypodie, and Worm-wood.

While the Patient uſeth theſe Preparatives, Purgatives are frequently to be interpoſed; which are to be given the Day before the Fit, and to be repeated twice a Week. To which Intent Various Forms may be preſcribed. But for ſuch as are Delicate, a Laxative Priſan, *Syrupus de Pomis Saporis*, or the Broth of a Chicken, qualified with Borrage, Bugloſs, Pimpernel, and three drams, or half an ounce of Senna, may profitably be given.

Blood-letting in the beginning muſt not be omitted, and ſo ſuch quantity of blood muſt be taken away, as ſhal correſpond unto the Quantity and Quality of Blood, and to the Age and Conſtitution of the Patient.

If the Diſeaſe prove long, when the fervor of the blood is abated, Vomits may profitably be adminiſtred; eſpecially to ſuch Patients as are troubled with Stomach-ſickneſs and Vomitings in the beginning of their Fits. Among Vomitories good for a Quartan, Afarum (as was ſaid before) is the principal, being given to the quantity of a dram in white Wine, and divers times repeated, if this Diſeaſe ſhal not after once or twice giving, be diſcuſſed.

Hereun-

Hereunto ad fomentations and liniments applied to the parts under the ſhort ribs, to correct the evil diſpoſition of the bowels (which continually affords new matter for the fits) and to ſoften and make thin the faſt, ſetled and impacted Humors: which may be preſcribed after this manner.

Take *Roots of Marſh-mallows, of Lillies, of Enula campana, Barks of capar Roots, and the middle rind of Tamariſk, of each one ounce; Leaves of Mallows, of Marſh-mallows, of Pellitory of the wall, of Borrage, Bugloſs, Pimpernel, Wormwood of each one handfull; Lin-ſeed and Parſly ſeed, of each an half ounce; flowers of Chamomel, Melilot and Dill, of each one pugil: make a decoction in three parts of water, and one of white wine added towards the end. With which decoction foment the Hypochondria, twice a day, far from meals.*

Take *Ointment of Marſh-mallowes, one ounce and an half; Oyl of Lillies, Chamomel, Roſes and Wormwood, of each an half ounce: make al into a Liniment, which muſt be uſed after the fomentation.*

Or Oyls alone may profitably be applied to the ſame Parts, laid on with wool.

And finally a bath of warm water either alone or with emollient and qualifiing things boiled therein, or of Barly and Almonds as is uſual, will be very convenient to cure this diſeaſe. For it corrects the diſtemper of the bowels, rectifies the heat and dryneſs of black Choller, mollifie that which is hard, opens the paſſages and widens them, and digeſts crude Humors. Wherefore the frequent uſe thereof will be moſt convenient, uſing the caution before ſpecified.

Now the operation thereof will be exceedingly advanced, if preparative Medicaments and ſuch as open obſtruction be given to the patient, upon entrance into the bath. Among which the chief is a decoction of Wormwood and Enula Campana, which is exceeding good to digeſt all contumacious Humors. provided the over great heat of the Bowels, do not diſſwade the uſe thereof. In which caſe it may be tempered by the mixture of other things fore recited.

And while theſe things are doing, gentle purgations muſt be repeated, as we adviſed before. And when the diſeaſe doth indeed decline, thoſe ſpecified medicaments propounded in the Legitimate Quartan, may here alſo be brought into uſe.

In the whol courſe of the diſeaſe we muſt be carefull of the Breaſt, leaſt a Conſumption betide the ſame, for the Humor offending in this Diſeaſe is of a corroding quali-

ty

Chap. 6. *Of Compounded or Complicated Feavers, and particularly of a Semi-Tertian.*

GAlen in his ſecond Book *de Criſib.* cap. 7. and 9. and in his ſecond Book *de Differ. Feb.* Cap. 7. and *Aviceu. Fen* 1. *Lib* 4. *Tract* 4. Cap. 16. Do propound many compoſitions of Feavers. Namely when putrid Feavers are compounded with non-putrid, as when an hectick is joyned with a putrid; or of a putrid with a putrid, which is done many wayes viz. Either continuall Feavers being complicated with continuall or intermittent with intermitent, or continuall with intermitent.

The Compoſition of two continual Feavers, is a thing controverted among authors, and a man ſhall hardly obſerve it in the courſe of his practice.

An intermitting Feaver or Ague is complicated with another intermittent, either of the ſame kind, or different: compound intermittents of the ſame kind are a double and triple Tertian, and a double or triple quartan, which have been expounded in their proper places. Of ſeveral kinds are when a tertian is compounded with a Quotidian or quartan; which alſo is very rarely ſeen in Practice.

Intermittents are complicated with continuals two waies viz. An intermittent tertian with a continual Quotidian, or a Quotidian intermittent with a continual tertian. and each of theſe is termed a Semi-tertian, conſtituting Species or ſorts thereof.

Yet that is properly and truly a Semi-tertian which is made of an intermitting Tertian and a continual quotidian: and conſequently is cauſed from choller putrefying without and flegm putrefying within the veſſels. By *Hippocrates* and *Galen* in 1 *Epidem.* it is named *Horrifica*, or the ſhaking Ague becauſe it cauſes the patient to ſhake, not only at the firſt coming of the fit, but in the whol courſ of the diſeaſe and eſpecially in the beginning and augment, two fits being met and joyned in one, viz: Of the tertian and quotidian Ague, with many reduplications, which are nothing elſe but unequal ſhaking and ſhivering motions, returning divers time in one and the

same Ague Fit, by reason of the mutual fight of the two Feavers; in which, if Flegm overcome, there will follow shiverings, and coldness of the extream parts. And then again, when Choller doth vanquish, the Body becomes warm, and the Feaver seems to tend towards the vigor; whenas flegm again getting the better, they are again brought into a cold and shivering condition; and this Contention is wont to last til the Feaver comes to its height. Hence it is that those shaking fits come only every other day, viz. When the fit of the Tertian Ague is upon the Patient, being joyned with the Quotidian.

But while the Quotidian alone is present, there is wont to be no shivering Fit. Yet we must take notice, That there are some Malignant Feavers, which without a commixion of a Tertian and Quotidian, without that same fight of Choller and Flegm, do shake the Patient; in which the Shiverings come from sharp Vapors, and malignant, which do arise out of the corrupt Matter of malignant Feavers, and do beat upon, and pull the sensitive parts, and nip or twitch them as it were.

Now this Semi-Tertian properly so called, is either exquisite, wherein an equal portion of putrefying Choller and Flegm is redundant, such as hath been now described; or it is a bastard Semi-Tertian, which is again two-fold: For either it hath Choller abounding, or Flegm. In the former there are more Symptoms of a Tertian; in the latter of a Quotidian. And so if Choller abound, the whol Feavet is more horrid, and somtimes it hath a shaking fit accompanying the same; also it proves more fervent, and some portion of Choller is voided forth by vomit, stool, or sweat. But when Flegm prevails, a more vehement cold doth possess the extream parts of the Body, and there are few shiverings; and the pulse it more and longer depressed, and the fit is longer before it grow towards its height, and remains in its consistency a long time; yet doth it cause no great thirst, nor burning.

This Feaver is known by what hath been said thereof, being continual, and cold, with many reduplications, and very great Symptomes. Because it comes every other day with a shaking cold fit; but upon the even daies it comes only with a coldness in the extream parts of the Body. The Urines are crude, thin, and without color; somtimes troubled, with no Sediment, or that which bodes no good. The Pulse is frequent and unequal. The Differences are known by the Signs of more or less of Choller and Flegm, propounded.

As for the Prognostick of this Feaver, it is a dangerous Disease, and therein the Stomach and Nervous parts are very much affected. And it is attended with dryness of the Tongue, Thirst, Swooning, Watching, and somtimes with Ravings, and dead Sleeps. *Hippocrates* reckons it among acute Diseases because of the Choller; and among Chronick Diseases because of the Flegm, in 1. Epidem. And *Avicenna* saith, That it lasts somtimes seven months, and somtimes ends in Chronick Disease, and an Hectick.

The Cure of this Feaver is to be taken from what hath been formerly said of the Cure of a Tertian and a Quotidian Ague; and seeing it is continual, it must be handled with the same Method which was set down in the first Chapter of this Section, as common to all putrid continual Feavers. So that when Choller chiefly bears sway, we must use most of those Simples which respect Choller; and when as flegm prevails, we must principally use such things as do prepare and purge that Humor. And finally, When both Humors are equal, the Remedies proper to each must be used in equal proportion likewise.

SECT. III.

Section III.

Of Peſtilential Feavers.

The Preface.

ALL Authors (very neer) who have writ of Feavers, do diſtinguiſh a peſtilential Feaver from a malignant, and doe treat of each of them ſeverally in divers Chapters; ſo that by the name of a peſtilential Feaver they doe underſtand the true Peſtilence or Plague; and by a malignant Feaver, they mean that which is commonly called the ſpotted Feaver, or ſuch a Feaver which though it be epidemical and contagious, yet it is not ſo dangerous but that more live than die of it: whereas the true eſſence of the Plague conſiſts in this that more die thereof than recover. But forasmuch as theſe Feavers differ one from another only according to the greater or leſſer degree of malignity, and muſt be cured with the ſame Medicaments; we have thought it more convenient to include al theſe kind of Feavers in one Chapter, and to handle them all under the name of Peſtilential Feavers. and conſequently this laſt Section ſhall conſiſt of two Chapters, the firſt of which ſhall treat of the Peſtilentiall Feaver; and the later of the Meaſles and ſmall Pox: For ſeeing a Malignant Feaver does allwaies attend them all Authors doe juſtly treat of them in this place.

Chap. 1. *Of a Peſtilential Feaver.*

THat Feaver is termed Peſtilential, which does afflict Nature not only by a bare diſtemper, or by heat ariſing from putrefaction, but alſo with a Malignant and venemous quality. This is wont to be for the moſt part Popular and Epidemical; ſo that many are at the ſame time ſick thereof: yet ſomtimes it is ſporadick or ſingle afflicting but here and there one, which ariſes from evil Humors that have attained a venemous quality.

It is likewiſe Contagious, ſo that it may be caught not only by means of the common Cauſe, Viz. Corruption of the Air or Diet; but alſo by Converſing with thoſe that are ſick.

It is alſo commonly called a Malignant Feaver, whereas many diſeaſes are termed Malignant by reaſon of their evil and cruel ſymptomes in which no venemous quality is found, in which alone the eſſence of a Peſtilential diſeaſe conſiſts.

In what Feaver ſoever therefore, this ſame venemous quality is found, whether it be a diary, an hectick, or a putrid Feaver, it is rightly termed Peſtilentiall: although a diary and hectick are much controverted, touching which conſult the Authors.

Now this ſame venemous quality ariſeth from the corruption of Humors, which conſiſts not in a bare change of the temperament, or in ordinary putrefaction, ſuch as is found in putrid Feavers; but in a deſtruction of the whol Nature and Eſſential ſubſtance of the ſame Humors. As Wine when it is turned an inſipid taſtleſs Liquor, is totally and eſſentially corrupted; but when it becomes vinegar, it is ſaid ſimply to putrefie.

And a Peſtilentiall Feaver differs from the Plague as a ſpecies or ſort differs from the genus or kind, becauſe there may be a Peſtilence without a Feaver, as *Hippocrates* hath taught us in his third Epidem. in many places; and alſo *Galen* in his Expoſition of the ſaid Book. and in his ninth Book, *de Medic. Facultatib. Cap. de Terra Samia.* And this is ſutable to Reaſon; forasmuch as the venemous Quality is not neceſſarily attended with putrefaction, which is the Cauſe of a Feaver. For that ſame venemous qualitie may be produced in the Humors, by a perfect corruption of their ſubſtance, and introduction of a new form, of which that venemous qualitie depends. And certain it is, that ſo oft as a new form is introduced, the former is corrupted; unto which mutations there are requiſite preparatorie alterations, but not putrefaction ſo that Humors may undergo ſuch a corruption without putrefaction; but becauſe the Humors of our body are very liable to putrefaction, they can rarely undergo ſo great a corruption, without the Intervention of putrefaction likewiſe: wherefore thoſe Peſtilences are very rare, which are not accompanied with a Feaver: Yea verily and by an intenſe, profound and fordid (as they are wont to ſay) putrefaction, ſuch a Corruption as that of the Plague is wont to

be raised. So, many Feavers, which at first were not pestilentiall, if by the Ignorance of the Physitian or negligence, the disobedience of the Sick, or the fierceness of externall causes, they have been mis-handled, the putrefaction becomeing more intense, they turn in the end to malignant and Pestilentiall Feavers. And that corruption does often precede Putrefaction is collected from such as are infected with the Plague by contagion; in whom a malignant, and venemous qualitie is first transfus'd, and therewith the Humors are corrupted, which corruption is followed by putrefaction, whence it comes to pas that such as have the Pestilence have sometimes no feaver for the first daies of their ilness; but afterwards the Feaver begins to shew it self, when putrefaction is bred; some such things we see in a part that is affected with a Gangrene, which is first corrupted, and afterwards puertfied.

A pestilentiall Feaver is caused, when the Humors being corrupted and haveing attained a venemous quality, doe come to putrefie: And so it affects the Heart by those two meanes Viz. By a putrid heat and a malignant qualitie.

Now this corruption of Humors, is not alwaies after one sort, but somtimes it is more intense and somtimes less and according to its divers degrees, the venemous qualitie arising therefrom is more or less pernicious; from whence proceeds the greater or less Malignity of Feavers. And hence arose that common distinction of Pestilential Feavers among Physitians, into a Pestilential feaver simply and properly so called and into a Malignant Feaver; calling that a pestilentiall Feaver properly so termed wherein is the true Plague; having this peculiar, note or character, that more die than live and recover; and calling that simply a malignant Feaver which being less pernicious, more live than die of it.

The differences of a Pestilentiall Feaver are taken either from the matter wherein that venemous Quality is produced; or from the place wherein the said matter is contained: and so they follow the difference of putrid Feavers, which in respect of the matter of putrefing are divided into the Feaver *Sunochos*, *Tertiana*, *Quartana*, and *Quotidiana*, according as the matter putrefiing it, Blood, Choller, Melancholy, or Flegm. And in respect of the place wherein the Humors putrefie, they are divided into continuall and intermittent; according as the aforesaid Humors are lodged within or without the veines: even so pestilential Feavers, some are termed Synochi, others Tertians, Quartans or Quotidians; some continuall, others intermittent: although *Hippocrates* hath said in the 43. Aphorism of the 4 Section, That intermitting Feavers are void of danger however they intermit, which only is to be understood of such as are void of all malignitie; for we see almost every year (in our country at least) tertian intermittent Feavers, which being extreamly malignant, doe at the third or fourth fit kill the patients: others which bring them into great danger, especially by the crueltie of the Symptomes.

There are other Differences of a pestilential Feaver taken from the intensnes of their degree or Remissnes; namly, as some are greater, other lesser, some partake of greater malignitie some of lesser. They are said to be simply greater or lesser, according as the Putrefaction is greater or less, or as the preternatural Heat arising therefrom, is more intense or remis; more malignant or benignant, according to the greater or less intension of the venemous quality Hence it comes to pass, that sometimes a pestilentiall Feaver hath extream putrefaction, and malignancy at the highest; and then it is wont to be most fierce, and therein in regard of the malignancy the vital faculty is exceedingly afflicted; and in regard of the extream putrefaction, the other faculties are likewise hurt, and cruell symptoms follow thereupon. But sometimes in this Feaver the putrefaction is very high, and the malignant qualitie remis; and then the Feaver is troublesom by reason of the putrefaction; but the vital faculty is less afflicted. Contrarilie somtimes Putrefaction is little, but the malignant quality intense: and then the Feaver in regard of putrefaction shews no such bad symptoms & seems remis; yet the strength of the patient is more than ordinarily weakned. For somtimes the putrefaction is so remis that it is in a manner none at all; but the malignant quality in a very high degree: and then we have a Feaver, which seems neither to the Patient nor by-standers any thing troublesom; but it seems at first sight mild, as mild can be, when as indeed and intruth it is very mortall; for when the malignant qualitie is increased, the patients strength is dejected, and the Heart wholly overwhelmed: and this kind of Feaver doth not only deceive the Patients and by-standers, but somtimes the Physitians themselves are thereby cheated; whiles there being no sign present either by crudity or pravity of Humors, the Pulse being in a manner in it's natural state, and the heat of the Body at first appearance seeming mild and gentle, it leads unto destruction. Som such thing is likewise wont to happen in the first difference, viz. When it is joyned with the highest degree of malignity: for putrefaction being by convenient medicaments subdued, and the signes of recovery appearing; death notwithstanding somtimes ensues by reason the malignant quality did remaine uncorrected.

And finally the differences of a Pestilent Feaver are taken from its adjuncts, and they are very many

many and moſt evident, for there is no evil ſymptom, nor kind of deadly diſeaſe which is not ſomtimes joyned with this Feaver. The ſymptomes are Head-ach, Watchings, Raveings, Dead ſleepes, Thirſt, Stomach-Sickneſs, and Vomiting, want of Appetite, Swooning, Fainting, Hiccoughing, Unquietneſs, Looſneſs, Sweats and ſuch like, which are common alſo to other kind of Feavers.

But there is one Symptom proper and peculiar to a peſtilential Feaver, which doth not happen in other Feavers; *viz.* Purple Specks, or Spots on the whol Body, but eſpecially in the Loyns, the breaſt and back, like unto Flea-bitings for the moſt part; which the Italian Phyſitians name *Petticulæ* or *Petechiæ*; and theſe Feavers which have theſe Symptoms, are commonly named *Purpuratæ* or *Petechialis*, Purple or Spotted Feavers. For theſe Purple Spots do not appear in all Peſtilential Feavers; but when they appear, they are a moſt certain Sign of a peſtilential Feaver. Now we call them Purple Spots, becauſe they are for the moſt part of a Purple colour. Yet they are many times of a violet colour, Green, blewiſh, or black, and then they are far worſe, and do ſignifie greater Malignity. And although theſe Spots are for the moſt part like Flea-bitings: yet they appear ſomwhat greater: So as to repreſent thoſe black and blew marks which remain after whipping, and then they are worſe. And ſomtimes they are very large, and poſſeſs whol Members, and a great part of the body; *viz.* the Arms, Thighs, and back, and then the parts appear tainted with redneſs; which in few hours oftentimes vaniſheth away, and then returns again, as it were by Fits, whilſt the Feaver undergoes it's Fits, or Exacerbations; wherein the blood boiling, doth ſend forth it's thinner Exhalations to the ſurface of the Skin, by which the Skin is not ſwelled; but only infected with a red Color. Oftentimes notwithſtanding, by theſe Ebullitions, the Skin is in divers parts puffed up with a certain redneſs: and makes certain broad and ſoft tumors in the Skin, which in a few hours vaniſh away, and are commonly called Ebullitions of the blood. In theſe, and the aforeſaid, there is alwaies ſome Malignity, but ſo light, that it threatens no danger; unleſs in the progreſs of the Diſeaſe it prove more intenſe. Now the Spots aforeſaid like to Flea-bitings, do differ from thoſe Puſhes, which are wont alſo ſomtimes to appear in theſe Feavers, and are mentioned by *Hippocrates* in *Epidemiis*, which have an Head, and are a kind of Tumors, which come ſomtimes to Suppuration, or Exulceration. But the Purple Spots, have (as was ſaid) no eminence or Head, and were unknown to the Antients, being deſcribed only by later Phyſitians of after Ages.

As to thoſe Diſeaſes which are joyned to a Peſtilential Feaver, we may affirm what hath been ſaid of the Symptoms; *viz.* that many deadly Diſeaſes are joyned with theſe Feavers; namely, Phrenſies, Squinzies, Pleuriſies, Inflamations of the Lungs, Inflamations of the Liver, bloody Fluxes, and very many more. But the chief Diſeaſes which ſhew themſelves in a Peſtilential Feaver, are two, *viz.* a Peſtilent *Bubo*, and a Carbuncle, which declare the venemous quality to be in the higheſt degree, and are not found but in the true Peſtilence, and are wont commonly to accompany the ſame: So that the common People call them by the very name of the Peſtilence.

The Cauſes of Peſtilential Feavers, are ſome Internal, others External: and the Internal are ſome Immediate, others Mediate.

The Immediate Cauſe of this Diſeaſe, as we hinted before, is a corruption of the Humors, joyned with putrefaction. From the Corruption they acquire an evil and venemous Quality, and from Putrefaction the Feaver is bred.

The Mediate Cauſes are a Plethory, Cacochymie, and Obſtructions. Now we underſtand ſuch a Plethory, or fulneſs of Blood; not as diſtends the Veſſels, but ſuch at leaſt as the ſtrength of the Patient cannot maſter, which not being regulated by Nature, doth eaſily undergo Corruption, and Putrefaction. Now a Cacochymie, or abundance of evil Humors, is eaſily corrupted and putrefied. Finally, Obſtructions are apt to breed all kind of Feavers: foraſmuch as Humors being cloſe ſhut up in an hot and moiſt place, wanting free tranſpiration, do eaſily putrefie. The Internal Mediate Cauſes, are by Authors commonly called *Morbofus Apparatus*, a ſickly Diſpoſition of Body; and the efficacy thereof is ſo great, that it alone is ſomtimes ſufficient to produce a gentle Peſtilential Feaver, ſuch as is commonly called a Malignant Feaver ſimply, or a Purple Feaver, without the Intervention of any External or common Cauſe. For we oft-times ſee, when the year is not Peſtilential, and there is no Epidemical ſickneſs abroad, ſome perſons through the evil Condition of their Humors, fall into ſuch Feavers, which are accompanied with many Symptoms of Malignancy; yea, and with other Purple ſpots.

Concerning the point of Obſtruction, we muſt obſerve, that it doth neceſſarily concur as the principal Cauſe in Malignant Feavers, which proceed from Internal Cauſes, and are not Epidemical: but that Epidemical Feavers, which proceed from a common Cauſe; viz. A Peſtilent conſtitution of the Air, or are gotten by Contagion, have not neceſſarily any Obſtructions for their Cauſe. For the venemous quality is received only by breathing in the corrupt Air, or only by Infection from others, by which venemous Quality the Humors of the Body, declining from their own proper Nature, do of their own accord putrefie. For even as Fruits that will not keep, and other things apt

to corrupt, though they have never ſo much freedom of the Air, yet cannot be preſerved from Corruption: Even ſo the Humors, when they have conceived that pernitious Quality, are apt to Corruption: ſo that though there be no Obſtruction preſent, they neceſſarily fall into a Putrefaction, and a Feaver. Howbeit, Putrefaction being by this means brought into the Humors, when Nature doth no longer rule them, they are wont for the moſt part to breed Obſtructions, whereby the Feaver is augmented; ſo that in theſe Feavers Obſtructions may Concur, which though in the beginning they were not the Cauſe of the Feaver, yet do they follow the ſame, being cheriſhed by the Cauſes of the Feaver, and being infected with Peſtilential Venom.

The External Cauſes of Peſtilential Feavers, are the ſix Non-natural things, which as they are neceſſary, ſo do they neceſſarily alter our bodies: and when they are far departed from their Natural condition, they breed in us Malignant and venemous Qualities. Among theſe, the Air holds the chief place: which as it is a moſt common Cauſe, ſo Diſeaſes that are common doth for the moſt part proceed from ſome fault thereof.

Now the Air becomes vitious and hurtful to men, for the moſt part by a threefold means. Firſt, If it be not blown through with wholſom Winds. Secondly, If it be polluted with the Infection of putrid and ſtinking Exhalations. Thirdly, If by an exceſs or prepoſterous condition of the firſt Qualities, it doth ſo alter Men, that thereby evil and malignant putrefactions of the Humors be ingendred.

The firſt is evident enough. For if the Air be not blown through, and ſtirred with Winds, it is eaſily corrupted. Whence *Hippocrates* in the 3. Epidem. Deſcribing a moſt grievous Peſtilential conſtitution, ſaith; This year had no Winds.

And the Second is moſt effectual and frequent, viz. When Putrid, Filthy, and malignant vapors are mingled with the Air, and do infect the ſame, which is wont to ariſe from divers things, viz. Lakes, Pooles, Fiſh-ponds, and other quiet and ſtill Waters, or ſuch as are full of mud, or wherein Flax, or Hemp have been ſteeped. Or from the ſtink of Privies, Dung-hils, and naſty Allies. Or from the unburied bodies of ſuch as have bin ſlain in battle. Or out of Dens or Caves (wherein the Air having been long ſhut up, hath gained a filthy putrefaction) being opened by an Earth-quake, or ſome other Caſualtie.

But the third Reaſon, which conſiſts in the Exceſs, Inequality, or Prepoſterous condition of the firſt Qualities, may happen divers waies, and eſpecially when there is a great exceſs of Heat and moiſture. For thoſe Qualities, when they are extranious and adventitious, and encreaſed above their Natural condition, they are the principles of putrefactions. Hence a Southern Wind laſting long in the Seaſons of the year, according to *Hippocrates* in Epidem. was the principal cauſe, of all Peſtilential Feavers there deſcribed.

But a dry Conſtitution of the Air, though in the Opinion of *Hippocrates*, it's more wholſom than a moiſt; yet becauſe al exceſs of Qualities, is hurtful to our Nature; certain it is that a very dry Conſtitution of the Air, more than ordinary, doth produce Peſtilential Feavers; eſpecially if it be joyned with Exceſſive Heat. A cleer example wherof we have in *Livy* in the firſt Book of his Hiſtory Decad. 4. viz. How by over great dryneſs, a Peſtilence happened at *Rome*, becauſe there had been little or no Rain that year: neither was there ſcarcity of Water from Heaven alone; but the Earth was ſcarce able to continue her Springs. Now this dry Conſtitution doth therefore Cauſe the Peſtilence, becauſe the Humors being above meaſure burnt & dried up, degenerate into the Matter of Biles, Carbuncles, and conſequently of a Peſtilential Feaver; and being very much thickned, they produce grievous Obſtructions; wherby in a matter otherwiſe wel diſpoſed therunto, Malignant putrefaction is eaſily bred. Add hereunto, That this immoderate drineſs of the air, doth corrupt the Corn, hindring it from attaining its due maturity. For it brings the Corn ſooner out of the Earth, and it gives it at firſt plentiful nouriſhment, and afterward Scanty, whereby the Corn is unequally digeſted, being Burnt without, but within quite Raw; like Fleſh ſcorched with an over violent Fire: and ſo it proves a Cauſe of indigeſtion, and divers Crudities.

It is proved alſo from *Hippocrates*, That immoderate Cold doth produce a Peſtilence 1. Epidem. Sect. 3. tempeſt. 1. where he ſaith. *In the Country of* Thaſus, *a little before the appearance of Arcturus* (a Star or Conſtellation) *and whilſt He appears, the North Wind blowing, there are many and great Rains.* In which places he fetches the Cauſe of a Peſtilential Seaſon, from over great Coldneſs. Alſo we may read in Livy Lib. 5. Decad. 1. That a Peſtilential Seaſon was cauſed by vehement Cold; in theſe Words. *The year was remarkable for a Cold, and Snowy Winter, ſo that the Wayes were ſtopped up, and the River* Tyber *was unnavigable. So ſad a Winter was followed by a grievous and Peſtilential Summer, Mortal to all kind of Living-Creatures; whether it were occaſioned, by the ſudden change of the Air from one extream to another, or by ſome other means.* And the reaſon of this Accident is at hand, viz. That by reaſon the Pores of the Skin are cloſed up by the extream Cold, ſo that the vapors cannot ſteem forth ſo as naturally they ſhould, there follows the greater putrefaction, and more grievous poiſon; whereupon follows more dange-

rous

rous feavers, than in the Summer, in which the condition of the air, although in ſome ſort it gives beginning to the Diſeaſe, yet doth it make the pores and paſſages wider, Through which that which putrified does exhale, and the natural and preternatural evaporations doe readily breath out.

Inequality of the Seaſon is wont alſo to be the Cauſe of this kind of Feavers; viz. when it is ſometimes Hot, ſometimes Cold; ſometimes wet, ſometimes dry in a ſhort time; or when theſe various ſeaſons doe endure longer one after another. As when after long vehement Hot weather, a freezing cold claps in, or after long rains, an extream drought ſteales upon us, or contrary-wiſe. Or when after a prepoſterous faſhion, it is hot in Winter and cold in Summer. Now theſe inequalities of Seaſons may help the production of Peſtilential Feavers; becauſe in them, the humors are exceedingly diſturbed, by which means they arrive unto an evill condition, far from their natural ſtate and fit to produce malignant Diſeaſes eſpecially in thoſe bodies which during the Courſe of the Seaſons aforeſaid, by diſorderly Courſe of Diet and liveing, have contracted either a Plethory a Cacochymy or ſome notable obſtructions.

To this kind of Cauſes may be added the malignant Influence of the Conſtellations, which by changeing the Ayr, are wont diverſly to affect the Bodies of Liveing Creatures. Such they ſay are, the Conjunction of the ſuperior Planets, *Saturn*, *Jupiter*, and *Mars*, in humane Signes, ſuch as *Virgo and Gemini*, and eſpecially when *Mars* is Lord. Which do bring Diſeaſes in otherwiſe then by change of the Ayr, ſo far as to corrupt the Nature and ſubſtance thereof. And that change is wrought two waies; and is by the manifeſt qualities, as when by the Influence of the Stars the ayr is ſo long and ſo far changed by exceſs of the firſt qualities of Heat, Moiſture, Cold and Dryneſs, that at length it's proper Subſtance becomes vitiated the other is by occult qualities, when by the ſecret power of the Stars, without any notable exceſs of the firſt qualities, the ſubſtance of the ayr is ſo changed, that it receives a certain degree of corruption contrary to our Life. Touching the firſt, no man doubts, ſeeing it is clear by Common Conſent of Phyloſophers that inferior Bodies are governed by the Heavenly Conſtellations. And as the alterations of the Ayr, which happen in the four ſeaſons of the yeer, do ariſe from the yeerly motion of the Sun: ſo the great diverſity of yeers, whereby one proves very moiſt, another exceeding dry the Sun holding every yeer the ſame Courſe in the Zodiack; can depend on nothing, but the various aſpects of the Conſtellations. The other way becauſe it is occult, is not ſo freely granted by all. Howbeit by common Conſent of Aſtrologers, it is held for certain, that the Stars do act upon inferior Bodies in a three-fold manner, viz. by their Motion, Light, and Influence The light and heat do alter theſe Sublunary Bodies according to the firſt qualities and eſpecially Heat. But the Influences doe induce both the firſt qualities (for example the cold which *Saturn* cauſes, cannot depend upon his Motion nor his Light) and alſo the hidden and occult ones. For ſeeing Peſtilential Diſeaſes doe oftentimes happen, no great mutation being made in the ayr in regard of the firſt qualities; but when they rage, the ayr appeares exceeding pure, and purer ſometimes, than it is wont to do when there is no peſtilence ſtirring; neither have very hot and moiſt ſeaſons preceded, from which great putrefactions are wont to ariſe, it is to be coniectured, that theſe peſtilential Diſeaſes doe ariſe from ſome malignant Influence of the Stars. Add hereunto, that Peſtilences are wont to rage even in the depth of Winter, which no remarkeable alteration of the firſt qualities hath preceded. For in ſuch a Caſe, theſe diſeaſes are to be attributed to the hidden power of the Starrs which have (as Aſtrologers teach) a power of corrupting the Air, no extraordinary mutation of the firſt qualitie being made therein. And this is that divine principle in diſeaſes, which *Hippocrates* acknowledged, and according to the Expoſition of *Galen* is in the Air, but is produced by the Celeſtial Bodies and hidden cauſes. It is alſo hinted at by the ſame *Hippocrates*, in the ſecond Epidem. Sect. one. When he ſaies. *The time and the Diſeaſes doe anſwer one another, unles ſome innovation happen in the Superior Powers*

Neither does that hinder which is brought as the opinion of *Plato*, out of his Epinomis, that the Courſe of the Heavens and heavenly Bodies have alwayes good influence here below, and from them nothing but preſervation and benefit doe flow. And *Ariſtotle* in the ninth of his *Metaphiſicks* Chap. 10. Saies that in thoſe Bodies which are eternall and æthereal, neither error nor corruption is found. And *Averrhoes* ſaies in his 1 *De Cælo.* cap. 24. The Heavenly Bodies doe containe the Elements, preſerve them, and univerſally are unto them inſtead of a form. whence it's collected, they cannot infect them with a poyſonous and malignant qualitie. Ad hereunto that if peſtilential diſeaſes ſhould be raiſed by influence of the Starrs, they would at one and the ſame time infect the whol World almoſt, ſeeing thoſe iufluxes are univerſal cauſes, and by the circulation of the Heavenly Bodies, doe affect all the quarters of the World. But theſe diſeaſes doe peculiarly invade ſom one Region onely. And finally if the

Stars were said to be malefick and of an evil disposition; God the Author of them would be accounted the cause of Mischief, which is full of Impiety. These objections, I say, doe not a whit prejudice the truth propounded, which may thus be answered. All created substances are considered two waies; either as they are things in being and do concur to the compleating and perfection of the Universe, and in that respect, they are all good: for *to be* and *to be good* are one and the same, neither hath the High God blessed for ever created any thing which ought to be termed evil, simply considered. or they are considered in regard of their operations, and then they may be termed evil, forasmuch as they may damnefie some other things by reason of the antipathy & inbred Enmity of Nature. And although almost innumerable contrarietyes of nature are foundin the world, yet must they al be termed good in respect to God their maker, & in regard of the Univers, whose perfection consists chiefly in variety. Furthermore the operations of things created, may be termed evil two wayes absolutely or simply considered in themselves, or in respect of somwhat else; They are absolutely evil when at all times, in all places and upon all occasions they doe perpetually evil; and in this sense no Creature can be found which is evil; in respect of some other thing, the operations of things may be termed evil, when they hurt one and doe another good; and so there is nothing in the whol universe so hurtful, but that it hath some other ways its uses & benefits, for which it was created: So al poysons, though most hurtful to men or other Animals, yet conveniently us'd they doe a great deal of good to them. And in the Art of Physick there is scarce so deadly a poyson found, but that out of it, by skil of Art, an healthfull medicine may be drawn. And finally the actions of Stars upon these inferior Bodies are considered two waies, either in respect of the whol sublunarie world containing the Elements and al mixed things: and so the action of the Heavens and Stars is simply benign, ingendering, conserveing, vivifieing all things, & doing al other good offices which tend to uphold the univers; & in this sence most true it is, that these inferior Bodies are cherished & susteined by the influence of the Heaven and Hevenly Bodies, or they are considered in respect of the proper nature of this or that Element, or this or that living creature: and then it is no absurditie to say that there are some influences hurtfull to som Element or living Creature in such or such a part so and so affected which depends not of any fault of the stars (for they are of a most perfect nature) but rather of the imperfection of sublunary things which cannot suffer any considerable mutation without the corruption of their proper substance: now these divers natures and qualities of the stars, produced in sublunary Bodies by their divers concourse and influence were ordained by the great Architect of this universe, for the Conservation of the whol world which being made up of so divers and so contrary natures, had need of as great variety in the influence of the Stars, that all things might be preserved, as it were in an even balance out of which diversity of influences notwithstanding, it could hardly come to pass but that som parcel of things so different shou'd sometimes suffer, not in any whol kind or sort (which should tend to the destruction of the universe) but only in some individuals that were less able to resist and for the most part misaffected, and only in some part of the Air more disposed to receive malignant influences. From whence we may conclude, that those corruptions doe chiefly depend upon the defect of sublunary bodies Forasmuch as many places are in the world, where the air is so perfectly constituted and the inhabitants so evenly tempered, that let never so malignant Influences of Starrs showr upon them, yet are they never infected whith other pestilence.

To the same kind of Causes must we refer the Defects and Eclipses of Sun and Moon, unusual Meteors and especially Blazing Stars: which are never wont to appear but that Epidemical and Pestilential Sicknesses, and Divers changes in the World do follow, as is Confirmed by the experiments of many Histories: whence that usually Cited verse of *Claudian* is become as a Proverb.

In Cælo nunquam Spectatum impune Cometam.

A blazing Star does not appear.
But some Beholders plagued are.

A most evident witnes whereof was that hairy Comet which appeared *Anno* 1618. Towards the East on the 27 of *November* and was afterwards seen near upon the whol Moneth of *December*, moving and shining. It's thicker and more solid part being turned towards the Sun, did behold the East, and did far exceed *Venus*, both in the clearnes of its shining, and in its largnes, thickly compacted and conglobated together. The remaining part, being more thin, and less enlightened by the *Sun*, because of its thinnes did move like a fairly spred beard and stretched towards the West. This Comet first appeared under the sign of *Libra* nere the *Æquinoctial Line*; but by a private and peculiar motion of its own, it was carryed from thence, through the feet of *Virgo*, the middle of *Bootes* and the tail of the greater *Bear*. And at length, its light decreasing by little and little and the matter whereof it consisted being dissipated, it vanished betwen the great *Bear* and the *Dragon*.

&

It was carried with the common motion of the Stars from East to West, but it ſeemed to be moved ſomwhat ſwifter than the Stars, for in the firſt Daies of its Apparition, it was wont to riſe a little before five in the morning; and afterwards it roſe about four a Clock and before four, and ſo ſooner and ſooner, till it prevented the Midnight, and Bed-time. And we have reaſon to believe, that this Comet was the Prognoſtick and forerunner of malignant and peſtilential Diſeaſes, and alſo of thoſe Wars, wherewith whole Europe in a manner, hath ſince that time been laid Waſt.

And although the Air be chief among the mediate Cauſes of malignant and peſtilential Feavers: yet ſure enough other non-natural things do concur to their generation, as I ſhall particularly and briefly declare.

The next to air are Aliments, becauſe bad Diet Cauſeth a ſickly diſpoſition of the body, which is an internal efficient, and *Cauſa ſine qua non*, of malignant and Peſtilential Feavers. Whereupon *Galen* in his Book *De Cibis boni et mali Succi*, and in the 1. *de Differ. Feb. Chap.* 3. Does demonſtrate, that from bad and corrupt Diet Peſtilential Diſeaſes do ariſe. Now meats are ſaid to be evil and the Cauſes of thoſe diſeaſes in many reſpects.

And in the firſt place, when the Fruits of the Earth and of Trees, by reaſon of a bad conſtitution of the year *viz.* Over moiſt or over dry, or corrupted by miſts, or ſome tempeſtuous weather, or ſome malignant influence of the ſtars; do, being eaten, produce bad Juices in the body.

Secondly, when there is great Famine and ſcarcity of Corn: From whence came that Proverb *Ho loimos meta limon*, the Plague follows famine. For then the poor common People are forced to fill their bellies with ſuch meats as are cheap and bad, whence ariſes abundance of bad Humors. And which is much worſe, when a plenty preſently followes famine, they do then ſuddenly cram themſelves with much meat, which by the languiſhing heat of their internal parts cannot be well digeſted, and thereupon thoſe meats come to participate of a malignant putrefaction.

Thirdly, When Aliments, which in their own Nature are good do by ſome way or other, gain putrefaction or ſome evil qualitie, ſuch are wheat, barly, beans, and peaſe, and other kind of grain, which being either over long kept, or ill laid up in a moiſt place, or otherwiſe miſaffected, do come to be muſty, or have ſome other putrefactive qualitie. Such is fleſh over long kept, or ſtinking or ſuch as is of beaſts that were not killed, but died of ſome diſeaſe: as *Julius Obſequens* relates, that in the Iſle called *Lipara* when the Sea was made hot, the fires which by meanes of an Earth-quake were forcibly vomited out of the Mount *Ætna*, and had boiled the Fiſhes caſting them upon the ſhoar: the Inhabitants eating greedily of thoſe Fiſhes, a ſore Peſtilence followed.

Neither is there leſs power in drinks, when putrid and corrupted wines or beer or other liquors are drunk; or when water is drunk out of putrid and muddy Lakes, or otherwaies infected. As good Hiſtories do teſtifie that numerous Armies, have been deſtroied by peſtilential Diſeaſes, with drinking ſuch waters.

Theſe non-natural things mentioned *viz.* Ayr and Meates and drinks, have the greateſt force to engender malignant Feavers. but the four remaining *viz.* things voided or retained, Motion and Reſt, Sleep and waking, with Paſſions of the Mind, are of leſs efficacy, and do only concur as adjuvant Cauſes, or ſuch as diſpoſe the body to conceive a malignant putrefaction; as in our expoſition of them ſhal preſently appear.

The retention of Courſes in women, or of ſome other accuſtomed evacuation in Men, as of the Hemorrhoides, bleeding at noſe, and Looſenes, which betides ſome perſons, at certain ſeaſons; when they happen in a peſtilential year, they are wont to produce a malignant diſeaſe. For thoſe things which are wont to be avoided as ſuperfluous and burdenſome to Nature, if they be retained in the body, they do eaſily conceive putrefaction ſo likwiſe over great evacuations either of blood or other humors, do much weaken the Body, and do Cauſe that Natural Heat being weakned, it is ſoon infected by the vitious and peſtilential impurities of the Air.

As for motion and reſt, certain it is, that overmuch Idleneſs is a Cauſe, that Natural heat is not ſufficiently eventilated, and conſequently the Humors conceive putrefaction: ſo over great exerciſe does very much open the pores, and diſſolves the Heat; whereupon the body becoming weak and more apt to take impreſſion, does eaſily receive the Infection.

And too much ſleep, makes many Excrements and fils the body with Humidities, which eaſily putrefie, but too much watching does engender Crudities, and they eaſily putrefie, becauſe Natural Heat cannot wel maſter them: and becauſe by them, many obſtructions are cauſed, by which Tranſpiration is prohibited, and at length putrefaction engendred.

And finaly, paſſions of the Mind, are wont vehemently to exagitate the body and to diſturb the humors: and ſo they much Diſpoſe the body to receive infection; and eſpecially fear and Sadnes which Drawing the vital Spirits inward, do as it were choak and ſmother them, whereby the vigor of the Heart is ſo broken, that it cannot ſufficienly reſiſt the venom and firſt aſſaults of peſtilential Sickneſſes, yea verily and the Humors being ſtirred in the veines and vehemently diſturbed, are thruſt out of their Natural conſtitution, and do conceive a malignant putrefaction. Inſomuch that

ſome

ſome have conceived, that Peſtilential Diſeaſes are bred in Camps and at Sieges of Towns, not ſo much through bad Diet and ſtink of dead Carcaſes, as through Terror, Fear, Anxiety and dread of Death, which do exagitate the Humors, and put them into a tumultuary Combuſtion and Fluctuation.

The Signs of a peſtilential Feaver do ſome of them foretel the diſeaſe when it is coming; others declare it to be preſent; and others witnes where it has bin. All which muſt be ſet down, becauſe the firſt tend to Preſervation, the ſecond to Cure, and the third ſort to be a Caveat to ſuch as are not yet infected.

The Signs which foreſhow a peſtilential Feaver, are taken from three things *viz.* From the the Diſpoſition of the Body, from the Preſence of Cauſes, and from ſome intermediate diſpoſitions.

Thoſe bodies are diſpoſed to receive peſtilential Infection, which have collected evil Juyces through bad diet, and by a prepoſterous uſe of the ſix non-natural things aforeſaid. Or ſuch as being plethorick do gorge themſelves and inordinately and unſeaſonably repleniſh themſelves. Furthermore ſome that are neither plethorick nor cacochymical, do diſpoſe their bodies to the reception of this diſeaſe, while they torment their minds with moſt troubleſome paſſions, or give themſelves immoderately to carnal embracements; for from theſe two Cauſes, the peſtilential feaver is very ordinarily produced, forasmuch as by them corruption is eaſily introduced even amongſt good humors for Paſſions of the Mind do diſtract and draw away the ſpirits, from their proper operations and overmuch Carnal embracement, does weaken al the powers of the body. but, the Spirits being diſtracted, and the vertues weakened, the Humors change their Nature, and grow corrupt.

Finally, thoſe whoſe principal Members are weak, or ſome waies tainted, either from the womb, or by bad diet or any other external Cauſe; which have an hot and moiſt temperature; which have a very thin or very compacted habit of body, are al diſpoſed to peſtilential Feavers, for hot and moiſt bodies are ſubject to putrefaction, thin bodies are liable to al injuries, compacted conſtitutions, have no free tranſpiration.

The preſence of ſuch Cauſes as can breed a peſtilential feaver do portend the ſame: and conſequently il ſeaſons and unnatural temper of the year, Dearth, and Scarcity of Victuals, Wars and other Cauſes, reckoned up before, when they appear, they declare the Plague to be approaching.

Thoſe intermediate diſpoſitions are, when ſuch a diſpoſition of body and the Cauſes aforeſaid being preſent, wee ſee a Man more ſad than ordinary, an unexplicable fear in him without good ground or cauſe, the Colour of the face changed; is not rightly diſpoſed in point of diet; is diſturbed with bad dreames; infeſted with wearines which comes without labor, thirſt, watchings, ſtomach-ſickness; it is eaſily conjectured, that man will have the Peſtilence: for al theſe things do declare, that the humors do attain another nature, and do corrupt. from whence comes a peſtilential Feaver.

Such Signs as declare the Peſtilence to be preſent are exactly to be propounded and therefore al the Heads of Signs muſt be run over, out of which this Diſeaſe may be known. which Heads of ſigns, are taken from the three kinds of ſymptomes, becauſe the ſymptomes are the Effects of Diſeaſes, and Cauſes can no way ſo conveniently be known as by their effects. And therefore, ſome ſignes are taken from the Actions hurt, ſome from Excrements voided, and others from qualities changed. Unto which Heads a fourth muſt be added taken from ſupervenient Infirmites. To the right underſtanding of which, theſe things following muſt be premiſed.

Firſt, we muſt know that the ſame ſigns in a manner doe ſhew a peſtilental Feaver properly ſo called, and a Feaver ſimply malignant, and that the ſignes of the one and the other doe differ only according to more and leſs; ſo that in the peſtilential Feaver the ſymptoms are more, and in the malignant Feaver leſs cruel; yet there are ſome adjuncts more proper to the one than the other which we ſhall declare in their proper place.

Secondly, we muſt note, that there is no true, proper and Pathognomonick ſign of theſe Feavers viz. Such an one as wherever that ſigne is, there is the peſtilence, and where that ſign is not, there is no peſtilence; no not the Bubo or ſwelling in the Groyn nor the Carbuncle; ſeeing that many have them not though they have the plague, and many have Buboes and Carbuncles that have no malignitie in them: neither are thoſe purple ſpots any ſuch pathognomonick ſign, although a malignant Feaver is from them termed the ſpotted Feaver, forasmuch as many have a malignant Feaver without any ſuch ſpots; & thoſe ſpots doe ſometimes appear on women that want, their courſes, and in ſome Children by reaſon of a light ebullition of Blood, without any Feaver, which I have often ſeen in both. Howbeit by a Concurrency and collection of all ſignes and tokens theſe Feavers may certianly be known,

Thirdly, we muſt mark, that al the ſigns which ſhall be propounded, are not found in al ſick perſons of theſe Feavers; but only a part of them, which notwithſtanding will be ſufficient, punctually to diſcover the kind of the diſeaſe. For according to the variety of patients bodies and

& the intention or remiſnes of the diſeaſe, now theſe kind of ſymptomes, & anon thoſe do chiefly ſhew themſelves.

Finally, it muſt be known, that the ſigns of a peſtilential and malignant Feaver (although they are alſo found in other Feavers) yet are made in ſome ſort pathognomonick in this Feaver in a two-fold reſpect. Firſt, becauſe in theſe Feavers, they are ſo conditioned as in other Feavers they are not. For the Head-ach, Ilneſs at Stomach, Vomiting, the manner of the Heat and other ſigns, when they accompanie peſtilential Feavers, they have a peculiar malignant condition whereby they differ from themſelves when they accompanie other ordinarie Feavers; which is wel known to them that are but indifferently exerciſed in the Practice of Phyſick. Secondly, becauſe the ſymptomes do not obſerve the ſame proportion among themſelves in theſe Feavers, which they doe in ordinarie ones. So that the heat being gentle to the touch, the pulſe not much changed, doe ſhew a ſmal Feaver: yet with them is joyned mighty Head-ach, watchings and ſomtimes raveings, and other ſymptoms which are wont to accompanie a burning Feaver. Theſe things being thus premiſed, we ſhal decribe the order of ſigns, beginning from the actions hindered.

Becauſe therefore, the Heart is cheifly afflicted in theſe diſeaſes, by the malignant and venemous quality thereof, therefore its action viz. The Pulſe, is diverſly changed, according to the varietie of times and the divers condition of the diſeaſe. For ſomtimes at the firſt, it is in a manner natural, and very like the pulſe of perſons in health, as *Galen* ſhews in the 3 de preſag. cap. 4. but in the progreſs and augmentation of the diſeaſe, it is little, weak and unequall. Alſo the frequentneſs of the pulſe is alwayes more than the increaſ of heat can require, becauſe the Heart being provoked by the malignant qualitie, doth in that regard diſturb it ſelf more than the neceſſity of eventilation doth require. Likewiſe the ſigns of this Feaver are.

Cardialgia, Heart burning or pain of the mouth of the ſtomach, which *Hippocrates* condemns as a ſign of malignity 1. Progn. in theſe words, Pain of the mouth of the ſtomach, with diſtention of the Hypochondria and Head-ach, are ſigns of maligity.

Somtimes great thirſt, exceeding the meaſure of the Patients heat and ſomtimes want of thirſt, with a vehement Feaver, and dryneſs of the Tongue, for both are ſigns of malignity

Great want of appetite, which make many abhor al kinds of meat, as much as if they were the moſt loathſom medicines. Now this is wont to ariſe from malignant vapors which vex the ſtomach.

Stomach Sickneſs and vomiting ariſing from the ſame Cauſe, eſpecially when it happens in the beginning of the diſeaſe, and is ſo divers that ſome preſently vomit what they eat; other vomits as ſoon as they have taken broath, but they vomit not the broath which they took, but divers kinds of Humors; ſome keep any kind of meat, but vomit their Drinks, Iuleps, Emulſions and whatever drinking matter is given them, preſently; great thirſt notwithſtanding remaining, with dryneſs and blacknes of the tongue.

A frequent and inordinate ſhivering, which comes divers times in a day, ſpringing from ſharp and biting exhalations of an adverſe qualitie to our natures, which are carried unto the ſenſitive parts: which kind of ſhivering does rarely happen in other putred Feavers, becauſe the vapors in them have not the like malignitie. In malignant intermitting tertians, ſomtimes a ſign of malignitie is taken from the ſhaking and the cold. For it ſomtimes happens, that in the beginning of the fit, with a light coldneſs or ſhivering, the heat doth ſo much retire inwards, that the fleſh of the patient is very cold and the face is like that of a dead perſon, and the pulſe ſo little as it it did not beat at al. After which follows an Heat, which neither in the Augment nor in the ſtate, doth to the touch feel great or ſharp; yea and the fleſh of the patient is either lukewarm to feel to, or coldiſh even to the declination. The pulſe, when the heat comes, doth more appear, yet it is ſmall, unequal, frequent and very weak: and many other ſymptomes of a peſtilential Feaver are preſent, which may ſufficiently prove, that there are intermitting malignant Feavers as well as continual; as was hinted before.

Wearyneſs of the whol bodie, Heavineſs, and a breaking as it were of the members appear in the beginning of the diſeaſe, by reaſon of the foreſaid vapors, diſperſed through the whol Body

Paines of the Head, Watchings and Raveings, which al come from the ſame cauſes, viz. from ſharp and venemous vapors; which when they lodg themſelves in the membranes of the Brain, they cauſe head-ach and in as much as they heat and dry the very ſubſtance of the brain, if the alteration be but ſmall, they cauſe watchings, if great they cauſe ravings. And to theſe ſymptomes, beſides Heat and Dryneſs, the venemous quality contributes much, becauſe in the vulgar Feavers ſuch ſymptoms do not happen, unleſs the diſtemper be much more than ordinarie. And paines in this Feaver, have a peculiar property to be very diverſe, & to ſhift places. For ſomtimes only

the fore part of the head, otherwhiles the hinder part, now the forehead, anon the eyebrowes are cut aſunder as it were with pain, and ſometimes other parts as the ſhoulder-blades, the ſides, the back, &c. Somtimes it is fixed in one part, otherwhiles it changeth place and vexes now this, now that part of the body.

In ſome patients drouſie and ſleepie diſpoſitions happen, viz. In ſuch as have their brains ful of flegmatick excrements: which flegmatick excrements, are diſolved by hot vapors aſcending from the inferior parts, and doe hinder the functions of the Brain.

The urin in theſe peſtilential Feavers, is ſometimes like the urin of ſound perſons, namely when the humors doe more offend through a malignant Qualitie, than by putrefaction; & ſomtimes it continues ſo for the firſt days; afterwards it becomes thick & troubled. Somtimes in the ſtate of the diſeaſe, it appears concoct, though the ſick are in a periſhing condition. ſometimes, it is thin and crude, haveing no ſediment, or ſuch a ſediment as is more like an excrement than a ſediment. But moſt commonly it appears thick and troubled, and of an high colour; and hath a thick, red, diſtrubed and ſcattered ſediment. And finaly a evil diſpoſitions of urines, doe happen in this diſeaſe, according to the divers alterations of the putrefieing and corrupted Humors.

Chollerick fluxes of the belly, which either comes of themſelves or through ſome like occaſions by ſome gentle Clyſter or medicament; which bring many to their end, So *Hippocrates* relates in 3. Epidem. In a peſtilencial Conſtitution there deſcribed, that many died of the looſneſs and Bloody-flux: For the Humors being made more furious by the malignant qualitie which is in them, doe exceedingly provoke Nature, ſo that ſhe indeavors to drive them out the neereſt way: Now in theſe Stooles, there is wont to be a mighty ſtink, by reaſon of the extream corruption of the humors.

An abundance of Worms is wont to be avoided in this diſeaſe, eſpecially at the beginning: For the great Putrefaction doth very much diſpoſe the Humors to breed Worms.

Frequent ſweates, ſmall, ſhort and unprofitable doe break forth in the beginning of the diſeaſe.

The Heat is mild and gentle to feel to, ſo that they ſcarſe ſeem to have a Feaver, whereupon *Galen 9. Simp. cap. de Bolo Armen, & Avic. fen 4. lib. 1. cap de febre peſtilenti.* Doe teach that peſtilential Feavers have oftimes a mild and gentle Heat; and the reaſon is, becauſe theſe diſeaſes are rather cauſed by a malignant and venemous quality, than of an ordinarie diſtemper and Putrefaction.

Readneſs of the eyes is often ſeen in peſtilential Feavers, becauſe the membranes of the Brain are in a ſort inflamed by ſharp vapors aſcending into the head, which they eaſily communicate to the *Tunica adnata* or ſkin of the eyes ſo called, which is propagated from the ſaid membranes

Finally, purple ſpots like Flea-bitings, called by later Phyſitians *Peticulos* or *Petechiæ*, are the proper and peculiar Signs of a malignant Feaver. For they are found in no other kind of Feaver; foraſmuch as they do ariſe from a vitious quality of the blood or other humors, joyned with malignity. Yet there do appear in other diſeaſes, ſpots very like unto thoſe aforeſaid, but ſpringing from a far different Cauſe; *viz.* From the over thinnes of the blood, which being exagitated by the heat or the expulſive faculty, does ſprout forth of the Capillary Veins into the Skin. Theſe ſpots, are wont for the moſt part to appear in ſuch as have ſome flux of blood, becauſe the blood in ſuch is more thin and watry: and alſo in ſplenetick perſons, in ſuch as have the Jaundiſe and old obſtructions of the Bowels, and (in a word) in al ſuch, who by reaſon of the weaknes of their Bowels, do breed watry blood and are apt to fal into a Cachexy. For in ſuch perſons, the blood being made thinner than ordinary, ſometimes flows out at the Noſe, ſomtimes at ſome other part, and ſomtimes it comes out of the Capillary Veins into the Skin; where being retained, it loſeth its own coluor, and becomes either blewiſh, or black, or light red, and cauſes great variety of ſpots; which notwithſtanding are very far different from the ſpots of peſtilential feavers, and do argue nothing but the watry thinneſs of the blood and weakneſs of the Liver. Now thoſe ſpots which come out, in Peſtilential feavers, do ariſe from Humors putrefiing and infected with an evil quality. Furthermore, thoſe ſpots do break out ſomtimes critically and ſomtimes Symptomatically. Critically, when as Nature haveing either in Part or in whol overcome the putrefaction and corrected the bad quality, does drive the corrupt humor to the external parts; And then the diſeaſe is evermore abated. Symptomatically when Nature is pricked forward by the quantity or evil quality of the morbifick matter, does tranſmit a portion thereof unto the Skin, before it be concocted, or the evil quality thereof amended. And from thence the Patient receives no Eaſe, but rather, Nature haveing unprofitably wraſtled with the diſeaſe, it is a token rather that ſhee is conquered than conquers.

The Colours of theſe ſpots are divers, and do ſhow the Diverſity of the humors by which they are bred. For the red ſpots are bred of the purer ſort of blood, and the black from chollerick blood more or leſs aduſt. As for the ſtore of theſe ſpots, ſomtime they appear in greater numbers and

ſomtimes

ſomtimes in leſs. They begin to appear ſomtimes on the fourth, fifth, ſeventh, or ninth, or ſome other critical day, if their coming out portend any good; ſomtimes on other daies, when there is little good to be hoped for thereby. Somtimes they are ſeen in al parts of the body, but moſt frequently in the Loynes, breſt and Neck.

Now the Diſeaſes which come, upon a peſtilential feaver for the moſt part are, ſomthing coming out like Pox called *Exanthemata*; Puſhes and Ulcers of the Mouth; Carbuncles; Riſings in the Groyn and behind the Ears.

The Exanthemata aforeſaid, differ from the purple ſpots, becauſe in the ſpots there is only the color chinged, but here is a certain riſing in theſe *Exanthemata* to an head. Somtimes they are like warts, and ſomtimes leſs, reſembling millet ſeed. Somtimes they are red, being cauſed by blood ſomtimes white, proceeding of flegm or Seroſities; yellow from choller; purple from aduſt Choller; blewiſh or black, by reaſon of great burning or Mortification. Some break out Symptomatically, others Critically, others in a middle way. Some dry away, others come to matter, others grow to be ulcerous.

To theſe may be referred puſhes appearing in the Mouth which have al the differences of the forſaid *Exanthemata*, and are ſomtimes ſo malignant, that the ſick can hardly endure to eat and drink. From Children they often Cauſe Death becauſe they wil not endure the pain of eating and drinking. Theſe puſhes do ſomtimes degenerate into Ulcers, which breed very great trouble to the patients, hindering the motion of their tongue and eſpecially their ſwallowing.

But ſomtimes Ulcers are bred in the Mouth immediately without any puſtules or puſhes foregoing which the *Greeks* cal *Aphthæ*: of which there are many ſorts. For ſome are ſuperficial, others profound; ſome clean, others foul; ſome benign, others malignant; ſome with a Cruſt, others without. And the Cruſt is ſomtimes white, ſomtimes yellow, ſomtimes blewiſh or black. Thoſe which are deep, filthy and malignant and that have a black Cruſt, are the moſt dangerous.

Carbuncles and Buboes, are wont to riſe in divers parts of the body, but eſpecialy where the Glandules are; becauſe the expulſive faculty being provoked by a malignant quality does expel the pernicious matter from the internal parts eſpecially the more noble ones to the external: ſo that from the Brain ſhee ſends it to the Glandules or kernels behind the Ears; from the Heart, to the Arm-pits; from the Liver to the Groyns; whence ſwellings under the Ears called *Parotides*, & thoſe in the Groyn called *Buboes*, do ariſe. Which kinds of tumors do cheifly appear in a true peſtilential feaver, eſpecially thoſe in the Groyn, which therefore the common people call the Peſt or Plague. But Carbuncles and *Parotides* or riſings behind the Ears, do alſo break out in malignant Feavers, but in ſuch as are at the top of malignity, and come very neer the Nature of true Peſtilential Feavers.

Signs commemorative, are chiefly in requeſt when Phyſitians are called to view the Corps of the dead, at ſuch times as there is a Plague abroad, or ſome ſuſpition thereof, that it may be known whether the party died of the plague or not.

And firſt of al, in ſuch dead bodies there do ſomtimes appear thoſe ſpots of which we ſpake before and ſomtimes marks, or ſtripes, as it were after whipping: for theſe are the tokens of a Peſtilential diſeaſe and venemous, ſeeing thoſe that are poyſoned have alſo theſe ſigns. And thoſe ſpots do eſpecially denote the Peſtilence, when they are of a lead Color or black. Alſo thoſe *Exanthemata* ſpoken of before, do ſhew the ſame, eſpecially if they have a bad Color: but much more the Buboes, *Parotides* and Carbuncles whereunto may be added ſuch ſigns as have appeared in the Courſe of the diſeaſe: for the recounting of them wil make a certain demonſtration.

The Prognoſtick of Peſtilential Feavers is ſo uncertain, that nothing can be certainly affirmed touching their Event, until certain tokens appear either that Nature or the diſeaſe hath gotten victory; which is not wont to happen, unleſs about the end of the ſtate or the Beginning of the Declination. Where the diſcreet Phyſician ought to delay and ſuſpend his Judgment touching the Iſſue of the diſeaſe in the Beginning and the Augment

Wee muſt nevertheleſs propound the chief tokens out of which we may draw a great Conjecture, whether the diſeaſe wil end in Death or Health, by help whereof we may foreſee, what is to be hoped or feared. yet not being over confident: for Experience hath taught us, that many have eſcaped, with moſt mortal ſigns; and others have periſhed under al the tokens of Recovery. But we ſhal paſs over al ſuch prognoſtick ſigns which are common to al acute diſeaſes, of which *Hippocrates* hath diſcourſed largely in his Prognoſticks, Coick, Predictions, Procheticks, and Epidemicks and likewiſe in his Aphoriſms, which may have a place likewiſe in this diſeaſe. But wee wil propound only ſuch as are proper in a ſpecial manner to peſtilential Feavers, from which a more certain Prediction may be drawn.

Now theſe may be drawn from the ſame fountains from whence wee drew the Diagnoſticks.

Firſt Therefore, in theſe Feavers, if the pulſe keep a tenor and equality, be the Feaver never ſo great, it gives alwaies ſome matter of hopes. Contrarily an inordinate, unequal and contracted pulſe, is dangerous, eſpecially if it appear weak from the Beginning. But thoſe differences of

pulſes

pulſes are not ſo dangerous in malignant Feavers, as in ordinary ones. For although an intermitting pulſe in a young man, be ſo deadly a ſign, that *Galen* teſtifies, though he had ſeen many old folks and children eſcape having an intermittent Pulſe, but never any young Man, yet in malignant Feavers I have known not a few young Men, which had an intermitting pulſe divers daies and yet eſcaped. Pulſes like thoſe of perſons in Health are very dangerous: for they ſignifie that Nature out of weakneſs abſtains from the Concoction of Humors. For where by an evil and pernicious quality, the ſtrength is exceedingly weakened, Nature being weak, does not ſet her ſelf to digeſt the matter, not meddling with the Humor which hath cauſed the diſeaſe: ſo that no endeavor of coction being uſed, no labor follows, and there is either no Feaver, or a very little one. Wee have an example hereof in external tumors, in which ſo long as the Part is almoſt overwhelmed by the plenty or ill condition of the matter, there is neither Pain nor Tenor; but whereas Nature begins to fight againſt the matter and to turn it into quittor then the feaver is much increaſed. Even ſo in malignant feavers, the Patients ſeem ſometimes freed from their feaver, wheras they grow worſe and draw towards death: as we may ſee in *Hippocrates* 3. Epidem. Secti. Ægr. 2. where *Hermocrates* from the twentieth day to the twentyfourth ſeemed to have no Feaver, and yet on the twentyſixth he died.

Raving is very common in this Feaver. neither is it to be feared, if it be leſſened by ſleep, and eſpecially if it vaniſh away with a plentyful ſweat: for tis a ſign that the matter is drawn from the Brain, into the habit of the Body. But a perſevering dorage, is pernicious, becauſe it's a token that it degenerates into a true Phrenzy.

The contractions and hoppings of the Members, which do often happen in this Feaver, are Convulſive motions and very pernicious, and that the more if joyned with raveing, for they ſignifie the brain to be extreamely hurt

Trembling motions of the hands and Tongue are wont to be deadly and are by *Hippocrates* much condemned in the 1. Prognoſt. For they ſhew great weakeneſs, and that Nature is overcome by the diſeaſe.

Deafnes though in the beginnings of occult diſeaſes it be exceeding dangerous, according to the Doctrine of *Hippocrates*; yet if it appear in the State of a diſeaſe it portends health, eſpecially in malignant Feavers. And I have obſerved a thouſand times, that ſuch as being ſick of Peſtilential Feavers, were taken Deaf in the State of the diſeaſe, did al eſcape, though the other ſymptomes were never ſo dangerous; for it is a token that the brain, being ſufficiently ſtrong does thruſt the humors from the internal to the external parts.

Sneezing, according to *Hippocrates*, even in deadly diſeaſes (provided the Lungs be in good Caſe) do give Hope of recovery. But in malignant Feavers, be the ſymptomes otherwiſe never ſo dangerous, they promiſe Recovery.

Frequent Heart-burnings or Hiccoughings, do portend danger, and ſignifie that the ſtomach is grievouſly afflicted by the venemous quality.

Extream averneſs to meat, is very dangerous for it ſignifies the Stomach to be maſtered by the malignant quality of the Humor, and that its temper is wholly overthrown, ſo that it refuſeth and abominates laudable nourihment, which it moſt familiarly affecteth in time of Health.

Suppreſſion of al evacuations in the beginning and augment of the Diſeaſe, is counted a good ſign. For it ſhews that the morbifick matter is not ſo malignant, as to provoke Nature to excretion before the due time but that Nature does yet conquer, and wil in due time expell the matter, provided there be no ſign that the Humor wil ſettle in the Head, Belly or any principal part. But in the ſtate of the diſeaſe for nothing to be evacuated, but for worſer ſigns to appear in ſome principal member; is bad. For it's a ſign the diſeaſe wil either laſt long, or give little hope of Life. For the matter which in divers daies could not be overcome, does bring ſome great dammage in the ſame member, as a phrenzy, Lethargy, and others which ariſe after the eleventh or fourteenth day, which can very hardly be cured by al the Medicines imaginable.

Blood that is drawn by Phlebotomie, if it appear no waies faulty, but pure and according to Nature, tis a dangerous token. For it is a plain argument that there is more of a venemous quality, than of putrefaction; or that putrefaction may lurk in the Veins next the Heart, which cannot be drawn away by Phlebotomy.

From Urines in a Peſtilential Feaver, there is ſcarce any, or a very uncertain prediction to be made. For not only the confuſed, troubled, thinner, and thicker Urines are bad, as in other Feavers: But alſo that Urine which is like the Urine of a healthy Perſon. Yea verily, and many have died, after the Urines have ſhewed ſigns of Concoction, and then became crude again.

Howbeit, Concocted Urines, and which have a laudable *Enorema* continuing many daies; and daily more uniting it ſelf and deſcending by little and little into the bottom of the Urinal, doth perpetualy promiſe certain recovery, even in malignant Feavers. For it cannot be, that a luſty and ſtrong natural Faculty, which diſcovers it ſelf plainly in theſe Urines, ſhould not riſe againſt the malignant Quality, and at length overcome the ſame. And therefore I have oftentimes with great confidence foretold a good event from the ſigns of Concoction perſevering in the Urines

in

in ſuch as have had malignant Feavers, attended with moſt grievous Symptoms, ſo that all the By-ſtanders were in great fear of their Lives.

A Fat and oyly Urine, black or livid, with a black or blewiſh ſettling, doth certainly betoken death.

Very much Urine being made, and no abatement of the Feaver thereupon, is dangerous, becauſe it ſignifies a melting of the Body.

Sweats in this Feaver, although they come well conditioned, and in the Critical day, doth ſeldom perfectly judge the Diſeaſe. And ſomtimes the Feaver is abated by Sweat on the firſt day; and then the Symptoms grow high, and after many Sweats the Patient dies. For plentiful Sweats, not diminiſhing the Diſeaſe, doth ariſe from the melting of the whol Body. Neither muſt we therefore beleeve, that Critical Sweats doth never any good in theſe Feavers. For by how much leſs Venom there is in the Diſeaſe, they do ſo much the more good; as it happens in ordinary Feavers. And we find by Obſervation, that 'tis far the better for the Patients to Sweat often at the beginning of the Diſeaſe (provided they be not worſe after their Sweats) for 'tis a ſign that Nature doth attenuate the Matter by little and little, and expel the ſame by Sweat.

Looſneſs of the Belly is a very uncertain ſign. For oftentimes a Looſneſs at the beginning of the Diſeaſe hath been good, which yet experience ſhews, is ſomtimes a deadly token. Again after ſome Coction, we have ſeen the Patient killed, by a looſneſs, and ſomtimes by the ſame recovered: Yet we muſt thus diſtinguiſh. When a venemous Quality hath the maſtery, the more the Matter goes away by Stool at the beginning of the Diſeaſe, the leſs danger. But when the Diſeaſe ariſes moſt part from putrefaction of the Humors, they are worſe that are looſe, at the beginning of the Diſeaſe.

Purple ſpots, when they are many and large, and of a benign color, and break out Critically, they foretel that Nature wil Conquer. But if they be few, ſmal, & of a bad color, and are Symptomatically put forth, they ſignifie that Nature is never worſted. And further, If they go in again, its the worſt ſign of all; for it ſhews that the morbific Matters reflux into the inward parts.

Ex anthemata, or wheels appearing in divers parts of the Body, are effects of greater malignity than Purple Spots, and conſequently portend greater danger.

Carbuncles and Buboes, or riſings in the Groin and ſome other parts, doth witneſs greateſt malignity, and threaten moſt danger: ſeeing they are wont to follow thoſe Feavers whoſe peculiar Character it is, that more die of them than recover.

Carbuncles & Buboes, by how much they are the further from the Heart, grow faſter and come quicker to ripen, by ſo much the leſs dangerous are they. But if Tumors encreaſe ſuddenly with bad Symptoms, 'tis ill. Carbuncles very great, of a filthy color, with an eating Ulcer, or which turn into a Grangrene, are deadly: as alſo thoſe which are neer the Heart, or riſe upon the Throat Experience hath taught that many Carbuncles are more dangerous than few; and contrarily many Buboes or other riſings are more ſafe, than few. *Perotides* (or riſings behind the Ears) in malignant and Purple Feavers, are in the Augment and ſtate deadly. But if they appear when the Diſeaſe doth never ſo little decline and come to Suppuration, they are a good token.

The Cure of a Peſtilential Feaver is divided into two parts. The firſt contains the preſervation of thoſe that have it not; the ſecond contains the healing of thoſe that have it.

The preſervation from the Peſt conſiſts chiefly in taking away of thoſe Cauſes, which make Bodies fit to rece ive the Peſtilence, and breed it in them. And they are Internal or External; the Internal are a Diſpoſition of the Body apt thereto, a Plethorie, a Cachochimy, and Obſtructions. The External are eſpecially, a vitiated Air, and a wandring Contagion. Bodies diſpoſed to this Diſeaſe, are ſuch as either Naturally or Accidently, are more moiſt than they ought to be; Weak lax and rare, denſe and compact. Moiſt bodies muſt be dryed; drie muſt be preſerved in that temper; the former muſt avoid full diet, much drinking and all moiſt nouriſhments; ſuch as are eſpecially Fruits that wil not keep, Hearbs, Fiſhes, Meats made of milk; the South air, ſuch as comes from lakes, and eſpecially the air of the night, Idlenes, long Sleep, eſpecially Sleeping after dinners, Batheings and whatever elſe can moiſten the Body.

Let weak bodies be ſtrengthened, with a reſtorative diet and with ſtrengthening medicaments. Thoſe of a rare lax and thin conſtitution, need the ſame waies of prevention with the moiſt. But the denſe and compacted conſtitution, becauſe it is moſt of al diſpoſed to a peſtilential diſeaſe muſt more carefully be freed from a plethorie, Cacochymie and from obſtruction; which cauſes, ſeeing in all bodies they may breed this kind of Feaver, as internall cauſes, we muſt perpetually ſtudie their removal.

A Plethory requires Phlebotimy provided nothing do adviſe the contrary, as a very cold or hot ſeaſon of the year, and a peſtilential Conſtitution of the Ayr in which a vein muſt not be open-

ſd, unleſs a *Plethora ad vaſa* do manifeſtly urge the ſame; or ſome uſual evacuations of blood by courſes, hemorrhoids, or noſe-bleeding, have been ſtopped. For the blood being exhauſt the air which is breathed in will more eaſily imprint it's peſtilential qualitie, and in caſe the diſeaſe happen, the Patient will the hardlier eſcape, for being weakened by blood-leting even as they who drink poiſon after blood letting, it penetrates the more and they are with more difficulty recovered. Alſo when we fear poyſon, we let not the patient blood, ſo *Galen Lib. 7. de diff. Feb. Cap.* 4. Where he propoundes a preſervation from a peſtilential Feaver, he preſcribes indeed Purgation and opening of obſtructions; but he makes no mention of Phlebotomy

To Cacochymy we muſt oppoſe purgeing, ſuch as is proper for the humors offending, convenient preparation being premiſed if it ſeem neceſſary: with this caution, that benign medicaments be only uſed, abſtaining from ſuch as have a malignant and deadly qualitie. with which it will be good to mix ſome Bezoarticks and ſuch things as are Alexipharmical.

Obſtructions are cauſed by the multitude of humors their thickneſs and clammineſs. The multitude will be helped by ſuch urin as evacuates the thickneſs; by ſuch as attenuate the clammineſs by things that are abſterſive or clenſing.

In reſpect of externall cauſes, Precaution muſt be made firſt by correcting the exceſſes of the air viz. By cooling that which is too hot, as we taught in continual Feavers; by drying that which is over moiſt, with fires both in ſtreets & in private houſes, and that as much as may be made with ſweet woods as Juniper, Bayes, Roſemary and ſuch like. Secondly by removing al the cauſes above recited which do infect the air. Thirdly by conſuming and diſſipating the infections in the air. which may be don by kindeling of fires, as was ſaid in correcting the moiſture of the air, and the perfumes of ſweet ſmelling and Alexipharmical materials. Alſo by vehement agitation of the ayr, to which end the frequent diſcharging of great Guns will be very effectuall.

But if the ayr ſhal be very much infected, ſo as therefrom a Feaver truly peſtilential ſhal ariſe, the beſt kind of preſervative is to change the air, and they that are forced to continue, or to converſe in places infected and among the ſick: have need of many other cautions and they muſt often uſe Antidotes. All which are at large ſet down by ſuch Authors as have treated expreſly of the Plague, and from thence the reader muſt fetch them; becauſe my deſign is but briefly to touch ſuch things as are requiſite to the cure of the true peſtilence; becauſe few Phyſitians of any note dare hazard themſelves in the cure of the true Plague: & contrarily ſeeing both in *England* & in *France* and whol Europe over; al Phyſitians in a manner have imployed themſelves in the cure of ſpotted and malignant Feavers; I have thought it moſt worth my paines to direct this cure to that kind of peſtilential Feaver, which is ſimplie called malignant and the ſpoted or purple Feaver. Yet ſo that it may ſerve for the cure of the true Plague; ſeeing as we ſaid at the beginning, the ſame Medicines and the ſame Indications, will ſerve for both.

The Cure therefore of thoſe which are actualy ſick muſt be directed unto the Feaver, the putrefaction and the malignant qualitie. The Feavers muſt be oppoſed with Coolers and Moiſteners, the Putrefaction with Evacuators and Alterers. The malignant qualitie with Antidotes. Al which intentions muſt be ſatiſfied by a threefold Medicinal Meanes after the manner following.

The ſame diet muſt be appointed in this Feaver which was appointed in the continual Feavers. Only this one thing muſt be obſerved, that ſharp things muſt be oftener uſed in drinks and broaths as being very fit to reſiſt putrefaction and the malignant quality. Alſo touching drink this muſt be obſerved that the uſe of wine and ſtrong drink is ſomtimes good in this Feaver, becauſe they and eſpecially wine are very cordial and contrary to the malignant quality. Yet many times they do much hurt and encreaſe the heat of the Feaver. Wherefore the prudence of a phyſitian, is in this caſe very neceſſary, that he may contemplate the Nature of the diſeaſe and conſtitution of the patient: for by this meanes he ſhal know whether the uſe of wine or ſtrong drink be ſafe or no For if the Feaver be very ſmal, but the venemous quality very intenſe, and the body of the patient abound with flegm, wine wel allaied with water may be ſafely given and to good purpoſe. But on the other ſide in an high Feaver and a chollerick conſtitution, to give wine or ſtrong drink is pernicious. This I have learned by a multitude of Experiments and eſpecially in the year 1623. When the Purple Feaver was rife at *Montpelier* after the City had bin beſeidged. Which Feaver was ſo malignant, that a third part at leaſt of thoſe which had it died, and it differed from the true Plague only in the point of a Bubo: foraſmuch as not only whelkes and *Exanthemata*, red, blewiſh and black, but alſo Carbuncles and ſwellings behind the eares did often appear. For to ſuch Sick perſons whoſe pulſe was not very quick and like the pulſe of a ſound perſon, their

Tongue

Tongue moiſt and they without thirſt, I gave wine with good ſucceſs; and I was enclined to continue the uſe thereof, by reaſon of the good the patients found thereby, and becauſe by the uſe thereof the Feaver was not at al augmented, neither did any thirſt or drynes of the tongue ariſe thereby. But in ſuch whoſe Feaver was more ſtrong, with thirſt, dryneſs roughneſs or blackneſs of Tongue, I wholly forbad wine, and kept them perpetually to the uſe of cooling and tart drinkes. But it is to be remembred, that in the firſt daies of the diſeaſe wine muſt never be given, leaſt the crude matter be too much agitated, but only about the ſtate, when the ſigns of malignity do begin more and more to ſhew themſelves. Howbeit *Zacutus Luſitanus* in the 93. Obſ. Lib. 1. of his wonderful Cures and Caſes, relates that in a peſtilential Feaver, the patient being extream thirſty, with a dry and black tongue and paſt hope, he gave wine with moſt happy ſucceſs, ſo that the patient was cured therewith alone. But here that ſaying of *Cornelius Celſus* is to the purpoſe, Thoſe which *Reaſon* could not, have many times bin cured with *Raſhneſs*.

Diet being ordered, the cure muſt be begun by blood-letting, a Clyſter being premiſed: for bleeding is very convenient, both in regard of the Greatnes of the diſeaſe, the hot diſtemper and the putrefaction. But in defining the quantity of blood which is to be taken away, prudence is neceſſary, when in regard of the malignant quality, it does no good but hurt; for thereby the vital faculty is exceedingly weakened, and thoſe which are let blood after being poyſoned, are haſtned to their death. Therefore if a malignant and venemous quality be more than the putrefaction, which may eaſily be known by the proper ſigns aforeſaid, little blood muſt be taken away but if putrefaction be more conſiderable than the venemous quality, blood muſt be taken in a greater quantity. And conſequently, if by reaſon of a ſickly Conſtitution of body, and of putrid humors contained in the veins, the malignant Feaver have bin produced chiefly; blood-letting may ſafely be repeated, once, twice or thrice, until the Burthen of vicious humors contained in the veins be diſcharged. And that eſpecially if Inflamation of any of the Bowels be feared, which many times happens in malignant Feavers. Now bleeding muſt be uſed betimes and at the beginning of the diſeaſe for if the diſeaſe ſhal have taken progreſs and the malignity be diffuſed into the whol Maſs of blood; bleeding does not only no good, but very much weakens Nature; ſo that very many Authors hold, that blood muſt not be let after the fourth day is paſt. And truly, foraſmuch as malignant Feavers do at ſeveral times differ much one from another, in regard of the different degree of Malignity; when they begin to be rife once, diligent obſervation muſt be made, what good the Patients receive by bloodletting. For ſome Feavers being of the kind of Synochi, in which there is great putrefaction and little malignity, are much leſſened by Phlebotomy. And others whoſe Nature conſiſts very near wholly in malignity do become more pernicious by blood letting. This appeares in the true Peſt, in which by the experiment of many approved Authors, it is aſſured, that al which were let blood died. So *Wierus* relates in an Epidemical Catarrh which wandred al Europe over in the yeare 1580. in which al in a manner recovered, ſo that ſcarce one of a thouſand died; yet al that were let blood died thereof. Now we muſt diligently obſerve that which *Galen* hath taught us in the 14. Method chap. 10. that in the Cure of Carbuncles it is good to take blood til the Patient faint away, that the boiling blood which cauſes the Carbuncle may be plentifully evacuated. Whenas the ſame *Galen*, *Lib. de Curat. per venæ*, S. Cap. 14. Commands that in Phlegmonous tumors blood be taken away, till the Color Change, unleſs the Patient be weak, or the Phlegmone malignant. Whereby is intimated, that *Galen* admits copious blood-letting in a ſimple Carbuncle that is void of malignity but not in a malignant and Peſtilent one; which agrees to an hair with the former Precept propounded by us.

As concerning the times and intervalls of blood-letting wherein it is to be iterated, this is to be noted: that if the diſeaſe proceed ſlowly, the blood-lettings muſt not be haſtened: for the patients ſtrength is too ſoon weakened; ſo that it cannot hold out, til al the morbifick matter be expelled. According therefore as the diſeaſe is moved; ſo the Phyſitian ought ſooner or later to let the Patient blood.

And there is a great Controverſie, whether Purple ſpots or wheales appear; Phlebotomy is to be uſed. For ſome account it to be an hainous Crime to let blood when the *Exanthemata* appear, becauſe at that time the humors are moved from the Centre to the Circumference, which motion muſt be by al meanes furthered; and by blood-letting the humors are put into a clean contrary motion, and the blood is drawn from the Circumference to the Centre, when as the inner parts being emptied, it muſt needs be that the blood contained in the outward parts, ſhould run inwards again; which *Galen* plainly teacheth in his 9 *Deſanit. Tuend. Cap.* 10. *viz.* That the Blood when a vein is opened, does flow back from the whol bulk of the body into the internal parts. And the ſame *Galen* in his Comment upon the 9 *Epidem.* Does conjecture that *Simon.* of whom *Hippocrates* ſpake haveing broad puſhes came out, had no good from his vomit, becauſe ſuch juyces were thereby to be evacuated, which took their Courſe to the Skin. Howbeit, by the more ſound Advice of Doctors it's concluded, that the Purple ſpots appearing in the beginning of the diſeaſe and on thoſe

dayes

dayes in which a vein is wont to be opened, if blood were not sufficiently taken away before, it must even then be drawn in immoderate quantity; Nether is there any danger to be feared by so doing; seeing that same Eruption of wheals, which comes in the beginning of the disease, is not critical but Symptomatical only, arising from an exceeding ebullition of blood, and from the fervency of malignant and putrefying Humors; and therefore the Motion of Nature cannot be hindered, when there is more to hinder. For in Case the Patients body being Plethorick, the Urine thick and red, you shal not let blood because of the *Exanthemata* or wheales breaking forth; Nature wil scarce be able to Master such a quantity of Humors, and it is to be feared least they should rush into some internal part of the body and breed therein a pernicious inflamation. Howbeit, blood at such a time must be sparingly taken away, not so as the veines may be emptyed, which might cause a retraction of the evil humors inward again but only so as to take away their over great abundance, which being taken away, the veines draw no new blood, but only fal a little together as it were and become a litle loosened so as to purge themselves the better, and consequently to be the better able to rule the remaining blood. And so is the motion and expulsion of Nature furthered which she endeavours towards the Surface of the body, for she being eased of part of her load wherewith she was oppressed, does more easily cast off the remainder, and drive the same out. Which we doe every where behold in our practice, whiles the very same day oftentimes, in which a vein is opened, yea verily sometimes a few hours after, plentiful sweats, critical and healthy doe break forth. And in truth, though nature were so strong that she could sufficiently rule al the redundant blood, seeing that in plethorick bodies the blood is wont to be thick and by these eruptions into the Skin, the thinner part of the blood only is evacuated, and the thicker abiding in the veines does more and more putrefie, and makes the disease much more dangerous. But I hold the most advised Course to be a little after the Blood-letting, to fasten many Cupping glasses, that the motion of the humors to the outward parts, may be hereby the more assisted; of the Administration of which cupping-glasses, we shal speak by and by. Now it must be diligently noted, as we said before, that we observe the time in which the *Exanthemata* do begin to appear. For if it be in the beginning of the disease and before the fourth day, in which time their breaking forth cannot be critical, and no help comes to the patient thereby; but the symptomes do rather grow more vehement, in which regard blood-letting ought by no meanes to be hindred. But if they break forth after the fourth day and that in great quantity, so that the sick party is thereby bettered, and the symptoms lessened; it is much betteer to abstain from blood-letting, and to fix many Cupping-glasses with Scarrification, that the motion of the Humors outwards may thereby be wel furthered.

What wee have hitherto said of blood-letting, is to be understood of opening a vein in the Arm, which does quickly diminish the blood. Howbeit sometimes, tis very profitable to open the inferior veins viz. if the patient be weak, and cannot suffer a reiteration of the former phlebotomy. But this is especially good in women; for it is as *Ribasius* saies Lib. 7. Chap. 10. proper to women and very efficatious, because it imitates the manner of their Natural evacuations. Yea verily & when they want their courses that kind of bleeding is proper for women, because naturally they have much blood in these veines which are nigh the womb. Also it is good for such, in whom we fear a translation of the matter into the brain, which is often wont to happen in these Feavers and to cause a Phrensie. Which may be perceived easily (as we said in the prognostick) by the Urins thin, white, and void of Color; and when the Urins are so, it wil be very good to open the inferior Veines. Also *Oribasius* relates in the forecited place that he was taken with a pestilential Feaver, and having two pound of blood drawn from his inferior veines, he recovered: and al that used the like bleeding, were recovered.

The opening of the Hemorrhoid veines by Horsleeches workes the same effect. For seeing by this meanes the blood is drawn out by little and little, there follows little abatement of strength. Yet is the blood revelled from the inmost bowells, where is wont to be the Heat and the Matter which foments the disease. and this is special good for Melancholick persons, because in such, Nature is wont to evacuate earthly blood, by these waies.

After Sufficient blood-letting, Revulsions must be celebrated by Cupping-glasses, both dry and with Scarrification. Dry ones, when we would only revel: but Scarrified ones when the redundancy of blood is not wholly taken away by blood-letting, which the Patients strength could no longer bear. For, blood is drawn by Cupping with much less expence of strength and besides the venemous spirits lurking within, are thereby drawn to the Surface of the body. But Authors agree not touching the places where Cupping-glasses are to be applied: for some and especialy al Italian Physitians very neer do hold they ought to be applied to the inferior parts viz. to the thighs and buttocks and no where else, that the venemous matter may be drawn from the Heart to the most distant parts: but that they are not good to be fastened to the shoulder blades or the Back, because they draw hurtful humors from other parts towards the Heart. Others are of a contrary opinion, that Cupping-glasses are best to be applied to the shoulders and back, viz. that poisonsom humors and vapors may be drawn from the Centre to the Circumference which motion is most suitable to the

Motion

motion of nature in this diſeaſe: But I am of opinion that Cupping-glaſſes ſhould be faſtened to each and every of the places aforeſaid; and that is is good to ſet them firſt upon the lower parts, that ſom portion of malignity may be drawn back unto the more remote parts: But becauſe the Glaſſes fixed in thoſe parts, cannot ſufficiently draw back the venemous humors and vapors from the heart and its neighboring parts; it is good to faſten them likewiſe to ſuch parts as are neer the heart viz. To the ſhoulders and back. For by this means the motion of nature is very much furthered, ſeeing that experience doth teach that the eruption of the ſpots is commonly in thoſe parts which by frequent fixing of cups is much furthered. Which *Mercatus* hath moſt elegantly delivered in theſe words. *Howbeit in the mean time, while the Body is plied with other medicaments, ſmall cupping-glaſſes muſt either many at once, or a few frequently be applyed. And if the venom of the diſeaſe or the weakneſs of the Patient be much, they may be fixed without any, or with very little ſcarrification. In which kind of uſe and upon that occaſion, it is the beſt courſe to ſcarrify thoſe which are ſet upon the Back over againſt the heart which experience hath taught to be of ſuch moment, that Anxieties & Inequalitie of the Pulſe, and other grevious accidents have thereupon ceaſed. Wherefore we muſt not ceaſe applying of them, until the venemous accidents are mitigated or wholly taken away.*

But the Reaſon urged by thoſe of the former opinion, is of ſmall moment for the fear leſt ill humors ſhould be drawn from other parts unto the Heart. For this reaſon might peraduenter be of ſom force: if they ſhould be uſed at the beginning of the diſeaſe, the whol body being ful of humors. But after an univerſal evacuation ſufficiently procured by blood-leting they can cauſe no ſuch danger; which is made manifeſt by a clear example drawn from a pleuriſie, in whoſe beginning, if the pained ſide ſhould be cupt, doubtleſs it would bring the Humors more and more to the greived part. But when after often blood-letting a cupping-glaſs is fixed upon the pained ſide, it doth not only draw nothing from other parts to the place affected, but that humor which is fixed and wedged into the part is thereby powerfully drawn out, ſo that ofttimes the diſeaſe is thereby perfectly cured. Although in this diſeaſe, there is more danger of drawing Humors to the part affected, becauſe it is in a manner externall and neer the Cupping-glaſs

Zacutus Luſitanus in *Obſerv.* 13. *Lib.* 5. *Praxeos admiranda* doth very much commend cups with ſcarrification, faſtened neer the groins and armpits. for by ſuch cuppingglaſſes ſo fixed the vitious humor is drawn to the ignoble parts and to thoſe common Emunctories, unto which nature is wont to expel the ſame.

Among revulſive remedies, Frictions may very will be reckoned, being often exerciſed upon the extream parts of the Body with a courſ cloth. But that Friction is moſt commended. which is made upon the whol Body with the Liniment of Aetius, which is thus compounded.

Take oyl of ſweet Almonds and fountain water of each three ounces: Sal nitre two drams. Boil them together til the water be conſumed, and with this Oyl warmed, let the patients body be rubbed al over with the hands being dipped therein. *Aetius* doth preſcribe Oyl of Savin, but becauſe it is too hot. Oyl of ſweet Almonds was by *Baptiſta Montanus*, fitly ſubſtituted in its place. This oyntment doth open the pores of the Skin, that nature may more fitly expel the venemous vapors thereby.

Veſicatories do likewiſe powerfully draw out evil and venemous juyces and ſerve for revulſion being applied in divers parts of the body: Commonly they are applyed to the hinder part of the neck; for they do both draw out the matter, and drive it from the head, and ſerve well to cure ſuch ſleepie ſymptoms as are uſual in theſe diſeaſes. But where great malignity doth poſſes the whol Body and grevious ſymptoms afflict the patients, one veſicatory will not ſuffice but more muſt be laid on: *I* am wont when the diſeaſe is very violent to lay them on in five places viz. The Neck, both the Arms on the inſide between the bending of the Arm and the Shoulder, and to both the Thighs, in the ſpace between the Groyn and the Knee, with happy ſucceſs.

The great profit of this Remedy we may learn from *Galen*, who in *Lib* 5. *Method. Cap.* 12. relates, that of a peſtilential Feaver al recovered, who happened to have exulcerations in divers parts of their Bodyes; becauſe the morbifick matter was evacuated by thoſe ulcers. And becauſe the uſe of theſe Veſicatories do often caus the Strangury (for the Cantharides do by a peculiar propertie affect the Bladder) it wil be good when they are applied, to give the Patient emulſion that may temper the acrimony of the urine. This ſymptome may likewiſe be prevented by mingling the poudered Seeds of Ameos with the veſicant plaiſter, which ſeeds have the faculty to keep the Cantharides from hurting the bladder

Amongst Revulsive Medicines may likewise be mustered, the Cataplasm of Radishes commended by *Crato*: The Radish (saies he) because it powerfully drawes the malignity of matter it is good to apply the gross pouder or scrapings thereof to the feet, having first clensed them with salt and vineger. And the following Cataplasm may be better for the same purpose.

Take scrapings of a radish and the two Briony Roots of each two ounces, seeds of Garden Cresses one ounce. Grains of Paradise half an ounce, Sea Salt three drams, Mix al and sprinkle them with the strongest Vineger, and make them up into a body, with a sufficient quantity of soft sope, til it become like a Cataplasm, & apply it warm with tow to the soles of the feet, when the patient is disposed to sleep.

To this Cataplasm may profitably be added leaves of Rue, Nettle, Sage, Scordium, Pidgeons dung, juice of Rue and Vinegar.

A Cataplasm of Snails beaten hath the like Efficacy, and powerfully drawes unto the nether parts hurtful humors and vapors, as *Galen* highly commends the same, for powerfully attracting and dissolving the waters of Hydropic Persons.

These revulsory Remedies have place during the whol Course of the disease after universal evacuations viz. Phleborotomy and Purgation: of the use whereof we are now to speak, that so we may pass from Chyrurgery to Pharmaceutick Remedies.

Now it is much controverted among Practitioners, whether we ought to purge in the beginning of malignant Feavers. Many reject purging at that time, not only because of that wel known precept of *Hippocrates*, that Concocted humors are to be purged, but crude humors not: but also because in this disease the malignant humors are too much exasperated by purgations, and diffuse their malignant quality the more abroad, and by sharpely provoking of Nature, they produce pernicious fluxes whereas otherwise of themselves in these Feavers, melting fluxes do often arise and bring the patients to their long home. But others contend, that sometimes there is such plenty of evil and venemous humors in the first passages, that unless they be first removed by purging, or very much lessened, they infect the rest of the humors, so that Nature cannot master them, however assisted by antidotes and corroborating medicaments.

We conceive this Controversie may be thus composed; viz. that in the beginning of this disease we must abstain from purgations for the reasons fore alleaged; and that the sink of putrid humors which lies in the first passages (which the truth is do very much hinder the Cure) be drawn away rather by frequent Clysters, than purging Medicaments. Howbeit, if their be so great a quantity of il humors in the first Region, that it seemes impossible sufficiently to evacuate the same by Clysters (which chiefly happens, when evil humors abound in the stomach, and then there is great loathing of meate, bitterness in the mouth, stomach sickness and vomiting) or when there are many worms, it is very good in such a Case to draw away the matter by a purging medicament that the morbifick matter contained in the veines, may afterward bee the more easily subdued. Which matter it is that cannot be purged before concoction, and of that must the saying of *Hippocrates* be understood, that onely concocted humors must be purged. But the matter contained in the first region and that mass of excrements may be drawn away without any preparation or concoction premised, and is ordinarily purged out only by Clysters, as we said before. Now those Medicaments which we give to purge the first Region, must be chosen from amongst the most benigne and gentle purgations, avoiding the most vehement, yea and the middle sort too, so that we may safely use Cassia, Manna, Tamarinds, syrup of Roses, and Cichory compound. And it is scarce lawful to arise to Senna and Rhubarb, or at least to mix them with the others in a final quantity, when a great abundance of evil humors do afflict the patient. The former of these Medicaments were propounded in our cure of continual putrid Feavers, and how we should purge in the beginning of them.

But Clysters are to be used, not only in the beginning of the disease, to free the first region from excrements; but they are to be given in the whol Course of the Disease, if the patient be not loosbellied, and that every or every other day. For by those the daily excrements are brought out, and some portion of the Morbifick matter is also by little and little drawn away, Likewise the humors mounting upwards, are brought down to the places more suitable to the intent of Nature. Now these Clysters must be compoled of an emollient and refrigerating decoction, adding gentle laxatives; for sharpe ones and Scammoniated, do over much irritate nature to excretion and often produce pernicious fluxes.

And the truth is tis best in the vigor of the disease to put no purgers into the Clisters, least a Loosenes be caused which is very incident to this disease, so that they are rather to be of the nature of an internal fomentation, then of a laxative Medicine.

But if in the Course of the disease the belly seem to be loose: we must not therefore abstain from Clysters, but we must use such as do moderately deterg and refrigerate, and in Juleps we must dissolve syrup of Pomegranates with pouder of Corral prepared.

While the foresaid Medicines are using, wee must endeavor to correct the Feaverish Heat, Putrefaction and malignant quality, with these following Medicaments.

And

And firſt of al the altering Juleps which were propounded in the Cure of continual putrid Feavers wil be very convenient, of the decoction cheifly of the Rootes of Sorrel, Cichory, Grais, Bugloſs, Sharpe-pointed Dock; the leaves of Endive, Cichory, Sorrel, Pimpernel, Maiden-hair and Tamarinds. Whereunto muſt be added ſuch things as by a Speciſick property do fight againſt the venemous quality, commonly called Alexipharmaca or Antidotes, as rootes of Cinkfoyl, Tormentil, white Thiſtle; leaves of Scordium, Carduus, Scabious, Scorzonera, Meddow-ſweet; Flowers of Marygolds, *Vetonica rubra*; bitts of Lemmons or Citrons and their ſeeds; Skinns of odoriferous apples, Shavings of Harts-horn &c. with the Syrups of Lemmons, Pomgranats, Vinegar, of the juyce of Sorrel &c. and we muſt frequently mix tart things with them ſuch as juyce of Citrons, or of Lemmons, Spirit of ſulphur or of vitriol: for they do mightily reſiſt the putrefaction and the venemous quality.

Touching the Pome-Citron *Athenæus* reports, that once in *Ægypt* certain condemned men were expoſed to death by biting of beaſts, and they were bitten indeed by the Aſpes, but had no harm thereby: becauſe as they were led to execution, a Woman out of Pitty gave them ſome Pome-Citrons to refreſh them & quench their thirſt: which having eaten, they received no hurt by the biting of thoſe venemous Beaſts. Now al parts of the Pome-Citron have an antidotary quality; and therefore it is profitably cut in pieces rind and al, and boiled with Rootes and Herbs aforeſaid to make juleps; and it is likewiſe to good purpoſe ſteeped in ſmal drink which the patient ordinarily uſes, unto which it gives a fragrant ſmel from its rind and a tartnes from its pulp: howbeit the juice only hath a cooling faculty.

The acid ſpirits of ſulphur and vitriol are highly extolled eſpecially by Chymiſt, and their rare vertues approved by long experience have cauſed that long ſince they have bin entertained by Galeniſts, and ordinarily preſcribed. And that it may appear how highly the Chymiſt eſteems of them let it ſuffice to cite the words of *Mindererus* alone in his 18 Book *De Peſtilentia*, where treating of ſpirit of vitriol and ſulphur, and of other Medicaments made of ſulphur: *There is* (he ſaies) *no putrefaction whoſe neck they break not; no infection which they do not overcome; no pravity of Humors but they can conquer. Verily* (to deal clearly) *if I ſhould be forbidden or hindered from the uſe of vitriolated medicaments, I ſhould never come to cure the Plague, or alwaies without my weapons.*

To the ſame Juleps may ſomtimes be added Sal prunella becauſe it powerfully cooles, and extinguiſhes the Feaverith heat; and it hath beſides a kind of diaphoretick faculty, by means whereof it is excellently fitted for malignant Feavers.

In place of Iuleps for the more delicate ſort of Patients, may be ſubſtituted ſomtimes medicated Broaths, made with the Leaves of Borrage, ſorrel, Pimpernel, and other hearbs that are not offenſive to the palate, with Skinns of fragrant apples, with the pulp and juyce of Citrons and a chick; and to them ſal prunella may ſomtimes be added, for to cool more effectually.

Alſo Emulſions may be made of ſweet Almonds, and the greater cool Seeds, with the Decoctions of the Juleps. And for the greater quelling of the venemous Quality, to the aforeſaid Seeds may be added Seeds of Citrons, of Navew or Turnep, and of Carduus Benedictus. And to commend the taſt, the aforeſaid Syrups may be mingled therewith.

Now in the whol Courſe of the Diſeaſe, Antidotes muſt be uſed, not only mingled in Juleps, Broths and Emulſions, as was ſaid before, and ſhal be further declared: But alſo contrived into other forms. And becauſe al are not to be uſed indifferently, nor at all times of the Diſeaſe; that their right Uſe may be wel diſtinguiſhed, they muſt be ſorted into four Tribes. The firſt conteins thoſe, which beſides the Specifical Quality by which they reſiſt poyſon, are cold and dry and moderatly aſtringent; and conſequently they hinder putrefaction, ſtrengthen the Heart, bridle the Venom, that it cannot be ſo eaſily ſpred into the whol Body, and hinder the diſſolution of the parts thereof by a kind of compreſſion; as Bole-Armoniack, Terra Sigillata, Coral, Cinkfoyl Roots, and the Roots of Tormentil. The ſecond Tribe contains ſuch as by their coldneſs and the tenuity of their ſubſtance do reſiſt putrefaction, and reſtrain the venemous Quality; as Juyce of Lemmons, Spirit of Sulphur and of Vitriol, as al acid things, and Vinegar it ſelf. The third comprehends hot & Diaphoretick medicaments, which expel venemous Humors and Vapors from the Heart, and bring them from the Centre to the Circumference; as Angellica, Zedoary, Dictamnus, Meddow-ſweet, Scordium, Carduus, Scabious, Treacle, Mithridate, Treacle water. The fourth contains ſuch as by a Speciſical vertue, without any exceſs of the firſt Qualities, do oppugn the venemous Quality; as Bezoar ſtone, Harts-horn, Unicorns-Horn, Troches of Vipers, and ſuch like.

The Medicines of the Firſt, Second, and Fourth Tribe, do beſt agree in the beginning and the Augment; and thoſe of the Third Tribe in the ſtate and Declination. Now theſe medicaments muſt be exceedingly varied, and diverſly mixed, according to the different degree of malignity or putrefaction; according to the various Intencion or Remiſſion of the Feaver; and according to the divers temperaments, Sex and Age of the Patient; and according to other Circumſtances: the

Determination

determination whereof depends wholly upon the Judgment and Prudence of the Phyſitian, and cannot be determined by any certain Rules. Only one thing I ſhall advice you of, which is very well known, viz. That when there is a vehement burning of the Feaver, we muſt chiefly uſe Refrigerating & cooling things; but the hot and Diaphoretick muſt not be medled with; which notwithſtanding will be very proper, when the Feaver is more remiſs, and the malignant Quality is that which moſt offends. Of theſe Tribes therefore, divers medicaments may be Compounded, according to the judgment of the Phyſitian. But leaſt yong Practitioners ſhould be wholly deſtitute of ſome forms, I ſhal ad a few, in imitation whereof, they may deviſe a thouſand others, as the occaſion of practiſe ſhal require.

Take Roots of Sorrel, Bugloſs and Tormentil of each one ounce. Leaves of Endive, Cichory, Sorrel, Pimpernel, of each one handful. Tamarinds one ounce. Boil al to a pint. In the ſtrained Liquor diſolve ſyrups of Pomegranats and Lemmons of each an ounce and half. Make of al a Julep to be taken at thrice: adding to every doſe a dram of Confection of Hyacinths bezoar-ſtone ſix graines.

This form of a Julep, may do wel in the beginning of the Feaver. But if the Feaver be very high and the Patient of a Chollerick conſtitution, a dram of Sal Prunella may be added to every doſe, or as much ſpirit of vitriol or ſulphur, as may ſuffice to make it moderatly tart, or both of them together. But in a Feaver not very high may be added to the decoction, Rootes of the white-Thiſtle and of Cinkfoyl, Leaves of Scordium and Scabious.

Take ſweet Almonds blanched one ounce: Seeds of Melones, Gourds, Navew, Citrons and Carduus of each two drams: Beat them together in a Marblemorter, pouring on by little and little a pint and half of the aforeſaid Decoction; Syrup of Lemmon three ounces; Sal prunellæ three drams. Make an Emulſion for three Doſes, to be taken twice or thrice in a day.

In the whol courſe of the Diſeaſe, let the Patients uſe in their Broaths the Confection of Hyacinths, or the following pouder, which is not unpleaſant.

Take of prepared Coral, Pearls prepared, ſhavings of Ivory Harts-horn, and Bezoar, of each one ſcruple. Mix them. Make of all a pouder, of which, give half a ſcruple in every meſs of Broath.

The Innovators of this Age, who endeavor to baniſh Gemms, Pearls, Coral, and al Cordial things from the uſe of Phyſick; and cure all Feavers, even thoſe that are malignant, with Blood-letting and meer refrigerating Apozemes; may be convinced with this one Experiment, at leaſt touching Coral and Pearls: which being poudred, if they be infuſed in Vinegar, Juyce of Lemmons, Spirit of Vitriol, or *Aqua fortis*; they take away all the Acrimony of thoſe Liquors. Whence we may gather, that the ſame Medicaments taken into our bodies do ſweeten and molifie the acrimony and malignant quality of humors and reduce them to a moderation. They which have taſted the ſolutions of Pearles and Corals, made in juyce of Lemmons or diſtilled Vineger, do know the truth hereof very wel.

Where the malignant and venemous quality is very rife *Alexipharmaca* or Poiſon-quellers, are to be given in Juleps, broths the ordinary drink of the Patients, and in al they take in, that by a perpetual and inceſſant Conflict, the troubleſom Enemy may be oppoſed.

Bezoar ſtone is given alone to the quantity of five or ſix graines, with water of Mead-ſweet, Scorzonera, Carduus, or ſuch like not only to oppoſe the malignant quality, but alſo to help the Diaphoretick motion; for this ſtone is reputed for a ſweating Medicament, which notwithſtanding many approved Authors doubt of, becauſe they could never ſee any ſenſible effect, by the giving thereof. And truly (to ſpeak out my mind) there can no great Confidence be put in this ſtone; becauſe although we may allow to the true and genuine bezoar ſtone, thoſe faculties which are hereunto aſcribed; yet becauſe the great price thereof cauſes that many Traders take a world of paines to ſophiſticate the ſame, we can now a dayes hardly get any but counterfeit. A clear teſtimony whereof is, that the writers of the Indian Hiſtories, do aver that Bezoar ſtone is very ſcarce and of great price among the Indians themſelves; when we have plenty of them and cheap enough.

More credit ſhould of right be given to that ſame Root, which the Spaniards have in this Age of ours brought out of Italy; which they cal *Contra yerva* which ſignifies the Poiſon-pelting or Antidotary Herb, becaute the pouder thereof is a preſent remedy againſt poiſons, and drives them out of the body by ſweat, or inſenſible tranſpiration. And they Conceive that Plant to be the Common ordinary food, of Thoſe beaſts in which the Bezoar ſtone is found, and that the ſtone hath its vertue primarily from thence. A ſcruple or half a dram of this Root poudered may be given in Carduus matter, or other medicaments.

Mendererus cries up this following pouder.

Take Sugar Candy three drams, white-ginger two drams. Camphire one dram. Make al into a pouder; the doſe one dram in ſome convenient liquor. But the Author doth adviſe that in great paines of the head or ſtomach, Camphire is warily to be uſed; which yet he highly commends in peſtilential diſeaſes; and avouches that ſeaſonably given, it doth more good than the moſt precious bezoardick medicaments. I conceive the pouder is too hot becauſe of the Ginger, and I have

compoſed

Compoſed this following in imitation thereof, Which I have uſed with happy ſucceſs.

Take mineral Bezoar three drams: Sal prunella two drams: Camphire one dram. Make of all a pouder: Give one dram at a time in Carduus water, or ſom other convenient Liquor.

Pouders may likewiſe be made of the fragments of precious ſtones whoſe vertues many deride & others as much admire; ſo that from the times of the Arabian Phyſitians to our days many compoſitions are prepared of them in the ſhops, as *Electuarium de Gemmis, & Confectio de Hyacintho.* But in peſtilential and venemous diſeaſes many have extolled the great vertu of the Smaragd, amongſt the reſt *Avenzoar, Mindererus,* and *Zacutus Luſitanus. Avenzoar 2 Teiſir. tract. 1. Cap. 5.* That himſelf being poyſoned, was thereby cured. *Mindererus Lib. de Peſtilentia Cap. 15.* Relates that to a woman in a Peſtilential Feaver who abhorred al Phyſick, he gave the following Pouder which ſhe might eaſily ſwallow having neither taſt nor ſmel; which when ſhee had taken the conbuſtions of cruel ſymptomes being allaied, and the diſeaſe turning to health, ſhe was cured.

Take of the Smaragd ſtone prepared, Eaſt-india Bezoar, of each ſix grains: Hyacinth prepared three graines, mix them. Make of all a pouder for one Doſe.

And *Zacutus Luſitanus,* relates that a Portugal Gentleman, haveing through poyſon fallen into a looſneſs and a Conſumption, from which no abſterſives, aſtringents or Antidotes could free him; he was cured only by the Smaragd, the pouder whereof to the quantity of twelve graines he tooke every other day in conſerve of quinces, and when he had taken it five times he was cured of his Looſneſs.

The Phyſitians of *Mountpelier,* doe uſe in this Feaver as a moſt profitable Antidote, no ways heating; the Troches of Vipers, which are uſually prepared as an ingredient into Andromachus Treacle, which they give from one ſcruple to half a dram in cordial waters or Juleps.

Yet the fleſh of vipers were better being dried, which hath no venemous quality (as people imagine) but is rather a potent Antidote; which is much abated by boiling; for it is boiled in water to make the troches. So that we ſee greater effects wrought only by the heart and Liver of vipers, being dryed, without any other preparation

The Alexipharmick Medicaments of the third Tribe viz. The Diaphoreticks and ſweaters muſt be given only in the ſtate or declination of the diſeaſe, as was ſaid before. which is to be underſtood, when they are given in a feaver ſimply malignant or ſpotted: for in the true Plague they muſt be uſed at the very beginning, that the venemous qualitie which would quickly kill the Patient may be ſuddenly and potently oppoſed, and the malignant vapors diſcuſſed. Yea verily and in ſimple malignant Feavers, if the venemous quality ſeem to be greater than the putrefaction they are likewiſe to be given at the beginning in ſmall quantity; making choyce of ſuch as are leaſt hot, mixing them with Juleps and other cooling medicines formerly prescribed.

Now of theſe Diaphoretick medicaments there are divers degrees, for ſom are more hot, as Angelica, Zedoary, Dictamnum, Treacle, Mithridate, Treakle water; which are never to be given when the heat of the Feaver is at the higheſt, but only when the ſame is much abated, and when the ſigns of malignity do very much prevail. But others are leſs hot, as Scabious, Carduus Mead-ſweet, Scordium, which may ſafely be given, though the Feaver be in it's height. And theſe diſtinctions are carefully to be obſerved in practice. and as for the formes of particuliar medicaments, every Phyſitian can vary them, according to the different degree of the Feaveriſh Heat and of the Malignitie. But I ſhall here diſcribe ſuch as are moſt effectuall

Take water of Mead-ſweet and Carduus of each two ounces: juice of Lemmons one ounce: old Treakle half a dram, two ſcruples or one dram, according as the fear of heating the Patient is more or leſs. Mix al into a potion. give it warm and cover the patient ſomwhat more than ordinary. if there be great vehemency of ſymptoms, new Treakle wil be more convenient, becauſe of the vigor of the Opium by means of which the vehemency of the ſymptoms will be allaied, and the boyling of the Humors wil be reſtrained: yea and ſomtimes when it ſeems unconvenient to uſe Treakle as in the beginning of the diſeaſe eſpecially, *Laudanum Opiatum* given to two grains & mingled with Antidotes, do much good. For by the Narcotick and congealing power thereof thoſe fervent Spirits ſo vexatious to the Heart, are as it were fixed; and the morbifick matter (which is moſt pernicious while it is in motion) is thereby ſtopped and remains in a manner unmoveable, whence it comes to paſs, that Nature not being provoked by the malignant humors and ſpirits, recollecting her ſtrength, doth more eaſily apply unto her ſelf the vertu of Antidotes

Aqua theriacalis seems fit to be preferred before Treacle it self. For seeing it is exceeding thin and spiritous, it doth more easily and suddenly peirce into and pass through the whol body and Cause sweat. And because there are many descriptions of Treacle water, their dose ought to differ according as they are compounded of Simples more or less healing. I shal in this place propound the chief.

And first of al, the Treacle water of Bauderon is most excellent, because it is exceeding temperate. For there goes no other Liquor thereinto than Vineger and Juyce of Lemmons, by which the hot Ingredients are very much tempered, and therefore it may be given from half an ounce to an ounce in Sudorofick decoctions or waters. And although this is less heating than any of the rest prescribed by divers other Authors; yet have I invented another, easily made, which is more cooling, and does no less oppose the Feaver than the malignant quality, and may consequently be used in the whol course of the disease, at any period thereof. Its composition is as followeth.

Take twelve fresh and juycie Lemmons. Take away the bark or rind and the seeds and press out the Juyce, and ad thereunto the said rindes and seeds; and three pints of juyce of Scordium, juyce of sorrel, of Goates Rue; of scabious, and Carduus, of each one pint. Shavings of Harts-Horn four Ounces. Old Venice Treacle six ounces. Let the rinds of the Lemmons be cutt into thin chips, let the seeds be beaten, and such herbs as have little juyce, let them in the beating be moistened with the juice of Lemnons and let al be distilled in balneo Mariæ. Of the water give one ounce by it self or mixed with other Liquors.

The horter sort of Treacle waters are made with white Wine or with spirit of wine; which must be warily given and in lesser quantity; yet they pierc more than the other and move sweat, and are cheifly used in the true Pestilence. Howbeit in some Cases they may by the prudent Physitian be used. Among the many Descriptions of such Treacle waters, I wil propound in this place, two of the most excellent.

Take roots of Angelica, White-Thistle, Gentian, Tormentil, Zedoary, Harts-Horn, of each one ounce. of the three sanders, of each half an ounce. Treacle three ounces, Camphire a scruple. beat al and steep them three daies together in two Pints of strong white-wine, in a warm place. Then distil Them in Balneo Mariæ, *and keep the water for use, the dose is, from two drams to half an ounce, in refrigerating Juleps, adding spirit of vitriol to correct the Inflamation thereof.*

Take Spirit of Wine, very wel rectified one pint and an half. old Treacle eight ounces. Fleet Mirrh four ounces. Oriental Saffron one ounce. Camphire half an ounce. Infuse al for twenty four hours in Balneo Mariæ. *afterward stil them in the same Bath; and you shal have a very effectual water.*

The Chymists do exceedingly cry up their *Bezoardica Mineralia*, because they are Sudorofick or Diaphoretick at least and yet do not at al heat: which they endeavor to prove by their having no taste, in which regard they are easily taken even by the most nice Patients, that loath unpleasant medicaments. They also commend their Medicine which is called by them *Mixtura Simplex* or *Mixtura Spiritalis*, made of Treacle Water Camphorated, spirit of Vitriol and of Tartar: and they mingle a dram hereof in Juleps and antidotary Potions.

A Physitian that undertakes the Cure of malignant Feavers ought to have divers Antidotes in a readyness, and to change them ever and anon, least nature be too much accustomed to one and the same, and slight the virtue thereof. Also the nature of the venemous quality is not alwayes one and the same but very divers according to the diversity of the patients bodies. So that what hath helpt one, wil do another no good; so that when he hath for some time used one antidote, he must try another and another.

While the foresaid diaphoreticks are using, if we have a Mind at any time to help their Operation, that they may more powerfully bring out the poison into the surface of the Body, some external helpes may be used: viz. Cupping-glasses, both dry and with scarification, many and often set on and Vesicatories, of which we spok before; which are most convenient in the state of the disease and at what time Sudorofick Medicines are given; as also Oyl of Scorpions of Matthiolus, which is much commended by al Practitioners; for it calls forth the poyson residing in the profound parts of the body unto the external parts, And therefore the Emunctories of the body, as the Groines and Arm-pits, with the Pulses of the Temples, Hands and Feet, ought frequently to be anointed with this oyl warm; viz. thrice or four times in a day, or else every third hour. Where this Oyl is not to be had, a Liniment may be made of Treacle dissolved in Juyce of Lemmons, adding a little saffron and Camphire.

If at any time Nature being oppressed with the malignity of the Poyson and overcome, and seem not to act, but as it were to submit her self with hands bound to the mercy of the humor. The strongest diaphoreticks, are then to be given, in a large dose, that the daunted mettle of the heart may be as it were spurred up, And then the strongest sorts of Treacle waters and Bezoardicks which have greatest force to penetrate, must be used: and the addition of Camphire wil much help their penetration and outwardly, at such a time this following fomentation, wil wonderfully assist the operation of

such

ſuch things as are taken in, and wil help to drive out the malignant vapors. For by this Method, many have bin reduced from the Gates of Death.

Take roots of Angelica and Gentian, of each two ounces, Leaves of Bawm, Origanum, Scordium, of each two handfuls. Seeds of Cardius benedictus one ounce. Flowers of Chamomel, Mullein, Melilot, St. Johns wort, Centaurie the leſs, Stachados, Roſemary, Marygold, of each two pugills. Make a decoction of all in water, adding towards the end a little white-wine, wherewith foment the feet, Groins, Armepits, and ſides warm with ſponges.

If drynes of the tongue, thirſt and other ſignes do ſhew that the Feaver doth prevail as much as the malignant quality, we muſt abſtain from the fomentation, and inſtead thereof let a Hen cut down through the Back, or the Lungs or Caul of a Wether new killed, be applied to the patients Belly.

In the whole Courſe of the Care, the greateſt Cure of al muſt be to preſerve the patients ſtrength, which is much dejected by the Venemous quality. It is beſt kept up, firſt by Convenient broths made with a Capon, unto which, when neceſſity urges may be added the diſtilled broaths of fleſh, and eſpecially the *Aqua Caponis* which is made in *Balneo Mariæ per Deſcenſum*, as the common manner is now to make it. Confection of Hyacinths given in broaths, doth repaire the ſtrength, and doth oppugn the malignant quality. In the ſame broaths Gelly of harts-horn, doth ſatiſfie both Endications. If the ſtrength of the Patient be very much decaied; we may make bold with *Confectio Alkermes*, provided the Heat of the Feaver be not very violent. And finally, wine is the moſt cordial thing in the world, of the uſe whereof in this diſeaſe, I ſpake before, treating of the Patients Diet. The only ſmel of wine doth much refreſh the Patients ſtrength, and much more a toaſt dipped in Canary and Roſewater and ſo held to the Noſe.

And in this Caſe alſo *Confectio Alkermes* and *de Hyacintho* are wont to be put into alexipharmical Potions. Or in extream dejection of ſtrength, Potions merely cordial may be thus made.

Take *Orenge-flower water and Roſewater of each one ounce and an half. Confectio Alkermes one dram. Syrup of Apples one ounce. Juyce of Lemmons three drams. Make all into a potion. If the Feaver be not intenſe Cinnamon water may be given to the quantity of one dram or three drams. and ſometimes Amber Grieſe may be added, to the quantity of five Granes or Seven. Neither in extream Weaknes of the Patients muſt we ſo much fear thoſe hot cordials, that we ſhould refuſe to ſave the patient from preſent death, for fear of augmenting the Heat of the Feaver for we muſt alwaies regard that which is moſt preſſing, and when the patient hath a little recovered ſtrength if the hot cordials have made ſome increaſe of Heat, it may afterward be tempered by potent coolers, as Sal Prunella, and Spirit of vitriol, mixed in julaps and ordinary Drink. This Method being obſerved by the diſcreet Phyſitian, in his adminiſtration both of Strengtheners and of hot Antidotes and ſweaters; wil prove happily Succeſsful.*

After theſe things, muſt follow the Application of Epithems and Liveing Creatures to the Region of the Heart; fomentation of the Genitalls with Confectio Alkermes diſſolved in Wine; Bags to be laied upon the ſtomach, and other both internal and external Medicaments, largly by me deſcribed in my Chapter of Weaknes or Decay of ſtrength.

As for Epithems, there is Caution to be uſed in their application, Becauſe very many Authors do wholly reject the uſe of them; becauſe they are wont to be compounded of refrigerating and repelling things; viz. of the waters of cooling herbs and Vinegar, by which the venemous quality is beaten back to the heart, and the tranſpiration thereof, which ought alwaies to be promoted, is hindered. But this reaſon cannot hinder the uſe of Epithemes, ſeeing we may compound them of cordial and diaphoretick waters that have repelling no or aſtringent quality in them, and without Vinegar (which ſome do yet allow) adding cordials thereunto; and by theſe things mingled together, Epithems may be made, not only which ſtrengthen the heart, but alſo open the pores of the skin, that through them the malignant vapors may more eaſily tranſpire. Of ſuch Epithems this may be an example.

Take *waters of ſcabious and Cardius, of each four ounces. Oreng-flower water two ounces. Confectio Alkermes two drams. Powder of Diamargaritum frigidum one dram. Saffron and Camphire of each ſix grains. Make an Epitheme and applie it warm to the Region of the Heart frequenly.*

Take *Confectio Alkermes half an ounce, Powder of Triaſantalon and Diamargaritum frigidum, of each one dram and half, a little Orengflower water. Make of al a Liniment to be applied to the part after aforeſaid the uſe of the foreſaid Epitheme.*

Neither muſt we here omit ſuch Epithemes as are to be applied to the parts under the ſhort ribbs, becauſe of the reaſons of their uſe propounded in the Cure of putrid Feavers, from whence the Materialls muſt alſo be fetcht.

At length whenas the malignant and venemous quality is maſtered by the Remedies aforeſaid

ſaid, and the Feaver abated and the Diſeaſe begins to decline, and the ſigns of Coction do manifeſtly appear; purgation muſt be uſed, which by the experienced Phyſitian may be accomodated to the ſtrength and conſtitution of the Patient. I ſhal here, for the ſake of Beginners propound only one example.

Take Senna half an ounce. Annis ſeed one dram. Leaves of Scabious and Scordium, of each half an handful. Liquoris three drams. Boil all to three ounces. In the ſtrained Liquor diſſolve the infuſion of four ſcruples of Rhubarb Made in bugloſs water with yellow Sanders. Manna and Syrup of Roſes of each one ounce. Make all into a Potion.

And for the moſt part one purge is not ſufficient in the declination of the diſeaſe when the Patient begins to recover health; but purgation muſt oftentimes be repeated twice or three times at convenient diſtances, that the evil humors may be perfectly rooted out. Otherwiſe there wil be danger of a Relapſe, or at leaſt the Patient wil be long in Recovering prfecte health. Becauſe though nature; be ſtrong enough to maſter the reliques of the Morbifick matter yet can ſhe not do it but in a long time and in the mean ſpace the body is long in recovering its former ſtrength.

For the perfect Compleating of this Cure, it remaines onely that we ſpeak ſomething of the Correction of ſuch ſymptomes as happen in this diſeaſe. Now their cure is very near the ſame which hath bin propounded in the ſecond ſection of this Treatiſe Chap. 2. where we delivered the Cure of ſuch ſymptomes as attend putrid Feavers. And the ſymptoms of this Feaver are the ſame in a manner with thoſe of putrid Feavers, the difference being only in degrees of more or leſs; and therefore the ſame Remedies wil ſute with both. Howbeit I ſhal here ſet down ſuch things as have bin frequently tried in the taming of ſuch ſymptomes as attend malignant and Peſtilential Feavers, and which have proved moſt ſucceſsful. And wee ſhal withal declare the Cure of ſuch diſeaſes as do Supervene upon theſe Feavers.

And firſt of al, In Paines of the Head, Want of ſleep, and Raving, at the beginning Revellers of al ſorts muſt be uſed, as opening of the inferior veins and of the Hæmorrhoids; emollient Clyſters, frictions of the nether parts, Cupping-glaſſes, firſt ſet upon the Calves of the Legs, afterwards upon the Back and ſhoulders, both dry and with ſcarification; and Veſicatories, which in a ſimple Delirium or Dotage ariſing from a Chollerick matter, muſt be applied to the Armes and thighes. But if with the Raving there be joyned a dullnes and ſleepynes, a Veſicatory muſt be applied alſo to the Neck; and then Repellers muſt be applied unto the Forehead and *Oxyrrhodines*; of which it is to be noted, that they are not ſo good in malignant as in meer putrid Feavers; becauſe the venemous vapors muſt by al meanes be expelled, and at no hand be kept within the body. And therefore firſt gentle repellers muſt be applied, and if the vehemence of the foreſaid ſymptomes ſhal compel us to fly to the ſtronger, we muſt not uſe them long together.

Among Repellers of the gentler ſort is reckoned that common frontal of the flowers of water Lilly Violets and Roſes, the greater cool ſeeds and Chermes berries, bedewed with the Vapour of vineger, And if that wil not ſuffice, let this following be laid on.

Take Unguentum populeum one ounce, Conſerve of Roſes and violets of each half an ounce. Oyl. of Roſes ſix ounces. Vinegar of Roſes two drams. Mix them all and receive them in tow and put them between two cloaths and apply them to the forehead.

Mean while the Emulſions of the four greater cool ſeeds may be uſed, from which cool and gentle vapors are wont to be carried unto the Brain, which are wont to mitigate the foreſaid ſymptomes. Which if they ſuffice not, narcoticks may be added, which do wonderfully hinder the aſcent of ſharp and malignant Vapors unto the brain, and procure ſleep. Yet they muſt be given in a ſmal quantity, as half an ounce of Syrup of poppies; or if neceſſity compel, two graines of Laudanum opiatum with conſerve of roſes may wel be given; or they may be diſſolved in ſome Julep, or inſtead thereof new Treacle may be given to the Quantity of half a dram. Howbeit theſe narcoticks are ſeldom to be given and in ſmal Quantity, becauſe they Concentre the poyſon, howbeit they are by ſome accounted ſudoroſicks.

After repellers have bin uſed a day or two, we muſt come to derivers, among which is reckoned a veſicatory applied to the Neck of which before, whereunto muſt be added blood-letting from the forehead vein to the quantity of five or ſix ounces: which is very ſucceſsful provided blood was before ſufficiently taken from the veins of the Arm. Alſo horſeleeches may be faſtened behind the Eares. which is a good remedy, but leſs effectual than the former, becauſe by leeches the thinner part only of the blood is drawn away; whereas by the forehead vein ſometimes in a phrenſie more corrupt blood is drawn than by the vein of the Arm. At length, in the ſtare of a Phrenſie, or at the beginning of the declination, reſolvers are to be applied, eſpecially liveing Creatures and their Parts, as the Lunges of a wether which is better than young pidgeons or whelpes, becauſe it doth ſafely encompaſs the whol Head. Now theſe Animals do partly reſolve evil humors contained in the brain, and partly ripen and digeſt them, that Nature may afterward more eaſily expel them. Some do unadviſedly apply them in the beginning of a phrenſie, becauſe by encreaſing the Hear, they encreaſe

the Flux of Humors to the Brain, and encreaſe the Raving.

In the Inflamation, Dryneſs, and Blackneſs of the Tongue, Remedies propounded in the aforeſaid place are convenient; eſpecially ſuch as are compoſed of Water, or the Juyce of Houſleek, and Sal prunellæ. Whereunto this following of *Mindereus* may be added, becauſe Experience hath taught, that it is very effectual.

Take *freſh butter waſhed in Roſe-water, two ounces: Sal prunellæ half a dram. Mix them, and keep the mixture in cold Water. Give the quantity of an Haſtifer or bean, oftentimes in a day, and let the Patients hold it as long in their Mouths, as they can poſſibly. It is a ſign that the Cure goes wel forward, if the black Sootineſs go away, and the dry chopped Tongue begin to grow moiſt, and peelings come away from the Tongue, as if it were flaid, ſo that the ſick Party does cough up the peelings of their Throats. But then their palate is pained, and that very thin Skin wherewith it is covered, can hardly bear any thing in regard of its tenderneſs, but its offended with every light tartneſs, and the leaſt Acrimony imaginable, becauſe the former Inflamation having left it in divers parts Flaid, it muſt be covered with new Skin; and ſo it requires to be perfectly cooled and healed. To this purpoſe the following Gelly wil be moſt convenient.*

Take *Seeds of Flea-bane and Quinces, of each one dram and an half: Gum Tragacanth one dram. With Water of Roſes draw out a liquid Mucilage, whereunto ad the like quantity of Syrup of Violets. Make it in manner of a Gelly; of which let the Patients take often in a Spoon and hold it long in their Mouth.*

Warm Milk does mitigate the pain Cauſed by Gargariſmes, tempers the Inflamation, moiſtens the Tongue and Throat, and attracts the Venom to it.

Theſe following Pills may conveniently be uſed.

Take *Seeds of Cucumbers picked and bruiſed, one ounce: White of an Egg as much as ſhall ſuffice. Make Pills, which let the Patients often hold in their mouths.* Or,

Take Seeds of Gourds and Melones clenſed, and of white Poppy, of each one dram. Liquoris and Gum Tragaganth of each one dram and an half. Beat all to pouder, and with the Mucilage of Quince Seeds drawn with Roſe-water, make Pills to be held in the mouth.

And becauſe this Inflamation, Dryneſs, and Blackneſs of the Tongue, proceeds from the burning that is within. Juleps very Refrigerating are good to cool the ſame; unto which may be added, Sal prunellæ, and Spirit of Vitriol. Alſo they may be mingled with the Patients ordinary drink.

The Cure of extremity of Thirſt was ſufficiently propounded in the aforeſaid place. But in a malignant Feaver, it will be happily extinguiſhed, with theſe two Medicines newly commended, viz. with Sal Prunellæ, and Spirit of Vitriol, taken in Juleps, and in the ordinary drink of the Patient.

Want of Appetite, Stomach-ſickneſs, Vomiting, and Hiccuping, muſt be cured according to the Method delivered in the aforeſaid Chapter. Yet we ſhall ad one thing touching vomiting; that it doth ſomtimes ſo vex thoſe that have malignant Feavers, that they preſently vomit what ever they take, and though they have Thirſt, with Dryneſs and Blackneſs of Tongue; yet can they bear no kind of Liquor or drink: but vomit all their Juleps, Emulſions, Ptiſans, and their ſmal Beer preſently after they have drunk them. This moſt grievous Symptom is ſuddenly cured, as it were by a miracle, with a dram of Salt of Wormwood, given in a ſpoonful of freſh Juyce of Lemmons, as I have learnt by Experience.

A Looſneſs is very frequent in this Diſeaſe, and herein the wiſdom of the Phyſitian is very neceſſary. For if it be unſeaſonably ſtopped, the venemous Matter is kept within. And if it be let alone, it weakens the Patients, and many times brings them to their deaths. In the Cure of this Looſneſs, we muſt therefore thus proceed. If it be ſo moderate that it weaken not the Patient, it muſt not be ſtopt, but only moderated by Strengthening Clyſters, But if it be immoderate, and do very much weaken the Patient, it is wont to be a melting Looſneſs, that Thawes the Patient as it were away, and muſt be boldly ſtopped; which new Treacle to the quantity of half a dram, or Laudanum Opiatum, to the quantity of two or three grains, will effectually perform. Yet I have often ſeen a pernicious Flux which threatned to kill the Patient, ſtopped as it were in a Moment, by giving of powerful Diaphoreticks in a great Doſe; which did expel by the Skin that venemous Matter, which by vexing and grating upon the Guts, and other Bowels, did cauſe ſuch a melting and conſuming Looſneſs.

Worms do very often vex thoſe that have theſe Feavers, and are plentifully bred by the great putrefaction of the Humors. Theſe are conveniently drawn away by ſweet Clyſters, and by potions againſt the Worms; eſpecially ſuch as are made of a Decoction of Scordium. For Scordium is equally good againſt the malignity and the Worms. And to temper the heat thereof, it muſt be boiled with Purſlain, Sorrel, and Harts-horn. Alſo burnt Harts-horn is profitably boiled againſt the

Worms. For *Foreſtus* in the fourth *Obſerv.* of his ſixth Book, that no Remedy did ſo much good to ſuch as having a malignant Feaver were troubled with Worms and a Looſneſs, as burnt Harts-horn given to the quantity of a dram in convenient Juleps.

When the malignant and venemous Quality bears great ſway in theſe Feavers, that they come neer the Nature of the true Peſt; in ſuch Patients there are commonly riſings behind their Ears, and Carbuncles. Wherefore we will here ſubjoyn their Cure.

In the beginning of a Parotis, or Riſing neer the Ear, as ſoon as it begins to appear, the Part recipient muſt be relaxed and widened as it were, and if the ſwelling riſe but ſlowly, the motion of Nature endeavoring to expel the morbifick matter that way muſt be aſſiſted, by applying drawing things to the ſwelling, and by giving Antidotes and Diaphoreticks. To relax the Part, make an Injection of Oyntment of Marſh-mallows, and lay on afterwards moiſt Wool which is greaſie, from the Sheep. Attraction may be cauſed by applying Whelps, or yong Pigeons, by which alſo the pain will be mitigated. Plaiſters made of Leven, Figs, Onions, Doves-dung, adding thereto Butter, Hens-greaſe, freſh Hogs-greaſe, and Oyl of Lillies, or ſweet Almonds. If by theſe Attractives the Part be over-heated, and the pain be too much encreaſed; they may be omitted by fits, laying on in the mean time the Cataplaſm made of the Crum of White-bread; or nointing with the aforeſaid Oyls, being laid on with unwaſht Wool; or with Oyntment of Marſh-mallows, as was ſaid before. And becauſe the part is not ſufficiently capable to receive the morbifick matter; to derive another way a portion thereof, a veſicatory muſt be applied to the hinder part of the Neck, and alſo the Diaphoretick formerly cited muſt frequently be given. The Matter being called forth into the external parts, let Suppuration be endeavored, by laying on a Cataplaſm made of the Roots of Marſh-mallows, and of Lillies, with Figs, Meal of Linſeeds, and the Oyls and ſeveral ſorts of Greaſe aforeſaid. When Suppuration is made, let the Tumor be opened; let the reſt of the Matter be digeſted, by continuing the Cataplaſm, or by laying on a Plaiſter of Diachylon. Let the Ulcer be cleanſed with that common Digeſtive made of Turpentine, Yolks of Egs, and Oyl of Roſes. Let the Ulcer be kept long open with a Tent, that all the Venom of the Diſeaſe may ſufficiently be purged out, and at laſt heal it up and Cicatrize it. Yet this one thing is to be obſerved; That if the Tumor doth ſo encreaſe as to cauſe danger of Suffocation, or Choaking, it muſt be opened before it be perfectly ripe: For ſo ſome portion of the matter being drawn forth, the Tumor will fall ſomwhat, and the danger of Suffocation will be avoided. In like manner, If the malignity be very intenſe, that the Patient ſeems likely to miſcarry before the Tumor be ripe; then alſo it muſt be opened before its due time that the force of the Venom may expire, whence oftentimes the Patient recovers. And upon this Account, in the Peſt the Buboes or ſwellings in the Groin, are wont to be opened, before they come to Suppuration.

Finally, It were a Wickedneſs to paſs over in ſilence a rare Experiment, which happened to me in that ſame Epidemick Feaver, which cruelly raged and ranged at *Montpelier*, in the year 1623. So that neer half of thoſe that were ſick died of the Diſeaſe. But eſpecially, So many as had ſwellings by the Ears (which was wont to happen about the ninth or eleventh day of the Diſeaſe) they al died within two daies after; there preceding or happening at the ſame time Raving, Stupidity, Convulſions, with an unequal, frequent, and very ſmall Pulſe, as it were the creeping Piſmire-Pulſe. And after I had ſeen divers in this condition, who could not be helpt by Antidotes, or by drawing things laid to the ſwelling; muſing with my ſelf if by any means poſſible, they might be delivered from ſo certain deſtruction: I began at laſt to think, that therefore theſe ſwellings proved ſo fatal, becauſe the Part in which they happened was not capable to receive all the Morbifick Matter, which being retained within kills the Patient, and that therefore the work of Nature being only begun in thoſe ſwellings, might be ſupplyed by evacuations, viz. Blood-letting, and purgation; whenas alſo *Galen* in his 3. *de Comp. Medic. Secund. Loca. Cap. de Parotidibus*, In the Cure of theſe ſwellings preſcribes Blood-letting. But this advice was contradicted by the extream weakneſs of the Patients, which was ſo great that they ſeemed to be even now in the pains of death, which alſo it ſelf ſoon followed. But *Galen* in the forecited place, when He preſcribes Blood-letting in the Cure of ſuch Tumors, does propound two conditions, viz. If blood abound, and the ſtrength of the Patient will bear bleeding. Both which Conditions were abſent in theſe Cales, for blood had been before ſufficiently drawn, both by repeated Phlebotomies, and Cupping-glaſſes: Alſo the Patients were extreamly decaied in their ſtrength. Weighing all theſe things with my ſelf, I conceived that golden ſaying of *Cornelius Celſus*, was in this Cale if ever ſeaſonable, viz. *That many things are done rightly in time of eminent danger, which were otherwiſe to be omitted: And that its better to Experiment a doubtful Remedy in one or two perſons, than to leave ſo many perſons to undoubted Deſtruction.* I was alſo encouraged by conceiving, that this great weakneſs of the Patients, was rather from oppreſſion of the Morbifick Matter, than diſſipation or diſſolution of their ſtrength. For therefore their ſtrength did ſuddenly decay, becauſe Nature was not able to caſt off her heavy burthen, and I hoped when that burthen was made lighter, ſhe would be freed. Add hereunto, That bleeding

bleeding might be ſo ordered, that no danger ſhould be feared therfrom, viz. If two or three ounces only were taken away at firſt, for tryall ſake, and if the ſucceſs were good, a greater quantity might be taken away afterward I reſolved therefore upon this courſe. And a Merchant of *Montpelier* named *Bernardier* being the firſt I met with, and a tumor aroſe behind his left ear on the eleventh day of the diſeaſe with ſuch a puls & other ſymptoms as aforeſaid; I preſcribed bleeding to the quantity of three ounces which the Chyrurgion being an Antient and experienced man refuſed to do for fear the patient ſhould dy under his hands; afterwards being emboldened by my preſence & authority, he took away three ounces of Blood, after three or four houres, I viſit my patient again, & find his puls a little ſtronger & not ſo unequal; then I cauſed him to bleed ſix ounces, after which his puls was beter and ſtronger. The Blood was very corrupt: The day following I preſcribed him a Purg of Senna, Rhubarb and ſyrup of Roſes: and ſo the patient was recovered from the jaws of death. And afterwards all the ſick that had riſings behind their ears, firſt I Bled ſeverall times a little at a time, and the day following Purged them: and ſo all of them (to God be the Honor and Praiſe) ſo many as were thus ordered happily recovered; and never any afterwards that had thoſe riſings behind their ears, died in the whol year

Howbeit it is to be noted (which we hinted in the prognoſis) that the ſwelling doth often appear critically and profitably, and thereby the ſick are recovered of their diſeaſes; viz. So oft as they appear in the declination of the diſeaſe, and this is eaſily ſeen by the abatement of the ſymptoms which follow upon the riſings; and ſuch are wont to happen in Feavers of leſs malignity But in the time aforeſaid, ſuch was the malignity of the epidemicall Feaves, that the tumors behind the Ears would often break forth in the ſtate of the diſeaſe and ſymptomatically and deadly; until by the remedies aforeſaid, their diſtructive faculty was taken away.

In a carbuncle ſuperveneing upon a burning Feaver, if before its apparition, Blood were not ſufficiently taken away. If the patient can bear further blood-letting, open that vein which is nigh the carbuncle, that the greater attraction may be made of the venemous matter to the part affected. Afterward let the Tumor be ſcarrified on every ſide round about and that with prety deep gaſhes and foment it a while with warm ſalt water, that the corruption of the blood may be hindered, and the flux thereof promoted. A while after apply a grain of a Cauſtick to the midle of the Puſtle, and upon the whol ſwelling, lay this following Cataplaſm,

Take leaves of Rue, and Scabious bruiſed of each one handfull: three pair of dryed Figs bruyſed; ſharp Leven an ounce; Pepper poudered one dram; two yolkes of Eggs: Mix all into a Cataplaſm, which muſt be applied for two dayes together.

And then lay on this following.

Take Juices of Comphry the greater, Scabious, Marygold, of each one dram; old treacle four ſcruples; Salt one dram; two yolks of Eggs: mix them all and apply it to the tumor.

Alſo at the beginning may be applyed the Cataplaſm *de Arnoglоſſo* deſcribed in the Diſpenſatory of *Banderon*.

But to the *Eſchara* after the application of the Cauſtick, apply *Unguentum Baſilicum*, adding thereto Treakle, Oyl of ſcorpions, and the yolk of an Egg.

When the tumor is grown, leſt the malignant matter ſhould flow back again to the internal parts let the compaſs thereof be anointed, with ointment of Bolus, twice or thrice in a day: And upon the Eſchara or Cruſt, that it's falling off may be haſtened, lay *Unguentum Baſilicum* with butter, and Sows greaſe mixed therewith after the cruſt is com away, let the ulcer be cleanſed with this folowing ointment.

Take juice of Marygolds, wormwood, Scabious, and Smalladg of each one ounce; choyce of Mirrh, Florentine Oris, Aloes, Sarcocolla, of each one dram; Honey of Roſes two ounces: Make of all an ointment, to be uſed till the ſore be perfectly cured

Chap 2. *Of the Meaſles, and ſmall Pox.*

THat Feaver which is commonly attended by the Meaſles and ſmall Pox, may juſtly be reckoned among Malignant and peſtilential Feavers; ſeeing it is Epidemical and contagious, and kills very many children, to whom it commonly happens

What is the difference berween the Meaſles and ſmall Pox, Authors are not yet well agreed. But cuſtom hath obtained that thoſe ſame larger puſtles or Whelks like unto Warts (from whence they

they have their name) should be called in latin *Variola*, in English the small Pox; but those little Pustles and as it were asperities of the Skin with a deep redness like St. Anthonies fire or the rose, which are discussed within five or seven daies without suppuration, are called in latin *Morbilli* and in English Measles. There is also another kind of pustles common to Children, like unto the small Pox in respect of the fashion and size; but herein it differs, in that the small Pox begins with redness and inflamation; but these are white and as it were bladderes full of a wheyish humor, which within three daies break and dry up and are wont to cause no danger, and commonly break forth without a Feaver. It is described by *Vidus Vidius*, in these words; *Som besides the two former sorts do add a third which they call the Crystalls*, For so they term certain Bladdrs full of matter, which shine like Christall, wherewith the Skin is in divers parts diapered; the common people call them *Ravaglione*. unto which all men are not so subject as unto the small Pox and measles, neither are they so greviously afflicted under them. wherefore these bladders ought not to be reckonedas a third sort with the small Pox and Measles

Touching the smal Pocks, and Measles Authors dispute much, and especially whether these be new diseases, or if they were known unto the antients, and what is the next and immediate Cause of them. But since I affect al possible brevity in my Lectures, I have bin wont to omit al controversies, propounding onely the plain and naked decisions of them; and accordingly, I shal breifly unfold what is to be thought of the foregoing questions.

And in the first place I conceive the smal Pocks and Measles to be no new diseases, seeing they rise from a most antient Cause, viz. the impurites of the maternal blood; which when the Arabians observed, they accounted it no new disease. But if they had first come abroad in their times, they would have mentioned their novelty. And although, they were the first that exactly described them; and *Hippocrates* and *Galen* with the rest of the Antients, have scarce mentioned them; we must suppose that therefore the Antients did not write distinctly of them, because they are only accidents of a malignant Feaver and critical eruptions, which do not make a distinct disease by themselves. Or because in Greece through the mildness of the Ayr, these diseases were so light, as not to deserve the Care of a Physitian. Even as in the Western Indies, in regard of the great temperatnes of the Ayr, it was wont to be so light, that it was scarce taken notice of before the coming of the Spaniards into those parts. But a Blackmore which was brought thither, being taken with Pestilential smal Pocks, the malignant and venemous quality being spred by Infection, the disease began so to range and rage, that a great part of the Indians were slain thereby. For whereas before, those impurites of their Mothers blood remaining in them, were wont easily to be discussed, through the Clemency of the Ayr; now when a venemous quality was added to them, they caused grevious Diseases.

Now that the Mothers blood is the true Cause of the Smal Pocks and Measles, is hence cheifly gathered, because among many thousands of Men, it is hard to find one, who once in his Life hath not had these diseases. But a disease common to al Men, must needs depend upon some common cause; such as are the principles of Generation viz. the seed and Mothers blood.

But the seed cannot be the cause of the smal Pocks and Measles, because from it come hereditary diseases, such as last a Mans Life time; it remaines therfore that these diseases spring from the Mothers blood, with which the Child is nourished in the Womb. For therein, be it never so pure, some impurites are found, which communicate their pollution to the parts of the Child; and that pollution of the parts, doth defile the Mass of blood; and being provoked by some occasion, doth make the same to boil, by help whereof, the blood ferments and becomes purified, both it and the parts aforesaid. This the *Arabians* do manifest by a cleer example of Wine, which being powred whiles it is new into a musty or otherwise il-qualited Vessel receives that il quality from the Vessel but when it begins to work and purefie, it clenses both it self and the Vessel. Now this working doth commonly happen to Children; howbeit somtimes to those that are elder and have attained Mans estate, because it is evermore set on work by some external Cause, such as is especially a certain disposition of ayr proportionable to this disease whence it comes to pass that somtimes the smal Pocks, somtimes the Measles are rise, because the Ayr is somtimes enclined to the one and somtimes to the other.

Neither can those impurites of the Mothers blood, infect her and cause in her the same diseases, although *Hippocrates* saies in his Book *de Natura Pueri* that there are three parts of the blood, one most pure, with which the Child is nourished; another impure, wherewith the Mother is nourished; and another, most impurer, which is kept in the Veins of the Womb, the whol time of Going with Child, and after the Birth is purged away in the Childbed purgations. For first, seeing the Mother hath parts more hard and solid, they do not so soon take impretion as the tender and soft body of the Child. Again that most impure part of the blood which is kept in the Veins of the womb and of the After-birth, the whol time of belly-bearing, doth infect the blood in the passage, which is carryed through those parts to Nourish the Child: whence the Child contracts an evil quality, which in its time is the Cause of that ebullition in the blood of the

the Child. But that impureſt part of the blood remaining in the foreſaid places, doth not infect the body of the Mother.

Furthermore, its not to be wondered at, that the breaking out of the ſmal Pocks and Meaſles, is ſomtimes ſo long deferred, as that ſome have them at Mans eſtate. For thoſe impurities do not ſubſtantially remain in the body as many imagine: for they would be corrupted by long ſtay and acquire a moſt grevious putrefaction. But only an evil quality is by them imprinted upon the parts of the Child, which in proceſs of time infecting ſome part of the humors, becomes offenſive to Nature; which then rowling her ſelf, doth drive thoſe infected portions of the humors, into the Skin.

And foraſmuch as in the Maſs of blood a twofold excrement is found, the one thick the other thin: of the thick, the ſmal Pocks are bred, of the thin, the Meaſles. And although the evil and malignant quality be one and the ſame, infecting both excrements: yet becauſe the Nature of the excrements is different, the Analogy of the external Cauſe unto them both is Different. whence it comes to paſs that ſometimes the ſmal Pocks and ſomtimes the Meaſles are Epidemically ſpread abroad.

And although the ſmal Pocks are wont to break forth in the whol body, yet are they wont to appear in greateſt quantity in the face, feet and hands; which is otherwiſe in the purple ſpots of the Purple Feaver, for they appear moſt on the breaſt and back. The Cauſe of which difference is this, that inaſmuch as the ſaml Pocks ariſe from an ebullition of the blood, by help whereof an Excretion is made of the excrements lurking therein, unto the Skin; and the Liver being the Fountain and original of blood, whoſe Emunctories are the Face, Hands, and Feet, whence it comes that ſuch as have hot Livers, have red and rubied faces, and feel intenſe heat in the palmes of their hands and Soals of their feet; it follows that the ſmal Pocks and Meaſles muſt come out there more than any where elſe. Contrarywiſe the purple ſpotts which appear in malignant Feavers, do ariſe principally from the Miſaffection of the Heart, and therfore they break out chiefly in parts near the Heart, and eſpecially about the Loines; becauſe in them the *Vena Cava aſcendens* and the *Arteria aorta* which are annexed unto the Hair, have their Courſe,

Alſo another difference is to be noted between the ſmal Pocks and Purples; becauſe the ſmal Pocks and Meaſles appearing on the third or fourth day from the beginning of the Feaver, are wont to be critical, and for the moſt part void of danger: but the purple ſpots, though they appear on the ſeventh day are commonly Symptomatical, and render the diſeaſe worſe; whenas a man would think it ſhould be otherwiſe, for a diſeaſe is more crude on the fourth than the ſeventh day. But the Cauſe of this difference conſiſts herein; that in the ſmal Pocks and Meaſles the Feaver commonly begins at the higheſt; ſo that not only on the third and fourth day, but alſo on the firſt or ſecond daies, excretions may be in them critical. But malignant Feavers proceed more ſlowly, and their beginning is commonly Extended to the ſeventh day: ſo that Excretions which then happen cannot be critical. Now that the Pox and Meaſles come ſo ſoon to their ſtate and not the malignant Feavers, is hence; becauſe the Pox and Meaſle-Feaver comes from the lighteſt putrefaction, and rather from an Ebullition of the blood than from any intenſe putrefaction of the matter; and therfore Nature by help of Coction makes it to ceaſe before the ſeventh day, becauſe it was a light Feaver and roſe from the ſlighteſt Cauſes. But in malignant Feavers, ſo great and ſordid is the putrefaction that it cannot be corrected in the fourteenth nor ſomtimes in the twentieth day. And therefore the ſpotts breaking out before that time, the diſeaſe is exaſperated; becauſe Nature was forced to expel them, without Concoction and ſymptomatically.

The expulſion therefore of ſmal pox and Meaſles is cauſed, by an Ebullition of the blood: which Ebullition according to *Avicennas doctrine*, is twofold; the one perfective, the other corruptive. The perfective or depurative is that, in which only the impurer and excrementitious parts of the blood, are by Nature purged forth, that the whol maſs may afterward remain pure; and then the ſmal Pocks are innocent, which are cured without any help of Phyſick. But the corruptive is, wherein not onely the excrementitious parts of the blood, but the ſincere blood it ſelf is putrefied whence ariſe dangerous and deadly pox, and according as there is more or leſs putrefaction, in more or fewer parts of the blood, ſo is the danger more or leſs. This corruptive Ebullition doth cheifly happen, when thoſe diſeaſes are epidemical being occaſioned by a malignant Conſtitution of the Air, by which an ebullition of the humors and a malignant putrefaction is cauſed; whence many and dangerous ſmal Pocks are cauſed; which are ſomtimes (according to *Rhaſis*) the Forerunners of the Plague.

Pocks and Meaſles are reckoned among acute diſeaſes becauſe ordinarily they are terminated within the ſpace of fourteen daies. Now ſom do wittily obſerve a double order of times in this diſeaſe viz. the time of ebullition and the time of eruption: the time of ebullition is commonly terminated in four daies; ſo that the firſt day is counted the beginning, the ſecond the Augment, the third the ſtate, and the fourth the declination: for then the Feaver and other ſymptomes are wont to remit.

But the beginning of the Eruption of the Pox is the fourth day it felt, the Augment reaches to

the seventh, the state until the eleventh, the declination unto the fourteenth, at which time the Pocks are dried. Howbeit oftentimes they are not dry until the twentieth day.

Differences of small Pocks and Measles, are taken either from the substance, in regard of which, some are more or less Flegmatick, Bloody, Chollerick, or Melancholick: or from the Quantity, in which regard they are more or less in number; greater or less; profound or Superficial; or from the Quality, in which respect some are red, others white, yellowish, Violet colored, Livid, black, according to the diversity of Humors of which they are compounded; or from the time, in respect whereof some come quickly out, others slowly; some are soon, others late ripe, or dissolved: or from the place, in which respect, some occupy only the Skin. others do seaz upon the internal Parts also, as the Throat, Lungs, Guts, Liver, Spleen, and other bowels.

The Diagnosis respects either the Disease present or at hand. The smal Pocks and Measles, when they are present, are subject to the outward Sences, and need therefore no other signs. But these signs following declare them to be at hand.

Pain in the Head with Pulsation in the Forehead, and Temples; great Sleepiness: Terrors in Sleep; sometimes Ravings, Tremblings, and Convulsions: Sneezings; frequent Yawning; Hoarsness, Cough, Difficulty in breathing. Heat, Redness, and Sence of pricking over the whol body. Pain of the back, which comes sometimes alone, or appearing with few other Symptoms in a Synochus Feaver, it shews the smal Pocks will come out. For seeing through the back are carried the great Vein and Artery, in which the malignant blood boiling, does send forth sharp vapors to the Nerves, and neighboring Membranes; it must needs be, that pains should be felt especially in those parts. Great Anxiety and unquietness. Tears flowing of themselves. Shining before the Eyes, and their Itching, a swelling of the Face with some Redness. A vehemency of the Symptoms at first, so that the Disease seems of a sudden to have attained its vigor.

All which are caused, eather by many and thick vapors sent up by the boiling of the blood, into the Head, Diaphragm, and other parts; or from the Nature of the Pocks themselves, now beginning to invade, the parts; or by a Fluxion caused by heat, which dissolves the Humors in the Brain.

It's of great Moment to foresee the smal Pox; but much more to foretel their event, which the following Prognostick Signs wil declare.

And in the first place those smal Pox are wont to be void of danger, which come out soon and easily, and do quickly ripen.

Inwhich the Feaver is moderate, without great Symptomes, which ceases after they are come out or is very much abated. In which the voyce is free and breathing easie.

Smal Pox, which at first are red, and white, soft, distinct, few, round, pointed, coming only in the Skin and not inwardly, are wont to be safe.

All the Signs aforesaid do signifie the paucity of the Morbifick Matter, it's Obsequiousness, Benignity, and the strength of Nature, lustily expelling.

Contrarywise dangerous and deadly Pox are known, by a great Feaver, which lessens not after they are broak forth; for it signifies the malignant and venemous humors are not sufficienly expelled unto the Skin, but that the greatest part of them remains yet in the Veins. Great anxiety and unquietness; which comes from the same humors boiling in the Veins. Difficulty of breathing, which signifies either pustles or Impostumes in the Lungs; or a Squinsie, or great decay of strength. Great thirst which declares the inward burning; and if with the thirst, shortness of breath be encreased, Death is at hand. A Loosness or bloody Flux, which shews the malignant humors have their recourse inward, which is a course quite contrary to that of Nature and therefore deadly, so that few of those which after the Pox coming out, are taken with such a Loosness do escape.

A Bloodie Urine is a most deadly sign; and likewise if by stool pure and sincere blood be voided. Somtimes also by the Nostrils, Gums, and other parts of the body blood is voided, which are commonly deadly Signs. For they signifie the extream Acrimony and malignity of the blood: which doth vehemently provoke Nature, and compells her to a preposterous excretion thereof.

Also Pox long a coming out are very bad, which signifie the contumacy of the matter, or the weaknes of Nature, Many, Great, Double and united Pox, do shew an overabundant quantity of Morbifick matter, and are bad. So are hard ones, shewing the thickness and incoctibility of the said matter. Also flatt ones which shew the weakness of the expulsive faculty, and they are worse, if they have a black spot in the middles of them, which argues extraordinary malignity. And green, blewish and black which spring from that sort of choller called *Bilis porracea, or Atra* Leeke-green or black Choller are a bad sign.

They are worst of al which when they are come forth do presently vanish, and the tumor of the parts falls: for they signifie the retirement of the Humor inwards; and none of those escape who have the Pox on this manner going in again, but they die commonly within twenty four houres.

They are also dangerous, when spotts like those of the purple or spotted Feaver, are mingled among the pox; especially if those spots be livid or black. For they signifie not only that same light

light putrefaction, which is wont to happen in the ſmall Pox by means of the ebullition of blood: but alſo that intenſe and profound Malignity is peccant; from which much greater danger is threatened to the Patient.

Dung or Urines in this Diſeaſe livid or black, do portend great danger: for they ſignifie that Melancholiy abounds in the Veins, and infects the whol Maſs of Blood.

The cure of the ſmall Pox & Meaſles is performed in the ſatisfaction of four Indications. whereof the firſt conſiſts in the Evacuation of the peccant humors. The ſecond in aſſiſting the motion of nature, or helping to expell the Pox. The third in the oppoſition of the malignant and venemous quality. The fourth in correction of ſymptoms. All which that they may be conveniently effected, firſt a convenient diet muſt be appointed, which muſt be the ſame which was ordered in the cure of putrid Feavers: howbeit ſome things muſt be particularly noted.

Firſt that the patients be kept in a warm room, to the end their pores may be kept open, & the breaking out of the ſmal Pox may there be furthered. therefore they muſt be kept in a Chamber well ſhut, which the cold air muſt in no wiſe enter into. For many Children that had benigne Pox, have been killed by letting in the cold ayr upon them, viz. the morbifick matter being thereby driven back into the inward parts. And for the ſame cauſe they muſt be moderately covered with Cloathes; but ſo that the heat of the air or the weight of the Cloathes may not augment the heat of the Feaver, The foreſaid coverings are wont commonly to be made of red cloaths, becauſe they are thought by ſom Analogy to move the boiling blood to the externall parts. Many are alſo wont to keep an Ewe or Wether in the chamber or on the bed; becauſe thoſe Creatures are eaſily infected and draw the venom to themſelves, by which meanes ſom Eaſe may happen to the ſick perſons.

A decoction of Barly, or of the roots of Sorrel, or of Harts horn is profitably uſed for drink, in the beginning of the diſeaſe eſpecially, and when the Feaver is vehement. But if the Feaver be not very violent, a decoction of Barly and Figs wil be very profitable, viz. Effectually driving the Humors to the Skin; and *Foreſtus* and *Amatus* did continually uſe the ſame with good ſucceſs.

Furthermore. Whereas in the whol Courſe of the Diſeaſe, Sleep ought to be moderate, yet in the Augment when the Pocks break forth, long Sleep is hurtful, and it is better to watch more than ordinary.

That therefore the aforeſaid Jndications may be fulfilled, the Cure muſt be begun by Blood-letting (if Blood in any ſort is redundant, and the Age of the Patient is like to bear it) and a Vein muſt be opened as ſoon as may be. But if the Phyſitian ſhall not be called the firſt day, yet he ſhal do well to take blood before the breaking forth of the Pocks, or while but few are come out; which time is wont commonly to laſt until the fourth day, from the firſt onſet of the Feaver. In which Caſe notwithſtanding, diligent heed is to be taken. For if upon the breaking forth of the Pocks, the Feaver and its Symptoms be abated; it is better to leave the buſineſs to Nature working well, which will ſufficiently expel the whol Morbifick Matter to the Skin. Alſo Blood-letting is not in this caſe neceſſary, ſince experience ſhews, that an infinite company of children haveing gentle Pox, and not Plethorick are happily cured without bleeding. Nay rather in the former caſe ſomtimes blood-letting may do hurt, becauſe the expulſion of the ſmal Pox is cauſed by an ebullition of blood: which ebullition if it be ſmall, it will by blood-letting be leſſened very much, and ſo it will becom inſufficient perfectly to purge the maſs of Blood from it's impurities. Contrarywiſe, if upon the Eruption of the Pox, the Feaver becomes more ſtrong, there be anxiety, difficult breathing, an urin thick and red, and other ſymptoms ſeem greater it's a ſign that naure is oppreſt, with the over great burthen of humors, and that ſhe cannot govern them conveniently; and that therefore Phlebotomy is neceſſary, that a part of the burthen being taken away, nature may be the better able to expel the reſt. In one word, when there is an Ebullition perfective meerly and depuratiue, blood is not to be taken away, but in a corruptive blood-letting is extreamly neceſſary yea even in that which hath leſs malignity in it, whoſe degrees have been ſpecefied before, And ſo neceſſary is blood-letting in dangerous Pox, in which the corruptive Ebullition is wont to happen, that the tender age of infants muſt not hinder it. For it is grown into a cuſtom to let children blood when they are four years old and ſomtimes when they are three. The phyſitians of *Paris* in their tender age and while they ſuck do let children blood. Which yet the tender age of infants doth hardly admit, with that light nouriſhment of milk, and the plentifull efflux of their humors by tranſpiration; neither can this new licence of letting ſuch yong ones blood be juſtified by any countenance from the wiſe Authors of Phyſick.

In prety big children, many times once blood-letting wil not ſerve the turn, but it muſt be repeated

if

if the Feaver remain intense or if Raving or any other grevious Symptome do urge, Yea verily when the Pox are perfectly come out, which for the most part is within nine daies, if the Feaver be very urgent, blood must be again let and the Patients ordered, as those who have a putrid Feaver.

If blood-letting be suspected because of the tenderness of the Childrens Age, or because the fitting season is now past; the superfluous blood may be diminished by Cupping-Glasses with Scarification, applied to the back, shoulders, and thighs, which may also wel be used in the state of the disease, seeing the Motion of Nature from the Centre to the Circumference, is by them promoted. But care must be taken that in young Children the Scarifications be not too deep: for it happens sometimes that an unadvised Surgeon cutts so deep, as to cut asunder some Veins and let out the fervent and boiling blood, so that there is great trouble to stop the same.

Purgation is suspected in this disease; for it makes a motion contrary to that of Nature viz. from the Circumference to the Centre; and to whomsoever, having Pocks, a loosness happens, the Pocks commonly strik in, and the Partie dies, as I said in the Prognostick. Yet observe, that many times purgation is to good purpose practised before the pocks come out, and before the Feaver growes vehement, viz. when the Children are in the Neutral state of Decidence. For then if il humors abound, they are profitably diminished by purging, that Nature may afterward, more Cheerfully set upon the Expulsion of the Remainder. But when the Pox begins to appear, Purging wil be pernicious: And likewise, if there be great malignity abroad, as in an epidemical Constitution, when very many Children dy of that disease; it is better wholly to abstain from Purging; because in diseases which are very malignant and Pestilential, Purgation in the beginning of the Disease, is very hurtful. Now the Purgatives must be compounded of gentle Simples viz. Rhubarb, Callia, Manna, Tamarinds, and Syrup of Roses.

In the Course of the disease, if the belly be hard and bound it may gently be removed, but not provoked; and that by a suppository of honey alone without salt; or with a Clister of Broath or milk, or a decoction of French barley, Raisons and Liquoris with sugar and yolkes of Eggs.

After blood-letting and other evacuations (if necessary) the expulsion of the pox must be helped forward, not only with specifick medicines driving the humors to the Skin, but also with diaphoreticks and Alexipharmicks; especially if the Pox be Epidemical and being very malignant, do threaten great danger.

There is a vulgar Medicine commended by *Rhasis*, *Avicenna* and al the Arabian Physitians to drive out the Pox; which also the greatest part of our later Physitians use, according to the description of Avicenna, which is thus.

Take *Fat figgs seven ounces. Lentills shaled three drams. Lack two drams and an half. Gum traganth and fennel seed, of each two drams. Boil al in a pint and half of fountain water to the third part. Let the patient drink thereof. Rhasis adds Saffron fifteen grains, Raisons five drams, because Saffron opens and corroborates, and the Raisons do strengthen the Liver. And Traganth although it do incrassate and astringe, yet is it therefore mingled with the rest, that it may prohibit the over great ebullition of blood.*

Lentils are by some Neotericks rejected, because they are restrictive and may hinder the coming forth of the Pox. But the Autority of so many and such noble Princes of Physick, must not rashly be rejected; but we must rather determine, that Lentils shaled are with great reason put into this composition; viz. that by their astringent and incrassating faculty, they may bridle the Fervency of the humors and hinder their falling upon any noble part; to which purpose Gum traganth was added, as I hinted before. This is taken out of *Galen*, who in the 1. *De Aliment. Facult. Cap.* 18. Doth teach us that Lentils twice boiled do Strengthen the Natural parts, and by their astriction stop the flux of the belly. The Lentils may therefore be put in or left out according to the Judgment of the Physitian who manages the Cure, as there is more or less necessity of attenuating and driving the humors into the Skin. For if the matter be subtile and the ebullition great, the Lentils may profitably be put in for the Intent aforesaid. But if the matter seem to be thick, so that Nature can but slowly drive it into the Skin then must they be omitted and the Gum traganth; and onely the other attenuating and diaphoretick things used for the drink. By which it appears, that we must not too strictly adhere to the formes of Medicaments propounded by Authors; but that in several occasions they must be variously changed. Let this following Receipt serve for an example, compounded partly of the foresaid simples and partly of others that are diaphoretick and resist malignity; which may much help such as have this disease, in making the Pox to come wel out.

Take *Rootes of Fennel and Sorrel of each one ounce. Harts-horn shavings half an ounce Leaves of Scabious, Scordium, St. Johns-wort of each one Handful. Three pair of fat Figgs. Gum Lack three drams. seeds of Navew or Turnep & Carduus Benedictus of each two drams. Lentils unhusked half an ounce. Gum traganth one dram and an half. Boil al to a pint and half. Of the straining take three ounces. Syrup of Lemmons one ounce. Mix them. make of them a Julep let the Patient drink thereof twice or thrice in a day.*

If

If the Malignity be very great, as commonly it happens in Epidemical smal Pocks, we must chiefly use Antidotes. and consequently al those remedies which we have propounded in malignant Fevers wil be good in this disease, respect being had to the Age and strength of the Patiennt. And among others, Confection of Hyacinth, Bezoar stone, Pouder of Corall, Pearles, Harts-horn; oyl of Scorpions of Matthiolus, must be used frequently, with other things, the manner of whose use may be learnt out of the foregoing chapter.

Neither must such things be omitted as do restore the Patients strength, both inward and outward which may be also learnt out of the foregoing Chapter, and by the prudent Physitian administred in due season.

And it must be heedfully remembred, that such medicaments as drive out the Pox are not to be used in al patients. For somtimes they break forth so violently, that they have need to be restrained for a while. For the great ebullition and immoderate Fervor of blood, if they be not tempered. are wont to destroy the Patients; and therfore, it is good in such a Case to use bridlers and coolers, For example, a Julep many be thus compoled.

Take *Whol barly one pugil. Cinquefoil rootes and Tormentil roots of each one ounce. Leaves of Sorrel, Endive and Wood-sorrel of each one handful. Lentils excorticated half an ounce. Gum traganth one dram. Boil al to a pint. In the straining dissolve four ounces of Syrup of Lemons or Pomegranates. Make of al a Julep for four doses, to be taken twice in a day.*

Amatus Lusitanus in the 18. Cure of the third Centurie propounds an example of such kind of Pox arising from boiling humors and cured only by coolers and thickeners. which example I thought good to cite in this place word for word, that the young beginners may perceive, in what cases the Cure is most to be varied. *The Boy of Altarasius* (saies he) *began to have the smal Pox, some of which did run together, so that in two daies they flaid his Miserable Carcase: for the pustles crept along and did only flay off his Skin; which I have likewise observed in other Children. Against which, I thus set my self to work; First because this matter was too thin, I endeavored to thicken the same, and not only so, but to abate the evil quality of the Liver and internal parts, that no more such thin subtile Humor might be bred.. This I did with refrigerating Medicaments, as Syrup of Roses, of Cichory simple, of Endive and Violets with waters of like Nature mixed with them. He was nointed with Ceratum Santalinum. But the Diet likwise helped much, which was ordered cold and moist. By al which the matter became thicker and the pox began to appear thick and large.*

And for ordinary drink prescribe a decoction of barly and of Sorrel roots. And these remedies must be continued, until the Fervency of the humors shal begin to abate: if Nature seem to want their assistance.

These things might suffice for a direct Cure of the smal Pox. But because they may bring great dammage to divers parts, both internal and external, we must endavour the Prevention and Cure thereof.

The internal parts may especially be preserved with a decoction of Lentils, of Gum Lac and Traganth, described before. For Gum Lack defends the Liver and Spleen, Lentils the Gutts, and Traganth the breast.

But the Lungs are peculiarly preserved by Conserve of Roses and Violets, and Syrup of Violets Jujubees, Myrtils, Dryed Roses, Poppies and also these following LOHOCHS. Se in my Dispensatory (at the begining of the Lohochs) what a Lohock is; and why so called.

Take *Conserve of Roses one ounce and half, juyce of Lentiles thrice boiled six drams. poppie seeds an half dram. Gum traganth one scruple. with Syrupe of dried Roses make all into a Lobech.*

Or this of *Avicenna*, which is commended by *Guainerius* and *Forestus*.

Take *Lentils unshaled and finely poudered three drams. White Poppie seeds one ounce. Conserve of Roses two ounces. Julep of Roses, as much as shal suffice, Mix al into a Lobech.*

Or such a Lohoch as this following may be made only of Syrups.

Take *Syrup of violets, jujubees and dried Roses of each one ounce. Syrup of Poppies half an ounce. Mix them, let the Patient lick thereof often out of a spoon, and swallow it down leisurely.*

But if a flux be at present into the Lungs and cause hoarsnes and suffocation; it must not only be stopped with the foresaid Remedies, but revelled by Cupping-glasses, both dry and Scarified, and by bleeding, if nothing else hinder. Also give the Patients to drink a decoction of Barly, Jujubes and Liquoris, and let them use this following Lohoch.

Take *Seeds of Marsh-mallows, Melons, Cucumers, and white Poppy, of each two drams. Raisons stoned and Jujubes of each four pair. Boile al to a pint. In which dissolve conserve of Roses and Violets of each half an ounce. Pouder of Diatragacanthum frigidum three drams. Sugar Candie and Sugar of Roses, of each as much as shal suffice. Make al into a Lohoch. The Jawes and throat may be fenced against the Pox, before they break out, with this following Gargarism.*

Take *French barly one pugil. Plantane Leaves two handfuls, red Rose Leaves one pugil, Balaustians, seeds of Sumach of each two drams. Boil al in two pints of water to a third parts consumption. In the strained Liquor dissolve Syrup of Mulberries and Pomgranates of each one ounce. Mix al into a Gargarism.*

If the young age of Children cannot admit a Gargle, a Lohoch may be made, of Syrup of Mulberries, Pome-granats, of dried Roses; either alone, or mingled with red Rose and Plantain waters. Which must often be given them in a spoon. Wherewith if the Fluxion cannot be stopped by reason of the abundance of the rhume, so that there is fear of Suffocation impendent; such things must be used, which widen the passages, and help excretion, after this manner.

Take *Mucilage of Fleabane seed and Oyl of sweet Almonds new drawn, of each one ounce and halfe Whitest Sugar two ounces. Mix them. Make of all a Lambitive to be given every hour.*

If by meanes of the Acrimony of the flux, or the Plenty of the smal Pox, an Ulcer be berd in the Jawes or Throat; it must be clensed with barly water and honey of Roses, or with allum water. and if it tend to corruption a little Ægyptiacum Ointment must be mingled therewith.

The gutts wil be preserved by the same remedies which were appointed to preserve the Lungs. But if a present Loosens, or dysenterie be urgent, first detergent and lenitive Remedies must be used and afterwards astringents. And so Clysters must be made of calybeated Milk, of Sugar and yolkes of Eggs: and afterwards of a decoction of barly and red Roses with the yolk of an egg; and last of al, of a decoction of Plantaine, Knot-grass, and Prunella or Self-heal, and other Simples set down in our Cure of the Disentery. And it is to be observed, that a loosnes in children that have Pox, is oftentimes caused by wormes, which lasts dureing the whol disease, whence they are in the danger of Death; because the expulsion of the Pox is therby hindred wholly or lessened. Which is easily known by the thicknes and viscositie of the excrements, and their grey or whitish color: then must be administred such things as kill Worms: and sweet Clysters must be injected.

Somtimes also the kidneys are affected and are exulcerated, whence arises Pissing of Blood. In this Case it is good to give an emulsion of the four greater cool seeds, with trochisics of Alkekengy, de Carabe, and other things set down in our chapters of Pissing of Blood.

Among external parts, the Eyes are most of all to be guarded from the smal Pox. For being endued with a soft and humid substance; the matter of the Pox is easily driven unto them: whence arise grevious calamites and somtimes total Blindnes.

Before the Pox break out therefore, or when they begin to appear, the Eyes must be anointed every hour with Plantane and Rose waters, in which a little saffron is dissolved; or with the following Eye-Salve, which doth more effectually preserve them.

Take *water of Roses and Plantane, of each one ounce and half. Pouder of Sumach seeds two drams. Infuse them a little while hot. then strain the liquor hard out. to the strained liquor ad Camphire ten graines. Saffron five graines. Make all into a Water for the Eyes.*

It wil be yet more effectual, if Instead of the waters, the juices of knot-grass and Sheperds-pouch be mingled with the rest.

And if some Pox begin to Peep out of the Eye it self, pidgeons blood must be often dropt in, that their resolution may be hastened. then also this following Eye-water is to be used.

Take *Red Rose water two ounces. Eye-bright water half an ounce trochisci* albi Rhasis *one dram. Tutty prepared one Scruple. Champhire five graines. Saffron two graines. make al into an Eye-water and wet the Eyes often therewith, with a thin linnen rag.*

But when the Eyes so swel that they cannot be opened, they must often be washed with a decoction of Linseed, Fenugreek seed, Quince seed and Mallow seeds; and to the swelling wil fal and the Eyes open and if when the Eyes are opened, there appear cloudes in them they must be scoured off with Sugar-candie finely powdered.

And finally if the Eyes are ulcerated, they may be cured with this following Eye salve.

Take *Washed Cerus three drams: Sarcocol one dram: Gum traganth one Scruple: Opium two grains: With mucilage of Gum traganth drawn out with Plantane water make all into little cakes or trochisics, which must be dissolved in Womens Milk, or red Rose water, when it is to be used and in all other things proceed, as Practitioners teach at large, in the Cure of Ulcers of the Eyes.*

To preserve the Nostrills, they must often smel to Vinegar. But a Collyrium of juyce of knot-grass, and shepherds pouch, Sumach seeds and camphire formerly praysed, wil work more effectually; let the tent be often moistened therein, and put up into the Nostrills. If notwithstanding, the Pox do grow with in the Nose, they quickly become hard Scabs, which are often to be nointed with Oyl of sweet almonds, that they may the sooner fal off. And finally if an Ulcer happen in the Nose, it must be dressed with a liniment of the Oyl of Eg-yolkes and juyce of Plantane, stirred together in a leaden Mortar.

To

To preſerve the Face, ſome waſh it with Roſe-water and other Aſtringents. Which I cannot approve of: for a great part of the impurities flows unto the Face. For the Skin thereof long looſe and ſoft, is very fit to receive Excrements. Wherefore if thoſe impurities which Nature ſends hither, be repelled, being retained within they may cauſe great hurt; and therefore the motion of Nature is no waies to be hindred. But this ought to be the Phyſitians care, to hinder that the Pocks which break out in the Face, do not leave behind them pits and Scarrs, which doth often deform the Countenance. And this he ſhall in good meaſure perform, if when the Pocks are ripe, and are high and white in the middle (which is wont to fall out upon the ninth day of the Diſeaſe) he cauſe them to be nointed with a Fether twice a day with Oyl of ſweet Almonds, drawn without fire, until the Cruſts fall off, For by this Medicine the Acrimony of Choller is tempered, the ripening of the Pocks is haſtened, and the falling off of the Cruſts furthered; which otherwiſe ſticking faſt, doth exulcerate the Skin more deeply, by reaſon of the Quittor which lies under them. Oyl of Nuts new drawn without fire, mixed well with a like quantity of Roſe-water, till they come to the form of a Liniment, is excellent for the ſame purpoſe.

If by neglecting the Remedies aforeſaid, or through the extream malignity of the Humor, there remain Pits and Pock-holes, all diligence muſt be uſed to repair the ſame. Which notwithſtanding is extream hard to do perfectly; although many have taken great pains thereabout to gratifie Virgins, and other Women, who are exceeding careful to preſerve their Beauties. Among infinite Medicines recorded by Authors to this intent, I ſhall propound the choiſeſt.

And in the firſt place, Oyl of Eg-yolks does nouriſh and engender Skin, and therefore is very convenient to fill the Pock-holes.

Wethers Suet freſh and new, melted and done out with a Fether, is effectual to the ſame purpoſe.

But the filthyneſs of Pock-holes is much amended, if they be waſhed firſt with Yarrow-Water, or Cows-dung-water, diſtilled in *May*, and then anointed with Mans-Greaſe.

Foreſtus does much magnifie this following Oyntment.

Take *Oyls of ſweet Almonds and white Lillies, of each one ounce: Fat of a Capon three drams: Powder of Peony Roots, of Orice and Lytharge of Gold, of each ten grains: Sugar-Candy one ſcruple. Mingle al well in a warm Mortar, ſtrain them through a Cloth, and noint the Pock-holes therewith morning and night. And afterwards let them be well waſhed with Water diſtilled out of Calves-feet: and when that is not at hand, uſe the Water of Yarrow in ſtead thereof.*

Neither muſt I omit that which many Practitioners do teach, viz. That when the Pocks be ripe, they muſt be bored through with a golden or a ſilver Needle, leaſt the Quittor tarrying long in them, ſhould leave holes in the part. Which Practice, is notwithſtanding, now in a manner grown out of uſe, ſince Experience has taught, that the Pocks being bored are longer in healing and doth longer hold their Cruſts, becauſe of the Weakneſs of Natural Heat, cauſed in the Part by boring, whereby more deformed Scars are left behind. And therefore it is better to abſtain from this boring, and to commit the evacuation of the Quittor to Nature alone.

To conclude this Cure, I ſhall ſubjoyn how thoſe diſpoſitions of Itching and Exulceration which happen to perſons that have the ſmall Pocks, may be remedied.

And in the firſt place, When the ſmall Pocks come forth, or when they begin to ripen, ſomtimes an huge pain or Itching does afflict the Patients; eſpecially in the Palms of the Hands and Soales of the Feet, becauſe the thickneſs of the Skin in thoſe parts hinders the Eruption of the Pocks.

Which Symptom you ſhall help, if you cauſe thoſe parts to be held in hot Water, or Foment them a long time with an Emollient Decoction. But when there is great Itching in the Face, which compels the Patients to ſcratch, whence great deformity and foul Scars follow; uſe this following Remedy.

Take *leaves of Pellitory of the Wall one handful: Flowers of Chamomel and Melilote, of each half a pugil. Boil them in a pint of Scabious Water, To the ſtrained Liquor ad three ounces of Honey-ſuckle Water. With this Liquor hot, often let the Itching Pocks be moiſtened, by dipping a thin Rag or Cotton Wool therein, and ſo applying the Liquor gently to them.*

Now the Ulcers which ariſe from deep and malignant Pocks, are to be cured with *Unguentum album Rhaſis*, or with an Oyntment of Lead made after this manner.

Take *Calcined Lead two ounces: Litharge one ounce: Ceruß waſhed and Vinegar, of each half an ounce: Oyl of Roſes three ounces: Honey of Roſes one ounce: Three Yolks of Egs: Myrrh half an ounce: Wax as much as ſhall ſuffice. Make all into an Oyntment.*

LONDON:

Printed by Peter Cole, Printer and Book-ſeller, at the Sign of the Printing-Preſs in Cornhill, near the Royal Exchange. 1653.

The Printer to the Reader.

READER,

THY cheerful Acceptance of my former Endeavors in this kind for the good of my Native Country, hath encouraged me, though with great Care, Labor, and Coſt, to preſent thee with the Learned, Judicious, and Worthily renowned Riverius his Works of Phyſick. He is an Author now living, and ſufficiently known: And his Works will ſpeak for themſelves, and praiſe him in the Gates.

And if thou ſhalt ſhew a friendly Countenance to this Worthy ſtranger, who now ſpeaks Engliſh, I ſhal be thereby encouraged by al other means to ſtudy to promote thy good by bringing thee more acquainted with this, and other excellent Authors.

And whereas ſome, either out of envy, or miſ-underſtanding, do condemn Works of this Nature, publiſhed in our Mother Tongue, alleaging chiefly, That ſuch Books encreaſe the number of Empericks; are a hinderance to learned and able Phyſitians; alſo occaſion ſome to hurt themſelves by raſhly practiſing on their own Bodies. I ſhal Anſwer to theſe Objections in order.

Firſt, as for Empericks: Theſe Books, and ſuch as theſe publiſhed in Engliſh, are ſo far from making more Empericks, that they will ſpoil thoſe that are, and make that we ſhal have fewer of them. For an Emperick being one that gives Phyſick (Hab Nab, as we uſe to ſay) relying only on Experience, and what he hath ſeen done before him, not being able to give any reaſon touching the Diſeaſe, its Cauſe, or Cure: Theſe Books wil teach ſuch perſons how to go upon good grounds, and to be able to give a ſolid Reaſon for what they do, and of Empericks, make them Rational Phyſitians, if they be men of good natural parts, though they be ignorant of all Tongues but their Mothers.

As for the hurt which is hereby pretended to be done to learned Phyſitians, it is a meer Imagination, and no learned Phyſitian that bethinks himſelf, wel, wil ſo judg. For the uſe of theſe Books reſpects chiefly the Poor of this Nation, together with Sea-farers, and Soldiers. But for the Rich that have Money to ſpare, and bide at home, no otherwiſe (in point of Practice) than for an honeſt Curioſity; and delightful Speculation. What rich man is there ſo mad, who reading a Chapter in theſe Books, and ſeeing what a world of Conſiderations and Cautions do belong to the knowledg and orderly cure of every Diſeaſe, but will be more fearful than ever he was before to commit himſelf to the Cure of any but a learned Phyſitian. Now it is not by the poor, but by the Rich, that the learned Phyſitian maintains himſelf; the poor are but

a trouble to him, only before ſuch Books as theſe were extant in the Engliſh Tongue, Conſcience (ſomtime) forced the learned Phyſitian to take care of the poor, becauſe the unlearned were wholly unable: Whereas now there may be found Induſtrious men that know no more Languages than their Native one, who may in a rational way contribute to the Neceſsities of the poor. Nay, theſe kind of Books are profitable to the learned Phyſitians; for many of the Gentry, eſpecially of the Ladies and Gentlewoman, viewing the ſtate of their own bodies in ſuch Books as theſe (as in Looking-Glaſſes) wil perceive certain Diſeaſes in themſelves, either now in being, or likely ere long to ſeize upon them, which otherwiſe they would never have ſo much as dream'd of; and thereupon crave the Advice and Aſsiſtance of the learned Phyſitian.

Alſo the Ladies and Gentlewomen being well read in ſuch Books as theſe, will better know how to demean themſelves towards their Husbands, Children, or other Relations and Friends in their reſpective Sickneſs in point of ordering them, and will be more apprehenſive of the Phyſitians Directions, and ſo better able to practice them; alſo more capable of his Reaſons, and Prognoſticks, and ſo more confident and cheerfully obedient. All which will very much advance the Cure, and conſequently the Honor and Gain of the learned Phyſitian: for as Hippocrates notes in his firſt Aphoriſm, It is not enough towards the Cure that the Phyſitian do what is fitting; but the by-ſtanders and friends of the ſick muſt play their part, or all will not be well.

And in the third place, whereas it is objected, That people reading theſe Books, wil practice upon themſelves, and hurt themſelves.

I Anſwer, If they do, they have none to blame but their own folly; for it is not the intent of the publiſhers of theſe Books, that every one that can read Engliſh, ſhould dare to take, of their own Heads, ſuch Medicines as are deſcribed in the ſaid Books. But our intent is, That where in the Country there is no learned Phyſitian at hand; at Sea, in the States and Merchants Ship, where the Chyrurgion is compelled to act both his own, and the Phyſitians part; In Armies and Leguers, &c. an ingenious and diligent Chyrurgion, Apothecary, or any other that hath from his youth been exerciſed in theſe kind of ſtudies, and converſant about the ſick, may attain ſuch a competent knowledg in the Cauſes and Methodical Cure of Diſeaſes, as they may with honor to themſelves, and profit to the ſick (by Gods bleſsing) ſupply the place of a more learned Phyſitian. For the uſe of ſuch perſons, theſe books are intended, and for diligent Midwives; and not that every fool ſhould turn Phyſitian, or that every Reader ſhould tamper with him or her ſelf.

Alſo divers Honorable Ladies and Gentlewomen, that out of a truly Chriſtian

ſtian and Charitable Diſpoſition have not diſdained, but counted it a great Honor to be helpful to the poor in the time of their ſickneſs, may by peruſal of theſe books, and the like, confirm and encreaſe their knowledg, and become honorable Inſtruments in the Hand of God, of much relief and comfort to many poor diſtreſſed Creatures in their reſpective Countries and places of Habitation.

I ſhal ſay no more at preſent, only refer thee to the next pages where thou maieſt read the Names of thoſe Books of Phyſick or Divinity that I have Printed.

From my Printing-houſe in *Leaden-Hall*, September, 2. 1657.

Thy hearty wel-wiſher,
PETER COLE.

The Names of Books printed by Peter Cole, *Printer and Book-ſeller of* London: *and are to be ſold at his Shop, at the ſign of the Printing-preſs in Cornhil, neer the Royal Exchange.*

Twelve new Books in one Volum of Nich. Culpeper, *All called the Idea of Practical Phyſick.*

1 The art to preſerve Health.
2 The preternatural diſorder of mans body, and their Signs.
3 Of Medicaments.
4 Of the art of Healing.
5 Of the general Cure of Diſeaſes.
6 Of External Diſeaſes.
7 Of Feavers.
8 Of Head Diſeaſes.
9 Of middle Belly Diſeaſes.
10 Of Lower belly Diſeaſes.
11 Of Venemous Diſeaſes.
12 Of Childrens Diſeaſes.

Twenty ſeven Books of Nich. Culpeper, *Gent. Student in Phyſick and Aſtrologie, formerly publiſhed.*

The firſt ſeventeen Books. Are al called the *Practice of Phyſick*, Wherein is plainly ſet forth, The *Nature, Cauſe, Differences*, and ſeveral ſorts of *Signs*; Together with the Cure of al Diſeaſes in the Body of Man. Being a Tranſlation of the Works of that Learned and Renowned Doctor, *Lazarus Riverius*, now living; Councellor and Phyſitian to the preſent King of *France*. Above fifteen thouſand of the ſaid Books in Latin have been ſold in a very few Yeers, having been eight times printed, though al the former Impreſſions wanted the Nature, Cauſes, Signs, and Differences of the Diſeaſes, and had only the Medicines for the cure for them; as plainly appears by the Authors Epiſtle.

18. A Sure Guide to Phyſick and Chyrurgery: That is to ſay, The Arts of Healing by Medicine, and Manual Operation. Being an Anatomical Deſcription of the whol body of Man, and its parts, with their Reſpective diſeaſes, demonſtrated from the Fabrick and uſe of the ſaid Parts. In Six Books of *Riolanus*, tranſlated, and adorned with an hundred eighty four Figures cut in Braſs.

19 *Veſlingus Anatomy of the Body of Man*, Wherein is exactly deſcribed, the ſeveral Parts of the Body of Man, illuſtrated with very many larger Braſs Plates than ever was in Engliſh before.

20 A Tranſlation of the *New diſpenſatory*, made by the Colledg of Phyſitians of *London*. Whereunto is added The *Key to* Galens *Method of Phyſick*,

21 The *Engliſh Phyſitian enlarged*. being an Aſtrologo-Phyſical Diſcourſe of the vulgar Herbs of this Nation; wherein is ſhewed how to cure a mans ſelf of moſt Diſeaſes incident to Mans Body, with ſuch things as grow in *England*, and for three pence charge. Alſo in the ſame Book is ſhewed, 1 The time of gathering al Herbs, both Vulgarly and Aſtrologically. 2 The way of drying, and keeping them and their Juyces. 3 The way of making and keeping al manner of uſeful Compounds, made of thoſe Herbs. The way of mixing the Medicines according to the Cauſe, and Mixture of the Diſeaſe, and the part of the Body afflicted.

22 A *Directory for Midwives*, or a *Guide for Women*. Newly enlarged by the Author in every ſheet, and illuſtrated with divers new Plates.

23 *Galens Art of Phyſick*, with a large Comment.

24 A New Method both of ſtudying and practiſing Phyſick.

25 A Treatiſe of the Rickets, being a Diſeaſe ſo common to Children wherein is ſhewed, 1 The Eſſence, 2 The Cauſes, 3 The Signs, 4 The Remedies of the Diſeaſe: Publiſhed in Latin by Dr. *Gliſſon*, Dr. *Bates* and Dr. *Regemorter*, tranſlated into Engliſh, And corrected by *N. Culpeper*.

26 Medicaments for the Poor, Or Phyſick for the Common People.

27 Health for the Rich and Poor, by Dyet without Phyſick.

Mr. Hookers *New Books in three Volums: One in Octavo, and two in Quarto.*

Theſe Eleven New Books of Mr. *Thomas Hooker*, made in *New-England* Are atteſted in an Epiſtle by Mr. *Thomas Goodwin*, and Mr. *Philip Nye*, To be written with the Authors Own hand: None being written by himſelf before. One Volum being a Comment upon Chriſt's laſt Prayer in the Seventeenth of *John*; wherein is opened, The *union* beleevers have with God and Chriſt, and the glorious Priviledges thereof. Beſides many other Goſpel Truths, there is alſo ſhewed.

1 *That the end why the Saints receive al glorious Grace, is, That they may be one, as the Father and Chriſt are one.*
2 *That God the Father loveth the Faithful, as he loveth Jeſus Chriſt.*
3 *That our Savior deſireth to have the Faithful in Heaven with himſelf.*
4 *That the happineſs of our being in Heaven, is to ſee Chriſts Glory.*
5 *That there is much wanting in the knowledg of Gods Love, in the moſt able Saints.*
6 *That the Lord Chriſt lends dayly direction, according to the dayly need of*

of his Servants.

7 *That it is the desire, and endeavor of our Savior, that the dearest of Gods Love, which was bestowed on himself, should be given to his faithful Servants.*

8 *That our Union, and Communion with God in Christ, is the top of our happiness in Heaven.*

The first eight Books: of the Application of Redemption, By the effectual Work of the Word, and Spirit of Christ, for the bringing home of lost Sinners to God. In which (besides many other seasonable, and Soul-searching Truths) there is also largely shewed.

1 *Christ hath purchased al spiritual good for* H I S.

2 *Christ puts al* H I S *into possession of al that good that he hath purchased.*

3 *The Soul must be fitted for Christ before it can receive him: And a powerful Ministry is the ordinary means to prepare the heart for Christ.*

4 *The work of God is free: And the day of Salvation, is while this Life last, and the Gospel continue.*

5 *God cals his Elect at any Age, but the most before old Age.*

6 *The Soul is naturally setled in a sinful security.*

7 *The heart of a Natural man is wholly unwilling to submit to the Word that would sever him from his sins.*

8 *God the Father by a holy kind of violence, plucks* His *out of their corruptions, and draws them to beleeve in Christ.*

The Ninth and Tenth Books of the Application of Redemption by the Effectual Work of the Word, and spirit of Christ, for the bringing home of lost sinners to God. Besides many other seasonable, and Soul-searching Truths, there is also largely shewed.

1 *The heart must be humble and contrite before the Lord wil dwel in it.*

2 *Stubborn, and bloody sinners may be made broken-hearted.*

3 *There must be true sight of sin, before the heart can be broken for it.*

4 *Application of special sins by the Ministry, is a means to bring men to sight of, and sorrow for them.*

5 *Meditation of sin, a special means to break the heart.*

6 *The same word is profitable to some, not to another.*

7 *The Lord sometimes makes the word prevaile most, when its most opposed.*

8 *Sins unrepented of, makes way for piercing Terrors.*

9 *The Truth terrible to a guilty conscience.*

10 *Gross and scandalous sinners, God usually exerciseth with heavy breakings of heart, before they be brought to Christ.*

11 *Sorrow for sin rightly set on, pierceth the heart of the sinner throughly.*

12 *They whose hearts are pierced by the Word, are carried with love and respect to the Ministers of it: And are busie to enquire, and ready to submit to the mind of God.*

13 *Sinners in distress of conscience, are ignorant what they should do.*

14 *A contrite sinner sees a necessity of coming out of his sinful condition.*

15 *There is a secret hope wherewith the Lord supports the hearts of contrite sinners.*

16 *They who are truly pierced for their sins, do prise and covet deliverance from their sins.*

17 *True contrition is accompanied with confession of sin, when God cals thereunto.*

18 *The Soul that is pierced for sin, is carried with a restless dislike against it*

Six Books more of Mr. *Hookers* in two Volums in Quarto, are printing.

Twenty one *several Books of Mr.* William Bridge, *Collected into two Volumns.* Viz.

1 *Scripture Light the most sure Light:* compared with, 1. Revelations & Visions. 2. Natural & Supernatual Dreams. 3 Impressions with, and without Word 4. Light and Law within. 5. Divine Providence. 6. Christian Experience. 7. Humane Reason. 8. Judicial Astrology. Delivered in Sermons, on 2 *Pet.* 1. 19.

2 *Christ in Travel:* Wherein, 1. The Travel of his soul. 2. The first and after effects of his Death, 3. His Assurance of Issue. 4. And his satisfaction therein. Are opened and cleered in Sermons, on *Isa.* 53 11.

3 *A Lifting up for the Cast-down,* in case of, 1. Great sin. 2. Weakness of Grace. 3. Miscarriage of Duties. 4. Want of Assurance, 5. Affliction. 6 Temptation. 7. Dissertion. 8. Unserviceableness. 9, Discouragements from the Condition it self. Delivered in thirteen Sermons, on *Psalm,* 42. 11.

THE FIRST CENTURY OF THE Medicinal Obſervations, *And Rare Cures, of* LAZARUS RIVERIUS,

Councellor and *Phyſitian* to the King, and Profeſſor of Phyſick in the Univerſity of *Montpelier*.

The 1 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of ſtoppage of the Urine.

MR *Anthony Meſtre*, a Gentleman ſixty yeers Old, of a Sanguine Conſtitution, and a ſtrong habit of Body, having in the Summer travelled by long Journeys, betwixt *Paris* and *Montpelier*, he drank down abundance of Drink, to quench his thirſt, cauſed by the hot weather. And three or four daies after he came to *Montpelier*, he fell into a total ſtoppage of his Urine; for the Cure whereof he ſent for an ancient Phyſitian, who three daies together combated this ſtubborn Diſeaſe with ſundry Remedies, as Clyſters, Fomentations, Baths to ſit in, Liniments and Diureticks. Finally, On the third day, when nothing elſe would do, a Catheter waſt thruſt up into his Bladder, and no Urine came away, whereupon the Phyſitian being terrified, and deſpairing of the Patients Life, deſired to have another called to conſult with. I being ſent for at the Evening of the third day from the firſt ſtoppage of his Urine, and hearing what had been done before: I enquire if the ſick man felt any pain in his Loyns or Share, or had formerly had any fits of the ſtone in the Kidneys. He told me he had no pain in the foreſaid parts, nor had he been ever troubled with Nephritick pains, nor had ever avoided any ſtones or Gravel. All which diligently conſidering, I judged that this ſuppreſſion of Urine depended upon no fault of the Kidneys or Bladder; but rather upon the ſtoppage of the Emulgent Veins, cauſed by a multitude of Humors; for *Galen* in the firſt Book of his Method, Chap. 2. makes a two-fold cauſe of Obſtruction, *viz.* Multitude, and thickneſs of Humors. In reſpect of Multitude, the Veſſels too much filled and diſtended, cannot contract themſelves, ſo as to cauſe Expulſion. Which is Manifeſtly ſeen in the Bladder, which being above meaſure diſtended, by long retention of the Urine, can very hardly void the ſame, becauſe it cannot contract it ſelf. Being ſtedfaſt in this Opinion, I propounded to have a Vein opened, and

ſtore of blood taken from him; which when the former Phyſitian conſented unto, there was a pound of blood taken away. Now ſcarce an hour was paſt, after the blood-letting, when the patint felt the urin flowing down from his kidnies, by the uriters, into his bladder, and ſaid he knew he ſhould quickly make water; & not long after he caled for the chamberpot, which being filled at one piſſing bout, other veſſels were brought, ſo that within an hours ſpace he voided many pints of Urine. And ſo he was perfectly freed; nor would he take the purge preſcribed for him againſt the next day.

For the knowledg and cure of the diſeaſes of the kidnies, reins, & bladder, ſee more in the fourteenth book of my tranſlation of the Practice of Phyſick: and *Riolanus* Anatomy, both of the laſt edition in ingliſh.

The 2 Obſervation, or Hiſtory, of Famous & Rare Cures, &c.

Suppreſſion of the Courſes.

AN Outlandiſh woman of a ſanguine Complection, was troubled with many infirmities, ariſing Cheifly from Suppreſſion of her Courſes; for the Cure whereof, when ſuch Phyſitians as were at hand, had applied many remedies, and the infirmeties proved unconquerable; Councel was asked of the phyſitians of *Montpelier*, by letter. And in the Relation, her ordinary Phyſitians had cheifly obſerved this one thing, which made them exceedingly wonder, and of the reaſon whereof they deſired to be informed; viz. That as often as a veine was opened in her anckle her courſes ſtopt; but when ſhe was let blood in the arme, they flowed more plentifully: which accident ſeemed to contradict the uſual doctrine of phyſitians, which ſaies that the opening of the lower Veins does povoke the flux of the Courſes; but bleeding from the upper veins does ſtop the ſame. To which Doubt, the phyſitians of *Montpelier* made anſwer; that this accident did very wel agree with reaſon, and the doctrine of *Galen*: For ſeeing *that* woman was plethorick, and her courſes ſtopt by reaſon of overgreat plenty of blood, which did ſo diſtend the veſſels of the womb, that they could not ſufficiently be compreſſed; blood being drawn to thoſe veſſels, by the opening of the lower veins, the obſtruction was encreeſed. But when as, blood being drawn from the upper veins, the courſe of the blood was drawn back from the veins of the womb, ſo that their fulneſs and diſtention was leſſened, then they did more eaſily contract themſelves, to performe that natural and ordinary expulſion, which is wont to be performed by the womb, which reaſon was backed by the fore-cited Authority of *Galen*, out of the 10. Book of his method, chap. 2. Where he teaches us, that obſtruction is cauſed, not only by the thickneſs, but plenty of humors alſo. The Phyſitians therefore that were with her were adviſed, that they ſhould abate her ſuperfluity of blood by taking a good quantity from her arme: and that afterward they ſhould draw the blood downwards, by opening the veines of her feet, eſpecially about the time, when ſhe was formerly wont to have her courſes. To which were added other remedies, that provoke the Courſes ſtopt. For womans diſeaſes, ſee *Riolanus*, and the 15. Book of the Practice of Phyſick, and my directory for Midwives.

The 3 Obſervation, or Hiſtory, of Famous & Rare Cures, &c.

The Colick, proceeding from Choler.

THE wife of *Iohn Daumont*, a ſtone-cutter of *Montpelier*, being thirty years of age, was vexed with a chollerick cholick for eight months together, during which time, ſhe uſed divers remedies preſcribed by two ſeveral phyſitians, who had her in hand one after another, but al to no purpoſe. Finally, deſiring my advice, ſhee was cured within five days, with theſe three remedies following.

Take of the ordinary Clyſter-decoction one Pint, Caſſia new drawn, one ounce. Hiera picra half an ounce, Honey of violets an ounce and half, freſh butter two ounces, ſalt half a dram, Mix th em and make of al a clyſter. Let it be given at a ſeaſonable hour.

Take

Take green polypody and Carthamus ſeeds, of each one ounce and halfe; topps of Epithimum, and of dryed time, of each a pugil; annis ſeed, fennel ſeed, Carraway ſeed, and carduus benedictus, of each two drams; Senna cleanſed one ounce and halfe; gummy turbith halfe an ounce. Cinnamon one ounce and half, chryſtal of tartar two ounces, ſalgem half an ounce. Beat al and fil therewith the Belly of an old drawn Cock; and then boyl him and them in three parts of water and one of white wine, til the fleſh of the Cock be parted from his bones. Of this broth let her take ſix ounces or ſeven every day in the morning, continuing the ſame ſeven or eight daies if need require.

Take Conſerve of wormwood and maiden haire, of each half an ounce; Citron peeles preſerved ſix drams, one preſerved myrobalan, confection of alkermes three drames, aperitive Crocus Martis, two drams; pouder of the Electuary of Diarrhodon Abbatis, one dram and an half, ſpikenard, one dram, with Syrupe of preſerved Citron peeles, make al into an Electuary, of which let her take every day, one dram and half, two hours before ſupper, drinking after it a little wine tempered with a good quantity of Cichory water.

Take Aron Roots prepared according to the preſcription of the *Diſpenſatory* of *Quercetanus*, half a dram; the Root of Acorus and Pimpinel, of each two drams; Cinnamon, two ſcruples, Salt of Wormwood, half a dram; Sugar of Roſes to the weight of al the reſt. Make al into a pouder, of which let her take two ounces every day, three hours after Supper, drinking after it a little wine tempered with Cichory water as aforeſaid.

When ſhe had uſed theſe Remedies four daies together and had been afflicted after the ſame manner with pains of the Cholick, which was wont to returne every day once or twice, with moſt bitter torments, perſevering two or three hours together; on the fift day about noone, when the purging broath ſhould have wrought its operation, ſhe was taken with ſo great a Torment, as it ſeemed inſufferable, and ſhe ſaid ſhe had never felt the like; which nevertheleſs went wholly away within the ſpace of an hour, and never returned any more. And ſo the Patient was wholly freed from that cruel Diſeaſe. 'Tis credible that the ſharp and Cholerick matter deeply faſtened in the Coats of the Guts, or of the Peritoneum, and thickned by long abiding there, was attenuated by the Medicaments, and the waies opened by which the matter was voided forth.

For the Cholick, and other Diſeaſes of the Guts. See the tenth Book of the Practice of Phyſick. And *Riolanus*, both of the laſt Edition Engliſhed by me.

The 4 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Sciatica, or Hip-gout Pains:

Iohn Ranquier, A Porter of *Monpelier*, in extream cold weather, had been in the water with his Legs, many hours together, whereupon he was taken with a mighty pain in his Huckle-bone, which reached unto his Thigh and Leg; ſo that he could not go at al.

After a Clyſter he was let blood in the Arme of the ſame ſide. The following day he was purged with a very ſtrong purgation: For three daies together following, he took every morning, eight drops of Spirit of Treacle, with Carduus water, and did ſweat plentifully, and ſo al pain was taken away. The manner how to make the Sudorifick ſpirit of Treacle, ſhal be taught in the following Centuries.

The 5 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The Green-ſickneſs with Cholick pains:

THe Maid ſervant of Mr. *Peter Deſlours*, an Advocate of *Montpelier*, was troubled with exceeding great obſtructions of her Liver and Spleen, ſo that ſhe was not able, in that regard, to go up a pair of ſtaires, being oppreſſed with extream wearyneſs and ſhortneſs of breath. Moreover ſhe had extream thirſt, her Courſes were ſtopt, her Hypochondrica ſtretcht, and

her whol body was of an ugly colour. But above al ſhe was horribly tormented with Cholick pains, which came by fits, twice or thrice in a day. For the Curing of which Diſeaſes, theſe follow Remedies were uſed.

In the firſt place, becauſe her condition could not bear long taking of Phyſick, I order her only one Flegm purging potion, premiſing blood-letting the day before; and I Cauſed her to take the ſame potion again, three daies after.

Afterwards ſhe took every day in the Morning, half an ounce of Spirit of Tartar, with a Decoction of common Wormwood. After the ſecond taking whereof, the Cholick pains wholly vaniſhed: and continuing this Medicament, ten daies together, ſhe was reſtored to perfect Health.

For Drink ſhe uſed white wine wherein ſteel had been infuſed, which I ordered her to continue for ſome time.

For the Cholick, and Green-ſickneſs. See the tenth, and fourteenth Book of the Practice of Phyſick, and *Riolanus*, both of the laſt Edition, Engliſhed by me.

The 6 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The Jaundies.

THe Son of Dr. *Trouſſelleir*, Dr. of the Civil and Canon Laws, dwelling in the Town of *Aymargues*, being fourteen years old, was troubled with a moſt filthy Jaundize, which died his whol Skin as yellow as gold. For whom my ſelf and Dr. *Pachequus*, in conſultation preſcribed theſe following Remedies.

Take Senna clenſed, half an ounce; Anis-ſeed, one dram; tops of Roman wormwood, and leaves of Agrimony, of each half an handful; Lycoris Scraped and ſliced, two drams; broom-flowers and Cichory-flowers, of each half a Pugil. Boyle al to three ounces. In the ſtrained liquor, diſſolve four ſcruples of Rhubarb, infuſed in wormwood water with a little Cinnamon and ſtrained forth, of the Electuary *de Succo* Roſarum [ſee Engliſh *Diſpenſatory*,] two drams; Syrup of Roſes ſolutive, one ounce; make al into a potion, let her take it in the morning, and order her ſelf accordingly.

Take madder Roots half an ounce. Celondine Leaves, one handful. Centory tops, one pugil. Cinnamon half a dram. Saffron half a ſcruple. Infuſe them al night with eight ounces of white wine. To the ſtrained liquor add half an ounce of white Sugar, let her take it in the mornig five daies together, after the potion aforeſaid. And after the uſe of this Remedy, let her take again the purging potion before preſcribed. With theſe Remedies alone ſhe was perfectly Cured.

Of the Jaundice ſee more in the Eleventh Book of the Practice of Phyſick of the laſt Edition Engliſhed by me.

The 7 Obſervation, or Hiſtory, of Famous & Rare Cures, &c.

A laſting Redneſs of one Eye.

A Pretty fair young Damſel, cald *Antoneta de Loiiys*, Eighteen years of Age, for three or four years together had a flux of Rheume into her left Eye, wherewith the whol Eye, Eye-Lids and parts round about, were affected with redneſs and ſwelling. By means whereof her fair Face was deformed. The Diſeaſe was moſt violent in Autumne, and continued al the winter, nor could it be aſſwaged either by blood-letting or purgation with potions and Apozemes, or Veſicatories, and very many other Remedies, which were frequently applied, but al in vaine.

Finally, at the beginning of Autumne, the Diſeaſe returning with like violence as formerly, it was thought fit to uſe more potent Remedies, for the rooting up of this ſtubborn defluxion. And therefore inſtead of the apozeme which ſhe had formerly uſed, I preſcribe opening and Diaphortick,

Diaphortick Pils, of the Salts of Tamarisk and Wormwood, and the Magistery of Tartar, with my Diaphoretick pouder; whereof she took two in the morning three hours before dinner, and as many before Supper, four daies together. On the fift day she took half a dram of universally purging Pils, by which she was excellently Purged, whereupon the redness and Inflamation, began very much to abate. She took again the opening Pils four daies together, and on the fift she was excellently Purged with the universal Pils aforesaid; and a few daies after, the redness of her Eye perfectly vanished, and returned no more. The Basis of the universal Pils aforesaid, you shal find in my Practice of Physick, in the Chapter of the Falling-sickness.

In this Cure, I did not let the Patient Blood though she were of a sanguine Complexion, because she had bled a few daies before, both in her Arme and Ankle Veins. But the Cure being finished I prescribed her a Decoction to move her Courses, because she had them not kindly. Which Decoction was as follows.

Take *Marsh-Mallow and Valerian Roots, of each one ounce; Fenel Roots, Asparagus Roots, and Smallage, of each six drams; Leaves of Betony, Pimpinel, Ceterach, Mugwort, Savin, of each one handful. Boyl al in a Decoction of red Vetches to a fourth part. In the strained Liquor, dissolve three ounces of white Sugar. Let al be made into a Cleare Apozeme, Aromatized with two drams of Cinnamon, and one scruple of Saffron, for four morning doses, to be taken four daies before the coming of her Courses.*

For the Diseases of the Eyes read that matchless piece, the Second Book of the Practice of Physick. And *Riolanus* Anatomy both of the last Edition Englished by me.

The 8 Observation, or History, of Famous and Rare Cures, &c.

Veneral Pains.

A Renowned young man Mr. *N.* being twenty five years Old, Skilful in the Laws and Affaires military, was vexed with veneral pains, which tormented him continually night and day, for four years together, especially in his left Leg, from one end thereof to another. For an whol year he wore *Vigos* Plaster made with Mercury on his said Leg, by the advice of of Chirurgious, on whom he solely depended for Cure. At last by the advice of many Physitians, my self being one, he used a sweating Diet drink twenty daies together, and had many Topick Medicaments applied to his Leg, viz. Fomentations, fumes, Oyntments and and Plaisters: al which did him no good. He never leaves solliciting me alone, that I would do yet somwhat more, to free him from this inveterate Malady. To Satisfie him, therefore, I give him for a month together my antiveneral Medicament made up into pils, of which he took two in the morning, and as many in the afternone, three hours before Dinner and Supper. Every fift day he was purged with the Catholick Pils, and so by little and little the pain went away.

For Venereal pains read my Translation of *Sennertus*, of the French Pocks.

The 9 Observation, or History, of Famous and Rare Cures, &c.

The Great Pocks.

THe famous Man Mr. *N.* being fifty years Old, had been troubled with the whore masters Pox one whol year together, which would not give way to ordinary Remedies: but with the two Remedies aforesaid, viz. The Antivenereal Antidote and the Catholick Pils used, twenty daies together, he was wel recovered.

For the Great Pocks, see my Translation of *Sennertus*, on the French Pocks.

The 10 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Catarrh with other Symptomes.

THe noble Gentleman Mr. *Guilielmus Hebrardus*, Lord of *Miravaulx*, thirty years of Age, of a Flegmaticck and Melancholick Conſtitution, was troubled with a ſtubborn Infirmity attended with many Symptomes; ſuch an extream heavineſs of his whol Body, that he could not ſometimes move himſelf, with ſo extream a weakeneſs, that he was ready to faint away. Alſo in the afternoones, and in the evenings a thin and ſharp fluxion fel down upon his Lunges, which cauſed a verry troubleſome dry cough, which made him exceedingly feare a Conſumption, which rendred him exceeding penſive, ſeeing two of his ſiſters had died of conſumptions, and himſelf had bin troubled with ſpitting of blood. And the worſt of al was, that he would not adviſe with phyſitians, becauſe he loathed al kind of medicaments, ſo as that he vomited them up again. But his Infirmity growing every day worſe and worſe, the worthy gentlewoman his wife ſent for me. Having heard the ſtory of his diſeaſe, I propounded many Remedies ordinarily uſed, which he being not contented with, I promiſe him very wel taſted medicaments, and ſuch as ſhould reſtore him to his former health. He being willing upon this condition to follow my Advice, in the firſt place I preſcribe theſe following broaths.

Take roots of bugloſs and Aſparagus, of each one ounce; Leaves of Agrimony, Burnet, ſcabious and maiden hair, of each one handful; Creame of tartar one drame. Boyl al with a quarter of an old Cock, and make broth, which let him uſe ſix dayes together. With which he was purged downwards twice or thrice a day, and ſaid he found himſelf ſomwhat better. Afterwards, I preſcribe him this following pouder.

Take Salt of tamariske, Magiſtry of tartar, and milk of ſulphur, of each one dram. Mix them into a pouder; of which let him take half a dram every morning, with ſome of the foreſaid broath. Having uſed this Remedy ſix daies together, on the ſeventh he was purged, with this following pouder.

Take Senna and Cream of tartar, of each one ſcruple; diagridium eight grains; Cinnamon four grains: of my ſpecifick cephalik pouder five graines; with this medicament he voided an incredible quantity of flegmatick humors, not only by ſtoole, but alſo by vomic, without any trouble, ſo that the Humors came as it were of themſelves like whites of eggs. Alſo they came out of his brain into his mouth, in ſo great quantity, that it was as much as the patient could do by hauking to bring them al out. Alſo he rendred his Urine, much more plentifully than formerly. The ſame day, he was ſo eaſed and cleared, that he profeſt he was cured. But becauſe his whole Body was filled with abundance of humors, I ordered him to take the foreſaid pouder again for ſix dayes together, and to purge again upon the ſeventh day, which advice he diligently followed, and the ſucceſs was as before: only he voided nothing neer ſo much excrementitious matter as formerly, becauſe it was by the former purgation abated: after his being the ſecond time purged, he went into a bath made of Barley, Almonds, and cool ſeeds, being luke warm, for two dayes together morning and evening, to moyſten his over heated and dryed bowels. After the bath, he uſed the foreſaid pouder, three dayes together; and finally, was again as formerly and perfectly cured.

For the knowledg and Cure of Catarrhs, ſee the firſt book of the practice of phyſick, and *Rioланus* Anatomy of the laſt edition, both engliſhed by me.

The 11 Obſervation, or Hiſtory, of Famous & Rare Cures, &c.

An Old Headach with other Infirmities.

A Choice Virgin, *Margaret De Varanda*, Daughter to the learned man Dr. *David De Varanda*, a moſt Renowned Lawyer, and Profeſſor of the Civel and Canon-Laws, in the Univerſity *of Monpelier*, deceſed; being twenty yeares of age, was troubled with a moſt

ſharp

ſharp Headach, with a ſtretching on her right ſide under the ſhort ribs, belly ach, and other ſymtomes. She uſed every year many remedies, as potions, apozemes, pils, bathes Veſiatories, and many other things; which did her little good, alſo ſhe was not much bettered by the uſe of ſteel, though al theſe ſymptomes depended upon obſtructions, and bad humors quartering in her hipocondria to her Head. Finally, at the beginning of the ſpring, in the yeare 1625. I preſcribe here theſe following Remedies.

Take Conſerve of wormwood and Maiden-hair, of each one ounce. Conſerve of Elecampane rootes half an ounce, ſalt of tamariske, Magiſtry of tartar, and my ſpecifick aperitive pouder, of each half a dram: with ſyrup of Maiden hair, make an Opiate; of which ſhee took two drames every morning, two hours before ſhee did eate.

Every fifth day ſhe was purged with catholick pils [ſuch as our *Extractum Rudii*, or *Extractum Catholicum* in the *London Diſpenſatory*, but not ſo ſtrong] to the Quantity of two ſcruples, and within fifteen daies ſhe was perfectly cured.

For diſeaſes of the head and headach, read the firſt Book of the practice of phyſick, and *Riolanus* Anatomy, and *Johnſtons* Idea of the laſt edition, al engliſhed by me.

The 12 Obſervation, or Hiſtory, of Famous & Rare Cures, &c.

Colick Pains

Stephen de Varanda, Brother of the damſel aforeſaid, eighten years old, was tormented ſome dayes together with moſt greivious collick pains. Coming to ſee him, to abate the moſt violent paine which he was ſcarce able to endure, I preſantly preſcribe him ſix grains *of laudanum opiate*, which in the ſpace of two hours took away al his pain; he ſupt liberally, and ſlept al night, having paſſed many nights before, without any reſt.

The day following he roſe in the morning and went about his ordinary buſineſs, nor would he take the purge which I had preſcribed to remove the cauſe; howbeit his pain returned no more.

The 13 Obſervation, or Hiſtory, of Famous & Rare Cures, &c.

Colick Pains.

THe Renowned Mr. *Stephen Deumoys*, the Kings Councellor in his Court of *Montpelier*, being tormented wich colick paines, and having uſed other remedies in vaine, took half a dram of Pilulæ Catholicæ, wherewith he was excellently wel purged, and perfectly cured of his colick the ſame day.

Thoſe that deſire to know and cure theſe diſeaſes ought to read the Idea of practical phyſick; *Riolanus* Anatomy, and *Riverius* Practice of Phyſick of the laſt Editions, all Engliſhed by me.

The 14 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An Old Head-ach.

THe worthy wife of Mr. *William Dortoman* a renowned Advocate, being of a melancholly Conſtitution, was troubled many years together with a moſt grevious head ach, which held her in a manner perpetually; for the cure whereof an almoſt infinite company of medicaments were preſcribed by ſundry phyſitians; which doing no good, ſhe deſired me alſo to preſcribe for her, which I did after this manner.

Take conſerve of wormwood, maiden haire, and Elecampane roots, of each one ounce; ſalt of wormwood and tamarisk, of each one dram. With ſyrup of maidenhair, make al into an

an Electuary. Of which ſhe took two drams every day, two hours before meat.

Every fift day ſhe took two ſcruples of *Pilulæ Catholicæ*, with which Remedies continued ten daies together, her grievous and long laſting pain was Cured.

The 15 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Vomiting in a Malignant feaver.

Lawrence Boſch a renowneed Apothecary of *Montpelier*, was grievouſly ſick of the purple Feaver in the month of *December*, 1622. after the ſeige of *Montpelier*, and among other Symptomes, he was extreamly troubled with vomiting up al that ever he drank, as ſoon as ever he had taken it in; Water, Wine, Juleps, Emulſions, he vomited al; Only he retained his broaths. His Feaver had raged for four daies together, with a mighty burning and a thirſt which no drink could quench. His inner parts were ſo dried and burnt, that his Tongue was extream black and parched. Which greivous Symptome, was, by my advice, removed with this eaſie Remedy.

Take *Salt of Wormwood, one ſcruple; freſh Juyce of Lemmons one ſpoonful. They were mingled in the ſpoon and ſo given him. Preſently his vomiting was ſtopped, and afterwards he drank what he pleaſed, and never caſt it up.*

The 16 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A feaver with worms.

THe Daughter of *John Nivelle* a Proctor, twelve years old, had a continual Feaver, with a moſt troubleſome flux of the Belly, by which ſhe voided aſh colored Excrements, ſuch as are commonly ſeen to proceed from perſons troubled with worms.

There were preſcribed for her at firſt detergent Clyſters, made of ſweet things; alſo drinks ordinarily given againſt worms, and pouder of Rhubarb, twice repeated, by al which ſhe had no eaſe: nay there her Feaver and looſneſs grew worſe, ſo that they began to fear her death: becauſe ſhe was of a tender Conſtitution, had been long ſick, and was exceeding pale faced. At laſt I preſcribed her this following Julep.

Take *Roots of Sorrel, of Graſs, of Cichory, of each one ounce. Leaves of Endive, Cichory, Sorrel, Porſlane, and St. Johns-wort, of each one handful. Scordium and Roman Wormwood, of each half an handful. Of the three Cordial flowers, of each one pugil. Boyl al in Barley water, til a fourth part remain. In the ſtrained liquor diſſolve four ounces of ſyrup of Lemmons, and ſome drops of ſpirit of Vitriol, to cauſe a gentle Tartneſs. Make of al a Julep for four doſes, to be taken morning and evening.*

In thoſe two daies ſpace, in which ſhe took her Julep, the Feaver and looſneſs went quite away; and ſhe was perfectly Cured. If any wonder this Diſeaſe was Cured with ſo eaſie a Remedy; let him know, that St. Johns-wort, and Scordium, have a wonderful force againſt puttefaction, and prohibit the generation of worms, and kil them when bred. Yea and thoſe Herbs laid up with Cloaths, do hinder the breeding of Moaths: and I can truly witneſs, that I have uſed theſe kind of Juleps, in an almoſt innumerable company of Children troubled with worms, with moſt happy ſucceſs.

For the forementioned Diſeaſe, read the ſevententh Book of the Practice of Phyſick treating of Feavers, And *Riolanus* Anatomy; and *Johnſtons* Idea, of the laſt Edition, Engliſhed by me.

The 17 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The Jaundice.

A Student of Chyrurgery who dwelt at that time with Mr. *Thierry Hagnenot*, a moſt renowned Chyrurgeon, who had long Practiſed the Art of Chyrurgery, was ſick of the Jaundice.

I pre-

I preſcribed him a Choler-purging potion, and then the Infuſion for the Jaundice deſcribed in the ſixt obſervation, for five daies together; and in concluſion the Choller-purging potion, again, with which he quickly recovered.

The 18 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of the Jaundice.

THe eldeſt Son of Mr. *Demanſe*, being borne when his mother had a Tertian Ague, had alſo four fits of the ſaid Feaver or Ague preſently after he was born, and afterwards fell into the Jaundice, ſo that his whol body was died al over with a deep yellow, which exceedingly terrified his Parents: now he was only two months old, when I was called to the Cure. I was in great doubt what to do in ſo tender a body. At laſt I preſcribed this following Syrup.

Take Roots of Madder and the larger Celondine of each two ounces: Leaves of Celondine, Centory, and roman Wormwood, of each two handfuls: Cinnamon two drams: Saffron half a dram. Boyl al in Fountain water to a pint. In the the ſtrained liquor diſſolve a pound of Sugar, and boyl it to a Syrup. Of this he took a ſmal ſpoonful every morning for twenty daies together, and was perfectly cured, and is at preſent perfectly wel, honourably ſupplying the place of his deceaſed Father.

The 19 Obſervation, Or Hiſtory, of Famous and Rare Cures, &c.

Of a Pleuriſy, and the Feaver Synochus with putrefaction.

ON *June*, 10. in the yeare 1630. At *Grenoble*, Msr. *De Boiſſuzel*, born of a Noble family, being twenty yeares of Age, of a Sanguine Complexion, about the evening, began to be troubled with a pain in his left ſide without a Feaver. The ſame day a carminative Clyſter was given him, and a diſcuſſive bag was applyed to the pained part. The day following in the morning, he began to be Feveriſh, his pain remaining, which troubled him moſt when he lay on the other ſide. He was Clyſterd again and blooded in his left Arme: and a Julep was given him of red Poppy water, Syrup of Violets, and Sal prunellæ. An emollient and Carminative fomentation was applyed to the pained ſide, and afterward Unguentum Dialthea with diſcuſſive Oyls, His blood appeared exceeding impure; in the afternoons his Feaver was ſtronger than at other times. He was let blood again, alſo his julep and topick remedies were repeated. On the third day in the morning he was again let blood in two porringers, the one of which was corrupt enough, the other more pure; the Julep and topicks were continued. For drink he uſed, from the beginning, a Ptiſan drink of barley and Licoris, and al his food was broaths, which were ſomtimes altered with cooling herbs. The ſame day, after noone his Fever was exaſperated; blood was taken out of the ſame orifice to the Quantity of ſix ounces, which ſeemed pretty good. With the morning blood-letting, the Pain of his ſide went quite away, which was never very vehement, nor had any Cough, Shortneſs of breath, or Spitting of blood joined therewith; which ſhewed that it did proceed either from a light fluxion, or from ſharp vapors, ſeeing alſo that it came before the Feaver. And therefore it was a Primary Feaver, of that kind which we terme *Synochus*, and did not depend upon the Pleuriſie. After his laſt blood-letting, ſeeing he was vexed with a vehement thirſt and burning, I gave him to drink about a pint of cold water, with twenty drops of ſpirit of Sulphur. Preſently he felt a cold; al his belly over was covered with cloaths, & ſwet a little, an hour after. Then he drank broath, and an hour after had a clyſter; which being come away, he fel into a new ſweat, ſo plentiful that he was all over wet therewith; which being wiped off, he ſwet again, but not ſo plentifully, and reſted quietly al the night. On the fourth day in the morning he ſwet again, and his Feaver was in great part abated. So that on the ſeventh day, he was quite freed from his Feaver, and being purged on the eight day, he needed no other Phyſick. In this Cure 'tis obſervable, that by the ſpirit of Sulphur given with water, plentiful ſweats were procured, which I have found by many experiments, having ſeen many tertian

Agues cured with the ſame remedy, being given in the height of the burning fit, and when the patient is moſt thirſty; by which plentiful ſweats were procured, by which not only the fit, but alſo the whol diſeaſe was perfectly terminated. In a leſſer quantity of water, a leſs quantity of ſpirit muſt be given, leaſt the water become too tart.

The 20 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Tertian Feaver, or Ague.

MR. *Berardus*, a moſt Famous Apothecary at *Grenoble*, being fifty yeares old, in the month of *July* 1630. was taken with an intermitting tertian Ague, and being twice purged, and twice let blood, and never the better, he took my catholik pils on his wel-day, and the day following had his fit much more gentle. Afterwards before his next fit, he took this ſmal potion following.

Take *Cichory water three ounces, Salt of wormwood half a dram; Spirit of Sulphur twelve drops; mix them. After this potion his fit came no more, but he was plentifully purged by urine.*

At the ſame time *Mſr. de Manijſieu* the Kings Councellor in the Parliament of *Grenoble*, being twenty four yeares of age, after two fits was cured by being once let blood without any other remedy: now his blood was very hot and cholerick.

The 21 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of The Purple Feaver.

ON the 18. of *June*, 1630. I was called to *Grenoble* to *Mſr. de Chapoullay* the Kings Advocate, who had been eight days ſick of a continual Feaver, during which time, he had been thrice let blood, and had taken a purging medicament preſcribed by his ordinary Phyſitian. As ſoon as I ſaw him, I found his pulſe very frequent and unequal, which made me ſuſpect it was a malignant Feaver, and cauſing him to be uncovered, I found his whol body ful of purple ſpots. His urines were ſufficiently good, and ſhewed ſome beginnings of Concoction.

I ordered many Cupping-glaſſes to be applied al along his back-bone, both without and with Scarrification, alſo Epithems, and that he ſhould be anointed with Mathiolus his oyl of Scorpions; alſo I gave him Confectio de Hyacintho in his broaths, and cooling cordial Juleps. For his drink he uſed the vulgar ptiſan, wherein harts horn tied in a Cloath was infuſed.

Theſe remedies he continued to the eleventh day of his ſickneſs, growing in the meane time every day worſe and worſe, till at laſt he was taken with ravings and convulſion fits. On the ſaid eleventh day, he did ſweat lightly, without any advantage. His raving was joyned with a kind of ſtupidity; and therefore a veſicatory was applied to his Neck, and Cupping-glaſſes to his lower parts. Inſtead of the former juleps which were made of cooling and opening roots and herbs, theſe following were preſcribed.

Take *Barly one pugil, Bugloſs roots two ounces; Borrage, Burnet, Scordium, of each one handful. Citron and Sorrel ſeeds of each half an ounce; Tamarinds two ounces; Fowers of borrage, Bugloſs, and Red Roſes, of each one pugil; Dittamus half a pugil. Make a decoction in ſeven pints of water, to a conſumption of the third part. In the ſtrained liquor diſſolve one pound of white Sugar; and make it into a Julep. Of which let him take eight ounces morning and evening, adding to each doſe one dram of Sal prunella, and half a ſcruple of ſpirit of vitriol.*

For his drink he had a tincture of Roſes. In his Broaths he took pouder of Perles, Coral, Ivory, Harts-horn, and Bezoar ſtone. But in the laſt daies when al the ſympcoms grew worſe and worſe, inſtead of the ſaid pouder, I gave him only a ſcruple of Bezoardicum minerale in al his broaths. And becauſe towards evening his Feaver, ravings, and Convulſion were wont to encreaſe upon him, I gave him this follwing pouder.

Take

Take Sal Prunellæ, half a dram. Bezoardicum Mineral, one ſcruple; mix them, and adminiſter them in Cardous water. On the thirteenth day, was this pouder given him, and on the ſame day he began to take the Bezoardicum aforeſaid, in his broaths, and his fit came not that day, but he was better al the night after; after midnight the ſame pouder was given him again. On the fourteenth day, he was a little better, but without any Evacuation. On the fifteenth he was after the ſame manner. On the ſixteenth, there appearing concoction in his Urines, as there had appeared in the whol Courſe of his diſeaſe, the Coction by little and little augmenting, I gave him a purging Medicament, of two drams of Senna, and one dram and an half of Rhubarb, infuſed in a cooling decoction, adding to the ſtrained liquor; manna and Syrup of Roſes, of each one ounce; with which he was gently purged. On the ſame day, very many Puſtles were obſerved to break forth like ſmal Pocks, tending to ſuppuration, in great number about the Veſicatory, alſo ſprinkled up and down upon his back, Loyns, and Buttocks. On the ſeventeenth day the ſaid Puſtles were for the moſt Part broken and began to dry up.

But on the forepart of his Body about the Hypochondria, and Breaſt, very ſmal Pimples came forth, pellucid and Tranſparent, in an almoſt infinit number: the Feaver was very remiſs; and his raving was much abated. On the eighteenth day he ſlept almoſt continually night and day, until the twentieth day. He was purged again on the two and twentieth day, and after that the Feaver went quite away; and within a few daies he perfectly recovered. Two years ago the Lord of *Raſtenclieres* was Cured of a very dangerous purple Feaver, cheifly with this Medicine. I gave him in every draught of his ordinary drink, which was the vulgar priſan, one dram of Sal prunellæ, and ten drops of ſpirit [*Not oyle*] of Virriol; by which the Extream blackneſs and dryneſs of his Tongue, with a mighty thirſt were in a few daies taken away.

Read more of Feavers and Agues in that moſt excellent Book, the Practice of Phyſick, the laſt Book.

The 22 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Tertian Ague.

Mr *de Chaune*, on the 18. day of *June*, 1630. was taken at *Grenoble* with a Tertian Ague, and in the ſpace of twelve daies was once purged, and thrice let blood, and had many Juleps, ſo that within the ſaid time he was freed of his Ague. Now this is worth obſervation in the foreſaid Patient, that there never appeared any contents in his Urins, yet their liquor in the declination was good and laudable in its color and ſubſtance. The reaſon whereof was, that the patient had been long troubled with Nephritick Diſeaſes, by which means his Urine was ſtrained, of al its Craſſitudes.

The 23 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Bleeding at Noſe.

THe ſaid Mr. *de Chaune*, having been long freed from the foreſaid Ague, was taken with ſo violent a bleeding at the Noſe, that he was weakened thereby. For the ſtoppage whereof, many Remedies being uſed, this alone did the Cure, Viz. Vinegar and water frequently ſnuffed up into his Noſtrils, with which the flux of blood was ſuddenly ſtopped. Which flux breaking out again two daies after, he uſed the Vinegar and water after the ſame manner, as before, and it was preſently ſtopped.

The 24 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Malignant Feaver.

ON the 19. of *July*, in the year, 1630. I was ſent for to *Grenoble*, to the Son of *Stephen Mercier*, a writing School-maſter, ſixteen years old, ſick of a Malignant Feaver: now he was in the fifth day of his Diſeaſe, being al beſprinkled with violet colord ſpots, with raving, looſneſs and other greivous Symptomes. He had been once let blood, and had uſed no other Remedies. I give him two ſcruples of my Sudorifick pouder with twelve grains of Camphire, in four ounces of Carduus water. Being wel covered, he ſwet plentifully, and was in very good Caſe, his raving ceaſed, and his looſneſs was abated. The day following, his Feaver was ſufficiently ſtrong, without any grievous Symptom: he was let blood, and the ſame day his Feaver went quite away.

The 25 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of an old Gonorrhæa.

Mſr. *Chevilier*, a Citizen of *Grenoble*, being thirty years old, and of a Sanguine Complexion, and troubled with a very old Gonorrhæa, asked my advice on the eleventh of *July*, 1630. I preſcribe him in the firſt place a purgation of one ſcruple, of Mercurius Dulcis, with the ſame quantity of *Pill Cochy*, the day after he was let blood. And after that a Bolus of a dram of pouder of Rhubarbe, and three drams of Terpentine which he took five daies together, and was thereby purged three or four times each day. And finally he uſed this following water eight daies together.

Take *dried Mints three ounces; Lettice, Rue, Agnus Caſtus, each two ounces and an half; Dictamnus Creticus, ten drams; White Sugar two pound. Pouder al, and ad thereto five ounces of Venice Terpentine, and thirty ounces of White Wine, and diſtil them in Balneo Mariæ. Let the Patient take two ſpoonfuls every morning, two hours before meat. And with theſe Remedies he was Cured of this ſtubborne Diſeaſe.*

The 26 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Tertian Ague.

ON the 25. of *June*, 1630. at *Grenoble*, I was called to Mſr. *de Poulemies*, thirty years old, a Knight of the order of St. John, being ſick of a Tertian Ague. He was then in his third fit. But before thoſe fits appeared, he had been ſome daies Feaveriſh without any courſe of fits. I preſcribed him againſt the next day, which was his wel-day, a ſcruple of the Calomelanos of May, erne, and five grains of Diagrydium, in the form of Pils, with which he was luſtily purged, and towards the evening he perceived an appetite to eat, which before he had not. On the day of his fit, he took before it came, this following Julep.

Take *Cichory water three ounces; Salt of Wormwood half a dram; Spirit of Sulphur, one ſcruple. Make al into a Julep. This he take two hours before his fit, and being wel covered he ſweat plentifully, and ſo was freed from his* Ague.

The 27 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Tertian Ague.

ON the 30. day of June, 1630. I was called to the Lord of *Semiane*, who had a Tertian Ague. He had nine fits before, and by one of the Kings Phyſitians, had been five times

let

let blood, and had taken a Medicine made of the Infuſion of Senna and Caſſia: howbeit his fits grew worſe, and in them one Symptome did moſt of al trouble him, viz. a moſt ſharp Head-Ach, pricking and tearing the half of his Head only, like an Hemicrania. Preſently I judged this pain to proceed from ſharp vapors, ariſing from a Cholerick matter, lodged in his ſtomach, or the neighbouring Parts: and therefore I preſcribed him a purging Medicament of one ounce of Aqua Benedicta with the Infuſion of half an ounce of Senna; which purged him four times by ſtool, and gave him two vomits; at the firſt vomit, he caſt up about a pound of Leek-colored Choler; at the Second a like quantity of Verdigreſe colord Choler; and the following fit, he had no Head-ach at al. Then I gave him temperate opening Juleps and purged him again with Senna, Rhubarb, and Diacatholicum, and he was perfectly Cured.

The 28 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of VVorms.

THe young Son of Msr. *Imbert*, a Merchant of *Grenoble*, being about three years old, was many daies vexed with a looſneſs, and continual Stomach-ſickneſs, with a moſt acute Feaver, which ſeemed to ariſe from worms in his Stomach and Guts. Many Remedies were uſed in vain. And when the Child was in a deſperate condition, I gave him twelve grains of the Calomelanos of Turguetus [Mayerne] and preſently his ſtomach-ſickneſs ceaſed, and he ſlept almoſt al the day; but at night, a greater vomiting and looſneſs hapned than before. Among the ſtools were found a great quantity of bits of worms putrified, he ſlept in the morning and the whol day after, and vomited no more, and within twenty four hours the Feaver left him, and he had no further need of Phyſick.

The 29 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Melignant Feaver.

Msr. *De Beauboys*, a young Courtier in the beginning of *July*, 1630. was ſick at *Grenoble* of a Maligtant ſpotted Feaver. I was ſent for on the ninth day of his ſickneſs: he had been eight times let blood, and refuſed al other Remedies; he had a grievous looſneſs, and ſometimes raved. On the tenth day, his Feaver and looſneſs were more intenſe, his pulſe did intermit, he let his Excrements go from him into his bed. On the eleventh day he was in the ſame condition. On the twelfth, he was worſe. On the thirteenth he ſeemed at the laſt caſt, and that the pangs of Death were upon him. I cauſe a Veſicatory to be applied to his Neck, and give him to drink in the morning two ſcruples of my Diaphoretick pouder, twelve grains of Camphire, in Carduus water, and he remained two hours covered, but did not ſweat. In the evening he took the ſame potion again, and being wel covered; he did ſweat plentifully, was much better, al that day took in every draught of broath one ſcruple of Bezoardicum Minerale. A few daies after he perfectly recovered. When his Feaver ceaſed a ſwelling aroſe behind his Eare, exceeding painful, which was diſcuſſed without breaking.

The 30 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Nephritick pains.

ON the 3. of *July*, in the year 1630. *Peter Berard*, a Famous Apothecary at *Grenoble*, thirty years of Age, was taken with a moſt grievous Nephritick Pain, and preſently he took two Chyſters very laxative of Confectio Hamech, Diaprunum Solutivum, and Terpentine; which giving him no eaſe, he ſent for me. I preſcribe him a third clyſter, emollient and carminative with Diaphœnicon, and Diaprunum ſolutive, of each half an ounce, and four ounces of A-

qua

qua Benedicta. With this Clyſter he was luſtily purged, and his pain quite taken away. For the ſick man perceived the Morbifick matter to be drawn forcibly out of his Loyns and whol belly, without any trouble. At the ſame time fomentations were applied of the forſaid decoction.

The 31 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Of Arthritick Pains.

ON the 8. *July*, 1630. I was ſent for by Mr. *Perdreau*, Apothecary to the moſt eminent Cardinal *Rachelieu*, lying ſick at *Grenoble* of pains in his Joynts, which tormented his Legs, Arms and other Parts, with ſwelling, Inflamation and a light Feaver. He had been twenty daies troubled with this Diſeaſe, and had been nine times let blood of his own Head, and his blood was ful of wheyiſh moiſture: alſo he had been divers times purged. By my advice there was given him a ſcruple of the Calomelanos of Mayerne, eight grains of Diagrydium, and a clove. He was gently and plentifully purged, and was much better. Afterwards he took morning and evening, a cooling Julep, in the doſe whereof was infuſed three drams of Senna; and half a dram of Coriander ſeed; which he took cold, two daies together. Afterward he took the former pouder with like ſucceſs, and was perfectly Cured.

Read more of the Nine former Obſervations, in the Practice of Phyſick, *Riolanus* Guide to Phyſick, and Chyrurgery, and *Johnſons* Idea, al Engliſhed by me.

The 32 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Womb-Fits.

IN the month of *Octobe*r, the year 1631. the wife of Mr. *Valmeras*, the Kings Councellor in the Supreme Court of *Subſidies*, was troubled with the Mother, with a vomiting, a looſneſs, and extream weakneſs, ſo that ſhe ſeemed at deaths door. After many remedies uſed, viz. Strengthening fomentations applied to the ſtomach, Chicken applied to the heart, and Epithemes thereto applied, alſo Cupping-Glaſſes fixed upon her Thighes and ſhare, a Chyſter injected, of broath and Treacle; and after ſhe had taken Cinnamon water, at laſt ſhe drank this following potion, which did her abundance of good.

Take *Water of Mugwort, Roſes and Orenge flowers, of each one ounce, Cinnamon water three drams*; Confectio de Hyacintho, *one dram*; *pouder of Diamargaritum Frigidum half a ſcruple*; *Saffron, four grains. Make al into a potion.*

Having taken this potion ſhe vomited no more, and was very wel for two daies, afterwards her diſeaſe came again, and troubled her by fits. But as oft as ſhe took the ſaid potion, al the Sympcoms ceaſed.

The 33 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Of a Looſneſs.

A Strong man, of a Cholerick temper, a middle Age, was taken with a very Cholerick Looſneſs, with an exceeding great thirſt: being called to him, I preſcribed him Lapis Prunellæ in his ordinary drink, alſo in his Juleps made of Lettice and Purſlane water, which he took thrice a day, and ſo in the ſpace of twenty four hours he recovered.

The 34 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Of obſtruction of the Liver and Spleen.

A Certain ſtudent, a Polander, by reaſon of unſeaſonable watchings, fel into grievous obſtructions of his Liver and Spleen, which brought him to extream Leanneſs, whereas he

he was before wel fleſht and of a good habit of body. And after he had uſed purging potions, apetitive apozemes, and other Remedies, which did him little good; I preſcribed him theſe following Pils, by the uſe whereof he was reſtored to health in a months ſpace.

Take *of the beſt aloes and gum ammoniac diſſolved in vinegar, and forced through a ſearſe, and thickned again, three drams*; Senna clenſed, *and choiſe mirrh, of each one dram and half*; *ſaffron half a ſcruple*; *with oximel of ſquils make al into a maſs of pil-ſtuf, of which let him take two ſcruples every other day, two houres before dinner.*

The 35 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a beginning Phthiſis, or Conſumption.

THe Renowned and moſt Beautiful woman, the widow of the Lord *De Ribes*, being twenty five years old, was grievouſly troulbed with a thin ſharpe rheume which fel down upon her breſt, with a dry and almoſt continual cough, Leanneſs, a ſlow feaver, and redneſs of cheeks, which infirmities ſhe had received by infecton from her Husband, who two months before had died of the Tiſſick, ſo that ſhe ſeemed to be poaſting to the ſame diſeaſe.

On the 15. day of the month of *May*, in the year 1629. I preſcribed her a purging potion of ſenna, Manna, and ſyrup of roſes, with a pectoral decoction. The next day I cauſed her to be let blood. Then I ordered her to take, pectoral and cooling broathes for twelve daies together, and in every fourth broath, Sena was boyled to the quantiy of half an ounce.

After her broaths, ſhe uſed a bath of a decoction of barly and ſweet almons. Mean while ſhe took anights one ſpooneful of a ſyrup to ſtay her reume and cough, which was compounded of Syrup of Violets, Jujubes, dried Roſes, and Poppies, of each a like quantity.

With theſe Remedies ſhe grew perfectly wel, nor had ſhe any need of a cauſtick or iſſue, nor of the Aſſes milke, which I had preſcribed for her. Howbeit I perſwaded her to take her purgation twice a day.

The diſeaſes mentioned in the four laſt Obſervations, are more largely treated on in the Practice of Phyſick, *Riolanus*, and *Johnſtons* Idea, engliſhed by me.

The 36 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of an old Gonorrhæa.

Mſr. Q. Dr. of the Civil and Canon Lawes, being for eight monthes troubled with the Gonorrhæa, asked advice of me. In the firſt place I preſcribed him this following Bolus.

Take Venice terpentine three drames, pouder of rhubarbe one dram; Make them into a bolus, which let him take five dayes one after another. After this medicine he was pretty wel, but after ſome dayes the flux returned. Afterwards he uſed the water for a Gonorrhæa, which is diſcribed in the diſpenſatory *of Quercetanus*; at the firſt giving, the flux was wholy ſtopped, and therefore he continued the uſe thereof, only for three or four dayes, and the diſeaſe came no more.

Read for this diſeaſe *Senertus* his moſt excellent Book of the French Pox, engliſhed by me.

The 37 Obſervation, or hiſtory, of Famous and Rare Cures, &c.

A deadly Headach.

ON the 6. day of *April*, 1629. at *Lodona*, I viſited the daughter of *Francis Feron* a Merchant, being ſeven years old, which for two monthes had been troubled with a grievous headach, about her forehead and Eyebrowes, which took her almoſt every hour ſo violently, that ſhe many times deſired that her head might be cut open with a knife. And two dayes before

fore I came to her ſhe had three or foure fits of the falling ſickneſs and foamed. Her ordinary phyſitian had preſcribed her many remedies, eſpecially Purgations by Apozemes, and cupping-glaſſes and veſicatories were applied to her neck; but al in vaine. Being about to conſult touching this caſe, word was brought, that a new fit had killed her, and after her death ſome corrupt matter came out at her noſtriles. Whence might be conjectured, that an Impoſtume was ſecretly lodged in her brain, but the ſame being opened there was nothing found therein ſave a ſerous or wheyiſh humor, ſhed into the ventricles of the Brain.

This Accident brought into my minde the Hiſtory of a certaine Virgin, who being tormented with the like pain for many monthes together, and having tryed many remedies in vain, a Certain Chyrurgion ſhaved al the Hair from her Head, and covered the ſame with a veſicatorie, as if it had bin a Spice-Cap; whereupon bladders being raiſed, a great Quantity of wheyiſh blood flowed out, and ſo ſhe was cured, which Remedy might alſo have helped this girl aforeſaid.

The 38 Obſervation, or hiſtory, of famous and Rare Cures, &c.

A Scirrhus of the womb.

ON the 26. day of *December* 1630. the wife of Mr. *Dugaſt of Bitteren*, twenty years of age, came to *Monpelier* to be cured of an infirmity, with which ſhe was troubled. Now it was a ſcirrhous hard ſwelling of the whole body of her womb, and had been of five months continuance when ſhe brought forth her firſt born ſonn, and unwarily expoſed her ſelf to the cold air; by which meanes the remainders of her Child-bed purgations were ſuppreſſed, and retained in the body of the womb, where they cauſed a tumor, which in tract of time attained to the hardneſs of a Scirrhus. Sometimes ſhe felt pricking paines in the part, whence there was a ſuſpition, leaſt that tumor might have ſome affinity with a cancer. Theſe following Remedies I preſcribed for her.

Take Diacatholicum half an ounce, hiera picra, and diaphenicon, of each one dram and half; rhubarb pouderd one dram; with ſugar make al into a bole. Let her take it in the morning, and order her ſelf accordingly. The day following, let the baſilica vein of her right Arme be opened, and let her bleed eight ounces.

Take rootes of aſparagus, butchers broom, parſly, and briony, of each one ounce. The barkes of Capar roots, and the midle rinde of the tamariske, of each half an ounce. Leaves of Agrimony, Ceterach, Maiden haire, Mugwort, Feverfew, of each one handful. Senna cleanſed and polipody of the Oake, of each one ounce. Epithimum half an Ounce. Agarick newly trochisked, two drams; ginger and cloves of each two ſcruples; Boyl al to a pint, in the ſtrained liquor, diſſolve Syrup of Cichory with rhubarb three ounces; Make of al an Apozeme for three doſes, in three mornings to be taken one after another.

Take Roots of Marſhmallowes, and Lillies, of each two ounces; roots of briony and wild coucumber, of each one ounce. Leaves of mallows and violets, of each two handfuls; Leaves of mugwort, Nep, of each one handful. Fat figgs twelve pair; Line-ſeed and Fenugrick ſeed, of each an ounce. Flowers of camomel and Melilote of each two pugils. Boile al in three parts of water and one of white wine added towards the end, with which the part affected muſt be fomented, morning and evening.

Take Freſh new made butter and hogs greaſe, of each one ounce; oyl of ſweet almons and Lillies, of each two ounces; Mucilage of fenugrick ſeed, drawn with white wine ſix drames, gum amoniacum diſſolved in Vinegar three drames, ſaffron half a dram, wax as much as ſhal ſuffice. Make of al an ointment to be uſed after the fomentation.

Take of the roll of Melilot Plaiſter, and of Plaiſter of mucilages, of each one ounce; Gum Amoniacum diſſolved in vinegar and drawn through a ſearſe, and then thickned, half an ounce; with oyl of lillies make a plaiſter upon leather of a fitting magnitude and ſhape to be applied to the ſaid part, after anointing, and to be renewed every fift day.

Take of the beſt aloes half an ounce. Gum Ammoniacum diſſolved in vinegar, and thickned again two drames. Bdellium and mirrhe of each one dram. Senna cleanſed, and aga

newly trochisked, of each two drams: Fecula bryoniæ one dram. With oxymel of squils, make all into a Mass of Pil-stuf. Of which let her take half a dram, every day in the morning, two hours before meat, for fifteen daies together.

When she had begun the use of these Remedies, an extream fit of cold weather, hindred her continuation thereof, and she returned into her Country; and at her departure, I advised her to renew her use of the foresaid remedies in the spring, and to continue them along time together. To which I added that she should Frequently sit in a bath, should use an emollient Cataplasme, and a diet drink of China roots for her ordinary drink. Al which remedies, being continued for three months together, especially the Fomentations, Ointments and Plasters, with the diet drink aforesaid, she was perfectly cured. And her monthly purgation, which was stopped for eight months together, came again, and kept its natural course, So that after that time she bore children. Read for this, and al other womens diseases that excellent Peece the fifteenth book of the Practice of Physick, englished by me.

The 39 Observation, or History, of Famous and Rare Cures, &c.

Of A quartan Ague.

A Comely Damsel the daughter of *Mr. Desplans*, the Kings Councellor in the supream Court of *Subsidies*, in the month of *November*, in the yeare 1630. was troubled with a double quartan, two months. I prescribe her an infusion of one dram of Senna, in my Fever-conquering-water, which she was to take every day, and at the Fourth taking, her Ague was perfectly taken away, and she was afterward very wel in health.

The 40 Observation, or History, of Famous and Rare Cures, &c.

Of Another quartan.

Mrr. Varandeus, A Canon thirty years old, being sick of a quartan ague, in the month of December 1630. Used the foresaid Remedy every day, and was Cured at the seventh taking.

The 41 Observation, or History, of Famous and Rare Cures, &c.

Inflamation of the Dugs.

About the Beginning of *January* in the yeare 1631. the wife of the renouned *Mrr. de Pecomare*, chief president in the Court of *Subsidies* and of Accounts, being in child-bed, began to her troubled with the Inflamation of her right dug, by reason of a blow which she had there received. Now there was milk therein, which could not be sucked out. On the first day there was an embrocation used thereto of two parts of oyl of Roses, and one part of oyl of unripe Olives. On the second day, and the Following daies, the said Embrocation was continued only to the part pained, and her whol dug anointed twice in a day with ointment of Marshmallows, and within a few daies she was cured, without any other Remedy, Cupping-glasses were Fastened to her shoulder blades, but no vein was opened, because I saw the disease presently discussed.

The 42 Observation, or History, of Famous and Rare Cures, &c.

Of A Malignant Feaver.

IN the month of *April*, in the yeare 1631. A young woman, the widow of *Montaudus*, a

a Citizen of *Montpelier*, was troubled with a malignant Spotted Feaver, and ſhe had ordinary remedies adminiſtred til the eight day, in which I was called, and found the ſick patient extream weak, with a mighty thirſt, dryneſs and blackneſs of tongue, and black Furred humors ſticking to his teeth. Beſides ſundry cordial medicaments, I preſcribed her very cooling juleps, with Sal prunellæ and Spirit of Vitriol. And in her ptiſan which ſhe did ordinarily drink of, ſhe took Sal prunellæ and Spirit of Vitriol. Cooling and moiſtening Fomentations were applied to her breaſt and hypochondria: and within two daies her thirſt and burning vaniſhed. And afterwards with a purgation and other lighter Remedies, ſhe in a few daies recovered.

The 43 Obſervation, or Hiſtory, of Famous and Rare Cuees, &c.

A malignant Feaver, with ſwelling behind the Eares.

IN the yeare 1623. After the ſeidg of *Montpelier*, a very malignant Feaver ranged up and down, of which wel-nigh half that had it, did die. More peculiarly, al that had ſwellings behind their Eares (which was wont to happen about the ninth or eleventh day of the diſeaſe) did die. And having ſeen many of theſe, whom I could not cure with any Antidotes; I began to think that Riſings behind the Eare, are therefore counted a natural ſign, becauſe that part is not large enough to receive the whol morbifick Cauſe, which remaining in the inner parts kills the patient: and that the work of nature muſt be ſupplied and helped. And though the patients had a ſmal, very frequent pulſe, and almoſt ſuch an one as they cal the piſmire-pulſe, ſo that they ſeemed to be at the point of death: yet revolving in my Mind, this ſaying of *Cornelius Celſus*, viz. that many things may wel be practiſed in a dangerous caſe, which were otherwiſe to be let alone, and that it is better to trie a hazardous remedy upon one or two, than to leave ſo many ſick people to certain deſtruction; I ordered them to be let blood by peece-meal (becauſe of their weakneſs) twice or thrice in one day, and the day after I gave them a purgation. By which Method, al that uſed the ſaid Remedies, were happily delivered, nor did any die afterward. The Hiſtory of the firſt patient Cured after this manner, is found deſcribed at large, in the firſt Chapter of the third ſection, of my Method of Cureing Feavers.

Read for theſe Feavers the Practice of Phyſick, *Book* 17. And *Johnſtons* Idea, and *Riolanus* guide to Phyſick and Churgery.

The 44 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Cholick pains of the Stomach.

IN the Month of *April* 1631. The wife of *Mr. William Dortoman*, a renowned Advocate of *Montpelier*, was ſuddenly taken with moſt vehement pains, quartering in the region of her ſtomach and Spleen, which could not be abated, either with Fomentations or purgations: but blood being plentifully drawn out of her left Arme, they vaniſhed immediatly.

The 45 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Vomiting of Blood

Paul Hilary, a Merchant of *Niſmes*, being afflicted with an abundant vomiting of blood, four or five times in the ſpace of ſixe weeks, for the ſtoppage whereof many remedies were applied, by his ordinary Phyſitians: at laſt the ſymptome returning again and holding longer than ordinary, ſo that he was in extream danger of death, I was called to him on the 28 of *May* 1631. He was 50. yeares old, of a cholerick temperament, and exceeding ready in al his actions; and having been Conſul the yeare before, he had wearied himſelf with exceeding great Labours, both of body and mind: whence much choler was bred, which by aduſtion came neare the nature of black choler, and putting the blood into great Commotion, cauſed

the

the ſame to find an iſſue, to which end the acrimony of the ſaid humor did very much conduce, as being apt to open the veins: as alſo the exceeding thinneſs of the blood by reaſon of abundance of wheyiſh ſubſtance mingled therewith. I conceived that this blood came out of the veins by way of anaſtomoſis, becauſe he vomited it in exceeding great Quantity, being curdled into clodders. Yet between whiles he vomited nothing at al, ſo that for a whole month after his firſt fit, he vomited no blood at al. Adde hereunto that he voided blood by ſtoole alſo, as wel as by vomit; yea and his firſt fit began with voiding blood by ſtool, which ſhewes that the meſaraick veines which end into the gutes were opened by anaſtomoſis.

On the Foreſaid day when I viſited him, the eruption of blood was ſtopped For twenty four hours, howbeit, it ſeemed to be again at hand, as might eaſily be ſeen by the unquietneſs, thirſt, heart-burning, Heat of the midrif, pulſation of the head and the patients Feavers: and therefore, ſeeing it was towards evening, he had only a julep given him of Purſlane and Poſſet-lane water, with ſal prunelle. He ſlept al night Ful of ſlumberings, mutterings and unquietneſs.

On the twenty ninth of the Month of May in the morning, he was let blood out of his left Arme, only the quantity of Foure ounces, becauſe he was ſo troubled with heart-burning and ſo weake, that he thought he ſhould quickly die. His blood was exceeding red, and on a manner turned into ſerum: upon his blood-letting he became ſtronger and was better alſo his urines, which before were like water, became coloured. A detergent Clyſter being given him in the afternoon, he was againe let blood ſeven ounces; the blood was very like the Former, and he was the better after it. The Foreſaid juleps were repeated. For drink he uſed water in which iron had been quenched, with ſyrupe of quinces and ſpirit of vitriol. An aſtringent pouder was put into his broathes, barley-creames and Panadas; alſo a binding and ſtrengthening Electuary was preſcribed, to be taken once a day, towards the Evening. A Fomentation was applied to the Hypochondria of the decoction of Purſlane and Plantane; and other things boyled in Oxycrate or water and vinegar; alſo a cooling aſtringent ointment, was applied to the ſaid parts. His Broaths were made with iroued water. The Following night he ſlept ſufficiently, but his dreames were troubleſome.

On the thirtieth day of the ſame month, his Urines were better coloured, his pulſe better, only his thirſt and pulſation in his head did continue. In the morning was given him a medicament of one dram of poudes of rhubarbe, and two drams of tryphera Perſica, with which he did four or five times void many cholerick and wheyiſh humors, whence he became better, his urines were amended, and he ſleept al night.

On the laſt day of the ſame month, he was wel in the morning, but his Urine had no ſwim, his thirſt contioued, and his pulſation in his head. He had a cooling aſtringent Julep given him to drinke, made of a decoction. His Urines grew paler by little and little, void of Swim, thirſt encreaſed, notwithſtanding his ſharp drinks. Towards evening the feaver was augmented, the patient was very unquiet, and thirſty, alſo he complained of a ſmarty boiling in his ſtomach, whereupon I was exceedingly afraid that his vomiting of blood would returne againe, the cauſe whereof ſeemed to be the tranſlation of choler to thoſe parts, whence it was that the Urines were ſo pale. I Conceived the proxatartick cauſe of this returne to be, either the too frequently giving him over boiled broathes, or the over hot application of the fomentations by the apothecaries unskilfulneſs, which ought to be applied but lukewarme. A token hereof was that the Patient ſaid he felt an heat under his ſhort ribbs preſently upon the firſt application of the Fomentations. To the end therefore to prevent this ſymptome at hand, I cauſed him to be let blood in his left arme eight ounces; which iſſued out with violence. At the ſame time Epithemes were applied of vinegar and water luke-warm, Frictions were uſed and ligatures, a Clyſter was given, and a julep of poſſlane water and red poppy water, with ſyrup of the ſaid red poppy and ſal prunelle. With which remedies whithin two houres he was freed from his Heat and thirſt. He paſſed over the reſt of the night with very little ſleepe, the beating in his Head ſtil remaining.

On the firſt day of *June*, his urines were wel coloured, with an eneorema or ſwim; he took a potion of a decoction of the leaves of Cichory, Sorrel, Poſſlan, with half an ounce of Tamarinds, adding an ounce of ſyrup of pumgranats, a ſcruple of pouder of rubarbe. He was twice purged in the Fore Noon, and voided great Quantity of wheyiſh humors. After the ſecond ſtoole, he was taken with a violent vomiting, and caſt up his broath, which he had took up a little

little before with flegm, but no blood, in the afternoon he had two or three ſtooles of cholleriek Froathy excrements, and ſlept indifferent wel at night.

On the ſecond day of *June* in the morning he ſeemed a little troubled in his diſcourſe; ſo that he could not rightly pronounce his words, nor conveniently deliver his mind in good ſence, which nevertheleſs he was himſelf aware of, and ſaid that his mind was not Free. The pulſation in his Head did continually perſevere, he took the foreſaid medicament of half an ounce of tamarinds, and a ſcruple of rhubarb. And ſeeing the foreſaid diſturbance of his mind continued, two cupping glaſſes were applyed to his ſhoulders, with ſcarification, with which very wheyiſh blood was evacuated, and the ordinary frontal was applied. Within an houre that ſmal Raving went quite away, and the whole dayes ſpace he had Four or Five ſtools which he bare very wel. At night he ſlept quietly, and was thereupon much better.

On the third of *June*, he profeſſed that he Found himſelf very wel, and that the beating of his Head was very much diminiſhed. He took again the Foreſaid Medicament, and was purged as before. Epithemes were dayly applied to his Heart, and Fomentations to his Hypochondria, of Oxicratum or vinegar and water: alſo he took in the evening the aforeſaid Opiate.

On the Fourth of *June* the patient continued in the ſame condition, he took in the morning the Foreſaid opiate, and again in the evening, and in the afternoon Syrup of Corals. But becauſe in his ſpleen an extraordinary hardneſs was perceived, an emollient and aperitive fomentation was applied, as alſo an ointment indued with the ſame vertues.

On the fifth day, he took in the morning of the broath of an old Cock, boyled with temperate aperitive Medicaments, China Root, and Cream of Tartar. An Iſſue was made in his left Leg, and the fomentation and anointing of his Spleen were continued. And now the Remedies uſed to ſtop blood, were by little and little left off, and we proceeded to the uſe of ſuch as were proper for the obſtruction of his Spleen, and againſt his Melancholy Humor. Then he began to uſe ſolid meats with a little thick Wine, when he was free of his Feaver, the Excrements of his belly, and his Urine better digeſted, and his ſleep almoſt continual. The ſwelling in his Spleen appeared ſufficiently great, and therefore I preſcribed him the foreſaid Cock broth for twelve dayes, adding every third day two drams of Senna. Alſo I cauſed him to continue his Fomentation and his emollient and aperitive Liniment for the like ſpace, and after thoſe twelve dayes a bath, after that the waters of Meyne, with iteration of the bath once a week. And finally the magiſtral ſyrup of juices, with the opening opiate.

On the ſixt of *June* he tooke his broath with two drames of ſenna, and was therewith duly purged.

On the ſeventh day I departed; and with the uſe of the Foreſaid remedies, eſpecially the magiſtral ſyrup for a long time together he was cured.

Read more of this in the ninth book of the Practice of Phyſick, and *Johnſtones* Idea, of the laſt editions engliſhed by me.

The 46 Obſervation, or Hiſtorie, of famous and rare Cures, &c.

The Whites.

A Renowned Nun, by reaſon of the hot diſtemper of her liver and kidnies in the beginning of *Auguſt* 1630. was taken with a very plentiful and troubleſome flux of the whites, of which a Chyrurgeon going about to cure her prepoſterouſly, and giving her vehement purgations, the diſeaſe was lengthened out to the winter following, nor did it now ceaſe, but was only diminiſhed, and the ſick patient continued pale and without colour. Now the ſpring Following, her infirmity began by little and little to grow worſe, until the Beginning of the Summer, at which time ſhe had no appetite, and was troubled with a light Feaver, unto which a cough ſometimes was joyned, ſo that it was Feared ſhe would fal into a Conſumption.

I appointed her in the firſt place a gentle purgative of ſenna and rhubarbe, and afterwards to be let blood. And then a laxative puſan for Four daies, then a luke warme bath to temper the Heat of her Liver and kidnies for two dayes Following.

Upon

Upon her bathing, ſhe was taken with a Looſneſs, ſeeming at firſt to do her good, but afterwards ſhe was thereby weakned, ſometimes ſhe had a Feaver, and her ſtomach was void of Appetite. I ordered her to take for five or ſix daies together a ſcruple of Roman Wormwood, an hour before dinner. The firſt day ſhe had many and large ſtools; on the ſecond her looſneſs was wholly ſtopped, and on the other daies her ſtomach was very much ſtrengthened, her Feaver vaniſhed, ſhe became daily better colored, but her want of Appetite did perſevere. I ordered her to continue the uſe of the Rhubarb for twelve daies longer, without the ſyrup, made into a bolus with one dram of Terpentine, to ſtop her whites. And ſo ſhe was freed from all the foreſaid diſtempers and diſorders.

The 47 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A continual and malignant feaver.

ON the laſt day of *January* 1629. the moſt reverend Biſhop of *Niſmes*, being fifty yeares old, began to be ſick of a malignant Feaver, which had its exaſperations every day, from eleven in the morning to ſix in the after noon; he was ſtomach-ſick by fits, and troubled with the Hiccup, his urines red and troubled, his excrements liquid, cholerick and few, his want of ſleep perpetual to the ſeventh day. Being firſt taken ill in a ſmal village near the Kings Camp, he preſently betook himſelf to *Belliloca*, where on the ſecond day of his ſickneſs, he was let blood by two Phyſitians, and very corrupt blood came away. This was done after he had taken a Clyſter.

On the third day, he was again let blood, and blood like the former was taken away. In the mean ſpace cooling juleps, and ſuch as reſiſt the venemous quality of the diſeaſe, were adminiſtred. On the ſame day a light ſweat appeared, without any cold ſhaking before the ſame, or any ſhivering, but he was very ſtomach-ſick before his ſweating. On the fourth, fifth, and ſixt daies the like ſweat returned, without any abatement of the Feaver.

About the end of the fifth, drops of blood came out of his noſe. Now I was ſent for on the ſixt day, in which the Feaver appeared vehement with a Great and frequent pulſe, thirſt, tumbling, and other ſymptomes. On the ſame day he was again let blood eight ounces.

About the beginning of the ſeventh day, he was taken with a ſhaking fit for an whol hour, after which he was greivouſly ſtomach-ſick for another houre, at laſt he did ſweat plentifully, which continued al day in a manner; ſo that he was fain to be ſhifted ſeven times. After his ſweating, his Feaver was wholly allayed, and his Urines which were before red and thick, became yellow and wel conditioned.

On the eight and ninth day he had a moderate looſneſs whereby was voided cholerick and phelgmatick matter, whereby he ſeemed reſtored to his former health.

On the tenth day, he was removed to *Niſmes*, becauſe of the unhealthyneſs of *Belliloca*, and becauſe the Plague began there to break forth.

On the twelfth day he was purged with a medicament of Senna, Rhubarb, Manna, and Syrup of Roſes.

On the thirteenth he began to uſe more ſolid meats, in a ſmal quantity, and on the fifteenth, Wine much allaied with water. The ſame day he left his Bed, and dined at the Table, to make it appeare that he was perfectly recovered.

Nevertheleſs he fell into a Relapſe on the ſaid fifteenth day about Midnight, with frequent vomitings, whereby he caſt up a little flegm.

About the beginning of the ſixteenth day, after a Clyſter, he was let blood, and very corrupt blood came from him. Juleps were made of cooling, aperitive and alexipharmical medicaments, Epithemes, anointings with *Matbiolus* his oyl of Scorpions, were applied, and Confectio de Hyacintho was ordered to be given him in his Broaths.

On the ſeventeenth day the Clyſter was repeated & he was again let blood, the blood being like the former. Bezoar ſtone was given him in his Juleps, and ſometimes bezoardicum mineral in his broaths. To take away his Inclination to vomit, ſalt of wormwood was twice given him, not without ſucceſs, and ſtrengthening Fomentations were applied to his ſtomach. An oyntment of Oyl of Nut-megs and of Quinces was applied to the ſame part. In his Julep treacle

treacle water was mixed once or twice, because there was great suspition that there was a touch of the pestilence in this Disease, because of his frequent stomach sickness and Faintings. Spirit of vitriol was given him in his ordinary drink.

On the 18. day, he was taken with a shaking fit, which was followed by a sweat, which continued four or five hours, but the matter was but little that sweat out and he bore it all, was very impatient, Stomach sick, and vomited frequently.

Afterward to stop his stomach-sickness, a dram of Salt of Wormwood was given him, dissolved in Wine, which wrought most happily, so that he was very seldom troubled with any vomiting afterwards. A few houres after, being again taken with a shaking fit, he went twice to stool plentifully, and at last he fel into a sweat, which he could not long bear, by reason of Unquietness; the sweat came slowly away, but it continued many hours.

To assist that motion of Nature there was given him Bezoar stone with broath, and some hours after in more broath there was given him Bezoar Solare, wherewith he did sweat abundantly and easily, and by that means his Feaver was very much abated.

On the 19. his Feaver was much gentler, a Laxative Clyster being given him with three ounces of Aqua Benedicta, with which he had five stooles during that whol daies time, and voided much Choler mingled with Flegm; at night he slept quietly, his Urins were wel colored, with a thin setting. His strength was repaired by Roborating Medicaments.

On the 20. and 21. day, al things were after the same manner: once or twice a day, he voided by stool, Excrements sufficiently thick.

On the 22. he was purged with a Medicament like the former: and he had many stooles of a Cholerick and Flegmatick matter; also he vomited thick Flegm with a little Choler. Afterward he slept pleasantly al night, as also the following day, which was the 23. and then he was quite void of the Feaver; and the Urines appeared better digested.

To expel the Remainders of the Humor on the 24. day he took an opening broath, wherein on the 26. day we boyled half an ounce of Senna with correctives; and therewith he was four times purged: whereupon his Stomach to his Meat was encreased, and his thirst gone; and the opening broaths being continued for certain daies, he was restored to his former Health.

The 48 Observation, or History, of Famous and Rare Cures, &c.

Of an Inflamation and Impostume of the Kidneys, Bleeding at the Nose, a Malignant Feaver, with grievous Symptomes.

ON the 27. day of *March*, in the year, 1629. I was sent for to the most reverend Bishop of *Lodoven*, being fifty years Old, who had been formerly sick of a Malignant Feaver, and had twice relapsed into the same Feaver, and was freed from the said Relapses by divers Critical Evacuations, especially by plentiful bleedings at the Nose, and with very many Remedies prescribed by two Physitians of *Lodoven*, and my self. After he seemed to be recovered many daies together, on the 17. of *March*, about twelve a Clock, he began to be sick, and on the day following was suddenly taken with a sharp, and setled pain about his right Kidney, which was followed by these Symptomes, frequent vomiting and Hiccupping, troubled Urines, sometimes red and watry, sometimes with gravel, partly red, and partly white, sometimes also he complained of a numnedness in his right thigh. On the 22. day, a Feaver seized him, and on the following daies he had shaking fits, twice or thrice a day; after which the Feaver was exasperated for two or three hours.

I coming to him on the 27. day of his Disease with the Physitians aforesaid, we conceived (advising together) that there was a stone in his right Kidney, and that the pain had caused an Inflamation in that part. But because there appeared then little or no pain, we conceived the Inflamation was come to suppuration. We resolved to let him bloud first in his right Arm, afterwards in his Ankle on the same side, and that he should have emollient and cooling Clysters frequently injected, with Julaps, lenitive Emulsions, Epithemes, Fomentations, Liniments, and Cataplasmes. We began with Blood-letting, which was Celebrated on the 27.

day

day aforesaid, in the evening to the quantity of eight ounces. About evening he bled at the Nose the quantity of two pound, and the blood still issued, and he grew weak. Therefore we consulted to stop the bleeding, and ordered him to bleed for revulsions sake, in his right Arm. We gave him Sal Prunellæ dissolved in cold water. An astringent frontal was applied, Vinegar was dropt into his Eare, he took juyce of Nettles, a Cupping-Glass was applied to the Region of his Liver; a Linnen Cloath wet in Vinegar was wrapped cold about his Neck, and his Arms and Legs were tied. Which working no effect, the Patient said he must go to stool, nor could he be perswaded to use the stool in his bed. We told him before hand, that if he rose out of his bed being so weak, he would faint away, howbeit that fainting would be profitable to stop his bleeding. Which happened just in a manner as we had foretold, for after he was up, he fainted away, out of which fainting fit being recovered by giving him wine, and throwing cold water in his Face, he had a plentiful stool, and after he was laid again in his bed, he bled not so violently as before; and after he had rested a while we gave him one dram and an half of Sal Prunellæ dissolved in water, which when he had taken, the Bleeding was quite stopped, and there needed no more Remedies.

The following day, which was the 28 of *March*, he was troubled with a mighty thirst, and certain painful pustles, Caused by adust blood, broke out about his Fore-head, Cheeks, Lips, Tongue, and in the Paleness of his hands, but no shew of any pains in his Kidneys. Only he did exceedingly abhor al meat, so that he would by no means take any broath, much less Juleps and Emulsions. Howbeit he slept, by fits, al the day long, and had two stooles of Cholerick and very stinking Excrements. His Urine had no color, was thin, void of settling, with gravel in the bottome of the Chamber-pot. In the morning we gave him in his drink half a dram of Salt of Perles with Boyled water, and his thirst was much abated. In the afternoon and again in the Evening, we gave him twelve drops of Spirit of Vitriol, with an ounce of Syrup of Maiden-Hair in Boyled water, by which also his Feaver and thirst were much abated. He was frequently anointed on his Loyns, with Populean, *Galens* cooling Oyntment and Oyl of Roses. Three or four spoonfuls of Oyl of Sweet Almonds was mingled with his broaths. The night following, he slept quietly, awaking now and then with mournful groanings, as formerly he was accustomed.

On the 29. day in the morning, he complained of a pain in his right Kidney, which was not very vehement, yet he was not able to lie upon his right side. His Urins were thin, and pale, with gravel, partly red and partly white. He had Pustles about his Mouth which were anointed with new Pomatum, a little Sal Prunellæ being mingled therewith. We prescribed him a Fomentation and a Cataplasm, Emollient and pain asswaging, to be applied to his Kidneys, as also a Julep of a Decoction of cooling Herbs, with Seeds of Lettice and white Poppy, the tops of Mallows and Violet, and Buglos flowers.

About four in the after noon he was taken with a light shivering, which was followed by an Intense Feaver, which lasted for some hours. At ten of the Clock, he tooke a Julep of eight ounces, and slept little al night.

On the 30. day, at three of the Clock in the morning, he was afflicted with a vehement shaking fit, for half an hour, afterwards his Feaver was augmented, the Ulcers of his mouth and Throat were more grievous and painful, for the asswaging whereof Diamorum was used, his thirst was exceeding great, his stooles liquid and very stinking. Having taken some broath, two hours after, a plentiful sweat broke forth in his Head and Neck, with a moisture only in his other parts; in the middle of which he had another stoole, and had to the number of five stooles betwixt that and eight of the Clock. His Urines appeared more digested and colored, having a very smal settling, also his Feaver was abated, but he was exceedingly weakned by his loosness. About four of the Clock he took a Julep, with twenty drops of Spirit of Sulphur, now the Quantity of his Julep was alwaies eight ounces. He slept again til six a clock, and when he awake, he said the Julep had done him much good, and that he felt a coolness al his body over, and indeed his Feaver seemed more remits: having taken some cooling broath he complained of a pain in his pallate, which having viewed, we find it Ulcerated by the heat of the foregoing Feaver. For the asswagement whereof, he used a Decoction of preserved Mulberries: afterwards we prescribed him this following Gargarisme.

Take

Take *Plantane and Meadſweet water, of each four ounces; Roſe-water two ounces; Crude alum two drames. After a gentle boiling, diſſolve therein diamorum and honey of roſes of each one ounce. Make it into a Gargariſme. We alſo ordered his pallate to be often ſmeared with a pencil dipt in honey of roſes. Alſo he frequently waſht his mouth with his ordinary ptiſan drinke, made of barley and Lycoris.*

And from that time he ſlept quietly enough til Midnight; when he was again taken with a ſhaking fit, which laſting two hours, there Followed an accute Feaver, which the day Following, being the laſt of *March*, towards eight a clock, appeared much abated, the urines being alwaies thin and very crude. In the afternoone the Feaver was yet much more remiſs, and he ſeemed to be generally better than on the daies before. Hee had three ſtooles that day, liquid and chollerick. Hee took his juleps twice a day, and Epithemes were Frequently applied.

But the Night Following, about that time when his ſhaking fit was wont to come, he was vexed with a grievous anxiety, and a very troubleſome diſquietneſs, with a looſeneſs, which voided frequently ſmal quantities of cholerick and flegmatick matter. he ſlept not al that night, nor could he endure in his bed. That we might therefore aſſiſt that motion of Nature, which was performed with difficulty and labour, we gave him a purge the firſt of *April* at three a clook in the morning. Mean while the ulcers of his pallate and Mouth, were exceeding troubleſome, and ſmelt like a ſtinking dead carcaſs; the urines continually thin and without colour did affright us: his unquietneſs was abated about nine of the Clock, and he had five ſtooles that day. About evening he was much better, but his Urines were continually white and crude, the ulcers in his mouth did continually trouble him; the puſtles upon his lips and Chin, yea and on a part of his right Cheek, degenerated into a filthy Cruſt, like many ſmal pocks running together into one. Alſo in the middle of his thighes, on the Inſide, there aroſe puſtles like ſmal pocks, diſtinct one from another, and in both his legs as broad as ones hand, which were ſigns of the greateſt malignity and aduſtion poſſible.

On the ſecond of *April*, at one a clock after midnight, his Feaver came again, with a very ſmal ſhivering, after which the heat encreaſed, with unquietneſs much leſs than Formerly. About the End of this fit, he took again his purging medicament, and voided greeniſh choler with plenty of flegme. After noone, his purge left working, and he was quite free of his Feaver, and ſaid he had a ſtomach to eat ſome more ſolid meats. The Ulcerous Scabs of his Chin and cheekes exhaled a ſtinking ſmel.

On the third of *April* after midnight, a Fit of the double tertian returned againe, the ſame hour, like the Former. His urines appeared more coloured, the ulcers of his chin and Cheekes did ſtink ſufficiently. We reſolved to prepare the reliques of the morbifick matter for further purgation, by remedies internal and external. The internal were, aperitive and cooling juleps; the external an Emollient Fomentation, opening and moiſtening, applied to his hipochondria, eſpecially to the region of his Liver, in which there was ſome ſtretching perceived, alſo the Liniment had the ſame vertues. Before noone, his Feaver was abated, but it did not wholly intermit, his urines were wel laudable, with a little ſettling. Between noon and ſix in the evening he had two ſtooles of liquid yellowiſh excrement: to the ulcers of his chin and cheeke was applied, an oyntment of terpentine, the yolkes of Eggs, and honey of roſes. At ſeven a clock in the Evening, his Fit returned with ſhaking, which laſted til midnight, and ended with a double ſweat, which flowed plentifully. Afterwards he had no feaveriſhneſs upon him, the ſtink of his jawes was taken away within twelve hours by the uſe of the foreſaid oyntment, and the ulcers began to ſend forth white and thick quittor. In his Fit we gave him to drink ſyrup of violets with ptiſan and ſpirit of ſulphur.

On the 4 of *April*, when he was free from his Feaver, in the fore noon, the Remedies aforeſaid were repeated, and he ſeemed free from his Feaver all that day. At ſix a clock in the Evening, his Fit returned again with ſhaking, and was much longer than the former Fit.

On the 5 day of *April*, a Clyſter being premiſed, he was let Blood, to abate the Feaver and putrefaction of the Humors, which two things ſeemed to be the cauſe of the encreaſe of the Fit. About five a clock in the Evening, *Crollius* his Feaver medicine was given him, of Salt of Wormwood, Spirit of Sulphur, and Cichory Water, when the ſick man felt his extream parts begin to grow cold. After which, being more than ordinarily covered, and his Members armed with heated Cloaths, the beginning of the Fit was in this manner delayed till

ſeven

ſeven a clock, and the cold Fit continued an hour; afterwards by force of the foreſaid Medicament, he vomited a good quantity of Choler and Flegm; afterward his heat was mild, and without any very great unquietneſs.

On the 6 day of *April*, the Patient complained of a fiery heat in his ſtomach, which by fits did very much vex him. Alſo he complained of a pain in his left ſide under the ſhort Ribs, which when I was about to feel, he could not endure my hand to touch the place, and there ſeemed to be a manifeſt tenſion or ſtretching: for three whol daies together his Urine was not ſaved. But becauſe he was wont to have three or four ſtools a day, we conceived that his Urine went away with his ſtools; but becauſe, beſides the foreſaid ſtools, he had an almoſt continual deſire of going to ſtool, we did very much ſuſpect that ſome grievous Diſeaſe lay hid in his Kidneys, eſpecially ſeeing he was frequently troubled with the Hiccup. Finally, about two a clock he voided into the Chamber-pot, true Quittor, white, ſmooth and even, and no waies ſtinking, to the quantity of three ounces, with very little Urine. Hence it plainly appeared, that there was an Impoſthume in his Kidney, which being kept in, brought grievous Symptomes. Yea verily, and the Patient ſlept all night, and the Feaver was very remiſs until Midnight. A fiery heat did by fits afflict his ſtomach, and an hiccupping did vex him by fits. At midnight the pain and ſwelling of the left Hypochondrium were much abated, ſo that he could endure it to be touched. He voided again ſome Quittor by way of Urine, to the quantity of half an ounce, and no more. He voided Cholerick matter twice or thrice by ſtool, with which we conceived there was mixed ſome purulent matter, though we could not certainly tell. After Midnight his Fit returned, or rather there was an exacerbation, for it came not with any ſhaking or ſhivering, not with a very intenſe Feaver, but rather with an unquietneſs and languiſhing.

On the 7 of *April*, in the morning before day-light, he made water, which was hardly an ounce in quantity, and in the bottom there was a little Quittor ſettled. About ſeven a clock he had a ſmall ſtool, and the half of it was purulent matter: whence it might be conjectured that an Impoſthume was opened in the capacity of his Belly, which purged it ſelf by his Guts; but by reaſon of the mixture of other Excrements, when his ſtools were large it did not ſhew it ſelf. Alſo we conjectured that his Urine with Quittor and Dung, was ſhed into his Guts, or that it was not drawn by his Kidneys, becauſe he piſt little or nothing, and there appeared no fault in his Bladder, or the paſſages thereof. Ad hereunto, that his ſtools were very large, which if they were not drawn away with a Clyſter, he was much worſe. And this very day being unquiet almoſt to deſpairation, until noon, after he had voided his Clyſter, he was in a quiet condition. The intenſe heat continued about his ſtomach, and which is a wonder, he was not troubled with thirſt, cooling Juleps and Emollient were given him, as alſo Emulſions. Sometimes Almond Milk was mingled in his Broaths. For Drink he uſed a Decoction of Barley and Liquoris with Syrup of Violets, mean while he grows every day weaker, and his pulſe becomes more feeble. About five in the Evening, he made a good quantity of water, without trouble, at the bottom whereof was a little Quittor; he reſted exceeding well, and at eight a clock he piſt again, with leſs quantity of Quittor, and his Pulſe ſeemed better. All night he reſted quietly, piſt three times plentifully, and there was alwaies Quittor in the bottom of the pot; and the Exacerbation of his Feaver was very little and ſhort.

On the 8 of *April*, early in the morning, a Julep was given him, and after an hour a Clyſter was adminiſtred, with which he had two plentiful ſtools. In his Broath was diſſolved a Pouder of the cool Seeds with Sugar; ſometimes Almond Milk, ſometimes cooling, and gently clenſing Herbs were boyled therein, his Loyns were anointed with a cooling Oyntment. For Drink he uſed a decoction of barly, Graſs, and Licorice, al which remedies were ordained to clenſe the ulcer already contracted in his Kidny, and to temper the remaining inflamation of thoſe parts. He was much better al that day, and was hardly Feaveriſh. At ſix in the Evening, his fit returned, with a light ſhivering and continued in a manner al night, but not very vehement, his urines were mattery, and he was pained in his Hemorrhoides.

On the 9 day he was purged with a gentle medicament of ſenna, rhubarb and Manna, he was prety wel, but loathed his broathes, and could not eaſily ſwallow, his feaver was very ſmal, but he was weak, he felt a weight as it were, about evening, in his ſtomachs bottom, he was frequently troubled with the Hiccup, as he had been al his ſickneſs along. At night he had no fit nor exacerbation, only a burning in his mouth, which kept him from ſleep,

and conſtrained him to waſh the ſame frequently; dryneſs and aduſtion appeared in his lips, and yet he had no thirſt.

On the 10 day, his mouth was dry, his belly looſe, his Feaver very ſmal, his pulſe languiſhing, his ſtooles very ſtinking, and alwaies when he went to ſtoole, he perceived an ugly taſt in his mouth; his urines were crude, with very little quittor, at night he was better, his fit returned not only a light exacerbation, he had foure cholerick ſtooles, his urines were plentyful and crude, with very little quitor.

On the 11 day in the morning he was better, nothing troubled him but a mighty wearineſs; his looſneſs continued, and his urines as before. In the afternoon, he was yet better, and felt no wearines, his apetite returned, and he ſeemed to be abſolutly in the way of recovery, had but his urines amended that night he was a little unquiet, ſlept not, his feaver was a little more intenſe, he had only one ſtool.

On the 12 day, a ſmal Feaver continued with ſome little wearyneſs about evening, he was free from his Feaver til ten a clock, and then it was lightly exaſperated, and troubled him little; he had no ſtool, his urines as before.

On the 13 day a ſmal Feaver continued, yet he was better.

On the 14 day he was purged, with the foreſaid medicament, but being much troubled with the dryneſs of his mouth, he was compelled frequently to waſh his mouth, a ſlow feaver continued upon him.

On the 15 day he began to eat ſolid meats with apetite, his urines were more colored, but with quittor in the bottom, his ſlow Feaver continued.

On the 16 day in the morning he was wel diſpoſed, his bleeding at noſe returned, which was ſtopped by a ſparing blood-letting: he had three ſtooles that day, having taken a clyſter, his urines and Feaver were the ſame as formerly.

On the 17 day, he did eat his meat with Appetite, his Feaver was leſs, he had only one ſtoole of more ſolid Excrements than formerly, his urines the ſame, he reſted little that night, and his feaver had no exacerbation.

On the 18 day he was better, he eat his meat with great appetite, an horſe-leech was applied to his hemorrhoid vein which continued ſwolne, to draw the blood from his noſe which ſeemed ready to breake forth; much blood and wheyiſh moiſture came away, and he ſlept better the night after.

On the 19 day, he had a ſtomach to his meat, he had a ſmal Feaver in the after noon, his urines pale and thin, without any ſettleing, and void of Quittor.

On the 20 day al things were as the day before.

On the 21 day, I departed; and by little and little he grew afterwards wel, and was in a Few dayes reſtored to his former health, principally by the uſe of whey.

For the Reins and Kidnies, read the fourteenth Book of the Practice of Phyſick, with *Riolanus* Guide to Phyſick and Chyrurgery.

The 59 Obſervation, Or Hiſtory, of Famous and Rare Cures, &c.

Of The Rheumatick Diſeaſe.

A Gentleman of 50 yeares old, of a chollerick conſtitution, having a long time committed many errors in his diet, eſpecially by feaſtings and immoderate and unſeaſonable Excerciſes; began for two years laſt paſt to be tormented with ſundry paines, which ſometimes afflicted his Armes and hands, other whiles his feet, legs, and other parts, and they were never fixt, but ſometimes in one part, ſometimes in another, ſo that to day his right hand, to morrow his left hand would be pained, and a while after, it would leave his hands and go into his feet. And when the pain left the parts, a great weakneſs remained in them, ſo that the patient was compelled to lie by it many dayes together. Nor did theſe paines afflict only his joynts, but alſo the other parts; for ſomtime his Head was pained, otherwhiles his teeth and jawes, ſometime his ſhoulder, otherwhiles his hipochondria; ſo that no part of his body, in a manner was freed from paines. At the bginning of the diſeaſe, the diſtance between his Fits was longer, ſo that being afflicted with his paines fifteen or ſixteen dayes together, he was afterwards free for a month

month or two: but now his free times from pain were much ſhorter, and he could ſcarce enjoy his health eight dayes together. Sometimes he had a light feaver, eſpecially when his paines came, and he was growne extream leane, and weake al his body over. Many remedies were preſcribed by ſuch Phyſitians as were at hand, for the maſtering of this rebellious diſeaſe, eſpecially evaccuating remedies, viz. Blood-letting and purging, but al in vaine; and therefore he conſulted with the Phyſitians of *Montpelier*, who preſcribed him theſe following Remedies.

From the Hiſtory of the Symptoms, with which this worthy Gentleman has been long time afflicted, it may be conjectured, that he is troubled with that diſeaſe which is called the Rheumatick diſtemper, which name we do not uſe according to the vulgar and common ſignification, by which all thoſe diſeaſes are uſually termed, in which ſome matter is transferred from the head to ſome other part, as is uſually conceived in Catarrhs. But properly and peculiarly according to the doctrine of *Hippocrates* in his Book *de Locis in Homine*, and of *Galen* in his firſt Book of the differences of Feavers, aud in his 1. *de Compoſitione Medicamentorum Secundum genera*, we cal that the Rehumatick Diſeaſe, which takes its original from the habitual diſtemper of the whol body which is punctually deſcribed by *Gallen*, in his firſt book of Feavers, Chap. 7. in theſe words. You ſhal underſtand that the Rheumatick diſeaſes ſo called, are cauſed after ſome ſuch manner as this, viz. The whol body being weak, the principal parts, though there be little blood, yet being burthened therewith, they thruſt it into the fleſhy parts of the Skin, ſo far *Galen*. Whence it appeares that the true nature of the Rheumatick diſeaſe does herein conſiſt, that the whol body is habitually ſo weak, that when any principal part thereof happens to be burthened with blood, though it exceed not much in quantity, it tranſmits the ſame into the fleſhy parts beneath the skin, and into the skin it ſelf, and from thence it eaſily ſlips into the joints. Now that principal part which in this diſeaſe, we judg to be moſt offended, is the Liver, which by reaſon of ſome adventitious diſtemper, breeding blood, not ſufficiently fit for nouriſhment, it is wont to afflict the whol body with the like weakneſs and very much to trouble the ſame. Now, this kind of weakneſs has its original from ſome diſtemper, which that we may more accurately find out, we muſt cal to mind that the inbred temper of the parts may be changed four manner of waies. Firſt by defect of the inbred heat and of the humidum radicale. Secondly by the augmentation of ſome of the four qualities, wherein the Temper is conceived to conſiſt. Thirdly from a vitious and maligpant, or venemous quality, introduced into the part. Fourthly when the Vital ſpirit is dulled, diſſipated, diſtracted, or vitiouſly corrupted. Now in this patient of ours, the ſecond Cauſe is cheifly to be blamed, viz. the Heat of the Liver augmented and become preternatural, whence the concoction of that part is depraved, and the blood is made wheyiſh, hot, and unfit for nouriſhment, and for that cauſe is diſtracted into ſeveral parts; which partly by its acrimony it twitches, and cauſes ſundry pains, partly it is turned into wind, and produces other ſymptomes until at laſt its wheyiſh and windy parts, are evacuated by inſenſible tranſpiration, ſweat or urine.

Thoſe moſt excellent Phyſitians could not attain to the cure of this diſeaſe for Two Reaſons, Firſt becauſe (as was ſaid before) the diſtemper which breeds the Rheumatick diſeaſe properly ſo called, is habitual and confirmed; and therefore is hardly changed. Secondly, becauſe they ſeem not to have obſerved that precept propounded by *Galen* in the Cure of this diſeaſe in his firſt book of Feavers Chap. 6. Which is this. The true ſcope therefore in the Cure of theſe diſeaſes, is, not evacuation, but ſtrengthening of the whol body: which words are not to be underſtood, as if no evacuation were requiſite (for the ſame *Galen*, before, begins the cure of this diſeaſe whith bloodletting, and if the excrements alſo were depraved, he gave a purge) but becauſe we muſt work more and more frequently with ſtrengtheners, leſs and more ſparingly with evacuators.

Seeing therefore, an hot diſtemper proceeding from his remarkable and very great Errors in diet, bred cheifly in his Liver, cauſes a weakneſs thereof and of the whol body. We muſt with al our Art oppoſe the ſame, with thoſe remedies as may correct the ſaid diſtemper, and by a ſpecifick property, may ſtrengthen and refreſh the Liver. And becauſe that diſtemper is habitual, it requires a very long uſe of Medicines.

In the Firſt place therefore, among al the Remedies, which Art has been able to find out to cool and ſtrengthen an over heated Liver, Tincture of coralds holds the cheif place; of which

the patient may take two ſpoonfuls, every day, two hours before he eates. The preparation thereof is after this manner.

Take Red Corral groſly poudered *ſix Ounces*; *put it in a round glaſs, and poure thereon juice of Lemmons, til it ſtand four fingers above the Coral (if you have not juice of Lemmons, take juice of Barberies) ſhut the glaſs wel, and ſet it in balneo Mariæ four or five daies together, and ſeparate the tincture from the feces and keep it in a glaſs by it ſelf for your uſe.*

The tincture wil be more pleaſant, if with a like quantity of Sugar Candy, it be reduced into a ſyrup; but it wil be much more ineffectual. It wil be better to ad Sugar to each doſe, when you give it.

For the ſame Intent the Conſerve of Eglantine berries or Hips is much commended. You muſt free the berries from their ſeeds, and then boyle them in water, and paſs the pulpe through a ſearſe, and at laſt boyl it up with ſugar to the Conſiſtency of an Electuary. It is made, juſt as they make marmalade of quinces.

Of this Conſerve he may take every day the quantity of a Walnut, at Morning, Evening, and when he goes into his bed. Alſo he may uſe this following Electuary.

Take *Lozenges made of Trionſantalon with a four fold quantity of Rhubarb, weighing two drams a peice. Let him take every day a lozenge and drink a little of his ordinary drink after it.*

Alſo the Tincture of Roſes wil be very good for the ſame purpoſe, which is made as followeth.

Take *Red Roſes dried one ounce*; *Luke warm water three pints*; *Spirit of Sulphur or of vitriol, one dram and an half: infuſe them together ſix hours, to the Strained liquor ad Sugar half a pound, let him drink a cup thereof at time convenient.*

Theſe four remedies, muſt be continually uſed, in ſuch ſort that, he take one in the morning two houres before meat, another in the evening when he goes to bed, and the day following the other two at the ſame houres, in ſuch ſort frequently changing his medicines, that nature may not be too much accuſtomed to any one of them. And when he cannot have them al at once, let him uſe two or three in the order aforeſaied; yea, he may, at the beginning, if he pleaſe, uſe the foreſaid Remedies thrice a day, viz. Morning, Evening, and two houres before ſupper.

The Tincture of Roſes may be uſed at al times, when he is thirſty, between meals, alſo preſently after the taking of his other medicaments.

Among roborating medicaments, the moſt convenient is Amber-greiſe, which wonderfully refreſhes the ſpirits and native heat, nor does it heat ſo much as is commonly conceived, and it is as it were the balſom of the radical moiſture. He may take eight or ten grains thereof, at a time, with tincture of Coral, in ordinary broath, or in a ſoft Egg.

But becauſe the Diſtemper and weakneſs of the principal parts, is wont to cauſe ſuperfluity of excrements, therefore they muſt be voided, at times, by gentle purgatives, as has been ſaid, which may be effected by a magiſtral Syrup compounded of juices, and which may do more by altering and ſtrengthening the Liver, than by purging.

Take *The juices newly preſt out and clarified by ſettling, of Endive, Cichory, Sorrel, Fumitory, Hops, Agrimony, and Bugloſs, three pints*; *Juice of Fragrant Apples newly preſſed forth, one pint and half*; *Senna clenſed ſix ounces*; *Epithymum two ounces*; *Agrick newly trochisked one ounce*; *Mace and Cloves of each one dram*; *Infuſe and boyl them according to Art, til there be thirty ounces of the liquor left. In which diſſolve the infuſion of one ounce and half of choyce Rhuebarb, made with yellow Sanders in ſome of the juices aforeſaid, by it ſelf and Sugar thirty ounces. Boyl it to a perfect ſyrup wel clarified. Steep it in a glaſs, and give him thereof one ounce and half or two ounces, twice or thrice in a month, with the broath of a chick, altered with endive, Cichory and Sorrel leaves.*

And in the intermediate times, when he ſhal be bound in his body (which muſt alwaies be kept ſoluble) he may take an ounce of the ſame ſyrup, with common broath, an hour before dinner.

Or he may diſſolve the ſaid ſyrup in a decoction of Prunes.

Or in the ſaid decoction inſtead of the ſyrup, may be diſſolved, half an ounce or an ounce of Manna, to be taken an hour before dinner as aforeſaid.

Or in the ſaid decoction of Prunes, there may two drams of Senna be ſometimes boyled.

The

The foreſaid Remedies may be uſed twice a week if his belly be not diſpoſed to ſtool.

Moreover to aſſwage the Heat of his Liver, nothing is more excellent, than a bathe of Lukewarme water, which muſt be moſt frequently uſed the whol Summer long, almoſt every day an houre before ſupper, in manner of a bath to ſit in.

Hereunto ad an excellent diet of meates eaſily digeſted, and of excellent juice, viz. partriches, Capons, Chickens and Pullets, eſpecially broaths, ſtrong-broaths, juice of fleſh preſt out, and ſuch like; al which muſt be taken in an indifferent quantity, that they may be more eaſily digeſted.

For his drink let him uſe a thin infuſion of Rhubarbe, made after his manner.

Take *Rhubarb groſſly pouderded half a dram; fountain water three pints: let them boyl a little and then ſtrain out the Liquor. Let him uſe the ſtrained liquor for his ordinary drink, with a little Claret Wine mixt therewith.*

Somtimes alſo in ſtead of the ſaid Infuſion, he may uſe a Decoction of Cichory Roots with Wine, as has been ſaid.

Let him avoid as much as in him lies al vehement motions, both of mind and body, venery, and other things, which he beleeves have done him much hurt.

If the pain ſhal happen to be ſetled in his Joynts, it may be aſſwaged, and diſſolved by theſe following Remedies.

Take *Pulp of Marſh-Mallow Roots four ounces; New Milk two ounces. Make it like a Liniment and ſmear it upon the pained part,* Or,

Take *of the Roul of Plaiſter Diapalma as much as ſhal ſuffice, ſpred it upon a peice of leather and make a Plaiſter anſwerable to the pained part.*

The 50 Obſervation, or hiſtory, of famous and Rare Cures, &c.

A Swelling of the Spleen.

THe Siſter of Mſr. *Nicolas*, a Canon of *Montpelier*, twenty years of Age, after a Tertian Ague ill cured, fel into a great ſwelling of the Spleen, which filled al her belly almoſt, with a ſlow Feaver, want of appetite, want of reſt, and other Symptomes.

I preſcribe in the firſt place Blood-letting in her left Arm, after a Clyſter. After that an apperitive Apozem, with Cream of Tartar for twelve daies, and every third day there was infuſed, two drams of Senna, and one ounce of Syrup of Cichory with Rhubarb was added. At the ſame time, there was applied to her Spleen, an Emollient and apperitive Fomentation, morning and evening, and a liniment after the Fomentation. She took alſo in the Evenings, Viz. An hour before Supper of this following Opiate.

Take *Conſerve of the flowers of Tamariſk and Elecampane Roots, of each one ounce. Conſerve of Maiden-hair two ounces. Conſerve of common Wormwood and of preſerved Citron peeles, of each half an ounce, Confectio Alkermes three drams, Salt of Wormwood and Tamariſk of each two drams. Diarrhodon Abbatis one dram. With Syrup of Maiden-hair make al into an Electuary, of which let her take the Quantity of a Chaſt-nut every day in the morning, two hours before meat, and let her drink after it a little wine allaied with water.*

With theſe Remedies ſhe was cured in the Space of fifteen daies.

The 51 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Blood Coagulated in the Stomach.

THe Brother of Mſr. *Dumoys* the Kings Councellor in the Preſidial Court at *Montpelier*, being fifty years old, after vehement exerciſe in continual hunting, vomited a little blood,

voided also a little by stool. The following daies, he was oppressed with a heavyness in his Stomach and Heart-burning, so that he frequently called for meat, and if he wanted the same smal space, he said his strength failed him. Also he frequently supt off a little Wine. When the Region of his stomach was handled, he felt a pain, his hands were somwhat coldish: and he was a little thirsty. His ordinary Physitian said he was troubled with the Feaver Lipyria, proceeding from the Inflamation of his Stomach. But when I, feeling his pulse, could perceive no Feaver; he said that his weakness hindered the Feaver from showing it self. Now he gathered that Inflamation, from blood before voided, which argued the effusion thereof, into the substance of the stomach; from the pain of the part it self, the coldness of his hands, and his heart burning; whereupon he pronounced boldy, that he would certainly and shortly die. But I judged that al those Symptomes did proceed from blood congealed and corrupted in his stomach; which corrupt blood, as *Galen* tels us, puts on the Nature of Poyson, and thence faintings, or Hart-burnings, coldness of the extream parts, and other Symptomes arise. For I could not think it possible, that an Inflamation of the stomach, should not cause an intense Feaver, and thirst. Moreover, the sick man was delighted by the Application of an hot tile and of hot cloaths upon his stomach, also with the frequent taking of pure Wine unallaied, and with very hot broaths, al which an inflamed stomach could not endure. A Clyster being given him, he voided some clotters of blood therewith. He was let blood, and that which came away was very Flegmatick. After the Emulsion which he took in the evening, by order of his usual Physitian, he was very ill, al the night. But the foresoid Physition would not content himself with such Remedies as dissolved coagulated blood and brought the same away, therefore I who only by occasion had once visited him, left the whol Cure to him. But the day following, no other Remedy being used, he voided by stool, most filthy black matter, and so was freed from al the foresaid Symptomes; which plainly shewed, that the Cause of this Disease was no other than blood congealed in his stomach according to my opinion.

The 52 Observation, or History, of Famous and Rare Cures, &c.

Of Consumption, and weakness of Sense in a Part.

THe most beloved wife, of the excellent Mr. *Paschal* the Kings Councellour, and a Mr. of the Court of Accounts being twenty two years old, of an hot and dry Complexion (as by the readyness of her actions, the sharpness of her wit, her angryness, the largeness of her Veins, her lean Constitution of body, and other signs, might easily be discerned) seven years since began to be troubled with an impairment of her sense of feeling in her left hand, with a leanness of the said part and a Consumption thereof; which appeared first in her Thumb, whose Muscles that make up Venus Mount, were first of al wasted away, and soon after the sense of that part was diminished, and consequently her other fingers, were taken with the same infirmity until at last they had wel nigh lost al feeling, for at present, if a Needle be thrust into her Thumb, it hardly puts her to any pain. Moreover little Bladders did sometimes arise on the tops of her fingers, as if they had been burnt, and some other things appeared in the habit of her body; which shal be mentioned in their place.

This Case is most difficult, most rare, and most intricate, although most excellent Physitians who undertook her Cure, did little doubt thereof, taking that same impairment of the sense of feeling to be the beginning of a Palsie, which opinion of theirs, although it may be confirmed by no smal reasons; yet is it an easie matter to make another judgment of the Nature of this Disease, and to under prop the same with most strong reasonings, viz. That it is a mere Atrophy of the part after which the sense of feeling was impaired by reason of dryness, without any obstruction of the Nerves. I shal produce the arguments on both sides, and leave it free to the reader to choose the founder opinion. And in the Conclusion (which wil be a rare and singular matter) I shal demonstrate, that this Disease is to be cured with the same Remedies, whether it proceed from the one Cause or the other.

In the first place therefore; that this hurt of the sense of feeling, is a kind of Palsie, seems to appear from hence, in that from any other Cause, that sense cannot be in any part diminish-

ed

ed or aboliſhed ſave from the obſtruction of the Nerves, which carry the Animal ſpirits and the ſenſitive and moving faculty to the parts of the Body. In the next place, becauſe this Gentlewoman, had formerly a Tumor in the right ſide of her Neck, and a ringing in her right Ear, alſo a pain about her Neck, which are ſignes of a flux of Humors from the Head.

But on the other ſide, that this Diſeaſe ought not to be referred to the Palſie, but rather to ſome ſort of Atrophy, theſe following reaſons may evince.

Firſt of al, in the palſie, not only ſenſe but alſo motion is hurt, eſpecially when it is an old Confirmed palſey, ſuch as that is which has afflicted the patient for ſeven yeares together; for though ſometimes motion may be hurt, the ſence remaining unhurt, and contrarywiſe, the ſenſe may be ſometimes hurt, and motion not hurt; yet this difference is to be obſerved, which is plainly taught by *Galen* in his firſt Book *De Locis Affectis*, Chap. 6. viz. That in a part Capable of motion, ſence cannot be hurt, without the hurting of motion, whereas motion may be hurt without any harme to ſenſe; for ſence conſiſts moſt what in paſſion, as motion does in action, and ſeeing the ſame animal ſpirit, does carry both ſence and motion through the ſame nerve, though it come in leſs quantity than can ſuffice for motion, yet may it be ſufficient for ſence: but if the obſtruction of the nerve be ſo great, that ſence is hurt, motion muſt needes be hurt much more. How can it then come to paſs, that ſometimes ſence ſhould be hurt and not motion? for this reaſon alone (according to *Galen* in the fore cited place) namely, if thoſe nerves only are affected which are caried into the skin, thoſe being unhurt, which end in the muſcles, ſence wil only be loſt, motion being undamnified, as it happened to *Paxſanias* the Syrian Sophiſter, whoſe hiſtory *Galen* relates in his third book *De Locis Affectis*, Chap. 12 as alſo in the place Forecited; who travelling towards *Rome*, fel out of the Coach, and receiving a blow about the ſeventh vertebra, from whence a ſmal nerve is carried to the skin of the two little Fingers, in thoſe two fingers the ſence of feeling was loſt, their motion remayning entire, becauſe the nerves which were carried to the muſcles of thoſe parts, remained unhurt. Now in the Caſe propounded, it could not be ſo; becauſe if the diſeaſe ariſe from the obſtruction of the nerves, we muſt grant that the nerves which are carried to the muſcles, were greivouſly affected, for extenuation and Conſumption never happens in a palſied part but that the ſaid part is firſt deſtitute of the influx of the animal ſpirit, for the natural faculty, when the animal cannot act, is drawne into conſent, and badly nouriſhing the part, cauſes a conſumption; but ſeeing by the integrity of motion, the integrity of the Nerves is apparent, we muſt conjecture that the foreſaid conſumption, is not cauſed by the palſie; but that rather the impediment of ſence depends upon the want of nouriſhment and dryneſs of the parts. Nor is it true, which was lately aſſerted, that al abatement and loſs of ſence, is a ſort of palſie, for in the diſeaſe called Elephantiaſis, ſence is diminiſhed and aboliſhed, by reaſon of the dryneſs of the parts, cauſed by black choller.

Secondly, from what has been ſaid, another argument may be collected, for leanneſs and want of nouriſhment doe not happen to palſied parts, unleſs the palſied be confirmed. But Authors count the palſie then only beginning, when ſence only is hurt, motion remayning undamnified. Whence it followes neceſſarily, that the foreſaid want of nouriſhment, does not at al proceed from the palſie.

Thirdly, ſeeing they terme this diſeaſe a beginnig palſie, 'tis ſtrange the begining of a diſeaſe ſhould laſt ſeven yeares, and make no further progreſs; and that the fluxion, which poſſeſſed only a nerve or two carried to the skin of the fingers ſhould not ſeize upon the greater nerves cauſing motion, which touched the other; ſo as thereby to ſtop both ſenſe and motion, and to cauſe an abſolute and perfect palſie.

Fourthly, before the ſence of feeling was impaired, there began firſt to ſhew it ſelf a Leanneſs and Conſumption of the muſcles of the thumb, after which followed, an inpairement of the ſence. Therefore the Atrophy of the part depends upon ſome other Cauſe, than upon the palſie, and ſeemes to be the Cauſe of ſence deminiſhed.

Fifthly, thoſe little bladders like burnings, which frequently afflicted the extremeties of her fingers, argues the humor flowing into thoſe parts, to differ much from that which is wont to cauſe the palſie. Which humor truly is ſent from the Liver not only to the fingers, but alſo to the whole half of the body neareſt thereunto, for both the toes of her right foot were

poſſeſſed

poſſeſſed with the ſame bladders, and alſo her right Leg was varigated with Tetters, and her right Arm was ſtreaked with certain rivulets, diſtinct from the ordinary Veins, running a ſtreight Courſe under the Skin, and being colored with a deep red enclining to black and blew; whence clearly appeares, that black Cholerick blood flows into the parts affected, which marring their nouriſhment, cauſed leanneſs and dryneſs; by which dryneſs the ſenſe of feeling was diminiſhed: For the wiſe Maſters of Phyſick, have taught us, that motion is furthered by dryneſs, but ſenſe by moiſture. And therefore when a part is rendred over moiſt, it becomes unfit for motion, and when it becomes over dry, it is unfit for ſenſe. The like Rivulets do alſo appear, in the right Leg of the Patient, like Varices, which evidently declare a fault in the *Liver*.

Finally, ſuch things as help and hurt do more and more declare the Nature of this Diſeaſe, for as hitherto ſhe never uſed convenient Medicaments, ſo by the uſe of baths and other hot things, and Medicaments very ſtrongly reſolving being applied to the part, ſhe was much worſe than before.

Now although this latter opinion, ſeems nearer to truth, yet if any man liſt to favour the former, perſwaded with the laſt reaſon, alleadged in favor thereof, which truly is not to be ſlighted, he may think thus at leaſt, that peradventure ſome deflux of Humor, may affect ſome parcel of the ſpinal marrow, whence the imminution of ſenſe may ariſe; but that the leanneſs and non-nutriment of the part ſprings from hence, is impoſſible, as the reaſons fore alleadged do plainly evince, and at leaſt according to that opinion, we muſt ſay, that the leanneſs and imminution of ſenſe are complicated Diſeaſes, ariſing from different Cauſes. Al which being ſuppoſed, which way ſoever your mind incline, the way of Cure wil be ſtil the ſame, as we promiſed at the beginning.

Proceeding therefore to the Cure from right Indications, we muſt uſe al our endeavour to amend the hot and dry diſtemper of her Liver, which is the original of al her maladies; the Conſumption and non-nutrition of the part muſt be amended, and we muſt procure it to be renouriſhed, from which if the hurt of the ſenſe proceed, when the Cauſe, viz. dryneſs is taken away, it wil ceaſe. But if this hurt of the ſenſe, ſhal be judged to ariſe from ſome harm of the Nerves, and from a fluxion from the brain into the back-bone; yet muſt we not therefore adminiſter heating Remedies, which wil encreaſe the primary Cauſe of the fluxion, namely, the diſtemper of the Liver. Nor muſt hot Medicaments be mixed with coolers, for by them the diſtemper of the Liver wil never be corrected, eſpecially ſeeing in the forms of Remedies, formerly preſcribed according to his indication, hot Medicaments are much more prevalent than the cold. Nor muſt external reſolving medicaments be applied to the part affected; becauſe they wil conſume and dry the ſame much more, and wil no waies ſerve to the Cure of the Diſeaſe; for if there be any obſtruction of the Nerves, it is not in the Hands, but in the original of the Nerves by the Vertebraes, and ſo we muſt imitate *Galen*, who in the *Syrian Pauſanias* aforeſaid, applied thoſe Medicaments with happy ſucceſs to the Vertebra's of his Neck, which other Phyſitians applied to his two ſenceleſs fingers, with no effect.

Yea verily, and thoſe Palſies which happen in hot and dry bodies, may be cured with cooling and moiſtening Remedies only, as *Trallianus* teaches, in his firſt Book, Chap. 16. In theſe words: The efficient Cauſe of the Palſie we may diſcerne for the moſt part to be, a thick, clammy, and cold Humor. We muſt alſo know, that this Diſeaſe proceeds from an hot or dry quality, when an hot diſtemper has too much parched the Humors. And a little after, for if the quality ſhal be only hot and dry, then extenuating and heating Medicaments (for al ſuch conſume the Native moiſture) do more burn the matter, and make it more thick. And in concluſion he adds the Cure by Diet and Medicines, purely cooling and moiſtening; which he averrs to have been taught by experience, ſaying. I verily know one that was Palſied by ſorrow, Care, and faſting; who thereupon taking Hiera, was ſo damnified, that he became wholly unmovable, and was at deaths door, had he not been altered quite contrary, taking nothing but moiſtening things, potions, meats, and other things which brought him to a temper, eſpecially frequent bathings, Oyntments of water and Oyl, change of the Aire into temperate, and al kind of mirth. You may ſee a ſtory not much unlike this in *Foreſtus* his 97. Obſervation, in his firſt Book, of a certaine youth, who in his Legs and Feet was deſtitute of ſenſe and motion, with an extenuation and Atrophy of the ſaid parts. And whereas by the uſe of heating and drying Medicaments preſcribed by other Phyſitians, he grew continually worſe and worſe,

he was in the end Cured by *Foreſtus*, only by giving him in, and applying without, moiſtening Medicaments.

In the firſt place therefore, ſhe muſt keep a cooling and moiſtening Diet. Her meats muſt be of good juyce and eaſie to digeſt, eſpecially the fleſh of young Animals. In her broaths let her uſe cooling Herbes, Borrage, Sorrel, Endive, Lettuce, and Porſlane. Let her abſtain from al fried, Salt, and peppered Meats, from Pulſes, old cheeſe, and other thick and hot meats; let her drink weak Wine, wel allaied with water.

Eſpecially let her avoid paſſions of the mind, and above al, ſadneſs and anger; let her ſleep very long, becauſe nothing moiſtens more than ſleep. Let her be alwaies looſe-bellyed by Nature or by Art.

As ſoone as ſhe is delivered of her great belly, a month after her lying in, let her ſet upon the uſe of theſe following medicaments.

Take *Rootes of Bugloſs, Graſs and Aſparagus, of each half an ounce. Leaves of Endive, Cichory, Sorrel, bugloſs, of each half an handful. Boile them with a chick and make broath, of which let her take every morning for twelve dayes together.*

In every third doſe of broth infuſe al night half an ounce of Senna, and one dram of aniſeed.

After her firſt purging broath, open the baſilica vein of her right Arme, and take away ſeven ounces of blood.

When ſhe has done with her broaths, let her goe into this following Bath.

Take *ſweet almons bruiſed and barly meale, of each one pound and halfe. Boyle them in a bag for a bath, into which being lukewarme let her enter morning and evening, long time from her meales. And let the decoction be renewed every day.*

Take *ointment of Roſes and Ceratum Santalinum, of each one ounce. Juice of Cichory and oyl of Roſes of each half an ounce. Trochiſks of Camphire one ſcruple. White waxe, a little. Make al into an ointment, wherewith let the Region of her liver be anointed when ſhe comes out of the bath and is dryed, and let her continue the uſe of it every day, when ſhe goes into her bed, for a long time together.*

Take *Whey of goats milk, made by boilling of the milk, and wel clarified ſix ounces; juyce of Cichory and fragrant apples, of each one ounce. Let her take it in the forenoon, two hours before dinner, fifteen daies together.*

If the ſeaſon ſhal be too cold to uſe the whey, let her uſe inſtead thereof a decoction of China, made after this manner.

Take *China root cut into thin ſlices one ounce; fountane water ſix pints; juyce of lemmons three ounces; ſteep them together twenty four hours, then boil them in an earthen pot glazed and wel covered, til a third part be waſted away. Straine it through an hippocraſs bag. And let her take ſix or eight ounces of it, every day in the morning.*

Take *of the juyces newly preſſed forth, and clarified by ſettling, of borrage, bugloſs, fumitory, Cichory, and ſorrel, three pints; juyce of Fragrant apples newly preſſed out and clarified two pints and an half; Infuſe therein eight ounces of ſenna, new polypody of the oake, and epethimum, of each two ounces, agarick freſhly trochiſked one ounce; mace and cloves of each one drame. Afterwards boile them to a pint and half. In the ſtrained liquor diſſolve an ounce of rhubarb, infuſed in ſome of the foreſaide juices, and one pound and half of white ſugar. Boil them to a ſyrupe, of which let her take two ounces, in chicken broath altered with the leaves of borrage, bugloſs, fumitory and ſorrel.*

In the intermediate dayes let her take every morning two houres before dinner, an ounce of the opiate made of Eglantine berries wel ripened, duly boiled, and paſſed through a ſearſe, and then reboiled with a ſufficient quantity of ſugar as marmalade is uſually made.

Sometimes let her uſe the Lozenges of Diatrion ſantalon, of which let her take two drames in the morning, inſtead of the foreſaid opiate, drinking a little Cichory water after it.

If by reaſon of the Injuries of the ſeazon, ſhe cannot this autumne exactly uſe al the foreſaid remedies; ſhe muſt repeate them afreſh the follwing ſpring; and then ſhe muſt frequently bathe, and long uſe the whey, for in theſe Remedies lies the cheife force of the Cure.

Finally, the waters of Meyne are very uſeful and moſt excellent for the Cure of this diſeaſe, to which ſhe may goe, about the beginning of the month of *July*, and uſe them a month together.

In the mean while from firſt to laſt; topical medicaments muſt be uſed, and frequently applied to her diſeaſed hand.

Take *oyle of ſweet almonds new drawne without fire two ounces, oyl of chamemel one ounce. Mixe them, anoint the part hot, morning and evening, and then wrap it up in hot linnen cloathes.*

After the foreſaide oile has been uſed for 15 daies together, uſe the Following as long.

Take *oile of puppy-dogs and of earth-wormes, of each two ounces. Oyle of ſweet almonds three ounces, uſe them as before. After that, for as many dayes more, let her uſe this following Liniment.*

Take *Violet* Oyl, *and Olive* Oyl, *of each one ounce and an half; Tarre, two ounces;* Oyl *of ſweet Almonds, one ounce. Make al into a* Liniment.

Finally, if the Diſeaſe ſtubbornly reſiſt the foreſaid Remedies, ſhe muſt uſe this following Decoction.

Take *Roots of Bryony, Lillies, and Marſh-mallows, of each three ounces. Boyle them in the broath made of the Head, Feet, and Guts of a Calf, or weather; and in this Decoction let her plunge her hand and part of her Arm, hot, morning and evening, and hold it therein two hours. And let this be done after the uſe of the bath for ſixteen daies together.*

And to provide againſt that ſuſpition of ſome matter ſettled in the original of the Nerves, ſhe may uſe Oyntments and Liniments that powerfully diſcuſs and reſolve, preſcribed by her able Phyſitians, with them anointing her Back-bone, hot, for ſome daies together. Done at *Montpelier* the 14. of *Auguſt*, 1631.

The 53 *Obſervation*, or Hiſtory, *of Famous and* Rare *Cures*, &c.

Of prevention of Abortion.

THe wife of *John Vieules*, a Citizen of *Montpelier*, Miſcarried three times one after another, at ſeveral ſeaſons of her being with Child. And now being two Months gone with Child, ſhe had pains about her Navil and Loyns, which threatened miſcarriage. Another Phyſitian had appointed her two Plaiſters to be applied to her Navil and Loins, made of the roul of Plaiſter for fractures and diſlocations, whereupon ſhe was better for ſome daies, but afterwards the ſame pains returned. I being called, and obſerving that the Woman was young and ſanguine, I cauſe her to be let blood, by which means in a few hours ſhe was freed from her pains and fear of miſcarriage. Her blood was ful of wheyiſh moiſture. Howbeit for preventions ſake, I order her to take a dram of pouder of Rhubarbe in broath, once a week for a month together. Alſo I willed her to anoint her belly and Loins with an aſtringent Oyntment, the day before ſhe purged, and to uſe an aſtringent Electuary the day after, but ſhe did not make uſe of them. Thoſe Symptomes came, at the very time when ſhe was wont to have her monthly purgations, when ſhe was not with Child. Afterwards, when ſhe was in her third Month, the ſame Symptomes returned, and ſhe was preſently freed by blood-letting. Likewiſe, in the fourth, fifth, ſixth, ſeventh and eight Month, the ſame Symptomes periodically returning, ſhe was again let blood, and they ceaſed. The laſt Blood-letting was performed eight daies before the beginning of the Ninth month, with the like good ſucceſs, viz. On the 15. of *January*, 1632. And at the end of the ninth Month, ſhe brought forth a boy, wel fleſht and lively, but ſomwhat pale.

The 54 *Obſervation, or Hiſtory, of Famous and Rare Cures*, &c.

A Semitertian Ague with Head-ach.

ON the 12. of *October*, 1631. I was called to the Lady of *Leſignan* being ſick of a continual Feaver joyned with an Ague, and heavy pain in her Head, alſo a pain in the tendons

dons of her Neck, and a fluxion of Rheum into her right Eye; whence I conjectured that the pain of her Head was Idiopathick, which ſhe had caught by expoſing her ſelf to the cold Air of the Night; her Feaver was ſufficiently ſlow, and flegmatick, without thirſt, I found her in the fourteen day of her Diſeaſe; and ſhe had been once let blood before, and had two purging Medicaments given her, alſo a plentyful ſweat brake forth on the foreſaid fourteenth day, but al did no good; her Feaver was ſtil the ſame, which grew more violent towards evening, with coldneſs of her extream Parts, by which the fits were known. On the fifteen and ſixteen daies ſhe was again let blood; afterward a Medicament was given her and after ſome daies repeated, of the Infuſion of Senna with Creme of Tartar; alſo opening broaths were given, becauſe ſhe refuſed Juleps and other internal Remedies; Fomentations and Oyntments were applied to her Hypochondria, which appeared to be diſtended. Becauſe of her Head-ach, a veſicatory and Plaiſter were applied to the Sutura; theſe things were continued to the twenty ſix day of the Diſeaſe, her Feaver continuing, the Urins being ſomtimes digeſted with a laudable ſwim; ſomtimes crude with a Swim very much divided, and many times of three Urins which were ſaved in the night, the firſt and third were crude, the middle moſt laudable, which threatned that the Diſeaſe would be long. After the foreſaid time, ſeing ſhe refuſed other Remedies, I give her three daies together half a dram of Salt of Tartar, and fifteen drops of ſpirit of Vitriol, in a Decoction of Wormwood, whereupon ſhe grew very wel, and her Feaver was conquered. Howbeit her Urins remained thin, with a ſwim torn as it were in peices: ſhe was purged again, and ſo perfectly recovered.

The 55 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Cough and Catarrh in an Infant.

THe ſon of Mſr. *Boirarques*, Controller in the Chamber of Accounts at *Montpelier*, eleven Months old, was ſick of a Catarrhe, with a continual Cough and Feaver, he frequently vomited flegm, he ſucke much, and Piſt little. After many Medicaments uſed to little purpoſe, I ordered them to anoint the Region of his Kidneys with Oyl of Scorpions of *Matthiolus*, thrice a day, whereupon he made Urine more plentifully, and his Catarrhe was abated. For *Mercatus* ſaies in his 8. Book of the Diſeaſes of Children, that Catarrhes happen in Children, ſomtimes by fault and through weakneſs of the Kidneys; when they do not draw the wheyiſh humor, whence it comes to paſs that the ſaid humor being drawn upwards, becomes matter of a Catarrhe. If that Symptome had continued, thoſe remedies had been uſed, which are propounded by the ſaid *Mercatus*, Chap. 13. Where he treates of Urine in Children ſuppreſſed, as Clyſters, opening broaths, &c.

The 56 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A pleuriſie.

A Tailor being young and Cholerick, and troubled with a Pleuriſie, after many bloodlettings, and other ordinary remedies, on the fifth day a Feaver violently continuing with a pain in his ſide, he did take a roaſted apple with a dram of Franckincenſe, and drank thereupon four ounces of Carduus water, and afterwards being covered, he ſweat a little, without any diminution of his Feaver, the day following he did ſweat very much twice or thrice, and ſo recovered his Health.

The 57 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Continual Feaver in a little Girle.

IN the year, 1632. In the Month of *January*, the Daughter of Mr. *Darenes* a Lawyer, being ſeven years old was ſick of a continual Feaver, not very vehement, but more violent at cer-

tain times, viz. Towards the evening. The Feaver began with a flegmatick vomiting, which was followed by a looſneſs continuing for a day, by which flegm was likewiſe voided, her breath was ſowr and ſtinking. I preſcribe her a potion of a dram of Rhubarbe, with an ounce of Syrup of Roſes. Before the Medicine was given her, there came another Phyſitian that would have it omitted, and maintained that it was better to let her blood. Howbeit ſhe took the Medicament, which ſhe vomited up ſoon after, with thick and very putrid flegm. Then I preſcribed her a Clyſter with half an ounce of *Diacatholicum*, to be given her about evening, with which and the other Medicament working together, ſhe had five ſtools that night, conſiſting of Flegmatick, Cholerick, and very ſtinking matter. In the morning her Feaver was very ſmal, and at noon, ſhe was free therefrom, and reſtored to her health.

From this Obſervation may be gathered, how much thoſe Phyſitians are miſtaken, who conceive that in al continual Feavers, the Cure muſt be begun with blood-letting. Seeing that many times in Children the ſaid Feavers ariſe from putrid Humors, ſettling in the firſt Region; which are eaſily drawn away by purging. Now in this Girle, her vomiting of flegm, and her looſeneſs, did ſhew the redundancy of ſuch an Humor.

The 58 *Obſervation, or Hiſtory, of Famous and Rare Cures,* &c.

The Cholick pain.

THe Wife of Mr. *Audifret*, a Citizen of *Montpelier*, was troubled with a moſt grievous Cholick pain, the 22. of *January*, 1632. A Carminative and purging Clyſter was adminiſtred in vain. I being called, preſcribe another Clyſter of a Decoction of Emollient and carminative things, made in a like quantity of water and white wine, diſſolving therein one ounce of Catholicum, two ounces of Honey of Roſes, and four ounces of Aqua Benedicta. Preſently after ſhe had taken the Clyſter, the pain ceaſed, ſhe ſlept three hours, was afterward moderately purged, and her pain returned no more.

If you deſire a competent knowledg in the Art of Phyſick, read *Riolanus* Guide to Phyſick and Chyrurgery, with *Johnſtons* Idea of Practical Phyſick, and *Riverius* Practice, Engliſhed by me.

The 59 *Obſervation, or Hiſtory, of Famous and Rare Cures,* &c.

Cholick pain.

ON the 8. of *March*, 1632. Mris. *de Varanda*, being ſixty years of Age, was tormented with moſt grievous pains about the Region of her Loyns, Liver, Stomach and Guts: two Clyſters were given her, with which ſhe was luſtily purged, and a great Cupping-glaſs was faſtened, before and behind, her pains continued very vehement. I being ſent for, give her a dram of the pouder of a Wolfes Guts, in three ounces of wine; her pain preſently ceaſed. And the following day a purging Medicament was given her, to expel the reliques of the Morbifick matter.

The 60 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Tiſsick, Inflamation of the Lungs, and palpitation of the Heart.

ON the 8. of *April*. 1632. the Widow of Mſr. *de Sejelory*, a Citizen of *Montpelier*, ſtarting out of her bed about midnight, thinly clad, to the window, was preſently taken with great ſhortneſs of breath, like a fit of the Tiſsick, with a Cough, ſpitting of blood, a Feaver, and redneſs of face. I being ſent for, Cauſe a Vein to be opened in her right Arm, and

and eight ounces of blood being taken away, her ſhortneſs of breath preſently ceaſed. Afterwards a laxative Clyſter was injected, and a julep given her, of red poppy water, ſyrup of violets, Sal prunellæ, and Confectio de Hyacintho.

On the ninth day, at ten in the forenoon, I viſit her again, and find her in a Feaver, troubled with a cough and ſpitting of bloody matter; alſo ſhe felt an heavy weight in the middle of her breaſt with an inward burning, and prickings in many parts of her Cheſt. I cauſe her to be let blood in her left Arme, and that the Clyſter and julep ſhould be repeated; to anoint her breaſt with oyl of Violets, and that ſhe lick frequently ſome Syrup of Violets. After the blood-letting, ſhe was preſently eaſed, and that ſence of weight and burning in her Cheſt were abated. At five a clock in the evening, the ſame day, conceiving that vapors aroſe from beneath, and humors into her Cheſt, which that ſhortneſs of breath did ſufficiently declare, I cauſe her to be let blood in the Saphena veine, after which ſhe was alſo better. The night following ſhe tooke the foreſaid julep again; ſhe ſlept but little.

On the tenth day in the morning ſhe was better, her Feaver and other ſymptoms were very remiſs. About the third hour of the evening, ſhe had a coldneſs in her extreame parts, with a light ſweat in her feet, and palmes of her hands, after that an acute Feaver, her pulſe very much expreſſed, and the ſenſe of heavineſs in her Cheſt very much augmented. Dr. *Ranchines* the Chancellor was called to conſultation, who conceived that it was a pleuriſy ariſing from Inflamation of the mediaſtinum. And by common conſent, ſhe was let blood in her right Arme to ſeven ounces, after which alſo ſhe was better, the other medicines were continued, alſo frictions, ligatures, and Cupping-glaſſes were frequently applied to her lower parts.

On the eleventh day which was the third of her ſickneſs, moved with what I had obſerved in another diſeaſe of the ſame patient, in which ſhe was afflicted by turns with a flux of her belly joined with a teneſmus, and a catarrh falling upon her breſt; ſo that as often as her looſneſs ſtopt, ſhe was greivouſly afflicted with her Catarrh; and when her flux returned, her Catarrh preſently ceaſed, the humor falling into her breaſt, being drawn downwards, I conceived that a purge would do her moſt good, which I made after this manner.

Take, *Leaves of Bugloſs and Lettice of each one handful; Tamarinds halfe an ounce; Lycorin three drams, violet flowers one pugil. Boyl al to four ounces. In the ſtrained liquor diſſolve one dram of Rhubarb, infuſed in Bugloſs water with yellow Sanders, Manna, and ſyrup of Roſes of each one ounce. Make al into a potion; which ſhe took in the morning, and voided much flegmatick, wheyiſh, ſharp and ſtinking matter. Nevertheleſs the diſeaſe was more violent towards the evening as formerly; yet her pulſe was not oppreſſed as before, and the weight in her breaſt was leſs. But ſhe felt a pain about her right chanel bone, which encreaſed by handling the ſame; ſhe ſlept little that night, ſhe tooke emulſions frequently.*

The fourth day of her diſeaſe, and the twelth of the month, when as in the morning her Feaver and the pain in her chanel bone continued, Dr. *Ranchinus* was again called to conſult, and beſides the foreſaid ſymptoms, ſhe had a great palpitation of her Heart, which appeared alſo in her right Hypochondrium, alſo in her right ſide, but it laſted not long there. But about her heart it continued and did beat like an hammer, violently. She was again let blood in her right Arme, and an ointment was appointed for the part pained, and remedies to revel the humors to the lower parts. About evening the diſeaſe was again exaſperated, and the palpitation continued. Some houres after ſhe did ſweat a little, al her body over, by which ſhe was a little eaſed. But her palpitation and Feaver continued as before. When we began to ſuſpect that vapours did ariſe from her womb, we preſcribed her a Clyſter for the Mother, Frictions, Ligatures, and Cupping-glaſſes to be applyed to her lower parts. Emplaſtrum Hyſtericum was applied to her Navel, and a julep was given her to aſſiſt her ſweating, of Scabious and Carduus water with Bezoar ſtone, and half an ounce of Orenge flower water in regard of her womb. In the night, ſhe had three large ſtooles, of ſtinking corrupt matter. After midnight ſhe ſlept quietly til morning.

On the fift day of the diſeaſe, I found her in the morninng with a ſmal Feaver, without any oppreſſion in her breaſt, or any pain, and with very little palpitation of heart. About evening ſhe did ſweat a little, and was better afterwards. After ſhe had voided her Clyſter, her Palpitation was augmented, her Feaver became more intenſe, and ſhe was pretty wel in the night.

On the ſixt day, al things were as before, in the evening Cupping-glaſſes were applied with Scarrification, which did her good.

On

On the ſeventh day, her Courſes began to flow plentifully, by which meanes al Symptomes were very much abated.

On the eight day ſhe was better.

On the ninth day ſhe had a light looſneſs joyned with a Teneſmus, by which ſhe voided few flegmatick excrements, and before that looſneſs, ſhe vomited much bitter ſtuffe.

The Humors were prepared with temperate aperitives.

On the tenth day which was the eighteenth day of the month, her looſneſs was leſs, at night it ſtopt quite, ſhe had no Feaver. And after that ſhe plainly amended.

On the 29 of the ſaid month of April, when ſhe felt her ſelf exceeding wel, and was buſie about her houſehold occaſions, as ſhe was ſitting in a Chair, ſhe fell ſuddenly to the ground, and died.

Her body being opened, her Mediaſtinum was found ful of wheyiſh blood, which peradventure, the membrane being broken towards the upper part of the lungs, and preſſing the ſame and the Aſpera Arteria might ſuddenly choak her. Moreover the whol ſubſtance of her Lungs was found ful of a purulent matter, exceeding heavy: alſo her left teſticle was as big as a ſmal Egg, of a blackiſh color, and as it were Gangrenated. Yea and as ſoon as it was opened, there leapt out of the middle of her teſticle, a certain matter like a nut kernel, and very like a putrefied Clotter of blood. We conjectured that to have been the cauſe of her mother fitts, to which ſhe was very much ſubject; yea peradventure the palpitation of her Heart aroſe from thence, viz. from filthy vapors, aſcending from that part.

The 61 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Symptoms after Abortion.

The renowned wife of Mr. *Deſgardies*, on the twenty eighth of *March* 1632. Suffered Abortion, by which ſhe voided her ſecondines in the firſt place with much blood, whence extream weakneſs brought her in danger of her life. The flux of blood being ſtopped, the day after ſhe voided her child, now it was of four months. And ſhe ſeemed afterward to recover, and was indifferently purged. Howbeit an extreame carrionly ſtink was perceived, in her purgations. On the ſeventh day ſhe was taken with an intenſe Feaver, and voided that ſame fleſhy womb-cake which is called the womb-Liver, very ſtinking, and ful of black blood; whereupon ſhe grew afterwards wel, by little and little.

The ſame happened in *Madam de Larochе*, who the fifteen day of *April* the ſame yeare, having been four months great, and ſuffering abortion, did void her child with the Membranes, and was therefore judged cleare. Yet ſhe afterwards fel into a violent Feaver, with frequent ſhiverings and Faintings. After which ſhe voided moſt ſtinking purgations, with clotters of blood, and bitts of fleſh. On the ſeventh day ſhe voided the foreſaid womb-cake whol, which was extream ſtinking, whereupon ſhe began to be better, and by little a little recovered.

Theſe two ſtories teach us, that the purgations of the womb, when they ſtink like a dead Carcaſs, do for the moſt part ſignifie, that there is ſome part of the ſecondines abiding yet in the womb. See more of this in the Practice of Phyſick of the laſt edition engliſhed by me.

The 62 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Scabbyneſs.

A Young Man, ſervant to *Mſr. Graſſetus* one of his Majeſties Judges, was tormented with a filthy Scab, with felons frequently breaking forth; of which diſeaſes he could not be freed by blood-letting, and many purges uſed at times, in the ſpace of ſixe months. At laſt there was given him one ſcruple of Mercurius dulcis and halfe a ſcruple of Diagridium, with which being excellently purged, he was in a few daies freed from that filthy ſcab.

The

The 63 Obſveration, or Hiſtory, of Famous and Rare Cures, &c.

Belly-ake.

THe Wife of *Mſr. de la Faverie*, having had the jaundies for a time, of which ſhe was imperfectly cured, ſhe fel into a long laſting tertian Ague, which being ended, a ſlow Feaver remained, with exaſperations every other day, and hardneſs of her Liver. Upon theſe there followed a moſt cruel paine, which did at firſt torment the region of the Liver, and afterwards the whol belly, eſpecially the Region of her womb, her courſes being very little; Clyſters were given her, Fomentations and liniments were applied, with which the paine was very much abated, but eſpecially by giving her half a dram of Sulphur poudered, mixed with one dram of nutmeg; this was given her by another ancient Phyſitian, in my abſence, and he kept it as a ſecret. But the pain was not quite taken away, and it ſoon returned again, with no leſs vehemence, ſo that the patient ſeemed to be now in danger of her life. The foreſaid remedies being repeated in vain, I preſcribed her theſe following pills, the 29. of *July* 1632.

Take *Aloes two ſcruples, Laudanum opiate four grains, diagrydium ſix grains. Make all into ſix pils; which after the patient had ſwallowed at the beginning of the night, ſhe ſlept an houre, and when ſhe waked, ſhe profeſt her pain was quite gone. She ſlept indifferently the reſt of the night, did ſweat much, was very wel in the morning, free from pain and Feaver; ſhe was not at al purged, but in the morning ſhe had a Clyſter, and thereby voided many excrements, which being repeated every morning, three daies together, her pain returned no more.*

The 64 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of A Liver Flux and Dyſentery.

A Certaine Baker having had a bloody flux for two months, fel at laſt into a flux of the Liver, wherewith he voided much watry blood, without other humors, with a Feaver and extream weakneſs, whereupon his Friends judging that he would quickly die, ſent for the Divine and the Scrivener. I being likewiſe ſent for, give him four grains of Laudanum about evening, and within an houre his flux ſtopped, and he went not to ſtoole all that night, until next day at noone, at what time his flux returned, but it was not bloody, but only cholerick; but in the evening there was a little blood mingled therewith. On the ſame day in the morning ſix ounces of blood were taken from him in two veſſels, the laſt of which was hot froathy blood. Cooling aſtringent Juleps were preſcribed him, Epithemes, and a cooling ointment to be applied to his Liver, and the tincture of Roſes for his ordinary drink. Theſe things were adminiſtred on the 14. of *Auguſt*, 1632. The night following was bad enough, and without ſleep, with many Cholerick and ſomtimes bloody ſtooles. But on the fifteen day he took a potion of Rhubarb, Tamarinds and Myrobalans, in a cooling and binding decoction, with which he was much purged al day long, and very much weakned. At the evening, he took the Laudanum again, and preſently his flux was ſtopt, yet he ſlept not al night. In the morning there was preſcribed a binding fomentation, of roots, herbs, and other materialls ſhut in a bag, and boyled in red wine and Vinegar, and ſo applied hot to his whol belly. Alſo a julep of the juice of Porſlane, Plantane and Services; and withal a ſtrengthening and binding pouder, to be uſed in his broaths and panadaes, and in the ſpace of twenty four houres he was perfectly cured.

The 65 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Mother-fits.

The Wife of *Mſr. Mouretus* a Proctor, was taken the 15 of *Auguſt* 1632. With frequent ſtomach

ſtomach ſickneſs, which made her vomit a little flegm with great ſtraining, paine at her heart, and a fitt of Feaver, which appeared and diſappeared many times in a day. Then her Courſes appeared before their due time. I conceive ſhe is troubled with ſome diſeaſe in her womb and I appoint her an hyſterical Clyſter, a plaiſter of Galbanum, and a ſmal potion of Orenge flower water two ounces, and four grains of Caſtorium. Theſe things did her no good, and beſides her Courſes ſtopt. On the ſecond day, when her ſtomach was ſick I give her a potion of Sal of vitriol, wherewith ſhe vomited an huge quantity of Clammy flegm, with great labor and ſtraining. On the third day I cauſe a vein to be opened in her ankle, which did her much good. But on the fourth day ſhe was troubled with faintings & languiſhings, ſo that ſhe ſaid ſhe perceived the vapors ariſe to her heart. A vein was opened in her other ankle, to no purpoſe. On the fift day this following potion was given her, which is very good for ſuch as are troubled with the mother.

Take *Muſk and Dragons blood of each thirteen grains, Orenge-flower water four ounces. Make them into a potion.*

With this medicine ſhe was very much eaſed, and was better all the day after. But upon the ſixt day, her ſymptoms returned, with which ſhe was alſo very much troubled the ſeventh day. On the eight ſhe took one dram of pilulæ fetidæ, with which ſhe was very wel purged, and was ſo wel afterward, that ſhe needed no more Phyſick.

The 66 Obſervation, or Hiorſtory, of Famous and Rare Cures, &c.

A Dyſentery.

THe young ſon of Msr. *Dorthes*, two yeares old, was troubled with a ſtubborn bloody flux; after many other remedies given in vain, I gave him half a ſcruple of extract of corals, with Plantane water, and the looſneſs was ſtopt the ſame day.

The 67 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Cholick pains.

A Certaine Courtier when the King was at *Montpelier*, on the 2 of *October* 1632. Fel into a certain moſt greivous Cholick pain, for the removal whereof, Firſt a Clyſter was given, emollient and purgative, after that a carminating and evacuating Clyſter with terpentine, with which he was eaſed, but the pain returned ſoon after. Finally I cauſe to be diſſolved in a Carminating decoction four ounces of Aqua benedicta, and one ounce of Diaphenicum. With which Clyſter he had four ſtooles, and voided much flegmatick matter, and was perfectly cured.

With the ſame Clyſter Msr. *Verchand*, a Citizen of *Montpelier*, dwelling near St. *Firmins*, was freed two months agoe, from the like paine.

The 68 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Hardneſs of the Liver with a Cachexy.

M*Adam de la Faverie* after the diſeaſe fore-deſcribed, obſerve. 63. Was troubled with a Cachexie and palpable hardneſs of her Liver. By the uſe of theſe following Pils for twenty daies together, ſhe was perfectly reſtored to health.

Take, *Calibs prepared with ſulphur, half an ounce; the beſt Aloes, Senna, Agrick Trochiſked, and choyſe Rubarb, of each one dram; pouder of diarrhodon Abbatis half a dram; Saffron half a ſcruple; with Syrup of Roſes ſolutive make a maſs of Pil-ſtuffe. Of which let her take one dram every day in the morning, walking lightly after it, and after three hours let her take ſome broath, wherein the Leaves and Roots of Perſely have been boyled.*

Becauſe

Because these Pils did not purge, there was added twice or thrice four grains of diagridium to one dose.

The 69 Observation, or History, of Famous and Rare Cures, &c.

A Disease resembling the Mother.

THe Wife of Mr. *Salgues*, a Merchant of *Montpelier*, which tormented many daies together with a pain about the Region of her Liver, with a light swouning, and a certain constriction of her jawes, and flegmatick vomitings: her pains returned by fits, and sometimes reached to other parts of her belly. Sometimes she was taken with such fainting fits, that she seemed as though she would presently give up the Ghost. Seeing it was conceived to be the mother which troubled her, fuitable Remedies were used, but al the symptomes did returne afterwards. At last having used bathes, fomentations, and clysters, she voided by stoole a certain flegmatick compact and broad matter like a swatheband, of an hands breadth, and afterwards she had some stooles of slimy matter, and at last was perfectly wel.

If you intend to be skilful in Physick, diligently peruse my guide to Physick and Chyrurgery And the *Idea* of Practical Physick, and *Riverius* Practice: al englished by me. And be sure you don't scratch your head with a pair of fools fingers.

The 70 Observation, or History, of Famous and Rare Cures, &c.

The Dropsie.

A Certaine young man twenty five yeares of Age, being the Cooke of the Marques *De Varenas*, after a continual and intermitting Feaver, fel into a dropsie tympanies, with abundance of water joyned therewith; after many remedies and frequent purgings, by meanes of which he voided much serosity and wind, and his belly grew lesser, which in twenty four hours time returned to its former greatness; at last with these two following remedies used for fifteen dayes together, he was cured.

Take *Eryngos roots, of madder, smalage, and parsly, barke of caper roots, middle rind of the ash tree, and tamariske, of each one ounce; Asarum roots half an ounce; Leaves of agrimony, Ceterach, maidenhair, ground-oake, St. Iohns wort, wormwood, Centory, of each one handful. Carrot seed, and parsly seed of macedonia, of each half an ounce. Boile them in two parts of water and one part of white wine to thirty ounces. In the strained liquor dissolve foure ounces of syrup of Cichory with rhubarbe. Make it into an Apozeme, for four doses to be taken four mornings, adding to every Dose, halfe an ounce of diuretick spirit, and one scruple of spirit of vitriol.*

After the third or fourth dose of the Apozeme, he was purged with six grains of Mercurius Vitæ and ten grains of Scammony, which caused no vomit, only wrought downward.

The other Remedie was a Cataplasme of the rootes of wild cucumber made with pouder of cummin seed. Whose description you have in my practice in the Chapter of a dropsie.

The 71 Observation, or History, of famous and Rare Cures, &c.

Of Smal Pocks and bloody flux.

A Boy five yeares old, the son of Mr. *Limousin* a Baker, being struchen sick of the smal pocks, the third day was taken with a bloody flux, with a frequent desire of going to stool, he voided flegmatick and snotty excrements, with great store of blood. The pocks were smal, white and flat: being called to see him, I præscribe as followes.

Take *red rose leaves one pugil; red sanders half an ounce; Liquoris scraped and whole raisons, of each one ounce: boyle them in the broath of a wethers head. In nine ounces of the strained li-*

quour diſſolve three drams of confectio de hyacintho, Conſerve of roſes forced through a ſearſe halfe an ounce, one egge. Make al into a clyſter and give it oftentimes.

Take waters of ſcabious and carduus, of each one ounce and an half; ſyrupe of dryed roſes one ounce; coral prepared, and perles prepared, of each halfe a ſcruple; Bezoar-ſtone three graines; Confectio De hyacintho half a dram. Make al into a julep which give him twice a day.

Take oyl of Scorpions of Mathiolus half an ounce, anoint his groines and arm-pits therewith frequently.

When he had twice uſed the cliſter, and twice taken the julep, his looſeneſs was quite ſtopped, and the ſmal pocks began to breake out more powerfully, and the diſeaſe was afterward perfectly cured, ſo that he had no further need of my aſſiſtance.

Although the remedies propounded are common: yet this Caſe deſerves obſervation, becauſe of the extraordinary event thereof; of al the children that ever I ſaw in my whole life, that had the ſmal pocks and a bloody flux none ever eſcaped but this: in others the bloody flux was a certain ſign of death, eſpecially when much blood came away.

The 72 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Of a Malignant pleureſie.

THe Wife of Mſr. *Argelies* of *Frontinia*, about the end of *March* 1633. was troubled with a moſt greivous pleureſie in her right ſide. About the end of the ſeventh day and the beginning of the eight, ſhe was ſuddenly taken with a grievous palpitation of the Heart, ſo that her ordinary Phyſitian ſuppoſed the pangs of death to be upon her, and pronounced openly, that ſhe would ſuddenly die. But I conceived this palpitation to proceed from ſome putrid matter contained in her belly, and ſending vapours upward. The event ſhewed it to be ſo, for after two hours ſhe went twice to ſtool, & voided very ſtinking excrements, & ſo the palpitation ceaſed. Her caſe was counted dangerous, becauſe the diſeaſe would not abate for ſeven dayes together though frequent remedies were uſed, and ſhe did ſeem abated, yet on the eleventh day there was a riſing behind her ear, which ſtruck in again the day following, and on the thirteenth day ſhe died. Whence it was manifeſt, that her diſeaſe was a malignant pleureſie, or rather a malignant feaver attended by a pleureſie.

The 73 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Baſtard pleureſie.

ABout the ſame time, the maid-ſervant of Mſr. *Germain*, a Citizen of *Montpelier*, had a pricking pain in her ſide, with a cough and white ſpittings, which nevertheleſs appeared twice or thrice bloody; ſhe could lie beſt on her pained ſide, which was the right. Now ſhe had no feaver, which ſhewed that is was no true pleureſie, ſeeing ſuch an inflamation cannot be without an acute feaver. On the ſeventh day of her ſickneſs, the pain never ceaſing al the while ſhe ſpet blood plentifully for ſome hours, after which followed the flux of her courſes, and after that her diſeaſe was perfectly terminated. I conceived the cauſe of this dieaſe to be a certain ſharp wheyiſh humor, brought into her ſide by the veins which cauſed a pain without inflamation. Which humor being much ſtirred on the ſeventh day, it opened ſome ſmal veins, whence her ſpitting of blood was occaſioned. But nature conquering, and ſending the ſaid wheyiſh humor to the veins of the womb, the diſeaſe was terminated.

THE

The 74 Observation, or History, of famous and Rare Cures, &c.

A palsie and Convulsion, being Hypochondriacal symptomes.

Mr. *Fauquet* a Physitian of *Provins* was troubled the foregoing Autumne with a very long lasting double tertian which lasted to the beginning of winter 1633. He was of a melancholick complexion, being forty yeares old, he had fed in the Lent upon bad diet, also had been troubled with very grievous passions of mind. After Easter he began to be troubled with a Catarrh falling upon his left shoulder blade, where he felt a paine; a few daies after he fel into a painful imminution of motion and sence, in al parts almost, but especially in his Legs and thighes. Moreover painful stretching, happened by fits in the said parts, so that the toes of his feet were contracted, and the muscles neare his groines were stretched like cords. In his upper parts, especially his arms, he could stir himself more freely. But in al parts, his sence was obtuse and dul, so that he affirmed he had little or no feeling in his sole and face. He voided at his mouth, a thin humor, which he said tasted sharp and bitter like vitriol; every day his Feaver was exasperated, and during the exacerbation, the tension of his muscles, his fluxion and other symptomes were encreased, also his breast was very much straitned, so that he seemed to be stifled. At the beginning of his ilnes, he was twice let blood, and twice purged, and went to the Balerucan Baths; where he was four times put into the bath four dayes together, and had his Head washed, to no purpose. Being returned from the Bath, he took my Advice. Now I judged that this disease of his proceeded from a wheyish humor, flowing from his braine, into the marrow of his back, and al the body of the nerves: and that the said wheyish humor was first gathered in his hypochondria, especially in the mesaraick veins, where a great quantity of melancholly humor was contained, bread of foregoing Causes. So that I conceived this Disease of his was an Hypochondriacal affection, whose symptomes were that same palsie and imperfect convulsion, bread of a wheyish humor, fluxt into the foresaid parts. An Argument wherof was both the melancholick constitution of the patient, as also the flowing of such an humor from his Mouth, in great quantity, likewise the Feaver wherewith he was troubled in a manner continually; and as his feaver encreased, all the symptomes encreased; whenas nevertheless a palsie is wont to cure a feaver proceeding from flegme. Now *Sennertus* tels us that such symptomes proceed from a melancholly humor, treating of the hypochondriacal disease, and of the scurvy. This is no palsie properly so called, which is caused by the stoppage of the beginning of the nerves, but abusively so called, being no total privation of sence and motion, by stopping the influx of the animal spirits through the nerves; but rather a depravation of the sensitive motive function, because there is a painful sense.

I prescribed him an Apozeme for many dayes together of temperate aperitives, purging him one day and altering another, and applying an emollient and opening fomentation to his hypochondria; a liniment of the same faculty; also blood-letting after the first dose of the Apozeme, a clyster being premised and a purging medicament. He used for his drinke, the infusion of tamariske barke, Agrimony and Burnet. But the blood which came from him, appearing very ful of bad juyce, he was let blood againe. He found no good by his other medicaments, but seemed to grow worse.

On the 24 of *April*, I visited him againe, and found him very weake, with a continual slow Feaver, which had nevertheless paroxysmes of a tertian ague. In which his Hypochondria were puffed up with winde, by fits, especially his Spleen. Sometimes also by reason of the said wine, his midrife was so compressed, that he would cry out, he was choaked and stifled; and having drunke a cup of water, he belched twice or thrice, and was presently freed from the said suffocation. A fatty substance did swim upon his urines, like Cobwebs, and their sediments were of a mealy substance. Which kind of Urines are deadly, according to *Hippocrates* in the second of his Prognostickes. On his wel day he did spit exceedingly, and felt the humor trickle down between his scul and skin, or the muscles of his face.

On the 29 of *April*, I visited him againe, being at the last cast, his pulse very smal, his

ſpitting ſtaid, and his breath ſtopt. Yet his underſtanding was unhurt. He died the day following in the morning.

If you mean to do good in Phyſick, diligently Peruſe *Riolanus* Anatomy, *Johnſtons* Idea, and *Riverius* Practice, Engliſhed by me. And abhot Idleneſs as I do Pride and Covetouſneſs.

The 75 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A pain in the ſide proceeding from worms.

ABout the end of the month of *April*, 1633. the daughter of *Raymund Michael*, of *Frontinia*, being eight years old, began to be troubled with a Feaver and a Cough, after which followed a pain in her ſide, ſo that ſhe was ſuppoſed to have the Pleuriſie. Howbeit, the fift day of her Diſeaſe, ſhe voided three or four worms, by means of a Clyſter; and the daies following ſhe voided more having taken Medicines againſt the wormes and a purge: and ſo ſhe was cured. Whence it appears, that Vapors ariſing from a putrid matter (of which worms are bred) do cauſe pains of the ſide, a Cough, and other Symptomes, which make ſhew of a Pleuriſie, when there is none.

The 76 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Kings-Evil ſwelling.

ON the 6. of *June*, 1633. Mſr. *de Gaian* brought his daughter to me being thirteen years old, of a Sanguine complexion, which appeared by the reddiſh color of her Face, and ſhe had her Courſes ever ſince ſhe was eleven years old. Having for eight moothe together had a certain fluxion upon the right ſide of her Face, a few daies after, it fel into her Neck, ſo that one of the kernels of that part ſeemed to be a little ſwelled. After that time the Tumor grew by little and little, ſo that it was now bigger than a gooſes Egg. She had many Remedies applied by a Phyſitian and Chyrurgeon in that place, for two months together, purges, ſweating Decoctions, a Cauſtick to the nape of her Neck, alſo Remedies applied to the part, firſt reſolvers and Emollients, afterwards ſuppurators and ſtrong drawers, by which no good at al was done; rather the Tumor which before was ſmal, encreaſed greater. Whereupon, I, adviſing with Mſr. *Delort*, Dean of the Univerſity, and Mr. *Thierry Hagenot*, an ancient Chyrurgeon: At firſt we ſent her to the Balerucan baths, that ſhe might uſe them in drink, bathing, and have them powred upon her Head. And afterwards we preſcribed theſe following Medicaments.

Pulvis Arthriticus, to be taken with Ginger, once every week. Blood-letting after the firſt doſe of the pouder.

Fomentation by a ſpunge wet in chalk water, preſſed forth, and tied hard on upon the part, for ten daies together. A Suffumigation of the ſtone Pyrites quenched in moſt ſtrong Vinegar, and the ſmoak received by a Funnel which ſhal cover al the Tumor.

After the Suffumigation the Emplaſter of Vigo with a fourfold quantity of Quick-ſilver, to every ounce of which plaiſter add one dram of Roman Vitriol.

A Diet drink of Salſaparilla, to be uſed a long time, without Wine.

The infuſion for the Branchocele, deſcribed in the *Diſpenſatory* of *Quercetanus*, which muſt be uſed when the moon is in the ful.

The waters of Meyn, drunk for a month together, and applied by way of fomentation to the part, twice a day, and of the ſame water a Diet drink was made.

Her Diet was continually drying.

After

After her return from the waters of Meyn, if the Tumor shal not be discussed, it must be opened with a Caustick.

Those were the Remedies we ordered for her, and she used al of them excepting the waters of Meyn; because when the other things did no good, but the swelling rather encreased, there was no hope from these waters, but we thought best to come to open the Tumor which was done on the 19. of *September*, 1633. And when after a Caustick, incision was made upon the Eschar, a very thin and clear water brake forth, like fountain water, and the Tumor presently fel, and was wel near as flat as the opposite part, which made us wonder, and we judged it worthy of observation. For I suppose no Author ever wrote of any such Tumor proceeding from water, saving the Hydrocele, and Hydrocephalos. Ten or twelve hours after it had been opened she was troubled with an acute Feaver, and a great fluxion happened into the part, with inflamation; on the third day the Feaver ceased, after twice blood-letting and twice purging. A Cataplasme of bread-Crums was applied to the Tumor, which settled a little, and a certain Flegmatick quittor flowed out of it. The thirteenth day after it was opened, the Eschar formerly cut off, went out at the Ulcer, the case remained whol and perfectly Membranous like a Sack, and a few daies after she was Cured.

The 77 Observation, or History, of Famous and Rare Cures, &c.

The Venereal pox.

A Certain young man of a Cholerick and Melancholick Complexion, being infected with the whore-masters Pox, in the month of *June*, 1633. Underwent a sweating Diet, and afterward was anointed with Quick-silver. After the second nointing, when the flux began to proceed wel, he was suddenly taken with a contraction of his Arms and Thighs, with a mighty stretching of his Belly, and suffocation, and suddenly his flux ceased. Vehement frictions were used upon the parts contracted, Aqua Imperialis and Cinnamon water were given him, which did no good. Afterward, we gave him of our Treacle water, drawn with spirit of Wine, with which he was much eased, and a sharp Clyster being administred his fit went away. Two daies after, because he did spit but little, Mercurial Emplasters were applied to his legs, thighs, and Armes, which within twenty four hours, made him spittle abundantly. But the patient fel into such a fit as the former, and being rubbed, and the former water being given him, also a clyster being administred, which he could not void forth again, he was no ways eased by suppositories, but seemed wholly to be choaked. I caused another sharper Clyster to be given him of two ounces of diaphenicon, and as much of Hiera picra, after which he went plentifully to stool, and was freed from his fit. The day following, he fel again, after his spitling, into the same fit, but a more greivous one than any of the former, for it could not be driven away, neither with treacle water, nor with iterated Clysters, which purged him plentifully. Finally, seeing it was my opinion from the first, that these Symptomes proceeded, from a Mass of Excrements in the stomach mounting aloft, which could not be voided at the mouth because of their thickness, or the weakness of the expulsive faculty: and being collected in great quantity, and Malignantly disposed, they vexed the mouth of the stomach, whence those Convulsions arose, by reason of the consent of the Nerves. Also, that from the foresaid matter agitated by heat, many Vapors are raised, which distending the stomach, did compress the midrif, whence followed suffocation and a stretching of the Belly: I judged therefore that his stomach was to be evacuated with a quick and potent Remedy. And to this purpose, I gave him a dram of Salt of Vitriol dissolved in water, with which in the space of a Quarter of an Hour, he voided about two pounds, of a Flegmatick, Clammy and thick Humor, mixed with Melancholly, and was presently freed from his fit; afterwards his fluxing was continued for many daies together, without any other Symptome, and so he was perfectly freed.

The 78 Observation, or History, of Famous and Rare Cures, &c.

Of Veneral Pox.

I have Cured it in many, with a Decoction made of Sudorifick and purgatives, used twenty daies together. If that did not the deed, I proceeded to fruictions with Mercurial Unguents. Many have been Cured in the middle of Winter only with this Decoction, who could not use a sweating Diet by reason of the Inclemency of the Air.

For this Disease, Read *Sennertus*, of the French Pox, Englished be me: And don't trust to a Knavish Author quoted by him which giveth Direction how to lie with the most Pocky Whore, and yet receive no harm.

The 79 Observation, or History, of Famous and Rare Cures, &c.

Of a pleurisie degenerating into an Empyema.

THe Son of Mſr. *de Calvieres*, Judg of Criminal Cases at *Nismes*, being twenty years of Age, about the middle of *May*, 1633. At *Montpelier*, fel into a pleurisie of his left side, with which he was held in such a manner, that he could not lie on either of his sides, but only upon his back. Many Remedies were prescribed for him, by three Physitians in Consultation, and he was let blood ten times, or more; yet his Disease lasted long, though the pain in his side seemed sometimes to cease, and the Patient could turn himself to any side. But his Feaver still continued and the pain of his side returned. His Feaver had lasted to the thirty five day, in which his side was observed somwhat to swel, and was pained when touched, and somwhat red. 'Twas judged, the Pleurisie was turned into an Empyema; and suppurating Cataplasmes were applied, wherewith his side did swel somwhat more, the sixt or seventh day after, when the opening of his side had been too long delayed (which ought to have been done as soon as ever the swelling in his side appeared) the impostume broak inwards. Howbeit the patient did easily Cough up the quittor, which appeared laudable and no waies stinking, and came away in a great quantity daily, at first pure, and afterwards mixed with much flegm. After the Impostume was broken, he could easily lie on either side, his Feaver lasting, whereas before he could not lie on his wel-side, because he felt a mighty weight in his pained side, which sign is observed by *Hippocrates*, in his Prognosticks. Eight daies being past after the breaking of the Impostume, the voidance of quittor ceased, and there came nothing away save flegm. Then he began to feel a weight again, in the same side, so that he could not lie upon his sound side, also some kind of rising did again appear, on the outer part of his side, I conceived a new Collection of Humors was made in his side, and that there was need speedily to open the same, least the matter being again shed into the Chest, should trouble the Lungs afresh, whence there might be danger of a Consumption. But because the other two Physitians with two Chyrurgeons, would not assent unto my judgment, and his Mother made hast to remove him; he was carryed to *Nismes*, where at last the Empyema was opened by a Caustick applied to his side and Quittor did a very long time flow from the Ulcer, and in Conclusion the Patient was perfectly cured.

The 80 Observation, or History, of Famous and Rare Cures, &c.

Child-bed purgations suppreſt.

A Woman of mean rank and quality being eight months gone with child, was taken with a continual Feaver, the 5. of *July*, 1633. On the third day of the Feaver, she miscarried, and her Child-bed Purgations were wholly stopt, purple spots appeared in her whol body, especially about her Neck; her Feaver was violent. I prescribe the opening of her Ankle vein,

and

and juleps compounded of cold aperitives, frictions of the Lower parts, a relaxing fomentation and Liniment to be applied to her ſhare and perinæum. No good ſeemed to come by all I did, rather about the end of the ſecond day after her abortion, her Feaver was very much enraged, ſo that ſhe fell into a raving, and her countenance was very much changed, whereupon every body was convinced that ſhe was in a moſt dangerous condition. Then I cauſe a vein to be opened in her Arm, and blood to be drawn to the quantity of ten ounces, which was very corrupt; it was about five a clock in the evening, and I gave order to let her blood four hours after, viz. About nine of the Clock. I preſcribe her very cooling Juleps of a decoction of Lettuce, Porſlane, Sorrel, with Sal-prunellæ, alſo a cooling and emollient Clyſter, with which Remedies ſhe was ſo amended, that the day following her Feaver appeared very ſmal, her Purgations began to flow, and in a few daies ſhe perfectly recovered, without any other Remedies.

The 81 *Obſervation, or Hiſtory of* Famous *and* Rare Cures, *&c.*

Suppreſsion of Urine by reaſon of a bit of fleſh growing in the Yard.

A Certain Officer belonging to the Senate of *Divion*, being at *Montpeler* about buſineſs, on the ſeventh of *July*, 1633. fell into a total ſuppreſſion of Urine, by a caruncle ſwelled in his yard, through immoderate carnal embracements. A Chyrurgeon whom he at firſt ſent for, putting in a Catheter cauſed a great effuſion of blood, by wounding the part, and yet he voided no urine. The ſick-man was tormented with moſt grievous pains and endeavors to piſs. I being called, ordered him to bleed twelve ounces, becauſe he was of a ſanguine Conſtitution, alſo to have an emollient and cooling Clyſter, and a lukewarm bath to ſit in, a cooling injection, and anointing of his kidneyes, ſhare, and perinæum with a cooling ointment; it was nine a clock in the evening, and I then ordered him to be let blood again about midnight, al which orders were performed. In the morning he was in the ſame condition, endeavored mightily to make water, but could do nothing, except four or five drops at a time. Being ſent for again I preſcribe him a vomit of one dram of Salt of vitriol, by help whereof, he twice vomited many flegmatick Humors; but in the ſecond vomit, he voided an ounce or two of urine, and ſaid that he was eaſed, which had not hapned before. After that, by fits, he piſt ſomwhat more plentifully, ſo that within the ſpace of four or five hours, his bladder was quite emptied. There remained ſome kind of Inflamation of the part affected, which was cured with emulſions with Sal prunellæ in them, with Injections, Clyſters a Bath to ſit in, and Inunctions.

The 82 *Obſervation, or Hiſtory, of* Famous *and* Rare Cures, *&c.*

Difficulty of Breathing.

The Son of Mſr. *Hugo*, a Merchant of *Montpelier*, five years old, having been ill ordered by his Nurſes, among divers ſymptoms, was troubled moſt with this, that when he ran, or uſed any vehement motion, he was troubled with ſhortneſs of breath. Finally, on the third of *July*, being much heated by exerciſe, he fel into a cough with difficulty of breathing, a ſmal Feaver and gentle looſneſs, by which he voided yellow, flegmatick, and ſometimes greeniſh excrements. Yet were theſe ſymptoms ſo light, that his parents had no thoughts of calling a Phyſitian; but an Apothecary applied a veſicatory behind in his neck. I being ſent for on the fift day of his diſeaſe, find the ſame ſymptoms, from whence I conjecture a fluxion upon his Lungs, with danger of an Inflamation, and therefore I order him to be let blood, which was not performed, becauſe the Chyrurgeon could not find the vein: but Cupping-glaſſes with Scarrification were preſently applied, and a pectoral cooling julep was given him. Theſe things were done about noon. But about three in the afternoon, the patient was ſuddenly taken with ſwouning, from which being quickly recovered, his pulſe was afterwards ſmal, languiſhing, frequent

frequent, and like the pulse of dying persons, his belly was very much stretched and pained, he fetchs his breath exstream short, had an unquenchable thirst. Many Remedies were used in this desperate Case, a consultation of Physitians being called, which did no good at al; but the Patient growing still worse and worse, died at midnight. The body being opened, his natural parts seemed in good Case, save that his bladder of Gal was bigger than ordinary, and ful of a blackish Humor. But the left part of his Lungs, did stick so fast to his Midrif, that it could not be parted, from whence, in part, we conceive his shortness of breath proceeded. Also the left Ear of his Heart, was larger than ordinary, and ful of a thick compacted matter, perfectly white, like boyled Lard. Which we conceive to have been the cause of his sudden death, by suffocating the left Ventricle of his heart, and hindring the Ventilation thereof.

For knowledg and Cure of these Diseases, diligently peruse *Riolanus*, *Johnstons* Idea, and my Practice of Physick.

The 83 Observation, or History, of Famous and Rare Cures, &c.

Spitting of Blood:

ON the thirteenth of *August*, 1633. Msr. *Duprat*, a Councellor at *Montpelier*, fel about night into a spitting of froathy blood, with a Cough, and voided a great quantity thereof in the space of a night.

Being called to him on the fourteenth day, in the morning, I order him to be let blood eight ounces, and after that to have a Julep of Plantan water, Syrup of dried Roses and Sal prunellæ, afterward a Clyster was given him, a Cupping-Glass was applied to the Region of his Liver, he used a thickning and astringent Lick-pot. At ten a Clock, he was again let blood to six ounces, also he was ordered to use Syrup of Purslain. In the afternoon, he fel into his spitting of blood again in great quantity, viz. To a pint, his Julep was repeated, water and Vinegar were applied to his Testicles, a cooling Epitheme to his Liver, a couling Liniment to the same part and to his Loyns, a Cupping-Glass was frequently fastened to his Hypochondria; and about evening he was again let blood in his Arm to the Quantity of seven ounces; Juleps were prescribed of the infusion of yarrow, tormentil Roots, and conserve of Roses, described in my practice of Physick, in the Chapter of spitting of blood, which are very efficacious. For drink he used Conserve of Roses, with a Decoction of Barley and Liquoris. At night this following Syrup was prescribed.

Take Syrup of dried Roses, of the Juyce of Porslane and white Poppy, of each one ounce. Mix them. Let him take a spoonful once every two hours, so as that he take the whol three ounces in the compass of that night. This Syrup did him wonderful much good, and the day following (which was the fifteenth) it was repeated again, so as that he was to take one spoonful at longer distances. On the same day in the morning a Vein was opened in his Ham, and a good Quantity of blood taken away, also the other Remedies were continued, and other things added, as an astringent and soddering Electuary; and finally, a Clyster was given him. Al which time, he did not spit very much blood, and the spittle which he coughed up at long distances, was bloody. Howbeit he was troubled with difficulty of breathing and hoarsness. But the following daies, he did spit no more blood, and became perfectly wel.

The 84 Observation, or History, of Famous and Rare Cures, &c.

A Gangrene.

A Certain man of a mean condition, being sick of a continual Feaver, had a Vein opened by an unskilful Chyrurgeon, whereupon his Arm swelled, was inflamed, and at last Gangrenated, so that his whol Arm was of a lead color. But in two places the color was most of al changed, in which he felt not the Scarrifications which were made. Wherefore after many

ny Scarrifications, the ordinary Remedies were applied, which did little good, rather his Arm did grow worſe. I, being at laſt ſent for, order the Scarrified Places to be moiſtened with ſpirit of Sulphur, whereby the mortified fleſh was burnt, and cauterized as it were. Afterwards, I order his whole Arme to be fomented, hot, with ſpirit of wine, wherein Aloes and Myrrh, had been infuſed, afterwards the foreſaid pouders of aloes and Mirrh, were Sprinkled in great quantity al his Arm over, and then were laid upon the pouders, Linnen Cloaths, wet in ſpirit of wine; which medicine being uſed for ſome hours together, his Arm in a Miraculous manner returned to its natural colour, the ſwelling being aſſwaged, and the Gangrene ſtopped, ſo that the day following, the mortified and burnt parts, began to ſeparate from the living fleſh; unto which was applied a digeſtive made of yolks of Egs, Terpentine and Honey, and after perfect ſeparation, the Cure was finiſhed with Epuloticks.

Nephritick pains.

ON the 10. of *October*, 1633. the Cook of Mſr. *de Miron*, his Majeſties Lieutenant in *Languedoc*, being many years troubled with pains in his Kidneys, which would not give way to ordinary Remedies; he took a bolus of Diaprunum Solutivum half an ounce: Panacea, one ſcruple. With which he was gently purged, made thick Urines, and was freed from his pain. While the medicine wrought, he felt the matter drawn away from his Reins, without any pain.

The 86 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Cholick pain.

IN the beginning of *November*, 1633. the Lady *de Varanda*, was moſt grievouſly tormented with Cholick pains, and after two Clyſters taken in vain, ſhe drank a dram of the pouder of a wolfes-gut in wine, which was given her the foregoing month for the ſame pain, as may be ſeen in the 59. Obſervation of this Centurie, and preſently her pain went away. Now ten or twelve daies after, though ſhe had been purged with Apozemes, her pain returned more ſharp than formerly; and though two drams of phylonium had been diſſolved in a clyſter, which ſhe took, her pain ceaſed not. The foreſaid pouder was given again, and the pain became leſſer, and within three hours went in a manner quite away. But the day after it returned more bitter than before. Five grains of Laudanum were given her, and her pain was quite taken away, and returned no more.

The 87 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Of an Ulcer in the Heart.

ON the 23 of *January* 1634. I was called to the daughter of Mſr. N. Fourteen yeares old, who had for many daies before been troubled with a vomiting of flegm, which took her once or twice in a day, eſpecially in the morning, with an Heart-burning which troubled her by fits. Alſo ſhe had a pain on the top of her left ſhoulder blade, and on the top of her arm where it is joyned to her ſhoulder. The night following, which was the fift ſince ſhe was firſt il, ſhe was taken with a Looſneſs, and a feaver, which held her al day. On the ſixt day ſhe took one dram of rhubarbe poudered, with broath, and had many ſtooles; the Feaver continues, in the night ſhe had but two ſtooles, and ſlept two houers. On the ſeventh day her looſneſs continues, but not ſo frequent; ſo that ſhe was let blood four ounces. Theſe two things we alwaies obſerved upon the coming of

her feaver, that her pulſe was in a manner alwaies intermittent; and whereas the foreſaid pain continued evermore fixed in the ſame part, and did not at al reach unto the Cheſt; yet the patient could not lie upon that ſide, viz. her left, but preſently ſhe was taken with the heart-burning and Cough, ſo that ſhe was alwaies forced to lie upon her right ſide. A drie Cough vext her by fits, ſomtimes ſhe voided wind upwards and downwards, and the ſame ſymptomes continue, eſpecially heart-burning by fits, and a pulſe unequally intermitting, little ſleep; ſhe continued the uſe of cordial medicaments internally and externally, alſo worm-killers, and ſuch as ſtrengthened the ſtomach. When her heart-burning did very much trouble her ſhe took a ſcruple of ſalt of wormwood, with a ſpoonful of juyce of Lemmons; after which ſhe was exceeding wel for ſome hours, but her ſymptomes returned, at night her Urines were thick and ſufficiently pale. On the ninth day a Veſicatory was applied to her neck, whereby her cough ceaſed; and before that the pain of her ſhoulder was abated and ſhe could better endure to lie upon her left ſide. The ſame day ſhe took one dram of the Infuſion of rhubarb, with one dram of Hiera picra, and one ounce of ſyrup of Cichory with rhubarb, with which ſhe was very much purged to good purpoſe, and her Looſneſs continued ſome daies, whereupon ſhe ſeemed to be perfectly upon her Recovery; though her pulſe did ſtil intermit, in the third, fourth, or fift pulſation. After that ſhe was riſen out of her bed, the intermiſſion of her pulſe ceaſed, the frequency thereof remaining, and the patient was troubled with a dry cough eſpecially at night, with ſhortneſs of breath. Which ſymptomes continued for a long ſeaſon, and beſides difficulty of Breathing, ſhe had by fits a pricking pain in her ſide, which did more vex her, when ſhe lay on her wel ſide; (her feaver was continually violent) and contrary wiſe her ſhortneſs of breath, was worſe when ſhe lay on her pained ſide. Al which gave great ſuſpition that there was an impoſtume in the left ſide of her Lungs. Finally, on the 34 day of her diſeaſe ſhe was taken ſuddenly with ſpitting of blood, which ſhe voided by coughing to the quantity of eight ounces. Now the blood was thick enough, and not froathy, which the Patient her ſelf ſaid came down from her head, and that before the voidance thereof, ſhe felt a trickling in her throat, alſo ſome blood came away, when ſhe blew her noſe. Howbeit, in the evening, when her ſpitting of blood returned, it was apparent enough that it came from her lungs, for it was altogether Froathy, and it was one pound in quantity. Whereupon ſhe was let blood in the baſilica Vein of her left arm a julep was given her of plantane and red-poppy waters, and *Sal prunellæ*, and ſyrup of dried roſes: ſhe uſed al night long, ſyrup of violets, of dryed roſes, and of poppies mingled together, wherewith her cough was allayed, her voiding of blood hindered, and ſhe ſlept by fits. The day following in the morning, ſhe was again let blood, out of her right Arm, her julep was repeated, and many other remedies uſual in ſpitting of blood, were preſcribed in a conſultation with Mſr. *Ranchinus* the Chancellour, and *Delort* the Dean of the Univerſitie. She did again ſpit blood to the Quantity of eight ounces, about eleven a clock before noon; her medicines were continued, and ſhe was again let blood in her ankle. At four a clock in the Evening, her ſpitting of blood returning in a violent manner, ſhe died ſuddenly. Her Carcas being diſſected, the *Lungs* were found of a white colour, ſticking to the ribs on both ſides, and round about to the midrif; alſo it ſtuck round about to the pericardium or Heart-bag, ſo as to make one continued body therewith. But the Heart was found whole, and near the middle thereof where it looks towards the Midrif, it was eaten and ulcerated, ſo that ſome purrid fleſhy fibres might be pluckt away, with the tops of ones fingers. And it was obſerved, that certain ſmal bits of fleſh, very like thoſe fibres, were ſpit up with the blood ſhe did ſpit. So that, moſt true it is, that this ſick perſon, did ſpit up the ſubſtance of her heart, which is very ſtrange. And whereas in the Heart-bag, a liquor was found, we do ſuppoſe that the matter cauſing this Impoſtume or ulcer, was mingled with the blood, and voided by coughing. Some ſuch ſtories are to be found in *Skenkius* his Obſervations, the ſecond book, where he treats of Tumors and Impoſtumes of the Heart.

The 88 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Dropſie of the Breaſt.

THere a rowned wife of the moſt noble Mſr. *De Thomas*, the Kings Counſeller in his Court at *Montpelier*, was troubled five months, with a fluxion of thin humors falling upon her

her Lungs, with a dry cough, Difficulty of breathing, a continual and ſlow Feaver, which was more violent every night, with a ſlight ſhivering, after which follow very plenciful night ſweats, ſo that every night ſhe is forced to ſhift her ſelf, three or four times. For ſome daies the exaſperations of her Feaver came twice a day; after noon, and in the evening: in the day ſhe ſwet not, but alwaies in her ſleep. Alſo from the beginning of the diſeaſe, ſhe had a pain on the left ſide of the Region of her Breaſt, and ſhe could hardly lie on that ſide; ſo that as ſoon as ſhe laid her ſelf on that ſide ſhe was taken with a moſt troubleſom cough and more pain'd than before. Yea and ſometimes by preſſing her ſide with the top of ones fingers, an exceeding great oppreſſion of her Lungs, and difficulty of breathing, did follow thereupon. Whereunto was added, the puffing up of her ſpleen, joined with ſome ſtretching, which is thought to have occaſioned thoſe other diſorders.

Having conſulted with Mſr. *Ranchinus* the Chancellor, it was releaſed that her chief infirmity was in her left ſide, and that it was ſome collection of the humors, which oppreſſed the left ſide of her breaſt. But what kind of matter was collected, could not certainly be known. Howbeit thus much may be avouched, that it is either water or quittor, for the ſigns of both concur, and the like is recorded by *Hippocrates*, where he ſaies, in his ſecond book *de Morbis*, that ſuch as are troubled with a dropſie of the Lungs, are affected juſt as thoſe that have a ſuppuration, only leſs violently and longer. Our opinions did more encline that it was a watry collection, becauſe neither pleuriſie, Inflamation of the Lungs, nor ſpitting of blood had preceded, nor had ſhe ever voided any purulent matter. She died of a conſumption, and gave charge before ſhe died, that her body ſhould not be opened.

The 89 Obſervation, Or Hiſtory, of Famous and Rare Cures, &c.

Of Suppreſſion of Urine.

MR. *Raymund Ratte*, ſixty years of Age, a plethorick perſon, and troubled with the ſtone, who had been accuſtomed without any hurt to void many ſtones at times with his urine; about the end of *January* 1635. after he had voided many ſtones upon occaſſion of immoderate exerciſe, he fell into a total ſuppreſſion of urine, which ſuppreſſion (as was clearly apparent by ſigns) was in his kidneyes, not in his bladder. For three days together he had made no water when I was called to conſult with two ancienter Phyſitians, the one of which was his ordinary Phyſitian, who during the three days aforeſaid, had preſcribed ſundry diureticks, both external and internal, Clyſters, baths to ſit in, potions, and the like. And before that he was called, the patient had been purged with a gentle cathartick. I delivering my opinion in the firſt place, ſaid that the chief cauſe of this diſeaſe, or at leaſt which foments this Symptome, is a mighty plenitude of the veins above the Kidnies, which by reaſon of diſtention, cauſed by plenty of the ſeroſities, retained the ſpace of three daies, cannot eaſily contract themſelves to expel the ſame, whence many times a difficulty of making water does ariſe. Now that there is a great plenitude of ſerous humor, is apparent, both from the plenitude of the patients body, as alſo becauſe he has been uſed to drink much, and when he was in health, he was wont to make three or four pints of water every night. Therfore I judged that diureticks were not to be uſed, which by bringing humors to thoſe paſſages, might encreaſe their diſtenſion. But that rather ſome notable revulſions were to be procured, by blood-letting and purging, and that blood ſhould be taken away, in a good quantity, as ſoon as might be; and that five or ſix hours after a ſtrong phlegm and water purging medicament ſhould be adminiſtred. The other Phyſitians were of the ſame mind, and a pound of blood was taken away before noon, and at evening one dram of the pouder of Diacarthamum without the ſeeds, was given him; which gave him many ſtools, and after four or five ſtools, he began to make water, and made firſt four ounces of blackiſh urine, and a little after a greater quantity of red, and after that cleare as water. He voided abundance of urine in the ſpace of a day, and was cured. Almoſt ſuch another caſe was propounded, in the firſt obſervation of this Century.

The 90 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Pain of the Stomach.

ON the 25 of *January* 1635. I was called to a Gold-ſmith of *Montpelier*, who for two months had been troubled with a moſt violent and perpetual pain in his ſtomach, ſo that by the pain and want of reſt, he was grown extream lean. During the ſaid ſpace of time, his ordinary Phyſitian, had preſcribed him twelve or fifteen gentle purgations, and many other remedies both internal and external, not omitting fomentations, Liniments, and ſuch like. At laſt three Phyſitians being called to conſultation, a vomit was preſcribed, of a decoction of radiſh ſeed, orach, &c. Which are commonly preſcribed to cauſe vomit; which having taken he vomited not at al; and having taken the like medicine again, he eaſed his ſtomach and vomited plentifully, whereby his pain was not at al eaſed. Afterwards he was again purged, and a ſweating diet was preſcribed him. Two daies after his purging, before he began the uſe of his ſweating decoction, ſome body put into his Head to ſend for me, which he did about the evening, and told me the Hiſtory of his diſeaſe. And I to ſhew that he might have eaſe, at leaſt for a time preſcribed him for that night five grains of Laudanum, with which his pain was wholly taken away, and he ſlept al night, whereas for three months, he had never ſlept longer than an hour. In the morning he ſaid he was cured. Yet his pain returned, and could no waies be aſſwaged, but by giving him Laudanum divers times, and that for a ſmal while, til at laſt he died of a Conſumption, His body being opened, a mighty Scirrhus was found, which poſſeſſed the whol pancreas and part of the Meſenterie, alſo it went about the pylorus, and the beginning of the Jejunum Inteſtinum; ſo that it did ſo ſtraiten the paſſage from the ſtomach to the gutts, that it was almoſt quite ſhut up, and his ſtomach was found ful of meat and drink. Seeing therefore the nouriſhment could not be diſtributed into the body, he died of a Conſumption. The Scirrhus could not be felt by the hand, becauſe it lay concealed under the ſtomach and Gutts. It made ſo great a pain becauſe it poſſeſſed the Pylorus and the lower part of the ſtomach.

For the diſeaſes in the eight laſt mentioned ſtories, Read the Guide to Phyſick and Chyrurgery, and the Idea of Practical Phyſick, with Riverius *Practice of Phyſick: al engliſhed by me, of the laſt Edition.*

The 91 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of worms.

THe Son of Mſr. *Gerard*, being four years old, began to be ſick, *January* the 25. 1635. of a Feaver proceeding from worms, with a vomiting of leek colored humors, and continual ſtomach-ſickneſs. I preſcribed him an uſual potion againſt worms, to which was added becauſe of the malignity (which was known by the humors voided, and by a kind of ſwelling al his body over) four grains of Bezoar, alſo he had a ſweet clyſter given him. Having taken the potion, he vomited two worms, and voided one by ſtool with the Clyſter. At night he took the potion again, and was next day wel, ſo that his freinds did not deſire he ſhould take any more Phyſick. Two daies after he fel into the ſame diſeaſe and was much more grievouſly tormented than before, with unquietneſs, and continual groaning, even in his ſleep. I preſently preſcribe him a potion, of the infuſion of rhubarb in ſyrup of roſes in porſlane water, with which he had three ſtools of exceeding black excrements; and after his purgation al the ſymptomes remained as alſo his vomiting was encreaſed, ſo that he caſt up al his broaths and whatever he drank; whence it was that the potion formerly given him againſt the worms, had now no effect (though formerly it did him ſo much good) becauſe he vomited it up again. And therefore conſidering that he did not vomit the Confectio de Hyacinctio, which was given him in broath, I gave it him two times more, with an addition of four grains of bezoar, whereupon he vomited no more, ſlept in the night and was much better. Whence I conclude, and think it worthy of obſervation, that Bezoar ſtone is of great efficacy in the

Caſe

Caſe of worms. He took the foreſaid purging potion again, after which he had a critical looſneſs, with which his Diſeaſe was very much abated, and at laſt with ſpecifical Juleps of a decoction of Scordium, and St. Johns wort made with cooling things, it was perfectly cured, he being after his Juleps again purged with Senna, Rhubarb and Syrup of Roſes.

The 92 Obſveration, or Hiſtory, of Famous and Rare Cures, &c.

An Impoſtume of the Abdomen:

ON the 16. day of *February*, 1635. I was called to the Daughter of a Widow, ſometimes the Wife of *John Peire*, a Merchant of *Montpelier*, being fourteen years old, whom I had cured two years before of a beginning Dropſie, ſince which time ſhe had been alwaies ſickly. And now ſhe had been three weeks ſick, without the adviſe of any Phyſician. I found her ſick of a continual Feaver, with a moderate looſneſs, whereby ſhe voided many Flegmatick and crude Excrements. She told me alſo, that her belly did again ſwel, and that ſhe felt therein at times a pricking pain, likewiſe her Legs did ſwel by fits. Preſently I began to think that her Dropſie was returning, which that I might more certainly examine, I put my hand upon her Belly, which as I was about a little to preſs, ſhe would not ſuffer me, complaining that I put her to pain. Whereupon, I ſuppoſing that ſuch kind of pains were not uſual in dropſies, I called for a Candle, and look upon her belly; which I found naturally colored, but raiſed and ſwelled, and that the ſwelling was round about her Navil five fingers in breadth, beyond which Circumference, ſhe might be touched without pain; but where the Tumor was ſhe was much pained if it were never ſo little compreſſed, eſpecially on the left ſide, two fingers from her Navil, where from the beginning of her ſickneſs, ſhe felt at times a pricking pain. Moreover in the Tumor it ſelf I perceived ſome Humor ſlipping to and fro; all which conſidered, I pronounced that an Impoſtume was lurking, between the Peritoneum and the Muſcles of her belly, and that it was already come to ſuppuration; and preſently I cauſed a Chyrurgion to be ſent for, who was of the ſame Opinion. And therefore we reſolved to open the Impoſtum as ſoon as might be, leaſt if it ſhould break into the Cavity of her belly, it might cauſe ſudden death. A Cauſtick was therefore applied to that part, where from the beginning ſhe had felt a pricking pain, and after three hours an Eſchar being raiſed, an inſtrument was forced in two fingers deep, but no matter came forth. But the Chyrugeon durſt not force his lancet any further, leaſt he ſhould make an hole in the Peritoneum, and ſo the matter ſhould flow into the Cavity of her belly. Wherefore he put a tent into the hole, which being drawn out three hours after, a little quittor came away. The day after the tent being drawn out in the morning, a great quantity of quittor came forth, being of a bad color and ſmel. Howbeit the patient grew worſe and worſe, ſo that ſhe died the fift day after the impoſtum was opened. Her body being opened, the Muſcles of her belly in the place ſwelled, were found to be putrified on the left ſide near the Navil, and on the right ſide beneath the Navil, the Guts did ſtick faſt to the Peritoneum, and the parts thereabouts were putrified, the Liver being very yellow, did ſtick on al ſides to the Peritoneum, and the midrif, and was ſo great as to fil half the Cheſt, and to be very near the Heart; al was ful of quittor and Corruption, and ſtunk abominably; moreover ſhe was extream lean al her body over, being conſumed away, by reaſon the Liver was not able to make blood.

And not only Impoſtumes of the belly in a cronick diſeaſe, and a body ill affected are deadly; but thoſe alſo for the moſt part, which follow Feavers, either continual or intermittent; which *Hippocrates* has condemned in his Coack Prognoſticks. And Mr. *Paebecus*, a Phyſician of *Lunella*, my friend, ſaw a yong man that had a tertian ague, whoſe fits exceeded not the number of ſeven; yet an Impoſtum happened about his groin, which being opened ſent forth laudable quittor at the firſt, but in the following daies, there followed bad Symptomes, the quittor ſeemed worſe, and the ſick perſon died on the twenty day: which Impoſtum he might nevertheleſs have judged at the firſt to be mortal, becauſe when it appeared, bad Symptomes appeared with it. Whereas Impoſtumes tending to health ought to bring with them an abatement of Symptomes. If the contrary happen, it ſignifies only a ſettling of the matter into that part, and not a critical expulſion.

The 93 Observation or History, of Famous and Rare Cures, &c.

Hard Labor in Child-bed.

THe wife of the Baron *Daumelas*, general Treasurer of *France*, was three daies in Labor, so that she was at last extreamly weakened; I being sent for, prescribe her this following potion.

Take *Dittamus of* Crete, *the two birth worts, and Trochisks of Myrrh, of each half a scruple; Saffron, and Cinnamon, of each twelve grains: Confection Alkermes, half a dram; Orenge-flower water, and Mugwort water, of each one ounce and an half. Mix them into a potion; which when she had taken, presently her throws came upon her, and a little after she brought forth twins. The same happened to the wife of Mr. Sattrey, when she was brought to bed of her first Child, she being the daughter of Mr.* Boschius, *an Apothecary at* Montpelier.

The 94 Observation, or History, of Famous and Rare Cures, &c.

An immoderate flux of Courses, with suffocation of the womb.

A Maid servant of the Baron of *Castries*, did suffer so plentiful a flood of courses, that she voided four or five pound of blood in the space of two hours, whence followed so grievous an Hysterical fit, that she lay speechless, and as it were dead; though her Eyes remained open, and she made signs with her hand, that she was strangled. Being called to her, I prescribe this following potion, fit both to stop her flux of courses, and to asswage her Womb-sickness.

Take *Waters of Orenge-flowers, of Roses and of plantane, of each one ounce; Dragons-blood, twelve grains; Sal prunella, one dram. Mix them, make them into a potion, which she took again three hours after, having taken some broath between. After the first taking, all the Symptomes were abated, after the Second, they wholly ceased.*

The 95 Observation, or History, of Famous and Rare Cures, &c.

The Veneral Disease in a Child.

THe Son of *Mr.* N. being two years old, was by his Nurse infected with the whores Pox, which first discovered it self in broad red pustles, which were chick upon his peritoneum, after which followed Ulcers in his Buttocks, after that pustles in his Face, and at last ulcers in his Throat and Lips. Also his body daily consumed. Being sent for to him, I prescribed these following Remedies.

Take *Senna clensed, one dram and an half. Choice Rhubarb, and Agarick newly Trochisked, of each two scruples, Cinnamon half a scruple. Infuse them in Carduus water, and in the strained liquor dissolve one ounce of Syrup of roses; make all into a potion, give it in the morning, and let him take it again, once every week.*

In the intermediate daies between his Purges, he used the following Decoction.

Take *Guajacum wood, one ounce; of the bark thereof half an ounce; Fountain water three pints: infuse and boyl them according to Art, til a third part of the liquor be consumed. Let him take four ounces of the strained liquor in the morning, without sweat, by reason of the coldness of the Air, for it was mid winter, also I feared least his tender body should be over dried, for which cause also I allowed him a restorative diet. He did use the same decoction, for his ordinary drink, but allayed with an equal quantity of fair water.*

When

When he had continued theſe Remedies for twenty daies, al the Symptomes vaniſhed and the child was nouriſhed, even while he took his Phyſick, and at laſt grew fat. Now it was in the midſt of winter, and he ſeemed perfectly cured.

Howbeit within a months time, the ſame Symptomes returned, and the child was again grown lean.

We ordered that he ſhould uſe the ſame Remedies again, only we made the Decoction a little ſtronger, by boyling the liquors half away, and we covered him with cloaths that he might ſweat a little. With this cure he was again reſtored to health, in the ſpace of fifteen daies, which nevertheleſs we had continued longer for fear of a relapſe, but that the extream coldneſs of the Winter did hinder us. Having therefore omitted his Medicaments for twenty daies or thereabouts, the ulcers were renewed. And becauſe then the Air was mild enough, it being *February*, and the wind in the South, I ſet afreſh upon the cure, but after a more effectual manner.

In the firſt place I give him eight grains of Mercurius Dulcis, with four grains of Diagridium in broath, with which he was ſtrongly purged by vomit and by ſtool; and every fourth day I gave him this Medicament: and in the intermediate daies he took a Decoction, made after this manner. The foreſaid quantity of the wood and bark of Guajacum, was put into an Alembick, with one pint and an half of water. They infuſed twenty four hours, and were afterwards diſtilled to the half, the Alembick being wel luted. The Liquor which remained in the Alembick was ſtrained and mixed with the diſtilled water which was a little ſharp; and of this mixture he took four ounces in the morning hot, and being wel covered did ſweat luſtily after it. This laſt Method of Cure, was continued twenty daies together, by which his Diſeaſe was quite taken away.

To the Ulcers on his Buttocks was applied an Oyntment, made of Honey of Roſes, Yolks of Egs and terpentine. And the Ulcers in his jaws, were ſoon Cured by Honey of Roſes, made ſharp with ſpirit of vitriol.

The 96 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Immoderate flux of Child-bed purgations.

A Certain Woman having miſcarryed, was troubled with an immoderate flux of blood, which did exceedingly weaken her. I order her to be rubbed and tied on the upper parts of her body, Cupping-Glaſſes to be applied under her dugs, Epithemes alſo and young Pidgeons, and her hands to be fomented with hot wine, in which Confectio Alchermes was diſſolved, and to take this following potion.

Take *Water of plantain, Orenge flowers, and Roſes, of each one ounce; Sal prunellæ, one dram; Dragons blood half a ſcruple. Mix them into a potion. Which was preſently given her, before the other Medicaments were provided and within a quarter of an hour, the pains of her belly and loyns ceaſed, and her flux was ſtopped, ſo that ſhe had no need of thoſe other Remedies.*

The 97 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Cancer.

Mr. *Chape*, of *Tholouſe*, of a noble family, Sojourning at *Montpelier*, in the year, 1635. to wards the end of winter, was taken with a final puth on his upper Lip, which turned into a Tumor that covered almoſt all his Lip, and it was hard and livid, with a pricking pain and ſome [illegible]. By the advice of another Phyſitian, he was frequently let blood, and gently purged, with purges made of Senna and Caſſia, cooling Juleps being firſt uſed. And when he had for ſome daies continued theſe Remedies, and the Diſeaſe nevertheleſs grew worſe, leaving

ving his former Phyſitian, he committed himſelf to my Care, the ſecond of *April*, in the year aforeſaid. But I, conſidering the foreſaid ſigns, and that all topick Remedies whatſoever, did exaſperate the malady, and made the pricking and burning pain more vehement: I conceived it was a cancerous Tumor, and although that Diſeaſe be accounted incurable, yet I undertook the Cure thereof, being taught by *Galen* that a Cancer, at firſt, while it is freſh may be cured, as we have it, in the 10. Chap. of his ſecond Book *ad Glauconem*, where ſpeaking of a Cancer, he has theſe words. *I have often Cured this Diſeaſe when it was but beginning, but when it is grown large, it cannot be cured without manual operation*; and a little after: *this diſeaſe I have (as was ſaid) Cured at the beginning, eſpecially when the melancholy humor was not very thick; for then it eaſily gives way to purging Medicaments, by which the Cure is effected*; and it is eaſie to conceive, that theſe purging Medicaments muſt purge black choler. Which muſt be uſed ſo long as til the patient have recovered his former health, uſing in the mean time, ſuch a Diet as may breed very good Humors. And according to the rule of the ſaid *Galen* in the ninth Chapter of his Book *de atra Bile*, and his Comment upon the 47. Aphoriſm of the 5. Section, Thoſe that are troubled with this Diſeaſe, muſt be purged with ſtrong Medicaments. Wherefore I conceived I muſt fly to the uſe of ſtrong Remedies, the chief of which is the Root of black Hellebore, which is moſt effectual to purge Melancholly. Thus therefore I began the Cure.

Take *Roots of Bugloſs and* Cichory, *of each one ounce. Leaves of Agrimony, Borrage, Ceterach and Veronica, of each half an handful. Boyl al with a Chick, and in the ſtrained broath diſſolve one dram of Tartar. Let him take this broath in the morning twelve daies together.*

In every fourth doſe of broath, diſſolve two ounces of the following Syrup.

Take *Of the Juyces newly preſſed forth and clarified by ſettling, of Borrage, Bugloſs, Fumitory, Cichory, three pounds. Juyce of Veronica, and Fragrant Apples, of each a pound. Senna clenſed ſix ounces. Epithymum, two ounces*; Choyce *Rhubarb and Agarick newly Trochisked, of each one ounce*; *Ginger, and cloves, of each one dram. Infuſe them and boyl them according to Art, til there remain fifteen ounces of the ſtrained liquor, in which diſſolve the like quantity of Sugar, and boyl it to a perfect Syrup, for the uſe aforeſaid.*

To the laſt doſe of broath, add four grains of extract of black Hellebore. Let him take it, and order himſelf accordingly.

This purged him very vehemently, both upwards and downwards, but the ſame day the Tumor was much abated and without pain.

After the uſe of his broaths, he uſed a lukewarm bath for three daies together. Horſe Leeches were applied to his Hemorrhoid Veins, an Iſſue made in both his Legs, he drunk Whey boyled with Epithymum for a month, and bathed once every week.

Fifteen daies after he had taken the extract of Hellebore, he took the ſame again, with three drams of Diaprunum Solutivum, the operation whereof was like the former, and the ſame day the Tumor ſeemed to be abated.

Al Topick Medicaments did exaſperate the Tumor, and made the pain more intenſe, ſaving the Oyntment of green Frogs, which is exceedingly lauded by *Aquapendent*, *Chametæus*, and others, and it did very much in this Diſeaſe. So that I conceive the cure thereof to be cheifly attributed to two Remedies, viz. Extract of black Hellebore, and the Oyntment of green Frogs. Yet the magiſtral Syrup did much aſſiſt the cure, which he uſed twice a week.

Within a month after the beginning of the Cure, the Tumor came to ſuppuration and broke of it ſelf, with quitter ſufficiently good. The Oyntment aforeſaid was continually applied to the ulcer, and al over the Tumor, and the Tumor grew leſs and leſs, and was at laſt inſenſibly Evaporated, and the Ulcer was brought to a ſcar.

The Oyntment of green Frogs is thus made.

Take *Green Frogs that live among Trees, or in pure waters, and put them in an Earthen pot ful of ſmal holes in the bottome, and fil their mouths with butter, cover the pot cloſe and*

daub

daub the juncture with clay, and ſet it over another empty pot which muſt be ſet in the ground up to the brim; then make a fire round about fit for diſtillation, and gather the Oyl that drops into the pot in the ground, and mix it with the pouder of Frogs into a Liniment.

The 98 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a flegmatick Inflamation of the Lungs.

Mſr. *Gualtier*, General Treaſurer of the Kings Exchequer, being ſixty years of Age, was troubled with a flegmatick Peripneumonia; which was known by his Cough, difficulty of breathing, Feaver, pain under his right ſhoulder, and redneſs of his cheeks. And becauſe he ſeemed very ful of flegm, of which he had vomited a great quantity; he had a Clyſter given him which wrought three or four times, and was the next day let blood, only once; and a purging Medicament was given him of an infuſion of Rhubarb, with manna and Syrup of Roſes, with which he was excellently purged on the fourth day of his Diſeaſe, which was the 29. of *May*, 1635. and the day following he appeared free from his Feaver and other Symptomes. Whence it appears, that purging is ſomtimes good in a Peripneumonia or Inflamation of the Lungs, though it be for the moſt part Pernicious to Purge before the ſeventh day.

The 99 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Conſumption beginning.

IN the month of *May*, 1635. The Wife of Mſr. *Thomas*, a Councellour in the Exchequer Court, died of a Conſumption, and a month or two after, her maid that had tended her night and day, ſeemed about to fal into the ſame Diſeaſe. For ſhe had a lingring Feaver, with a dry Cough which held her day and night, leanneſs of her whol body, want of Appetite, and want of ſleep. Being ſent for to her, I ordered her to be let blood, and to have an univerſal purgation with an Apozeme, and lukewarm baths, with a thickning courſe of diet, and cooling; al which did no good. At laſt conſidering with my ſelf that her diſeaſe proceeded from a Malignant quality, impreſſed upon her Lungs and heart, by way of Contagion, I preſcribe her a decoction of Guajacum for fifteen daies, without ſweating, and a reſtorative diet. With which Remedy ſhe was perfectly Cured. And her Feaver, Cough, and other Symptomes went quite away.

The 100 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Smal pocks.

THe Son of Mſr. *Boudon*, of *Languadoc*, being nine years old, and ſick of a Ferver which ſeemed to threaten the ſmal pocks, was committed to my care, in the month of *June*, 1635.

The firſt day I commanded a Vein to be opened, and ſix ounces of blood to be taken away; and at night as much more to be taken; juleps were preſcribed him, and to be anointed with Oyl of Scorpions, and other ordinary Remedies. On the ſecond and third day he raved a little. The ſmal pocks appear, ſmal, thick ſowen, and flat. They encreaſed by little and little, but very ſlowly, ſo that on the ſixt day his Face ſeemed not at al ſwelled, The Pocks were flat in his Face, and al his body over, and hollow in the middle, yea and ſome of them were black in the middle. His Parents were the more fearful, becauſe they had loſt three Children of the ſame diſeaſe, whoſe Pocks were juſt like theſe of our Patient. I therefore thinking it

beſt to fal to work with the moſt effectual Medicaments, preſcribe him this following Julep.

Take *Carduus water, three ounces*; *Treacle water, three drams*, *Trochiſks of Vipers, one ſcruple*; *Bezoar ſtone, ſix grains. Give it in the evening.*

Young Pigeons were applied to his Heart, and afterwards a Liniment of Treacle, Confectio Alkermes, and Oyl of Scorpions of *Matthiolus*.

In al his broaths a Scruple of Bezoardicum minerale was diſſolved. The day following, which was the ſeventh of the Diſeaſe, he had three ſtools of a matter Sufficiently thick, but of a perfect Lead color. At the ſame time he voided moſt thick Urins, and the breaking out of the Pocks was ſo furthered, that in a daies ſpace, his Face was much ſwollen, and from that time forwards the Pocks grew ſufficiently great. The Bezoardicum Minerale was continued for a day longer, and afterwards Confectio *de Hyacintho*, which was given him at the firſt. Til at laſt the Patient was perfectly freed from that Cruel Diſeaſe.

Cholick pain.

THE firſt of *July*, 1635, Mr. *Sarret Viſitor*, General of the Salt-pits, being forty years old, was taken with a moſt grievous Cholick pain, which could not be aſſwaged, neither with Laxative and Carminative Clyſters, and Aqua Benedicta; nor with Fomentations and Baths to ſit in, uſed for twenty foun hours. His pain therefore continually raging, I preſcribed theſe following Pills.

Take *of the beſt Aloes one dram; Diagridium eight grains; Laudanum Opiatum* five *grains. Make all into ſix Pills, and let them be gilded.*

He took theſe Pills at Midnight, and at four a clock in the morning his pain was quite gone, and he was purged five times that day, and ſo was perfectly cured.

The 102 *Obſervation, or Hiſtory, of famous and rare Cures, &c.*

Small pox, and Looſneſs.

THe Son of Mſr. *Graſſet*, a Councellor in the Court of Accounts, five years old, was ſick of the ſmal Pox, with a Looſneſs, which continued during the whol courſe of the Diſeaſe. On the ſeventh day of the Diſeaſe, which was the 15. of *Auguſt*, in the year 1635. his Looſ-

neſs was much more violent, his Feaver high, with mighty thirſt; the Pox were flat, becauſe the looſneſs did hinder their riſing. Other Remedies having had al along little effect, I preſcribe him this following julep, reſpecting his Looſneſs and the malignicy of the Diſeaſe.

Take *Roots of Cinquefoil and Tormentil of each one ounce; Scabious and Pimpinel leaves of each one handful; Scordium a pugil; yellow Sanders two drams. Boil al to twelve ounces for three doſes, to be taken twice a day: adding to every doſe half a dram of Confectio de Hyacintho, half a ſcruple of trochisks of vipers, and four grains of Bezoar ſtone.*

After he had taken once of this julep, his looſneſs was abated, the Pox roſe high, and his thirſt was leſſened.

In very many children beſides, the ſame potion did wonderful much good, in ſtopping their Looſneſs, and in raiſing the Pox when they were flat. To it I added, Roſewater and Orenge-flower water, of each half an ounce. It did wonderful much good, where there was no looſneſs the Pox being flat; and thus I compounded it for the moſt part.

Take *Roots of Cinquefoil and Tormentil of each one ounce; Leaves of burnet and Scordium, of each one handful; Yellow ſanders and ſhavings of ivory, of each two drams. Boyl al to twelve ounces. In three drams of the ſtrained liquor diſſolve Orenge-flower water and Roſewater of each half an ounce, trochisks of vipers one ſcruple. Bezoar ſtone four grains, make them into a poſion, give it al at once, twice in a day to ſuch as are big: but to ſucking children give frequently a ſpoonful.*

The 103 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The After-birth retained.

THe honorable Wife of Mſr. *Graſſet*, Councellor in the Court of Exchequor, in the beginning of *October* 1635. Having miſcarried of a three months conception, and brought forth a very wel ſhaped child; had her after-birth retained. Whereupon ſhe was long troubled with the whites, and perceived a kind of a ſtink in her mouth, which vaniſhed after ſome daies. She voided certain peices of a membranous ſubſtance, but very few and ſmal. Whereupon the women avouching that ſhe had voided her afterbirth, by peecemeale. I was ſtil of a contrary opinion. By little and little ſhe recovered her former health, the white flux ſtil continuing. Howbeit, after two months and an half, ſhe was taken with an immoderate flux of her courſes, with which her after-birth being dried was voided peice after peice. Which is very wel worthy of obſervation, that the after-birth could be ſo long retained in the womb, without greivous detriment to the patient.

The 104 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a watry Rupture in an Infant.

THe Son of Mſr. *de Aumelas*, General Treaſurer of *France*, being eleven months old, had a watry rupture in his right teſticle, with a matter contained in the proper membrane of the teſticle called Darios; ſo that the teſticle ſeemed as big as a ſmal Egg. And this tumor had troubled him from his birth, which they had long laboured to diſcuſs, by applying Cotton-wool ſmoaked with Franckincenſe. At laſt they ſent for me, and I preſcribed a Cataplaſme, in the beginning of *November*, 1635.

Take *Bean-meal half a pound, boyl it in ſtrong rich wine to the conſiſtence of a pultis, then add three drams of oxymel ſimple. Make al into a Cataplaſme or pultis and applie it morning and evening.*

In the ſpace of eight daies, with this only remedy, the tumor was quite diſcuſſed.

The

The 105 *Obſervation*, or Hiſtory, of Famous and Rare Cures, &c.

Worms.

ON the 25 of *November*, 1635. a Boy four yeares old was troubled with worms, that he was tormented with a greivous pain in his belly, with extream weakneſs, ſo that his pulſe could not be perceived in his wriſt, his eyes were hollow and void of ſpirits, juſt like the eyes of dying perſons. He had been ſick three daies, and voided four worms at his mouth, with a vomit of black humors. An Apothecary had given him potions againſt the worms, and a purging potion of Electuary of diacarthamum, and rhubarbe, which wrought not at al. I preſcribe him powerful Remedies againſt the worms, both internal and external, which did no good. The next day he continued in the ſame condition. I order him to take eight grains of Colomelanos of Turquetus, and ſix grains of Scammony, with which he was purged and voided a clammy glewiſh and putrid matter, with two worms. He had two ſtools, was very much eaſed, and within a few daies perfectly recovered.

If thou meaneſt to make a profitable uſe of theſe Hiſtories, reſolve neither to be Fool or Knave, but be ſure you read over with care my Guide to Chyrurgery and Phyſick, The Idea of Practical Phyſick, and *Riverius* Practice: al of the laſt Edition, engliſhed by me.

The 106 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Pain of the Hemorrhoids.

THe 21 of *December* 1635, Mr. *John Charanton*, a Citizen of *Montpelier*, having walked on foot to a village two miles from the Citie, thick clad, he was exceedingly heated, by which means his tumors were very much ſtirred, and ſettled to his fundament, whereupon his hemorrhoid veins did exceedingly ſwel, with inflamation and a moſt ſharp pain. Al the following day he was exceedingly tormented, and paſt the night without any ſleep. The day following he rode to town, reſting himſelf upon the ſtirrups with great pain, whereby the tumor was very much irritated. I being called in the afternoon, cauſe him to looſe ſeven ounces of blood; in the morning he had two ſtooles. About evening, becauſe of the vehemency of his pain, he was again let blood. In the evening he took a julep with ſyrup of poppies. And he uſed four times in the night a fumigation of great Houſeleek boiled in white wine; he ſlept by fits, and the tumor was aſſwaged, and the Hemorrhoides abated in their diſtention: and by continual uſe of the ſuffumigation and of pain-aſſwaging liniments, he was quickly Cured.

The 107 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Children dying in the Birth.

A Dyers wife of *Niſmes*, from the time that ſhe had been married, had three times brought forth a mature Child, in the ninth month; ſhe had the ordinary throwes of women before the birth, without any unuſual trouble ſo that her Labors were not very hard or troubleſom; nor was the woman of an ill Habit of body, nor had ſhe any diſeaſe upon her, or any thing preternatural, in her child-bed pains, the child ſufficiently ſtirred it ſelf in her womb, yet when it came into the world, it was found dead, and this had happened three times. Her Phyſitians after her ſecond birth preſcribed her purgations, and a ſweating diet, alſo ſhe changed her midwife. Yet the third child was found dead, in the ſame manner. The cauſe and cure hereof is demanded. Since no cauſe is related in the Hiſtory, it is exceeding hard to conjecture the ſame. Yet, to ſpeak my opinion; I ſay theſe caſes happened, either through the childs

weakneſs

weakneſs, or the ſtraitneſs of the womb or its neck, in the time of Child-birth. The weakneſs of the child contracted from ſome hidden fault of the ſeed or mothers blood, might cauſe, that when the child did moſt indeavour to make its way in the birth, it might faint away and die, as an eight months birth does for that cauſe neceſſarily periſh, becauſe it made ſome endeavor in the ſeventh month, which if it repeat in the eight, it faints away and dies. If therefore a double endeavour does unavoidably kil any child, a child that is weake may wel periſh by one endeavour. Alſo this weakneſs might cauſe the childs death another way, inaſmuch as being brought into the world, by reaſon of the ſaid weakneſs, it might be unable to endure the air and light, and be killed by them. And finally, it might proceed from the ſtraightneſs of the womb or its Neck, becauſe at the time of birth, it does collect and purſe it ſelf to force out the child; and if the ſaid conſtriction ſhal be too violent it may choak the child. The ſame may happen from the neck of the womb, if it too much contract it ſelf when the child comes into it; for by that ſtraitening of it ſelf it may deſtroy the child. Theſe things thus propounded the remedies are to be directed to two ends, viz. To ſtrengthen the child and to hinder the overgreat conſtriction of the womb.

In the former reſpect, the parents muſt uſe a laudable diet and of good juyce before the Conception; that pure and faultleſs ſeed may be ingendred. Alſo the mother during the whole time of her being with child muſt uſe the like diet, that ſhe may afford good blood to nouriſh the child with. Moreover let her uſe this following pouder twice a week.

Take *Kermes berries, ſhavings of Ivory, Coral, and Pearls prepared, of each one dram; Maſtich half a dram; Manna Chriſti perled two drames; make al into a pouder, whereof let the doſe be a dram; in a ſoft egg, or in broath.*

Let her other whiles inſtead of the pouder uſe this following Opiate.

Take *Conſerve of roſes two ounces; preſerved Citron peels one ounce; myrobalans preſerved, and nutmegs preſerved, of each half an ounce; coral prepared, and perles prepared, of each one dram; ſhavings of Ivory, half a dram; Make al into an opiate, with ſyrup of preſerved Citrons, of which let her take the quantity of a Chaſinut, once or twice in a weeke, inſtead of the foreſaid pouder.*

If at laſt ſhe grow weary of both theſe, let her uſe theſe following Lozenges, which are very pleaſing to the taſte.

Take *Confectio alkermes three drams; amber greiſe one ſcruple; ſugar diſſolved in orenge-flower water, and roſe water four ounces; make al into Lozenges, which ſhe may uſe at any time, when ſhe takes not the former medicaments.*

When ſhe is entring into her ninth month, let theſe following things be applied to her belly, in the morning for the ſpace of half an hour.

Take *generous wine three pints, heat it and diſſolve therein oile of nutmegs half an ounce, pouder of cloves and Kermes berries of each three drams. Mix them, and let a Sponge wet in this Liquor, be applied to her Belly upon her Navil, hot, twice a week.*

Take *nutmeg, mace, cloves, and cinnamon, of each equal portions: mix them with white honey, into the forme of a Liniment, and ſpread them upon a cruſt of toaſted bread, and apply them to the navil, every morning when the fomentation is not uſed.*

Take *Orenge-flower water, and Roſe water, of each three ounces; Cinnamon water one ounce. Mixe them. Let her take one ſpoonful every morning, during the whol ninth month.*

At the time of her labour, give her in every draught of broath half a dram of Alkermes made according to the deſcription of *Meſue*, by reaſon of the doſe of amber; and an houre after every broath, give her a ſpoonful of Cinnamon water.

To her navil apply frequently a peice of hot fleſh half roaſted, and ſprinkled with the pouder of cinnamon, nutmegs, and cloves.

In reſpect of the Straitneſs of her womb or its neck, if ſhe be not with child, let her frequently uſe, when it is not winter, a bath to ſit in, made of an emollient decoction. When ſhe is with child, from the beginning of the ninth month to the day of her deliverance, let the neck of her wombe and the perineum be anointed with Line-ſeed oile drawn without fire. Given at *Montpelier, December 24. 1635.*

THE

The 108 Observation, or History, of Famous and Rare Cures, &c.

Of Wandering Pains about the Chest.

Mſr. *Raymundus Melgoriensis*, fifty yeares of age, of a Sanguine complexion, returning from being a Soldier in *Italy*, he complained of moſt cruel pains, which tormented him every night, after his firſt ſleep; and theſe pains began in his left ſide, and reach withal to the fore and hinder part of his chest, alſo to his left ſide and ſhoulder blades, with ſo much vehemency that he is thereby ſuddenly awaked, and cannot in any poſture find reſt in his Bed, but is compelled to rise. Theſe pains continue to the morning, and then ceaſe. Nor is there any ſhew of them al day long. He began to be vexed with them now two months ſince, and had never uſed any Remedies. Another Phyſitian who had formerly preſcribed for him, conceived that theſe pains proceeded from a thin Catarrh, falling upon thoſe parts in the Evenings, at what time the flegmatick humor is accuſtomed to move. But I conceive theſe pains proceeded from winds, which are raiſed only in the night, by reaſon that the natural heat is then made more intenſe by the Concentration thereof through ſleep. The matter out of which theſe urines are raiſed, is a redundancy of bad and crude humors in the ſtomach, Meſentery, and eſpecially about the Liver. Now theſe Humors were collected in the Camp, through bad diet. Hence alſo the concoction of his ſtomach was weakened, whence it comes to paſs that the cruder part of his meates, infected likewiſe with bad humors, is turned into windes, which run into al places. And when digeſtion is finiſhed, no more of theſe winds are ſent up, and conſequently the pains ceaſe about the morning.

For the Cure of this diſeaſe, I preſcribed in the firſt place an Univerſal Evacuation by Apozemes, and blood-letting, which being finiſhed, I preſcribed him a decoction of China for fifteen dayes with the uſe of which medicaments, the diſeaſe was by little and little diminiſhed, and in a months ſpace cured without any other Medicine.

The 109 Observation, or History, of Famous and Rare Cures, &c.

Jaundies in a woman with Child.

THe honorable wife of Mſr. *De Aumelas*, General Treaſurer of France, about the end of the ſeventh month of her being with child, by ſome houſehold occaſion was vehemently provoked to anger, after which ſhe vomited in the morning, had a pain in her ſtomach, and became ſick of the jaundice. Now this jaundies of hers had two peculiar properties; one, that in her bed the colour of her face and whole body, was of a very remiſs yellow: but when ſhe roſe and ſtirred a little, it began to grow more deeply yellow al of a ſudden. The other is that ſhe was not Coſtive as people ordinarily are in the jaundice, but voided liquid and cholerick ſtools. Her urin was red, but did not color the cloaths put into it. I being her ordinary Phyſitian, cal for Mſr. *Rhanchinus*, to conſult with, that we might conſider about letting her blood; for on the one ſide, the Procatarctick cauſe perſwaded bleeding; for in al Diſeaſes ariſing from Anger, blood letting is extreamly convenient, by reaſon of the extream commotion of blood thereby raiſed. Moreover, thoſe Cholerick Evaporations, ſuddenly ſeizing her, upon a light motion, did argue that her blood was very much exagitated. Nor did this diſeaſe ariſe from the obſtruction of the Choler paſſage (in which caſe *Galen* forbids to let blood, in his book of blood-letting) becauſe then her belly would have been bound, and her ſtools white; but rather from the Liver being inflamed and over heated. On the other ſide, her being now long gone with Child, ſeemed to diſſwade us from blood-letting, and ſeeing the patient by reaſon of her diſeaſe was in danger of death, if it ſhould happen that ſhe die after blood-letting, the fault would be attributed thereunto. For theſe laſt Cauſes, Mſr. *Rhanchinus*, would not conſent that ſhe ſhould be let blood: but it was agreed to give her one dram of Rhubarb in ſubſtance, that the

Choler

Choler might be carried away by little and little by ſtool; which was done. The Rhubarb did little good, and the patient after five or ſix daies miſcarried. Peradventure letting of blood might have prevented the ſame. But the ill conditions of our Women, in aſcribing al bad events to the Remedies uſed, is the Cauſe, that even the more prudent ſort of Phyſitians, do ſomtimes to avoid Calumny, abſtain from the uſe of moſt profitable Remedies.

The 110 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a Squinſie.

ON the 18. of *February*, 1636. a certain young man a digger was troubled with ſo vehement a Squinſie, that he could neither ſpeak nor ſwallow, yet he breathed wel. When I was ſent for he had taken a Clyſter. Whereupon I cauſed him preſently to be let blood ten ounces. Then a Veſicatory was applied to the Nape of his Neck, and Cupping-Glaſſes with Scarrification to his ſhoulder blades. And four hours after his bleeding, he took two ounces of Aqua benedicta, with which he was purged up and down, and after that, he began to ſpeak and ſwallow, and a little while after, did perfectly recover.

The 111 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Hyſterical and Hypochondrical Symptomes.

ON the 15. of *March*, 1636. the worthy Wife of Mſr. *de Clauſel*, a Councellour in the Court of *Exchequer*, being fifty five years old, of a Flegmatick and Melancholick Complexion, and ſickly, fel by reaſon of long grieving, into divers Symptomes, which vexed her frequently, but eſpecially in the night. She had pains in her whole left ſide, from her Ribs down to her belly, ſo that ſhe could not lie upon that ſide; ſhe had flegmatick and ſowr vomitings, Head-ach, Heart burning, and fainting fits ſo violent, that ſhe thought ſhe ſhould preſently die; ſhe had ſhiverings and tremblings al her Body over, after which ſhe fel into ſweats; her pulſe was very ſmal, languiſhing and weak; ſhe had frequent belchings, by reaſon of abundance of wind breaking out at her mouth. When I was firſt ſent for, I appoint her a Carminative and Laxative Clyſter, a potion of the Waters of Orenge flowers, Roſes, and Cinnamon, bags and Oyl of Nut-megs to be applied to the region of her Stomach, by which ſhe was much eaſed and freed from the foreſaid Symptomes. But becauſe they frequently returned, ſhe was purged twice in four daies. And her Symptomes returning again, I gave her two grains of Laudanum Opiatum, with conſerve of Roſes, in form of a bole, when ſhe went to ſleep, wherewith in an hours ſpace al her Symptomes were quite taken away, and ſhe ſlept quietly, nor did thoſe Symptomes return any more ſo violently, but they were much gentler. Afterwards ſhe was purged twice a week with Specifick pils, with which ſhe grew every day better. And ſo ſhe was at length reſtored to her perfect health.

If thou meaneſt to be helpful to thy ſelf, or they neighbours, beſtow ſo much mony and pains as to peruſe, the Guide to Phyſick and Chyrurgery, The Idea of Practical Phyſick, and *Riverius* Practice, of the laſt Edition, Engliſhed by me.

The 112 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Cholick pain.

ON the 22 of *March*. 1636. the widow of Mſr. *Dortis*, having been many years troubled with an exceeding hardneſs and diſtention of her whol Belly, whence by fits ſhe was cruelly pained, as it were with the cholick; ſhe was now taken with the ſame pain being much more raging than formerly, about night. An Apothecary being called, gave her two Clyſters to no purpoſe, although they did purge her much. I being called in the morning preſcribe her a

Pil

Pil of five grains of Laudanum, and within an hour the pain quite ceased, and came no more.

At the same time Madam *de Varanda*, Mother of the foresaid Gentlewoman, was then with a true Cholick pain, whereunto she was subject: a Clyster is given by an Apothecary, which not working, I am sent for, and find her crying out by reason of extremity of pain. I prescribe her a Clyster of a pound of emollient Decoction, an ounce of Diaphenicon, and four ounces of Aqua Benedicta, by which her pain was quite allaied, and the patient voided many flegmatick Excrements and much wind.

I my self being a month before vexed with the same pain, and finding little help from an emollient, carminative and Laxative Clyster, was cured with such a Clyster as this, so that as soon as I had received it, all my pain went away, though I did not void the Clyster till two hours after.

The 113 Observation, or History, of Famous and Rare Cures, &c.

Pissing of Blood.

THe renowned Mr. *de Serres*, the Kings Councellor in the Court of Account and Subsidies, and Controller of the *Exchequer*, being fifty years old, of a Cholerick temper and Melancholick, having for many daies together suffered grievous disturbances and sadness in his Mind, and by that means had lost all night sleep; made bloody Urine, which appeared manifestly after he came from Horse Back; and at the same time he was troubled with sharpness of Urine. After which time, as oft as he journeyed on Horseback, he made bloody urine in like manner, and with the like sharpness. Yea verily the foresaid sharpness of his urine, was often wont to torture him, although his urine were no way infected with blood. Also with his urine he voided gravel, which stuck to the sides of the Chamber pot, which he had been accustomed to void for many years. The question therefore now is, upon what near and immediate Cause this pissing of blood depends. And though Pissing of blood in general is wont to arise from many Causes; yet in this present case, two only will come under consideration, viz. A Stone contained in the Kidneys, and by its roughness tearing the final Veins, and drawing Blood from them; or Humors sharp, Salt and Cholerick, opening the mouths of the foresaid veins. Two things especially do seem to declare that it is the former cause, viz. Those sands which the patient has been accustomed for many years to void with his Urin, which any one may judg to spring from some stone lurking in the body: and that some periodical Excretion of blood, happening then only when the patient uses immoderate exercise, and vehemently shakes his Kidneys with riding, whereby the stone comes to bear upon the substance of the Kidney and its final vein. Howbeit these two signs are not sufficient to demonstrate a stone in his Kidney. For the principal signs, and those that perpetually accompany or go before the same, are wholly wanting. The chief of which is a pain in the Loyns, which cannot be absent, if there be a stone, but must of necessity afflict the patient, and return by fits; and it is either grievous and pressing as a weight, when the stone sticks in the substance of the Kidney, or it is pricking and cutting, if it be contained in the Membranous Cavity of the Kidney. Adhereunto that this worthy Gentleman was never in his whol life tormented with Nephritick pains, nor ever voided any stone; whereas nevertheless it can hardly happen, that a disposition to breed stones, which for the most part, is native and Hereditary, should lie idle fifty years together, and break forth into act in that age, without giving any signs or tokens of it self, at the time foregoing; when as the chief conjecture that pissing of blood comes from the stone, use to be taken from this consideration, viz. That the patient had formerly voided stones. Add hereunto that the parents of this Patient, were never observed to be troubled with the stone, which is of no mean moment in this cause. Finally, all other signs that demonstrate a stone in the Kidney, are here wanting, as a numbedness of the thigh on the same side, retraction of the Testicle, stomach sickness and vomiting, gross meats used long time before, and such like.

The two signs propounded to prove that there should be a stone, are thus confuted. Such gravel as truly shews a stone lurking in the body, does settle to the bottom of the pot, and if you rub them between your fingers, they will hardly go to powder. But if the sands stick to

the ſide of the Chamber pot, and are eaſily rubbed into a powder by the fingers (ſuch as is the gravel voided by our patients) they can never be ſigns of the ſtone. For ſuch gravel is not bred in the Reins or bladder, but in the Veins and Liver, by aduſtion of the Humors, whoſe more thicker and more Terreous parts, do reſemble gravel, and are ſeparated into the ſtraw. Which having not been obſerved by few, many are counted to have the ſtone, that were never ſuſpected thereto. And dayly experience teaches us, that many void ſuch kind of gravel from their Child-hood all their life long, who nevertheleſs were never troubled with the ſtone, and who had little reaſon to fear the ſame.

The periodical voiding of blood, happening then only when the patient does vehemently exerciſe himſelf with riding, though it may poſſibly come from a ſtone in the Kidney; yet there is no queſtion but it may alſo proceed, from heat ſtirred up in the Kidneys and the whol maſs of blood, without any preſence of the ſtone. For Cholerick and ſharp humors, or ſuch as are of the Nature of ſalt flegm, being agitated by motion and heat, are ſent unto the Kidneys, being mingled with the ſeroſities of the blood, and opening the ſmal Veins of the Kidneys, they cauſe a flux of blood. And I confidently aver, that this is the Caſe of our preſent patient, ſeeing he is of a Cholerick conſtitution, and his blood attained aduſtion by the paſſion of mind and watching aforeſaid. Alſo the acrimony of thoſe Humors which paſſed through his Kidneys appeared, from the ardor of his urin, which often troubled him, when he made his bloody urine.

That my opinion of mine, is agreeable to the judgment of moſt learned men, is eaſie to ſhew by inſtance of ſundry. It may ſuffice to recite up ſome of them. *Hollerius*, a man exerciſed as much as any in the Practice of Phyſick, in his 52. Chapter of internal Diſeaſes, ſaies, *That ſome perſons void blood by way of Urine, as others do by their noſe, the Hemorroid veins, or by vomit. And experience ſhews that this kind of voidance of blood, does often happen in ſuch as are thereunto diſpoſed, when their bodies are heated with vehement exercise. Wherefore piſſing of blood may happen, and return by fits, when mens bodies are heated with vehement exercise.* Which the ſame Author does more plainly evidence in his comment upon 78. Aphoriſme of the fourth Section. *There are* (quoth he) *ſome, who if they ride hard, or exerciſe themſelves immoderately, their Kidneys are ſo heated, that they piſs blood.* The moſt learned *Montanus*, in his 28. Counſel, propounds the caſe of a certain Hungarian Biſhop, is like the preſent caſe of ours, that I think fit to inſert the ſame word for word. *I conceive* (quoth he) *That this moſt reverend Biſhop, does therefore make bloody and troubled Urine, becauſe a dilatation is made, both in the Cavities of his Kidneys, and in his urinary Veſſels, by reaſon of extream heat raiſed in his back, by reaſon of violent motion, cauſed by the ſtirring of his coach paſſing over rough waies: and by reaſon of great heat following while he walkes up hil in a ſun-ſhine, when the ſun ſhone extream hot. By all which means a great deal of heat was ſtirred in the parts about his Kidneys, that by reaſon of too much dilatation, he voided bloody urine. Whence it is, that ſtil as often as he is wearied, and exerciſes his body, he falls into the ſame Symptoms, viz. Of turbid and bloody urin. For the dilatation is cauſed by motion, which ceaſes upon reſt. Now the burning heat when he voids his urine, and alſo the pain about his Fundament, proceed from the ſame cauſe, viz. From the ſame dregy urin, which has in it ſharp and biting parts, either of choler, aduſt humors, or ſalt flegm, &c. as before.* Now the pain which he feels about his Fundament, is in the muſcles of the Neck of his bladder, which Neck borders upon thoſe parts, and there is good reaſon that the pain ſhould chiefly be felt in that place. So far *Montanus*. From whence it alſo appears, that the ſuſpicion of a ſtone in his bladder, which our patient imagins to himſelf, becauſe of the ardency of his urine and the vexation of his Fundament in voiding; ſeeing thoſe Symptomes may proceed from the ſame Cauſes, which we have ſhewed to be the originall of his bloody Urin. *Horſtius* in the 37. Obſervation of his 1. Book. *A Boy* (quoth he) *eight years old, the Son of Johannes Stuppius, the magnificent Chancellor of a lean habit of body, has no ſtomach to meat, is thirſty and voids bloody urin, without any pain in the Loyns, nor does he feel any trouble in the voidance thereof.* Although bloody urine often happens, as is manifeſt in the ſtone of the Kidneys, in the ulceration of the neighboring parts, and ſuch like diſeaſes; yet this is a rare caſe, becauſe this piſſing of blood, is without pain, whence may be collected, that this bloody excretion, is not cauſed by a ſtone vexing the Kidneys, nor

by any exulceration. It remains therefore, that the Cauſe of your diſeaſe muſt be the acrimony of Cholerick blood and the weakneſs of his kidneys. So far *Hollerius*. Which examples I was willing in this place to ſet down more exactly, that the mind of our worthy patient, might be wholly freed from fear of a ſtone bred in his kidneyes or bladder, with which fear he has been long tormented by reaſon of the opinion of his other Phyſitian.

As for what concerns the Cure, it muſt aime at two things, viz. to temper the acrimony of the Humors, and to ſtrengthen the kidneyes, that they may not ſo eaſily receive ſharp humors flowing in from other parts. This may be effected by a cooling and thickening diet, which the patient has for ſome time begun to uſe, and wherein he muſt perſevere a long time, uſing eſpecially Lettuce, Plantane and porſlane, in his broaths, as alſo meates made of barly, oates, rice, and ſuch like, alſo for his drink, water wherein iron has been quenched, and red wine ſomwhat harſh: ever more abſtaining from vehement motions of body and mind.

And although the renowned patient, is not very ful of blood, yet I judg it profitable for him to bleed ſix or ſeven ounces from his Arme, that the hot diſtemper of the whol maſs of Humors, may the better be corrected. Yea verily, and if the diſeaſe ſhould laſt long, it ſeems good to derive the humors to the lower parts, by opening a vein in his ankle, or the hemorhoid veins.

After which a gentle purgation wil be very convenient, which muſt be repeated at certain times that the humors having recourſe to his Reines, may be voided forth by ſtool; The Compoſition whereof, may be after this manner.

Take *Leaves of Lettice, Porſlane, Plantane, and the tops of Mallows, of each half an handful; Tamarinds half an ounce; Yellow myrobalans one dram; boyl them to ſix ounces. In the ſtrained liquor diſſolve one ounce of Caſſia new drawn. Strain it again, and diſſolve therein one dram and an half of Rhubarb infuſed in lettice water with yellow Sanders, Manna and Syrup of Roſes of each one ounce, mix them and make al into a potion.*

After the firſt purgation, Juleps, Apozems, Broaths, or emulſions, reſpecting the foreſaid Indications, may be accommodated, ſo as the patient can beſt away with. Which being uſed for ſome time; Sheeps milk or goats milk wil be beſt for him. Which is exceedingly commended by *Hippocrates, Avicen*, and latter Phyſitians; and *Foreſtus* brags that therewith alone, he had often cured piſſing of blood. Now, they ad to every doſe a dram of bole armenick; which as it is fit for a violent piſſing of blood; ſo I conceive it is ſeldom to be uſed in this lighter diſeaſe.

And becauſe the patient is of a dry and lean habit of body, and of an hot and dry conſtitution, before and after he uſes the milk, I conceive a bath of Lukewarm water is very good for him, which he muſt uſe al the Summer long, in form of a bath to ſit in.

After his uſe of the Milk, let him uſe the waters of Meyne.

In the intermediate times, if ſharpneſs of urine do ſometimes trouble him, Waters of Marſh-mallow flowers and roſes, with conſerve of Mallow or Marſh-mallow flowers, or emulſions and other things aforeſaid, may be uſed.

And finally, to ſeal up the Cure, a ſtrengthning Opiate, moderately aſtringent and cooling may be uſed. Nor wil it be unprofitable, if the diſeaſe continue, to make an Iſſue in his leg, to draw away by little and little, thoſe ſharp humors, which flow into his Kidneys and urinary paſſages.

Al the time of the Cure, topicks applied to his Reins, wil be very uſeful, and they muſt be cooling and aſtringent.

Take *Unguentum Comitiſſæ, and Refrigerans Galeni, of each two ounces; waſh them wel with Vinegar and water mingled together; and anoint the Loins therewith frequently.*

Alſo a plate of Lead with many holes bored in it may be worne along time, upon his Kidneys.

The 114 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Caruncle in the Yard.

THeſe following Remedies were tranſcribed in the Chmaber of Accounts at *Montpelier*, wherewith *Geofrey Giamatus* cured *Charls* the ninth of that name King of *France*, in the

yeare 1584. and had two thouſand Crowns for his Reward.

In the firſt place, Take *Caſſia new drawn half an ounce, Juice of Lycorice one dram Electuary of the Juice of Roſes two drams, water of Hops four ounces: mix them into a potion, to be taken in the morning. Afterwards for ten daies together, let him drink eight ounces of this following decoction, lukewarm.*

Take *Roots of Lycoris ſliced, of Marſh-mallows, ſebeſtens, Raiſons, each one handful; Seeds of Mallows, marſh-mallows, Smallage, Parſley, of each half a dram; Fountain water two pints, boyl them to the half. Of which let him take eight ounces, for ten daies, having firſt taken the potion, or a bolus of Caſſia.*

How to make the firſt ointment.

Take *Oyl of Roſes one pound. Cerus of Venice four ounces. Champhire half an ounce. Tutty prepared with Roſe-water half an ounce. Litturidge of Gold prepared three ounces. Antimony excellently poudered one ounce and half, opium, olibanum, maſtich, aloes hepatica, of each two ſcruples: mix them al and keep them in a leaden boxe.*

How to make the ſecond Oyntment for Conſolidation.

Take *of* Galens *ointment of Roſes new made, and waſhed in roſe water, Unguentum album camphoratum of Rhaſis, of each one ounce; Pomatum made without the pouders half an ounce; mix them together and keep them in a leaden box, for uſe.*

How the Oyntment is to be applied.

Take *a very ſmal candle of white wax covered with a very fine cloath. And to find the place where the Caruncle is, Take a Candle thicker than the former, ſmeared with oyl of ſweet almonds, and put it into his yard. And if you feel a ſtoppage, that you cannot thruſt it further; mark the place in the Candle, and meaſure the length of that part of the candle which went in, then wrap the candle in a peice of thin Linnen, and noint at the end with the ointment, and then put it into the yard, til it reach the bit of fleſh which ſtops the paſſage thereof. And if you find two Carnoſities; then you muſt ſo order your firſt ointment, as that it may touch them both, continuing the ſame for fifteen, or eighteen, or twenty daies, according to the greatneſs of the malady, and according as the Carnoſity, ſhal be found to open and turne to quittor. And when you perceive his urine to come freely and eaſily away, with little quittor therein, then you muſt take away the firſt gray ointment, from the Candle; and anoint the whole candle with the ſecond ointment, continuing the ſame eight or ten daies, til there come no quittor out with the Candle, nor no more pain is perceived in making water, at which time, you muſt abſtaine from the uſe of remedies.*

The 115 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Nephritick pains.

THe 18 of *April* 1636. the widow of Mſr. *Dortis*, was tormented with a moſt vhement nephritick paine, which reached al along from her left kidny, according to the courſe of the ureter, as far as to her ſhare, with ſharpneſs of urine & frequent provocations to make water. She received no help from clyſters with Aqua benedicta, nor with Terpentine, nor with Laudanum, nor from mighty vomiting which came of its own accord, nor from baths to ſit in; nor from Laudanum taken inwardly, her cruel pain continuing two daies together. At laſt a vein in her Ankle was opened, and preſently being let blood, her extream pain ceaſed, only a dul pain remained.

The 116 Observation, or History, of Famous and Rare Cures, &c.

VVormes

ON the 8 day of *June* 1636. a Damsel three years old, the daughter of one *Robert* a Baker, was sick of a most accute Feaver, with great Anxiety and weakness. Being called to her about the evening, I judged she was troubled with the worms, and prescribe her in a little potion, of half a dram of Hiera and half an ounce of syrup of roses, with porslane water, which purged her in the night, and thereby she was much eased, the day following, I prescribe these following Juleps.

Take *Leaves of Sorrel, Porslane, and Endive, of each one handful. Tops of hypericon and scordium of each one pugil. Boyl them in a pint of water. In the strained liquor dissolve three ounces of syrup of Lemmons, Make al into a julep. Let her take three ounces morning, and noon, and night. Within two daies she was perfectly cured.*

Three daies after, the daughter of Mr. *Beuf* a Merchant, being six years old, was troubled with the like disease, very grievously, I prescribe her the same Remedies, with the same success; but she had one dram of hiera, and one ounce of syrup of roses in her potion.

The 117 Observation, or History, of Famous and Rare Cures, &c.

A stretching pain of the Belly.

ON the 15 of *June* 1636. *Peter Blanc*, a Citizen of *Montpelier*, had been troubled with an old loosnes, by which he became exceeding weak and lean. At last the 15 of *June* 1636. he perceived an huge rumbling in his belly, after which followed vomiting, and then he was exceedingly troubled with a painful stretching in his belly and a Feaver. He voided nothing at al either by vomit or stool, and he returned his Clysters, as they came, without any mixture of excrement. By order of an unskilful Chyrurgion he tooke a purging medicament, which brought nothing away, but his stretching and pain were thereby much encreased. I being called on the fifth day, find the man very weak, with the face of a dying man, as *Hippocrates* discribes it, and his hands and feet cold, the tokens of death at hand. I was much troubled in my mind to know what disease this was, and could not imagine that it was any other than a mighty inflamation, which with its extream swelling did so presse the Gutts, and so hinder the passage of the excrements. The Body being opened, the thick Guts were found black, half corrupted, and one of them bored through: and in his belly many most stinking humors by which it was manifest, that excrementitious humors which had been used for a long time to flow into the Gutts and to cause a Loosnes; did at last stay so long by reason of the weaknes of the expulsive faculty, as to corrupt the Gutts, and at last by their weight to open that part in which the said humors did abide, it being more putrified, and so to rush violently into the belly. And that Consequently his meats, and part of his Clysters, were passed through that hole, into the Cavity of his Belly.

The 118 Observation, or History, of Famous and Rare Cures, &c.

A malignant Feaver.

ON the 4 of *July*, 1636. *Peter Stelle*, Consul of the Town of *Perois*, being forty years of Age, fel into the disease termed Cholera, which was stopped in the space of twenty foure hours by convenient Remedies. After which followed upon the third day of his illness a large bleeding at the nose, by which he was very much weakned. He was troubled with a mighty thirst

thirſt at the beginning, and with unquietneſs and a burning heat in his midrif. Being called to him, I find his pulſe ſmal and very frequent, with an Hippocratick face, and afterwards viewing the habit of his body, I find it ſprinkled with large black and blew ſpots, whence the extraordinary malignity of the Diſeaſe was apparent, which was the Cauſe of ſo great ſymptomes. Beſides ordinary remedies, and cordial juleps with Sal prunellæ, to be given him thrice a day, I præſcribe him this pouder.

Take Sal prunelle half an ounce, Camphire half a dram. Make them into a pouder. Divide into four parts, and let him take one every third hour. He took his pouder at night, and was much better in the morning. I order him to take the pouder again with other remedies, and the ſame day he was freed from the preſent danger of death, and in a few daies after was perfectly recovered.

If thou wouldeſt fright away all diſeaſes from thy ſelf and freinds, then be ſure thou beeſt a diligent underſtanding Reader of the Guide to Phyſick and Chyrurgery, *Riverius* Practice of Phyſick, and the Idea of Phyſick: All of the laſt Edition, Engliſhed by me.

The 119 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

The diſeaſe Cholera, proceeding from over violent purgation.

A Sword-ſmith at the ſign of the Lillie, being purged by a Barbar with a certain ſtrong pouder, in the extremity of hot weather, and he himſelf being of a very cholerick conſtitution; the night following, he was violently purged, voiding cholerick and watry excrements up and down, with pain in his ſtomach, extream thirſt, and exceeding weakneſs the day after. I being ſent for in the morning, do give him ſix grains of Laudanum, and within a quarter of an hour all the ſymptoms ceaſed. Nevertheleſs, ſtrengthning bags ſteeped in red wine were applied to his ſtomach, and the ſame day he was perfectly cured.

The 120 Obſervation, or Hiſtory of Famous and Rare Cures, &c.

A ſtubborn Looſneſs.

ON the 8 of *September* 1636. Mr. *Peter Hucher*, the Son of the renowned *John Hucher*, in times paſt Chancellor of our Univerſity, after a long tertian Ague, was taken with ſo vehement a Looſneſs, that within three daies, he was extreamly weakned, and in danger of his Life. I being ſent for, præſcribe him in the firſt place one dram of Rhubarb in pouder, with which he was much worſe. The day following when he went to reſt, I gave him a bolus of maſtich and terra ſigillata each half a dram, Laudanum four grains. His looſneſs was ſtopped, but yet he ſlept not; the daies following he went to ſtoole only twice or thrice, and in a few daies after was perfectly well. At the ſame time Mr. *Graſſet*, Preſident of the Court of Accounts, after a long continual feaver joined with ague fits, was taken with a moſt troubleſome looſneſs, with which he was extreamly weakned; I viſited him with another elder Phyſitian; and together we gave him in the firſt place divers ſtrengthners, and after that aſtringents, all in vain. The ancient Phyſitian would never agree to give him Laudanum, and his looſneſs had continued twenty daies, being allwaies alike violent. Alſo I often propounded tincture of Corrals, which by ſtrengthning the Liver does ſtop fluxes, alſo it potently cooles, which was much to be wiſhed in the patient, being of a Cholerick Complection, but it was neglected for divers daies together. At laſt, I daily urging the preparation and adminiſtration thereof, we gave him two ounces thereof, twice a day, for three daies together: wherewith his looſneſs was manifeſtly abated every day, and his excrements appeared digeſted, ſo that in a few daies he was thereby perfectly cured.

Note that he had before twice taken in broath Rhubarb twice infuſed in Cichory water, and dried again, which made him worſe than before.

The 121 Observation, or History, of Famous and Rare Cures, &c.

Head-ach by being in the Sun.

THe 8 of October, 1636. Mr. William Dorioman, a renowned Advocate, being in the town, expoſed himſelf to the Sun about Noon, going on foot to another town a good diſtance off; whereupon he was taken with light fits of a double tertian, which came about the evening, and in his fit he was troubled with an extream Headach, which the firſt three daies, went away with the Ague fit when it was morning. Meane while he was twice let blood, and had one purge given him. Which not withſtanding his Headeach and Ague continued, and after the fourth fit it turned into a continual Feaver: For it cruelly tormented him as wel in the morn-ings as at other times, nor did the feaver ever leave him. Being therefore it was manifeſt that the Headach proceeded from his being in the Sun, it was feared there might be ſome inflamation in his braſn, for remedies had been applied to his forhead and did no good. To remove therefore this grievous ſymptom, I cauſed ſeven ounces of blood to be taken from his forehead veine, whereby his Headach was preſently much abated, and the following fit returned much lighter, with little Head-ach. And the next day in the morning, he felt no pain at al.

The 122 Observation, or History, of famous and Rare Cures, &c.

An hectick and a putrid feaver together.

THe 13 of October 1636. the Daughter of Mr. de Serves Controller in the Court of Accounts fourteen yeares of age, about the End of Summer, was taken with a tertian Ague, which after four fits went away of it ſelf, and ſomtime after returned again; and the fits again ceaſing, a ſmal Feaver held her, with obſtructions in her belly, whereby her courſes were ſtopped; in which condition ſhe continued three months, without taking any thing, being in the Country. In the begining of October, I being ſent for, find her troubled with a lingring Feaver, extream-ly lean, and having a very eager burning heat to feel to, which grew worſe at night; yet ſhe did not perceive her ſelf to be feaveriſh, and through in the night ſhe ſeemed to be burning hot, yet ſhe was not thirſty, which made me conjecture her feaver did turn to an Hectick, and the rather becauſe ſhe grew hoter after her meales, and al along the artery of her Arme, the heat was perceived to be more intenſe, which the very by ſtanders obſerved; and ſome oyly matter did ſwim upon her urines. Seeing therefore, it was apparent that there was a putrid feaver linked with a beginning Hectick, I firſt ſet my ſelf to remove the putrid feaver, and preſently cauſed her to bleed ſeven ounces from the baſilica veln of her right Arme. The day following ſhe was purged with a gentle medicament. The third day ſhe took a cooling and opening ju-lep. The fourth day ſhe was again let blood, for her blood ſeemed very corrupt and aduſt. Her juleps were continued, and an emollient and opening fomentation was applied to the Re-gion of the ſpleen, alſo a liniment of the ſame faculty. The fift day, an emollient and purga-tive Clyſter was given her, by which ſhe was much purged, and her feaver much exaſperated; her pulſe was ſmal and frequent, her heat ſharp and biting; al which continued the whol night and half the day following. The two next daies following, the feaver was remiſs, & the mighty exaſperations thereof were very gentle; the ſwelling of her ſpleen and the reſiſten-cy thereof to the touch, were leſs; alſo the pain which ſhe was woont to feel, when ſhe was touched and preſſed never ſo little upon her ſpleen, was wel neare quite gone. Meane while the fomentations, linaments, and aperitive broths were continued. When thoſe two daies were over, ſhe was purged by a gentle medicament, which brought away much flegmatick matter by vomit, and wrought the oily twice downwards, the ſame day her feaver appeared yet more remiſs. After which her opening broths, fomentations, and liniments, were continued; alſo in every third broth half an ounce of ſenna was infuſed. So, by little and little ſhe re-gained her former Health.

The

The 123 Observation, or History, of Famous and Rare Cures, &c.

Fatty substances voided by stool.

THe little daughter of Mr. *de Rochemore*, named *Lucretia*, being three yeares old, had a continual Feaver proceeding from worms. She voided by stool very crude excrements, and resembling plaister, amongst which were found sometimes certain little green round things like large peale, which being laid upon a trencher and held neare the fire, did melt like butter. Having never seen such like matter before, nor ever read thereof in any Author, I was very doubtful, whence it should have its original. An ancient and experienced Apothecary said that he had observed the like excretions in his own daughter. At last, seeing this matter could not be thought to proceed from the fat or oyly moisture of her body, (for she had no hectick nor melting Feaver) and her excrements appeared very undigested; I conjectured, that this matter proceeded, from the fat eaten with her meat, which she had eaten too plentifully; or from broaths not wel skimmed from the fat; which fat did hurt digestion by relaxing the stomach, and was therein il digested; especially seeing other meats eaten in too great quantity, would remain undigested. This fatness therefore, retained long in the stomach or Guts; received its thickness and green color, from the Heat of her Body.

On the 12 of *October* 1636. this Conjecture of mine was confirmed by another Case of a Man troubled with Hypochondriacal Melancholly, who frequently thought that he had poison given him, which to resist he frequently took great quantities of Oyl. Now he voided such like round pellets, which he melted and kept in a glass. Which matter contained in the glass was like the dregs of oyl, and void of al smel. Whence I conjectured that the oyl taken in so great quantity, could not al be digested by Nature, but that the thicker parts were by long heat more thickned, and wrought into such pellets, which being melted, did resemble dregs of oyl.

The 124 Observation, or History, of Famous and Rare Cures, &c.

A Squinzie.

THe 14 of *October* 1636. a Tailor forty yeares of age was troubled with the squinzie, which hindred his swallowing, and he was let blood, clysters were given him, and a vesicatory applied by an Apothecary: these things doing no good, they send for me. And observing that he was hardly able with al his might to swallow a little broath, taken in a spoon, and that he could not therefore drink a purging potion. I prescribe him two ounces of Aqua benedicta, which purged him frequently by vomit and stool, and the same day he was cured of his Squinzie.

The way to deliver from death is to be wel studied in these Books, viz. the Guide to Physick and Chyrurgery, the Practice of Physick and the Idea of Physick, of the last Editions, Englished by me.

The 125 Observation, or History of famous and Rare Cures, &c.

Sciatica Pain.

ON the 8. of *January* 1637. Mrs. *Grefveille*, Councellor in the supream Court of Accounts, was vexed with a pain in his huckle bone, in the bitterest of the winter: having taken Clysters, and a purging medicine, and a plaister being applied to the part pained, al did no good; at last, his ankle veine on the same side was opened, and within a few hours the pain abated, and afterward went quite away; so that the second day after his blood-letting, he went about his wonted affairs, being able to go about the City on foot.

The

The 116 Obſervation, or Hiſtory, of famous and rare Cures, &c.

A Sleepy Diſeaſe, Cured with a Sleepy Remedy.

THe 22 of *October*, 1636. A certain Virgin of *Melgore*, twenty years old, named *Liquiore*, was troubled with a double Tertian, about the beginning of Autum, for twelve daies together: and was freed therefrom after the uſe of ſome Remedies. She fel again into the fits, which at firſt ſeized her after their wonted manner; but afterwards certain new Symptomes hapned with the fit, viz. Extream ſleep, redneſs of Face, ſticking out of the Eyes, a pricking pain of her left ſide, and extream difficulty in ſwallowing; her meat going to the bottom of her gullet, and to the Orifice of her ſtomach, was ſuddenly caſt up again; and if any thing paſſed in, it was with great trouble. I ſuſpected that a fit of the mother was combined with an Ague, and appointed her Remedies againſt the mother, which notwithſtanding the diſeaſe continued. Some daies after, theſe Symptomes returned without a Feaver, which exceedingly confirmed my opinion; alſo in that the pain in her right ſide, did ſometimes go over into the left; and ſometimes ſhe felt pricking pains in ſeveral parts of her belly, her ſtomach was pained and ſick; and ſometimes ſhe ſeemed to be ſtrangled. I obſerved three things peculiar in this diſeaſe. The firſt was difficulty in ſwallowing, which is not common in fits of the Mother, yet that was not perpetual, but came by fits, for it hindered her from ſwallowing meat or drink for many hours, and then it went quite away, ſo that ſhe ſwallowed even pils in my preſence, without any trouble. The ſecond was, that theſe fits of the mother came every day in the evening, as conſtantly as Ague-fits. The third, that when her pain of the ſtomach and other Symptomes were moſt troubleſome, ſtrengthening and heating bags did encreaſe her Diſeaſe, and brought the Choaking fit upon her. Which being told me, and I being preſent at one of her fits, the Patient complaining of an exceeding pain at her ſtomach, I cauſed a Cruſt of bread toaſted, and moiſtened in hot wine, and ſprinkled with the pouder of Cloves and Nutmegs, to be applied to her ſtomach; which very much encreaſed her ſuffocation, ſo that we were fain to take it away. Then for trial ſake I cauſe a cloath four times doubled, to be wet in Vinegar and water mingled, and to be applied cold to her ſtomach, which being laid on, the ſuffocation and pain of her ſtomach preſently ceaſed. Which experiment was ſeconded by cold water taken at the ſame time, ſome drops whereof ſhe ſwallowed with much ado, felt their coldneſs in her ſtomach, and was preſently releived. Afterwards, I cauſed the cruſt of bread to be laid on again hot, which then ſhe patiently endured. The reaſon whereof I conceive to be, that the vapours being raiſed and troubling her ſtomach, were by hot things put more into motion: but after they had been laid with cold things, the ſtomach being free from the ſaid Vapors, could eaſily endure hot Medicaments. I conceive by the Feaver foregoing ſome ſeed retained, was corrupted, which did produce ſuch Symptomes. Peradventure alſo the relicks of menſtrual blood putrified, might Concur to the production of theſe Symptomes. But the ſaid putrified matter had its motions at ſet times, even as we ſee the matter of inward Impoſtumes, is alſo often moved at ſet times, and preſents fits as it were of a Tertian Ague.

Now before ſhe was taken with her fit, becauſe ſhe could then ſwallow very wel, ſhe took by my advice four little pils made of four grains of Laudanum, and a little after the foreſaid fit came; but after two hours, the Laudanum beginning to work, al Symptomes abated, and ſhe was wel al that night, whereas the foregoing nights ſhe was extreamly tormented. The day after in the morning ſhe took an Hyſterical and purging Apozeme, and continued the uſe thereof three daies together, wherewith the Cure was perfected. I doubted much, when I gave her the Laudanum, becauſe ſhe was wont to fal into a deep ſleep in her fits, which might be encreaſed by the uſe of the Laudanum. But at laſt I reſolved with my ſelf, that the ſaid deep ſleep did ariſe from vapors aſcending plentyfully from the womb into the Head, by prohibiting the aſcent whereof, the ſleepy fit might be hindred. And the Event proved according. Whence this true Concluſion is gathered, which ſeemes at firſt ſight a great Paradox, Viz. That a ſleepy diſeaſe may be ſtopped, by the uſe of Laudanum.

The 127 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Gripings in Children.

ON the 12. of *December*, 1636. my little Son *Charles*, being four months old, was taken with a moſt cruel colick pain, which made him cry and roar continually. I gave him half a ſcruple of pouder Diamoſchi Dulcis in milk, whereupon his pain ceaſed for a quarter of an hour, and then it returned as feirce as before. A Clyſter was given him of a Decoction of Anis and Chamæmel, with the yolk of an Eg and Sugar, and therewith the pain was wholly taken away. Eight daies after, he was taken with the ſame pain; he took the ſame pouder and the ſame Clyſter, but al in Vain. At laſt I cauſe a Fomentation to be applied to his whol belly, of Aniſe and Chamæmel boyled in Aqua Vitæ, at the firſt Application whereof the pain went quite away. The day following the pain returned again, which being ſomwhat mitigated by the foreſaid remedies, the day following in the morning, I gave him an ounce of Syrup of Roſes. Which when he had taken, he vomited flegm like the white of an Eg, but voided little or nothing by ſtool, and his gripings returned. He took the Syrup again with infuſion of one dram of Senna, which alſo did little good. At laſt I gave him ten grains of the Earle of Warwicks pouder [or Pulvis Cornachini] in Milk, with which being gently and largely purged, he was perfectly freed from this Diſeaſe.

The 128 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A fluxion upon the Lungs in an Infant.

THe 19. of *January*, 1637. My ſaid young ſon *Charles*, a month after his former diſeaſe, fel into a moſt cruel Catarrhe, which did flow down into his breſt, which cauſed him frequently to Cough, and to rattle in his pipes as he breathed. I gave him a purgation of Syrup of Roſes, with an Infuſion of Senna, whereby he vomited flegm, but purged little downwards. Pectoral Syrups were given him; his breaſt was nointed. His diſeaſe continuing, the ſame purgation was given him to ſmal purpoſe. At laſt I gave him ten grains of the Earles pouder in Milk, wherewith he was gently and plentifully purged, and was wel the ſame day.

The 129 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Suppreſsion of Urine.

ON the 27. of *January*, 1637. Mſr. *de Labaie*, an Auditor in the Court of Accounts, was two daies troubled with a total ſuppreſſion of urine, with a pain in his left Kidney, and of the Ureter on the ſame ſide. He had taken Clyſters by order of another Phyſitian, and fomentations had been applied to the Region of his ſhare. I was called to conſult with the ſaid Phyſitian, we ordered his Hemorrhoid Veins to be opened (which did then ſwel) by Application of Leeches, an emollient Clyſter was again given him, with half the quantity of Oyls, a Fomentation was applied to his Kidney and Ureter, and afterwards they were anointed, with Oyl of Scorpions and ſweet Almons, alſo a Cataplaſme of the ſtrainings of the emollient Decoction, with onions roaſted in the embers; and at the ſame time, we gave him this julep following.

Take *Juyces of Pellitory of the Wal and Sea-fennel, of each one ounce an and half. Juyce of Lemmons and Oyl of Sweet Almons, of each one ounce. Mix them, make al into a julep. Within an hour after he had taken this julep, he made water abundantly, and was freed, ſeven hours after we began our conſultation, during which ſpace the foreſaid Remedies*

dies

dies were administred. To seal up the Cure, he took the day following, a bole of Cassia, Rhubarb, and cream of Tartar.

The 130 *Observation, or History, of Famous and* Rare Cures, &c.

A Stubborne Gonorrhæa.

THe 6. of *February*, 1637. Mſr. *N.* thirty years old of a Cholerick and Sanguin conſtitution, having had a Gonorrhæa for two months, and the Chyrurgeons had tried many remedies in vain, he did commit himſelf to my Care. In the firſt place I order him to be let blood in his Ankle, and the day after one ſcruple of Mercurius Dulcis, with half a ſcruple of Diagridium in broath; after that a bolus of three drams of Terpentine, and one dram of Rhubarb, for ſix daies together, which did him no good. The purging pouder is repeated, and after that he uſed the following water for twelve daies, which preſently did him good, and he was perfectly cured; it did ſo powerfully cleanſe the internal ulcer, that his urine being poured upon the ground, did infect the ſame with a white color, like diſſolved Chalk.

Take *dried mint three ounces. Seeds of lettuce, Rue, and Agnus Cauſtus, of each two ounces and an half. Florentine Orice Root two ounces; Dittamus of Creete ten drams; Sugar two pound; Pouder them al, add thereunto five ounces of clear Terpentine, and thirty ounces of white Wine, and diſtil them in Balneo Mariæ. Let the Patient take two ſpoonfuls, in the morning two hours before meate, and in the evening four ſpoonfuls after Supper.*

If thou wouldeſt quel al Diſeaſes, read and underſtand *Riverius* Practice, the Idea of Phyſick, The Guide to Phyſick and Chyrurgery, and the *London Diſpenſatory*, al of the laſt Edition, Engliſhed by me.

The 131 *Observation, or History, of Famous and Rare Cures, &c.*

Of an Hiſterical Epilepſie.

THe 17. of *February*, 1637. the Wife of Mſr. *Palemarchus de Sumenes*, was vexed many years with ſundry Hyſterical Diſeaſes, which did imitate the fits of the falling-ſickneſs, ſhe tried many Remedies preſcribed by many Phyſitians but al in vain. At laſt by the advice of a woman, ſhe took the fleſh of a Wolf reduced to pouder, and wore a peice of the ſaid fleſh ſalted, alwaies about her, after which ſhe was perfectly freed from the foreſaid Diſeaſe.

The 132 *Observation, or History, of Famous and Rare Cures, &c.*

Immoderate flux of the Courſes.

ON the 6. of *March*, 1637. among other Remedies preſcribed for the Wife of Mſr. *de Vitrac*, who was brought to deaths door, by an immoderate flux of her Courſes, which hapned after abortion, the following julep did wonderfully help her.

Take *of the flowers of Chamæleon, Spikenard, dragons blood very finely poudered, of each one ſcruple; Plantan and Roſewater, of each one ounce and an half. Make a julep, of which let her take two ſpoonfuls, twice in an hour.*

Alſo extract of coral with Plantain water, did her much good.

The 133 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

A Cholerick Cholick:

THe 18. of *May*, 1637. a certain woman was tormented with cruel pricking pains of the Cholick, al her belly over, wel near. Another ancient Phyſitian had given her ordinary Remedies, hot, wind expelling, and flegm purging, by which ſhe found no eaſe. At laſt, I being called, by the kind of pain, its ſcituation, the hot complexion of the woman, and her very red urines, I conjecture it was a Cholerick Cholick; and I preſcribe her preſently blood-letting, a cooling and Lenitive Clyſter, and a cooling julep, wherewith her pain was very much abated, and ſeeing her blood appeared extream Cholerick and corrupt, ſhe was again let blood the day following, whereupon her pain went quite away. And finally, the Cure was perfected by a Choler purging potion. I preſcribed her at the firſt a bath to ſit in; which ſhe uſed not, becauſe of the great abatement of her pain.

The 134 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Malignant feaver.

ON the 7. of *June*, 1637. Mr. *Patris*, a Councellor, being fifty five years old, was taken with a light coldneſs, and was feaveriſh al night, continuing much after one and the ſame manner; the day after in the morning he was free from his Feaver, and in the evening he was Feaveriſh again, and after the ſame manner his Feaver continued intermitting, until the ſeventh day, and then it was turned to a continual Feaver. Howbeit he was troubled with a frequent coldneſs of his Feet, and Knees, and ſomtimes of his Hands; his Urines were like thoſe of an healthy perſon; howbeit al things grew every day, worſe and worſe, ſo that it was eaſie to ſee, that it was a Malignant Feaver, and it was afterwards manifeſt by the ſpots which came out on the ninth day, alſo by his ravings, and the Convulſive motion of his Hands, with a certain profound ſleepyneſs, and a looſneſs. The ordinary Cure, uſual in ſuch caſes, was adminiſtred. But this is peculiarly obſervable, that he was let blood on the third day, and his blood appeared laudable. On the fifth day he was purged, while it was yet an Ague. On the ſeventh he had a looſneſs, which continuing til the eleventh, hindred any further blood-letting. And ſeeing on the twelfth day the flux ſeemed to be ſtopped, I doubted whether or no I ſhould let him blood, ſeeing the other Evacuation had done no good, and the great weakneſs and danger wherein the patient lay (ſo that his Kindred Lamented for him as one at deaths dore) ſeemed to diſſwade the ſame. Add hereunto, that for the two foregoing daies, many Cupping-Glaſſes were applied with Scarrification, to ſupply the want of blood-letting. At laſt I conceived that it was beſt to let him bleed ſome five ounces by way of Trial, ſo that if he bore it wel, more might be taken away afterward. Blood was taken away, black and corrupt, with the good bearance of the patient; five hours after, the like quantity was taken away, the patient remainning as ſtrong as before. In his cooling Juleps were mingled Scordium and St. Johnswort: wherein Sal Prunella and ſpirit of Vitriol were diſſolved. In al his broaths he took a ſcruple of Bezoardicum Mineral. On the ſame twelfth day at night, he had a plentiful looſneſs, yet the Patient ſeemed to be better after it. Wine was given him to drink very wel tempered with water. He did many times Sneeze in the Courſe of his diſeaſe, which made me Hope he would do wel, although many other Signs did portend his death. The thirteenth and fourteenth daies his looſneſs continued, with extream weakneſs. Chyſters were given him of Milk, wherewith his looſneſs was moderated. A Julep was given him of Orenge-flower and Roſe-water, with Confectio Alkermes and ſome drops of Cinnamon water, of which he took now and then a ſpoonful to ſtrengthen him. His looſneſs being abated, his ſleepyneſs abated on the fifteenth day, and his raving ceaſed. Yet he made little or no Urine, On the ſix-

teenth

teenth day, he was a little better. His Tongue, before dry, appeared moiſt. After which by little and little he grew perfectly wel.

The 135 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Looſneſs.

ON the fifteenth of *July*, 1637. Madam *de Groſſet*; being fourſcore years old, but of an exceeding ſtrong body, was taken with a looſneſs and Teneſmus, which made her go many times to ſtool every hour, with moſt grievous gripings. Her ſtools were various, ſomtimes yellow, ſomtimes Leek-green, and ſomtimes black. The ſeminary of the diſeaſe was taken away by four purgations, repeated with ſome diſtance between, of Rhubarb, Parſly infuſed partly in ſubſtance, with Syrup of Roſes. In the intermediate times, clenſing, pain aſſwaging, and ſtrengthening Clyſters were given her, with cooling and thickening juleps and Emulſions.

The 136 Obſervation, or hiſtory, of famous and Rare Cures, &c.

Prognoſtick of a Dyſentery.

IN the month of *July*, 1637. the daughter of Mſr. *Guilliminet*, Secretary of the Parliament of *Languedock*, five years old, being troubled with a Dyſentery, voided divers Excrements, Yellow, green, and ſomtimes black. About the end of her diſeaſe, ſundry ſpots appeared, like flea-bitings in her Face and other parts, and one of her hands was ſwelled with a Flegmatick Tumor; which were certain preſages of death.

At the ſame time the Reverend Father *Guardane*, Provoſt of a Covent of *Franciſcans*, called *Minorites*, being troubled with a Dyſentery, was taken with frequent Hiccupings, which were forerunners of his death.

The 137 Obſervation, or Hiſtory, of famous and rare Cures, &c.

A Dyſentery.

IN *Auguſt*, 1637. the Son of Mſr. *de Mauſſac*, Preſident of the Exchequer Court, being eight years old, had a bloody flux and voided much blood, with green and Leek colord ſtools, and a continual Feaver. On the third day of his Diſeaſe, he took the infuſion of a dram of Rhubarb, made in plantane water with yellow ſanders, in which was diſſolved a ſcruple of the pouder of Rhubarb, and an ounce of Syrup of Roſes. He was very wel purged, voided many Excrements without blood, and was in a manner free from his Feaver, al that day. The day following he voided pure blood, with which were mingled certain drops as it were of Leek colored matter: his ſtools were frequent, with gripings in his belly and a Feaver, which continued til the eight day, though al ordinary Remedies were adminiſtred both internal and external, as alſo ſundry Clyſters. On the ſeventh day, extract of corals was given him three times, a ſcruple at a time, with plantane and Roſe water and Syrup of Quinces; but in vain. At the beginning of the eight day, when both his Feaver and Flux grew worſe and worſe, and he vorded pure blood, he was let blood about Noon, to the quantity of five ounces. At night al things were as formerly. The next day in the morning, I gave him two grains of Laudanum, with extract of Coral, Plantane, and Roſe water, and Syrup of Quinces: his looſneſs was wholly ſtopped for four hours, he ſlept quietly, waking between whiles. After four hours, he went to ſtool again, thrice in two hours, and voided meer blood as before, and vomited up his broath. Whereupon there was more appearance of danger, ſeeing other remedies had done him no good, nor Laudanum it ſelf, which does alwaies help in this Diſeaſe. He did ſneeze

once.

once. His fourth ſtool after the Laudanum, voided more of Excrements without any blood. He Vomited no more. Towards evening he went more frequently to ſtool, yet leſs than before he had taken the Laudanum, nor were they ſo bloody, but did partly conſiſt of Dung. The night following, he ſlept pretty largely by fits, and his ſtools were ſeldomer. In the morning he took a Medicament of one dram of Rhubarb, one ſcruple of Citrine Myrobalans, red ſanders half a ſcruple, infuſed in a decoction of plantain, purſlane, and tamarinds, diſſolving in the ſtrained liquor a ſcruple of powder of Rhubarb, and half an ounce of Syrup of roſes. Which made him void plenty of dung and humors, with very little blood, and ſmal gripings; his Feaver was abated, and the night following he went ſeldomer to ſtool, and ſlept better. The following daies his looſnes continued by fits, without any blood, gripings, or Feaver. Yet he was afterwards vexed with a continual looſneſs, and a lingering Feaver for an whol month together, with a mighty apperite, he had ſtools in the night in his bed, and frequently in the day time, ſo that it ſeemed to incline to an Hectick Feaver. Finally, I gave him two ſcruples of Bole-Armenick with broath, two daies together, and ſo his looſneſs was perfectly Cured.

The 138 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

Cholick Pain.

THe 25. of *September*, 1637. The Wife of Mſr. *de Sorret* the Kings Councellour in his Supream Court of Accounts and Subſidies, being with Child in her ninth month, was taken with a moſt grievous Cholick pain, which made her at the firſt vomit al that ſhe took; but ſhe voided nothing by ſtool. She had devoured much fruit, her pain was fixed near her ſhort ribs on the right ſide, ſo that there was fear of her Liver being inflamed, becauſe ſhe had a feaver and was very thirſty. After many Clyſters, Fomentations, and baths to ſit in, ſhe voided downwards liquid and crude Excrements. Howbeit her pain continued. At laſt there was given her a purging Medicament, of half an ounce of Catholicum, infuſed in a decoction of Cichory and Maiden-hair, with a dram of Rhubarb alſo infuſed, and an ounce of manna and as much of Syrup of Roſes: She had ſeven ſtools and her pain was much abated. The day after the pain continued, but more remiſs, a Clyſter was given her, wherewith ſhe had five ſtools, and afterwards voided much Urin, whereupon ſhe was perfectly Cured.

To deliver from the Diſeaſes before mentioned, and to preſerve health, Read with care the Practice of Phyſick, The Idea of Phyſick, *Riolanus*, and the *London Diſpenſatory*, of the laſt Editions, all Engliſhed by me.

The 139 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Inflamation of the Teſticles.

ON the 20. of *September*, 1637. Mſr. *Texiar*, of *Niſmes*, Doctor of the Canon and Civil Laws, by reaſon of Violent riding, fel into an Inflammation of his right Teſticle, with a large Tumor. He was twice let blood in his Arme, once in his Ankle, a purge was given him. The part was fomented with Roſewater, and a Cataplaſme was laid on of bean meal boyled in Vinegar and water, a fourth part of Vinegar being mixed with three parts of water, which Cataplaſme never failed me in this Diſeaſe. Howbeit, in this patient the skin of his Cod was ſo tender, that the ſharp Vinegar did fetch off the Skin, and he could no longer endure the Cataplaſme. I cauſed the Cataplaſme to be repeated; but to take away the acrimony of the Vinegar, I cauſed it to be boyled with litturidge; and ſo the Cataplaſme did operate excellently, and the Patient was cured of his ſwelling in the ſpace of three daies.

The 140 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of an Hepatick flux.

THe 11. of *October*, 1637. The wife of *Peter Banete*, a Baker, after certain fits of a Tertian Ague, fel into a flux of the Liver, whereby al her ſtools became bloody. I being ſent for, preſcribe her preſently two grains of Laudanum, with half a dram of Conſerve of Roſes, and within an hour her flux ſtopped; returning afterwards, ſhe voided only Humors and not blood, and was Cured with other vulgar Remedies.

The 141 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Eryſipelas.

Mſr. *de Gout*, a Gentleman of *Montpelier*, twenty five years old, was often troubled with a red ſwelling in his Legs; he began to drink his wine much ſtronger than before, and with very little water in it; from which time he has never been troubled with his ſwelling, though it have been four or five years ſince. I conceive the reaſon is this, that his expulſive faculty being ſtrengthened by the Wine, the matter of the ſaid inflamation is expelled, by ſtool, Urins, or inſenſible tranſpiration.

The 142 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Tertian Ague with Vomiting and Looſneſs in the fit.

THe 18. of *Auguſt*, 1638. Mſr. *Durant*, a Proctor in the Court at *Montpelier*, fifty years of Age, had five fits of a Tertian Ague, from which he was delivered only by blood-letting. For fifteen daies he was wel, and did Eat ſome ripe fruit. He fel into the ſame Ague again, and in the ſecond fit was vexed with a moſt grievous vomiting and looſneſs, which made him void many Cholerick Excrements upwards and downwards, with extream unquietneſs and debilitation; ſo that his life was now in danger. I preſcribe him the following Julep, with which preſently al his Symptomes were ſtopped, he ſlept two hours, and his fit was terminated by ſweat. And in a few daies he was perfectly wel.

Take *Water of Lettuce, Roſes, and Plantain, of each one ounce; Syrup of Quinces, one ounce. Confectio de Hyacintho, one dram; Laudanum Opiatum, two grains. Mix them into a Julep and let him take it preſently.*

The 143 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Grievous ſore Mouths in Children.

THe 4. of *Septemper*, 1638. My Son *Stephen*, being four Years old, had a moſt ſore fluxion upon his Tongue and Jawes, ſo that they were ful of infinite Ulcers, and they whitiſh, and very painful, with great Inflamation. He could take neither meat nor broath, nor ſuck milk. And he cryed day and night, could not ſleep, was lean and almoſt conſumed. Among remedies, Honey of Roſes, with Spirit of Vitriol, did him no good. He had a large looſneſs with which he voided leek-colored Choler. A Veſicatory did him much good. But his paine and cryings continued, and the Patient continually voided ſerous and ſharp Humors by his mouth, the heat and Inflamation drawing the Humors more and more.

At

At laſt I gave him one grain of Laudanum with broath, and therewith his pain was aſſwaged, a ſhort ſleep Cauſed, which continued afterward moderate, and came at its hours. After which he grew better, and the flux of humors running out of his mouth was wholly ſtopped. Howbeit the day following he had a purging medicament given him, which did him likewiſe much good.

The 144 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a Diſentery.

IOan *de Paraviſol*, eighteen yeares of age, was troubled with a moſt greivous Dyſentery, with an acute Feaver. For ſeven dayes ſhe was in the hands of another elder phyſitian, who did preſcribe her nothing elſe but detergent Clyſters and rhubarb, whereby her Feaver was encreaſed, and her diſentery became worſe. He being abſent, I was ſent for, and gave her firſt three grains of Laudanum, with which her fluxe was much abated that very night, and ſhe ſlept three or four hours. In the morning I let her blood, and the blood came away exceeding hot. Then I gave her one ſcruple of extract of Coral, with plantane water, twice in a day, but without any profit. For ſhe had a moſt bitter night, both in reſpect of her Feaver, and of the flux which was bloody, and had been ſtopped ſome time by the uſe of Laudanum. The next day in the morning, I give her Laudanum again, and the flux was ſtopped; at evening a vein is opened again. The Excretion of blood was in leſs quantity, but ſhe voided leeke-coloured choler very corroſive, her Feaver and thirſt being very violent. For her thirſt, I preſcribed her juleps, of a decoction of porſlane and plantan with Sal Prunellæ, which did her much good; howbeit her diſeaſe continued ſtil. At laſt there was given her in the morning, roſewater with common oyl; at noon a decoction of the Guts of a wether boiled much away with the pouder of Actes berries. The patient was thereby much holpen. And the day following thoſe three remedies being once againe repeated, ſhe attained her health.

The 145 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of the Meazles.

THe 28 of *Septem.* 1638. The nurſe of my ſon *Stephen*, by name *Claudia*, was taken with the Meazles, wherewith her whole body was covered, with an intenſe Feaver. Whereunto was added a moſt greivous ſymprom, viz. a thin fluxion falling upon her lungs, which cauſed her frequently to cough, and was in danger to choake her, with a mighty hoarſeneſs. A veſicatory was applied to her neck, and two grains of Laudanum were given her, with conſerve of roſes. Her fluxion was ſtopt al night. The day after it returned again, and laudanum was given her again with like effect, whereupon in a few dayes ſhe recovered, her hoarſneſs abiding a long time after.

The 146 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A tertian Ague.

IN the yeare, 1638. very long tertian agues were riſe in Autumne, from which many were delivered, by taking after frequent blood-lettings and purgations, one dram of treacle with plantane water for three dayes together. In ſuch as I feared its heat moſt, I gave it after ſupper. But one took treacle without my advice while his diſeaſe was yet crude, with red urines, and his Feaver was increaſed. Wherewith the experiment of *Galen* was confirmed which is recorded in his book *de Precog. ad Poſthumum*, Chap. 2. and 3. touching *Eudemus* the Peripateric, to whom while his diſeaſe was yet crude, the Phyſitians of *Rome* gave treacle, and his ſimple Quartan was by that meanes turned into a triple. But with the ſame Treacle given by *Galen*, when the ſignes of concoction appeared, he was happily cured.

THE

An Inveterate Diarrhea.

THe 15. of *Octob.* 1638. a Gentelman thirty yeares of Age, came to *Montpelier* to take advice about a Looſneſs that had troubled him eight years together, which made him go to ſtool five or ſix times in a day and night, voiding excrements partly cholerick and partly flegmatick. He fel into this ſickneſs by bad diet, which he was forced to uſe many yeares together, following the Camp. It did not much weaken him, yea rather he was ruddy of countenance, eſpecially about his cheekes. I ſent him to the bathes of *Baleruca*, the water whereof he drank ſix daies together, and his looſneſs was quite ſtopped, ſo that for eight dayes after he had left taking the water, he never roſe in the night, whereas before he was wont to riſe twice or thrice every night. I preſcribed him many other uſual remedies to ſtrengthen his natural parts, which he ſaid he would make uſe of in his own Country.

The 148 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A moſt ſtubborne Vomiting.

ON the 15. of *Octob.* 1638. Mſr. *Enguarran*, Canon of the Cathedral Church at *Montpelier*, of a melancholick and aduſt temperament, fel into a moſt ſtuborn Vomiting without any manifeſt cauſe, wherewith he voided with much ſtraining, flegmatick, clammy, and mucilaginous excrements; alſo he belched up much wind after he had taken any broath. Many medicaments were uſed by other Phyſicians in vain, for two monthes together. At firſt he took pils of hiera for many dayes together; afterwards he was purged with a decoction of Senna and an infuſion of rhubarbe, and afterwards with apozemes, in the uſe whereof he was not able to continue. Afterwards milk was given him becauſe they ſuſpected he had an ulcer in his ſtomach, alſo frequently he took treacle, for feare he might have bin poyſoned, and many fomentations and unguents were applied. I being called find his Hipochondria very much diſtended, eſpecially his left, his pulſe ſtrong enough, though he was weake enough in reſpect of his animal faculties. I conceived the humors flowed out of his hipochondria, and that this vomiting was a ſpice of the Hypochondriacal Diſeaſe. At evening, two grains of laudanum were given him, and al night he vomited not, but reſted quietly. The day following he was let blood, which was ointed by his other phyſicians, and ſix ounces of blood was taken away, which was very aduſt; he vomited twice or thrice that day, a Cliſter was caſt in about the evening; alſo I preſcribed an emollient and opening fomentation, to be applied to his Hypochondria, and a Liniment with the ſame Vertues. The third day he took this pouder.

Take *Rhubarb one dram*; *Myrobalans Citrine one ſcruple*; *Spodium and Maſtick of each ſix grains*: *make them into a pouder, give it in the morning with broath. He vomited up his medicament, and would take no more. After a month he died, and his body being opened, his Epiploon or cal was found thick, red, ſcirrous and contracted, ſo that it reſembled the Liver at firſt ſight, and was as thick as it; his ſtomach was black and blew, thin at the bottom, and in the upper part ſcirrhous; his guts black and blew. His ſpleen was in good Caſe. Melancholly humors were heaped up in the Cal, and from thence flowed back into the ſtomach.*

The 149 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A long Looſneſs with an ulcer of Inteſtinum Rectum.

ON the ſecond of *Novemb.* 1638. Mſr. *Ludowick Maſſanes*, being vexed two months with a double tertian, with a looſneſs partly of dung, partly of Humors, and partly of blood, whereby he had eight or ten ſtooles in a day. At laſt he was freed from his ague fits, his Looſneſs abiding, whereby a paine was raiſed in his right or ſtreight gut, a little above his fundament, alwaies vexing him, even when he went not to ſtool. Sometimes he voided laudable dung, ſometimes a reddiſh matter, reſembling the colour of the liver, and ſometimes mixed with quittor. I conjectured by reaſon of his long looſneſs, that there was an ulcer about the internal hemorrhoides. He did loath in a maner al medicaments. And therefore I adviſed him to uſe the bath waters for three dayes together. The firſt day, his appetite, long ſince dejected, was preſantly reſtored, and conſequently the pain of his fundament quite vaniſhed, an indifferent Looſneſs remaining, whereby he had two ſtooles in the night, and as many in the day, and his excrements were ſoft, but wel digeſted; whereupon he grew every day better, ſo that after fifteen daies taking the waters again, he was perfectly Cured. Yet he received a fumigation from a decoction of tapius barbatus, through a groaning chaire, with which his looſneſs was mightily ſtopped, though he uſed it but twice. The Effect thereof was ſenſible.

The 150 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Arthritick pains.

ON the twelft of *November* 1638. Mſr. *Monret* of *Montpelier*, was vexed with arthritick paines, which afflicted divers parts, and rambled through al the jointes. He had bin troubled an whole month with this diſeaſe, and was many times purged, blood-letting being alſo not omitted. At laſt he uſed this following Diet-drink.

Take *Salſaparilla one ounce, ſhavings of Guajacum two drams, water as much as ſhal ſuffice. Let them boil til a third part be conſumed, ſtrain out the liquour, adding thereto a little Cinamon.*

After he had uſed this diet drink eight daies together, he began to void with his urines, a flegmatick matter, which ſtuck to the botom of the Chamber-pot, and at the ſame time he found great eaſe of his paines, until he was perfectly cured, that flegmatick matter iſſuing forth for many daies together.

The 151 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Wandering pains.

ON The 13 of *Novemb.* 1638. Mſr. *Gaillard* was ſuddenly taken with moſt greivous, wandering paines, tormenting ſometimes his thighes, other whiles his knees, legs, or feet, or Loins. Another phyſitian was called, and took away five porrengers of blood within an hours ſpace, and his pain not abating he gives him a pil of laudanum, whereby the pains were pacified that night, and til next day at noon. In the afternoon the pains returned as bad as ever. I being called, the other phyſitian being abſent, preſcribe him a bolus of half an ounce of diapruinum ſolutivum, and one ſcruple of jallap, to be taken at night, which he muſt otherwiſe paſs without ſleep and in moſt greivous pains. He was purged ten times to good purpoſe, for the pains were very much abated, and conſeqently in a ſhort time quite diſcuſſed. He was a man of fifty years old of a black cholerick temperament, toſſed with many paſſions of mind, by reaſon

reaſon of his being Conſul that yeare. And therefore I did conjecture that thoſe pains proceeded from a very thin and ſharp wheyiſh matter, which was carried this way and that way in a kind of furious motion; and that therefore it was ſoon to be drawn forth by a purging Medicament.

If thou wouldeſt be a helpful friend to man-kind, be a diligent reader of *Riverius* Practice of Phyſick, and the Idea of Phyſick, and the beſt way to Phyſick and Chyrurgery, and the *London* Diſpenſatory; al of the laſt edition engliſhed by me.

The 152 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Spitting of Blood.

ON the tenth of *Decemb.* 1638. the wife of Mſr. *Capon*, Auditer in the Court of Accounts, fifty yeares of age, after midnight was taken with a plenteful ſpitting of blood, which ſhe brought up by coughing, and perceived it to be very ſalt. It continued til morning returning by fits; at what time I being called, preſently cauſe her to bleed ſeven ounces from her Arme, and after two hours to bleed as much more. After each blood-letting ſhe took a julep, of plantane and Lettice waters, with ſix drams of ſyrup of violers, and two drams of ſyrup of poppy. I cauſed frictions and ligatures to be made upon her legs, and cupping-glaſſes to be frequently applied under her ſhort ribbs; and a thickning and aſtringent lick-pot. At night ſhe took a tyrup compounded of equal parts of ſyrup of violets, dried roſes, and Poppies, viz. a ſpoonful when ſhe lies down to ſleep, the other after midnight; and her ſpitting of blood returned no more.

The 153 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Cancerous Tumor in the Liver, with Sciatica pains.

ON the 17 of *Decem.* 1638. the widdow of *Peter Aubert*, a Merchant of *Montpelier*, lay ſick many monthes, being troubled with a continual Feaver; ſhe had moſt cruel paines in her left huckle bone, which reached to the further end of her foot. Moreover a tumor was diſcerned in her belly, towards her navel, enclining to the right hand, and that hard, ſo that it was counted ſcirrhous, and was placed among the muſcles of the Epigaſtrium, becauſe it was felt immediatly under the skin, and was not painful but being touched. Sometimes biting paines did occupy her left ſhoulder, and her ſide it ſelf ſo as to counterfet the pleureſie. We imagined thoſe pains did come from a moſt ſharp ſerous matter, which was bred in her liver being exceeding hot. The blood which was taken away was moſt fervent, and black and blew: ſhe never felt any eaſe ſave by Laudanum; by meanes whereof her pains were eaſed. When the paine in her hip grew worſe, and a tumor appeared in the part though not different in colour, alſo the part being compreſſed did ake much; as alſo the patient perceived cutting pains in the ſame part by fits; chyrurgeons were called, who affirmed conſtantly, that there lay hid a deep Impoſtume; and ſo after conſultation, the part was opened with a ſmal inciſion knife, and a cauſtick, no quittor came forth. Fifteen daies after the opening, her belly before ſwelled, was now more ſwelled, and ſhe became hydropick, and at laſt died ſuffocated. Her body being opened, her liver was found ful of ſcirrhous tumors and for the moſt part ſuppurated; in the extremety whereof, there were two cancerous tumors, ſticking out as far as her navil, and equalling a mans fiſt in greatneſs, touching one another in a manner, which cauſed that ſwelling in her belly aforeſaid; neither were they thought to be in her liver, becauſe they were not in the natural place of her liver, yea the liver was felt at a diſtance from thoſe tumors, but hard and painful; becauſe the foreſaid tumors, were more prominent, than the reſt of the ſubſtance of the Liver. Her whole Liver did weigh twenty pound, and more. Her hip was cut up as far as to the bone in the place of the opening, and certain ſmal glandules were found ſuppurated, which contained congealed Quittor, ſo that it could not flow out.

Kings evil ſwellings.

ON the 8 of *January* 1639. a certain maiden of *Niſmes*, being eighteen years old, was troubled with Kings evil ſwellings in her Neck, which were ſupputated by many remedies a long time applied, and afterwards conſolidated. Howbeit a part of the tumors remained exceeding hard, which could not be diſſolved, no not with Emplaſtrum de Vigo, Roman Vitriol, and Gum ammoniacum diſſolved and thickned again, of each an equal quantity with as much terpentine as ſhould ſuffice: with which Plaiſters thoſe tumors were perfectly diſſolved in a months ſpace. Convenient diet being in the meane while uſed, and convenient evacuations ſometimes made uſe of.

The 155 *Obſervation, or hiſtory, of famous and* Rare Cures, &c

Inordinate Flux of the Courſes with the whites.

ON the 15 of *January*, 1639. the Wife of Mr. *de Rignac*, Proctor General of the Court of Exchequer, having a fat, burly, and flegmatick body, after abortions ſhe was troubled, with an inordinate flux of Courſes, and with the Whites. She was happily cured, with blood-letting, purgation, a diet drink of Salſa, and a fine pouder of Frankincenſe, Maſtich, Sandarach, Amber, Borax, Benjamin, Cloves, Nutmeg, and Red-Roſes, received by a funnel, morning and evening a long time together.

The 156 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

Grievous and laſting head-ache.

ON the 29 of *March*, 1639. A woman of *Frontinia*, being forty years of Age, of a black-cholerick temper, having ſuffered Abortion, afterwards ſhe wanted her Courſes, whereupon a moſt greivous Head-ach afflicted her for four months together, blood-lettings doing her no good, nor Leechesapplied to her forehead and temples, and other Remedies. I being ſent for appoint her temporal Artery to be opened, which was excellently performed, nor did the blood come out leaping by reaſon of the ſmalneſs of the Artery, and the thickneſs of the blood, but drop by drop; there was taken away to the Quantity of five ounces, red and florid, both externally and internally. The Orifice was ſtopped, with a plaiſter of maſtich only, with a ſimple ligature, and after that another ligature which is wont to be made in wounds of the Head, having continued ſticking on five hours. She was freed from the paine of her Head, and was troubled therewith no more.

The 157 *Obſervation, or hiſtory, of famous and rare* Cures &c.

A tertian *A*gue.

THe 14 of *July* 1639. Mr *de Vandiere*, a Student of Phyſick, after five fits of a tertian Ague, having been twice let blood and once purged, took at the beginning of his fit a good doſe of Aqua benedicta, his fit was ſtopped, as alſo the working of the medicine for two hours, afterwards he vomited five times or ſix without trouble, becauſe in every vomit he took four or five ounces of ordinary peaſe-broath. The fit was ſhorter than ordinary, and at the end thereof he had divers ſtooles, and was perfectly cured.

The

The 158 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Nephritick Pains.

THe 22 of *July* 1639. I was troubled with a Cholik pain, which extreamly tormented me in the bottom of my belly, and about my right kidny. After two clyſters, the pain of my belly ceaſed. The pain of my kidney continued, which reached al along the ureter, with a pulling back of my left teſticle, ſo that it was a true nephritick pain. It was diſſolved with an hot bath, becauſe when the bath was luke warm, it increaſed the pain. The pain came again, and was removed by application of Cupping glaſſes to the part. The day after it returned again, and went away again upon application of the Cupping-glaſſes; ſoon after I took a bolus of Caſſia, Catholicon, Rhubarb, and Cream of Tartar; the pain returned no more. I conceived this Nephritick pain was cauſed by wind, ſeeing with diſcuſſive remedies, viz. an hot bath and Cupping-glaſſes, it was aſſwaged, and no obſtructive matter, as ſtone, gravel, or flegm was by me voided in my urines, after the ſolution of the diſeaſe, in the diſeaſe it ſelf, or at any time before. Nor is it impoſſible that the ſame kind of winds, which inſinuate themſelves between the coates of the Guts, may be transferred into the Kidneys and ureters, and cauſe grievous diſtenſions in thoſe parts: ſeeing that winds are wont to be conveighed into al parts of the body ſomtimes, and in them to raiſe either pains or palpitations. Yea and very many think that the moſt vehement pains of the teeth are cauſed by winds, ſhut up in the veſſells which creep about the roots of the teeth. My conjecture was ſtrengthened, becauſe when my purge did work, the winds were ſenſibly carried from my Loines to my belly with a gentle noiſe, which was eaſily heard by the by-ſtanders.

The 159 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Looſneſs

A few daies after the diſeaſe aforeſaid, I was taken with a cholerick looſneſs, ſo ful of acrimony that it did corrode my fundament, and cauſed ſharpneſs of urine, a portion of the matter being tranſlated to the Urines. A dyſentery was at hand. Having entred into a lukewarm bath to ſit in, I was preſently cured.

The 160 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Falling-ſickneſs in a child.

A Boy three yeares old, had a fit of the Falling-ſickneſs, from which he was freed with the ſmoak of Tobacco; which a ſervant drew out of a pipe, and blew into the open mouth of the boy; the boy fel a vomiting, and the fit ceaſed.

The 161 Obſervation, or Hiſtory of Famous and Rare Cures, &c.

A beginning Conſumption.

THe 15 of *October* 1639. The Son of Mr. *Le Sage*, of *Montpeler*, being twenty yeares old, for two months had been troubled with a deflux of rheume into his Lungs, with a cough, ſhortneſs of breath, and a ſlow Feaver, ſo that he ſeemed to be fallen into a Conſumption. I preſcribe him blood-letting, a purge of manna, medicated broaths, and other ordinary remedies: But the cheife were a Cauſtick to each Arm-pit, which does moſt potently derive fluxions to the Breaſt and humors therein contained, and herewith he was reſtored, in a months ſpace.

The

The 162 Observation, or History, of Famous and Rare Cures, &c.

A Malignant feaver.

THe 18 of *October*, 1639. *John Vezian*, a Perfumer in *Montpelier*, being twenty four years of Age; was troubled with a malignant Fever, by means whereof, about the eleventh day of the diſeaſe he fell into a Raving fit, and a few dayes after into trembling and Convulſive motions of his Nerves, which are wont to attend a deadly phrenzy; he continued Raving near a month together; his convulſions laſted twelve daies, and at laſt he eſcaped, after the uſe of many Remedies. Thoſe that did moſt good were, the opening a vein in his forehead, and Juleps made of four ounces of Carduus water, three drams of treacle water, two ſcruples of Bezoardicum minerale, and twelve grains of Camphire. Which Julep he took five times.

The eighth of *December*, 1639. *Peter Randon*, a Stone-cutter, thirty years of Age, was taken with the like diſeaſe, which ſeemed very Gentle til the ſeventh day, whereon he began to rave. On the elventh day the vein of his forehead was opened, the day after he took the foreſaid juleps twice, and the day following once, and with them, al the malignity was diſcuſſed.

The 163 Observation, or History, of Famous and Rare Cures, &c.

A Pleuriſie

THe 15 of *December*, 1639. The Wife of Mr. *Clauſelius*, Councellor in the Court of Accounts, Subſidies, and Exchequer, twenty years old, fell into a pleuriſie in her left ſide, the ſame day in which her Courſes began to appear, which nevertheleſs were wel-neare ſuppreſſed; ſeeming very ſmal quantity of reddiſh matter only was voided, both nothing appeared having the Color of blood. I beeing ſent for in the morning before day-light, was ſomwhat in doubt, whether or no her ankle vein ſhould not be opened, to aſſiſt the motion of Nature. But becauſe the pain of her ſide was very urgent, and nothing worth ſpeaking of was voided by her womb, I thought it better to open a vein in her Arme on the ſame ſide, which proved ſucceſsful; for the pain of her ſide was very much abated. Preſently after blood-letting I cauſed her thighs to be rubbed, and her legs to be tied, and Cupping-glaſſes to be applied to her thighs to help forward her menſtrual purgation. After noon her Ankle vein was opened, Fomentations applied to her ſides, and liniments, alſo a clyſter was given her between her two blood-lettings. Juleps were appointed with Sal prunellæ; on the ſecond and third day of the month they did continue a little, but in a very ſmal quantity. Yet becauſe the ſickneſs was not urgent, we left the buſineſs to nature, eſpecially ſeeing ſhe did ſpit freely and plentifully, by which much flegm was voided, colored with a light reddiſh color. On the fourth day, when her courſes had quite left her, and her diſeaſe was not abated, ſhe was again let blood in the morning, to the quantity of nine ounces, and after dinner again, the quantity of ſix ounces. The fift time ſhe was again let blood to eight ounces in the morning, which blood was like the former, viz. very flegmatick, the woman being nevertheleſs leane and of a cholerick Conſtitution. At the bottom of the porringer it appeared aduſt. The ſame day in the after noon, ſhe was again let blood to ſix ounces, and the blood appeared red in the top, which appeared white before. Hence I gathered that ſhe had been ſufficiently let blood, ſeeing blood had been taken away, til the color thereof was changed, according to the precept of *Hippocrates*; and the patient was ſomwhat better, and ſlept three or four houres in the night, whereas ſhe could never ſleep before during her Illneſs. Howbeit in her emulſions, two drams of ſyrup of Poppy, were commixed, her emulſions continued with Sal prunellæ, and a Cataplaſme applied to her ſide of the materials of the fomentation, with flower of Linſeed, oyl of Lillies, oyl of ſweet almonds, freſh new made butter and Safron. The fixt day ſhe took a roaſted apple, into which had been put a dram of Frankincenſe poudered, and drunk four ounces of Carduus water after it, and covering her body more than ordinary, to provoke her to ſweat. At nine a clock in the morning this medicament was given her, ſhe did not ſweat, but her [illegible] appeared for three or four hours more tainted with blood, and came

came up more easily. About two a clock in the afternoon, her spittle appeared no longer red, but altogether white, her Feaver was more remiss, and the pain of her side was quite allayd, so that she could lie without pain on which side she pleased. Emulsions were continued, to temper the Feaver of her blood. On the seventh day, her menstrual purgations broke forth plentifully, and continued for four daies together, by which meanes her Feaver was very much lessened, and the pain of her side wholly taken away. On the twelft day she was purged with a medicament of half an ounce of Senna, one dram of Rhubarb, manna and syrup of Roses of each one ounce. The purgation did luck wel, and the patient was perfectly cured.

At the same time a certain Countery woman was troubled with the same disease, after the seventh blood-letting, her disease was abated; on the twelth day she was purged with the like Medicament, whereby she was much eased, and the disease began to decline a few daies afterward.

The knowledg and Cure of Most diseases in man are to be had from these Books, The Practice of Physick, the Idea of Physick, The guide to physick and Chyrurgery, and the the London dispensatory, of the last Editions, Englished by me.

The 164 Observation, or History, of Famous and Rare Cures, &c.

A malignant Feaver.

ONn the 11 of *January* 1640. a Woman fifty years old, named *Martina*, a broker for oyl, was taken with a malignant Feaver, with broad violet spots, about her shoulders and neck in smal Quantity. I was called on the sixt day of the disease, her pulse was low and languid, she was very sleepy, and her disease accompanied with a dead sleepiness. She was twice let blood; I appoint her an emolient and laxitive clyster, a vesicatory to her neck, cooling juleps, with antidotes. On the seventh day al things were worse. On the eighth day, being sent for again, I prescribe her a diaphoretick potion of two scruples of bezoardicum minerale, and twelve grains of camphire, with carduus water, which was three times repeated. After it was first given, a diaphoretick fomentation was added, to be applied to her whol belly and breast with spunges, after she had took the potion; and her pulse became stronger and more ordinate. Being called again after two daies, I find the signs of malignity as yet strong, whereby she was in extream danger. I appoint her juleps of a decoction of Cinquefoil, White thistle, Buglos, Scordium Leaves, Sorrel, &c. to be taken morning and evening; and four vesicatories to be applied to her Armes and thighs. On the eleventh day a rising appeared behind her eare, which was brought to suppuration by topick medicaments, and at last the sick woman was restored to her former Health.

The 165 Observation, or History, of Famous and Rare Cures, &c.

The Dropsie.

THe 8 of *November* 1640. the Maid-servant of Mst. *de Cros* his Wife, a famous Advocate, after a tertitian ague fel into the dropsy, because she had in her fits drunk abundance of water. I prescribe her the Infusion of Senna with Salt of Tartar for twelve daies, after which she was somwhat better. Afterward this following Apozem was given her.

Take *Elecampane roots, roots of Gentian, Valerian, our orice, and long birthwort, of each one ounce. Barke of Capar roots, middle rind of Ashe and Tamarisk, of each half an ounce. Leaves of Agrimony, the two wormwoods, ground oake and Centory, of each one handful. Licoris scraped and Raisons stoned, of each one ounce. Senna one ounce. Turbith and Agrick, of each half an ounce; Dwarf elder seeds, three drams. Ginger and cloves of each one ounce. Boyl all to twelve ounces. In the strained liquor dissolve syrup of Cichory with Rhubarb four ounces. Make an Apozem for four morning doses.*

With this Apozem she voided al the Hydropical humors by stool and urine, and was perfectly cured.

It

It did not a little help forward the Cure, that while she was using a fume to discuss the Tumor of her Legs, she burnt both her Legs, whence followed Ulcers, from which much water flowed during the use of the Apozemes.

The 166 Observation, or History, of Famous and Rare Cures, &c.

A Quartan Ague.

ON the 15. of *October*, 1640. the Son of Mſr. *Roche*, twelve years old, was freed from a Quartan Ague, by an Infusion of Senna and Cream of Tartar, which he took for seven daies together.

On the 14. of *November*, Mſr. *Pelisserius*, thirty years Old, had a Quartan Ague for three months; in the beginning of *November*, after the use of an aperitive apozeme, which he took a little before four daies together, purgatives being also mingled therewith. At last I prescribe him an Infusion of Senna with Salt of Tartar, for fifteen daies. And at the twelve time taking, the Ague fit ceased and came no more. Now he is of a Melancholick temper, hard to work on, a strong tal man. At first there was infused half an ounce of Senna with a dram of Tartar Christalized, in ten ounces of water: Wherewith he was purged only once a day. After some daies I put in four scruples of the Tartar, and he was purged twice in a day.

After the use of this Medicament, though he was free from his Ague-fits, I prescribed him a strengthening and opening Electuary for twelve daies. By the use whereof his Face was restored to its ancient Comelyness.

The 167 Observation, or History, of Famous and Rare Cures, &c.

The Dropsie.

ON the 20. of *February*, 1641. The Widdow of *Paul du Cras*, a Citryzen of *Montpelier*, sixty years old, was taken with a Dropsie and shortness of Breath, so that her whole Belly, Thighs, and Legs were swollen very much. She was al her life time of a very Fat and Phlegmatick habit of body. I prescribed her after some other Remedies, a Decoction of Guajacum, with Senna, Agarick, Turpet, and Hermodactyls, to be used for fifteen daies together.

Afterwards, with these two following Remedies continued for a month, she was perfectly Cured.

Take *Roots of Elecampane, Smallage, Fenel, and Orice dried, of each one dram and half. Roots of Valerian, Gentian, Acarum, Squil, of each one ounce. The middle bark of Elder, and Sassafras wood of each six drams. Leaves of Wormwood, Agrimony, Ground Oake, Maiden Hair dried, of each two drams. Tops of Centory, and broom flowers, of each one dram. Seeds of Persley, Amdos and Dill, of each one dram and an half. Cinnamon, two drams. Bruise and shake them together, and infuse them in four pints of white Wine certain daies. And let her take two or three ounces of this Wine, every day in the morning, two hours before meat.*

Every fourth or fift day, let her take a dose of this following pouder.

Take *Senna clensed, Gummy turbith, Hermodactils, Dwarfe-Elder-seed, Roots of Jallap and Mechoacan of each one ounce. Cream of Tartar two drams. Cambogia half a dram. Pouder Diambre a Dirrhodon Abbatis, and sweet Fennel seed, of each a scruple. Sugar Candy three drams. Make all into a pouder, two drams whereof must be infused all night in four ounces of the foresaid Wine. Let her drink the Wine and pouder together in the morning.*

The 168 Observation, or History, of Famous and Rare Cures, &c.

An Ulcer of the Gums.

ON the 23. of *February*, 1641. the Daughter of Mſr. *de Raſtenclieres*, being 18. year old, having endured for two years together ſtubborn Ulcers of her Gums, in her lower Jaw-bone, at the Roots of her three former Teeth which are called Cutters, ſo that her Teeth were looſe, and were bare of fleſh to the very ſoles: She could not be freed from this Diſeaſe, without much pains and many Remedies; becauſe it depended upon an hot and dry diſtemper of the Spleen, and conſequently upon a black Cholerick Conſtitution. When ſhe had been a year Cured, there aroſe a puſh in the ſame place, but a little lower, viz. By the jaw-bone, and in that part where the lower Lip begins to be ſeparated from the Jaw-bone. After four or five months, uſing no Remedy, the puſtle broke, and an Ulcer remained, with part of the jaw-bone bare, appearing to the lookers on perfectly bare as broad as half a mans Nail

After blood-letting and purgation, the Ulcer was perfectly healed within fifteen daies ſpace, with this following Balſome.

Take *Choice Myrrh, and Sugar Candy, of each a like Quantity, ponder them, and fil therewith the whites of Egs hard boyled, and cut aſunder in the middle: tie them wel with thrids and hang them on ſticks laid croſs a Glaſs or Baſin, and ſet them in a Cellar. From them wil drop a liquor or Balſom, with which let the part be anointed oft times in a day.*

The 169 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Puffing up of the whol Body of a little Boy.

THe 3. of *June*, 1641. The Son of one *Robe*, a Citizen of *Montpelier*, 18. Months old, was blown up ſuddenly al his body over with a Feaver; and another Son of the ſame family died of the ſame diſeaſe. I preſcribed him ſundry Remedies for ten or twelve daies, viz. A purge, Clyſters, Aperitive Juleps, a Vehicatory, Oyntments. At laſt I preſcribe a Syrup of the Decoction of Egrimony, Roman and common Wormwood, and Centory, to be taken out of a ſpoon, twice in a day; and within three daies he was wel, a looſneſs following, with plenty of Urine

The 170 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Venereal pain in one Arme.

THe 15. of *June*, 1641, an outlandiſh Gentleman, thirty years old, had two years before been infected with the Venerial Pocks, by means of which being ill cured, there did remain a pain in his left Arm, al along wel near, which was worſt at night, and it ſeemed to be about the Perioſteum or Membrane which covers the bones. I preſcribe him an univerſal purgation and to be let blood twice. After that a ſweating diet for twelve daies, in the morning he took the decoction to ſweat, and at evening his Arm was held over the ſteam of a decoction of Guajacum and Cephalick Herbs made in water and white Wine, which was ſprinkled upon hot ſtints, and thereby much ſweat came from his Arm. After the ſweat there was applied the Plaiſter of Vigo with a fourfold quantity of Mercury. When his ſweating drink was done, the ſume was continued for five daies, every morning and evening; and afterwards that Plaiſter was applied, which is preſcribed for the Sciatica, made of Orpment, Verdegreiſe, &c. which raiſed puſtles and little Ulcers, in thoſe places where the greateſt pain was wont to be, and ſo he was perfectly Cured.

The 171 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Cholerick Cholick.

A Certain Religious perſon, was ſubject to a long and ſtubborn Cholerick Cholick, which went and came frequently. Some body did counſel him, to take in the morning, a peice of freſh butter and to drink a little Wine upon it. By this Remedy continued a long time together, he was perfectly Cured of the ſaid pain, and never troubled therewith any more.

The 172 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Sciatica pain.

THe Son of Mſr. *Paſcheque*, the Phyſician of *Lunelle*, my very dear friend, was taken with a pain in his Huckle bone. After which followed a kind of nummedneſs of his Arms, nor could he wel uſe his Fingers, alſo he could not eaſily fetch his wind. All theſe Symptomes came from one and the ſame diſeaſe, by reaſon of the fourth Muſcle of the Cheſt, which ariſes from the Os Sacrum, and the inner Os Ilij, and climbing up by the vertebraes of the Loins, does cleave to the ten firſt Ribs, and is inſerted into the ſeventh vertebra of the Neck; ſo that it is no wonder, if when this Muſcle is affected in its beginning, with ſwelling, pain, or any wearyneſs which is tenſive, ulcerous, or Phlegmonous; that then the parts ſhould be affected, unto which it is faſtened. Seeing therefore it ſerves to reſpiration, that comes to be hurt, when this Muſcle is diſeaſed in its original: and ſeeing it is inſerted into the vertebraes of the Neck, from which the Nerves of the Arms do ſpring, it is rational that the actions of the Arms and Fingers ſhould alſo be hindred. Theſe things are more largely explained by *Sanctorius*, in the 20. Chapter, of his Second Book, *De Vitandis Erroribus*.

The 173 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Malignant feaver.

THe 26. of *October*, 1641. The Daughter of Mſr. *Conte*, a Merchant of *Montpelier*, twenty years old, was taken with a Malignant Feaver, which proceeded ſo far, notwithſtanding ordinary Remedies; that about the eleventh day of her Diſeaſe, ſhe fel into Raving by fits, and contractions of her Nerves, which appeared chiefly in her Wriſts; unto which were added fainting fits ſometimes, and very black furredneſs ſticking to her Teeth. Her Tongue was rough, black, and burnt. In this Dangerous condition beſides Epithems, young Pidgeons, and other ſtrengthening things internal and external; I preſcribed theſe following Remedies, which are wont to be of greateſt Efficacy in theſe diſeaſes, viz. Five Veſicatories, to be applied to her Neck, Arms, and Thighs. Juleps of three ounces of Carduus water, three drams of *Bauderon* his Treacle water, two ſcruples of Bezoardicum minerale, and ſix grains of Camphire; which Juleps ſhe took two daies morning and evening. Alſo a ſcruple of the ſaid Bezoardicum Minerale, was given her in every doſe of broath. With theſe Remedies, ſhe was in a few daies freed from this grievous Diſeaſe.

The 174 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Gonorrhæa.

A Man fourty years old from an impure bedfellow, Caught the Gonorrhæa, for whom I appointed at firſt a bolus of one ounce of Caſſia, Rhubarb poudered, and Cream of Tartar,

tar, of each one dram. The day following I would have had him let blood in the foot, but he refuſed. Emulſions were preſcribed him, for three or four dayes, wherewith the accrimony of his Urine was tempered, the flux continuing after the ſame manner. Afterwards he uſed a laxative ptiſan for ſeven dayes together, made after this manner.

Take *Tamarinds two ounces; Fountain water foure pints, boile them to three pints. In the ſtrained liquor being cold, ſteep al night Senna, Coriander ſeed, Liquoris, and red roſes of each two drams. Let him take a draught in the morning an hour before meat. With this, his flux was very much abated; for the total removing whereof, I preſcribed this following Bolus.*

Take *Venice terpentine three drams; Rhubarb poudered one dram; make a bolus, which let him take every morning five daies together.*

Then he uſed this following water for ſeven dayes.

Take *Dried Mints three ounces, ſeeds of Lettice, Rue, and Agnus Caſtus, of each two ounces and an half. Orice root two ounces. Dittamus ten drams, the beſt ſugar two pounds. Pouder al, and ad thereto five ounces of Venice Turpentine, ſtrong white wine thirty ounces. Mixe them and diſtil them in Balneo. Let him take two ſpoonfuls in the morning, two hours before meat. Thus was this gonorrhea cured. Yet becauſe a little moiſture did frequently appeare on the top of his yard, as is wont for the moſt part to happen, in the end of a Gonorrhea; perfectly to ſtop and drie the ſame up, I appointed theſe following pils.*

Take *Gum arabick, Tragant, amber, Mummy, Bole Armenic, of each one dram; pouder them, and with ſyrup of dried Roſes, make a Maß of Pil-ſtuf. Of which let him take one ſcruple every morning, two hours before meat, for eight or nine daies together. And ſo his flux was perfectly ſtopped.*

The 175 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of Empiema.

THe Son of Mſr. *Plantade*, a Councellour in the Court of Accounts, Subſidies, and the Exchequer, being five years old, had a continual Feaver for about two months together, with a frequent and troubleſome Cough; ſo that he was thought to incline to a conſumption. At laſt, Phyſitians being called to conſult, they were informed that he complained of a pain in his left ſide, eſpecially if he were handled thereabouts. Alſo it was related that when his feaver began, he felt ſome paine in that ſide, which ceaſed within a few dayes; and therefore his ordinary Phyſitian judged that it was no pluriſie that troubled him. It was ſuſpected that ſome Empiema lay hidden in that part, and the better to manifeſt the matter, it was reſolved to apply an Emollient and drawing Cataplaſme for ſome daies; after three dayes uſage wherof a certain riſing began to appeare in the part, and an obſcure rowling to and fro of ſome humor was perceived. The Phyſitians being again called to conſult, no man doubted but that it was an Empiema: and being opened, good ſtore of Quittor came forth, and the evacuation thereof was continued for two months, til al the matter was voided forth, and the patient was at laſt reſtored to his former Health.

The 176 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An ulcer with Corruption of the Bone.

A Boy 15 yeares old, had an ulcer a long time upon the uper part of his foot, between the Inſtep and toes, which a skilful Chyrurgeon that had him a whol year in hand could not cure. Another younger Chyrurgeon to whom the patient was afterward comitted, having widened the ulcer and perceiving that there was a corruption in the Bones, he applied pulvis Caragmaticus, to take away the ſaid corruption, but in vain. Afterwards he askt my adviſe, I bid him applie ſome pouder of Euphorbium with lint; many ſmal ſplints of bones came out;

the second day he laid on the Linen bolster alone, the third day he applied the same pouder again and more splinters of bones came out, so that the bone appeared at last clean and free from rottenness, and the ulcer was afterwards in a short time cured.

The 177 Observation, or History, of Famous and Rare Cures, &c.

Difficulty of breathing with a very uneven pulse.

THe most excelent Lady, *Madam de la Roquette*, sixty years of Age, being very fat and burly, living a sedentary life, very religious and given to dayly prayers, began fifteen years since to be troubled with shortness of breath, which increased by little and little, so that now she could not go up stairs, without resting at every third or fourth step. About the begining of January 1642. being upon a journy, when the wind was south and the weather rainy, she was suddenly taken with a Catarrh, falling partly upon her lungs and partly upon her jaw-boner. Whereupon her shortness of breath encreased, her right cheek was swelled, and her jawes were so straitned, that she could take in no meat, but only broath she could sip a little. She had been accustomed to be troubled at times for many years together, with a red swelling of her left leg, which was wont often to be exulcerated, and before the coming of this Catarrh, she had the said swelling, with large exulceration. I being called to her on the eight day of her disease, I find her pulse very uneven, and intermitting after every third or fourth stroake, with a very great difficulty of breathing. Which made me conjecture, that the disease was grievous, not only in her lungs, but also in her heart, or the vessels neerest the same, and I foretold that she should die. Which prognostication was rendered thereby more certain, because the ulcer aforesaid in her Leg, was al of a sudden dryed up, according to that saying of *Hyppocrates* in the 25 Aphorisme of the 6 section; for an Erysipelatous swelling to strike in, is a bad signe. Moreover the swelling on her cheek being in a few dayes resolved, her jawes remained shut nevertheless, and it was apparent, that the closure of her jawes, did proceed from a convulsion of the muscles which should move the same. On the 15 day of her disease in the mornings, her right eye was observed to be shut, the other being open, which hapened by reason of the palsie in her eyelid, which threatned somewhat worse to follow, which accordingly hapened the same day in the after noone, viz. her left side became paralytical. And three dayes after, her strength decaying by little and little, she died.

In the whole Course of her disease no Cough did follow her shortness of breath, nor any rattleing of her pipes, unless it were one day before her death. Her body being opened, her spleen was found putrefied, so that being lightly pressed it would breake in pieces. The substance of her Lungs was of a black and blew colour, and ful of a watery humor, and one lap thereof, on the left side, was ful of putrid and mattery flegme. The right ventricle of her Heart, had no membrane in the inside, was putrid and exulcerated; so that if you toucht the fleshy fibres thereof with your fingers tops, they would crumble to pieces. The right Eare of the Heart seemed bigger than ordinary, and was filled up with a certaine fleshy substance, partly red, and partly black, like congealed blood, which nevertheless could not be broken asunder with ones hand. These two diseases, viz. Of the Eare and the Ventricle of the Heart, I conceive to have been the Cause of so much inequallity and intermission of her pulse, whiles the Heart seeking to shake that off which troubled it, was excercised with sundry motions, whence followed the interruption and interception of the natural pulse; but that her difficulty of breathing sprung from the stoppage of her lungs is manifest enough.

It was my hap to see the like inequality of pulse, in two other sick persons, one of which was the son of Mr. *Hugo*, a Merchant of *Montpelier*, five yeares old, who being long vexed with such an inequallity of pulse, at last died. In his opened body, there appeared nothing preternatural, but the right Eare of his heart, which was much greater than ordinary, and was ful of a certain hard congealed flegmatick substance, like a great nut, which hindered the free motion of the heart and caused the foresaid Inequallity. The like pulses appeared in the daughter of Mr. C. 20. years of age in whose opened body, an ulcer was found in the very heart, whereby wel neare halfe the substance thereof was consumed. The History of these Cases are described, in the former observations.

THE

The 178 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

A Conſumption.

THe daughter of Msr. *Salomon*, a Citizen of *Montpelier*, about twenty five years old, being of a very choſerick complexion, was troubled ſome months together, with a greivous defluction of rhume falling down upon her Lungs, with a troubleſom cough night and day, want of ſleep, pain in her breaſt, a ſlough Feaver, coſtiveneſs, and Leanneſs of her whol body; ſo that ſhe ſeemed to be abſolutely in a Conſumption, kept her bed many daies, and made haſt unto the Grave. I being called, and obſerving the very hot diſtemper of her bowels, and the perpetual coſtiveneſs of her belly, which was very troubleſom, premiſing a Clyſter, I cauſe her to bleed ſeven ounces. And ſoon after I cauſe two cauſticks to be applied between her ſhoulders, neare her back bone. I preſcribe her a laxative ptiſan, to be uſed five daies together, which was thus made.

Take, Tamarinds one ounce and half; Fountain water three pints. Boyl them to a quart. In the ſtrained Liquor being cold, infuſe al night, Senna, Coriander Seeds, and Licorice bruiſed, of each two drams, Red Roſe leaves, one dram. Let her take a Cup of the ſtrained liquor every morning, an hour before meat.

With theſe few Remedies ſhe was ſo recovered, that after fifteen daies, ſhe roſe out of her bed, and begun to go about her uſual work. Yet her coſtiveneſs and want of ſleep continued, againſt which I preſcribe, firſt a bolus of one dram of Conſerve of Roſes and a grain of Laudanum. Wherewith ſhe ſlept four or five hours, and after that whol nights together, for the moſt part, without any other help. Then I ordered her to take the foreſaid laxative ptiſan again, for ſome daies together. The ſpring following, having uſed Aſſes Milk for a moneh together, ſhe was perfectly cured.

The 179 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Pleuriſy

THe fourth of *April* 1642. The Son of Msr. *Roche*, a Citizen of *Montpelier*, twelve years old, was ſick of a Pleuriſie, in his right ſide; he was five times let blood, and other ordinary remedies were adminiſtered to the ſeventh day. The feaver was violent, with great unquieteneſs, and the pain did very much trouble him. On the ſeventh day half a dram of chimny-foot poudred was given him in Carduus water; within two hours after, al the ſymptomes were very much abated, and the patient was much better, and afterwards by little and little recovered

The 180 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A hoarſneſs.

THe daughter of Msr. *Viventius* of *Lunelle*, being twenty years old, expoſing her ſelf to the cold Aire, fell into a grievous hoarſneſs, ſo that ſhe could hardly ſpeak a word, ſhe had no cough, no ſhortneſs of breath, nor any catarrh that appeared. The diſeaſe continued for ſix months; many remedies were uſed, but in vain. At laſt while ſhe was aſleep, an indifferent quantity of watry ſubſtance ran out at her ear, and ſhe began to ſpeak freely, and with a clear voice. Whence maybe conjectured, that the foreſaid humor being collected in her brain did poſſeſs that branch of the Nerves, which is caried from the fift conjugation unto the muſcles of the Larynx, whereby the voice is formed and ſo thoſe muſcles became as it were palſied.

Four months after, another Virgin of *Lunelle*, named *Rudaude*, being troubled with the ſame diſeaſe eight months together, deſired my advice. Being moved by the foreſaid example;

I conceived

I conceived that al the ſcope of the Cure was to be directed to the evacuation or diſcuſſion of the wheyiſh or flegmatick matter collected in her brain. And having premiſed Blood-letting and Purging, I preſcribe her a decoction of Guajacum and Salſaparilla, with Senna, Agrick, Turbith and Hermodactilylis to be taken twenty daies together, with a diet drink of Salſaparilla, and a drying diet. Afterwards I ſent her to the *Balerucan* baths, where ſhe did ſweat for three daies, and her diſeaſe was perfectly cured.

The 125 *Obſervation, or Hiſtory of famous and Rare Cures*, &c.

Inveterate Veneral Pox, with an hot and dry, and almoſt Black-cholerick temper.

A Certaine Gentleman thirty five years old, of the temperament aforeſaid, being for two years troubled with the veneral Pox, had filthy ulcers in his palate, upper lip, and about the root of his Noſe. At firſt, he was handled with ſweating and fluxing, whereby he ſeemed to be cured; but a few daies after, the ulcers break out afreſh, and the patient is as bad as before. The Cure was again begun with ſweatings and Mercurial ointments, after which he was worſe. The third time the Cure was undertaken in a manner quite contrary to the former, by coolers and moiſteners, quite omitting ſuch things as are proper for the pox; but al did no good. At laſt coming to *Montpelier* and imploring the advice of three phyſitians, he received theſe following directions. viz. that Indication being taken both from the hot and dry diſtemper of his Bowels, and from the veneral diſeaſe, he ſhould uſe theſe Remedies following.

First, An emollient Clyſter.
Secondly, A cooling and purging potion.
Thirdly, Blood-letting to nine ounces.
Fourthly, A cooling and purging Apozem.
Fiftly, A Lukewram bath for two daies.
At the coming forth from the ſecond bath the hemroids were to be provoked.

Afterwards a liberal and temperate diet-drink was preſcribed him of Salſaparilla and guajacum, adding at the end of the decoction, Cichory, Endive, and Tamarinds, let him uſe it five daies, and ſweat very gently.

Meane while let him have a drink of Salſaperilla for his ordinary uſe, and keep a liberal and not a drying diet.

After the uſe of the ſudorifick decoction for five daies, let him take the foreſaid purging potion again.

For two daies following let him uſe the bath again.

Afterwards let him again uſe the ſudorifick decoctions for five daies, made only of the forſaid ſudorificks, without the addition of herbs and tamarinds. And let ſweat be provoked by the vapors of ſpirit of wine, impregnated with tincture of Guajacum.

After he has ſwet again for five daies, let him be again purged with the foreſaid potion. And after that let him bathe for two daies together.

Then let him ſweat again for five daies with a decoction of Guajacum alone, and when the five daies are paſt, let him take the purging potion again, and then let him uſe a lukewarm bath for two daies together.

Let him continue this Method til the Ulcers ſhal be healed up. And that their Cure may be the better forwarded, let him uſe theſe following topical remedies.

First let a Gargariſme be made of a decoction of Guajacum, adding the roots of great comfry, and round birthwort, Leaves of Agrimony, Vinca pervinca, prunella, mouſeare, betony, of each one handful. Tops of St. Johns wort, and red roſes, of each one pugil. Diſſolving therein afterwards Honey of Roſes.

Let his external ulcers be cured, firſt by an infuſion of Litteridge made of vinegar. And if when the Cruſts are taken off, they ſeem very foul, let the following ointment be uſed.

Take *Oyl of Roſes one ounce and half, juice of Plantane and nightſhade, of each one ounce. Boyl al to the Conſumption of the juices, afterwards ad of lead burnt and waſhed*

ſix

ſix drams ; White wax, as much as will ſuffice. Make all into an Ointment.

If the Gargariſme ſhal ſeem too il taſted, it may be made without birthwort root, and the quantity of honey may be augmented ; or ſugar of roſes may be put in, in ſtead of Honey.

The ulcers being cured, let him uſe yet a month or two the foreſaid diet-drink.

At the end of the ſaid diet-drink, let him again purge and bathe. And let him take cooling broaths for ten daies together, wherein let one dram of Salprunellæ, and half a dram of Cream of tartar be diſſolved, with three drams of fine ſugar.

When he ſhal begin to take his broaths, let a cauſtick be applied to both his legs.

Finally, to confirme the Cure, let him uſe for ſome time together, an opiate compounded of ſudorificks and purgatives, whoſe deſcription may be ſeen in the Diſpenſatory of *Renodæus*.

The 113 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Suppreſſion of Urine.

A Certain man ſeventy yeares of Age, having rid ſome miles upon a trotting horſe, fell into a ſuppreſſion of urine, ſo that he could hardly make any water, and that only drop by drop. By another phyſitian, he had firſt a Clyſter given him, then was let blood, and ſate in a bathe. Alſo ſome diuritick potions were given him. But finding no eaſe, and ſending for me, I obſerve a ſtretching and hardneſs in the Region of his bladder, with pain which was only felt by preſſing the ſame. Moreover the patient had pains in his Back, Shoulders and Breaſt, ſo that he could hardly ſtir himſelf. It was a ſoutherne and rainy ſeaſon. I conjecture that al theſe ſymptomes proceeded from a Catarrh flowing out of his Head, and that the flowing humor had invaded the body of the bladder and bred ſome tumor therein, by which the ſphincter of the bladder was compreſſed, and the paſſage of the ſaid bladder made ſtrait. Therefore to direct and evacuate the humor flowing in, I preſcribe him a temperate purging Apozem for three daies, a veſicatory to be applied to the hind part of his neck, and an emollient fomentation and a little reſolving, to be applied to the Region of his bladder, and a liniment endued with the ſame vertues. By the uſe of the Apozem his Urines came away every day better and better, ſo that three daies being paſt, he made water much more eaſily and freely. Afterwards I appointed him a bolus of terpentine and lycorice pouder for three daies together, a fomentation and clyſter, made of a decoction emollient and more reſolving ; and a cataplaſme of the reſidence of the decoction, with bean-meal, fenugreek, oyl of dil and chamemel. With theſe remedies he was reſtored to his former health.

The 183 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Feavers of Children.

THe Son of Msr. *Paul*, a Citizen of *Montpelier*, three yeares old, was taken with a moſt accute Feaver, which ſoon came to its Height : he had a perpetual unquenchable thirſt, which continued from firſt to laſt, and within five daies he died. His hands and feet were oftentimes cold, and at the laſt continued ſo, ſo that the diſeaſe reſembled the Feaver lipyria. His body being opened, no Inflamation appeared in his ſtomach, Gutts, or any other part, of which there was great ſuſpition by reaſon of the foreſaid ſymptoms. And ſeeing there appeared no Cauſe of ſo great ſymptomes, and al the bowels were wel conſtituted ; I ſuppoſed thoſe ſymptoms proceeded, from a malignant and venemous quality, viz. from the ſmal pox, which were then rife, which this child was not able to thruſt forth by reaſon of its native weakneſs, and the vehemency of the venom. This hapned, about the beginning of *July*, Anno 1642.

At the ſame time two little Girles of eight months old, began to be ſick of a frequent Looſneſs, wherewith Leek-colored and verdigreiſe colored choler were voided, with a moſt intenſe Feaver. I preſcribed them both clyſters of broath, the yolk of an egg, & Confectio de Hyacintho ; a liniment for their bellies, of ointment of Roſes, Comitiſſe, and oyl of quinces ; for their Hearts, cooling and ſtrengthening Epithems, and Juleps of Plantane water, Porſlaine water, Syrup,

Syrup of quinces, Confectio de hyacintho, and Lapis prunellæ. Which they took frequently out of a ſpoon, and within two daies the Feaver was much abated, and almoſt extinguiſhed, and the looſneſs very much abated. The Nurſe was ordered to uſe a cooling diet.

The 184 *Obſervation, or Hiſtory, of Famous and Rare Cures,* etc.

A Dyſentery.

ON the 3. of *Auguſt*, 1642. my wife fel into a grievous Dyſentery, in the afternoon, having taken the day before a gentle Medicament; now this Diſeaſe was at that time very rife. At bed time, I gave her two grains of Laudanum, in conſerve of Roſes; the day after at two a clock after dinner, the Diſeaſe continuing, I gave her two grains more of Laudanum. Her looſneſs continued, without blood, which continued five or ſix daies, not very troubleſom. And at laſt with a Medicament of Infuſion of Rhubarb and Myrobalans, with pouder of Rhubarb and Syrup of Roſes, it was quite cured.

The 185 *Obſervation, or hiſtory, of famous and* Rare Cures, etc.

Of a Dropſie.

IOhn Haguenore, a Chyrurgion about twenty ſeven years of Age, was troubled with the Rhumatick Diſeaſe, with pains al his body over, proceeding from a hot diſtemper of his Liver; which Diſeaſe continuing four or five months, brought him to an extream leanneſs, with a continual ſlow Feaver. At laſt, notwithſtanding divers Remedies adminiſtred to overcome ſo great a Diſeaſe, he fel into a dropſie, which was partly aſcites, and partly tympanites, by which his belly was ſwelled to a great Bulk. After many Medicines tried in vain, and many conſultations to no effect, when he ſeemed wholly deſperate, he was commited to my care alone. He was extream lean, ſo that his Muſcles were wholly conſumed, as in an Hectick Feaver of the third degree. I conceived the very ſubſtance of his Liver was extreamly decaied, ſo that it was impoſſible to reſtore the ſame. Wherefore premiſing a prognoſtick to that effect, I ſet upon the cure for experience ſake, on the fourth day of *Auguſt*, 1642. And in the firſt place I gave him univerſal purging Pills with one ſcruple of Calomelanos of Turquetus. He had ſix ſtooles, and bore it wel, and voided many Wheyiſh and Phlegmatick Excrements.

The following day, he began the uſe of theſe following Apozemes.

Take Roots of aſparagus, Butchers-broom, and Elecampane, of each one ounce. The middle bark of Aſhe and Tamariſk, of each half an ounce; Roots of Valerian, round birth-wort, and Aſarum, of each two drams. Leaves of Cichory, Agrimory, Ceterach and Maiden-hair, of each one handful; of the two Wormwoods, Ground Oake, and Centory, of each half an handful. Boyl them to a pint, and in the ſtrained liquor diſſolve Syrup of Maiden-hair, three ounces. Make of al an Apozem for three morning doſes, adding to every doſe one dram of Diuretick Salt, and thiry drops of Diuretick ſpirit. This be continued for ſix daies, and voided twice or thrice a day flegmatick and Wheyiſh Excrements. On the ſeventh day he took again the foreſaid Pills, with the ſame effect. Afterward he continued his Apozems for fifteen daies, and the ſwelling of his whol Belly was abated, for he went to ſtool every day four or five times, voiding flegmatick and Wheyiſh Excrements, and plenty of Urine. He continued extream lean and without any appetite. I preſcribe him a pouder of one dram of vitriolum martis, and two drams of pouder of Ivory, he took at firſt one ſcruple in the morning with panada; and at the ſame time he took morning and evening two ſpoonfuls of Tincture of Roſes. Theſe were continued only for two days. But becauſe his Belly was yet ſomwhat ſwollen and he voided Flegmatick and very crude matter by ſtool; he returned to his opening julets which were made of a Decoction of temperate opening Herbs and Roots, the ſalt and ſpirit aforeſaid being added, becauſe from the long uſe of the foreſaid Decoction, I feared he ſhould be too much dried. He took the ſaid Julep in the evening, without the Salt and Spirit, but with juyce of Lemmons to quench his thirſt. He voided

as

as before flegmatick and watry excrements. To his evening julep was sometimes added one ounce of tincture of Corals, to strengthen and coole his Liver. These things being continued for twelve daies together, his belly was quite fallen, and the skin of his whol body felt softer; his muscles began to be filled, and his whol habit of body to be nourished, his appetite was good, and his stomach did wel digest. At last to strengthen his bowells, and gently to provoke his expulsive faculty, which remained sluggish, every day he took half a dram of Rhubarb, made into a bolus with syrup of Roman Wormwood. This bolus he took for five daies together. Afterwards he abstained from al remedies, for as many daies more. Afterwards to recover him out of his leanness, he used a bath of Barly and Almonds, which was repeated once every week. And when he had abstained a month together from purging, he began to be tormented with pains in his limbs, yet not very violent, which continuing many daies, he sent for me again: and I told him the fluxion of humors must be taken away by purging. He said, that his former pains, in the begining of his disease, were much encreased by purgation. Which was the reason, that I would not give him any vulgar purgation, but the foresaid pils he took, and they gently purged him, and his pains were taken quite away. He was perfectly cured of his dropsie, but being very careless in his diet, and did eat ever and anon meats bad for him, he fell into a tertian Ague, of which being by some remedies cured, after fifteen daies he fel into it again; and so he lived four or five months, his tertian ague fits ever and anon returning, by his new extravagancies of diet; til at last he died, having nevertheless lived six months before, even to his dying day, free from the dropsie.

The 186 Observation, or History, of Famous and Rare Cures, &c.

A Gangreen caused by a vesicatory.

IN the month of *Auguſt*, 1642 the daughter of Msr. *Bon*, a Councellor of the Exchequer Court, being two years and an half old, troubled with a malignant Feaver, was plied with sundry remedies, and among the rest a vesicatory being appointed, the Apothecary made it of the comon vesicatory Plaister of the shops, and to make it the stronger, sprinkled a great deal of pouder of Cantharides upon it, whereupon the skin was burnt, and the day following, al the part covered with the vesicatory, appeared Gangrenated. For the Cure whereof, scarrifications being made, it was fomented with Aqua vitæ, and then a liniment applied, made of Unguentum Egyptiacum dissolved in Aqua vitæ. Within three daies, the Eschar was separated, and the remaining ulcer cured, with this following ointment.

Take the kidny suet of an oxe one ounce. Lythartidge prepared, and minium, of each one scruple. Oyl of roses, as much as wil suffice. Make of al an ointment.

The 187 Observation, or History, of Famous and Rare Cures, &c.

Of a Malignant feaver.

I *Obn Richards* a Citizen of *Montpelier*, having been afflicted with a malignant Feaver, for six weeks together, was so extreamly weakned, that he seemed to be neare his grave coming then first to him, and hearing that he had been little purged, al his disease long, I conceived that his strength was overpowred with the burthen of humors, but so weak withal that he could hardly beare purging. Therefore I undertook to purge him by degrees, and prescribed him a potion of the Infusion of one scruple of Senna in Cichory water, and half a scruple of Cream of tartar, adding one ounce of Syrup of roses. This potion he took three daies one after another, and had two stools every day, his strength was a little encreased; on the fourth day he took an ounce of Syrup of Roman wormwood. On the fift day I gave him the infusion of a dram of Senna, which being continued for two daies, he was gently purged to good purpose. Whereupon he began to be better, recovered by little and little, repeating his purgations at certain times. Some time after he fel into a relapse, and sent for no physician, til he was at last cast, and so he died. This one thing only is worthy of note in this Observation; that a purging

ging Medicament may be given in the greateſt extremity of weakneſs, provided it be preſcribed in a very ſmal doſe.

The 188 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Looſneſs in a Boy.

THe Son of Mſr. *Audeſſan*, Councellor in the Curt of Accounts, being four years old, was troubled with a long Looſneſs, want of Appetite, and weakneſs. The original of this Looſneſs was from bad Diet, for they crammed him with much meat, and ſometimes gave him pure wine to drink; whereby his Natural heat was ſo waſted, that his nouriſhment was converted into crude and Flegmatick Excrements; for his ſtools were in a manner nothing but mere Flegm, when I firſt viſited him; whereas before they had been yellow, Green, verdigreiſe coloured, and bloody, as I was informed. Having ordered his Diet, I preſcribe him a Medicament of Syrup of Cichory with Rhubarb one ounce, and half a dram of Rhubarb to be taken three daies together: after that two ſpoonfuls of tincture of corals, to be taken morning and evening; within five daies he was better, and the remedies being continued, he recovered in a few daies.

The 189 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a long Looſneſs, and a ſtubborne Head-ach.

ON the 7. of *October*, 1642, I was called to *Lodova*, to Mſr. *Fleury*, Treaſurer of the Exchequer, fourſcore years of Age, being troubled with a looſneſs of two Months continuance, with which he voided many Wheyiſh and crude Excrements, but eſpecially his looſneſs troubled him in the night, by which and other ſignes, it ſeemed that the influx of Humor was chiefly from his brain. Moreover he was troubled with a cruel pain in his Head, on the left ſide thereof, from the Crown of his Head to his Eare and Temples on the ſame ſide, which pain when he lay upon the part affected, was manifeſtly pultative. I ſetting my ſelf to the Cure, in the firſt place, becauſe of his Looſneſs, I preſcribe him this potion.

Take *Choyce Rhubarb, one dram. Citrine Myrobalans, half a dram. Yellow ſanders, half a ſcruple; infuſe them in Plantane water, and in the ſtrained liquor diſſolve half a dram of Rhubarb poudered, Syrup of Roſes, half an ounce: make them into a potion. After the taking whereof he had three ſtools in the day time, and only two the night after, whereas before he was wont to go to ſtool five or ſix times a night.*

The following day, the ſame Laxative potion was given him, adding the infuſion of one dram of *Senna*. He had five or ſix ſtools in the day, and none at al in the night, and ſo his looſneſs was quite Cured.

On the third day, to take away his long and pulſing Head-ach, when many other Remedies had been tried in vain, I cauſed the Artery of his Temple to be opened, whereby three ounces of blood were taken away, and upon the Orifice was applied a Plaiſter of Franckincenſe, Maſtich, Bole-Armenick, Hares Hairs, and the white of an Egg with good Ligature: and the ſame day, the pain was quite taken away.

The 190 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Catarrhe falling upon the Lungs.

ABout the End of *October*, 1642. I fel into a grievous Catarrhe by being in the Sun, which falling upon my Lungs, made me ſhort winded and wheeze. I was let blood, and then purged for two daies together, with a Laxative Ptiſan, abſtaining from Wine, and keeping a very

very ſlender Diet: by which means my Wheezing ceaſed, and my ſhortneſs of breath was much abated. But there followed in their ſtead a very troubleſome Cough, which having continued two daies, in the morning I put a bit of Tobacco into my mouth, having firſt lightly ground it with my Teeth, which when I had kept half an hour upon my Tongue, my Head began to be a little dizzy, and my Stomach ſomwhat ſick, after which followed a ſmal vomit of Wheyiſh matter, which had a bitter farwel with it. The Dizzyneſs of my Head continued for two hours, and my Cough was ſtayed til evening, when it began a little to trouble me by fits. About Supper time, a pain aroſe in my Head, with a certain heat, eſpecially on the left ſide; after Supper, which was plentyful enough, my Head-ach was much worſe, and was accompanied with a troubleſome Stomach-ſickneſs which having continued for an hour, and my Head-ach grew worſe and worſe, thruſting my finger down my throat I caſt up al my Supper with much flegm, whereupon my Head-ach was abated, and ſoon after I betake me to my bed, where falling aſleep, I paſt the night quietly, and was the following day, quite freed from my Cough and Catarrhe.

The 191 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

An Old Head-ach proceeding from the Veneral pocks ill-Cured.

A Certain man infected with the Lues Venerea, was Cured by a Sudorifick Diet, and a Mercurial Oyntment, whereupon he ſeemed for a certain time to be Cured; but afterwards the ſame diſeaſe returned again, and he was again Cured with a Sudorifick Decoction, taken for ſome daies together, and then with a fume of Cinnabar, ſo that the Cure ſeemed perfectly accompliſhed. Yet he began afterwards to be troubled with a grievous Head-ach, on the left ſide of his Head, which upon the change of Seaſons, and eſpecially at the beginning of Autumne, did grievouſly torment him, and remained like a Nail evermore fixed in the ſame place. And when he had tried many Evacuating, revelling, deriving, and anodyne Medicaments in vain, he came to me. And I was of Opinion that this grievous Head-ach, was from the Relicks of Lues Venerea not perfectly Cured. Yet that the next and immediate Cauſe thereof, or at leaſt which fomented and encreaſed the pain was, beſides the Veneral Venom, a ſharp and biting Humor, flowing to that part of the Head; or the mercury it ſelf collected in that part, or a rottenneſs contracted in the Skul. Which two laſt Cauſes, though not frequent, yet do ſometimes happen, as appears from many Hiſtories reported by Authors.

Now that reſpect may be had to al theſe Cauſes, In the firſt place I preſcribed an univerſal Evacuation, by bloodletting, and Purgation, by Apozemes for four daies.

After that a Sudorifick Diet drink, of a Decoction of Guajacum, and Salſaparilla, for thirty, or fourty daies, reſpect being had to the temperament, for if it be hotter than ordinary (for I could not ſee the man, only my advice was deſired upon a Relation of the Caſe in writing, where the Complexion of the Patient was not expreſſed) it may be corrected with baths and cooling broaths. For many times a Lues Venerea that could not be Cured with Mercury, has been Cured by a long uſe of Decoctions. And if the Head-ach ariſe only from Virulent Humors which Vellicate the Membranes, it may be Cured only with a longer uſe of the Diet drink.

And if that ſame Head-ach, ſhal not give way to the Decoction long uſed, it muſt be conſidered if ſome mercury be not collected in the part, which may be known by putting a little pellet made of Leafe Gold rould up, into his left Noſtril as far as can be, and pulling it out after it has been in ſome time; for if it come out Wheyiſh tis a ſign there is Mercury. The ſame may be experimented alſo, by covering a Cephalick Plaiſter with Leaves of Gold, and putting it upon the part pained; for if the Gold turne white, 'tis a ſign there is ſome Mercury in the part, which may be drawn forth, by little and little, if a thin plate of Gold be continually worn upon the pained place, and a ſolid pellet of Gold, be frequently thruſt up into the Noſe.

If this Remedy do not remove the pain, the part muſt be opened, the ſcull being boared with a Trepan. For many times the Scul is gnawn by ſharp and virulent Humors, and it is corrupted, the Skin remaining intire. And although the rottenneſs appear not, yet the Trepan does many times help by bringing forth a Virulent matter, which is collected upon the Coats of the Brain.

The 192 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Pleuriſie.

THe Daughter of Mſr. *Divoul*, a Citizen of *Montpelier*, of a Sanguin Complexion, twenty years of Age, was troubled with a grievous Pleuriſie of her left ſide, in the beginning of *March*, 1643. On the ſecond day of her diſeaſe, a Vein was opened on the ſame ſide, and eight ounces of blood drawn away. The day following when the Chyrurgeon would have let her blood again, he could not find the Vein; becauſe the Virgin was very Fat, and the Vein lay buried in the depth of her Arme, ſo that becauſe the vein appeared better in her right Arme, he was forced to open the ſame, and drew thereout eight ounces of blood. Nevertheleſs, this blood-letting did no good. Seeing therefore the Pleuriſie was very urgent, they ſent for me, and when I ſaw there was great need to let her blood again; becauſe ſhe was almoſt choaked, and had a very high Feaver; I cauſed them to ſend for other Chyrurgions, that one or other of them might open the Vein; having therefore ſent for one of the Skilfulleſt, adviſed him if he could open the Vein, he ſhould make a large orifice and take away good ſtore of blood at once, ſeeing it was ſo hard a matter to repeat Phlebotomy in this patient. He did as I wil him, and tooke away about fourteen ounces of blood, whereby the Patient was much eaſed, and not at al weakned. Four or five hours after, blood was again let to ten ounces. Which ſhe eaſily bore, and the day following was perfectly freed from her Pleuriſie and Feaver.

The 193 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a falling-ſickneſs.

THe Son of Mſr. *Roche*, a Cittizen of *Montpelier*, being twelve years old, was for ſome months tormented with fits of the Falling-ſickneſs; which came at firſt, only once a week and afterwards every day. He was purged once or twice, alſo let blood, and had an Iſſue in his Arme many years. Being ſent for, I preſcribe him an Apozeme of Cephalicks and ſpecifical Remedies againſt the Epilepſie, with purgatives, for four doſes. Then an Iſſue is made in his coronal ſuture, and with theſe two remedies he was freed from his diſeaſe.

This boy was of an hot and Cholerick conſtitution, and very ready in his actions, which bred a conjecture, that this diſeaſe did ariſe from filthy Vapors, which by this emiſſary might be Diſcuſſed.

The 194 *Obſervation, or Hiſtory, of famous and rare Cures, &c.*

A Dropſie.

THe Daughter of Mſr. *Patris*, Counſellor in the Court *Præſidiary*, ſix years old, and ſick of a Dropſie, was cured with theſe following remedies, in the month of *March*, the year 1643.

Firſt a Clyſter was adminiſtred, which was thus made.

Take *Pulp of Coloquintida, one dram; courſe bran an handful, boyl them in white Wine to nine ounces, make a Clyſter; which brought away Flegmatick and wheyiſh Excrements withou*t

without trouble, and was continued for three daies. At the ſame time there was applied to her whol Belly a Cataplaſme of the Roots of Wild Coucummer, made with comin ſeed and Honey, the diſcription whereof you have in my Practice of Phyſick. Now when her belly began to aſſwage, and ſhe would not take internal Remedies, the clyſter was repeated three or four times, every other day, and the Cataplaſme was continued. From whence followed a greater diminution of her belly. At laſt I preſcribed her a purging pouder of Senna, Turbith, and other things, the deſcription whereof, is in my Practice, whoſe doſe was one dram, and ſhe was therewith but little purged, ſeeing ſhe vomited up the Medicament; and her Belly did yet appear ſwolne. Afterwards I preſcribe her Juleps, of aperitive Roots and Herbs, with Salt and diuretick ſpirit, for four doſes, with the uſe whereof ſhe made greater quantity of Urin, but her belly continued ſtil ſwollen. Afterwards I appoint her a pouder of Calomelanos of Turquetus, twelve grains, Scammony eight grains, and jallap, fifteen grains. Which ſhe took in broath and was ſeven times purged, and voided much wheyiſh Humor and flegm by ſtool, whereby the ſwelling of her belly was half in half abated, in the ſpace of twenty four hours. The foreſaid Julep was repeated for three daies; and the fourth day ſhe took the foreſaid pouder again, with the ſame ſucceſs; and when her belly was very much fallen, ſo that ſhe began to get out of her bed, and to have a good Stomach to her meate, ſhe took no more Phyſick, and ſo by little and little perfectly recovered.

The 195 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Venereal Pox in a little Boy.

A Little boy thirty months old, being ſick of the Veneral Pox, with a filthy Scab al over his body, which he had caught of his Nurſe, he was Cured with theſe following Remedies.

Take *Shavings of Lignum Guajacum, two ounces. Fountain water two pound. Infuſe them twenty four hours, then boyl them til a third part be conſumed. Take three ounces of the ſtrained Liquor and give it the Child in the morning two hours before meat, covering his body a little warmer than ordinary, and continue this courſe twenty daies.*

Take *Scammony poudered ſix grains; Calomelanos five grains. Mix them into a very fine pouder, and give it him in a ſpoonful or two of Sugared Panada, and let him drink a little broath after it. Continue this Remedy every fift day, encreaſing the doſe of both the Meditaments according to their operation.*

Take *the matter of the foreſaid Decoction, Fountain water three pints, make hereof a Diet drink for his ordinary drink, adding ſugar and Lycorice as much as ſhal ſuffice for to gratifie the Palate. Theſe Remedies being continued for a Monih together, he was well Recovered.*

The 196 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An Impoſtume by the Back-bone.

SInce the time that I have Practiſed Phyſick, it has been my hap to ſee five Impoſtums upon the Back near the Back-bone, which were bred of a cold matter, collected by little and little without pain, or inflamation, and the color of the part being no waies changed. The Tumors were ſoft, like an Oedema, as big commonly as a mans fiſt. Howbeit, when they were opened, Laudable matter flowed out of them. The three firſt killed the Patients, in the ſpace of three or four months, Whenas the Ulcer remaining after the Impoſtume opened, became very hollow and winding, and a greater quantity of Quittor came thereout every day; whereupon the whol body was exhauſted, and turned into an Atrophia, though the Cure of the Ulcers was by many Remedies endeavoured. The fourth was cured by great inciſions made in the back. By which al the Cavities were laid open; and afterward with Fomentations of Aqua Catapultarum, and other Topicks, the Ulcers were Cured, and in the mean time the antecedent Cauſe

was

was provided againſt by frequent evacuations, and the uſe of a ſweating decoction. Finally, the fiſt was cured without inciſion, only it was laid wide open with a potential cautery, and then the ulcer was cleanſed with injections of the Decoctum catapultarum, and a fomentation of the ſame, and by ſtrong compreſſion of the part, with ſwathbands and bolſters; and by continual application of very aſtringent medicamens round about the ulcer. And in the mean while the antecedent cauſe was provided againſt, with the foreſaid Remedies.

The 197 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

A Dropſie in a boy ſeven yeares old.

THe Son of Mſr. *Saget*, a Citizen of *Montpelier*, was troubled with grievous obſtructions, whereby his belly was mightily ſwelled, ſo that he was now become hydropical. Being called to him the 28 of *April* 1643. I preſcribe theſe following Remedies.

Take *Senna cleanſed two drams; anis ſeed and Cream of tartar, of each one dram; Roman Wormwood one pugil. Boile them to two ounces, in the ſtrained liquour diſſolve of the Electuary of Diacarthamum one dram and half; ſyrup of roſes half an ounce: make all into a potion. Let him take it in the morning and be ordered accordingly.*

Take *Roots of Smallage, Perſeley and Aſparagus, of each half an ounce. Leaves of Agrimony, Maidenhair, Ceterach, and Hyſop, of each half an handful; polipody of the oak, and Carthamus ſeeds, of each two drams. Seeds of Smallage and Parſly of each one dram; Cream of tartar two ſcruples. Boile them with the fourth part of an old cock, in the ſtrained liquor diſſolve ſalt of wormwood and tamariſk, of each one ſcruple. Make a broath, of which let him take every morning for twelve dayes.*

In every third doſe of broath infuſe two drams of Senna al night. Let him take it, and be ordered accordingly.

Take *Oyle of Capars and Tamariſk, of each two ounces; juice of dwarf elder and wild Cowcummers, of each an ounce and half; Boile them to a conſumption of the juyces: in the ſtrayned liquour diſſolve ſeeds of Agnus Caſtus, and parſly of macedonia finely poudered, of each half a dram; oyl of nutmegs half an ounce. Wax as much as ſhal ſuffice to make a liniment. Let his belly be therewith ſmeared hot, as he goes into his bed.*

Let him uſe for his ordinary drink an infuſion of ſteel and rhubarb, in manner of a diet-drink.

With theſe remedies the ſwelling of his belly was leſſened, but not quite taken away, therefore I was fain to proceed to theſe medicines following, which in three weeks ſpace, quite cured the diſeaſe.

Take *Conſerve of the flowers of tamariſk, and maidenhair, of each one ounce and half. Confectio alkermes three drams, ſalt of wormwood and tamariſk of each one dram. Ivory poudered and Diarhodon Abbatis, of each two ſcruples; with ſyrup of Maidenhair, make all into an opiate, of which let him take the Quantity of a Chaſt-nut every morning, two hours before meat, and drink after it a little wine tempered with water.*

Take *Calomelanos eight grains, diagredium ſeven grains, two leaves of gold: make all into a pouder, and give it him once a week with two ſpoonfuls of ſugared panada, and let him drink a little broath after it.*

The 198 *Obſervation, or Hiſtory, of famous and rare Cures, &c.*

A Baſtard palſie.

AN honeſt woman of *Aix*, about 50. yeares old, having ſuffered abortion, and living yet by it, was at firſt troubled with a nummedneſs about her belly, which ſhe eaſily perceived by putting her hand upon her belly. After the abortion ſome months, ſhe proved with child, and during the courſe of her Impregnation, the ſaid nummedneſs ſeized alſo upon her thighes and leggs, and a far worſe ſymptome was added thereto, viz. an inability to ſtir them.

After ſhe was brought to bed, many purging and ſweating medicines were uſed, and many other heating and drying Remedies, without any effect. So that ſhe had been now two yeares troubled

troubled with this greivous Infirmity. In the parts aforeſaid, the ſenſe of feeling was not quite taken away, but only impaired; but al motion was quite loſt. Yet there is this one thing peculiar and very wel worth obſervation; That when her legs are drawn forth by her ſervants, or are any other waies ſtirred, preſently they become ſtif and convulſed, in manner of a tetanus. To which is added a certain Convulſive motion like that of perſons which have the falling-ſickneſs, which is wont alſo frequently to take her of it ſelf by fits. And when ſhe is taken with theſe ſymptomes, ſhe perceives a kind of motion in her hipochondria, moreover ſhe is frequently afflicted with wandering pains, poſſeſſing divers parts, but eſpecially her Cheſt; ſo that ſomtimes the fore part, other whiles the hinder-part; now the right, anon the left part of her cheſt, is vexed with theſe running paines. This is the Hiſtory of the diſeaſe, related by the Patient her ſelf, who returning from the bathes which ſhe had uſed in vain, deſired my advice the foruth of *July*. 1643.

I could indeed have wiſhed, that the diſeaſe had been more exactly deſcribed, by thoſe skilful Phyſitians who had her under cure, to the end that the nature of ſo moſt intricate and difficult a diſeaſe might be the better known, and the Cure more ſollidly undertaken, by a diligent meditation upon al the Circumſtances thereof. Yet ſhal I not forbeare, (to ſatiſfie the deſire of the patient) to ſhew my opinion, ſubmitting the ſame to the judgement of thoſe moſt expert Phyſitians, who are able to obſerve al the particularities of the diſeaſe, and perfectly to ſee into the nature thereof.

I conceive therefore, that this diſeaſe is no true palſie ariſing from a flegmatick humor, looſning and reſolving the Nerves; but that it is rather a mixt diſeaſe conſiſting partly of a baſtard palſie, and partly of a convulſion. Now theſe baſtard palſies, compounded with diſtentions and convulſions of the nerves, are in thoſe inferior parts often produced, by chollerick, melancholick, or wheyiſh Humors contained in the Hypochondria, or other parts of the lower belly, and tranſlated into the back-bone; from which ſeeing the nerves ariſe, which bring motion and ſence into the parts, as alſo into the muſcles and skin of the belly; it is no wonder, that the animal actions of thoſe parts are very much hurt. This may be confirmed by a larger diſcourſe, the Judgment of Authors, and by experience, but unto ſuch learned men it may ſuffice, to declare a few things, which make this conjecture of mine ſufficiently probable.

In the firſt place therefore it muſt be taken as a certaine and unqueſtionable truth; that al privation of ſence and motion does not draw its original from the flegmatick humor; but that it proceeds ſomtimes from an hot and dry diſtemper, and humors following ſuch a Conſtitution. This may be confirmed by the opinion of *Trallianus* alone, who in the 16. Chap. of his 1. book, alleadges ſuch a Cauſe, and confirmes it with a cleare example in theſe words. *I knew, truly, a man that was palſied through ſorrow, much care and faſting, and having taken Hiera picra, he became ſo bad, that he could not ſtir at al, and was neare to death; unleſs he had been altered to the contrary, both with al kinds of moiſtening things, and potions and meates, and other things that might reduce him to a right temper, eſpecially with baths and frequent nointings with water and oile, with mutation of the air to a temperate, and al kind of cheerfulneſs.* A ſtory not much unlike to this may be ſeene in *Foreſtus* his 97 obſervation of his 10. Book, of a Certain young man who being deprived of motion from his thighs to his feet, with an extenuation and non-nutrition of the ſaid parts, and growing continually worſe and worſe by the uſe of hot and drying medicaments preſcribed by other Phyſitians, at laſt he was cured by *Foreſtus*, only with moiſtening medicaments, which were partly taken in, and partly applied externally.

Moreover it is a thing long ſince obſerved amongſt Practitioners, that there is a chollerick colick, which does frequently degenerate into a palſie, and that ſuch a palſie ſprings from choler no man doubts.

And finally, That from a melancholick and wheyiſh Humor, Symptomes are produced very like the palſie and convulſion, is every where related by ſuch Authors as have written of the Scurvy and the hypochondriacal diſeaſe, as you may ſee in *Sennertus*, where he explaines the ſymptoms of the foreſaid diſeaſes, in his Book of the Scurvy, and of the hypochondriacal diſeaſe.

Now that thoſe Impairments of ſence and motion which afflict this honeſt woman, do proceed from aduſt and hot humors, wee may in the firſt place conjecture from ſuch things as help and hurt; for ſeeing ſhe received no good by heating and drying medicaments, but was alwaies

waies worſe after them, it follows that they were no waies contrary to the diſeaſe. And this was the only way, whereby *Trallianus* and *Foreſtus*, in the foreſaid Hiſtories came to the knowledg of a palſie proceeding from an hot and dry diſtemper.

Secondly, That this patient has a dry diſtemper, may be hence collected, in that Cauſticks applied to divers parts, and Iſſues made thereby, afforded very little humor, and were quickly dried up.

Thirdly, Palſies which proceed from flegm, draw their original from the brain, as the fountain of that humor; and thoſe parts which are near the Head, are commonly firſt and moſt of all hurt. Whereas in the patient, there are no ſigns of any humor flowing from the head, nor is there any hurt in her upper parts, ſo that her Armes, hands, and other upper parts, do perfectly perfotme their Actions.

Fourthly, the firſt Inſult of the diſeaſe, did cauſe a dulneſs of the ſenſe of feeling in her belly, and the Muſcles of the Abdomen, which ſhews that the nerves which ſpring out of the back bone, through the vertebraes of the Loines were firſt hurt; and that afterwards the diſeaſe was propagated to the nerves which ariſe from Os Sacrum, and creep along to the thighs and leggs. Whence may be gathered, that the humor offending, was transferred from the parts contained in the lower belly unto thoſe nerves, juſt as in a palſie following after the cholick, ſuch a like tranſlation is wont to happen.

Fifthly, pains afflicting divers parts, eſpecially about the breaſt, and thoſe ſo flitting, do argue that ſharp and biting vapors, are carryed from the Hypochondria into thoſe parts; as like pains in ſuch as are troubled with hypochondriacal Melancholy, do moſt frequently happen.

Sixthly, as often as this Patients feet & legs are ſtirred, a ſtretching and trembling motion does preſently ariſe, which argues that the matter impacted into the nerves is thin and movable, and conſequently put into agitation by the leaſt ſtirring, by that means cauſing tenſions and vibrations of the Nerves.

Seventhly, when the Convulſions ſeize upon this woman, a certain motion goes before in her bowels, which ſhe plainly perceives; which motion proceeds from the foreſaid matter, begining to work and ſtir it ſelf, or from vapors raiſed out of the ſaid matter by its commotion; as in a Sympathetick Epilepſie, ariſing from the inferior parts, ſuch Commotions are perceived in the Belly, when the fit is about to come.

Finally, this diſeaſe began to ſhew it ſelf after the patient had miſcarried, and took its increaſe during the time of her afterwards being with child; which ſignifies that bad humors collected in the veins of the womb, not ſufficiently voided by the monthly purgations, did fal into thoſe nervy parts, and did at laſt cauſe theſe Impediments of ſenſe and Motion.

Theſe things thus laid down, Let us come to the Cure, which muſt be directed to theſe Indications, viz. That the hot and dry diſtemper of her Bowels be corrected; that the melancholick and burnt humors (which I take to be the cheife cauſe of theſe ſymptoms) be prepared and evacuated, the obſtructed paſſages be opened, and the cheife bowels producing theſe humors be ſtrengthened. I ſhal breifly propound ſuch materials as are fit to ſatisfy theſe Indications, and thoſe the choyceſt, premiſing this prognoſtick, That diſeaſes proceeding from melancholly, are of al others moſt hard to cure, and if they ſeize upon the nerves, they are yet harder to cure; and confirmed old diſeaſes of the nerves, are incurable; whence it follows, that this caſe propounded, is hardly vanquiſhable by remedies, and that there is little hope of the Cure. I adviſe nevertheleſs that this Cure ſhould be undertaken, ſeeing many things daily fal out beſides hope, and many diſeaſes are cured, which were accounted deſperate.

In the firſt place therefore, her diet muſt be of meats of good juice and eaſie digeſtion, ſomwhat cooling, and very moiſtening. Of which kind are the fleſh of young beaſts, and new ſoft eggs, as the principal. The other particularites of her diet, are left to the preſcription of her ordinary Phyſitians.

The reſt of the Cure muſt be begun with a laxative Clyſter, after which muſt follow the next day, blood-letting in her left arme to eight ounces. And if the blood be corrupt, or infected with any bad quality, ſhe muſt be let blood again, the next day, out of her other arme in like quantity. After bleeding let her fal to the uſe of theſe following broathes.

Take Roots of Bugloſs and Aſparagus, of each one ounce; Leaves of Agrimony, Ceterach, Maiden hair and Cichory, of each one handful. Boyl them in Cock-broath, and diſſolve therein one dram of Cream of tartar. Let her take hereof for twelve daies together.

In

In every fourth broath infuse al night three drams of Senna, one dram of Anis-seed, in the strained liquor dissolve an ounce and half of choyce Manna. Let her take it and be ordered accordingly.

Her broaths being ended, let her use a bathe to sit in Lukewarme, of a decoction of Barly and sweet Almonds: let her sit in it twice a day for three daies together, far from mealetimes.

The day after her last use of the Baths, let the vein of her left ankle be opened, and take away six ounces of blood.

Afterwards let her drink whey of Goats-milk for fifteen or twenty daies, taking at first one cup, afterwards two or three, as her stomach can beare, for the more she shal drink, the more good it wil do her. Now the whey must be made presently before she takes it, of milk newly milked, by boyling the same one walm, and as soon as it begins to boyl, thereinto sprinkling a little quantity of juice of Lemmons or vinegar, and presently removing it from the fire, for presently the whey wil be separated from the cheesie substance, which is made exceeding cleare by straining and clarifying the same with the white of an egg; and may be drunk in great quantity without offending the stomach, so that it is by many drunk after the rate of Mineral waters, with great profit.

Every fourth or fift day let two ounces of manna be dissolved in her first cup of whey.

During the rest of the Summer, let the bathe to sit in be repeated, once or twice in a week, that her hypochondria may be moistened, and the acrimony of the offensive humor tempered.

If she be not of her self loos-bellyed, let her take a Clyster every other day.

Take, Conserve of Eglantine berries, four ounces; Conserve of the flowers of Borrage, Violets, and tamarisk, of each two ounces. Conserve of the Roots of Elecampane, and Citron peeles preserved, of each half an ounce. Ivory shavings two drams. Salt of wormwood and tamarisk, of each one dram and half. Two preserved myrobalans, Confectio Alkermes half an ounce, with syrup of Maidenhaire make an Opiate, of which let her take the quantity of a Chesnut every morning, two hours before meat, and drink a little wine allayed with water after it.

And because the disease is very stubborn, & cannot be vanquished, unless by remedies very long continued; in Autmne, the cure must be begun again, beginning with a clyster, then letting blood, after which the following Apozem shal be used twelve daies together.

Take, Roots of Asparagus, Butchers-broom, and Buglos, of each one ounce. Roots of Enula compane, bark of Caper roots, middle rind of the Ashe, and tamarisk, of each half an ounce. Leaves of Agrimony, borrage, burner, cichory, ceterach, maidenhaire, of each one handful. Fragrant apples, ripe and cut into bits, number two. Flowers of Borrage, Violets and tamarisk, of each one pugil. Boyl them to a pint for three doses, adding to each dose one dram of Christial of tartar, Salt of wormwood and Tamarisk, of each one scruple, Syrup of Maidenhaire an ounce. Let her take it for twelve daies, in the morning, three hours before meat, renewing the decoction every third day.

In every fourth dose, infuse al night three drams of Senna, Anis-seed one dram. In strained liquor dissolve two ounces of Choise Manna. Let her take it and order her self accordingly.

After the Apozems, let her again use the bath to sit in according to the foresaid directions.

The day after her last use of the bath, let her Fundament be chafed with a course cloathe, and fasten two horse-leeches, to those parts that swel most, and draw away five or six ounces of blood.

The next day make Issues in both her Leggs on the inner side, and keep them open a long time.

Take, *of Juices newly pressed forth, and clarified over a gentle fire, of borrage, buglos, Fumitory, Cichory, and Endive three pints. Juice of fragrant apples newly pressed out and clarified two pound. Senna six ounces, Epithymum three ounces, Agrick newly troched and choyce Rhubarb, of each one ounce and half. Mace and cloves of each one dram. Infuse them and boyl them according to art, til there remain fifteen ounces. And therin dissolve fifteen ounces of Sugar. Make al into a syrup perfectly boyled, of which let her take two ounces twice or thrice in a month in Chicken broath boild with Leaves of Borrage, Buglos, Agrimony, and Pimpinel.*

Let her continue the uſe of the foreſaid opiate on al ſuch daies, as are free from the uſe of the other Medicaments.

The 199 Obſervation, or hiſtory, of famous and Rare Cures, &c.

Vomiting in a Malignant feaver.

THe Chamber-maide of Madam *de Rozeb*, called *Laprune*, being ſick of a Malignant Feaver, on the tenth day of the Diſeaſe, was taken with ſuch a troubleſome vomiting, that ſhe caſt up al her broaths and drink; and when ſhe had been three daies troubled in that manner, the Phyſitian that had care of her, by my advice gave her one ſcruple of Salt of wormwood, with a ſpoonful of Juyce of Lemmons; and her vomiting was ſuddenly ſtopt, and afterwards ſhe kept al that ever ſhe took. Three daies after, the ſame vomiting returned, and was cured by the ſame Medicine.

Some daies after, the ſame Medicament was by the ſame Phyſitian given to two Children, troubled with the ſame Symptome, and it cured them.

The 200 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A falſe Conception.

A Woman of *Giniaca*, fourty five years old, came to *Montpelier*, to ask advice concerning a diſeaſe ſhe had. She told us that being never married, ſhe had to do with a young man, conceived, and thereupon loſt her ſtomach, was pale al her body over, longed for certain meats, with other ſigns of being with Child.

Fourty daies after her conception, ſhe perceived a kind of Palpication about her right Hypochondrium, and from that time ſhe began to be better, and her appetite was reſtored. Her belly grew daily bigger, her dugs did ſwel, and at laſt milk began to breed in them, viz. In the fourth month in her left dug, and that was reddiſh, and afterward there came milk into her right dug which was white.

In the fourth month ſhe had her courſes plentyfully three daies together, whereupon the ſwelling of her belly abated. But it began afterwards by little and little to riſe again. Her Courſes came every month, as they uſed before ſhe conceived. She perceived a motion in her belly, like that of an infant in the womb.

The ninth month ſhe had the pains of a Woman in Travail, ſo that the midwife was ſent for, and al the by-ſtanders looked when ſhe ſhould be delivered. Howbeit thoſe pains ceaſed after twenty four hours, and nothing came from her.

From that time her courſes have come ordinarily, until the thirteenth month, wherein ſhe again ſuffered the pains of Child-birth without any effect. And after that her courſes came no more, the bigineſs of her Belly continued, with motions at times, as it were of a live Child. And now thirty two months are paſt ſince the time ſhe firſt conceived, neither is the ſwelling of her belly exceeding great, for it hardly equals that of a Woman ſix months gone with child. Two riſings appear ſenſibly diſtinct, ſo that a ſpace appears between them: which Tumors encline to her Hypochondria, when the Woman lies. But when ſhe is upright, they reſemble the true form of a woman with child, being in the middle of her belly: being compreſſed they give place, and then returne again. They are often moved with a motion of their own like a Child in the Womb.

The ſwelling of her breaſts is long ſince gone, and they are very ſoft and flaggy, out of which very little drops of green milk is preſſed forth.

All the time of her being great, ſhe kept her ſelf ſhut up in the Houſe, tormenting her ſelf with griefe and faſtings, becauſe ſhe had conceived out of the lawful ſtate of Wedlock.

This

This is a most rare case and involved with most intricate Labyrinths of difficulties, out of which notwithstanding we shal endeavour to free our selves, by the thred of reason and conjecture.

And first, That it is a true conception may be argued from her loss of appetite, the milk in her breasts, and the motion of the child it self, to which nothing seems wanting except the ordinary time of bringing forth: which some may say was therefore retarded in the Woman, because long fastings, and the flux of her courses, had defrauded the child of its due nourishment, whereby the child could not so soon grow to perfection, and thereupon did stay longer than ordinary in the womb. Howbeit it is agreed upon by Physitians, Philosophers, and Lawyers, by whom this Controversie has been oft disputed, that the last term of a childs being in the womb cannot be extended beyond the eleventh month. Nor let any man say that between the natural & ordinary time of bringing forth, some rare and extraordinary cases may happen, as we have with us a late History of Madam *de Cardet*, who affirmed that she bore a child in her womb first fifteen months, afterwards a year, two, and three, of which matter are extant two councels one contrary to another, of very learned men, *Hercherus* and *Varandæus* on the one part, and *Saporta* with *Pradillæus* on the other. Also in *Schenkius* certain Histories are propounded, of infants born two years in the womb, who began to speak and go, as soon as they were borne. For I avouch that these are no *Histories* but fables; which is easily to confirme by reading them; for as for what concernes Madam *de Cardet*, by the reasons propounded by *Saporta* and *Pradillæus*, in their Counsel, it is abundantly proved that she was melancholick, and disturbed in her imagination; which not only her frequent belchings, Palpitations of heart, Vapors rising to her head and Face, and other things did witness, but especially, in that she her self said, that she heard the Child Cry in her Womb; which any novice in Physick, knows to be an impossible thing. And those things which hapned since that time, sufficiently shew that her mind was disturbed. For the same Lady, being yet alive, saies she has been with Child now two and twenty years, which assertion of her, takes al the Credit away from her other Speeches. But the Histories collected by *Schenkius*, are thereby convinced of falsity, in that they affirme Children new born, to have begun presently to speak; but every man knows that to speak comes by discipline and teaching. As true as the rest, is that which *Avicenna* saies was told him by a faithful Woman; for he professes himself only an Ear, not an Eye witness. Seeing therefore it does not appear by any true story that such cases have happened, and in this case of ours the conception moved about the fortyeth day, whereas a true child stirs not til the third or fourth month, it is better to affirme, that this woman of ours had no true child in her Womb. For fasting and menstrual purgations are so far from retarding the child, that they rather hasten the same, as *Hippocrates*, tels us, that a Woman with child by blood-letting, comes to miscarry. We must therefore say, that there was in the womb of this woman somwhat preternatural, viz. Either water, Wine, a Mole, or a Monster. That it was water no man will say; that it was wind we have more reason to think, for it manytimes fals out, that wind shut up in the womb, makes a motion like that of an infant, and does a long time counterfeit a true being with child. But that this was not wind, two things evince; one, that it could not be so long kept in the womb, but it would have been at one time or another either evacuated, or dissipated; the other, that the milk in her dugs did witness somthing greater than wind to be in her womb. Now the safest way, is to say that it was a Mole; both because the frequency of moles makes it no wonder; and also because the signs propounded do seem to answer very wel to a Mole, viz. A panting motion at the fortieth day, raw milk in the dugs, flux of courses in time of Gravidation, also the milk vanishing after the ninth month, and the falling of her dugs, to which may be added, the hardness of the Tumor of her belly, which by pressing changed its place, and then returned again. And although *Hippocrates* saies, in his first Book *de Morbis Mulierum*, that the conception of a Mole does not bring milk into the dugs: that is to be understood of true and perfect milk, and not of crude and flashy, which is usually seen in such cases. And because two distinct Tumors were felt, 'tis likely there were moles in her womb.

A man might be indeed, Satisfied with what has been ſaid, unleſs ſome things ſtood in the way, from whence the extraordinary difficulty at firſt expreſſed, does ariſe. For in the firſt place, according to the doctrine of *Hippocrates*, a mole has no motion of its own, but is only moved by the wombes motion, and if any motion appeare to ſuch as feel the ſame, it is only a panting motion. But in this woman a greater motion is perceived, very like the motions of a true child, which is eaſily diſcerned by the by-ſtanders. Secondly a mole tumbles from one ſide to another, like a ſtone, with a ſenſe of weight and heavyneſs; in this woman there was no ſuch thing. Thirdly, in a mole the belly is widened equally in al dimenſions, whereas in a true child, it is raiſed up towards the navil, and ſtraitned on both ſides, ſuch as is the belly of this woman. Fourthly a mole ſinks towards the ſhare and Groins; in this woman the tumor is in her Hypochondria. Finally, a mole is continually encreaſed, and in the ſpace of near upon three yeares, it would have attained an huge bulk. But in this caſe, the tumor of the belly is very little, reſembling that of a woman five or ſix monthes gone with child, nor is it grown any bigger in a long time. In the Concurrence of ſo many difficulties though I thought better to inſiſt upon the generation of a mole, as a thing more frequent. Yet we ſhould better ſatisfie al the phænomena, if we durſt to ſay, that ſome monſter lies lurking in the womb of this woman, which being grown to its determinate magnitude, does encreaſe no more, but is only nouriſhed like a child, whence it comes to paſs that neither the womb is more widened, nor does the Conception die for want of nouriſhment. For ſo Hiſtories tel us, that ſome women have brought forth Serpents, Moles, Frogs, Mice, Birds, and other Animals. Yea verily, and in *Opulca* and *Lombardie*, many Authors relate, that ſuch Animals are frequently bred in women, and therefore thoſe kind of Animals are termed the *Lombards* Brethren; *Gardonius Tornamira*, and other barbarous Phyſitians, term them *Arpa* or *Arpia*, becauſe this kind of monſter has for the moſt part many feet, which in that barbarous language they term Arpas. This being, I ſay, ſuppoſed, we may ſatisfie al the phænomena. For at the begining of ſuch a gravidation, al the true ſignes of a woman with child might appeare, viz. milk in the dugs, a motion like that of a true infant, which might appeare on the fortieth day, becauſe ſuch a kind of Creature as we ſpeake of, might be ſooner ſhaped than a true child; moreover, the animal being perfected, the belly increaſes no more, yet it provokes not Nature to expel it, becauſe it lives only by tranſpiration, and is cheriſhed by the warmth of the womb. Now that there are two of theſe Animals, may be conjectured, becauſe two diſtinct bodies are felt in the womb. Through ſuch conjectures as theſe, the mind may rove at uncertainties, til the excluſion of the Conception what ever it be, ſhal make it viſible to the Eye-ſight. Which excluſion (which is al I ſhal ſay of the Cure) I would not further by art, leaſt the woman ſhould come in ſome hazard of her life; but it is beſt to wait ſo long, til either nature of her own accord caſt off the burthen, or that her belly ſwel yet bigger, which notwithſtanding I muſt avouch, from the foundations before laid downe, wil never be. Some yeares after it was told me that this woman was delivered, but how, or of what, I could never fiſh out, becauſe ſhe ſtudiouſly concealed the ſame.

It wil not a little conduce to the illuſtration of this ſtory, to relate another caſe told me by an ancient midwife touching a woman of *Montpelier*; who firſt of al miſt her Courſes, afterward loſt her appetite, and fel to long for ſome certain meats, but ſhe ſpecially deſired to eat oyſters and ſuch like ſhel-fiſh, wherewith ſhe could never be ſatisfied. After the ſecond month of her being great, ſhe perceived the conception ſtir in her womb, and ſo it continued the following dayes and months; which nevertheleſs appeared ſtrange to her and other women, ſeeing a child in the womb is not uſed to ſtir before the third month. After the ſeventh month milk appeared in her dugs, but of a bad greeniſh colour. Her delivery was delayed to the end of the tenth month. At what time having her paines upon her ſhe ſent for the midwife and continued in thoſe paines three whole dayes together. And herein her pains were different from the ordinary paines of women in travel, becauſe ſhe ſaid ſhe felt her belly to be prickt and cut, and her womb to be torn. And ſo fierce was that pricking pain, that ſhe was compelled to cry out exceedingly. At laſt after many throwes, ſhe brought forth a certain Animal or Monſter, not unlike a Toad, but it had more than twenty feet round about its body. Being received out of the womans womb into the midwifes lap, it ſkipt from thence into the floor, and ran a good pace, and at laſt got under the bed; whence being drawn, it was ſuddenly carried away and buried in the wine ſeller, to cover the womans reproach. It had at the

End

end of its feet sharp claws, whence doubtless those pricking and cutting paines did proceed, which the childing woman felt. For the membranes being broken which contained the Animal in the time of Gestation; it seeking its way out, did teare the inner membrane of the womb, with its nailes, and caused those extream paines. Although these kind of monsters have sundry formes and figures, because they are bred by chance and fortune, and the mistake of Nature, yet those which are frequently bred in *Apulia*, and are termed the Lombards brethren, do for the most part come neare this now described, as may seem by the relation of those Authors that have written thereof.

Councellor and *Physitian* to the King, and Professor of Physick in the University of *Montpelier*.

The 201 *Observation, or History, of Famous and Rare Cures, &c.*

Inflamation of the left Testicle.

M*r*. *B.* a Merchant of *Montpelier*, having contracted a Gonorrhœa by lying with a polluted bed-fellow, advised with a Chyrurgeon, who let him blood in the foot, gave him a bolus of Cassia, and the day following a bolus of Terpentine, and other Remedis afterwards, wherewith the Gonorrhœa was stopped; whereupon the influent matter being translated another way, a swelling and inflamation arose in his stone, so that in two daies 'twas grown as great as a Mans Fist. At last he came to me on the 8. of *July*, 1643. I cause him to bleed again in his Foot, I prescribe him emulsions, and a Cataplasme of Bean-meale boyled, in water and Vinegar mingled together. These Remedies being used two daies together did no good, the Tumor and pain of his Testicle continuing not without a Feaver. I desired to see the Cataplasme, which the Chyrurgeon had made too hard, and therefore it did not allay the inflamation for want of Vinegar, and it did heat the part, by reason of its over great solidity. I order him to be let blood in his Arme, and his Testicle to be fomented with Rose water, and the same Cataplasme to be repeated with equal parts of water and Vinegar, and that he should use the emulsions again made of a cooling decoction; al which were made by the Apothecary according to Art, the next day he was better, his Feaver and inflamation were abated, the Tumor remaining in the same condition as formerly, I prescribe him a purgation, of Senna, Rhubarb, Manna, and Syrup of Roses; he was wel purged, the Feaver quite gone, and

the inflamation much abated; but his Testicle did continue swelled. He is again let blood in his Arme; and a Cataplasme is made of beanr Meal boyled in pure vinegar. The Tumor was thereby very much abated, but the sharpnes of the vinegar did make his Cods smart; to remedy that, I cause the vinegar to be first boyled with litturidg, for so the sharpnes of the vinegar is quite taken away; and therewith a Cataplasme was again made with beam meal; it luckt very wel, and within four or five daies, the Tumor was so abated, that the testicle affected, was hardly bigger than that which was wel.

The 202 *Observation, or History, of Famous and Rare Cures, &c.*

A Dysentery.

MAdam *Luquissa*, Sister to the Baron *de la Roquette*, was taken with a grievous dysentery the 14. of *July*, 1634. the weather being extream hot. I was called to her on the third day of her disease, I prescribe her a detergent clyster, and to be let blood. On the fourth day she was purged with one dram and an half of Rhubarb, and half a dram of Myrobalans, infused in plantan water, dissolving therein one scruple of pouder of Rhubarb, and one ounce of Syrup of Roses. she had two stools of Excrementitious humors; but in her other stools which were many, she voided a snotty kind of matter drenched in blood. At night I give her two grains of Laudanum, whereby her gripings were somwhat abated, and her stools were not so frequent, also by short fits she slept a little, whereas in the foregoing nights she had not slept at all. On the fift day, her gripings were the same, her stools frequent, and bloody. Clysters of milk and Yolkes of Eggs were frequently administred. In the evening she took again three grains of Laudanum with conserve of Roses, and her pains presently ceased, and she went to stool only once in an hour, and slept between whiles. On the sixt day in the morning, her stools were yet more frequent, with extream pains. She was again let blood, and three hours after she took broath of a weathers Guts, with a dram of the pouder of Actes berries. Her pains were quite abated and gone, and her stools were much seldomer, but presently after blood-letting, her whol belly was anointed with a mixture of Oyl of Roses, vinegar, and Rose-water, to allay the inflamation of her guts, which was known by the Feaver, and because any light touch upon her belly was painful; and with this remedy she was much eased. In the evening a Clyster was given her of milk and three ounces of Juyce of Plantane, to asswage the Inflamation of her Guts aforesaid; for I conceived that it was a matter of very great moment, in so extream hot and soultry weather, to direct the Cure chiefly to the asswaging of the Inflamation of those parts, because the greatest danger uses to spring therefrom: for commonly those that die of a Dysentery, are brought to their end by a Gangrene of the Guts, which is easily caused by the continual flowing in of bad humors into the Guts, inflamed and ulcerated. Also at night I gave her a julep of Plantane water, with a dram of the pouder of Actes berries. Al night long she slept not, and went frequently to stool, but without pain. The seventh day, the frequency of her stools continued, but without pain; her Clysters were continued. On the eight day she took a dram of Rhubarb poudered in broath, after which her stools were not so frequent. Afterwards for three daies together she took in the morning a decoction of Myrobalans, wherewith she was perfectly cured. The decoction was thus made.

Take Myrobalans Chebulan, one ounce; Citrine Myrobalans, half an ounce; Corants, two ounces. Boyl them in a Quart of water, to the Consumption of a third part. Clarifie the liquor and Aromatize it with two drams of Cinnamon; let her take it in four doses, morning and evening.

The 203 *Observation, or History, of Famous and Rare Cures, &c.*

Of Wroms.

MSr. *de Saint Andre*, a Gentleman of sixty years old, was troubled many daies with a Dysentery, and afterwards with a Tertian Ague. And at last when he seemed to recover, his

his pulſe was found to intermit, for three or four daies, with anguiſh of mind, and weakneſs. The cauſe of this intermitting pulſe could not be diſcovered neither by his ordinary Phyſitian, nor by my ſelf, in conſultation with him. But it did diſcover it ſelf, being a worme, as thick as a mans finger, and half as long as ones Arme; which being voided, his pulſe became orderly, and the patient who was an outlandiſh man returned into his own Country.

The 204 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Dyſentery.

THe ſecond of *Auguſt* 1643. my ſon Charls being ſeven years old, was taken with a dyſentery by reaſon of a ſudden coldneſs of weather which then happened. He voided much flegm mixt with blood, but without any pain or Feaver. On the ſecond day he was as before. On the third, he was taken with a feaver, his ſtools not ſo large, but more frequent, of a leek color and with gripings; clyſters of milk were given him, and blood taken away to the quantity of ſix ounces. At night the flux being violent, I gave him half a grain of Laudanum; his flux was a little abated, ſo that he went ſeldomer to ſtoole, and with leſs pain. On the fourth day I give him a potion of one dram of Rhubarb infuſed in plantane water, with a ſcruple of pouder of Rhubarb, and one ounce of ſyrup of roſes: his feaver being very remiſs, he voided much flegm and choler many times, with amendment; but the night following he was vexed with moſt grievous gripings, and thoſe in a manner continual, with a perpetual but vain deſire of going to ſtool. I give him about midnight one grain of Laudanum, whereby the gripings were allaid, and the Looſneſs abated, ſo that he went to ſtool but once in an hour. His drink was continually a decoction of Ivory, with conſerve of roſes mingled therein, wherewith I did ſomtimes mix a ſcruple of Sal prunellæ, this was inſtead of Juleps which he obſtinately refuſed to take. On the fift day his ſtools were ſeldomer, ſo that ſometimes he had not one ſtoole in the ſpace of two or three hours, and Flegmatick and Cholerick humors were voided without blood, or any Feaver. The ſixth and ſeventh daies, he was after the ſame manner. On the eight day he took a dram of rhubarbe in broath, and voided much excrementitious matter at times. On the ninth day his ſtools were more ſeldom and thicker, he had a ſtomach to his meat, and the daies following without any other remedies, bleſſed and praiſed be God, he was reſtored to perfect Health.

The 205 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Purge in the Dog-daies.

ANno 1643. in the Heat of the Dog-daies, about the beginning of Auguſt, three little boys of two or three yeares old, were by Phyſitians that had the Care of them purged with gentle purgations, and died the ſame day in convulſion fits. Two of theſe were troubled with a Catarrhe falling upon their breaſt, the third with a dyſentery. Other children alſo by meanes of Catarrhs, fell into convulſions at the ſame time, and died the ſame day. Now theſe Epileptick convulſions are cauſed by the humors melted through heat of the Aire. Hence it is apparent, that we muſt be exceeding wary how we purge our Patients in the dog-daies, according to the precept of *Hippocrates*.

The

The 206 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Coſtiveneſs.

A Certain Dominican Fryar of a Melancholy temper, was ſo coſtive, that he went not to ſtool ſomtimes for ſix or ſeven daies together. Which inconvenience he did remedy, by taking two hours before dinner ſtewed prunes and their Syrup, to which he added a quantity of wine allayed with water, the half of which he took before his prunes, and the other half after them; and ſo his belly was more conveniently looſned and more effectually, than it had wont to be when he did only eat the prunes. He alſo ſomtimes helpt himſelf by taking the quantity of a walnut of new butter, and drinking upon it a draught of wine and water mingled.

The 207 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Pain of the hæmorrhoides.

THe ſame Fryer on the fift of *Auguſt* 1643. was taken with a moſt grievous pain and remarkable ſwelling of the Hemorrhoides, with inflamation. I being ſent for, order him to bleed in his left Arme, a Clyſter being premiſed; and after that a pain aſſwaging fomentation, with a Cataplaſme of Crums of bread, which he could not endure by reaſon of the moſt exquiſite ſenſe of that part. The ſecond day I cauſed him to bleed again, from his right Arme; he took emollient juleps, and ſomwhat laxative, that his body might be kept open, for the hardneſs of his dung was wont extreamly to encreaſe his pain. Now the Juleps were made after this manner.

Take, *Leaves of* Lettice, *bugloſs, and the tops of Mallows, of each one handful; Lycorice Scraped, and Raiſons ſtoned, of each half an ounce. Flowers of Bugloſs, Borage, and Violets, of each one pugil, boyl them to eight ounces. In the ſtrained liquor infuſe one ounce of Caſſia new drawn, let them be again ſtrained and clarified, adding thereto an ounce of Syrup of violets, let him take it twice in a day.*

To the part it ſelf this following Ointment was applied.

Take *Oyl of Roſes and Violets, of each one ounce; ointment of Populeon half an ounce: make a Liniment hereof.*

And becauſe the tumor and pain did continue, two leeches were applied, and four ounces of blood taken away, and the tenſion and Inflamation were ſomwhat abated. And afterwards this following fumigation was preſcribed.

Take *Great Houſeleek an handful, white Wine a quart. Boyl them, and let him receive the ſteame of this decoction through a groaning chaire. And then let this following ointment be applied to the part.*

Take, *Ointment of Roſes one ounce, crude Mercury two drams, mix them into an ointment.*

And although Mercury have a mighty faculty to ſoften and diſcuſs a tumor, yet the Hardneſs abode in the part. And therefore two remedies were preſcribed to mollify and diſcuſs the tumor. The firſt was the fume of Vinegar in which burning flints were quenched, which *Galen* ſaies will mollify ſcirrhous tumors; the next was this following Liniment, to be applied after the ſuffumigation.

Take *Oyl of Bitter Almonds two ounces, Bdellium and liquid ſtorax, of each two drams. Make them into a* Liniment.

With theſe, the pain and ſwelling were daily much diminiſhed; whereinto alſo a decoction of millefolium was much ſubſervient, which he took two daies together for his ordinary drink, with a little wine mingled with it.

And becauſe he was continually coſtive, to looſen his belly, and withal leiſurely to remove the antecedent Cauſe, theſe following pills were preſcribed.

Take *Of the Maſs of Pil de Bdellio two drams, ſenna clenſed, choiſe Rhubarb, and Agarick newly trochirked, of each one dram. With ſyrup of Roſes ſolutive make al into a maſs of pils, of which let him take a dram every day in the mornting, til the maſs ſhal be ſpent. And theſe being continued certaine daies, he perfectly recovered. The ſumigation of Vinegar was very effectual in diſcuſſing the tumor.*

The 208 *Obſervation, or Hiſtory, of Famous and Rare Cures,* &c.

An *A*ſthma and Dropſie.

A Poore old man being troubled many yeares with the Tiſſick, became Hydropical, and becauſe he could not be plied with much phyſick, a Clyſter is preſcribed him of an handful of bran and one dram of coloquintida, boiled in white wine, with which he voided many flegmatick and wheyiſh excrements. The ſame Remedy he repeated every third day, and once in a week took half an ounce of Diacarthamum in broath, and within a month his dropſie was cured. But becauſe his Tiſſick could not be cured by reaſon of his old Age, and the patient only required ſome Remedy to uſe in the fit, and thereby to free him from choaking, and ſomwhat abate the extremity of his ſhort windedneſs. This following was preſcribed him.

Take, *Cinnamon water two ounces, oxymel of ſquils one ounce, mix them. Let him take ſome in a ſpoon during his fit.*

With this medicine he voided much thick and clammy flegm, and was ſoon freed from his fit which did threaten abſolutely to ſtrangle him.

The 209 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Dyſentery

A Young man twenty yeares of Age, born about the end of *Auguſt*, 1643. was troubled with a dyſentery twelve daies together; which he took no medicine for, until being brought into the Hoſpital, he took by order of the Phyſitian thereof, one dram of Salt of vitriol, diſſolved in water. He vomited much flegmatick and cholerick matter, and ſo the humor flowing into his Gutts was revelled, and he cured by this only medicament.

The 210 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A double Tertian.

A Certain young man called *James du Rand*, being ſeventeen yeares old, in the month of *September* 1643. was ſick of a double tertian, and had paſt over eight fits ere he took any phyſick: he was let blood, a Clyſter being firſt given him, and the day after he took ten grains of Cambogia, prepared with ſpirit of wine and Sulphur. He was not purged, only was a little ſtomach ſick, without vomiting. The fit came ſooner that day, yet was ſhorter than before, and he never had more, but was perfectly cured.

The 211 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Another double Tertian.

P*Eter Alegre* twenty yeares old, had a double tertian ſix weeks, in which time he was divers times let blood and took purging medicaments. At laſt he took a bolus of ten grains of red Precipitate made without corroſives, and a like quantity of Scammony, made up with conſerve of roſes. He was troubled with a gentle Looſneſs eight or ten daies before the taking of this

this medicament, which he had not told his Phyſitian: howbeit ſuch was the operation of the medicament, that it purged not, the Looſneſs was ſtopt, and the Ague fits went quite away.

At the ſame time another troubled with the ſame kind of Ague, did take the ſame medicament, and was thereby ten times purged, being ſtomach-ſick between whiles, and he was cured of his Ague fits.

The 212 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Spitting of Blood.

A Soldie named *Beaulaguet*, being thirty yeares old, of temperament cholerick and Sanguine, fell eight months ſince into a voiding of blood, at his mouth, which at firſt he caſt up by vomiting to the quantity of eight pints, from which he was freed, by frequent blood-letting. But the ſame vomiting of blood came afterwards again, though in leſſer quantity, and now by fits he did ſpit bloody ſpittle, and ſometimes pure and meer blood. For whom theſe following remedies were preſcribed, in the beginning of *Auguſt*, 1643.

After a Clyſter, open the baſilica veine of his left Arme, and let out ſix or ſeven ounces of blood.

The day after open the ankle veine of his left foot, and take as much blood as before.

Take *Leaves of Plantane one handful. Tamarinds half an ounce. Boyl them to ſix ounces. In the ſtrained Liquor, infuſe one dram of Choyce Rhubarb, Citrine Myrobalans half a dram. Yellow Sanders half a ſcruple. In the ſtrained liquor diſſolve manna and ſyrup of Roſes, of each one ounce, Pouder of Rhubarb one ſcruple. Make of al a potion, which give him the day after his laſt blood-letting, and let him be ordered accordingly.*

The day after his purgation apply two Cauſticks behind his neck, between the third and fourth vertebraes.

Take, *Roots of Snake-weed, Tormentil, and Comfery, of each one ounce. Leaves of Plantane, Burnet, Mouſe eare, Vinca-pervinca, of each one handful; Red Sanders two drams. Boyl them to one pint and half. In the ſtrained liquor diſſolve four ounces of ſyrup of dried roſes. Make a Julep for four morning doſes, adding to each doſe one ſcruple of Salprunellæ.*

The juleps being ended, the foreſaid purging potion muſt be repeated, adding one ſcruple of pouder of jallap, and infuſing al the Rhubarb.

Take *Comfry roots one ounce. Leaves of plantane, Burnet, Bugle, Prunella and Mouſeeare of each half an handful, boyl them in the broath of a weathers neck, and let him take the ſtrainings in the morning, twelve daies together.*

After every fourth broath, let him take the purging potion aforeſaid.

His broaths being ended, let him uſe this following opiate.

Take, *Conſerve of Roſes and Comfry roots, of each one ounce. Trochiſks of Amber and Terra ſigillata, of each half a dram; Coral prepared, pearls prepared, and Blood-ſtone, of each one dram. Gum Arabick and Tragant, of each one ſcruple: with ſyrup of dried roſes make al into an opiate, of which let him take the quantity of an hazel nut, two hours before meat, drink a little of his ordinary drink after it, which muſt be priſan made of a Decoction of barly and Licorice, or water in which Iron has been quenched, and wherein burnet and Mouſ-eare have been ſteeped.*

In the beginning of Autumn, let him uſe for fifteen daies Goates milk or Sheeps milk, highly chalybeated.

As ſoon as he had ſet upon the uſe of theſe remedies, his ſpitting of blood ceaſed, and never appeared al the time he uſed them, nor ever afterwards.

The 213 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Wind inſtead of quittor coming out of a tumor.

A Woman thirty yeares of Age, had a ſwelling for eight months in the lower part of her thigh,

and on her Knee; it was not red, but did pain her, so that she halted. Many discussing remedies being applied, the Tumor remained as it was. At last in two places, Viz. On the inside and the outside, there appeared a remarkable rising, and round about it softness and fluctuation; so that al conceived there was quittor within; a potential caustick was applied to the most swelling part, which was the outer: afterward the Eschar being cut with a Pen-knife, and the Tumor opened, there came out a certain wind, and nothing else. The like story there is in *Zacutus Lusitanus*, in the first book of his admirable Practice, Observation the 163. where from *Galen*, and *Avicenna*, he teaches, that such Tumors as these in the Knee are many times opened by Physitians, supposing there is quittor concealed within, whereas nothing comes out but a windy spirit.

The 214 Observation, or History, of Famous and Rare Cures, &c.

Stingings of Bees.

A Merchant of *Montpelier*, named *Claparede*, fifty years old, going early in the morning out of the City, and intending to travail, when he was a mile on his way, a swarme of bees flying in the Air suddenly assaulted him, and fixed al over his Face and Neck a thousand stings. Whereupon he was forthwith grievously pained, which made him presently turn home again. Being called to him, I find the man extreamly out of patience by reason of the pain, that he could hardly contain himself in his bed, his Face did swel and was red al over. I presently cause the places stung to be smeared with Treacle, which not restraining the extremity of the pain; I order him a fomentation of the same Treacle, dissolved in Aqua Vitæ, wherewith the pains were somwhat mitigated, and the swelling of his Face abated. Afterwards to the places most pained, bruised Onyons were applied in manner of a Cataplasme, and after that they were anointed with *Matthiolus* his Oyl of Scorpious. The extremity of the pain caused us many times to change our Medicines, which being continued for two hours, and a cordial and antidotary potion being given him, the pains ceased in al parts almost. But there abode yet a most acute pain in the Gristle of his left Eare, which could not be allaied with the foresaid Remedies. Considering with my self that not only Bees applied to the part, do not attract the poyson, and asswage pain, but also other kind of flies, I conceived that Cantharides might do good for a double reason: first because they are a sort of flies, and then because they had a mighty drawing faculty. And because the Vesicatory Plaister kept in shops, has store of Cantharides in it; I lay a Plaister made thereof to his Eare, which in a quartor of an hour took the pain quite away. No bladders being raised, because it lay on so smal a time.

The 215 Observation, or History, of Famous and Rare Cures, &c.

A Catarrhe with Hoarsness.

About the end of *October*, 1643. When the Southwinds began first to blow, I was troubled with a Catarrhe falling upon my breast, which made me exceeding Hoarse, and almost speechless; which to remedy, I purge my self with a Laxative Ptison, which I take twice a day two daies together. This cured my Hoarseness, and in the day time I seemed to be free from the Catarrhe, but in the night about midnight the defluxion encreased, and caused perpetual coughing, so that I was fain to rise from my bed. For the Cure whereof, I lost ten ounces of blood; yet the night following, the same Cough returned, which could no other waies be stopped, but by rising out of my bed. The day after my blood-letting, I seemed freed from the Catarrhe, but at midnight my Cough came again; which effectually to allay, I took presently three grains of Laudanum, and going to bed again half an hour after, I past the rest of the night without Cough or defluxion, in a most sweet sleep; and the following nights neither Cough nor Catarrhe appeared any more. When the disease was most troublesome, I abstained

abſtained from wine, uſing for my drink a Ptiſan made of Lycorice and Coriander ſeed.

The 216 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

A double Tertian with a Dropſie.

Anthony Sany, of *Montpelier*, being about fourty years of Age, a poor mean man, in the month of *September*, 1643. Was taken with a moſt vehement double Tertian, which he indured an whol month without any Phyſick, keeping a bad diet; whereupon firſt his ſpleen did ſwel, and contract a ſcirrhous hardneſs, and at laſt he grew Hydropical. Being in this condition, he ſent firſt for the Phyſitian of the Hoſpital, who firſt preſcribed him a purging potion, afterwards to be let blood, and after that an Apozeme, cooling, opening and purging, for three doſes; and withal an Emollient and aperitive Fomentation for the Region of his ſpleen, and to be again let blood after the uſe of the Apozems. When theſe things did no good, he gave him by my advice a Bolus of twelve grains of Mercurius Vitæ corrected, and working only downwards, in conſerve of Roſes; he had two ſtools without any ſtomach-ſickneſs or vomiting, and the day following his fit was milder and ſhorter, which before was wont to be moſt vehement. Two daies after, the ſame Medicament was given him again, which voided by ſtool, very much black, Leek colored, and ſtinking Excrements, and his fit much abated. After two daies were over, he took a third doſe of the ſame Medicament, and no Evacuation did follow; but his fits came no more: and from that time forward he was quite freed of his Tertian Ague. Howbeit the Dropſie remained, and the ſwelling of his Spleen, and an exceeding pain in the ſame part, for the Cure of which diſeaſes he had given him a Bolus of a ſcruple of Calomelanos of Turquetus, and ten grains of Diagridium with conſerve of Roſes; which remedy was uſed for ſix daies together, whereby he was purged downwards twice or thrice every day without trouble. And after the fourth time taking, the ſwelling of his belly did ſeem abated, the hardneſs and ſtretchedneſs of his Spleen diſcuſſed, ſo that he ſeemed perfectly cured. But for the more ſureties ſake, the Medicine was continued yet two daies more, and afterwards he was left only to kitchin Phyſick to repair his ſtrength, ſeeing no preternatural diſorder was found remaining in his body. But the ſo ſudden reſolution of the Tumor of his belly, and of the tenſion and pain of his Spleen, makes a conjecture that abundance of wind was contained in the patients belly, which was ſoon diſcuſſed, the waies and paſſages of the natural parts being laid open.

The 217 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The Dropſie in a little Boy.

THe Son of Mſr. *Chaugerius*, A Proctor in the Court of Accounts, ſix years old, at the beginning of Summer, 1643. began to be afflicted with a troubleſome pain in the Region of his Spleen, which did reach unto his Navel. After which followed a ſwelling of his belly encreaſing by little and little, with leanneſs of his whol body. Which becauſe they were not very troubleſome, his parents neglected to get him Cured, til the end of *October*, when they came to aske my advice. I preſcribe in the firſt place a purging potion, afterwards opening broaths, for twelve daies, adding to every third broath two drams of Senna, and one ounce of Syrup of Cichory with Rhubarb. At the ſame time his whol belly was anointed with an opening Oyntment, and he uſed for his ordinary drink a diet drink of Rhubarb infuſed in chalybeat water. Theſe things being diligently uſed did no good. And therefore betaking my ſelf to more powerful Remedies. I preſcribe him an opening and ſtrengthening Opiate, to be uſed every day, alſo a purgation of Jallap and Scammony, each ten grains, Calomelanos of Turquetus, twelve grains, reduced to the form of a Bolus, with Conſerve of Roſes. At the firſt giving, there

there were but ſix grains of Scammony, and Jallap, but becauſe the Medicine gave him but two ſtools, ten grains of each were uſed in the ſecond doſe, with which the patient had four ſtools without any trouble, and the next day in the morning he went once to ſtool; and in his ſtools was found a bladder of water as big as a wallnut, to which did cleave a ſufficient quantity of thick and viſcid flegme. Every third day theſe purgations were uſed, and five times repeated, and the patient was much more lively, but becauſe of the froſt, theſe purgations were omitted for ſome time. After two months, his Navil opened of its own accord and a great deal of quittor came forth, whereupon the patient died. The pains which appeared at the beginning of the diſeaſe, might argue an impoſtume, if they had been obſerved by an attent Phyſitian, but becauſe none was then called, and his Mother made no mention of that pain in her firſt relation of the diſeaſe, and the Tumor had poſſeſſed his whol belly, it was ſuppoſed to be a vulgar Dropſie.

The 218 *Obſervation, or Hiſtory, of famous and rare Cures, &c.*

A Cancerous Ulcer.

THe Mother of *Peter Renaldas*, a Chyrurgeon of *Montpelier*, being ſixty years old, had an Ulcer in her left Leg, as big as the Palme of a mans hand, black and blew, and Malignant, having very hard fleſh, and quite void of ſenſe, ſo that ſhe felt not when it was cut; which did proceed from black Choler burning the ſubſtance of the part. Now it was in the Month of *October*, 1643. when the weather was very cold, ſo that baths to ſit in being otherwiſe very neceſſary to correct the diſtemper of her bowels, could not be uſed. And therefore I ordered her only to keep a cooling and moiſtening Diet, for many daies together uſing cooling and moiſtening broaths, and to be purged once in a week with a Laxative Ptiſan. And ſhe applied to the part, red Precipitate to conſume the dead fleſh, and a deep Eſchar being made, the Emplaiſtrum Stipticum Crollii, was applied to the ulcer, by help whereof, within one moneths time, the ulcer was filled with fleſh, and cloſed up with a Scar.

The 219 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A wound with a Bruiſe.

A Prieſt ſeventy years old, wel in ſtrength, received a wound with a bruiſe, whereupon he was tormented with a bitter pain, and the part was very black and blew. He was preſantly let blood, and *Emplaſtrum de Cumino* was laid on, the day after a gentle purge was given him. The pain continued, and therefore the part was frequently anointed with Oyl of Wax warm, the foreſaid Plaiſter being laid thereupon, and ſo in the ſpace of twenty four hours, al the pain was taken away, and the old color reſtored to the part.

The 220 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Of a Simple tertian.

A Young man twenty five years old troubled with a Simple Tertian, about the end of *September*, 1643. Was cured by theſe following Remedies. Firſt a purge was given him. The Second day he was let blood. The third day was given him red Præcipitate, Prepared without corroſives, with Scammony, ten grains of each. He voided much Cholerick and Leek colored Excrements, by two vomits and as many ſtools. The Diſeaſe continuing the ſame doſe of both was given him, he was purged after the ſame manner, and the Ague came no more.

The

The 221 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of the Tiſsick.

A Man ſeventy years old, having been many years Tiſſical, was at laſt brought to that extremity, that he could hardly draw his breath, no not when he held his head upright; he was alwaies gaping and wheezing, nor could any way reſt, but that he ſeemed preſently that he ſhould be choakt. By the uſe of theſe following Remedies, his Wheezing ceaſed, he fetcht his breath more eaſily, and was much eaſed.

Take *Cinnamon water two ounces. Oxymel of Squils, one ounce. Mix them, let him take hereof out of a ſpoon frequently.*

Take *Elecampane Roots preſerved three drams; Sugar Candy, half an ounce. Syrup of Hyſſop two ounces; Gum Ammoniack diſſolved in Aqua Vitæ, half a dram. Mix them into a Lohoch, of which let him take one ſpoonful morning and evening, licking it in by little and little.*

The 222 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Cholick pain and Rhumatiſme.

ON the 19. of *December*, 1643. The moſt renowned Matron, the Wife to Mſr. *de la Roche*, Councellor in the ſupreame Court of Accounts, Subſidies, and the Exchequer, at *Montpelier*, was taken with a moſt cruel Cholick pain, whereby the whol Region of her Loyns and of her belly beneath her Navel, was vehemently tormented. Now ſhe had been troubled two monthes with the rheumatick diſeaſe, which had gone over wel near al the parts of her body, one after another, cauſing pain in the ſaid parts, nor was ſhe yet free from the ſaid pains. For the vanquiſhing whereof, blood had frequently been taken away, both from the upper and lower parts; clyſters were frequently injected, but few purges, and thoſe gentle were given her, becauſe the patient being dainty and tender could not otherwiſe bear them. For the removal of this grievous pain I preſcribe her a clyſter of an emollient and carminative decoction, in which were diſſolved double Cathollicon one ounce, diaphœnicon half an ounce, aqua benedicta four ounces. Within half an hour after ſhe had taken the clyſter, ſhe voided half a baſen ful of thick and viſcous flegm, and half an hour after that ſhe voided as much more of like flegm; and an hour after that ſhe vomited the ſame kind of flegm, only in leſs quantity and mingled with yellow choler. She had two ſtools, and three hours after her receiving the Clyſter ſhe was perfectly freed from her pain. The night following ſhe ſlept excellent wel, and the foreſaid rheumatick pain s quite ceaſed.

The 223 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Dropſie.

James Mignot a baker of *Montpelier*, being 35. years old, having in the month of *Auguſt* 1643. been troubled ſomtime with a double tertian Ague, by careleſneſs in his diet, he fel into a continual Feaver, which having held him twenty daies, turned again into a double tertian, which laſted an whole month; and becauſe he uſed little or no phyſick, and drank abundantly, he fel at laſt into the dropſie Aſcites, wherewith he had been held two months when I was cald to him, and then his belly was mightily ſwelled, as alſo his thighs, legs, and Cod; and his whol body was ſo weakened that he was fain continually to keep his bed. I ſet upon his Cure after this manner.

The

The firſt day which was the 27. of *November*, I gave him a purging medicament of Senna, Agarick, Manna, and ſyrup of roſes, whereby he was moderatly purged. On the 28. he was let blood eight ounces from his right Arme, and his blood was ful of wheyiſh liquor. On the 29. he took a bolus of twenty four grains of Calomelanos, and a ſcruple of jallap, made up with conſerve of roſes; wherewith he had five ſtools of thick and black excrements, after which he voided ſtore of wheyiſh humors, his thighs and legs were much abated, and his cod was not above half ſo big as before. On the firſt of *December* the ſame medicament was iterated with the ſame operation. On the ſecond of *December* he took it again, and the operation was as before, but ſomwhat leſſer: the ſwelling of his thighs, legs, and cods, was quite downe: but his belly continued as before. The third day of the ſame month a clyſter was caſt into his guts, of the decoction of one dram and half of coloquintida, and an handful of bran, boyled in white wine. He kept it not long, yet had two ſufficient ſtools. The fourth day of the ſame month, the ſame clyſter was repeated of one dram of Coloquintida, to which was added one ounce of common oyl, that it might not too much provoke the expulſive faculty he kept it longer, but had only two ſtools. On the fift of *December* he took a water-purging pouder, and was plentifully purged, voided much black excrement, ſuch as he had alſo voided with his clyſters. The pouder was made after this manner.

Take *Senna cleanſed, gummy turbith, Hermodactils, dwarf-elder ſeed, jallap, mechoacan, of each one dram. Cream of tartar two drams. Gambogia half a dram, Species Diambræ, Diarrhodon Abbatis, and ſweet fennel ſeed, of each one ſcruple. Sugar Candy three drams. Make of al a pouder, of which infuſe two drams al night in foure ounces of white wine. Let him in the morning drink of the wine and the pouder.*

The ſixt day of the ſame month he took this following julep.

Take *Roots of ſmallage, parſly, Elecampane, of each one ounce; the middle bark of aſh and tamriſk, of each half an ounce; roots of Aſarum three drams; Leaves of Agrymony, Ceterach, Maiden-hair, Cichory, Ground oak, Centory, and wormwood, of each one handful. Anis-ſeed and parſly ſeed, of each three drames; flowers of Broom and Elder, of each one pugil. Boyl them to fifteen ounces. In the ſtrained liquor diſſolve four ounces of ſyrup of violets, make a julep, for foure morning doſes, adding to each doſe one dram of diuretick ſalt, and half a dram of diuritck ſpirit. At the firſt giving of the julep no ſenſible effect appeared. But at the ſecond taking, his urines were more plentiful than formerly.*

After the ſecond doſe of his julep, viz. the eight day of *December*, the water purging pouder was again given him, which wrought mightily. On the ninth and tenth of the ſame month his julep was repeated, and his belly appeared ſofter and ſmaller: he walkt almoſt al day up and down in his chamber. On the twelfth, thirteenth, fourteenth, and fifteenth daies, his appetitive julep was repeated, and his urines were more plentiful, and his belly grew daily leſs, ſo that now he ſeemed perfectly to recover, and to need no ſtrong medicaments. And therefore I enjoyned him only to keep an exact diet, and to uſe as his ordinary drink Chalibiated white-wine, with his accuſtomed ptiſan which he had uſed from the beginning of his diſeaſe, being made of a decoction of Agrimony, Ceterach, maidenhaire, and the middle rinds of the tamariſk. Having given him this order, I ſaw him no more in five or ſix dayes time, which being paſt, he told me he was ſtil extreame thirſty, as he had been al the time of his diſeaſe. I adviſe him for the quenching of his thirſt, to diſſolve in three pints of his ordinary ptiſan, half an ounce of the pureſt ſalt peter, and uſe the ſame for his ordinary drink, with the chalybeate wine aforeſaid. Which being continued for five or ſix daies, his thirſt went quite away, and his urines thereby became much more plentiful. So that continuing the ſame for ten or twelve daies the remainder of the ſwelling of his belly was wholly diſcuſſed, and the ſick man (God be bleſſed and Praiſed) recovered his former health. Howbeit I adviſed him, that he ſhould yet uſe his Chalibeat wine for a long time in his drink, and that he ſhould take two ounces thereof every morning. Theſe things were done two yeares agoe, and he has ſince that time lived luſty and ſtrong, and is at this preſent in very good Health.

THE

The 227 Observation, or History of famous and Rare Cures, &c.

Unquenchable thirst.

ON the 17 of *February*, 1644. I was called to *Lodovamper*, the most illstrious Bishop of *Lodona*, being sixty years old, of a sanguine complexion. He having been for some daies troubled with arthritick pains, of a sudden the pains were much diminished, and at the same time a Feaver seized him with an unquenchable thirst, so that having drunk two good draughts of water, it was no waies abated. I conceived that these symptoms did proceed from the retention of those humors, which were before carried to the joints, for they being restrained in the inner parts of the body, caused that Feaver and thirst; whereby he was in great danger of death, for persons troubled with the running gout are wont commonly to die in their old age, when the expulsive faculty being weakned, cannot sufficiently expel superfluous humors into the joints, so that they being retained in the bowels do cause grievous, and for the most part deadly diseases. For the cure of these diseases, I appointed a cooling and laxative clyster to be given him twice in a day, for two daies together, and in every draught of his ordinary drink, which was a decoction of barly and grass, I dissolved one dram of Sal prunellæ, and eleven drops of spirit of Vitriol. With these remedies, in the space of two daies, that mighty thirst was extinguished, and the Feaver very much abated. And in a few daies after, with gentle purgations, and cooling broaths used at times, he was perfectly recovered.

The 228 Observation, or History, of Famous and Rare Cures, &c.

A Catarrh flowing into the Lungs.

AT the end of *February* 1644. I was afflicted with a most grievous catarrh falling upon my Lungs, whereupon a vehement cough troubled me night and day, with shortness of breath, so that I could not lie in my bed. For the cure whereof I was four times let blood, and purged as many times in the space of fifteen daies; also Cupping-Glasses were applied, and a vificatory with many thickning medicaments against the cough. I had also a smal feaver which threatned an inflamation of my Lungs. Although I am wont twice or thrice in a yeare to be troubled with these Catarrhes, yet I never had any so long and stubborn, so that I much feared, it would turn to a consumption; seeing al remedies wrought no effect, which at other times did me good. Supposing therefore, that I must make use of some effectual medicine to pul up the roots of the defluxion, I took twenty grains of Calomelanos, and ten grains of jallap. With which remedy, I voided by stool much flegmatick and cholerick matter, such as my other purgations did not bring away, and I voided much Flegm at my mouth by coughing and spitting, which evacuation continuing two daies together, my catarrh ceased, and my cough went quite away, and so I was freed (by the goodnes of God) from that grievous disease.

The 229 Observation, or History, of Famous and Rare Cures, &c.

Bruises.

A Certain young man fell from an high place, & al his members were bruised, so that he seemed to be at deaths door. His Father took honey combes with the hony in them, and boiled them in wine to the consistence of an ointment, which he spred upon the skin of a weather newly killed, and therein wrapped the patient. Which being repeated for three daies together he was perfectly cured.

In particular contusions this ointment is spread upon a Linnen cloath and applied, and presently works the Cure.

The 230 *Obſervation, or hiſtory, of famous and Rare Cures, &c.*

A ſlow feaver with pains of the Loins and thighs.

THe Son of *Jacob de Ladeveſe*, a Citizen of *Montpelier*, ſeven years old, was troubled for ſome months with a ſlow Feaver, whereby his body was much fallen away, and it was attended with pains in his Loyns and thighs. He uſed many medicaments, but in vain. Being called to him *April* the 19. 1644. I preſcribed him a bolus of Calomelanos ten grains, and Diagrydium five grains, with conſerve of Roſes. Which he took the twentieth day, was twice gently purged, and better after it. On the twenty one day, of the ſame month, he took twelve grains of Calomelanos, and ſix grains of digridium, was twice gently purged, and much better after it. On the twenty two day he took the ſame doſe with the ſame operation, and was perfectly cured.

The 231 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Cough, Shortneſs of breath, and pains of the Shoulders and Arms.

THe Wife of *Peter Florens* an Husband-man, named *Vavareſſe*, was troubled eight months with pains of her Shoulders and Armes, with ſtraitneſs of her breaſt, cough, and difficulty of breathing; ſhe voided by coughing much flegmatick and watry matter. She had taken many potions and apozems, preſcribed by another Phyſitian, and all to no purpoſe. At laſt ſhe implores my help on the eighteenth of *April*, 1644. and I gave her twenty grains of Calomelanos, and ten grains of diargydium with conſerve of Roſes. Two hours after ſhe had taken the medicine, ſhe did ſweat twice plentifully, and after that had three large ſtools, and the day after ſhe ſaid ſhe was perfectly cured. Howbeit, three daies after I cauſe her to take the ſame medicine again, wherewith ſhe had four ſtools, and from that time was perfectly freed from the foreſaid ſymptoms.

The 232 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

A Cronick ague, without any certain Courſe, with the hypochondriacal diſeaſe.

THe tenth of *June* 1644. when I was at *Grenoble*, Mſr. *de Sancto Martino de Vercors*, thirty yeares of Age, came to me, deſiring to be cured of a moſt ſtubborn diſeaſe. He was troubled three years with ague fits, which came twice or thrice in the month, without any certain courſe, ſo that the fit came ſometimes after ten, otherwhiles after twelve or fifteen daies. It began with a light ſhivering, which a great heat followed, with grievous pains of his thighs. It laſted fifteen, twenty, and twenty four hours, and went not away but after plentiful ſweating and making water. In the ſpaces between the fits, he performed al the functions of his body very wel, ſave that he was bound in his belly, and voided his excrements with very much straining, which were clammy and like wax. This diſeaſe took its original from a continual Feaver, which he had three years before in the Camp in *Italy*, not being duly purged at the end thereof. So that the reliques of the diſeaſe, reſting cheifly in the Meſentery, became thick, and bred ſtubborn obſtructions. By which the paſſage of the humors being hindred, it made a diſeaſe like the Hypochondriacal paſſion, and in the hot complexion of the patient raiſed theſe kinds of Feavers. Which kind of Feavers, did ſpring from a collection of

wheyiſh

Wheyish Humors working and putrefying, which being voided by sweat and urin the Feavers ceased. Now the pains of his Thighs did arise from thick Vapors, translated from the Hypochondria to those parts. He used many Remedies, for the space of those three years, prescribed by skilful Physitians. I set upon the Cure after this manner.

Take *Senna clensed two drams, Fountain water eight ounces, Salt of Tartar, one dram; Spirit of Sulphure, thirty drops: infuse them cold al night. Let him take the strained liquor in the morning, and order himself accordingly.*

The day following let the Basilica Vein of his left Arm be opened, and take away nine ounces of blood.

After blood-letting, let the Infusion of Senna be repeated for three daies.

During the use of these Remedies, let his belly be Fomented with an Emollient and aperitive decoction, in the morning, an hour before he takes the infusion; and in the evening an hour before Supper.

After the Fomentation, let the same parts be anointed with an Emollient and aperitive Oyntment.

Then let him use Chalybeat Pils for fifteen daies.

At the same time presently after his Pills, let him take the infusion of one dram of Senna, made with Salt of Tartar, and Spirit of Sulphur.

During the use of the Pils, let the Fomentation and Oyntment be continued morning and evening.

In the middle, and at the end of his Pills, let him use a Luke-warm Bath for two daies together.

With these things he seemed to be perfectly Cured, for neither did his Ague fits return, nor did his Excrements retain that same Wax-like consistency any longer. Howbeit to make the cure more compleat, I sent him to the Medicinal waters, to take them fifteen daies together. I prescribed him for that summer a magistral Syrup to be taken twice in a month, and a strengthening and opening Electuary to be frequently used. And in Autumn, I ordered him after purging and blood-letting, to repeat his Chalybeat Pills for twelve daies, with a Fomentation and Liniment. After that, to take his usual aperitive and purging Pills, twice or thrice a month, al winter long. And finally, to continue his Opiate on the intermediate daies. The latter Remedies, viz. The Syrup, Pills, and Opiate, he did not use, because he was by operation of the former, freed from that stubborn Disease.

The 233 *Observation, or history, of famous and* Rare Cures, &c.

Immoderate flux of Courses, and a Dropsie beginning.

THe honored Wife of the renowned Msr. *de Burcin*, President of the Senate of *Grenoble*, for seven months had a continual flux of her Courses, whereby she fel into a Cachexy, and the beginning of a Dropsie, with extream weakness. I was called to her, the 12. of *May*, 1644. She said Physick did her hurt, because purgations augmented her flux, and so did al things prescribed to open obstructions. But I did prescribe her a purge of the Decoction of Plantane and Myrobalans, wherein half a dram of Rhubarbe was dissolved; she was gently purged by this Medicament, used for three daies together, and the flux also of her courses was almost stopped, also her perpetual thirst, was very much diminished. But to open Obstructions, and to bring away the whol surplusage of Humors, these following pils were prescribed.

Take *Chalybs prepared with Sulphur, one ounce; Senna, Rhubarb, and Agarick Trochished, of each one dram; Species of Diarrhodon Abbatis, half a dram. With Oxymel simple make a mass of pils, of which let her take one dram, three hours before meat, walking upon it.*

These pills being continued fifteen daies together, she was freed from the immoderate flux of her Courses, and from the Cachexia. And to strengthen her Liver, she used conserve of Roman Wormwood many daies together. And four or five daies before the coming of her courses, least they should flow immoderately, whence she might happen to be exceedingly weakned,

ned, ſhe took in the morning eight grains of Spiknard, with fifteen grains of Crocus Martis aſtringent, made into pills, with Conſerve of Roman Wormwood, and ſo the immoderate flux of her Courſes was ſtopped.

The 234 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Tooth-ach and a ſwelling on the upper Jaw.

THe 15. of *Auguſt*, 1644. I was taken with a pain in my teeth which was followed by a Tumor on my upper Jaw, on the left ſide, with Inflamation and great pain. After blood-letting from the ſame ſide, I apply to the part, al day long, a Cataplaſme of Crums of bread, which I renewed every third hour, and before the Application, I nointed the part with Roſe water wherein Sal Saturni had been diſſolved. The following night, when the pain continued, I took three grains of Laudanum, whence I ſlept quietly, whereas I had not ſlept the night before, and my pain was allaied, and the fluxion ſtopped; and the Tumor appeared next day in the morning, much leſſened, and in the ſpace of that day it was for the moſt part diſcuſſed.

The 235 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Moſt Rebellious ſore Mouths.

A Certain Woman was troubled with moſt rebellious ſores in her mouth, which could not be Cured, neither by blood-lettings, many purgations, cooling juleps, nor anointing with ſpirit of Sulphur. She ſlept not anights, and could hardly eat any meat, becauſe al parts of her mouth were ful of little Ulcers. She took at night three grains of Laudanum, and continued the ſame remedy for three daies, and ſo the ſharp fluxion which fel into the parts of her mouth was ſtopped, and conſequently the ulcers of her mouth were in a few daies thorowly Cured.

The 236 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

A Malignant feaver.

ON the 14. of *Auguſt*, my wives maid, began to be ſick of a Malignant Feaver, which brought her to ravings and convulſions. And becauſe ſhe was poor, and loath to be at charges, ſhe was cured with little Phyſick, after this manner.

She was four times let blood, Cupping-Glaſſes were frequently applied, moiſt and dry; her drink was a Decoction of Sorrel Roots, wherein I diſſolved twice a day, one dram of Sal-Prunellæ, and fifteen drops of Spirit of Sulphur. She took frequently in her broaths one ſcruple of Bezoardicum Minerale. On the eleventh day of the piſeaſe, I gave her two drams of Spirit of Soot, in Carduus water, and ſhe did ſweat a little; on the twelve day I gave her three drams of the ſame ſpirit, with the ſame water, and ſhe did ſweat plentifully; and the ſame day the Feaver abated, the ravings and Convulſive motions ceaſed, and ſhe was wel within a few daies after.

The 244 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Catarrhe falling upon the Lungs.

THe 14. of *October*, 1644. The South winds having blowed for an whol month together, that hot and moiſt ſeaſon was changed into a cold and dry, viz. The North wind blowing, by means whereof, though for two dai[illegible] immediately preceeding, I had been purged by a Laxative ptiſan and manna, a Deflux of Rheum fell upon my Lungs, which cauſed me to cough, fetch my wind ſhort, and to Wheeze a little. For two daies it did not much moleſt me, ſo that I went about the City nevertheleſs. The third day, my diſeaſe growing worſe, I took an ounce of Manna amd four grains of the Roſin of Jalap, with which I was but little purged, and therefore I took the ſame night ſome Laxative ptiſan with Manna, and was plentyfully purged in the Courſe of that night. On the fourth day I dined lightly, and five hours after dinner, I took the ſame Laxative ptiſan, and it wrought pretty well upon me that night. On the fift day, at bed time, my Catarrhe being not yet gone though much abated, I took three grains of Laudanum, preſantly my Catarrhe ceaſed, and I ſlept quietly al that night. Yet, becauſe on the ſixth day in the morning, a ſmal Wheezing might be heard in my breſt, with a light ſhortneſs of breath, I was reſolved to waſt away thoſe reliques by faſting. Wherefore keeping in my bed al that day, I took only one meſs of bredath at dinner time, and ſome Barley-broath at Supper time, I ſlept quietly al night, and my Catarrhe was quite diſcuſſed. Howbeit, a ſlight pain aroſe on my right Jaw-bone, which was quite taken away, by a flux of blood out of the Gum where the Tooth was Rotten: now there came away drop by drop, about three ounces of blood mingled with flegm.

Of a Spot in the Eye.

THe Daughter of Mſr. *de Merviel*, eight years old, having long had ſore Eyes, a very thick ſpot was left in her Eyes, which poſſeſt the middle of the Iris. Which was conſumed with Roſewater, wherein Sal Armoniack was diſſolved in ſuch quantity, as that it did a little ſmite the Tongue, and it was kept two or three daies in a Copper Veſſel, til it got a blew color.

The 246 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Catarrhe with hoarſneſs.

ON the 7. of *November*, 1644. The Southwind blowing, I was taken with a Catarrhe, and an Hoarſneſs. The ſecond day I kept my bed, and took nothing al day but two meſſes of barley broath at Dinner and Supper time. The third day I took a Laxative ptiſan, with an ounce of Manna. The fourth day I reſted, and my Hoarſneſs was very much abated. On the fift I had a dry Cough, which made me open a Vein. On the ſixth my Cough continued, therefore I took twenty grains of Calomelanos, and eight grains of Roſin of Jalap. The Medicament wrought not al day, only towards night it gave me two very ſmal ſtools. Howbeit my Cough was quite diſcuſſed.

The 247 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Difficulty of Breathing with a Cough and hoarſneſs.

THe Wife of Mſr. *Dortoman*, a renowned Advocate, was troubled with a Cough, Hoarſneſs, and difficulty in fetching breath for twenty daies together: in the Courſe whereof, ſhe was thrice purged, with an infuſion of Senna and an ounce of manna. Being called to her in the beginning of *December*, 1644. I preſcribed her to be let blood, nine ounces; her blood was very corrupt, then ſhe uſed ſeven daies together pectoral broaths, in the firſt and laſt whereof, Senna was infuſed and Manna diſſolved. Nevertheleſs a Cough and ſhortneſs of breath, though not ſo violent as before, continued; becauſe her Lungs were weak and her Brain very moiſt. In which reſpect the by-ſtanders propounded the uſe of a Sudorifick Decoction, which I ſaid I did not diſlike, but that we would firſt try one Remedy more, moſt effectual to Root up ſtubborn fluxes. Wherefore I preſcribe her twenty grains of Calomelan, and ten grains of Roſin of Jalap, with which Medicine, ſhe was ſeven times purged, and quite freed from her defluxion, ſo that ſhe needed no more Phyſick.

The 248 Obſervation, or hiſtory, of Famous and Rare Cures, &c.

An old Cholick Pain and Looſneſs.

Antonia de Paraviſol, an Honeſt Virgin twenty five years of Age, was troubled eight months together with a pain in her Belly not unlike the Cholick, accompanied with a Looſneſs, with which ſhe voided a Flegmatick and Cholerick matter, as alſo ſome quittoſh ſtuf. She had taken very little Phyſick, til brought to the laſt caſt and ſuppoſing her ſelf to be at deaths door, ſhe implores my Aſſiſtance. I preſcribe in the firſt place to aſſwage the pain which was cruel and continual, three grains of Laudanum, with one dram of conſerve of Roſes, whereby her pain was ſtopped, at leaſt for a time, and her Looſneſs abated. Afterwards to aſſwage the ſaid pain, to open obſtructions and cure that ſtretching of her Belly, which might be perceived by the Hand, as alſo to abate her Looſneſs, I preſcribed the Medicaments following.

Take *Roots of Marſh-mallow, two ounces; Leaves of Mallows, Pellitary of the Wall, Violets, of each two handfuls. Seeds of Line and Fenugreek, of each one ounce; Flowers of Chamemel and Melilote, of each two pugils. Make of al a Decoction, wherewith let the pained place be fomented, morning and evening.*

Take *Oyntment of Altbea, two ounces; Oyl of Chamemel, and Lillies, of each one ounce. Make a Liniment, and therewith anoint the ſaid part after Fomentation.*

Take *Roots of Graſs, aſparagus, butchers Broom, of each two ounces. Leaves of Egrimony, Burnet, Mouſe-Ear, and Plantain, of each one handful. Tamarinds, one ounce; Crude Tartar, half an ounce. Citrine Myrobalans, two drams. Boyl them to one pinte. Make an Apozeme for three morning doſes, adding to each doſe half a dram of Rhubarb, and an ounce of Syrup of dried Roſes.*

With theſe Remedies her pain was ſo abated and her Looſneſs, that ſhe ſuppoſed ſhe was well-nigh perfectly Cured; but after fifteen daies the Symptomes returned with the ſame vehemency. Being called again, I preſcribe as follows.

Take *Rhubarb poudered, one dram; conſerve of Roſes three drams. Mix them into a Bolus; Let her take it in the morning, and order her ſelf accordingly.*

Take *Terpentin waſht in Plantain water three drams; Rhubarb poudered, half a dram. Make them into a Bolus. Let her take it three mornings together, after the uſe of the former.*

With theſe two ſlight Remedies ſhe was perfectly Cured.

The

A Long tertian Ague.

A Girle ten years old having had a Tertian Ague three months together in the Hoſpital, after many Remedies tried in vain, took the 8. of *January*, 1645. twelve grains of my Feaver-frighter, it being her wel day: ſhe had five ſtools, her fit came that day, out of its uſual courſe; the next day there was no appearance of the Ague, nor ever after. I ſhal ſay more touching this Feaver-frighter, at the end of this Century.

The 250 Obſervation, or Hiſtory, of famous and rare Cures, &c.

A Quartan Ague.

A Woman fourty years old, lying ſick in the Hoſpital, had been troubled four months with a Quartan Ague. On the 10. of *January*, 1645. She took twenty grains of my Feaver Frighter, had ſix ſtools, and the next day inſtead of her fit, ſhe had certain pains and diſquietneſſes, without any ſhaking or coldneſs foregoing, and without ſenſible heat. On the day of the following fit, the ſame unquietneſſes returned, without any fit. The day after ſhe was purged with a Medicament of half an ounce of Senna, three drams of Diaphenicon, and one ounce of Syrup of Roſes: it gave her ſeven ſtools, and after that ſhe neither had Ague fit, nor any unquietneſs.

The 251 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan Ague.

THe Wife of *Lewis Lauter* a Tailor, twenty three years old, dwelling near the laten gate, and having been troubled with a double Quartan Ague, five months, came to me the twenty ſeven of *January*, 1645. to whom I give on the twenty eight day, twenty grains of my Feaver-frighter, or Ague-Chaſer, in the morning, ſeeing the firſt fit was expected about the evening, ſhe had ſix ſtools, and vomited once about noon, three hours after ſhe had taken breath, and when ſhe began to dine. At night the fit came again without cold, but the heat was longer than ordinary. The Second fit came not the day after, nor any more ever after.

The 252 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

The Dropſie.

A Beggar-man called *Rafeau*, was troubled with a Dropſie three Months, whereby his belly grew exceeding big, and becauſe his poverty would not afford him Phyſick, he uſed for a month together by the advice of a Countrey Woman, a Decoction of the Roots of Knee Holme or Butchers broom, and was purged twice or thrice with an infuſion of Senna, and with theſe Remedies alone was perfectly Cured.

The 253 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

An Hectick feaver with fear of a Conſumption.

THe Daughter of Mſr. *Paſchal*, four years old, had for ſix months together an Hectick Feaver, with a Cough and ſpittle ſomwhat rotten, whereupon ſhe was deemed to be in a Conſumption, and at laſt given over by her ordinary Phyſitian, who openly profeſſed that it was an Hectick in the third degree. Her Mother in this deſperate caſe, made her keep a thin Diet, whereas before ſhe did Eat ſolid meats, for ſhe took nothing but broaths al the day long, and at night ſome barley Cream. And twice a week ſhe gave her the infuſion of two drams of Senna in a Decoction of Cichory and Bugloſs made with Annis-ſeed, into which Decoction being hot, the Senna was put, and continued therein al night without any other heat. With this plain way of Cure ſhe was reſtored in a months ſpace.

The 254 Obſervation, or hiſtory, of famous and Rare Cures, etc.

A Quartan Ague.

THe Mother in Law of Mſr. *Athanaſius*, Superviſor of the Salt pits, fifty two years old, had a Quartain Ague ſix months together, and on the 5. of *February*, 1645. ſhe took twenty grains of my Ague-frighter, had two ſtools, and twice vomited bitter gear after her broath. It was the day before her fit, which returned the next day, at the accuſtomed hour, in the ſame form and duration. But the next fit day, there was no appearance of the Ague, nor ever after.

If thou intendeſt to be able to know and Cure al diſeaſes, read the Idea of Practical Phyſick, *Riolanus* Guide to Phyſick and Chyrurgery. And my Practice of Phyſick.

The 255 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

Ludovica Bevonſe, forty five Years old, dwelling near Holy-croſs Church, and troubled with a quartan Ague four months together, took on 8. of *February*, 1645. twenty grains of my Ague-chaſer, the day before her fit, which firſt made her vomit much very bitter Choller, three hours after the taking of the Medicine; and after her vomiting ſhe took broath, which a little after ſhe vomited up again with Choler not ſo bitter as the former; and half an hour after ſhe voided by ſtool ſtore of Humors, having only one ſtool. The day following ſhe had a Fit like the former; and from that time forward the Ague left her.

The 256 Obſervation, or hiſtory, of famous and Rare Cures, &c.

A Quartan ague.

THe Daughter of Mſr. *de Boirargues*, Controller of the Court of Accounts, Subſidies, and Exchequer, fifteen years old, having had a quartan Ague three months together; after many Remedies tried in vain, ſhe took the 9. of *February*, 1645. twenty grains of my Ague-frighter, the day before her Fit; ſhe had ſix ſtools: the day after her fit came three hours later than ordinary, and was much ſhorter than formerly. The ſecond Fit came not, but inſtead thereof ſhe had ſome diſquietneſs. The third Fit came again, but very little. The fourth was greater. She took the Medicine again the day before the fift Fit, which came ſomwhat leſs than uſual, and after that ſhe never had it again.

The

The 257 Obſervation, or hiſtory, of famous and rare Cures, &c.

A Quartan ague.

Jane Guillarde, a woman of forty years old, being troubled with a Quartan Ague ſix months, on the 15. of *February*, took twenty grains of my Ague-Frighter, the day before her Fit. She had ſix ſtools, and did not vomit. The day after, her Fit came, but was ſhorter by half; but ſhe never had it more.

The 258 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan Ague.

A Woman fifty years old, named *Motona*, Living near the Church-Wel, had a moſt vehement Quartain Ague, ſeven Months together. The 17. of *February*, 1645. She took twenty four Grains of my Ague-frighter, had three ſtools, and vomited once exceeding bitter Choler; her fits continued, but were much more gentle. After the third fit was paſt ſince ſhe took the Medicament, ſhe took thirty grains more of the ſame, and had twelve ſtools, and vomited twice leek-colored Choler mixt with Flegm, and was perfectly freed from her fits.

The 259 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

Andrea Delona, a maid of 13. years old, the daughter of *James Delon*, Gardener to the Friars Minorites, having had a quartan ague four months, took on the ſeventeenth of *Februa.* 1645. twenty grains of my Ague-frighter. She vomited twice, but had no ſtool. Her fits continued as before. After the third fit, viz. the three and twentieth day of the ſame month ſhe took twenty four grains of my Ague-frighter; it purged her five times by ſtool, but not at al by vomit, and ſo her diſeaſe was quite cured, ſhe never having any fit afterwards.

The 260 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

Mary Delona, ſiſter of the foreſaid maid, being eleven years old, had the ſame ague as long; ſhe took the ſeventeenth of *Feb.* 1645. ſixteen grains of my Ague-frighter, had three ſtooles the ſame day, and two the day after, and was perfectly cured.

The 261 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

THe 2. of *March*, 1645. *Antony Bayle*, a man of 50. years old, dwelling neare St. *Anns* Church, and having had a quartan ague five months, took twenty grains of my ague-frighter, had three ſtools without any vomiting or ſtomach ſickneſs, and without any trouble. The day following her fit came but half ſo big as formerly, and after that ſhe never had it more.

The

The 262 Observation, or History of Famous and Rare Cures, &c.

A Quartan Ague.

THe moſt renowned Mr. *de Leſpine*, Councellor in the ſupream Court of Accounts, Subſidies, and Exchequer, having had a quartan Ague ſeven months; having tryed many remedies in vain, and being fallen into a cachectick diſpoſition, which made him tear a dropſie, becauſe in his fits he had drunk abundantly, and would drink ſix or ſeven pints of water; took on the eighth of *March* 1645. twenty grains of my ague frighter, wherewith he was purged at leaſt twelve times in twenty four hours, and he vomited three or four times: all which he did endure without trouble. On the ninth day of the ſame month, the fit which had wont to return about noon, came not til ſeven in the evening without cold, and with leſs heat intenſively, but more extenſively. The tenth day which followed the fit he was wel. On the eleventh day in the morning he was taken with an extream pain, very like the colick, which poſſeſſed his left hypochondrium, with bleeding at the note, whereby he voided about four ounces of blood. The pain being ſometimes more intenſe, other whiles more remiſs continued al day, with a continual deſire of going to ſtool. Howbeit now and then he voided ſome evil humors; about evening, he had a troubleſome provocation to make water, and his urine ſcalded him at the end of making the ſame. On the twelfth day, he was wel al day long, and his fit which was then expected returned not. On the thirteenth day he made many urines extream black like ink, with a thick and very black ſediment. On the 14. day a pain in his left hypochondrium came again, coming by fits. It became more intenſe the fifteenth day, and then it was plain to diſcern, that the pain was in his ſpleen, by reaſon of the ſwelling out and puffing up of that part, which did not before appear. Fomentations were applied to the part affected, and clyſters were injected, whereupon followed a gentle Looſneſs, the waies being opened, and the matter made thin, which being retained did cauſe the pain. On the ſixteenth day he took an infuſion of two drams of Senna, with a ſcruple of ſalt of tartar. He had three ſtools: but taking the ſame again the next day, he had five ſtools and was thereupon better. Howbeit the daies following he had ſome ſhiverings, viz. on thoſe daies in which his fits were uſed to come til on the third fit-day, he had a perfect fit, but lighter than the former. He took again the Infuſion of Senna two daies together, wherewith he was indifferently purged, and yet his fit came like the former fits. On the firſt of *April* he took my feaver frighter again in the ſame quantity as before, he had three large ſtools, but never a vomit. On the ſecond day a fit came like the former. On the fifth day of the ſame month, the expected fit came not. On the eight he had again a very ſmal fit. On the eleventh he had a fit ſtronger than the former, ſo that the feaver ſeemed to return to its former ſtate. Therefore on the fifteenth day he took my ague-frighter again, the doſe being doubled, which purged him abundantly two daies together, and from that time forwards his fits never returned.

The 263 Observation, or History, of famous and Rare Cures, &c.

A Baſtard pleuriſie.

ON the eighth day of *March*, 1645. the wind ſuddenly paſſing out of the South into the North, and making the weather very cold, I begun to be pained in the mornings with a moſt grievous pain in my left ſide and my breaſt, from whence extream ſhortneſs of breath did ariſe. Which I preſently endeavoured to diſcuſs with hot fomentations, though a feaver began to ſhew it ſelf, which was nevertheleſs very ſmal. The fomentations made my pain more violent, whereupon I ſend for the Chyrurgion, and take away ten ounces of blood from my arme on the ſame ſide, the blood ſeeming to be very hot. Two hours after blood-letting, and an hour after I had ſupped ſome broath, I received a Clyſter. After I had taken broath the ſecond time, I was again let blood to twelve ounces. For though the pain ſeemed to ariſe chiefly from wind; yet I feared leaſt the grievouſneſs of the pain ſhould draw a fluxion to the part, which the year before had been twice diſeaſed with a true pleuriſie. Herewith the pain was

ſomwhat

what abated. Yet because it continued, the day following I took another Clyster, made of an emollient decoction, with an ounce of diaphenicon, and four ounces of Aqua benedicta, by which my belly was plentifully loosened, and I had one vomit; also while I was vomiting, the wind contained in the parts about my chest was suddenly expelled, so that after my vomiting, I felt my self perfectly freed from the pain of my side and Breast, and had no need of other remedies.

The 264 Observation, or History, of famous and Rare Cures, &c.

A Quartan ague.

ON the twelfth of *March*. 1645. *John Rey* a Lantern maker, dwelling in *Lapeyre* street, and troubled six months with a Quartan Ague; took twenty grains of my Ague-frighter, and was therwith twice purged by stool, and vomited many wheyish and cholerick excrements. The day following, which was the thirteenth of the same month, his fit came at the wonted hour, but less than formerly. On the sixteenth day, instead of a fit he had a small Heat without any cold. On the nineteenth day when his fit was expected there was no appearance of it, and from that time forward he had it no more.

The 265 Observation, or history, of Famous and Rare Cures, &c.

A Quartan ague.

ON the 17. of *March*, 1645. a Woman of forty years old, named *Mary Courbiague*, dwelling against the House of the Lord of *Argencour*, a poor body, and keeping an exceeding bad diet, and frequently drinking store of wine, had been two years troubled with a Quartan ague; she took twenty grains of my Ague-driver, being no way prepared thereunto, for she would take no preparatives, only she was let blood a few daies before. She had twenty stooles, because her body was very impure, and she vomited twice or thrice; the day after she had a light fit, and never any more.

The 266 Observation, or history, of famous and rare Cures, &c.

A Quartan Ague.

THe same day viz. the 17. of *March*, a woman forty years of age, called *Tonette Boxsiere*, the widow of *John Alquier* a Taylor, dwelling near the foresaid *Mary*, and having been troubled seven months with a quartan Ague, took twenty grains of my ague-frighter, was seven times purged by stool, vomited four times, and the day after in the morning she had three large stools more. The same day her fit which was to come at three in the afternoon, came after midnight, but with a Light cold and a light Heat, three or four hours, whereas before the fit was wont to continue most violent, for fourteen hours together. And after that she had no more fits.

The 267 Observation, or History, of famous and Rare Cures, &c.

A double Tertian.

PEter *Palat*, 15. years old, lying at the sign of the silver Eagle, being troubled forty daies with a double tertian, after blood-letting and purgation divers times repeated, and many juleps given him, by order of another Physitian; he took the eighteenth of *March*, 1645. Fourteen grains of my Feaver-frighter, was purged six times by stool. He took the medicine

at

at four a clock in the morning, notwithſtanding his fit was to come at eight; at which time it came after the old manner, but he never had fit after that.

The 268 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

THE moſt noble prince *Janethinus Doria* of *Genoa*, Admiral of the Spaniſh Fleet, his Gally being by tempeſt Caſt upon the ſhoares of *Catalaunia*, he was taken by our ſoldiers and brought into the Caſtle of *Montpelier*, where abiding two years, the ſummer laſt paſt he fel into a tertian Ague, which held him four months, ſometimes in manner of a ſymple tertian, other whiles like a double tertian, notwithſtanding al the Remedies preſcribed by his ordinary phyſicians, and others called to conſult with him, amongſt whom I was ſomtimes called. At laſt the winter coming in, his tertian ague turned into a quartan; for three months together, two phyſicians one after another did their beſt endeavour to cure the ſame. At laſt the diſeaſe continuing, he implored my help, and I gave him on the 17. of *March*. 1645. twenty grains of my feaver-frighter. Three hours after he had taken the medicaments he twice vomited wheyiſh humors, and went not to ſtool al day. About midnight he had one plentiful ſtool, and the next day two. The ſame day his fit was expected at ſix in the Evening, but it came not then, nor ever afterwards, and he attained thereupon his perfect health.

A Catarrh with a Cough.

THe 4. of *April* 1645. whenas by reaſon of a long Catarrh, I was vexed with a troubleſom cough, which was moſt violent in the night, and I purged divers times to no purpoſe. I took three grains of Laudanum, which allayed my cough. But it returned two daies after, through injury of Air, which was one day very hot, and another day upon the blowing of the north-wind very cold. On the eight day of the ſame month I took two grains of Laudanum, and my cough went quite away.

The 270 Obſervation, or hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

Mr. *Pichory*, a Councellor in the Court of Accounts, Subſidies, and Exchequer, was freed from a quartan Ague by a very rare chance. Having had a Vein opened, a little after the Orifice was cloſed, and his Arm bound up, little drops of tranſparent water began to flow out of the wound, which ſoaked through the Rowler, and made him often to change his ſhirts. The ſaid flux continued for many daies, till the Quartan Ague was quite gone. It is obſervable, that many years after he died of a Dropſie.

For the Knowledg and Cure of all Agues or Feavers, read my Practical Phyſick; and the Idea.

The 271 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Obſtruction of the Oeſophagus.

A Certain hunger-ſtarved Countryman, eating of a boiled hogs-foot, ſwallowed a great piece thereof, in the middle of which there lay a bone covered with fleſh. Which by reaſon of its

its greatneſs and clamyneſs ſtuck in his gullet, and was glewed thereunto, ſo that neither vomiting nor ſupping down of any liquor could remove it. For two dayes he remained in this condition, in ſo great extremity, that he ſeemed ready to give up the ghoſt. A certain Chyrurgion doubled the end of a piece of wire like a fiſh-hook, and thruſting it far down his throat, with the Hook he took hold of the piece of fleſh, and by main force pulled it out.

The 272 Obſervation, or hiſtorie, of famous and rare Cures, &c.

A Squinſie.

A Man being taken with a true ſquinſie, had the top of his throat ſo ſhut up by the inflamation that he could ſwallow nothing. And while Remedies might be uſed, to reſtore his ſtrength, that he might be able to bear plentiful bleedings and other Remedies, a Catheter was put into his throat, and a Syringe joyned to the Catheter, by which meanes they ſquirted broaths into his throat, which went down into his ſtomach, as alſo other remedies, by help whereof he was delivered from death.

The 273 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Jaundize.

A Jeſuite was troubled with the Jaundice and a weakneſs of ſtomach, by reaſon of Choler flowing back thereinto, whereupon he frequently vomited. The Colledg Apothecary gave him three ounces of juice of Fumitory. At the firſt giving the vomiting was ſtaid, and the Remedy being continued for ſome daies, the jaundies was quite cured. This jaundice was cauſed by an hot diſtemper of the Liver, joined with obſtruction of the choler-paſſage. Now fumitory is very good in both Caſes, whoſe vertues are much more potent in the juice, than in Decoction.

The 274 Obſervation, or Hiſtory, of Famous *and Rare Cures, &c.*

A Cruel Catarrh with divers Complications of Feavers.

THe firſt of *May* 1645. I was called to the Lady of *Beaufort*, lying ſick at her mother Madam *du Pelous* Houſe in the Caſtle of *Bayart*, not far from *Rhodanus*. She was thirty five yeares old, of a ſanguine complexion. For an whole month ſhe had been troubled with a cruel Catarrh, with a continual Feaver, to which were added fits of an ague, which came twice a day, viz. at ten in the morning, and ſix in the evening. With theſe a moſt vexatious cough did trouble her night and day, with which ſhe brought up abundance of crude flegm, and could take no reſt. In a months time ſhe had been five times let blood by order of Dr. *Chaumel*, her ordinary and moſt expert phyſitian; ſhe had been thrice purged, and many other remedies had been uſed, of which one did her the moſt good, viz. a bolus of three grains of Laudanum, with conſerve of Roſes, which for twelve hours did quite ſtop her Catarrh, and cough, and ſhe ſaid ſhe was cured, by reaſon of the great eaſe ſhe found. As ſoon as I ſaw her, in conſultation with two other Phyſitians, I judged her diſeaſe to be a continual Feaver, complicated with two double tertians. As for remedies, that ſhe was to be let blood in her left arme, ſeeing ſhe had a pricking pain in her left ſide, with a very ſtrong Feaver, blackneſs of her tongue, and a continual Cough. On the firſt therefore of *May*, about evening ſhe loſt nine ounces of blood, and a cooling and thickning julep was given her. She paſſed the night with ſomwhat leſs trouble, the next day in the morning which was the ſecond of *May*, ſeeing the Feaver continued yet ſtrong ſhe was again let blood eight ounces, whereupon her feaver was abated, and the pain of her ſide went away. About evening the ſame day, ſhe complained of a pain in her right ſide,

which growing ſtil greater and greater, was very ſore about nine a clock at night, wherefore we were compelled the ſame hour to let her blood in her Arme on the ſame ſide, whereupon her pain was abated, and in the Courſe of that night went quite away, howbeit the night was troubleſom, void of ſleep, and ſhe did cough almoſt continually. Her Ague fits went quite away; one after a purging medicament, the day before I came to her; the other by reaſon of her former blood-letting: but her continual feaver ſtuck by her, after the ſame manner as formerly. On the third day of the ſame month, ſeeing her cough and Feaver were vehement, we gave her before noon, half the foreſaid bolus made of three grains of Laudanum, which was ready made, which within an hour did ſtop her cough quite, and ſhe was in a good condition til midnight; howbeit her cough returned by fits, wherewith ſhe voided thick, clammy, and very putrid flegm; ſo that much of her ſpittle was yellow and green, the Feaver continuing very violent. And becauſe in the evening, the Cough did exceedingly trouble her, and ſhe was extream unquiet, the other half of the bolus was given her, wherewith ſhe paſt the night quietly, but ſlept very little. On the fourth day in the morning, her cough returned, but it was very free, and ſhe brought up much putrid matter, ſome of which was a little ſprinkled with blood. After two hours, her cough ceaſed till noon, and then it came again bad enough, and when it had held her a great while, and much afflicted her, and her ſpittle appeared more crude, ſo that it ſeemed to come from a new defluxion, the halfe of another bolus made of three grains of Laudanum was given her, with which her cough was again allaied. Her belly was looſe in the morning, and ſhe had two ſtools of many cholerick and greeniſh excrements, whereas before her body was alwaies bound, and Clyſters wrought very little. About evening a Clyſter was given her of a decoction of half an ounce of Senna, with Catholicon and diaphenicon, of each one ounce; which gave her four ſtools, and in her laſt ſtool ſhe voided much flegm of a greeniſh color, like that ſhe was wont to bring up by coughing. After ſhe had voided her Clyſter, ſhe ſlept quietly three hours, and ſaid ſhe had not ſlept ſo ſweetly al the time of her ſickneſs. At ſeven clock in the night her cough being ſomwhat returned, ſhe took a fourth part of the foreſaid bole, which did not contain half a graine of Laudanum, yet it ſtopt her cough, and ſhe reſted quietly that night. On the fift day in the morning, ſhee took a purging medicament of half a dram of Senna infuſed in a pectoral Decoction; wherein being ſtrained, two ounces of Manna were diſſolved. And the ſame day I left her, having ſeriouſly debated with her ordinary Phyſitian, couching what was afterward to be done, and committed the ſame to writing. Wherewith, in the ſpace of twenty daies after my departure, ſhe was reſtored to her former health. The cheiſe of thoſe remedies were pectoral broaths, continual blood-letting, and purgation repeated. But the Bolus of Laudanum bore away the Baies, which being given her many daies in a ſmal doſe, al the ſymptomes, were thereby allaied.

The 275 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A long ſwelling of the right Foot.

A Noble Matron, Wife of the moſt noble Msr. *de Langon*, fifty yeares of Age, had a flegmatick tumor with extreame pain in her right foot, the original whereof was thus. Travailing upon a time on horſe back, the Horſe ſhe rode on fel upon the ground, and in his fal tumbled on the right foot of the ſaid Matron, and by the blow her heel was depreſſed, and thruſt from the inſide of her foot outwards. Whence grievous pains followed, ſo that ſhe could not ſtir. Many Chyrurgions and Empricks had divers times vexed her, nor could the diſlocated bone be any waies reſtored to its place, whereupon ſhe was continually tormented with pains, inability to go, and a flegmatick tumor in her ſaid foot. She had been four months in theſe ſtraites when I viſited her, which was the twentieth of *May*, 1645. Diligently viewing and conſidering the part affected, I find a ſmal diſlocation remaining, which had contracted a Callus, and was therefore incurable. I found that the cheiſe pain was in the hollow of her foot, not in the part diſlocated, becauſe the nerves in that place, were filled with humors. And therefore to cure the ſame, the flux of humors to the weak part was to be ſtopped; the humor al-

ready

ready in the ſaid part was to be diſcuſſed, and the part it ſelf to be ſtrengthened. Al which was accompliſhed in eight daies ſpace by theſe following Remdies.

Take *Salſa parilla four ounces. Fountain water four pints; infuſe them twenty four houres, and then let them boyl til half be conſumed, adding towards the end Senna one ounce, turbith and Hermodactils of each two drams. Let her take half a pint of the ſtrained liquor, in the morning eight daies together.*

Take *Oyl of wax one ounce. Noint the part affected therewith morning and evening: and then app'y this following plaiſter.*

Take, *Of the Maſs of Diapalma plaiſter diſſolved in harſh red wine, til the wine be conſumed, half a pound. Red roſes, Myrtles, Maſtich and Tartar of Red wine, of each one dram. Groundpin and Chamemel ponderd, of each two ſcruples, make al into a Maſs, and thereof ſpread plaiſters, and lay them al over her whol foot, after nointing. With theſe things the ſwelling and pain were taken away, only ſhe was forced to halt, becauſe of the diſlocation of the Bone.*

The 276 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Meazles.

THe foreſaid Matron, Madam *de Langon*, was taken with a continual Feaver, with a Cough and Hoarſneſs, the 26 of *June* 1645. For three daies together, the ſymptomes were not very urgent; and therefore ſhe paſt that time, without any uſe of Phyſick. On the fourth day her Feaver becoming more violent, ſhe was let blood, and a cooling Julep was given her. The ſame day, her whol body was covered with meazles. I being called the fift day, I appoint her towards the Evening a julep of equal parts of Meadow-ſweet water, and of Carduus water, with twenty grains of Bezoardicum minerale. Two hours after ſhe had taken her julep, ſhe did ſwear abundantly; after her ſweat ſhe had a large ſtool. The day after in the morning, the ſame julep was repeated, and ſhe did ſweat more plentyfully after two hours, and her feaver went quite away, and the Meazles were al wel near diſcuſſed.

Stone in the Kidney.

A Certain Man fifty years of Age, being very much ſubject to pains in his kidneyes, took for twelve daies a decoction of the Root of Aſſes Thiſtle and Lycorice, wherewith he voided many ſtones and much gravel, and was afterwards, many years free from his Infirmity. There was half an ounce of the Thiſtle root, and two drams of Liquoris in every doſe.

The 278 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The Diſeaſe Cholera, in a Malignant tertian Ague.

A Certain young man, of a Cholerick Conſtitution, in the middle of the Summer, fel into a tertian Ague, which in the two firſt fits ſeemed pretty gentle, but in the third fit, ſo great was the malignity and fierceneſs of the Cholerick humor, that a vomit and frequent loofneſs being thereby raiſed, with mighty weakneſs, the patient was in extream danger of his life. Being ſent for I preſently preſcribe him a clyſter of broath, with three drams of Confection Alkermes, and a dram of new Treacle, wherewith his vomiting and loofneſs were preſently ſtopped. And becauſe in theſe malignant Feavers, thoſe carnel ſymptomes are wont to return every fit, kil the patient in the ſecond or third fit; for prevention thereof, I ordered him a thick-

ning diet, and to take four grains of Laudanum two hours before his fit; and ſo the foreſaid ſymptomes did not return, the fit was light; and the Cure was finiſhed with cooling, thickning, and antidotary julepa.

The 279 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Suppreſsion of Childbed Purgations

A Certain curious woman, three dayes after ſhe was brought to bed, deſiring to help the overwidneſs of her genital parts, applied thereto aſtringent medicaments, whereby her Child-bed purgations were ſtopped, and blood was ſo multiplyed in her womb, that preſſing upon her rectum inteſtinum, and the neck of her bladder, it hindred al evacuations, and her belly was ſwelled like a bottle. Being called to her, firſt I cauſe a Catheter to be thruſt into her bladder, and ſhe voided abundance of urine, after that I preſcribe her a ſharp peſſary to be put into the neck of her womb, wherewith her purgations came away plentifully; and laſtly ſhe had a laxative Clyſter, wherewith ſhe voided much dung; and ſo al her paſſages were opened.

For al Womens diſeaſes carefully peruſe *Johnſtons* Idea, and ſpecial *Riverius* on that ſubject in Engliſh.

The 280 Obſervation, or Hiſtory of Famous and Rare Cures, &c.

Night-ſweats.

A Man forty yeares of age, of a melancholick complexion, was a long time troubled with night ſweats, which did continue four or five daies, and then ceaſed. And they returned twice or thrice a month. It was ſufficently apparent, that theſe ſweats did proceed from abundance of ſeroſity, which was collected between whiles, and by nature afterwards expelled in forme of ſweat. Wherefore being poor and not able to take much Phyſick, I advized him to take twice a month Jallap and Cream of Tartar, of each half a dram. Which having continued for the ſpace of three months, he was freed from his tedious infirmity.

The 281 Obſervation, or Hiſtory of famous and Rare Cures, &c.

The Whites.

A Woman forty yeares of Age, long troubled with the whites, after many remedies uſed in vain, was perfectly cured with a Laxative Ptiſan, which ſhe drank of every day for a Month together. This was the Compoſition of the ſaid Ptiſan.

Take Senna one dram; Coriander Seeds prepared and Lycorice one dram and an half of each. Fountan water in which three drams of Tamarinds, and a dram of Lentisk wood have been boyled, one Cup. Infuſe them cold al night, and in the morning let her drink the ſtrained liquor, two hours before meat.

The 282 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Of a Rupture of the Belly.

A Man fifty years of Age, had a moſt grievous Rupture in his Belly for four daies together, which could by no means be holpen. Being called to him, I find his pulſe very languiſhing, with coldneſs in his Hands and Feet. Alſo the part affected was very cold to feel to, ſo that I feared its Mortification. Among other Remedies I preſcribe a Fomentation of hot Aqua Vitæ,

Vitæ, to be applied to his Groin, which being continued for two hours, his Gut was gently reſtored to its place, and the Patient freed from eminent deſtruction.

The 283 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

An hyſterical Paſsion.

A Woman twenty years of Age, of a Cholerick Complexion, being troubled with Hyſterical fits, and having a ruddy Face: a Clyſter being given her of Water and Vinegar, ſhe was preſently freed, and needed no other Remedies.

The 284 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Diſentery.

A Certain man troubled with a Dyſentery, and refuſing al other Remedies, uſed only a decoction of Burnet made with water and butter, of which he drank a porrenger ful at morning and Night, and was Cured within three daies. Burnet is exceeding powerful to purifie the Blood, and has a light aſtriction with it; and therefore 'tis no wonder if it help the bloody flux.

The 285 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Scirrhous tumor of the Sweet-bread, with the hypochondriacal Diſeaſe.

THe moſt illuſtrious Mſr. *Audeyer*, Preſident of the Senate of *Grenoble*, being fifty ſeven years old, was tormented with moſt grievous and Contumacious Infirmities; the Nature whereof, that it may be more exactly diſcovered, I muſt ſet down a bed-role of thoſe Infirmities, briefly, with which he has conflicted, now this twenty years.

And in the firſt place, it muſt be known, that he is of a Melancholick and Cholerick complexion, of a thin and lean habit of body. And the firſt begining of his Maladies was Arthritick pains, which began to infeſt him by fits ſince the year, 1622. And after them followed, certain light fits of the falling-ſickneſs; which did firſt invade him about the year, 1626. and returned by fits, and within the ſpace of two years, they quite left him. At the ſame time his arthritick pains returned upon him again, which ſtirred not al the time he was ſubject to fits of the Falling-ſickneſs.

Now theſe Arthritick pains did vex him twice or thrice every year, ſo that ſometimes for two or three months he was naild to his bed, with very little help from divers Remedies which were uſed: eſpecially obſerving, that he had little good by often bleeding, rather that his pains were thereby alwaies made more ſharp.

But after that for eight years together, viz. from the year 1631. to the year 1639. he had been exerciſed with theſe pains by fits, he afterwards fel into more grievous infirmities, by reaſon of extream grief taken at the death of a noble Court Lady nearly allied to him in the bands of affinity and friendſhip, and very uſeful to him in his affaires. Whereby he was firſt taken with an involuntary motion of his Eye-lids, which continues to this very day, whereby his Eyes by fits are ſometimes opened, and then ſhut again; ſo that it is as it were a certain trembling of thoſe parts,

parts, with which trembling his hands and feet are many times taken, though very lightly.

At the ſame time he was vexed with pains in his joynts for the ſpace of three months, ſo that he was not able to walk for ſix months after. And being then at *Paris*, he uſed the Villecomitan waters by the advice of Dr. *Delormeus*, a renowned Phyſitian, which did exceedingly cool his ſtomach; and after that a very troubleſome and ſcabby itch did moleſt his whole body, which was preſently cured by an oyntment (of Mercury I Suppoſe) applied to his wriſts and the ſoles of his feet, by advice of Dr. *Labtoſſe* a Phyſitian of *Paris*; after which anointing there followed a mighty looſneſs for twenty dayes together with moſt greivous gripings of his belly; ſo that ſometimes he had a ſhew of the bloody flux. The weakneſs in the meantime of his feet and legs continuing, made him unable to go for an whol year. And at the ſame time his mind was both exceedingly buſied both in peruſing books and papers; and much agitated and toſſed with extream paſſions, and extraordinary ſadneſs at the il ſucceſs of his buſineſs, which may juſtly be thought to have occaſioned the following infirmities.

In the year 1640. he fel into a grievous ſhortneſs of breath and ſtraitneſs in his breaſt, with a certain pain in the region of his ſtomach; which ſymptomes did exceedingly trouble him for fifteen dayes together, and afterwards were much abated, but after ſome ſpace of time they ſeemed to gather new ſtrength, ſo that to this very day he is troubled with them, ſometimes more, and ſometimes leſs.

For the quelling of this ſtubborn diſeaſe, various medicaments have been by Sundry phyſitians preſcribed for four yeares together; various purgations, by Apozemes, potions, ſyrups laxative priſans, and the like. To which were added frequent blood-lettings, iſſues, Veſicatories, opening of the hemorrhoid veins, baths to ſit in, phyſical broaths, chlybeated whey, milk, ſulphurous mineral waters, as thoſe of *Borbon* and *Digne*; alſo vitriolated waters, as thoſe of *Orleance*; roborating and aperitive opiates, pectoral Syrups, and many other things, which being uſed at ſundry times in the ſpace of four years, did ſometimes much, otherwhiles little eaſe the patient. But his habitual diſeaſe did ſtil keep its courſe, and the illuſtrious patient is ſtil troubled with the ſame infirmities.

And I being called to viſit him about the beginning of *May*, 1644. I conceived the cure was to be directed to thoſe two remarkable ſymptoms fore recited, viz. the ſtraightneſs of his breaſt, and his difficulty of breathing, whoſe cauſes are firſt to be conſidered, wherein the greateſt difficulty, with extream obſcurity ſeem to lie. For that ſame ſhortneſs of breath, does not ſeem to be any true Aſthma or Tiſſick, nor to proceed from any defluxion out of his head into his Lungs, though ſome excellent phyſitians did go about to cure him as one aſthmatical; for he has no cough, no wheezing, nor does he ſpit up any flegmatick humor. Secondly, his difficulty of breathing, is in a moment ſtirred up by the procatarctick cauſes, and goes away in a moment; ſo that if he move himſelf a little more vehemently than ordinary, or is never ſo little angry, preſently he is troubled with ſhortneſs of breath, and by and by he attains his freedom of breath again. Thirdly, though he is chiefly troubled with this ſymptom in the evenings and nights, ſo that he is fain to ſit upright in his bed til midnight; yet as ſoon as he begins to fal aſleepe, his ſhortneſs of breath quite vaniſhes, and he laies his head down upon the pillow, and ſleeps the reſt of the night ſo quietly, and breaths ſo freely, that it is eaſie to ſee that there is a diſeaſe in his Lungs.

The Immediate Cauſe therefore of this ſhortneſs of breath, muſt be ſought elſewhere, viz. in his Belly, the Parts wherein contained, being troubled with greivous diſeaſes, contain in them the original of al his infirmities.

This is in the firſt place demonſtrated, by that ſenſe of pain and ſtraitneſs, of which our noble patient perpetually complaines, and ſhewes the ſeat thereof to be under his midrif, and about the region of his ſtomach: and as often as he is troubled with ſhortneſs of breath; that ſame pain, ſtraightneſs and oppreſſion (as he calls it) is ſtil encreaſed; and when the ſaid oppreſſion incteaſes, the ſhortneſs of breath comes: ſo that it is manifeſt that the one depends upon the other. And I, diligently enquiring into the cauſe of that pain, ſtraitneſs, or oppreſſion, and feeling the region of his ſtomach; I found it pliable enough, as long as I held my hand lightly upon it, but preſſing my hand harder, I perceived a certain hardneſs and Reſiſtency deep under the bottom of his ſtomach, which I conceived to be in the Pancreas or ſweetbread, which I conceive was ſwelled with an hard and ſcirrhous tumor, and ſeeing the pancreas is placed under the diaphragma, it is no wonder that it being ſwoln, ſhould compreſs that part which

which chiefly ſerves for reſpiration, and hinder the free motion thereof. Yet verily this cauſe found out by feeling, does not quite ſatisfie our doubt, for if the ſhortneſs of breath ſhould wholly depend thereupon, it ſhould be perpetual, and not come by fits, nor ſhould it be ſo eaſily cauſed by external occaſions, as commotion of the Body or mind. This reaſon verily, is ſo convincing, that ſome other cauſe muſt be joyned hereunto, viz. ſome thin matter, which is ſoon moved and ſoon quieted. Now what that matter ſhould be, and what ſeat it ſhould preciſely poſſeſſe, is not eaſily determinable. Yet I may with thoſe moſt excellent phyſitians who undertook the cure of the patient, aſſert the moſt probable reaſon to be, certain vapours and winds ariſing from his Spleen and ſtomach. Now this Commotion of winds and vapours in his ſtomach, is hereby eaſily diſcerned, in that the noble Patient, is wont to be more grievouſly troubled with the foreſaid ſymptoms, after his meales. For from hard and laborious digeſtion in a weak ſtomach, many winds are bred, which diſtending the ſtomach, compreſs the Pancreas and Midrif, whereupon greater ſhortneſs of breath is wont to ariſe, ſome hours after his Meals. Moreover, in the greateſt changes of the Aire, when the wind ſhifts from north to ſouth, the foreſaid ſymptoms are moſt troubleſome, becauſe by ſuch a mutation of the air rheumatiſmes are cauſed, which at other times were wont to cauſe paines in the joynts; and doe now flow into the inner parts, weakened by long diſtempers and obſtructions, and exagirate the bad humors in them contained; or becauſe by the moiſtneſs of the air, the humors are puffed up, and as it were fermented; whence a vapor ariſes, which ſeizing upon the diaphragma and Lungs, beeds a ſtraightneſs in the breaſt, and a difficulty in breathing.

If theſe Symptoms may be referred to any kind of diſeaſe, I conceive they belong to that ſort of melancholly, which is termed hypochondriacal; ſeeing they had their firſt original from a grievous and long ſadneſs, in a body hot and dry, whence aroſe a great maſs of melancholly humors, which bred ſtubborn obſtructions in his Hypochondria. Yea verily, and although the Scurvy which is frequent in northern Countries, is not uſual in this of ours; Yet this Diſeaſe ſeems to approach unto the nature of the Scurvy, ſeeing the two ſymptoms aforeſaid, viz. ſtraitneſs of the breaſt, and ſhortneſs of breath, are moſt frequent Symptomes of that diſeaſe, as *Severinus Eugalenus* has noted in very many obſervations; in whoſe Country that diſeaſe is moſt frequent: and in imitation of him *Daniel Sennertus* in his Book of the ſcurvy, Chap. 4. where he propounds the ſigns of that diſeaſe, and in the 9. Article of the ſaid chap. does ſo deſcribe theſe two ſymptomes, that he ſeemes to deſcribe the condition of our illuſtrious patient to an hair.

And although (as has been ſaid) the Diſeaſe called the Scurvy, is not uſual, and hardly ſeen in theſe Countries of ours; yet I, to neglect nothing in the Cure of ſo great a Diſeaſe, preſently uſed the ſpecifical Remedies belonging to that Diſeaſe, mixed with others, that were good to open obſtructions, and correct and expell melancholly humors. And therefore, in the firſt place, I gave him the juyces of Water-creſſes, Brook-lime, and Fumitory, for many dayes together, mixing therewith Salt of Tartar, and Spirit of Vitriol, alſo frequently infuſing a little Senna; and ſo thick, clammy, and tartarous Humors, were purged out by little and little. And ſomtimes I mixed the foreſaid juyces with Decoctions of Elecampane, Bark of Tamarisk, Leaves of Ægrimony, Wormwood, and Burnet. By which Remedies continued from the 7. of *May*, to the 28. thereof, our Patient ſeemed much holpen. And the weather happening upon that day to turn from dry and clear, into thick and rainy, by reaſon of South winds, the foreſaid Symptomes came all afreſh, which continuing to the third day of *June*, by two blood-lettings a little at a time, they were much abated. From that time forward he uſed Salt of Steel or Vitriol, for a whol month together, which is of admirable force to open obſtructions, ſtrengthen the Bowels, and to correct their hot diſtemper. Howbeit ſomtimes, viz. every third or fourth day, I gave him ſmal purges, of Senna infuſed in the foreſaid Decoctions, and ſomtimes chalybeate pills; and I gave him chalybeate water to drink ordinarily with thin ſmal wine. Which being continued (as was ſaid) for a month together, the noble Patient was brought into a much better condition, ſo that he which before could not travel either on Horſ-back, or in a Coach, without great trouble, could now endure a Coach running apace, and an Horſe on a faſt amble. Moreover, the vigor of his whol Body, and the color of his Face, were much reſtored. And this is eſpecially worth obſervation, that the noble patient was very much hurt by baths to ſit in, and tomentations applied to the Region of his Belly, and brought into an extream ſhortneſs of Breath: ſo that we were fain wholly to abſtain from the uſe of them, although very neceſſary for this Cure.

Theſe

Theſe things were done the fourth of *July*, at what time I procured leave of the moſt illuſtrious Preſident to depart, and returned to *Montpelier*, leaving him written Directions for what was afterwards to be done.

After my departure, through the whol courſe of Autumn and the Winter following, he uſed the foreſaid Remedies by courſe, and at fitting diſtances of time, by order of the moſt renowned Dr. *John Matthew*, his ordinary Phyſitian, viz. the Salt of Steel, Pills of Steel, and an infuſion of Senna made with the foreſaid Decoction, with Salt of Tartar, and Spirit of Vitriol; to which was added a ſtrengthening Opiate, and Aperitive, preſcribed by me before my departure. And whenas after ſome months, there was a great abatement of ſymptomes, I adviſed him by Letters, to try the Fomentation and bath to ſit in; for it was to be hoped, that the morbifick cauſes being very much diminiſhed, there would happen leſs commotion of humors, which did hinder the uſe of the ſaid Remedies. The matter ſucceeded according to our wiſh, and he bore the Fomentation without any trouble, which did him much good. And the Spring following, he uſed not only the fomentations, but alſo the baths to ſit in, and diligently continued the foreſaid Remedies, ſome others being thereunto added, with which at laſt (bleſſed and praiſed be God) he was brought to a ſtate of perfect Health.

The 286 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The Dropſie Tympanites.

THe moſt renowned Matron, the Wife of Dr. *de Guere*, Doctor of the Civil and Cannon Laws, thirty years of age, of a Cholerick Conſtitution, was troubled for ten months with a ſufficiently great tumor in her belly, joyned with great ſtretching, ſo that it was juſt of the nature of a Dropſie Tympanites. The firſt Original of this Diſeaſe was chiefly aſcribed to the Patients going into a cold bath, being troubled with the whites: whereby they were ſtopped. To which were added divers errors in Diet. She uſed many Remedies during the time aforeſaid preſcribed by moſt skilful Phyſitians, viz. Potions, Apozemes, and Aperitive and Diuretical Juleps, Opiates ſtrengthening the Liver, and many other things, to no purpoſe. At laſt about the end of *May*, in the Year 1645. ſhe did commit her ſelf to my Care, whom I undertook with theſe following Remedies:

Take *Roots of Aſparagus, Knee-holme, and Cichory, of each half an ounce; Roots of Elecampane and Parſley, of each two drams; Leaves of Agrimony, Ceterach, Maiden-hair, of each half an handful; of the two Wormwoods, of each half a Pugil. Boyl them to ſix drams, in the ſtrained liquor infuſe al night cold Senna, one dram; Diuretick Salt, one dram; Diuretick Spirit, thirty drops. Let her take it in the morning ſix daies together, and order her helf accordingly. She had four or five ſtools every day, and voided a clammy matter Aſh-colored. After the ſecond doſe ſhe was let blood eight ounces. At the end of her Apozemes, ſhe took pills of Calomelan, twenty grains, and as much Diagridium, which gave her ſeven ſtools: and the day following the Tumor of her belly ſeemed abated, which yet began about evening to be puffed up again. The Tumor ſettling, as I felt her Hypochondria, I perceived a very great and painful ſtretching about the Region of her ſtomach, in which reſpect I preſcribed (with continuation of the Juleps) an Emollient fomentation, and aperitive, to be applied every day to the whol Region of her Hypochondria, for alſo no ſmal tenſion was likewiſe perceived, in her right Hypochondrium. Which being uſed four daies together, her monthly Courſes appeared, which had been wanting for ſome months before. And becauſe they flowed but ſlowly, after three daies, the fomentations, and the Apozems leaving out the Senna, were uſed again. By which a moderate quantity of her courſes was procured, and from that time forward, the Tumor of her belly ſeemed wholly diſcuſſed. Howbeit, to ratifie the cure, I preſcribed her the uſual aperitive and Laxative pils, to be ſwallowed twice or thrice a month, as alſo a ſtrengthening opiate and aperitive, to uſed every day for an whol month.*

The

A Quartan Ague.

John Goſſel, of Lorrain, a Maſter of Arts, dwelling at that time in Dauphine, near a Town called Revel, with a Gentleman whoſe Sons he inſtructed, came to me the 15. of June, 1645. that I might help him, having been ſick of a Quartan Ague for an whol year. Now examining his Hypochondria, I find an exceeding great tenſion and ſtretching, with hardneſs in the Region of his Liver and Spleen; which ſuppoſing to be the Cauſe of the ſtubbornneſs and long-laſting of the Diſeaſe, I thought beſt to remove the ſame, with an aperitive and Laxative Apozeme (blood-letting being premiſed) as alſo with Emollient and aperitive fomentations: and with pils prepared with ſteel. All which things, I ordered him to continue for twenty daies together. Then I gave him a doſe of my Feaver-Frighter, to be taken after the foreſaid Remedies; and becauſe he could not conveniently make uſe of the Apothecaries, which were ſufficiently far from his Habitation; and could hardly bear the charge of Remedies, omitting al the other things, he preſently took my Feaver-frighter: which purged him plentifully. The firſt fit after the taking of this Medicament was half as little again as the former, and the ſecond leſs than that. And ſo the fits growing inſenſibly leſs and leſs, after the fift fit, he was quite freed from his Quartan Ague; of which he informed me by letters, adding that he was infeſted with a Cough which remained after his Feaver. To Whom I wrote back, that he ſhould uſe the Remedies preſcribed by me before, for the opening of the Obſtructions in his two Hypochondria, which I beleeved did remain and cauſe that ſame dry Cough.

The 288 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An old Vomit.

The Wife of Doctor *Antony de Maniſſy*, a Phyſitian and Doctor, of the Univerſity of *Valentia*, being twenty four years old, was troubled three years together, with a vexatious vomiting, with a pain in the Loyns reaching to the Region of the Spleen. Now ſhe vomited after every meal, almoſt al her meat and drink mingled with Clammy flegm: whereby ſhe became extream lean. Moreover ſhe had certain Ague-fits as it were twice or thrice in a month, which continued twelve or fifteen daies together. Many Phyſitians that had conſulted about her, did ſuppoſe that theſe Symptoms proceeded from a ſtone in the Kidneys fixed in their ſubſtance, and others ſaid they were Obſtructions and Hyſterical infirmities that were the Cauſe. In reference to al which, ſundry Remedies were uſed to no purpoſe. Til at laſt ſhe came to ſuch a Leanneſs joyned with a ſlow Feaver, that every one thought ſhe would die of an Hectick. But I being deſired by her Husband to preſcribe her ſome Remedies, I conceived the chief original of her malady to lie in the Spleen, which was both obſtructed, and diſtempered with an hot and dry diſtemper. In reſpect of which, ſparing blood-letting being premiſed, I did preſcribe theſe following Remedies.

Take *Roots of Cichory, Aſparagus, Butchers broom, and Bugloſs, of each half an ounce; Leaves of Agrimony, Ceterach, Maiden-hair, and burnet, of each one ſcruple and an half. boyl them with a Chick. In the ſtrained broath diſſolve Cream of Tartar one dram. Make a broath, which let her take in the mornings for ſixteen daies together.*

In every fourth broath infuſe al night cleanſed Senna, three drams, Annis-ſeed one dram. Let her take it, and be ordered ſuitably.

Take *Barley and ſweet Almonds, of each one pound; let them be bruiſed and boyled for a Bath to ſit in, whereinto let her enter warm, twice a day for three daies, after the uſe of the Broaths.*

Take *Steel prepared with Sulphur, one ounce. Aloes, Senna, Rhubarb, Agarick new-*

ly Trochisked, of each two drams; pouder of Diarrhodon Abbatis, half a dram; Saffron ten grains. With Oxymel simple make a mass; of which let her take a dram every morning three hours before meat, and walk upon it. And this let her do for fifteen daies together.

The use of the pils being ended, let the bath be repeated for four daies.

These Remedies used in order, she was freed from the foresaid Infirmities, and restored to perfect Health.

The 288 Observation, or History, of famous and rare Cures, &c.

A Tertian ague.

THe Maid servant of Mſr. *de Sautereau*, a Senator of *Grenoble*, being thirty years of Age, was held of an intermitting Tertian Ague, and she had suffered fifteen fits thereof, in the Course of which, she was twice let blood; and a purge was twice given her, and many cooling Juleps were prescribed and aperitive, by the ordinary Physitian; who after the fifteenth fit gave him twenty grains of my ague-frighter on his wel day, which was the twenty five of *June*, 645. She was five times purged by stool, gently and without trouble. The day after, her fit came much stronger. And from time forward, she never had fit more.

The 289 Observation, or History, of Famous and Rare Cures, &c.

Of a tertian feaver.

Mſr. *de Pourroy*, President of the Senate of *Grenoble*, fifty years of Age; had endured twenty fits of a Tertian Ague, when I was called to him. He was twice let blood; many cooling Juleps were given him: and the Aqua-Benedicta of *Rulandus*, was twice given him to drink, whereby he voided great store of Choler and flegm by stool. I being sent for in the twenty one fit, find it very intense, exceedingly afflicting the patient for twenty four hours together, with extream thirst and great unquietness, which is in conclusion discussed by sweats breaking forth at the end of the fit. His Urins were red, and as it were flaming, having no signs of concoction. Therefore I cause him to bleed a good Quantity: I prescribe him very cooling Juleps: and to take juyce of Lemmons in his ordinary ptisan: and spirit of vitriol in the said ptisan, at the time of the fit. By which means, in two daies space, the red color of his Urin was much abated, and a light swim appeared therein. Nevertheless, the two and twentieth fit was as long as the former, but with less unquietness, which was much tempered by moist Epithemes applied to the Region of his heart. The day following, I gave him twenty five grains of my Ague-frighter, which wrought not all day, save that he had one stool at three a Clock in the afternoon, and voided a pretty quantity of Cholerick matter. But the next day at eight in the morning he had another stool, much larger, by which he voided Cholerick and wheyish excrements. At nine a Clock his fit returned, and was shorter, lasting but eight hours. After the fit, he had three stools. This fit hapned the last day of *July*, 1645. The 1. of *August*, he had no fit, because it was his wel-day. And on the second, when his fit was expected, he had none, so that he seemed cured. Howbeit on the third day, which was his wel-day, a new fit came. The day following, which was the fourth of that month, he was let blood, his Urins appearing still red, and after noon, another fit came: so that his simple Tertian decayed to be turned into a double one. On the fift day of the same month, a fit came like the former. Here those that were censorious, had great occasion to insult, because with my Ague-frighter, I had turned a simple Tertian into a double one. But upon the sixt day I gave him again thirty three grains of my Ague-frighter, which gave him six stools, and he voided many wheyish, Cholerick and Flegmatick Excrements. His fit came at the same hour, but somwhat weaker than before. After his fit he had three or four stools more, and the next day in the morning three or four more. And his fit returned not then, nor the daies following; and within

within a few daies after he returned to his ordinary Employments. And he continued in this Condition for twenty four daies, in which time he committed many Errors in diet, which cast him into a Relapse. And therefore on the thirty day of the same month, he was taken with a new fit, at two in the afternoon, which held him ten hours. On the last day of the month another fit came, at four a Clock in the Evening, but much lighter than the former. On the 1. of *September*, at ten in the morning, a fit returned like the former. I conceived, that these fits did proceed from ill humors newly collected by his bad Diet, which were lightly putrified, the Putrefaction not being firmly fixed in the parts, nor strongly fermented, and that therefore they might be voided by easier Remedies, without making use of my Feaver-frighter. I did therefore prescribe him a purging Medicament of an Infusion of three drams of Senna, in a Decoction of Tamarinds, Cichory, and Agrimony, with anniseed and mineral Chrystal, of each one dram. Adding to the strained liquor Manna and Syrup of Roses, of each one ounce; Jalap one scruple. He was very wel purged, and the following fit was less. For two daies following he took opening and Laxative broaths, and so he was perfectly freed from his Fits, and observing a better Diet, he was reduced to perfect health, which he happily enjoyes to this very day.

The 290 *Observation, or history, of famous and* Rare Cures, &c.

A Quartan ague.

A Young Fryar of the order of Recollects at *Grenoble*, named *Theotimus*, fel into a Quartan Ague towards the end of *July*, 1645. He had had five Fits, when I was called to him. He had been let blood, but took no Physick. He took on the 7. of *August*, thirty grains of my Feaver-frighter, the day before his Fit. He was much purged by stool, and somwhat by Vomit. His Fit came the next day, much less than formerly: and after that no more.

The 291 *Observation, or History, of Famous and* Rare Cures, &c.

A Quartan ague.

A Friar of the same Covent, named *Pascalius*, had undergone ten Fits of a Quartan, when I visited him: and I gave him twenty three grains of my Ague-frighter on the 25. of *October*, the foresaid year: he had eight stools, and two Vomits, and his Disease was quite Cured thereby.

The 292 *Observation; or* History, *of Famous and Rare* Cures, &c.

A Quartan ague.

THe Wife of the most renowned Mſr. *de Chappaulay*, the Kings advocate in the Exchequer at *Grenoble*, fifty years of Age, had been sick of a Quartan Ague Five weeks, so grievously, that she continually kept her bed, and did eat nothing but broaths, for she was alwaies in a Feaver. On the 1. of *September*, she took sixteen grains of my Feaver-frighter, had six stools very gentle, and two more the next day; and her Fit which was to returne after noon, was delayed to seven a Clock in the Evening, and was much more remiss. But the following daies it came no more. And when she began to feed her self, and used solid meats, she did eat unripe Grapes every meal, whereupon she fel again into a Quartan Ague, which became double and trebble, I being returned to *Montpelier*. Now it hapned that in *December*, the same year, I was again sent for to *Grenoble*, and then visiting her, I find her grievously oppressed with a Tripple Quartan. Wherefore I gave her twenty grains of my Ague-frighter; which gave her seven stools, and two vomits. Her Ague returned not that day, nor two daies following.

following. But on the 23. day, having eaten a liberal Dinner, she was taken with a long Fit. For which cause, she took the day following, a like quantity of my Ague-frighter; and five stools, never a vomit, and was thereby freed from her Ague.

The 293 Observation, or History, of Famous and Rare Cures, &c.

A Quartan Ague.

A Woman fifty years of Age, in the Hospital at *Grenoble*, was afflicted with a Quartan Ague an whol Year together. On the 5. of *September*, 1645. she took twenty grains of my Ague-frighter, and was plentifully purged by stool, and once by vomit; seven houres after she had taken the Medicament. The next day her fit came four houres later, and less than formerly. And after that she had no more Fits.

The 294 Observation, or History, of Famous and Rare Cures, &c.

A Quartan Ague.

THe Maid servant of the Wife of Mr. *de Serviers*, President in the Chamber of Accounts at *Grenoble*; was troubled with a Quartan Ague five weeks. The 6. of *September*, 1645. she took sixteen grains of my Ague-frighter, the day before her Fit, and was thereby much purged, only downwards. On the second day her Fit returned without cold, later than the former, and continued longer. And the six following daies it returned not, and in that condition she remained an whol month. But using a carelets Diet, after the manner of Maids, she relapsed into her Quartan Ague; which turned first to a double, then to a triple Quartan, after my departure. And I returning to *Grenoble* in the month of *Decemb.* I gave her twenty grains of my Ague-frighter, on the 23. of the same month, it being a cold frosty season. In the morning she vomited a clammy and glewish matter in great quantity; and in the evening she was plentifully purged by stool, and so was quite freed of her Quartan Ague.

The 295 Observation, or History, of Famous and Rare Cures, &c.

A Double Tertian Ague.

PEter *Faiole*, a Procter in the Senate of *Grenoble*, and one of the Consuls for that Year, being forty years old, had a double Tertian twenty five daies; during which time, he used store of vulgar Remedies by advice of another Physician. I being called the 25. of *August*, 1645. find him confined to his bed, eating nothing but Broaths, and dayly afflicted with grievous Fits. And I gave him sixteen grains of my Ague-frighter, which gently purged him by stool, and he was quite freed from his Ague-Fits.

The 296 Observation, or History, of Famous and Rare Cures, &c.

A Quartan Ague.

GAbriel *Pyot*, the Servant of Mr. *Marcha*, a Citizen of *Montpelier*, being twenty four years old, and three months troubled with a Quartan Ague, during which time he used no Remedy; took of my Ague-frighter twenty four grains, on the 10. of *November*, 1645. which was his well day. He was seven times purged that day, without any vomiting, Stomach-sickness, or trouble: and the day following he had no stools. His Fit which was expected at five in the evening, came not til three a clock next morning; his second Fit which was wont to come in the evenings, came not at all; and from that time forward, he had no more Fits.

The

The 297 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

THe Wife of *John Alles*, a Chyrurgeon of *Montfrine*, thirty years of Age, had a Quartan Ague four months together; and when I paſſed through that Town about the end of *October*, 1645. I was deſired by her Husband, that I ſhould preſcribe ſomwhat for her Cure. I find the woman very pale and lean, not having had her Courſes ſince the beginning of her ſickneſs; and feeling her Hypochondria, I find her Spleen very hard, and in a manner Scirrhous. And therefore I judged her Quartan Ague could not be cured till thoſe grievous obſtructions were firſt removed. I therefore did firſt preſcribe her a purging potion, and the day after to be let blood. Afterwards, I gave her pills of Steel, Aloes, Gum Ammoniacum, and other things, to be taken for fifteen daies together; and an emollient Fomentation and aperitive, to be applied to her Hypochondria every day during the uſe of the Pills. Which Remedies being diligently uſed, the ſtretching of her left Hypochondrium was very much abated, but her Ague-Fits kept their former courſe; I gave her therefore twenty grains of my Ague-Frighter, and after that ſhe never had Fit more.

The 298 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

AN ingenuous yong man, *Michael Pineau*, a Student of Phyſick, having been four months troubled with a Tertian Ague, fell at laſt into a Quartan, which had troubled him ſix weeks when he came to deſire my help. I gave him therefore twenty grains of my Ague-Frighter, on the 29. of *November*, 1645. That day he had only two ſtools, and that about evening. The day following, which was his Fit-day, he had ten ſtools, and two vomits, viz. at the hours of Dinner and Supper; and with his meat he voided Cholerick humors, and had no Fit that day, nor any time afterwards.

The 299 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

A Damſel named *Joan Brunet*, ten years of age, having had a Quartan Ague four months, took ſixteen grains of my Feaver-Frighter, on the 29. of *November*, 1645. She was purged five times by ſtool, without any trouble; the day following her Fit returned after its wonted manner; but after that it never came more.

The 300 Obſervation, or hiſtory, of Famous and Rare Cures, &c.

A Quartan ague.

BEcauſe all my Cures of Quartan Agues propounded under divers Titles, would exceed the Limits of this Book; therefore I have comprehended theſe following under one and the ſame Title, that I may continue the Series of my Cures to this very day, when this is printed. Alſo that what I ſhall hereafter ſay of my Ague-frighter, may be more evident and illuſtrious.

When I travelled from *Grenoble* to *Montpelier*, in *October* 1645. paſſing through *Valentia* a certain In-keeper meets me, named *Claudius Bouden*, having had a Quartan Ague three months; againſt which he had uſed no Phyſick, ſave being once let blood. I preſcribe him firſt a purging

a purging potion to evacuate the ill humors reſiding in the firſt paſſages, which might reſiſt the Operation of my Ague-Frighter; of an Infuſion of half an ounce of Senna, three drams of Diaphenicon, and an ounce of Syrup of Roſes, to be taken the day after his Fit, by which he was ſufficiently purged. The day after he took twenty grains of my Ague-Frighter, was thrice purged by ſtool, without trouble; and that only about the Evening. The day after, his Fit returned, much longer than formerly; but after that he had no more.

In the ſame Journy paſſing through a Town called *le Bourg Sainet Audiol*, Mr. *Henry Chays* a very skilful Chyrurgeon, deſired me to give him a doſe of my Ague-Frighter, for a poor woman long troubled with a Quartan Ague: I ſatisfied his deſire, and he afterwards told me, the woman was thereby cured of her Quartan Ague.

John Ridelet, a Proctor in the Senate at *Grenoble*, Fifty four Years of Age, was troubled three months with a Quartan Ague, which was a double Quartan, and a terrible one; ſo that he kept his Bed, and fed only upon Broaths. He was extream Lean; alſo his Face, Feet, and Legs, were troubled with flegmatick ſwellings, ſo that he ſeemed haſtening into a Dropſie. After many Remedies tried in vain, he implores my help on the 23. of *December*, 1645. it being in the extremity of cold and froſt. But I finding him in an exceeding bad condition, refuſe to give him of my Medicament, becauſe I would not have it diſgraced. Howbeit, overcome at laſt with the entreaties of his Wife and Brother, I give him twenty grains on the 24. of the ſame month. He had ſeven ſtools, without trouble; at firſt he voided cholerick Excrements, and afterwards much Flegm. On the 25. he voided again the ſame kind of matter. His Fits continued. On the 27. day he took twenty four grains of my Medicine, and had ſix ſtools without any trouble. The day following he had a light Fit. And after that his Quartan Fits never returned, at leaſt during the ſeven daies I ſtaied at *Grenoble*, nor could I yet ever hear what became of him after my return; for the Dropſie hanging over his Head, did portend great danger of Death.

Claudius Mouſſeau, a Baker of *Grenoble*, at the ſign of the Sword-Royal, being forty years old, had a double Quartan four months: he took twenty grains of my Medicine the 25. of *December*, 1645. when the weather was cold and froſty. He had four very gentle ſtools. On the 24 and 25 dayes he had his fits again. On the 26 day he took thirty two grains of my medicine. He had only two large ſtools; and never had fit after.

Michael Gounſelin a ſmith of *Grenoble*, having had a Quartan Ague four months, took thirty two grains of my medicine on the 26. of *Decemb.* 1645. the weather extream cold: he had ſeven ſtools and two vomits. The following day his Fit returned more intenſe than the former. On the 29 day of the ſame month, he took the ſame Remedy, was ſix times purged by ſtool without any vomit, and he never had Fit after.

Martin Lebreton of *Paris*, Organiſt of the Church of St. *Lewes*, which belongs to the Jeſuits, 20 yeares old, troubled with a quartan ague foure months together, having took nothing al that time, the third of *Feb.* 1646. he took twenty grains of my Feaver-Frighter; which purged him plentifully, only downwards; the day following, he had a very light fit, but none after that.

The Maid ſervant of the wife of the moſt noble Mſr *Mareſchal* De Le *Hoſpital*, named *Barbe Lepeſe*, being eight months troubled with a double quartan; took twenty grains of my ague frighter the twenty fifth of *Feb.* 1646. being her wel day: ſhe was purged by ſtool. The day following ſhe was purged after the ſame manner and meaſure. Her fit which was expected at five a clock in the Evening, came at nine in the morning, like the former, and after that ſhe never had fit more, but was quite freed from that ſtuborn double Quartan.

The Foot-boy of Mſr. the Count of *Larochegujon*, eighteen years old, had a quartan ague four months, he deſired my help the 27 of *Feb.* 1646. And becauſe he had a long time took no phyſick, and kept a Lenten diet; I thought good to prepare his body by a moderate bloodletting and gentle purgation of an infuſion of three drams of Senna with half a dram of ſalt of tartar, wherewith he was gently purged. On the ſecond of *March* he took twenty grains of my feaver-frighter, it being his fit day, and the fit not to come til ſix in the evening. He had eight ſtools, no vomit. His fit came at two in the afternoon, more violent than formerly. On the fift day of the ſame month, the fit came again at two a clock and was like the former. On the Seventh day, he took the ſame doſe of my ague-frighter, which wrought as before. Yet the fit came as formerly, and he had three more fits one after another, uſing no remedy. Yet he

he began to get flesh, the colour of his face was more fresh, and he had a better stomach to his Meat. After those three first, the day before the fourth, he took twenty one grains of my feaver-frighter, which gave him six stools. The fit came the day after somewhat weaker; and after that time he never had fit more.

An Appendix, or Additional Discourse touching my Ague-Frighter.

HItherto a Quartan Ague has been counted incurable in the Beginning, Augment, and State: because the morbifick matter is at those times not sufficiently digested and prepared, so as to be brought away by purgations; and al that endeavour to bring it away by strong purgatives, of a simple Quartan, they many times make a double or a triple, and sometimes a continual, whereby the patients are brought in extream danger of death. Hence it is that the more discreet sort of Physicians, use to advise such as have Quartan Agues to a long Patience, and put them off til the Spring season, whose temper is most accommodate to concoct and purge out the humor offending: but the winters cold is so contrary thereunto, that during the same a Quartan is judged to be wholly uncurable. Because the tartarious and melancholly humors are more condensed, and as it were congealed; also the passages of the body as wel sensible as insensible, are shut up, so that al hope of Evacuation or Transpiration, is thus taken away. Yea verily and the stubbornnes of the morbifick matter is sometimes so great, that many Quartan Agues have been by most learned Physicians set upon in a due method in the spring and summer time, with al possible variety of vulgar Medicaments, and yet they have frustrated al their endeavours, and continued an whole year, yea sometimes two and three years together.

The Premises notwithstanding, long use and continual exercise, is wont to encrease Art very much, and the new Inventions of later Physicians, have advanced the art of physick received from the Ancients, unto a more sublime degree of Dignity. In whose foot steps treading, having for the space of thirty seven yeares, in which I have practised physick, been diligently painful in searching into the most hidden secrets of nature, although communally talking (besides visiting the sick) with Lectures, Disputations, and other Academical Exercises, I did oftentimes for a long while, seriously consider with my self, if by any means possible this stubborn and long lasting sickness, might in a short time be overcom and mastered. And though this seemed a very hard Task, and almost impossible to be accomplished, yet (by Gods blessing to whom be honor and glory) I obtained my desire. For at length by long meditation, elaboration, by adding, detracting, diminishing, and many waies preparing sundry materials, I found out the true and specifick Remedy of a Quartan Ague, which pluckes it up by the Roots. I wil not say, it is an infallible medicine, least I should speak like a Mountebank. But with a good conscience say, that I never yet gave this Medicament, but it took away the fits at least at the third times taking. Howbeit in some persons, either through errors of diet, or by reason of some Reliques of the morbifick matter remaining within the body, there has happened a relapse, which has been for the most part removed, by some light vulgar purgation.

It is fourteen Months since I have begun to use this Medicament, which I had meditated in my mind many years together. And I have committed to writing the names of the most that have hitherto taken it, with the stories of their Diseases. In whom Quartan Agues have been Cured, in the beginning, Augment, and State; yea and in the midle of winter, when al was frozen.

The Vertues of this Medicament are such, that it oppugnes the Melancholy Humor by its Specifick quality, and hinders the Fermentation thereof which causes the Fit, extinguishes the bad Qualities thereof, and changes the whol Nature thereof. And so al those Tumults which that fierce Humor is wont to raise in the body of man are presently appeased, that humor being made weak and impotent like water. For even as Vinegar, the salt of Tartar, or of

Saturn

Saturn, being mixed with it, does suddenly lose all its sharpness and strength, and becomes like water: so the Melancholick Humor, when it meets with its Specifick Remedy, is after a manner extinguished, and loses all power of acting and resisting. So that, for the most part, by once giving thereof, a Quartan Ague is chased away, and seldom needs it be given twice, and very seldom the third time. Whereas otherwise, the matter being rebellious, not tamed beforehand, it cannot be stirred in the least, by an hundred Medicaments. Whereupon the Physicians, being many times vexed with the stubbornness thereof are forced to give over the Cure. And although this Remedy be peculiarly ordained to Cure the Quartan Ague, yet it does in one day drive away Tertian Agues, by reason of the Analogy they have with Quartans (for long Tertian Agues do commonly turn to Quartans) as appears by the Cures of many Tertian Agues, before set down; and therefore I have given it the General name of Ague-queller, or Ague-Frighter.

I think not fit as yet to set down the exact and plain description of this Remedy, til its vertues shal by some more years Observations be made manifest. In the mean time, to satisfie the Curious Searchers into Nature so far as to give them an occasion of Enquiry, I shal here propound a faithful and sincere description thereof, howbeit somwhat obscure, and covered as it were with a thin Vail or Curtain, which the Sons of Art being industrious, may without very great pains draw aside. This precious Medicine therefore is compounded of a threefold Hercules, by twelve Labours brought to the highest degree of Nobility and excellency: unto which a fourth Champion is added, to accomplish the work. It may be given to Children the quantity of ten, twelve, and fifteen grains. To grown persons from twenty grains to thirty and fourty. It works gently being given in due dose, nor does it disturb the body more than vulgar Medicines made of Senna and Rhubarb. Yet it works sometimes by vomit, if the Morbifick matter some part of it, quarter about the stomach. For this is its peculiar Quality, that it goes directly to the Morbifick matter wheresoever it lies lurking, valiantly assails, stoutly cudgels, and at last vanquishes the same. The Histories lately described, do plainly witness the same. For in some persons, finding the passages open, and the matter not very plentyful, it performs its work without any trouble, and with a little purging; as in the Prince *Doria*, and some others before recited. But in others who had used no Physick al the time of their Disease, and had gorged themselves with bad Diet, finding a Multitude of bad Humors, the passages close shut up, and extream Crudity, it could not overcome the Disease without some disturbance and labour of the Patient; as it hapned in certain poor common people, upon whom this Medicament was first experimented. And so much shal suffice to have said touching my Ague-Frighter, or Ague-Queller.

OBSER-

THE FOURTH BOOK OF Medicinal Obſervations, AND REMARKABLE CURES, OF Several Famous Phyſitians.

The Preface to the Reader.

ALL Phyſitians who are diligent and accurate in the mannaging of their Practice, do often meet with many things moſt worthy of Obſervation; which notwithſtanding being for the moſt part neglected, do unhappily periſh, and become a Sacrifice to Oblivion. And as for ſuch things as ſome do regiſter in their private Note-books, they are reſerved indeed for their own private uſe, but are not in the leaſt profitable to the publick. I do therefore make it my requeſt to all induſtrious Profeſſors of this Art, that if they are deſirous of the publick Good, and have already collected ſo many remarkable Obſervations as may make a conſiderable Volumn, that they would be pleaſed to print them: But if they ſhall be too few to fill a Book, that they would vouchſafe liberally to communicate the ſame unto me, who will print them under their Names, with my fourth Book, which (God granting life) I ſhall ſhortly publiſh: as they may ſee I have done in the following Obſervations communicated by others: which I gathered here and there from my

friends, and have publiſhed every mans Obſervations under his proper Name. Amongſt which, many things may be found more excellent than any thing in my Obſervations; by which it is apparent, that any man may advance the Dignity of the Art of Curing by this kind of writing, and gain himſelf ſome Reputation thereby.

Furthermore, I deſire the gentle Reader to take notice, that I have cauſed theſe Obſervations to be printed in the ſame order that I received them; that no man may complain I have not marſhalled them according as the preheminency of one above another might ſeem to require.

Obſervations communicated by Mſr. *Petrus Pachequus*, a famous Phyſitian at *Lunell*, my moſt ancient Friend.

The 301 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

VVant of Appetite.

A Soldier much vexed with a Cronick Ague, beginning now to be much eaſed in reſpect of the Fits, which were not ſo cruel as formerly, did humbly beſeech me that I would recover his Appetite, which was wholly loſt, otherwiſe he muſt of neceſſity die in the ſpace of three or four daies. I preſcribe him a Potion of half an ounce of Diaphenicon, with a decoction of common Wormwood and Egrimony; afterward I ſharpened his Appetite with theſe following Remedies, as with a whet-ſtone.

Take *Leaves of Agrimony, Common Wormwood, Centory the leſs, of each half a handful: make of all a Decoction. Take half a pint of the ſtraining with a little Sugar. I ordered the Patient to drink of this Decoction nine daies together: but after five dayes were paſt, he came unto me, earneſtly intreating, that I would abate his Dog-like ravenous hunger, cauſed by my medicine: which I did by cauſing him to abſtain from the foreſaid Drink, and adviſing him to eat Butter and fat meats, and to drink ſtrong Wine. I can teſtifie that many by this Medicine have fallen into the like ravenous Hunger.*

The 302 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Cholick pain.

MOnſſir, the Preſident of *Rupemore*, an ancient Man, being tormented three whol daies with a grievous Chollick; when no Anodynes would eaſe his pain, having taken one dram of the Pouder of a Wolfs Guts, he was cured as it were by a Charm. Alſo a Prieſt very ſubject to this Diſeaſe. And a Widdow dwelling at *Montpelier*,

Montpelier, which had been cruelly tormented twenty seven dayes together. And finally, a thousand more whom for brevities sake I pass over without taking any clyster or purging medicine which makes the admiration greater.

The 303 *Observation, or history, of famous and* Rare Cures, &c.

A Cholick from the kidneys affected.

A Certain widdow being vexed with a colick pain, and that proceeding from the Reins, implored my help when I was at the Sesilucan baths, to ease her pain. Which I did in a moment. For I bad her immediatly to goe into the bath, and presently her pain was taken away; And I admyred that so suddenly it was eased without any Clister or purging medicament.

The 304 *Observation, or* History *of* Famous *and* Rare *Cures*, &c.

A Cholerick Looseness coming upon Agues.

SUch as are troubled with cholerick and malignant Agues, especially with a double tertian, by reason of an abundance of a raging chollerick humor, doe fal into the disease named Cholera, upon the return of their fits, the violence whereof if you do not asswage, with such medicaments as I shal by and by set down, the patients wil die within the space of two or three Fits. Mr. *Labrundus*, a very learned Man having one of these Agues, could hardly be recovered out of his Fit, which was attended with the disease Cholera, being as cold as a stone, his pulse exceeding smal and almost deficient, with hollow eyes and other horrible symptomes. At length after a multitude of medicines, which many so affected would not use, but bid the world adiew, he was recovered out of the jawes of death. I to prevent the tempestuous storm of the next Fit which should come the morrow after, ordered that the patient should be refreshed with thick Panadaes and jellies, that a bridle might thereby be cast upon the humors, which would rage the day following. I appointed Epithemes and Opiates of Conserve of Roses, Buglos, Borrage, preserved myrobalans and perles; and three hours before the Fit, I caused this wonder working Clyster to be given him, without which, if I mistake not, my friend had gone to the pot.

Take *Red rose leaves one handful, boil them in the Broath of a weathers head and feet. In a pint of the strained liquor dissolve two drams of new Venice Treacle, and one yolke of an Egg. Make of al a Clyster. This Clyster be kept until the returne of his Fit, which brought the cholerick flux with it, but much less than formerly. By this Method, I cured many desperatly sick of this disease.*

The 305 *Observation, or history, of famous and* Rare *Cures*, &c.

Pain of the Hemorrhoids.

MAny in this hot Season of the Year are troubled with inward and blind hemorrhoids, which cause extream pain. Likewise by reason of the excrements being hardened and kept in by reason of their swelling which closes up the gut, most cruel pain is caused. The ordinary sort of Physitians give Cassia to loosen the belly in this Case, but they do il questionless in so doing. For seeing the veins are most of al puffed up in the fundament, by reason of their natural softness, and are alwaies ready to receive blood; it comes to pass, that by the use of cassia, they are so far mollified, that afterward they more easily entertain superfluous blood, and consequently augment the disease. But I learned of a beggar woman, to infuse Yarrow in boyling water, and to give the said infusion to drink for a month together, and al of this disease were so cured. The Lady *due-Masia*, and the wife of *Crancerius* a Chyrurgion, troubled with the hemorrhoids were cured with this Medicine. At last I found this very Medicine in *Arnoldus de Villa Nova*,

in his chapter of the pain of the Hemorrhoids. The ſelf ſame remedy, is good alſo againſt the extraordinary afflux of the Hemorrhoids, if we will beleeve the foreſaid *Arnoldus*, and there is reaſon alſo for it.

The 306 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

The Stinging of a *Waſp.*

A Waſp having ſtung my hand, it pained me ſo cruelly that I was not able to indure it. I laid on Venice Treacle and the pain was gone in a moment. But when three hours after I threw away the treacle, a moſt cruel pain returned, as bad as at firſt, which was allayed by applying the ſame Medicine again, and keeping it on all the day.

The 307 Obſervation, or hiſtory, of famous and Rare Cures, &c.

Puſhes.

WHen I could not by any Medicines heal certain Epinyctides, or Puſhes, which ariſe in the night ſpringing from black choler, by a womans advice they were anointed with oyl of juniper berries, and the patient thereupon ſlept quietly, whereas he had lain ſleepleſs before, and was perfectly cured.

The 308 Obſervation, or hiſtory, of Famous and Rare Cures, &c.

Convulſion.

A Young man had a convulſion ſo that he could not bend his back-bone. By help of this following medicament he could preſently walk nimbly.

Take *of rank butter, and old lard, of each three ounces; Bdellium, amoniacum, of each half an ounce; Myrrhe, Caſtoreum, of each three drams. Flowers of ſtœchados and roſemary, of each one pugil. Nutmeg and cloves of each one dram, a young Kittling or little Cat unbowelled and ſtripped and cut in peices. Stopp the belly of a gooſe with theſe things, and ſew it up and roaſt it on a ſpet: and the firſt liquour that drops, caſt away, the next ſave in a dripping-pan half full of vinegar, to anoint the cramped or convulſed Back. This is a divine Medicine.*

The 309 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Red pimples in the face ſtriking in again.

A Certain Carmelite Frier, a civil and wel mannered perſon, but disfigured with great high red pimples, thick ſpred al over his face, came to viſit me, whom at the firſt ſight I knew not: becauſe the foreſaid puſtles were of themſelves without any help of art gone away, and his face become ſmooth. I told him he would ſuddainly fal into a moſt grievious diſeaſe; nor was I miſtaken in my conjecture, for within fifteen dayes, he fel into a continual feaver, of which he died.

The 310 Observation, or History, of Famous and Rare Cures, &c.

The Mother fits.

A Certain Damsel being marrigable, was vexed with wandring convulsive motions, by which, and by certain pains in her womb, I conjectured that she was troubled with suffocations caused by vapors ariling from the womb. With this following Medicament I Cured her in a Moment.

Take *Assa Fetida, two drams; Castoreum, Fœcula, Bryonie, of each a dram; Rue-Seeds, one scruple; Saffron, an half scruple; Laudanum of Paracelsus, eight grains; (which Laudanum I therefore added, both by the advice of* Hippocrates, *who prescribes the juyce of sleeping Poppy in fits of the Mother in his second Book of Womens Diseases, page 237. about the end, in the Edition of* Foesius; *as also that I might temper and moderate the other Medicaments with the* Laudanum*) with Syrup of Mug-wort make a Mass of Pils, of which let her take one dram.*

The 311 Observation, or historie, of famous and rare Cures, &c.

Pains after Child-birth.

A Drunken Gossip was after she was brought to bed vexed with most cruel pains, which after other Remedies, were cured with this following.

Take *Galbanum, Assa Fetida, of each one ounce, Spread therewith a round Plaister and put four grains of Musk in the middle, and lay it on a little below the Navil. Her Womb which was contracted like a Globe in her Groin, returned to its proper place, and the pains ceased.*

The 312 Observation, or History, of famous and Rare Cures, &c.

A Medicine for pains caused by a Vesicatory.

Mr. *Amalricus*, being troubled with a sleepy Disease, when he was rowzed and came to himself, he complained exceedingly of the pain which was caused by a vesicatory which had been applied: and when I could not give him ease by any anodine Medicament; Madam *Ranchina*, my wives sister asswaged the same only with Water and Oyl mingled together. I cured one woman that was grievously tormented, with the burning of a Vesicatory, with this Medicine, and al others vexed with the like Calamity.

Take *of the second green bark of an Elder Tree bough, scraped off with a Pen-knife, one handful. Boyl it in sweet Oyl with a little Water, until the water be consumed; to the scrapings adde a little Wax: and make al into an Oyntment, which asswages al pains caused by Vesicatories. This is a Divine Remedy.*

The 313 Observation, or History, of Famous and Rare Cures, &c.

Swelling of the thigh.

THe Wife of Mr. *Justamondus*, had a swelling in her Thigh, which threatned a Gangreen, her Native heat in that part being by this time suffocated and over whelmed. After she was let blood I gave her an ounce of Syrup *de Spina Cervina*, in a Decoction of red vetches, and the day following, her Thigh asswaged pretty wel. And this I observed in many other Women, whom I observed to be more liable to swellings of the Legs than men, because

the

the Womb is the Common ſhore of the Body, into which Superfluous Humors are collected, and the womb disburthens it ſelf into the nighbouring Hipps.

The 314 *Obſervation, or hiſtory, of famous and* Rare Cures, etc.

Chops in Womens Duggs.

MY Wife was much vexed with Chops and Clefts in her Dugs, which I could by no means heal: a tattered old Woman quickly cured her, with Oyl of Nuts newly drawn, which ſhe anointed upon the Clefts, and ſtrewed Sugar finely poudered thereupon. The Ballom of Sugar works the ſame effect: as I have tried an hundred times.

The 315 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

The Dropſie.

A Prieſt named *Sabardetus*, having vomited eighteen ounces of blood, fel into the Dropſie Aſcites, that is the bottle belly Dropſie: from which I had Cured him with an infuſion of Rhubarb in fair water, which he drank for his ordinary drink: but when he fel to pleaſe his Palate, and had forgot his former Calamity, the Dropſie returned and killed him.

The 316 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Bleeding:

A Countrey Man being almoſt dead with bleeding at his noſe, ſent for me: but when nothing would help, I dropped a little Vinegar of Roſes, into that Ear which was next the Noſtril out of which the blood came, and his bleeding preſently ceaſed. I learned this of Mr. *Pontaudus*, who ſaw this remedy uſed by a Dutch Phyſitian. I have read it in *Scribonius Largus*, in the Chapter of Bleeding.

The 317 *Obſervation, or* Hiſtory, *of famous and rare Cures, &c.*

Hiccupping.

CAptain *Dumaſius*, having a Tertian Ague, and taking Syrup of Poppies in the middle of his fit, was vexed with ſuch a troubleſome Hiccuping, as almoſt kild him. And when neither Aloes often taken, nor other Remedies could cure this Diſeaſe, at length by our patients own adviſe I ſent him to the Baths of *Baleruca*, to ſeek water; which having plentyfully drank of, as the manner in thoſe Baths is, he was quickly Cured, thoſe Humors being diſſolved and waſhed away, which the Syrup of Poppy had riveted as it were into the Coats of the Stomach.

The 318 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A flux of Blood out of the Ears.

I Saw *Brouſolus Giniacenſis*, who fel from Horſ-back upon the ſtones, on his right Ear, out of which flowed three pounds of Blood. Alſo I have ſeen very many others who by a fal

have

have bled plentyfully at their Ears, and escaped with their lives. But as many as I have seen void quittor or bloody matter out of their Ears after a fal, they al died upon it.

The 319 Observation, or History, of Famous and Rare Cures, &c.

Liftleſſneſs to Carnal Conjunction.

A Woman very desirous of Children, but having no appetite to Carnal Embracements, entreated me that I would kindle in her the desires of the flesh, which were (as she said) Mortified in her. I did what she requested with this following Opiat.

Take *Conserve of Eringos Root, and of the Male Satyrion, of each one ounce. Orenge Rinds preserved in Honey six drams. One preserved Wal-nut. Confectio Alhermes, an half ounce. Amber Greese, flying Pismires, of each one scruple; Mosch, six grains. With Syrup of preserved Citrons, make al into an Electuary. Of which let her take before a light Supper the Quantity of a smal Chest-Nut, drinking a little Hippocras after it. The Woman confessed that she felt wonderful pleasure, after the use of this Electuary. There is nothing in the world more effectual in these cases, than to anoint the Region of the Womb, with Oyl of flying Pismires, which is made after this manner.*

Take *of Flying Pismires, two ounces; infuse them in Oyl fourty daies together in the hot Sun of the Dog-daies.*

The 320 Observation, or History, of Famous and Rare Cures, &c.

Proud fleſh.

I Had an Ulcer which secretly lurked under the Nail of my great Toe; that I might come to Cure this Ulcer, I bad the Chyrurgeon to Cut the Nail just over the Ulcer, and make an hole, that so Medicines might be applied: but proud flesh grew up, which after I had often taken away, it stil grew again. Wherefore after I had long used burnt Alum, I determined to try a new Medicine. Wherefore I applied red precipatate wel washed, and no waies painful, to eat out the proud flesh, which it quickly did, and it grew up no more.

The 321 Observation, or history, of famous and rare Cures, &c.

Pain of the Pleuriſie.

A Damsel of a Constitution mingled with black Choler, was tormented with a most grievous pain in her side, which had brought her to the Gates of death, from whence I reduced her by this following medicament.

Take *Oyl of Sweet Almonds, two ounces; Laudanum Paracelsi, three grains: A little after she had taken this, her pain ceased, and she was better.*

The 322 Observation, or History, of famous and Rare Cures, &c.

A Prognoſtick touching Wounds.

IN the Seige of *Montpelier*, many wounded Soldiers, especially such as were wounded in their hands, were within a few daies taken with Convulsions of their temperal Muscles, and I observed that al of them died. A certain Captain in that bloody battail at *Calvisson*, between the Marshal *du Trec*, and the Duke of *Roban*, was wounded in his Thigh, and the wound reached as deep as the Periostium, a Convulsion followed in the parts near his Thighs, and arose by little and little to his temple Muscles, and kild him. They that are taken with this Convulsion,

ſion, cannot open their mouths. At the beginning of the Convulſion they ſpeak readily, and know not that they are ſo near to their long home.

The 323 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Over-violent working of a Purge.

THe Baron of *Calviſſon*, after he had taken the pouder of Diacarthamus againſt my mind, he had an hundred ſtools. I Cured him after this manner.

Firſt we made him a Cliſter of a Decoction of Red Roſes and Chamemel flowers, with a little Sugar of Roſes, and the Yolk of an Eg. Afterwards we gave him this following Clyſter.

Take *Capon broath one pint. Sugar of Roſes one ounce. Laudanum of Paracelſus five grains; the Yolk of one Eg. This preſently ſtopt the violence of the Purge. Inſtead of the Laudanum, a dram and half of Venice Treacle may be added.*

The 324 Obſervation, or hiſtory, of famous and rare Cures, &c.

Extream thirſt.

MSr. *Viventius* being ſick of a Feaver, was tormented with ſo extream thirſt, that he imagined himſelf to be one of the water bearers of *Paris*, that carry water about the Citty, and cryed night and day water, water, who wants water? but his thirſt which no other means could ſtop, was aſſwaged with one dram and an half of Sal Prunellæ, which he drank diſſolved in fair water. Alſo my *Simeon*, having taken ſome Syrup *de Spina Carvina*, was almoſt killed with thirſt: and took a dram of Sal Prunellæ, and his thirſt preſently ceaſed.

The 325 Obſervation, or hiſtory, of Famous and Rare Cures, &c.

Smal pocks.

I Saw the Son of Mſr. *Martinetus*, ſick of the ſmal Pocks with laudable ſigns; for after the coming out of the Pocks the Feaver abaced, he fetcht his breath freely, and he had no looſeneſs, the Pox were high enough, his ſleep was moderate, he took what was given him without offence: howbeit, al on a ſuddain without any manifeſt Cauſe, the Pocks ſtrook in again, and he died thereupon. I have ſeen the like befal many which had the ſame Diſeaſe, and I foretold that they could not eſcape death.

The 326 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Deadly prognoſtick.

THe Son of Mſr. *Engarranus*, being ſick of a Feaver could not ſwallow, but voided what he drunk through his Noſtrils, the muſcles of his *Oeſaphagus*, being (as I conceive) taken with the palſie. He died. Furthermore, whereas he was not favoured like his Mother during his health, yet before his death he was countenanced ſo like his Mother that al wondered at it. Alſo a voyce of mine, not at all like his Mother, a little before his death reſembled his Mother, as if he had been her picture. And al ſick perſons that have voided their drink out of their Noſtrils, or who were like their great Granſires, their great Grandfathers, or Grandames, or their Parents, in the time of their ſickneſs, they al died; which is a wonderful thing.

THE

The 327 *Obſervation, or Hiſtory of Famous and Rare Cures, &c.*

Night-ſweats.

THe Wife of Mſr. *de Ladeveſe*, every night after ſhe recovered of a Feaver, was wont to ſweat. I preſcribed her a cooling Julep of the waters of Cichory and Bugloſs, and the Syrup of Apples, and ſhe did ſweat no more. Whence I gather, that for people to ſweat in their ſleep, is not alwaies a ſign of Abundance of Humors, but ſomtime of heat; for healthy perſons of an hot Complexion are wont to ſweat in the night. Add hereto, that the foreſaid Gentlewoman was cured of her ſweating without any Evacuation either Natural or Artificial.

The 328 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Bleeding Cauſed by tooth-drawing.

MAdam *Viventia*, having drawn one of her Teeth, ſo plenyful a flux of blood followed, that ſhe was at Deaths door, al Remedies being applied in Vain. I being ſent for, cauſed a great Rupture-Plaiſter ſhould be laid upon her Temple on the ſame ſide out of which her tooth had been drawn. Alſo I cauſed a little burnt Vitriol poudered with a little Cotton-wool to be put into the hole out of which her Tooth was drawn, which ſhe kept in with her finger. Theſe things being done, within an hour the blood was ſtopt.

The 329 *Obſervation, or Hiſtory of famous and Rare Cures, &c.*

The Pleuriſie.

ALL that have the Pleuriſie and vomit at the beginning of the diſeaſe do recover, as I have obſerved in an infinite company of patients: the ſide being eaſed of the Humors caſt up by vomit.

The 330 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Menſtrual Blood:

THe menſtrual blood of Women, eſpecially ſuch as are in good health, does ſmel like a Mary-gold flower. Which makes me conjucture that Mary-gold flowers do povoke the Courſes through ſimilitude of ſubſtance.

The 331 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The Running Gout.

MAdam *de Cottereau*, being troubled with an Univerſal Gout, ſo that no part of her body was free, was cured with Crocus Metallorum: notwithſtanding what *Hippocrates* relates touching fourty daies.

The 332 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Pains of the Womb.

I Have ſeen many Women tormented with pains of the womb, who found little eaſe by our Laudanum. But having taken a dram of Antidotum Aſyncritum [deſcribed in the Pharmacopœia of *Renodæus*] they were preſently freed from their pain. Which I have much admired, neither do thou Count it a ſlight matter.

The 333 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Danger of an over hot Bath.

A Very honeſt woman coming out of a Bath hotter than ordinary, fel into ſo great an inflamation of her whol body, that ſhe could not reſt a minute by reaſon of pains and Anxieties. And after al cooling Medicines both inward and outward had been uſed in Vain, a Bath of nothing but Luke-warm water, freed her from al her pains: whereby my mind was freed of a great deal of Care.

The 334 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Pain of the Stomach.

CHolerick, Lean, Red-hair'd perſons, of a thin habit of body are in the begining of the Summer troubled with pains of the ſtomach; becauſe the mouth of their Stomach being extream ſenſible, is corroded with Cholerick Humors, which were formerly bridled by the temper of the winter and ſpring. The Cure is, to purge them with Rhubarb, and then to give them twice or thrice, in the morning, three or four grains of the Laudanum of *Paracelſus*. Doubtleſs it is better with them, when the mouth of their Stomach is not ſo ſenſible.

The 335 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Scabby Legs.

TO Cure that great Scabbyneſs which after long ſickneſſes, eſpecially the Quartan Ague, breaks out upon the Leggs, having cruel pains attending the ſame, I have not found any thing among al the Medicines which we uſe, more effectual, than this following Oyntment.

Take *Unguentum Baſilicum, four ounces. Terpentine, two ounces; Oyl of Roſes, three ounces and an half; three Yolks of Egs; a little Wax. Make of al an Oyntment and anoint the Scabby places therewith.*

The 336 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Inflamation of the Mouth Cauſed by Mercurial oyntments.

TO ſuch as are fluxed by being anointed with Oyntments made of Quick-ſilver, an Inflamation and exulceration of their mouth is wont to happen, ſomtimes exceeding hard to Cure, I having cauſed one to be anointed, his mouth was ſo inflamed, that he was almoſt deſparate, which

which inflamation, al other Medicines being tried in vain, was healed only with Chicken broath made without ſo much as any Herbs in it. I ſuppoſe the virulency of the Quick-ſilver was mitigated by the benigne and debonaire ſubſtance of the Chicken.

The 337 *Obſervation, or Hiſtory, of Famous and Rare Cures,* etc.

Pain of the Head.

AFter a pain in the one half of my head of fourteen years continuance, it happened that a Vein opened in my upper Lip, out of which every month four or five pound of blood very hot and Salt Iſſued. I freed my ſelf from this troubleſome accident, by opening a vein twice every month in that Arme which was juſt oppoſite to my bleeding Lip; and blood being liberally taken away my Head-ach ceaſed.

The 338 *Obſervation, or Hiſtory, of Famous and rare Cures,* etc.

Bruiſes on the Head.

A Maid twenty years of Age, received a blow with a ſtone a little above her Forehead, and went for al that about her uſual buſineſs. Howbeit three daies after ſhe complained of a dul pain in her head, ſhe became ſleepy, and was a little Feaveriſh. Upon the ſeventeenth day certain Convulſive motions appear; upon the twenty an Impoſtume breaking, and greeniſh quittor coming out of her Noſtrils, ſhe died. Mr. *Viventius*, fel backwards, he remained ſome daies intent upon his buſineſs; afterward he began to Rave, to deſire fire, ſaying that he was cold; to be ſleepy. He had a bad night, ever and a non putting his hand unto his Head. Upon the eleventh day, the Impoſtume broke, and he voided purulent quittor out of his mouth, and died preſently. A Nephew of mine having received a bruiſe on his Head, became ſad and camplained a little of Head-ach. A month after he fel into a Feaver with drowſineſs and Head-ach: he Roſe ever and anon and Cryed out. On the ſeventh day of his Feaver, he voided corrupt matter from his Noſe and preſently died.

The 339 *Obſervation, or Hiſtory, of Famous and Rare Cures,* &c.

A tetter with Itch of the whol Body.

A Certain Fiſh-wife was vexed with a Cruel Tetter al over her body, with ſo great an Itch, that ſhe continually clawed her ſelf, and could not reſt a moment. In the morning, by reaſon of her continual ſcratching, there was found in her bed, three or four handfuls of Scales like unto the ſcales of fiſhes. I having ordered her Diet to be Chicken, Kids fleſh, and barley broaths; firſt of al preſcribed her a bole of Caſſia, afterwards I cauſed the Baſilica Vein of both her Arms to be opened, alſo a vein in her forehead and in each Ankle, that I might draw out the corrupted blood from al parts of her Body. Which being done I ordered her to uſe this following magiſtral Syrup for thirty daies together.

Take *of Senna, Polypody green, of each four ounces; Epithymum, an ounce and an half. Choice Rhubarb, one ounce. Annis Seeds, three drams; Yellow ſanders, one dram and an half. Infuſe them al night in juyce of Apples cleared by ſettling. Afterward boyl them according to Art, adding as much Sugar as wil ſuffice to make al into a perfect Syrup. The firſt and ſecond time ſhe took two ounces, or two and an half, of this Syrup in whey; afterward ſhe took two ſpoonfuls every morning; and ſo her body was kept open, and the Morbifick matter was leiſurely evacuated. Somtime ſhe took Lozenges of Diarrhodon Abbatis in the morning, after her ſyrup. She uſed Chicken broath many daies together, wherewith the*

force of the Melancholick Humor was much abated. At laſt I ſent her to the water of Meyne, with the cooling quality whereof her inflamed Liver being brought into temper, ſhe perfectly recovered; and required no more of my advice for fifteen years after. Her Husband had died of the Leproſie.

Piſsing of worms.

A Young Man that was tormented with pain in his Kidneys, voided with his Urin very many worms, black, as long and thick as an Ordinary needle, horned, of crumbly ſubſtance; two of which worms, if you remember, I ſent to you.

The 341 *Obſervation, or Hiſtory, of* Famous *and* Rare *Cures, &c.*

Fooliſhneſs.

Mſr. N. N. after long uſing of Red Poppy water became fooliſh, and at length died. His Scul being opened, I found the Cavities of his Brain ful of a black Humor like Ink, extream ſtinking.

The 342 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Fierce Diſtillations with Sweat.

I Have ſeen many troubled with cruel Diſtillations, who did ſweat ſo exceedingly, that it brought them into an extream weakneſs, which I thus ſuppreſſed.

Take *Frankincenſe, Maſtick, red Sanders, Kermes Berries, red Roſe leaves, of each one ounce. Make them into a pouder, wherewith let the patients Head-Cloaths be Smoaked.*

The 343 *Obſervation, or hiſtory, of* Famous *and* Rare *Cures, &c.*

Spots in the Eyes.

WAter of Honey does moſt certainly take away ſpotts out of the Eyes. But if the Eye be pained withal, the pain muſt firſt be aſſwaged before this water be uſed, for it wil cauſe pain. Be ſure to remember that.

The 344 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Stones preternaturally great.

Mſr. N. N. had naturally very great Stones, ſo that they were far bigger than thoſe of a ſtone-Horſe. He never had Child. I ſuppoſe becauſe he wanted tools fit for that work. After a fal from an Horſe his Cod ſwelled like a great Bal; the ſwelling came to ſuppuration, and great quantity of quittor came away. The ulcer being perfectly clenſed, there fel away pieces of his ſtones which were ſtones indeed, hard as flints, and flew in pieces being ſtruck with an Hammer, as other Stones are wont to do. The Functions of his Body and mind were little altered. At laſt, when a few daies were over a gentle Feaver laid hold upon him, with Anxiety and thirſt, which a little after grew grater: the pulſe on that ſide on which his ſtone was diſeaſed, was much leſſened, before any change could be felt on the other Arm. There followed a deep redneſs in his Face; alſo red pimples in his whol body, which quickly brought death. This ſtory, is indeed very wel worth Obſervation.

The

Swooning upon Blood-letting.

MAny endure wel enough the opening of a vein and the effuſion of their blood, but when their Arm is untied and the Orifice ſtopped, they faint away. You may prevent this accident by giving the patient a meſs of good ſtrengthening Broath, a little before the opening of the Vein, which I have many times experimented.

The 352 *Obſervation, or hiſtorie, of famous and rare* Cures, &c.

Sciatica Pain.

MAny there are who are troubled with very ſharp pains of the Sciatica, they being of a Cholerick temper and it being Summer. Such perſons I do not torment with hot Medicines, but I open a Vein; and after a purging Clyſter, I give them another Clyſter made of broath with Laudanum in it. So I cured your *James*, that witty ſcoffing Companion.

The 353 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

Tetters or Ringworms.

A Boy ten years old was vexed with a Tetter; which did ſweat forth a blood watry matter. The wind coming North, that filthy matter was ſuppreſſed, and turned to his Lungs, and cauſed an Horrible ſhortneſs of Breath; which ceaſed ſo ſoon as the wind turned South again.

The 354 *Obſervation, or Hiſtory, of* Famous *and Rare Cures, &c.*

To draw Matter out of an *Impoſtume*.

A Soldier being wounded in the Breaſt, bled not at al for ſeven daies together. With the adviſe of a Chyrurgeon we applied a plaiſter to the wound which drew forth an abundance of matter. *Sigillorius* had alſo a Tumor which came to ſuppuration: but being not wel opened nor in ſeaſon, he was in danger of his Life, the matter being concentrated and kept in, which I drew forth with help of this following Plaiſter.

Take *Rozin of the Pine-tree new, clear, and ſweet ſmelling, one pound. Oyl of Baies and Terpentine, of each two ounces; Gum Elemni, four ounces. The Rozin and Gum muſt firſt abide in the pan til they are mixed, afterward add the Terpentine and the Oyl, and let al boyl together again, then ſtrain them through a Courſe Cloath. Spread a part hereof upon leather. Make a Plaiſter and lay it upon the wound. Renew it in the winter only once a day, but in the Summer twice in a day, and you ſhal ſee wonders. Neither do I think there*

is

is any thing more certain in al my Obſervations, as you may learn out of Pareus, *his* 10. *Book Chap.* 30, *Touching wounds in the Breaſt and Cheſt. Now the foreſaid Plaiſter muſt have two or three long ſlits in it in the middle, that the matter which is drawn may flow out eaſily.*

The 355 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

To aſſwage the pain of tetters.

A Mettleſome Woman troubled with a cruel Tetter with extream pain, al other Remedies being tried in Vain, was wonderfully eaſed with this following Pultis.

Take *ſix Rotten apples, draw them into pulp through an hair ſearſe, and add thereto Oyl of Roſes, two ounces; a little Breaſt Milk, and make a Cataplaſme, and lay it upon the part pained. I have found by long experience that rotten Apples do more aſſwage pain, than roaſted or Boyled ones, which alwaies retain ſomwhat of the fire in them.*

The 356 *Obſervation, or Hiſtory, of famous and rare Cures, &c.*

Summer feavers of Children.

IN the Months of *July, Auguſt,* and *September,* a great number of ſucking Children die, which our Women ſay were troubled with the Worms. But I avouch that their Death is Cauſed by the ſharpneſs of their Nurſes Milk, wherewith their Stomach is inflamed, for their Hands and Feet are cold, they are extream thirſty, very unquiet, apt to vomit, and have a looſneſs, as my ſelf can witneſs. Wherefore they muſt be let blood, and then this following Cataplaſme muſt be applied to their Stomach.

Take *Barley Meal, one pound; Crummy part of white bread, four ounces; Boyl them gently in Goats Milk, adding afterwards, Juyce of Night-ſhade, one ounce. Oyl of Roſes as much as ſhal ſuffice. Mix al into a Cataplaſme to mitigate the pain of Inflamation. We muſt alſo change the Nurſe, and give the ſick Child the Mucilage of Flea-wort ſeeds in a ſpoon with a little Sugar of Roſes. Alſo Chicken broaths qualified with Purſlane, Sorrel, or Lettuce. Alſo we muſt apply Pidgeons or the like Creatures cut down the back, to draw forth the raging heat of their ſtomach.*

VVorms.

OUr Women are of Opinion that al Children have worms; but when they void none, the women ſay the Worms are turned into putrid Excrements. And it is wel ſaid. For ſeeing Worms put into a Glaſs and covered with warm dung do ſoon turn into a paſt: why may not the ſame thing happen in our bodies, whoſe heat reſembles that of hot dung, the Worms being killed by bitter Medicaments? This ſeems to me very rational.

The 358 *Obſervation, or Hiſtory, of Famous and* Rare Cures, &c.

Symptomes of the Mother.

A Melancholick Woman ſubject to fits of the Mother, did once a day void a great Quantity of Urin, crude and without any color: which being voided a world of Symptomes preſently followed, coming as it were out of the Trojan Horſe: to tel the Cauſe whereof I count it extream difficult. For ſometimes ſhe had a pain in her Head, ſometimes her Heart panted, ſometimes

times ſhe ſwooned away, ſomtimes ſhe was ſtomach ſick, ſomtimes ſhe did ſweat in her Neck and Forehead, ſomtimes ſhe ſhivered al her body over. But whence come al theſe Symptoms? I conceive verily they ought to be referred to the Womb, which is the ſink of Womens bodies. For ſeeing the foreſaid Symptomes came not til ſhe had voided her Urin, I am of this Opinion, that her bladder being ful and reſting upon her womb, did with its Bulk keep the Womb faſt and cloſe. Whereupon the impurities and vapors contained in the Cavity of the Womb, could not freely play their Reax in other parts of the body; but when the Urin was voided, thoſe putrid Humors became free, and cauſed thoſe Various accidents.

The 359 Obſervation, or hiſtory, of famous and Rare Cures, &c.

An Horrible Vomiting.

A Maid of twenty five years old, complained of a pain in her Spleen, which was very inward; after which followed a Scirrhus or hard ſwelling. She vomited every day at ſeveral times twenty or twenty two pound of a greeniſh Humor. In *November*, ſhe fel into a terrible Dropſie, and the ſixteen day of *January*, ſhe died. I ſaw a Country-man who vomited almoſt every day, but at ſeveral times, twenty, twenty five, or thirty pounds of that greeniſh Humor, who was Cured by the uſe of ſteel, and he is perfectly wel at this very day. Which verily is worth the marking.

The 366 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Scabbyneſs with Itching, in a Man of eighty years old.

THe moſt illuſtrious Senator and Dean Mſr. *de Mauſſac*, being neare the age of four ſcore and four yeares, naturally of a conſtitution mixt of blood and choller, in which choler prevailed, moderatly fleſhy and of a propper ſtature, and wel ſhaped Body, with a nimble induſtrious wit, and a rare faculty to debate Caſes of Law, not ordinary for one of his years: In former times he enjoyed his health very wel, finding no alteration from the weather whither hot or cold. Yet in the ſpace of five years, three times he ſuffered ſome abatement of health by reaſon of Indigeſtion of his meat, not that his ſtomach languiſhed through age, nor through any fault in his diet. He was not given to feaſting, nor to pleaſe his palate; yet he delighted in ſallates and fruites that wil not laſt; which though they ſeem familiar to our natures, and eaſie of digeſtion; yet can they hardly be converted into good blood, whereupon bad humors are collected, which putrefiyng upon any ſlight occaſion, doe often breed malignant feavers, as *Galen* hints in his ſecond Book of the faculty of meates. And this I obſerve to have happened to this venerable old man, firſt in *May*, the yeare after about autumn, and laſtly; but worſt of al, about the time in which the Pleiades are wont to diſappear;

whereupon he ſel into an accute feaver, which every other day had ſome exacerbation, after the Inſult whereof he vouded upward and downward an excrementitious flegmatick humor, which was at laſt mingled with choller, with great unquietnels and heart-burning, which are ſigns of at leaſt a baſtard Cholera; out of which dangerous condition he eſcaped upon the ſeventh day, nature driving out the reliques of the morbifick Matter to the skin, whereupon aroſe a filthy itch al his body over, but eſpecially in his legs and chiefly in the left leg, where aroſe a red fiery ſwelling, the matter whereof being in a manner diſcuſſed, there remained an inflamatory diſpoſition like the ſhingles or St. Anthonies fire, with painful itching, often provoking him to ſcratch, ſpringing from a mingled ichorous matter, ſalt, ſharp and pricking, which was ſhed abroad through both his leggs; ariſing from a mingled Cacochymia and Cachexia, which is familiar to old men; and it was ſo much the worſe becauſe both his legs did a little ſwel, which ſhewed great weakneſs of his Liver and other Bowels, which being weakned (eſpecially his liver) with the foregoing heat of the feaver, it was much to be doubted, whether (in ſo great age eſpecially) they could be reſtored to their ancient good Condition.

We began the cure with a vomit, he being enclined thereunto, that we might empty the evil humor floating in his ſtomach: Then we purged him downwards with a gentle purge. But when the Diſeaſe would not give way, we began to think of opening a vein, about which we were divided in our Opinions: his old Age and a Cachexia begun, which was cleare from his extreame itching and the ſwelling of his legs and feet, pleaded againſt blood-letting. Howbeit his feaver growning more intenſe, he was let blood, and not without cauſe; ſeeing that it is better to run a hazard, than certainly to periſh. Bad blood came away, he bore it wel, and had his Criſis on the ſeventh day, the reliques of the morbifick matter being driven out into the habit of his body and to his legs. After ſome dayes we thought fit again to purge out the il humors that were gathering head afreſh, that we might more ſafely uſe a bath of freſh water, To procure tranſpiration, to temper the heat and acrimony of the humors and vapours, alſo to open the skin & let them forth. After the bath had been uſed divers days, his itch became more troubleſome than before, the il humors being drawn from the Centry to the Circumference, which had not been ſufficiently purged forth. Wherefore becauſe our Patient refuſed to take any more purges I reſolved to draw the humors away by little and little with a gentle Lenitive, and to try what aſſes Milk would doe, which *Hippocrates* ſometimes uſed inſtead of a Linitive and purging Medicament, as may be ſeen in the fourth Book *de Diæta Acutorum*. And the event was according to my deſire, for having a whole month together drunk of the Aſſes milk, his belly of it ſelf very dry and coſtive was looſened, and he vouded abundance of excrementitious humors, in the place of which good humors bred; and the dregs of his groſs humors being attenuated, his hemorrhoid veins opened, by the flux whereof he was reſtored to his former Health; yea, and became more luſty. I ſay nothing of the ſtrengthening things we gave him, nor of the oyntments and other outward applications to mitigate the itch, and when the fervor of the ſhingles was abated, to diſcuſs the remaining morbifick matter; al which did much good to our Patient, by the bleſſing of Almighty God, the giver of Health, and al good things beſide.

An Obſervation communicated by Mſr. *Antonius Jodon*, a Renowned Phyſitian at *Autiſſiodore*.

The 367 *Obſervation, or Hiſtory, of Famous and Rare Cures*, &c.

A Dropſie of the Stomach.

IN the year 1620. a Woman ſomwhat tal of ſtature forty eight yeares old, named *Joane Delier*, wife of a Citizen of this City, beleeved that ſhe was with child, her belly growing ſtil bigger and bigger. But when ſhe knew the time of childbearing was paſt, ſhe went to a phyſitian who preſently told her ſhe was fallen into a dropſie. Medicines being taken

taken in vein; the ſwelling of her belly continuing three years together, (ſhe ſtil following her ordinary Employments) it grew at length ſo great, that ſhe was ſcarce able to beare ſo great a Burthen. At laſt ſhe fel into a continual feaver, with ſhorter breath than before, and an unquenchable thirſt, together with much tumbling and unquietneſs. Within the ſeventh day ſhe died. Whoſe body becauſe it could not be incloſed in a Coffin, becauſe of the extream greatneſs of her belly, in al parts thereof; being deſired of her Parents, I cut her belly, and ſo great a quantity of wheyiſh liquour came out, that it weighed above nintie pound weight. At laſt there came a thick and troubled humor, which was the ground & ſettlings of the wheyish excrement. Which being done, and ſpunges put into the holes, which we had cut to let out the hydropick Humor; we proceeded in an orderly way to diſſect her whole belly, and when we looked for the peritonæum that we might diſſect the ſame, a ſtrange thing to ſay, but more ſtrange to ſee, this Membrain whoſe office it is to cover the natural parts, did ſo ſtrongly cleave to the forepart of the ſtomach, that it could not be parted without breaking or cutting. Yea and we found our ſtopple which we had left in the wound ſlipt into the cavity of the ſtomach. Before the cutting up whereof, we did conſider a while its unuſual greatneſs and its two orifices, the Stomachus and Pylorus having both the ſame ſituation, and touching one the other, the Cal poſſeſſing the uper Region; the Liver found enough, which yet the twelling ſtomach did bear up, the Heart (with the Midrif between) bearing heavy thereupon, had ſet its print upon it, as if it had been upon waxe. No wonder ſhe was ſo troubled with ſhortneſs of wind for two yeares ſpace. The reſt of her inwards, as the ſpleen, kidnies, Guts, Meſentery, Gal-Bladder, Piſs-Bladder, and womb, were ſound, and little altered by the Heat of her feaver. Theſe things thus obſerved, we drew forth that mighty ſtomach with the Gullet and Gut Duodenum; and being cut open through the middle it was above a *Paris*-Ell broad; in the lower part thereof we obſerved a ſerous Mudder being the remainder of the ſettlings of the foreſaid hydropick humor. Al the fibres of the inner membrane were far ſeparated one from another. There was no fault in either of its orifices, ſave that in the Middle of the pilorus in its uppermoſt part, there hung a Bladder half a finger long, and a little thicker than a mans thumb, ful of tranſparent water, and entring almoſt into the cavity of the Duodenum Gut. We obſerved alſo the inner membrain of the ſtomach, ſtudded as it were with many little water bladderkies, part whole, and part eaten aſunder. And theſe are things (if I miſtake not) never obſerved before by any mortal man, I am ſure I never read or heard the like. Now when I conſidered ſeriouſly with my ſelf what ſhould be the cauſe of ſo unwonted a diſeaſe as this, being a dropſie proceeding from the ſtomach; I could lay the fault no where elſe, but in an habitual cold and moiſt diſtemper of the whole ſtomach, which when it drew nouriſhment from the trunk of Vena Porta by the Ramus gaſtricus, and other branches, by reaſon of its diſtemper it turned, the ſaid nouriſhment into a wheyiſh excrement, juſt as the liver does, when a dropſie is cauſed thereby. And the ſaid cold and moiſt diſtemper of the ſtomach came by much drinking of cold water, eating of raw fruit, and other ſuch like cauſes. And for as much as by reaſon of the great looſneſs of the fibres of the ſtomach, and the perverſe figure of that part, the lower orifice was ſituate juſt even with with the upper, the meates did eaſily paſs from one unto the other, ſo that they were not drowned in that vaſt whorlepit of Seroſities, but were in ſome meaſure Chylified in the gut Duodenum; for al grant that the Guts can make chyle, and nature when neceſſity compels, may render their chylifactive power more effectual than ordinary. Now the ſtomach did not expel the water by thoſe open paſſages, becauſe its fibres were reſolved and deprived of their activity by the plenty of moiſture wherewith they were ſoaked.

Obſervations communicated by Mſr. *Francis Chomel,* the Renowned Phyſitian of the *Annonæenſians.*

The Iliack Paſsion, or Miſerere mei.

A Certain Man being five dayes troubled with the Iliack paſſion, ſo that he Vomited up his dung, and many medicines being tryed in vain, he took an ounce of quickſilver Killed with Brimſtone, encloſed in a little bal of wax. Preſently after he had taken it in, fomentations were continually applied and clyſters frequently injected. After ſome hours, little bits of wax were ſeen in a Clyſter which came from him, which was a token that the paſſage was open, ſo that a purge being given him, he was perfectly cured of his diſeaſe.

The 369 *Obſervation, or* Hiſtory, *of famous and rare Cures,* &c.

The Efficacy of an iſſue.

A Certain Man long time afflicted with pain in his Loines, when nothing would help him, at length he died. Among other Remedies, a little before his death an iſſue was made in his thigh, four fingers above his knee, out of which when the cruſt fel off there flowed a kind of bloody waterish ſubſtance, about the quantity of half an ounce; but afterwards there came out of the iſſue every day an ounce of true and wel conditioned matter or quitor, or more. The Chyrurgeon wondered and could not deviſe whence that matter came. The Man being dead & his body opened, his Lungs were found ful of matter, which was the chief cauſe of his death. And in his loins a great impoſtume was found, from whence that continual and ſtubborn pain proceeded. And from the ſaid impoſtume unto the iſſue was found a gutter or little Conduit pipe, by which ſome part of the Quittor flowed from the ſaid Impoſtume out at the iſſue. By which we may gather what induſtery nature is wont to uſe in expelling morbifick Cauſes, who framed that ſame conduit pipe to purge the Impoſtume in the Loines by the iſſue; howbeit ſhe could not bring to paſs what ſhe intended, being overcome by the greatneſs of the Diſeaſe.

The 370 *Obſervation, or Hiſtory, of Famous and Rare Cures,* &c.

A Tertian Ague.

THe ſaid Mſr. *Chomel* told me, that he was wont to Cure all tertians in a manner, by giving the patient an hour before the fit a good draught of the Decoction of Chamemel and Cream of Tartar, and preſently after the medicine was taken, letting the patient blood. If he have no decoction ready, he is wont to give the patient a draught of cold water, and the ſame effect for the moſt part followes. He conceives that the water, by meanes of the blood-letting is drawn into the Veines, and that it does temper the morbifick matter, and keep it from fermenting or working, by which meanes the fit is hindred.

The 371 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

Pain of the Colick.

A Young Maiden of the age of fourteen years, was vexed with a moſt cruel pain of the colick, with a ſwelling of her belly, which could not be mitigated neither by clyſters, nor purging

ging potions, nor by potions to kil worms; only it was allayed by a lukewarm bath; but when ſhe came out of the bath, it returned, & within twenty days brought her to her grave. Two dayes together immediatly before her death, ſhe voided a great Quantity of exceeding black blood by ſtool. Her body being opened, much glaſſie flegme was found ſticking to the outer coat of her guts, and during the whol length of the guts, it was diſperſed here and there in bits of different greatneſs, ſo that ſome were as big as beans, others no bigger than hafel Nuts. In her veines and in the Ventricles of her Heart, we found no blood at al, Becauſe Nature with al her might had driven it into the Guts, where it turned black, as al blood out of the veins is wont to doe, and before her death was voided forth. Where we are to obſerve the ſeat of the Matter which cauſed this colick pain, which is not ſpoken of by Authors, viz. the outward ſurface of the guts.

Bottle-bellyed Dropſie.

IN the Yeare 1642. in the month of *October*, I was ſent for unto a boy of 14. years old, who after the ſmal pocks had been troubled with the dropſie for a month together; he had no feaver, yet was ſo weake, that he was fain to keep his bed. I preſcribed forthwith an Aperitive and water purging Apozem, the ſame which is deſcribed in the Practice of Dr. *Riverius*, in his chapter of the dropſie. And after the uſe of the Apozeme, I ordered him to be ſmoaked, as it were in a ſtove, with aperitive and diſcuſſing materials, for three dayes together, once in a day. Whereupon he was perfectly wel.

The 373 Obſervation, or Hiſtory of Famous and Rare Cures, &c.

Inflamation of the Teſticles with ſuppreſsion of Urine.

THe ſame yeare, in the month of *Decem*. I viſited a Man fifty yeares old troubled with an inflamation of his right teſticle, and with ſuppreſſion of his Urine. I preſcribe him a clyſter, partly emollient and laxative, partly expelling wind; and when that was come away, I cauſe him to bleed eight ounces from the vena baſilica of his right arme. I cauſed his reins to be anointed with oyl of ſcorpions of *Matthiolus*, and after he was anointed I cauſe a pan-cake made of onions cut in ſmal bits, and egs beaten together, with Hogs Greaſe, to be applied to the ſame part. And the day after I gave him a bolus of Caſſia, Diaphenicon and poudred rhubarb. Hereupon he piſt luſtily. And for his inflamed teſticle we made a Cataplaſme or pultis of bean meal boyled in vinegar and water unto a juſt Conſiſtence. Which medicine being applied three dayes together unto the part affected he was reſtored to his former health.

The 374 Obſervation, or hiſtory, of famous and Rare Cures, &c.

Urine ſtopt.

THe Same yeare and month, I met with a woman forty yeares old fat and wel fleſhed, troubled with a ſtoppage of her urine. Shee had a feaver but not very ſtrong; and her urine which ſhe made in very ſmal Quantity, was very red, with a great pain about the reines of her

Back

back: finally ſhe vomited ever and anon by fits. Many emollient, Laxative, and wind-expelling Clyſters were given her, but in vain; ſhe was twice let blood, viz. in her arm and in her foot. Alſo fomentations and ointments were applied, as in ſuch caſes is uſual. A bole was given her, made of caſſia, Diaphenicon and rhubarb, but all in vain. At laſt I applied the pancack commended in the former obſervation, to her reins; with the which ſhe ſlept quietly, piſt plentifully, and found her ſelf very wel. The like ſucceſs befel me, in another patient, who having an acute feaver, without any pain of the Reines, and yet was not able to make water: the foreſaid pancak being applied, he piſt afterwards, and his Feaver being chaſed away, became perfectly wel.

The 375 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Fiſtulous Ulcer.

IN the Month of *January*, *Anno* 1643. Mſr. *Ferries*, a Varilienſian, being fifty five years old, of a very Cholerick Complexion, and one that had wearied himſelf with many Cares and Labors, deſired me to undertake to cure him. He had been troubled for four years paſt with divers pains in his Breaſt, cauſed by Humors falling down from his Head into the outward parts of his Cheſt. He had about the Bone called *Clavicula*, a ſwelling as big as a Hens Egg: but, which was worſe, there appeared a tumor on the right ſide of *Os Pubis*, as big as a couple of Gooſe Eggs, out of which being opened there had flowed for ſome months together, well-conditioned matter or quittor: there was a deep Ulcer, almoſt half a Foot deep: for the healing whereof, many Medicines were tried, but all in vain; ſo that every one feared it would prove a Fiſtula. I ſet upon the Cure after this manner:

I preſcribed firſt of all a purging Potion, which was made to purge partly flegm, and partly Choler. Then I cauſed him to be let blood. Then I gave him Apozemes made of temperate Aperitives, Wound-herbs, and Purgatives. When he had done with them, he took of this following Decoction, twice a day for twelve daies together.

Take *Barley entire one pugill*; *the Leaves of Scabious, Sanicle, Mouſ-ear, Vinca pervinca, Agrimony, and Pimpernell, of each one handful. Seeds of St. Johns wort, and Cardus Benedictus, of each two drams: Of the three cordial Flowers, of each a pugil. Boyl all in weak Hydromel,* [*that is, Honey and Water boyled together, the Honey being in ſmall quantity*] *unto one pound and half. Of the ſtrained Liquor let him take ſix ounces morning and evening.*

In the mean while, Injections were made dayly into the Ulcer of the ſame Decoction. But when all would not do, but that all the foreſaid Infirmities continued: I preſcribed him a ſweating Diet Drink for twenty five dayes together, made of a Decoction of Salſa parilla, and Guajacum, of each a like quantity. Of the remaining materials a Diet-drink was made for his ordinary drink. And every ſixt day of his Diet, he took a purging Medicament. Towards the end of the diet-drink, the Ulcer ſeeming to remain much as it was at firſt, I cauſed the Chyrurgeon to put a ſtick into the wound, and cut the Skin and Fleſh which was above it, being about a Fingers breadth deep, with an Inciſion Knife, that the Cavity thereof being opened, we might more eaſily apply convenient Medicines. The event did anſwer according to my wiſh, for that ſame ſpongy proud fleſh being conſumed, the Ulcer was in a ſhort time healed up, and the patient freed both from the pains he felt, and from the fears he had conceived of a Fiſtula. To perfect and ſeal up the Cure, I ordered an Iſſue to be made in his left Arm, and that it ſhould be kept open for a long time.

The 376 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The After-birth retained.

AT the ſame time, Madam *de Ruffia*, being aged thirty five years, of a Sanguine Complexion, having brought forth a Child with much pain and Labor, had her After-birth remaining

ning within her Womb. We could not feel any pulſe that ſhe had, her Face was like a dead Bodies Face, ſo that all ſeemed paſt hope. When I came to her, a certain Chyrurgeon had given order, that ſome of her Hair ſhould be cut off and burnt, and the aſhes given her in a cup of Wine: which being done, her After-birth came very happily away. Howbeit, her Childbed purgations were ſtopped, which caſt her into a Feaver. The day after I cauſed her to bleed eight ounces in her right Foot (for her Pulſe was ſtrong and full) and the day following, becauſe ſhe was Coſtive, I ordered that ſhe ſhould take this following Clyſter.

Take *Mallows, Violet Leaves, Pellitory, and Mercury Leaves, of each one handfull. Flowers of Chamemel and Melilot, of each one pugil. Annis ſeed, and Fennel ſeed, of each half an ounce. Boyl all in the Broath of a Calves Head to a pound. In the ſtrained Liquor diſſolve Syrup of Violets, and Red Sugar, of each one ounce, and give it for a Clyſter.*

When the Clyſter was come away, ſhe had a Vein opened in her left Foot, and bled ſeven ounces. By this means her Feaver was abated, her ſleep returned, which formerly ſhe was wholly deprived of, and by little and little, without any more ado by way of Phyſick, ſhe grew well.

The 377 Obſervation, or Hiſtory, of Famous and rare Cures, &c.

A Salt rhewm, with inclination to a Conſumption of the Lungs.

IN *October*, 1643. I was called unto a ſick man forty years of Age, of a Cholerick Complexion, and of a lean and meagre Body. He was troubled with a ſalt and ſharp Rhewm, falling from his Head upon his Lungs, four years together; he had a very dry Cough, and obſtructions in the parts under his ſhort Ribs, on both ſides, with a ſlow continual Feaver. Ad hereunto an Inflamation, which appeared by a pain about his Breaſt-bone, and the Vertebraes of his Back.

I ordered him in the firſt place a purge made of Rhubarb, Tamarinds, Senna, Manna, and Syrup of Roſes, but in little Quantities. Then I cauſed ſeven ounces of blood to be taken from his right Arm. Afterward I made him take Broaths made of temperate Aperitives, for twelve daies together, ſteeping all night in every third Broath, half an ounce of Senna, and diſſolving therein an ounce of Manna. When he had done with his Broaths, he went into a lukewarm particular Bath made of a Decoction of Barley and ſweet Almonds, twice a day, three dayes together. At the beginning of the Cure, I cauſed two Iſſues to be made between his Shoulder-blades, two fingers breadth diſtant from the Back bone, on either ſide thereof: and I give order that once a week a Cupping glaſs ſhould be faſtened upon the Iſſues. Which Remedy prevailed ſo much in this Patient, by reaſon of the ſeroſities, which in great quantity were drawn away every time the Cups were faſtened, that I attribute the whol Cure in a manner thereunto.

The 378 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Inflamation of the Eyes.

A Certain Man of thirty years old, of a Sanguine Complexion, but of a very moiſt Rheumatick Brain, was long troubled with an Inflamation, which did poſſeſs both that Coat of the Eye which is called *Tunica adnata*, and both the Eye-lids. The Diſeaſe was not continual, but came by Fits. Many Medicines had formerly been uſed, but all in vain. At laſt I preſcribed two Iſſues between his Shoulder-blades, and cauſed a Cupping-Glaſs large enough to cover them both to be applied, ſo often as the Rhewm was more than ordinary. Which being done, his Eyes became perfectly well. This following Oyntment did not a little further the Cure, which he uſed at the beginning, as ſoon as his body had been purged, and a Vein opened.

Take

Take *Verdigreece twelve grains; Camphire, and Lapis Calaminaris, of each half an ounce; Tutty prepared, half a dram; fresh butter washed in Rose-water, two ounces. Mix all into an Oyntmint.*

The 379 Observation, or History, of famous and Rare Cures, &c.

A Malignant feaver.

IN the Month of *May*, 1644. a Woman of thirty years old, desired me to take her into Cure. She had been sick two daies of a malignant Feaver, with a pain in her Head, continual unquietness, extream thirst, and certain blewish Spots about her breast and back. Thrice in two daies I caused her to bleed eight ounces at each time, and because she abhorred all inward Medicines, I bethought my self of some that might be outwardly applied. On the fift day of her Disease, I caused a Cataplasm of Snails beaten with their shells into a mass, to be applied with Tow upon the Soals of her Feet. This Medicine was applied about three a clock in the afternoon; and when it began to draw towards night, the sick Woman began to feel a certain grievous and troublesom pain, in both her Thighs and Legs, which continued till midnight, so fierce, that she alwaies made her complaint, desiring the Cataplasm might be taken from her Feet. And at midnight she swet all over her body, with such a filthy stinking smell, that she her self could hardly endure the same. Having shifted her Linnen, the Cataplasms were taken from her Feet, which did so stink as that they had almost poisoned the By-standers. In the morning I find the Woman cheerfull, her Feaver and other Symptomes being very much abated. And I conceiving that she was past all danger, I thought good to do no more to her, only I prescribed her a purge, which notwithstanding through extream self-willedness, she refused to take; howbeit, a little after, she perfectly recovered.

The 380 Observation, or history, of famous and rare Cures, &c.

The Gout.

IN the Month of *February*, 1645. a Gentleman of a Sanguine Complexion, fat, and well fleshed, was for three daies troubled with the Gout in his Knees. As soon as I visited him, I order him to bleed a pound of blood: which appearing very impure, the day following I caused him to bleed as much more, whereby the Patient found himself much relieved, the blood being as bad as the former. Then I caused him to bleed the third time ten ounces; and the day following I gave him a purge made of Senna and Rhubarb in a convenient Decoction, with Diaphenicon, and Syrup of Roses, after which he was perfectly well.

The like success befell me in two other Patients, which were of the same temper and corpulency, in whom blood-letting three or four times repeated at the beginning of the Cure, wholly took away the Disease, the part being fomented with Vinegar and Water mingled together, and afterwards anointed with Oyl of Roses.

Obſervations received from Mſr. *Des Grands Prez*, a moſt Expert Phyſitian of *Grenoble*.

The 381 *Obſervation, or Hiſtory, of Famous and Rare Cures*, &c.

A Swelling of the tongue.

A Certain Perſon infected with the Whore-maſters Pox, was cured with Mercurial Fricti̇ons, which by order of the Apothecary, being uſed more frequently, and longer than the Phyſitian had preſcribed; the extream violence of the Flux, had ſo ſwelled his Tongue, that it hung out of his mouth the breath of four Fingers. Which to Remedy, the Phyſitian would preſcribe nothing, taking it hainouſly that the Order by him preſcribed had been neglected and exceeded. Whereupon the Patient continued in this miſerable condition for the ſpace of four months, and his Tongue being altered by the air was grown three fingers thick. I being ſent for, after blood-letting, waſhing of the part affected, and a Seton faſtened in his Neck, order a Pouder to be applied to his Tongue, made of Pepper, Ginger, Muſtard ſeed, and parched Salt. With the uſe whereof his Tongue began to grow ſoft, and to move it ſelf the firſt day, The third day I order them to waſh it oftentimes in Aqua vitæ very well rectified; ſo that upon the fourth day it appeared much ſofter, and might be thruſt into his mouth, howbeit it would come out again preſently. But afterward perceiving certain Ulcers in the lower part of his Tongue near the Veins called *Ranulæ*, which proceeded from the grating of the Teeth whereupon it reſted; I cauſed the ſaid Ulcers to be waſhed with the white water made of white precipitate, and I ordered deep Scarifications to be made about the foreſaid Veins. By which means, within few daies the Tumor was wholly diſcuſt, and the Tongue brought to abide within its proper Quarters.

The 382 *Obſervation, or Hiſtory, of famous and* Rare *Cures*, &c.

A dumb perſon Cured by Accident.

A Certain Beggar was entertained in way of Hoſpitality by a wealthy Farmer, in whoſe Houſe he remained certain daies by reaſon of a dumb and Deaf boy he had brought with him, who was the ſame night taken with a continual Feaver. At length the Beggar being out of patience and deſpairing of his recovery, he ſlipt privately away and left the ſick boy behind him, who recovering his wonted health, was by the Farmer ſet firſt to look to his Lambs, and after that to keep his Sheep and Wethers, which ſervice he performed excellent wel. Now it fel out ſome years after, that being at Dice, he was ſtruck over the pate with a thick cudgel, and the hinder part of his Scul was broken into many peices. Howbeit by the induſtry of a Skilful Chyrurgeon he was Cured of that very Dangerous hurt. And as he grew wel his ſenſe of hearing began to come to him, and he began to mutter and babble ſome words, til that at laſt he attained to hear and ſpeak perfectly; in which condition he lived to the fourty five year of his Age, ſerving as Vine-Dreſſer, to Mſr. *Pajanus*, Proctor of *Grenoble*; and it is ſcarce two years ſince he died.

The 383 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

Depreſsion of the Skul.

IN many a Depreſſion of the Skul has been cured, a Cupping-glaſs (after once or twice blood-letting) being faſtned upon the depreſſion with much flame; and ſomtimes Inciſion is added with many Scarifications, and ſomtimes without them. Among the reſt, I ſhal inſtance in one remarkable patient, named *Arthaudus*, a Procter of *Grenoble*. This man being upon a far Journey, met his enemy and was ſtruck on the *Os Parietal Siniſtrum*, with which blow he was ſtruck to the ground, and left for dead. Being carried thence into a neighbour Village, two Chyrurgeons did undertake to cure him, who uſed only blood-letting and Cupping-glaſſes, without any regard of his wound, becauſe they could perceive no maniſeſt ſolution of continuity. I being ſent for, find the man wallowing in blood, which came out of his mouth and noſtrils, with ſtomach ſickneſs, and almoſt perpetual vomiting, hardly knowing them that were about him. Speaking with great difficulty, and not ſo much as opening his Eyes. Having viewed his whol Head, when I did but touch his Skul where it was dented in, never ſo little, with the top of my finger, preſently he began to be ſtomach ſick. Which having obſerved, I ordered the Chyrurgeon to ſhave that part, and apply a great Cupping-Glaſs thereunto, with much flame, which though it reſted upon the ſound and ſolid parts, did ſo much pain the patient, that not being able to ſpeak, he ſhrunk down muttering into his bed. But after the Cupping-Glaſs was removed, and inciſion made upon the part affected, and the Cupping-glaſs again ſet on, he was ſo far from being pained, that he perceived great comfort thereby: and thereupon began to ſpeak to me, and knew al the By-ſtanders. And though ſeven or eight ounces of Blood were drawn away by the Cupping-Glaſs; I ordered nevertheleſs, that the next day he ſhould be again let blood. And thus the ſick man, a few daies after, recovered his perfect health.

The 384 *Obſervation, or hiſtory, of famous and rare* Cures, &c.

Conſumption of the Lungs.

THe third Son of the Lord *de Periſſol*, Preſident in the Parliament of *Grenoble*, being fourteen years of Age, was brought from *Geneva* to *Grenoble*, in the eight month of his diſeaſe, being conſumed with Leanneſs and Conſumption of the Lungs, with a very great Looſneſs, ſo that I foretold his Father he would ſhortly die, becauſe of an ulcer of his lungs, which he coughed up bit after bit, and thoſe bits being laid upon the hot coales, they ſtunk extreamly. Alſo his breath ſmelt ſo ſtrong, that it did not only infect the ſick mans Chamber, but was ſmelt al the ſtaires over, by thoſe that lodged near. All which conſidered, I ſaid I could appoint him no other Medicine than a Womans Milk, which he muſt ſuck from the Dugs of an healthy wel diſpoſed Nurſe. Which putting in Practice the next day, the patient was ſomthing better the day after, and within two months he was perfectly thereby recovered. This Diſeaſe aroſe from a pleuriſie ill cured, which was changed into an Empyema, and the Empyema into a Conſumption of the Lungs. This very Medicine I have experimented in many other perſons, in my ſelf and Son, and two Gentlemen who did ſpit blood in great Quantity.

The 385 *Obſervation, or hiſtory, of* Famous *and Rare Cures, &c.*

Pricking of a Nerve.

A Certain Merchant of *Grenoble*, ſmiting upon a table with his Hand doubled in, ſtruck a Needle into it, which ſtuck in a clue of thred. For two daies together he felt no inconvenience thereby, but the third day ſo great pain aroſe in the part, continuing for divers daies

daies following that it could not be aſſwaged, either with blood-letting, Fomentations, Cataplaſmes, or Anodynes. Obſerving the contumacy of this pain, I queſtion the Chyrurgeon whether he did ever know that this patient was troubled with the Whoremaſters Pocks; he told me, that three years ago indeed, he was troubled with the Gonorrhæa and Putrifaction of his Yard, but was perfectly Cured thereof. Forthwith I preſcribed him a Suffumigation of Vermilion, Storax, Benjamin, Franckincenſe and Henbane ſeeds, mixed with Terpentine; wherewith only his hand was Smoaked, and preſently he was better, and the Medicine being continued a few daies, he was perfectly Cured.

The 386 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Quartan Ague.

I Have cured many of the Quartan Ague, whoſe happy cure, after Univerſal Medicines, I have chiefly attributed to *Oleum Magnificum*, Oyl of the Load-ſtone, which has no viſible or other wiſe ſenſible operation. I give two or three drops thereof in a ſpoonful of Wine, at the beginning of the fit. And thereof I make my *Pilulæ Febrifugæ*, or Ague Quelling Pills.

The 387 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The falling ſickneſs.

I Have often tried, and can prove the ſame by many witneſſes, that Peony gathered under its proper Conſtellation, viz. When the Moon is deſcendent in the ſign of *Aries*, does remove the Falling-ſickneſs only by external Application. And I cauſed a certain Virgin of eighteen years of Age, who had been troubled with this Diſeaſe from her Child-hood, and had dayly fits, being in the Hoſpital to wear it about her Neck and Arms. After which ſhe was perfectly cured. Hence it is apparent, of what Conſequence Aſtrology is, in the Practice of Phyſick.

Obſervations communicated by *D^r Henricus Rufus*, Practitioner among the *Sammarcelinenſians*.

To Mr. Dr. Lazarus Riverius, *Councellour and Phyſitian to the King, and worthy Profeſſor of Phyſick in the Univerſity of* Montpelier.

Henricus Rufus *ſendeth Greeting.*

SInce the time that you (moſt worthy Profeſſor) have ſhined as a new ſtar in this Province, no wonder it is that all Eyes are intent upon you, and ſeeing that by your light you do exceedingly refreſh and cheer us, it is fit that we ſhould extol and praiſe you, being made happy by your influence. For he that does not know your Vertues and worthy Life, has at leaſt heard of you and wiſhed that he might be better acquainted. I will not inſiſt upon the Gifts of your mind, and the excellency of your diſcourſe ſweetned with Learning. So many people at the Grenoble, and every where in the Delphynate you have recovered from the Jaws of Death, cannot, nor ought not to conceal your praiſes; only there is one thing that does afflict and make us miſerable, viz. That the Narbonenſian Province, *and* Montpelier, *will not let us longer enjoy your preſence. Howbeit, no place can wholly want you (renowned Doctor and Profeſſor) for beſides what was ſaid before, your moſt accurate Practice of*

Phyſick which you have publiſhed, does comfort us in your abſence, and gives this advantage to the Common-wealth of Phyſitians, that we can have your advice though your ſelf be abſent: And yet, this is not the end of your Labors; for in the middeſt of ſo many weighty Emp'oyments which take you up in the Univerſity of Montpelier, *and the importunities of ſo many ſick perſons, which ſeek unto you for health, you are buſily compoſing another Book of your Obſervations, not regarding your health, nor diminiſhing your ſtudies, that you may add Luſtre to the Art of Phyſick. Which though of your ſelf you could ſufficiently accompliſh; yet it is your deſire to adjoyn the Obſervations of divers Friends: neither have you diſdained to deſire my poor Obſervations, who was once your Scholar, and do account it my Glory to have learnt the Rudiments of Phyſick from your Mouth. I have yeilded to your command, though not ignorant that I bring water to the Sea. If you ſhal read them, and find ſome things therein not conveniently expreſſed, I am wel content (worthy Sir.) that they ſhould be corrected by you, to whom I have vowed eternal ſervice and Veneration. Farewel, and live long, to bleſs me, and the whol Tribe of Phyſitians.*

From my poor Study,
the Ides of *July*, 1645.

The 388 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Monſtrous and unwonted Hiccup.

Anno 1634. in the Month of *December*, A Tailor of fifty years old, by reaſon of faſting, cold, and journeying, fel into the feaver Ephemera, which within twenty four hours was diſcuſſed by plentyful ſweat: ſo that the following day, he continued free from his Feaver and Head-ach untill eight a clock; howbeit he had no Appetite to mear, and was very ſleepy and ſluggiſh. But upon the eighth day in the morning, he was again ſeized by the Feaver without any ſhaking; and a while after, towards the evening, he was tormented with a moſt grievous Hiccup, the noiſe whereof was heard four Houſes off in the Neighbor-Row, and eaſily in the ſtreet without any truce or intermiſſion. In the mean time, he was not very thirſty, and well in his wits, but very impatient of ſo cruel a Symptome. At eleven a clock with coughing he vomited a crude matter, not unlike corrupted fleſh, which the by-ſtanders took to be a piece of Marmalade of Quinces, which the Patient had eaten not long before. But the day following, he caſt up a bit of the ſame color and greatneſs, viz. red, and as big as a Hazel Nut; which I cauſed firſt to be waſhed in water, and then laid upon the coals, whereupon loſing its red color, which it left in the water, and ſtinking extreamly in the broiling, it appeared to be (as I formerly gueſſed by the ſtory) a piece of fleſh with the Membranes, eaten off from the Oeſophagus, or upper Orifice of the ſtomach, by an Ulcer which lay concealed in the ſaid Oeſophagus. Whether that Ulcer was bred all on a ſudden, taking its riſe the firſt day in which the man was taken with the Feaver Ephemera; or whether it was contracted long time before, is uncertain. Yet it is likely that it began not ſo ſoon: firſt, becauſe no Inflamation or other tumor had gone before, which is commonly attended by an Ulcer: Again, becauſe that for many years he had been vexed with a light Cough, which brought up nothing viſible. So that the Diſeaſe, which had long ſince rooted it ſelf under the firſt Coat of the Oeſophagus or Stomach, being produced by thoſe external cauſes fore-recited, did all on a ſudden diſcover it ſelf. Now the Symptome was continual by reaſon of the Ulcer, whereof he died upon the fourteenth day, raving: For the Hiccupping would remit nothing of its fierceneſs, neither with Blood-letting, Cupping, Deterſive Medicaments, Digeſtives, nor Purgers, amongſt which Hiera is very much commended.

The 389 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

An inflamation in the hinder part of the Brain, with Symptoms therefrom ariſing.

THe moſt noble and illuſtrious young Gentleman, *Monſeiur de Larthaudiere*, thirty ſeven Years of Age, fell in the Dog-dayes into a moſt grievous and ſharp pain of his Head, which troubled him moſt in the hinder part, and towards the left ſide. He had an obſcure and very light Feaver, his Senses were viperous, eſpecially his Taſt; howbeit he was mighty thirſty, and could take no reſt. His Forehead was not at all hot, his Head but little, he felt no pain though his Head were hard touched; laying our hands, one to his Forehead, the other to the hinder part of his Head, we perceived his Brain to be ſhaken and pulled, within his Skull, and his whol Head did involuntarily ſhake this way and that way, his Urines were at firſt thick and white. Which things having obſerved, fearing there was a Flegmone or Eryſipelas in his Brain, I ordered him to bleed; firſt from the Cepialica, or head Vein, then from the Mediana, two pounds of blood. The following daies becauſe the pain raged terribly, we cauſed him at ſeveral times to bleed two pound more in the other Arm. On the fift day we purged him; on the ſixt we drew half a pound of blood, with Cupping Glaſſes faſtened to his Shoulders. In the mean while, his head was ſhaven, and bathed with Vinegar of Roſes, and we omitted nothing which might revell, derive, or repell any kind of humors from the brain. On the fourth day of the diſeaſe, there brake forth a ſmal tumor on the right ſide of his Tongue, which we found to be hard, hollow, and ulcerated without feeling, and indeed no other than a Cancer. On the ſeventh day towards the evening, he raved a little, and ſoon after he began to ſweat, firſt in his Face, and then plentifully over his whol Body, ſo that we hoped there would be a true and perfect Criſis: his Sweat was wiped off, his Linnen changed, and he did ſweat again abundantly. And now he began to complain of the Cloaths, crying out that he was ſmothered, which being removed, and the Sweat wiped off as before, we found him almoſt quite ſpent, and perpetually raving. His ſtrength, which was very firm before the Sweat, we perceived to be wholly weakened, and in this condition he continued all night untill nine a clock in the morning of the eighth day. He raved and talked exceedingly, being forgetful of all that had happened, or had been done about him, during his whol Diſeaſe. About ten of the Clock he ſeemed to come to himſelf, and to remember ſome things, and ſo we ſhould have had ſome hope of him, but that his Convulſive Pulſe, and the trembling of his Limbs, did declare his Brain to be extreamly diſordered. Soon after he piſt plentifully, and his Urine was red, and ſhined like fire. About the ſame time as the day before, towards the evening, he raved again, which was ſo much the worſe, becauſe, having recovered ſtrength, he became phrantick, and drove all the by-ſtanders from him with great terror. At nine a clock in the morning, he came to himſelf again, and continued ſo until the evening, about which time, a ſwelling roſe in his Neck, as big as an indifferent Apple, not painful, nor different in color from the reſt of his Skin, nevertheleſs he continued raving with a Convulſive trembling of his Hands. On the tenth day all things continued alike. Towards the end of the eleventh day, he died with Convulſions. And becauſe he was one of an illuſtrious Family, and much eſteemed by his Friends, and died ſo unexpectedly, his death not being foreſeen til the ſeventh day, nor foretold, it was thought convenient to open his Body, that the cauſe of his death might be manifeſted to his Friends. The other parts of his body were found in a good condition, all ſave his brain: For his Skul being opened, great plenty of very black blood, but thin, flowed preſently forth, before the coats of his brain were opened, and ere the bone was well ſawn aſunder, it came out by the Saw; which blood being ſhed between the Skul and the Coats of the Brain, was gueſt to be two pounds or more. When the Coats of the brain were diſcovered, we found them diapred al over with little Veins, which ſwelled with black aduſt blood. And in the hinder part for the depth of two fingers, and the length of four, where the Torcular or Brain-tunnel is ſaid to be ſcituate, there was not only blackneſs, but the Membranes were of a bright red color, and periſhed with a Gangrene: into which part, when I cauſed a Pen-knife to be thruſt, preſently

there

there came forth five or ſix ounces of a purulent matter or quittor, which ſtunk. Afterward the Chirurgeons making deeper inciſion, al the Baſis of the brain very neare, eſpecially the Cerebellum, and that part of the Marrow of the back, which is contained in the uppermoſt Vertebraes, & upon which the ſwelling did ariſe, were found likewiſe ſphacelated & mortified. And the coats of the Brain were on the left ſide eaten throughwith ulcers, through which tis probable the blood had iſſued out, which was found immediately under the skul. By the narration of al wch it is eaſie to infer, that the cauſe of that ſame ſharp pain, want of ſleep, Ravings, and Convulſions; was the ſolution of Continuity, in the hinderpart of the Brain called Cerebellum, or the Little Brain. Now two cauſes there were of the Solution of its Continuity, an Ulcer, and an Inflamation. The Ulcer being the principal cauſe, which was contracted ſome months ſince, by meanes related to me but not to be publiſhed, produced that litle ulcer in his tongue, and made the brain weak and ſubject to be inflamed. Now the Cholerick Inflamation was augmented, by the patients youthful age, his temper being ſanguin mixed with choler, and by the hotneſs of the weather: but certain external Cauſes did eſpecially further the ſame, viz. ſwimming in cold water, in the open air, after he had been heated by biding in the ſun and by being chafed with anger. But the Cauſes, why ſo obſcure a feaver ſhould be attended with ſo many terrible Symptoms, were theſe. The firſt was becauſe his brain was only affected, and al other parts of his body ſound. Secondly, becauſe the brain has of it ſelf but little feelling, and is of a cold and moiſt temper. The third and moſt remarkable was, becauſe the Brain is far diſtant from the Heart, and therefore the ſpirits which paſs to and fro in the brain, being once gotten into thoſe labyrinthian conetxtures of veſſels in the Brain can hardly return unto the Heart, and conſequently do not communicate thereunto the contagion of the part affected.

The 390 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A lingering diſeaſe proceeding from the Lungs being blaſted, of which a Maid died, never perceiving her ſelf to ail any thing. *February.* 1643.

A Virgin of good Parentage, being over fourteen yeares of age (as many ſuppoſed) was taken away by death. Two yeares before, ſhee was given to ſighing ſhe loved ſolitarineſs, and her face and whole body was pale and white. Two months before, when I viſited her brother, who was alſo waſted with a lingering diſeaſe, her mother deſired me to feel her pulſe, whether ſhe were feaveriſh. I obſerved her pulſe langiſhing and unequal, but without any feveriſh heat; wherefore, after I had a while conſidered her pale countenance, and queſtioned her age, it came into my mind that her courſes were about to come, which being by reaſon of the narrowneſs of the veines and other paſſages hindered, nature indeavoured to make way for them, whereupon the blood was by them infected, and ſtirred up thoſe light ſymptomes, as often happens to virgins of the ſame Age, and her Mother and Kinſwomen were of the ſame mind. Whereupon theſe things being done and laid upon the by, I departed, reſolving to inquire further into the matter, if her ilneſs continued, or the ſymptomes ſhould grow worſe. But theſe promiſes on both ſides, being either neglected or forgotten, two monthes after I was called in good earneſt to the maid; I find her diſeaſe much more grievous, as being accompanied with want of appetite and a continual Feaver, and intended or encreaſed towards night, without any burning biting heat, or other ſenſible Symptom or token; ſhe was very much weakened, the circumference of her noſtrils did widen themſelves as ſhe breathed, and yet ſhe had no great difficulty in ſetching her breath, no thirſt, no redneſs in her Cheeks, no want of ſleep; as ſhe lay in her bed, ſhe coughed a little without ſpitting. Her heart, being moved more frequently and ſtrongly ſtil towards the evening, was perceived to pant by laying on of a bodies hand, ſhe her ſelf not perceiving the ſame; her urines were thick, white, fatty, with broken a Eneorema or ſwim of the ſame Condition. She never raved, ſhe never loſt nights ſleep, no not ſo much as the laſt night, in which quietly and without any pangs or ſtrugling, ſhe changed her life for a better. Wherefore becauſe of her unexpected Death in reſpect of her parents, and becauſe thirteen more of the ſame Generation had died either before, or at the time they became marriagable, it was thought convenient by her friends to open her. And in the

the firſt place, her body being uncovored, we ſaw both her ſides, from her arme pits to the laſt baſtard Ribbs, ſpotted with reddiſh black and blew ſpots like ſtripes. Her Bowels contained in the Belly were ſound, only her liver was a little more black than ordinary, and her ſtomach very ſmal and coloured with choler green as Leekes. When we came unto her cheſt, from the Cavities thereof being diſſected, there iſſued an abundance of venemous ſtinking water, to the Quantity of four pints. 'Tis wonder that it had not cauſed great difficulty of Breathing, while ſhe lived, or that it had not been perceived to fluctuate by the ear. Her lungs we found blaſted; alſo in their edges round about, we ſaw every where whitiſh ſpecks, which did break with the lighteſt touch, and quittor with corrupt humor came forth of them. Yea, and the infection had dyed al the veſſels and cavities of the Lungs with a light red colour. The Membran Pleura and the intercoſtal muſcles were tainted with a greeniſh colour; the Midrif was wel, but the Pericardium or Heart-Bag by reaſon of neighbourhood, was withered, putrified, and dryed up. The Heart and brain were ſound. Al things being conſidered, it was determined and reſolved, that this infection, had its original from the parents, either from the ſeed or blood. The examples of her brothers prove the thing. And if this diſeaſe in the virgin had come from any external cauſe, ſome part only of her lungs would have been diſeaſed, & not the whol body of them. For ſhe had not offended in her Diet, and courſe of Life: alſo her quiet death did teſtifie, that the corruption in the ſubſtance and temperament of thoſe parts was made by little and little, and came not by a violent cauſe. And again, foraſmuch as ſhe had no cough, it is thereby apparent, that no flux or collection of Humors did corrupt her Lungs. Furthermore, as no man doubts but that ſuch Diſeaſes are propagated from the Parents to the Children; ſo it cannot be denied, but that they may eaſily be communicated; and we ordinarily find, that in Families infected with ſuch Diſeaſes, many are taken with the ſame Diſeaſe, either all together, or one after another; yea, and ſomtimes they are tranſmitted unto the fift or ſixt Generation, and infect other perſons that converſe with them.

The 391 *Obſervation, or Hiſtory of Famous and Rare Cures, &c.*

Stones continually voided by ſtoole.

I Knew a Gentleman, who ſo often as he went to ſtool voided with his Excrements ſtones of an uneven, Pointed ſuperficies, of an aſhe-colour, for many yeares together, not unlike in color and ſubſtance to them which come through the ureters from the Kidnies. Theſe ſtones, both with their bulk and ſharpneſs doe vexe his fundament in their tranſition; ſo that there is no doubt to be made of the ſtones, or of their perpetual Generation.

The 392 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Stones bred in al parts of the body.

I Knew another honeſt Man who dwelt in the Houſe of Mſr. *de Leyſſins* the Kings Councellor in the Supream Court of the *Delphinate*, being his Secretary and Clerk of the market, who could ſhow great and little ſtones in any part of his body; I have often ſeen and touched ſuch ſtones upon his fleſh, muſcles, Membraines, nerves, bones, indifferently: ſo that his eares nole, dugs, eye browes, were not without them; for they bunch out viſibly and appear moveable to thoſe that touch them; and if in one part they come to be diſſolved, they grow in another, and they daily encreaſe both in number and magnitude. The ſame perſon is alſo nepthritick, and once when I viſited him, he ſhewed me upon the whirl-bone of his right knee, a notable tumor, ful of divers ſuch like ſtones diſtinct one from another, which were as in a bag and rattled when they were ſtirred. Some months after I came to him again, and he told me the ſame tumor was become ſoft and ſmooth. I bared both his knees, felt the ſwellings and perceived indeed that they contained an humor in them: and inciſion being made, preſently there came forth three or four ounces of very white wel-digeſted matter and thick, ſuch as I have often

ten ſeen to come from thoſe kind of tumors which are called *Steatomata*, that is, Tumors ful of matter like tallow or congealed fat. In his left knee, becauſe I felt certain firm ſtones yet remaining, though with ſoft matter between, I did not open the tumor, waiting til they were fully diſſolved.

The 393 *Obſervation, or Hiſtory of famous and Rare Cures*, &c.

Stones bred in the ſpleen, vomited out.

I was cruelly troubled four yeares together with the ſtone in my kidnies, without any ſenſible hot diſtemper of my kidnies or Liver, from which I was freed by little and little, by Gods bleſſing upon the uſe of the vitriolated Aureilian waters. But I had ſcarce left voiding of ſtones and gravil, when I was taken with moſt cruel pains in my left ſide, about the ſpleen. The pain took up but a ſmal compaſs, not reaching ſo far as my navil or belly, only my left kidney did ſympathiſe by fits, and the left ſide of my ſtomach, eſpecially when I was diſpoſed to vomit. This Diſeaſe after ten dayes began to breake away, touching which I obſerved, that I was neither bound in my body, as is uſual in the colick paines, neither was my urine ſtopt, which happens in the ſtone of the Kidney: but contrary wiſe I voided abundance of urine, in which you would have ſaid there had been the pouder of tiles or bricks diſſolved, which quickly ſunk to the bottom of the chamberpot: yet that ſame thick ſettling was not rough or gritty, nor any waits ſtoniſh, but it was quickly, upon the leaſt agitation mingled with the urine like chalk. I was vexed with the like fit, three or four times, in the begining of the winter uſing to mitigate the grievoutneſs of the pain, ſuch remedies as are wont to be adminiſtred commonly for the pain of the Colick, only I omited bathing, which I formerly found did me much hurt. And ſeeing among other ſymptomes, frequent and painful vomitings did cheifly afflict me, before which I was troubled with anxiety and grievous heart-burning: it came into my mind to make diligent enquiry what the conditions of that matter were, which I vomited up in ſuch abundance, even when my ſtomach was empty. As for color it was of a dark red, in conſiſtence like a pultis, thick and clammy, and I found many little ſtones therein of an aſh-colour ſomewhat yellowiſh, ſuch as formerly I had voided by urine, and that not once only, but as often as I vomited with great ſtraining and pain; or as often as the foreſaid pain returned. This laſt yeare 1645. the pains grew milder by little apd little, my kidny pained me but little, but my ſpleen and the left ſide of my ſtomach pained me more than that, according to the old manner, but that the fits came not ſo often. By which I perceived, that the Seminary or Mine of theſe ſtones was firſt and laſt in my ſpleen, and in the veſſels thereof, and that by the *Vas Breve* (which by the Medicinal waters and by vomiting, was made wide and open) it ſent part of its ſtones with abundance of black choler into my ſtomach, which at firſt were carried only to my kidnies.

Obſervations communicated by Dr. *Simeon Jacoz*, a moſt Expert Coſtenſian Phyſitian.

To the moſt renowned Mſr. Doctor *Lazarus Riverius* Councellour and Phyſitian to the King, and his Majeſties worthy Profeſſor in the moſt Famous Univerſity of *Montpelior*.

WHat you lately deſired, or rather Commanded me to doe (moſt renowned Profeſſor) I doe now willingly performe, and preſent unto you the firſt fruits of my Practice of Phyſick, or rather the fruit of your own Learning, which none can ſo juſtly challenge, as he that took ſo much Care to manure the ſame. My poor Obſervations

do

doe returne unto you as unto their ſpring, which it is your pleaſure to joyne with the Obſervations and experiments of your ſelf, and other excellent Worthies of our Art. They are yours, becauſe I am ſo; to you they are dew, becauſe you are firſt Author of them, under whoſe conduct I firſt ſet ſail in the Sea of Phyſick: by whoſe Guidance I have luckily run the Apolinary Race, and then quietly reſted my ſelf in the quiet ſtation of your family, in which as you have ſowed in me the firſt ſeeds of practical phyſick both publickly and privatly, and cherriſhed the ſame, ſo do you now make it your glory, when they are coming abroad into the world, to defend them from the danger of Calumny wherewnto they are liable; for ſeeing ſo many difficulties do for the moſt part accompany, and ſo great dangers follow our firſt endeavors, I ſhould never have dared to have let theſe firſt fruits of my Practice to ſee the light, were they not to come forth under the Happy Conduct of your Name, and had I not your ſelf both for Captain and companion in my journey. Whom becauſe the cure of diſeaſes has made famous, uſe has made expert, and experience has made you happy and fortunate in Practice; whom Diſeaſes fear as their Enemy, Men Love as the recoverer of their health, and Death hates as his Conquerer. It ſhal never grieve me to march into the Feild under ſo great a Commander, who has evermore been freindly unto me both in publick and private occaſions, and in the middeſt of innumerable aſſaults of adverſe fortune, has born up and cheered my mind with his dayly converſe: who being exceeding careful of my Learning, has continually watered my Wits with the fruitful ſtreams of his Doctrin, and opened a way for greater things, which peradventure riper age, and more advantagious opportunity may hereafter bring forth.

If *Fates* give Leave, It *Phœbus* when I pray
To bleſs my Studies, *He Amen* ſhal ſay.

In the mean time Fare you wel, and long may you ſhine like a new Apollo *upon the Famous Univerſity, and whol* France. *Many and happy years may you live; which is the ardent prayer of him, who is yours moſt devoted.*

Dated the 6. of the
Ides of *October*,
Anno 1645.

SIMEON JACOZ,
Dr. of Phyſick
of *Montpelier*.

The 394 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

A deadly frigidity of the tongue.

A Young man of *Montpelier*, of twenty years old, by name *Ludovicus de Camp*, was in the month of *June*, 1643. troubled with a long Looſneſs, and was at laſt brought into the City Hoſpital, being by the Governours of the City committed to my Care. After divers Remedies adminiſtred convenient for one in his condition for fifteen daies together and al in vain, the Diſeaſe continued in the ſame condition as at firſt, with very great weakneſs; yet his apperite was pretty good and his thirſt not very great. And in this condition he lived ſix or ſeven daies longer, after which, I found his Tongue moiſt enough, and having its Natural color, but it felt cold, without any coldneſs of his Hands or Feet; ſo that nothing ſeemed to trouble him but his Looſneſs, with which he was much weakned, yet I thought he would die in a ſhort time, yet he lived four daies with an actual coldneſs of his Tongue.

Another of the ſame Age in the ſame Hoſpital had many Ulcers in both his Legs, and a Fiſtulous Ulcer in his left Groin, and being ſuddenly fallen away in his fleſh he waſted to the grave. Howbeit, he continued in that condition two months or more, growing ſtil leanner and leanner, and at laſt his Tongue became actually cold as in the former example, which calling to mind, I foretold that he would die within a ſhort time, as it fel out twenty four hours after.

Another named *John Aventurier*, fifteen years old in the ſame Hoſpital was ſick of a bloody flux; and within ſix daies ſpace his fleſh was waſted away, his Tongue being actually cold, without any great coldneſs of his Hands or Feet, and the next day he died. From which

examples we may gather, that coldneſs of the Tongue is to be reckoned among the tokens of Death.

The 395 *Obſervation, or hiſtory, of Famous and Rare Cures,* &c.

The falling-ſickneſs joyned with a Dead Palſie.

A Girle named *Catherine Bognole*, ten years of Age, of a flegmatick Conſtitution, and of a broad wel ſet body, was troubled five or ſix months with the Falling-ſickneſs, the fits coming almoſt every day, yea ſometimes twice or thrice in a day; to which was added a privation of motion and ſenſe in her right Arm. This Girle being brought into our Hoſpital in the month of *December*, 1643. I preſcribed her in the firſt place a potion purging flegm with a Cephalick Decoction, which after ſome daies was repeated, and ſhe uſed between whiles preparatives and ſpecifick Medicaments, but without profit. At length I gave her about two drams of *Montagnana* his Opiate four or five daies together, which being over, ſhe began to ſtir her fingers, and ſoon after her whol Arm, and ſhe was not ſo frequently taken with fits of the Falling-ſickneſs; ſo that within twenty daies (ſhe taking every morning of the foreſaid opiate) ſhe was perfectly cured of both Diſeaſes. The Opiate was made as followeth.

Take *Roots of Male peony, Stœcados, Coſtus, of each ten drams. Agarick, five ounces. Pellitory of Spain, Carway ſeeds, Annis ſeed, Aſſa Fœtida, and Ariſtolochia Rotunda, of each two drams and half; juyce of Squils and Choyce Honey, of each one pound and two ounces. Let the Juyce of Squils and the Honey boyl together over a gentle fire, unto a good conſiſtence, then ad the powders and make al into an Electuary. Let the doſe be two drams every morning three hours before Meat.*

The 396 Obſervation, or hiſtory, of famous and Rare Cures, &c.

Fits of the Mother.

A Woman of *Montpelier*, threeſcore years old, had Fits of the Mother twenty four hours, with pain of her Head and her Belly, eſpecially over againſt her Spleen. She was ful of Unquietneſs, could not ſleep, and was very thirſty. And becauſe ſhe would admit neither of Clyſters nor Cupping-Glaſſes, ſhe was content only with a Plaiſter of Galbanum applied to her Navil. I adviſed her when ſhe was a thirſt to drink a Cup of water tempered with vinegar, which ſhe did three or four times, and within a few hours ſhe recovered and was free from her fits. Another Woman I freed from fits of the Mother, only with a Clyſter of Vinegar and water, which ſhe kept two hours.

The 397 *Obſervation, or Hiſtory, of famous and Rare Cures,* &c.

Gouty and Whore Pocky Pains.

A Young Man of twenty five years of Age, named *Matthew Farlet*, for two months was troubled with moſt cruel pains of his joynts, eſpecially in his Knee, with a ſwelling which had the ſame color with the other parts, and felt no pain when it was touched, but had a deep inward pain; the like he had in his Shoulders, Arms, Hands, and Fingers, which were more ſharp in the nights, tormenting the patient and forcing him to keep his bed. After I had Phyſicked his whol body by Aporzemes and Blood-letting often repeated, he felt ſome eaſe, and eſpecially by the uſe of Jalap, ſo that he was now able to go. Yet there remained a pain (though not ſo grievous) in his Knee, Arm, and Shoulder-blades, which came ſtil in the night: whereupon I conjectured that it was a Pocky pain; the rather becauſe two years before he had been troubled with the Gonorrhœa; which being cured ſooner than

than was fitting, he ſaid he felt no pain from that time. He being brought at laſt unto the Hoſpital, becauſe he was a Forreigner; I gave him for ſeven daies together Mercurius Dulcis with Conſerve of Roſes, the firſt day one ſcruple; the ſecond, third, and fourth, half a dram; the fifth, ſixth, and ſeventh, two ſcruples. It cauſed a light Salivation, an hour or two after the taking, which continued til dinner time; it gave him two ſtools a day, without any griping or ſickneſs of Stomach. The Mercurius Dulcis was ſix times ſublimed. On the eight day he took a pouder of Senna, Cream of Tartar, and Jalap, which purged him very wel. And ſo his pain went quite away.

The 398 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A ſwelling and pain in the Knee.

ANother young Man, twenty two years old, in the ſame Hoſpital of *Montpelier*, had a ſwelling in his left Knee, with a pain which came by fits, which had ſucceded a Rheumatiſm, and had vexed him four or five Months. After univerſal Evacuations he took in the ſame time, Mercurius dulcis according to the Method aforeſaid, for ſeven daies with a light Salivation every morning after the taking of the Pouder. But upon the ſeventh day he was extreamly fluxed, and the Roof of his mouth and jaws were ulcerated, his Teeth looſe and ready to drop out of his Head; flegm continually flowed out of his mouth which ſtunk ſo that himſelf could not endure it, and he ſlept neither night nor day. After four daies time, I thought it time to ſtop the flux. Wherefore I preſcribed him a Laxative ptiſan, to be taken twice a day for two daies together, and ſo the Humors changed their courſe downward, the ſwelling went away, the pain ceaſed, and the patient began to go without any help, and without any more Phyſick, after fifteen daies, he returned ſafe and ſound into his own Country.

The 399 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Dropſie.

A Country fellow thirty years old having had the Dropſie three Months, was brought about the end of *January*, 1644. Into the Hoſpital; and a few daies after died. His body being opened, an huge Quantity of water came away; we found his liver in a very good condition: but his Spleen ſo corrupted, that the whol ſubſtance thereof was like melted pitch. Whence it is apparent that every ſort of Dropſie, is not alwaies cauſed by extream weakneſs or diſtemper of the Liver.

The 400 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Immoderate flux of the Courſes.

A Country Woman, thirty years of Age in the Month of *June*, 1644. was troubled with immoderate flux of her Courſes, and ſhe was exceedingly weakned by reaſon of continual loſs of blood for divers daies together, ſo that ſhe gave her ſelf over for a loſt Woman. It being my hap to be rambling in the Country as I recreated my ſelf with Hunting, becauſe Medicines were not there to be had, and her purſe could not reach to the price of them, I gave her preſently, about ſix in the evening five or ſix ounces of the juyce of Nettles, and I ordered to lay upon her belly below her Navel a Cataplaſme or pultis made with the ſame juyce and Wheat flower. About Midnight I gave order to repeat both the Medicines, which being done, the Woman was better in the Morning, her flux of blood ſtopped, and by little and little ſhe grew perfectly wel without the help of any other Remedy.

The 401 *Obſervation, or Hiſtory, of* Famous *and* Rare *Cures, &c.*

The Whites.

A Coſtenſian Woman fourty years old was troubled ſeven months with the Whites being of a Wheyiſh Nature, whom I cured within five weeks, by giving her every eight daies eight grains of the Rozin of Jalap; the ſeroſities being purged away, upon which the Diſeale depended. And then I took away al occaſion of Relapſe, by this following Opiate.

Take *old Conſerve of Roſes, two ounces, conſerve of Roman Wormwood one ounce. The powders Trion ſantalon, and Aromaticum Roſatum, of each one dram. Red Coral prepared, half a dram; Old Venice Treacle, two drams; with Syrup of dried Roſes, make al into an Electuary. Of this ſhe took the Quantity of an Haſel Nut every night, when ſhe lay down to ſleep for a long time together.*

The 402 *Obſervation, or Hiſtory, of* Famous *and* Rare *Cures, &c.*

Hard ſwelling on the Back of the Hand.

A Coſtenſian Maiden of twenty years old, had a Scirrhous Tumor on the back of her hand, which was diſcuſſed by my advice; for a leaden plate ſmeared with Quick-ſilver, was laid upon the ſwelling and worn there eight daies, and ſo the Tumor went away and came no more.

The 403 *Obſervation, or Hiſtory, of* Famous *and* Rare *Cures, &c.*

A Beginning Dropſie.

A Woman twenty five years old named *Damiana Gulon*, who was my Neice, was troubled two years with ſuppreſſion of her Courſes, by reaſon of an heedleſs Courſe of Life, and becauſe of errors committed in her Childing (for ſhe had come too ſoon into the cold Air) with want of ſleep, want of Appetite, ſluggiſhneſs, and loathneſs to ſtir, difficulty of breathing, ſwelling and hardneſs of Spleen, and falling away of her whol Body; ſo that it ſeemed ſhe would ſoon fal into the Conſumption or Dropſie. She had uſed divers Medicines for almoſt an whol year, preſcribed by moſt skilful Phyſitians according to the Rules of Art. But her Diſeaſe getting head, and al Remedies being uſed in vain, her Legs began to ſwel, and alſo her belly though in much meaſure puffed up with wind. Al the Symptoms grew dayly worſe and worſe, and at laſt the Region of her Stomach was raiſed up into a Tranſparent ſwelling. Being thus afflicted and caſt down, ſhe came to me, and with the following Medicines ſhe was cured in the Month of *September*, 1644.

Firſt of al ſhe took four daies together a Laxative ptiſan of the Infuſion of two drams of Senna, with half a dram of Sal Prunellæ, and fifteen drops of Oyl of Sulphure per Campanam. Then ſhe fel upon the uſe of theſe following broaths.

Take *Sparagus Roots, Graſs and Cichory Roots, of each half an ounce; China Roots cut in ſlices, one dram. Leaves of Egrimony, Ceterach, Bugloſs, and Cichory, of each half an handful; Cryſtal of Tartar, two ſcruples. Boyl al with a Quarter of an old Cock. In the ſtrained broath diſſolve, Salt of Wormwood and of Tamariſk, of each one ſcruple. Sugar of Roſes, two drams. Let her take of this broath every morning three hours before meat, for twelve daies together.*

Her broaths being ended, ſhe took again the Laxative Ptiſan aforeſaid for three daies. And then ſhe uſed this following Electuary, whole wonderful Effects, I have often times beheld.

Take *Conſerve of the flowers of Tamariſk and Maiden Hair, of each an ounce and an half.*

Conſerve

Conſerve of Elecampane Roots, ſix drams. Steel prepared with Sulphure, an ounce; Salt of Tamariſk, one dram. Spirit of Sulphure per Campanam, ten grains. With ſyrup of preſerved Citron peels. Make of al an Electuary, of which let her take every morning two or three drams; for fifteen or twenty daies together, and walk upon it.

She drank water of the Infuſion of ſteel, with a little red wine mingled therewith.

She had two Iſſues made at the beginning in both her Legs, and they were alwaies kept open til ſhe was perfectly cured. She preſently began to mend, after the uſe of the foreſaid Medicaments; for her belly fel by little and little, ſhe gained her ſtomach and the freſh color of her Face, with her natural ſleep; and the hardneſs on her left ſide was ſoftened, and ſhe recovered the benefit of her Courſes.

The 404 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

VVorms.

A Boy four years old much ſubject to worms, in the month of *September*, 1644. was troubled with want of appetite, ſtomach ſickneſs, itching of his Noſe, thirſt, big-belly, with gripings in his guts and a Feaver: ſo that it was apparent, al things conſidered, that he had Worms. I gave him twelve grains of Mercurius Dulcis, ſix times ſublimated, with five grains of Diagridium. Two hours after he had taken the Medicine, he voided about twenty worms in a knot, by ſtool, and al the foreſaid Symptomes departed, and the boy became perfectly well.

The 405 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Intollerable Head-ach.

A Certain Man, fifty years of Age, lean, and of a thin texture, exceeding prone to Anger, was troubled about two years with an extream ſharp pain of his head, on the right ſide thereof, from the top of his head to his temple on the ſame ſide, which pain as oft as it returned (which was three or four times a year) it forced him to keep his bed, and did ſo torment him that it brought him almoſt to deſparation: but without any Feaver, thirſt, or inflamation, only there was a great pulſation of the Artery of that temple. Being called to him in the month of *September*, *Anno* 1644. I order him to be let blood, giving him firſt a Clyſter, to cleanſe away the Impurities of the firſt Region. Then I gave him a Medicine to purge Choler, which was repeated after a few daies, and he took in the mean ſpace juleps to refrigerate and prepare the Cholerick Humor. Afterward repelling Medicaments and Vinegar of Roſes were applied to his head, and revulſions were made with Cupping-glaſſes, with, and without Scarification, and his extream parts were rubbed. He was again let blood, and yet his pain went not away. It returned in the beginning of the ſpring *Anno* 1645. I gave him firſt an Emollient cooling Clyſter, then a medicine purging Choler, and ſo I come to open the Artery in his temple, which was performed by reaſon of the urgency of his pain, and there came five ounces of blood leaping out. And then applying lint wet in cold water and binding it on, as is the practice in ordinary blood-letting, his pain ceaſed within half an hour, which formerly was wont to torment him many daies together, and it returned no more from that time forward.

There might have been applied for more ſureties ſake, *Galens* Plaiſter of Frankincenſe, maſtick, Bole-Armeniack, and the wool of an Hair, with the white of an Eg, and a good Ligature; but we found no need thereof.

The

The 406 Obſervation, or Hiſtory, of Famous and Rare Cures, etc.

A ſtubborne pain of the Head.

A Woman of *Coſta* fifty years old, too much noted and over famous, was troubled in the month of *October*, the year 1644. with difficulty of breathing, and a moſt cruel pain of her Head, which came and went by fits, and troubled her moſt in the night, and ſeeing that it would not be removed by purging and ſtrengthening Medicaments applied a month together; I ſuſpected that it was a Pocky pain. And this ſuſpition of mine was ſtrengthened by the wearyneſs which ſhe felt, which came of it ſelf, without labor, by her lazyneſs and loathneſs to ſtir, and becauſe ſomtimes ſhe was thick of hearing, and had a Ringing in her Ears. The digeſtion of her ſtomach and Liver was weakned, ſhe was pained and tormented very much in the former part of both her Legs, eſpecially in the night: alſo beſides the courſe of life which ſhe had formerly lived, the year before ſhe had often uſed a Sudorifick Diet, frictions with Mercurial Oyntments and mercurial Pills. Wherefore the ſeaſon of the year being extream cold, and the condition of the patient would not bear the uſe of Antiveneral medicaments; I bethought my ſelf how to remove the pain of her Head, which becauſe it came and went, I conceived that it was cauſed by the malignant quality of the Quick-ſilver aſſailing and moleſting the brain, and I was not miſtaken in my conjecture, for a piece of Gold being wrapped up and thruſt into each Niſtril and kept there ſome hours, and then taken out, they were both colored white at the ends with the Quick-ſilver, and being put a little into the fire they recovered their former color. Another piece of Gold which ſhe held four or five hours in her mouth, was taken out white, and being put in hot coals, the Quick-ſilver vapored away. And with this Remedy often repeated, that moſt cruel pain of her Head was taken away wholly, Howbeit a little heavyneſs remained. And the Woman ſeemed to be better many daies together, ſo that ſhe roſe out of her bed, could eat her meat wel, and profeſſed that ſhe was cured; the ſhortneſs of her breath ſtil remaining, and the pain of her Legs alwaies returning in the nights. But fifteen daies after, ſhe was taken with a continual Feaver and died.

The 407 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A baſtard tertian.

A Certain Man of *Coſta*, twenty ſeven years of Age of an excellent Habit and complexion of Body, about the beginning of *September*, 1644. was taken with a baſtard Tertian, which having continued an whol month, and Medicines preſcribed by another Phyſitian according to the Rules of Art, being uſed in vain: he took by my advice a vomit of one dram of Salt of Vitriol diſſolved in water, which cauſed him to vomit three or four times, and his Ague returned no more.

The 408 Obſervation, or Hiſtory, of Famous and rare Cures, &c.

Tooth-ach.

IN the begining of *February*, 1645. I was taken with a frequent and troubleſome ſpitting, with moſt cruel pain of my Teeth, which at length brought a Feaver, which after I had taken a Clyſter, and was let blood, went away, only my Tooth-ach remained and a continual ſpawling of thin wheyiſh matter: the excretion of which continuing, there aroſe wandring pains in divers parts of my body, holding ſomtimes one, and then another part, which I judging to proceed from a Melancholick ſeroſity, I took eight grains of Rozin of Jalap, with which being very wel and gently purged, I voided in great Quantity the ſuperfluous ſeroſity,

in

in ſeven ſtools, and the day following I found my ſelf free from the foreſaid pains and troubleſome ſpittings. But in the Month of *April*, the pain of my Teeth returned with the ſpitting, which went away within twenty four hours, upon my taking the foreſaid Medicine.

The 409 *Obſervation, or hiſtory, of famous and rare Cures, &c.*

The VVhores Pocks.

IN the month of *May*, 1645. two Girls, the eldeſt of which was ſcarſe five years old, the yonger three years old, were troubled with the Lechers Pox for five months together, which they had gotten by contagion; they had many Ulcers in their mouths and Privities, with puſtles and a filthy Scab al their bodies over. A skilful Chyrurgeon had given them a Decoction of Guajacum for a month together, but in vain. I being ſent for, cured the ſaid Girls within the ſpace of fifteen daies with white Mercury Precipitate, giving every day to the elder ſix grains, to the younger four, yet ſometimes augmenting both the doſes, according to the operation, which was ſuch, that each of them had three or four ſtools a day. They never vomited, neither were they fluxed. But they perſiſted al the while in the uſe of their Diet drink of Lignum Guajacum.

The 410 *Obſervation, or Hiſtory of Famous and Rare Cures, &c.*

VVarts upon the Hands.

A Man had many warts upon the fingers of his Hands, which he cured by my advice, by nointing them four or five ſeveral times with the milk of a fig-tree. The ſame cure was performed, and that much more effectually upon a certain Country man, by ſmearing the warts with ſpirit of Sulphur per Campanam divers daies together, and by applying the ſame like a Fomentation.

The 411 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

A bruiſed wound.

A Certain Captain liſting ſoldiers in the City for Mſr. *de Ville*, in the beginning of *May*, 1645. fel from the top of a pair of ſtairs upon an hogſhead that ſtood at the bottom, and was bruiſed and wounded in his right ſide upon his ſhort Ribs; ſo that much blood came away, and he was perpetually tormented with a moſt cruel pain in the bruiſed part, ſo that he could hardly move himſelf, or ſpeak, breath, or cough, but he was forced to cry out with pain. I being called to him, cauſe a vein preſently to be opened on the Arm of the ſame ſide, and a Plaiſter of Cummin-ſeed to be applied to the parts pained; which having been on twelve hours, and once renewed in that time, the pain was much leſſened, the black and blew color gone, he breathed more freely, and the day following he began to riſe out of his bed, and ſo after one day more, the pain went quite away.

The 412 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The Peſtilence.

IN the time of the Plague, which in the years 1628. and 1629. did rage in a manner al *France* over: a man of *Coſta* conceiving himſelf to be taken with the Plague, becauſe of a ſudden heavineſs and pain of his Head, and party colored vomitings, preſently applied Cantharides

with

with Leven and Vinegar behind his Ears, and to other Emunctories, and kept his bed. After four and twenty hours he had a riſing behind his Ear, out of which continually flowed a ſharp ſerous humor, and the like by other Emunctories; whereupon the diſeaſe was leſs grievous and dangerous, and he recovered ſome daies after, and never had it again, though he converſt dayly with ſuch as had the Plague, and miniſtred unto them. The ſame Mans wife a while after finding her ſelf ill, was cured in the ſame manner, which Remedy they had learnt of others, who had practiced it themſelves with good ſucceſs.

The ſame Year, the Wife of *N. Micha* of *Coſta*, conceiving that her eldeſt Daughter about twelve Years of age, was taken with the Plague; for being an ingenious Woman ſhe conjectured ſo much, by her horrible look, her Feaver, Heat, Headach, and Stomach-ſickneſs: ſhe thruſt a Feather ſmeared with Oyl down her Throat, which made her vomit firſt wheyiſh Liquor, then a yellow Excrement, and at laſt green as Leeks in a great quantity, like half boyled Herbs. Then ſhe laid her in the bed, gave her a draught of broath, and diſpoſed her to reſt. Some hours after the Girl aroſe cheerful, and was troubled no more with any peſtilential Symptome, though ſhe often converſt with ſuch as had the Plague. Eight dayes after, her two yonger brothers, and her little Siſter, were taken with the ſame, yea, and more grievous Symptomes, whom their Mother in the ſame manner procuring vomit, which brought up the like humors, ſaved from the Suburbs of Death.

The 413 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

The Kings Evil.

OUR Neighbor *James Gorroz*, his Girl, four years old, had Swellings of the Kings Evil about her Neck and Ears, very high. Sombody adviſed her Parents to let her grow Louſie, til the Lice ſhould make al her Head ſore and run; by which means the morbifick matter, *viz.* a flegmatick humor, was convemently purged out ſome months together in great quantity, and ſo ſhe was at laſt cured of her Swellings, without any other Medicine.

The 414 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The Dropſie.

A Woman thirty years old, troubled with the Dropſie Anaſarca, by the advice of another Woman, and of an Ancient Apothecary, abſtained from all manner of drink almoſt an whol year; and ſo at length ſhe was cured, without any more to do. By whoſe example, a Country man her Neighbor, troubled with the ſame Diſeaſe, was cured after the ſame manner in the ſpace of four Months. Another Hydropick perſon was cured by an Apothecary, who applied many Veſicatories to divers parts of his Body.

The 415 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Fits of the Mother.

THe Renowned Lady, *Madam de Popiam* in *Occitania*, being much ſubject to Fits of the Mother, uſed divers Medicines for many years together, but al in vain. At laſt, by the uſe of the following Pouder, ſhe was freed from them for fifteen years together. She took about one dram thereof in Wine, or in a Water Cake, twice or thrice in a week, or oftener, if the fits did much trouble her. She uſes this Pouder likewiſe againſt al Poyſons, the Plague, Agues, and want of Appetite, with moſt happy ſucceſs, as I have often ſeen. The Pouder is thus made.

Take *Roots of Gentian, white Dittamus, Tormentil, Pellitory of Spain, Rhaponticum,* Biſtort,

Biſtort, round Birthwort, white Thiſtle, Bay-berries, Angelica, Maſterwort, Coriander ſeeds prepared, Annis ſeeds, Juniper berries, Maſtich, Bole Armeniac, Terra ſigillata, of each three ounces and an half. Oriental Saffron two drams and an Half. Mix them, and make of all a very fine Pouder.

Obſervations communicated by Mſr. *Samuel Formius*, a moſt Experienced Chyrurgeon of *Montpelier*, having practiſed the Art fifty Years.

The 416 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The Bleeding of a Wound.

IN the Year, 1593. a certain Soldier having received a Wound in his Arm, with which his *Radius* and *Cubitus* were cut croſs-waies, ſo great effuſion of blood happened, that after divers aſtringent things had been applied, and the uſe of Cauſticks and Eſcharoticks, the blood would notwithſtanding flow by fits; ſo that the Phyſicians and Chyrurgeons had thoughts to cut his Arm quite off. But I, to whom the Cure was committed, rouled a Linnen Cloth into the form of a Cylinder, or Garden Rowling ſtone, four fingers breadth in length, and as thick as a mans Thumb, which I thruſt perpendicular down-right into the Wound, filling the bye ſpaces with little bolſters; and becauſe the end of my Rowl came an inch above the ſurface of his Arm, I laid four bolſters which came as high as the Rowl, and kept it faſt, and upon the Rowl I laid a fift bolſter four ſquare, and at laſt ſwathed al faſt. And from that time the blood came no more; now I did not open the Wound for four or five daies, until the fleſh which was bred within, might ſtop the orifice of the Veins.

The 417 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

The bleeding of a wounded Artery, cured by binding.

A Young man of *Montpelier*, named *N. Peyre*, had received a Wound in a ſingle Combat, in the fore part of his Arm, near his Arm-pit, by which the axillary Vein and Artery were cut, whence ſo great bleeding aroſe, that I judged it could no waies be ſtopped with aſtringents, I preſently betook my ſelf to make a Ligature, which I happily performed after this manner. I thruſt a crooked Needle into the ſound fleſh above the Wound, ſo that it went unto the bone, and compaſſed the foreſaid Vein and Artery, beginning at the inferior part, where the *Muſculus Extenſor Longus* was transfixed, and the Needle where it came out pierced through the *Muſculus Biceps*; in the eye of the Needle there was a four-fold thred, with which the Vein and Artery were compaſſed within; then having laid a Rowl or Cylindre made of Linnen Cloth upon the Skin, between the two ends of the Thred, I tied the Thred cloſe upon the Cylindre or Rowle, which I did to keep the Skin and Veſſels from being broken or cut aſunder by the Thred; and thus the Vein and Artery aforeſaid were ſo tied, that the blood iſſued no more. After ten or eleven dayes, when the Wound ſeemed to be cloſed up, I cut off the Thred, and the Patient was cured. In the mean ſpace, after the foreſaid Ligature was made, to aſſwage the pain cauſed thereby, and to cure the Inflamation which followed the pain, he was frequently blooded, and Vinegar and Roſe-water were applied to the part, and other Medicines to aſſwage pain, and ſtop the Inflamation.

The 418 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

An intollerable Pain of the *Os Sacrum.*

A Certain poor Cobler about forty years old, had a moſt cruel pain in the lower part of *Os Sacrum*, for two months together, which was ſo vehement, that the man fell mad upon it. Divers Remedies univerſal and particular, were uſed in vain. At laſt, being ſent for, I applied two Cupping-Glaſſes, one to the part pained, the other a little lower, viz. upon his buttock, with deep Scarrifications, out of which much blood came, the which being wiped off, I ſet the Cups on again upon the ſcarrified places, and a good quantity of blood came away again. The Man ſeemed free from his pain; nevertheleſs the day following, I applied a large Cauſtick to the pained place, above the Scarrifications, and kept it on four and twenty hours; ſo that there was a deep *Eſchara*, which reached to the bone. Which being come away, the Ulcer was healed up, and the Patient freed from his great Miſery.

The 419 *Obſervation, or Hiſtory, of Famous and rare Cures,* etc.

The Dropſie.

THe foreſaid Cobler, two years after the foreſaid Cure fell into the Dropſie Aſcites, which being troubled with for ſix months together, ſo that his Navil ſtuck out as big as an Hens Egg: an apertion was made in the middle of his ſwollen Navil, and the water drawn out by little and little, a pipe made of Tinn being put into the hole; in the end whereof there was a broad plate, that it might not ſink into his belly, having holes bored through, that it might be tied. Afterwards it was ſtopped up, and ſo he was cured.

In this kind of Operation obſerve, that Hydropical Perſons muſt not be opened, unleſs their Navil ſtart out, and ſo nature ſeem to affect that way to diſcharge her ſelf. For al that are opened, their Navils not ſwelling as aforeſaid, die upon it. Now this ſtarting of the Navil may be procured by Art, applying frequently upon the ſame, Cupping-Glaſſes without Scarrification, but with much flame; alſo by applying Emollient and Attractive Fomentations, which being uſed about the ſpace of eight dayes, wil raiſe the Navil into a ſwelling, upon which the Orifice may be made.

The 420 *Obſervation, or Hiſtory, of famous and rare Cures, &c.*

Another Dropſie.

A Certain poor Woman, twenty five years old, was troubled with the Dropſie. An old woman adviſed her to take the bones of any Beaſt which had lain drying in the Sun, and beat them to pouder, and take a dram thereof every day for a month in white Wine mingled with the juyce of Parſley. The Juyce was thus extracted. She took an handful of Parſley, and wrapped it in a Linnen Cloth, and roaſted it under the hot aſhes, and then ſhe beat it in a marble Morter, powring on by little and little as much white wine as would ſuffice. She preſſed out the juyce and wine together to the quantity of two or three ounces, in which ſhe diſſolved the poudered bones, and drank it every morning for a Month, at the end of which ſhe was perfectly cured.

The

The 421 Obſervation, or hiſtory, of famous and Rare Cures, etc.

VVater in a Childs Head.

AN Infant newly born was troubled with the Hydrocephalos or Water-Head, the whole Head being Swoln with a great dilatation of the ſuture. I cured this diſeaſe without any phyſick or other Remedy, ſaving *Guido* his Swathe, made in form of a Cucupha or ſpice-cap, wherewith the whol head of the infant was covered, the two ends being tied up into knots. Every day the ſwathe was renewed, and ſo within fifteen or twenty dayes the tumor wholly vaniſhed.

The 422 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

The Dropſie.

I Have been told by credible perſons, that two hydropical women were cured by cutting the nailes of their toes ſo cloſe that ſome part of the fleſh was cut away with them, and ſome blood came away, whereupon followed a dropping of wheyiſh excrements for many dayes together, and ſo by little and little the hydropical humor was drawn forth.

The 423 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A certain wound of the head with Contuſion.

A Certain woman by the fal of a beam upon the top of her Head, received a grievous wound with contuſion, whereupon, there appeared a Bag in the nether part upon the *Os parietal*, four fingers bredth in greatneſs, I would have opened the ſaid bag or Impoſtume, in the ſloping part thereof, which the patient obſtinately refuſed. Wherefore I put the foreſaid ſwath or cap upon the impoſtume with a thick emplaſtred bolſter that it might ſtick, whereupon the matter was preſſed unto the wound, which was on the top of her head, and afterward Glutination, whereupon a perfect Cure happily followed.

The 424 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An Impoſtume upon the Breaſt-bone.

A Certain Student of Phyſick had one of theſe red hot ſwellings called, Phlegmone of a very great bigneſs upon his breaſt-bone, as big as the palm of a mans hand, which coming to ſuppurate, through the unskilfulneſs of another Chyrurgeon the Impoſtume was opened in the upper part. I being called would have opened it again in the nether part, which the patient would by no meanes hear of, wherefore I applyed a thick implaiſtered bolſter and ſweathed it faſt on, by which meanes the matter was al forced to the part opened and ſo expelled; and by this meanes the wound was healed.

The 425 Obſervation, or hiſtorie, of famous and rare Cures, &c.

A Hollow winding Ulcer.

A Youth eighteen yeares old had four monthes an hollow winding ulcer in his right thigh between his groine and huckle; the orifice was uppermoſt, and the cavity went downward

ward to the midle of his thigh. He would not ſuffer it to be opened beneath, which ſeemed neceſſary to be done. I being compelled thereunto, after detergent injections oft times repeated, applyed a very thick bolſter emplaſtered that it might ſtick cloſe; and twathing it in a ſpiral wreathed fathion, from the nether part to the upper, which was kept open: the ſaid winding hollow ulcer was healled up in a months ſpace.

The 426 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The Sleeping Diſeaſe in Children.

THe Daughter of Mſr. *Ludovicus*, a Citizen of *Montpelier*, eight yeares old, was taken with the Coma or ſleepy Evil, which *Avicen* termes Subeth, with frequent convulſions, to whom the Phyſitians had given many Medicines and applyed divers Remedies, viz. Clyſters, frictions, Cupping-glaſſes, Veſicatories, sneezing pouder, &c. I gave her one dram of white vitriol in broath, whereupon ſhe vomited, and was preſently cured.

The Son of a certain Gardener five or ſix yeares old, was taken with the ſame diſeaſe, to whom I gave half an ounce of the *Aqua benedicta Rulandi*, which purged him up and down, and cured him.

The Daughter of Mſr. *de la Croix*, a Merchant, being a yeare old and troubled with the ſame diſeaſe, without convulſion fits, took of juyce of onions and ordinary oyl, of each one ſpoonful mingled together, wherewith ſhe vomited, and was wel.

The daughter of Mſr. *Morand* a Goldſmith, foure years old, troubled with the ſame diſeaſe, was cured with the ſame medicine.

The 427 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Tertian Ague and wormes.

A Citizen of *Montpelier* thirty yeares old troubled with a tertian Ague, took an ounce of Aqua Benedicta, and was cured of his Ague, and with the working of the medicine he voided a broad worm ſeven foot long.

The 428 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Leaden Bullet ſhot into the Heele.

A Certain ſoldier was wounded in his Leg, which wound deſcended downwards as far as his heel, into the ſubſtance whereof the bullet was faſtened, and there it ſtuck. The Ulcer was not cured, but became fiſtulous, and continued in that maner ſeven yeares together. At laſt he committed himſelf to my care. I putting a probe into the ulcer felt the bullet in the very cavity of the bone. Then meaſuring the place with my probe, which went into the ulcer ſix fingers deep, over againſt the place where the bullet lay, I applied a great Cauſtick, which becauſe it did not pierce ſo far as the bone, I applied another which wrought to the heel-bone, which being barred, I opened his heel with my trepan, where I find the bullet ſecretly enclоſed, and draw it out, and in a ſhort while after the ulcer was healed up.

The

The 429 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

The Skul depreſſed by a wound.

THe Daughter of Mſr. *Strinc*, Citizen of *Montpelier*, eighteen monthes old, fel down the ſtaires, and hitting her head againſt the ſtones, her skul was bowed in between the ſagital and Coronal ſuture, the quantity of half a nut. Being called to ſee her, I cut off her hair and applie a cupping-Glaſs without ſcarrification to the depreſſed part, and afterward applied it again with ſcarrification. Afterwards I applied a cataplaſme made of bran bread, wine, and Roſes, which I repeated twice a day, five or ſix dayes together, reiterating the application of my Cupping-Glaſs without ſcarification before every application of the Cataplaſme, and at laſt for four or five dayes applying the Cataplaſme alone without ſcarification. The tumor raiſed by the Cupping-Glaſs was diſcuſſed, and the depreſſion or dent was taken away, ſo that the bone returned to its natural place and convexity.

The 430 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Ruptures.

I Have cured many burſten men and women, in ſome of whome the gut had been fallen without the peritonæum for three or four dayes together: ſo that they were fallen into the iliack paſſion commonly called *Miſereri mei*: which Cure I performed after this manner. I place a table or a planke of ſufficient breadth by the Patients bed in ſuch a manner, that one end leanes upon the ſide of the Bed, and the other end reſts upon the floore. Then I place the ſick perſon upon the ſaid plank with pillowes under him or her, in ſuch a poſture that the head of the patient lies next the ground and the feet next the bed ſide. Then I foment the part a long time with cloathes foure times double ſteeped in cold water, in the meane while gently touching the ſame with my fingers, and having continued this fomentation, for half an hour, I applie a many times doubled cloath ſhaped like a Triangle wet in cold water upon the place, making a containing ligature thereupon; and thus within a few hours for the moſt part, the Gut is of it ſelf reſtored to its place. But if after the firſt Fomentation and the Application of the Cloath thereupon the Gut be not reſtored to its place, I Reiterate the ſame operation twice in a day, and upon the ſecond or third Repetition the Diſeaſe is cured.

In ſome patients being called late, when the Gut was inflamed, ſo that in regard of its ſwelling, it could not return back again by the ſtraight hole in the Peritonæum, I have by widening the ſaid hole by inciſion, ſaved three patients from a ſpeedy Death. Which operation I doe thus performe. Firſt I place the patient as aforeſaid, and withal I bind him hand and foot that he may not be able to ſtir while I am in my work. Then I draw a tranſverſe line with ink above the Line of the ſtrangling of the Gut where the rupture of the Peritonæum is. Then I draw another line perpendicularly cutting the foreſaid line at the place of the ſtrangulation and in the mideſt thereof: then I draw the skin too on both ſides with my two fingers in a tranſverſe Line, and I cut it with my Inciſion knife perpendicularly, ſo that the length of the Inciſion is as much as two fingers bredth. Then I lift up the muſcles which cover the rupture, by little and little with certain hooks, and I ſeperate them with a pen-knife until the production of the peritonæum lie open to the ſight. And then it is lifted up with an hook, and cut with the foreſaid pen-knife, and ſo the Gut is put into its place again. But if the Gut be ſo ſwelled with wind or inflamation, that it cannot be thruſt back into the abdomen, the Apertion already made may be enlarged, by putting into the wound ſuch a fathioned Catherer as they uſe to cut the ſtone upon, and by clipping the abdomen thereupon with Siſſors, either in the upper or lower part as the Chyrurgeon ſhal think moſt convenient.

In this operation I noted one thing wel worth obſervation in a certain woman whom I cured by the meanes aforeſaid, viz. that her belly being opened, the gut which had fallen out of the

Peritonæum

Peritonæum thirteen years together, cauſing a perpetual Tumor in her Groyn, appeared covered with a fleſhy kind of ſwath band, which compaſſed the ſaid Gut, and continually growing in the inferior part by the Rupture, did ſo ſtraiten the Gut in that part, that the Excrements could not find paſſage through the ſame, whereupon the Woman fel into the Iliack paſſion, which was the Cauſe that I took her in Hand.

The 431 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

The tumor *Ganglion* upon the Face.

A Certain young Woman had one of thoſe Tumors called *Ganglion* in her Face, as big as a Cherry, beneath her Eye, upon the Bone called *Zygoma*; which was Diſcuſt within a month, by applying thereunto a plate of lead ſmeared with Quick-ſilver and ſtuck upon a Plaiſter that it might be kept on. The plate with the Plaiſter were laid upon the Tumor and a bolſter thereupon, and then I tied them to with ſuch a ſwath-band as *Galen* calls *Semipbalera.*

The 432 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Tumor called Anchylops.

A Woman forty years of Age had a Tumor in the Larger corner of her Eye, which Tumor is called Anchilops: I took it away, by applying a ſmal Cauſtick, and the coat being fallen away, I cured the Ulcer with a little red Precipitate and burnt Allum, two parts of precipitate I mixed with a third part of burnt Allum, which I made up with a little Unguentum Aureum, and applied it to the Ulcer til there came a new Eſchar as big as a Vetch, which being fallen away, the bone appeared bare, which appearing untainted, I preſently took a Courſe to fil up the Ulcer with fleſh, laying on old worn rags and changing them twice a day, and ſo the diſeaſe was perfectly Cured.

The 433 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A deadly Coſtiveneſs.

A Certain Taylor for a month or longer had never gone to ſtool, and having took many Clyſters and purging potions in vain, at laſt he died. His body being opened, al his Guts were found ſtuffed with Dung partly, and partly with meat and drink like puddings. The cauſe whereof was judged to be, that the Guts had wholly loſt their expulſive faculty.

The 434 *Obſervation, or Hiſtory, of Famous and Rare Cures, etc.*

A fracture of the ſkul in the left temple.

A Certain Woman was wounded in her left Temple with a ſtone, who preſently upon the wound received, came into the Hands of a young Chyrurgeon, who being terrified with the grievouſneſs of the wound, called me to his aſſiſtance. I perceiving there was a fracture, and judging it neceſſary to uſe my Trepan, I confidently made a Croſs-faſhion'd inciſion upon the Crotaphita, by which means the bone was diſcovered and the fracture found, in which a bit of the ſkul as big as an almond ſhel was wholly ſeparated, depreſſed as low as the Dura Mater, and ſeen lurking under the Skul. But with the Trepan wel applied, that portion of the Skul was drawn out, and the wound happily cured, neither did there happen any grievous ſymtome upon the Inciſion of the Crotaphita.

The

The 435 *Obſervation, or hiſtory, of famous and* Rare Cures, &c.

A Canker.

A Certain Woman fifty years of Age had a Canker in her left Dug, which began to ulcerate: a young Chyrurgeon a forreigner applied the following Medicament.

Take *Aqua fortis, one ounce*; *Crude Sublimate, four ounces*; *Sal Ammoniack, two ounces*; *Arſenick, one dram*; *put al into an Alembick and ſtil them til they become dry, adding as much diſtilled Vinegar as anſwers the weight of the pouders. Stil the Vinegar again, til the matter come to be as thick as paſt.*

Firſt he carefully waſhed the Canker with hot wine, with Cloaths dipped therein, and rubbed it luſtily, to ſtirr up the Humors in the part. Then he ſpread of the paſt upon a bolſter ſix times ſmaller than the ſwelling, which he left upon the part twenty four hours, and there was made an Eſchar ſix times greater than the bolſter, ſo that it did eat the Canker wholly away, and when the Eſchar fel off, the Ulcer was filled with fleſh and then cloſed up. And in caſe the foreſaid Eſchar had not taken away the whol Tumor, but that ſome Roots thereof had remained, thoſe he would have conſumed with the pouder of red precipitate and burnt Alum wel mixed.

And to fil the ulcer with fleſh he uſed only lint of old rags.

This is worth Obſervation, that when the Paſt was laid on, a Feaver was preſently raiſed, with vomiting and a looſneſs, and much provocation of Urin, which ſymptoms continued two or three daies, Nature being vexed and provoked with the deſtructive quality of a Venemous Medicament.

With the ſame Medicine a Canker was cured upon a Soldiers Noſe end, which had eat away the tip of his Noſe.

The 436 *Obſervation, or* Hiſtory, *of famous and rare Cures*, &c.

Another Cure of a Canker.

A Certain old Woman had a Canker in her left Dug, which ſhe had born thirteen years together. Wherein little Cancerous Tumors grew out, which pained her more than the great one upon which they grew, becauſe they were ulcerated. Theſe little Tumors were taken away by frequent Application of Waters of red Poppy, plantain, and Roſes, mixed with Honey of Roſes at firſt, but afterwards the waters were uſed alone. And in another Woman that had a cancerous Ulcer in her breaſt, the ſame Medicine cured the Ulcer quite, and cloſed it up.

The 437 *Obſervation, or Hiſtory, of* Famous *and* Rare Cures, &c.

A Gangræne in a womans Privy part.

A Woman thirty years of Age by reaſon of Sore Travil in her Child bearing and rending of the Lips of her Privity, contracted a great ſwelling in the right Lip, by reaſon of the Concourſe of blood into that part, which when ſhe had neglected for three or four daies, at length a Gangræne was introduced into the part. I being thereupon ſent for, I made large and deep inciſion in the inner part of the Water-Gate, and then I put my hand into thoſe inciſions and drew forth clotters of blood to the quantity of a pound and an half. Afterward I waſhed the part very wel with Wine, Salt, Honey, and Vinegar mixed together and made very hot, and I Fomented the ſame with Linnen Cloaths; then I made new Inciſions, and waſhed and Fomented them. Afterwards I cut away certain portions of the inner coat which were putrified, and again fel to fomenting; and I perſiſted without intermiſſion with ſuch like inciſions and Fomentations, until no ſtink appeared in the part, and that al the corrupted portions were taken

taken away. And afterward, the foreſaid Fomentations were continued day and night, for two orthree daies together, after which I mixed Unguentum Ægyptiacum, and Aureum, and applied to the part; and finally the Ulcer was cloſed up with Aqua Vulneraria.

By the ſame Method a Citizen of *Montpelier*, was Cured of a Gangræne in his Teſticle.

The 438 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Another Gangræne in the Foot.

A Gentlewoman through a long ſickneſs, contracted a Gangræne in her Foot, which being only in its beginning, was perfectly cured by continually Fomenting the ſame with a Vulnerary Decoction made of round Birthwort Roots, Rhapontícum, Zedoary, Myrrh, Aloes, and white Wine, unto which, after boyling and ſtraining, was added Aqua Vitæ with Camphire diſſolved therein.

The 439 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Another Gangræne in the Foot.

A Certain Gentleman had a Gangræne in his Leg, which was gone ſo far, that the Phyſitians and Chyrurgeons had reſolved to cut his Leg off, which they deferring to do til the next day, when they were gone there came an Emperick, who undertook to cure the Gangræne, whereupon the patient ſubmitted to his Cure, and he Fomented the part al night with water in which lime and chalk had been boyled, and in the morning the Gangræne appeared wholly taken away.

The 440 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A *Wenn.*

THe Son of Mſr. *Malafoſſe*, a Merchant of *Montpelier*, had a great Wen as big as a large fiſt, under his ſhoulder blade near his Back-bone, which was cured by the following Method. I made me an inſtrument of hard wood like the ſtone with which painters grind their colors upon a Marble; with which I did rub and grind upon the Wenn half an hour at a time twice a day: then I laid on an Emollient and ſuppurating plaiſter very hot, which I kept on for four or five daies; and the Wenn came to ſuppuration, and being opened the matter or quittor came forth being liquid, and afterwards al the ſubſtance contained in the Wenn was turned into matter and Evacuated, and the Ulcer was healed up. The foreſaid grinding and rubbing with the wooden Inſtrument ſerves to break the bag in which the Wenn is contained, and by that means alſo the matter contained in the Wenn is attenuated and divided into ſmal particles, that it may the ſooner come to digeſtion. Inſtead of a Cataplaſme, an hot loaf newly taken out of the Oven and cut aſunder in the middeſt may profitably be applied.

This kind of Cure wrought the ſame effect in many other patients.

The 441 *Obſervation, or Hiſtory, of famous and Rare Cures, &c.*

The Letchers pox in a new born Child.

A Woman infected with the Whore-maſters Pox brought forth a Man-child with Puſtles and Ulcers in divers parts of his body, who was cured with white precipitate given in the quantity of two or three gains with Sugar and Milk, every day or every other day for a month together. He began to take it upon the fifteen day after he was born.

The

A Spot in the tunicle Cornea.

A poor Woman had a ſpot in her Eye, whom I adviſed to drop twice a day one drop of juyce of Rue into her Eye: which when ſhe had practiſed a good while together, the ſpot was quite taken away.

The 444 Obſervation, or Hiſtory of Famous and Rare Cures, &c.

Gutta Serena.

A young Woman was taken with the *Gutta Serena* [that is, a kind of blindneſs in which no fault can be ſeen in the Eyes] with which ſhe was ſo grieved, that ſhe was reſolved to ſtarve her ſelf to Death. Yet her Husband and others that were about her did compel her by force to take down a little broath or Wine, but it was very little which ſhe would take, rejecting all kind of nutriment as much as in her lay. She continued in this condition an whol year, and was made extream lean, her natural heat for want of food devouring the ſubſtantial moiſture of her body: and therewith al the Humors likewiſe of her body were conſumed, and that among the reſt which had Cauſed her Blindneſs; and ſo ſhe recovered her ſight, and was by little and little brought up again by a reſtorative Diet.

The 445 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Children with crooked Legs.

MAny times, Children when they are two years old, and begin to go, prove Crook-legged, whereat their Mothers being troubled do ask adviſe of Chyrurgeons, which commonly endeavour with divers engions and deviſes to ſtrengthen their Legs and Thighs. But al is for the moſt part labour loſt, becauſe ordinarily, about the third or fourth year of their Age, their Bones and Muſcles grow naturally ſtronger, and the parts returne unto their naturtal Rectitude.

The 446 Obſervation, or hiſtory, of famous and rare Cures, &c.

Head-ach called Cephalæa, and Hemicrania.

IN the *Hemicrania*, when one half of the Head akes by reaſon of an hot Cauſe, and in that kind of pain which *Gordonius* does term *Clavus* or the Nail, which is a pain fixed in the Temples, the opening of an Artery does wondertully help, which I have ſafely performed in many.

many. I bind down the Orifice with a ſingle bolſter made of a doubled clout, and wet in cold water as in the caſe of Ordinary Phlebotomy, which I ſwathe with ſuch a Swath-band as *Galen* calls the Hare without Ears, and the blood never breaks forth afterward. Alſo I have ſeen a laſting Cephalæa, or univerſal Headach, cured in the Hoſpital by applying a potencial Cauſtick unto the temporal Artery. For the Eſchar being come away, which was cauſed by the potencial Cauſtick applied upon the Veins and Arteries, no flux of blood follows; becauſe provident Nature while ſhe endeavours to ſeparate the Eſchar, does without breed new fleſh, wherewith the mouths of the Veſſels are cloſed up. And whereas it is objected, that great bleedings in wounds which are ſtopped by actual Caueries or Corroſives, are oftentimes renewed, when the Eſchar comes away. I anſwer, That thoſe Eſchars are thinner, and fal away ſooner, and therefore there is not in the mean ſpace time enough to breed new fleſh; but ſuch Eſchars as are made by a potential Cautery, are more thick and ſolid, and are long before they come away, ſo that there is time enough for new fleſh to breed and ſtop up the Veins.

The 447 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Madneſs.

THere was a certain yong Man mad, and for his Cure the moſt effectual Remedies were put in practice, ſo far as to come to the uſe of Antimony, the Trepan, and the opening of the Arteries of his Temples. And when all did no good, I adviſed that he ſhould be gueldded; which being done, all ſymptomes were abated, and his fury ceaſed quite; yet ſo as that he continued in a melancholy dotage, his madneſs being changed into Melancholy.

The 448 Obſervation, or Hiſtory, of Famous and rare Cures, &c.

Stoppage of Urine.

I Have made tryal of an effectual Medicine for ſtoppage of the Urine in three Patients. It is made of the brain of a Mag-pie dried and drank in white wine. Within an hour it makes the Patient to piſs.

The 449 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

VVarts.

WIthin ſeven or eight daies they are cured with Purſlane bruiſed and rubbed upon them, and then applied as a Pultiſs, renewing the ſame twice a day.

The Peſtilence.

WHen there was a moſt cruel Peſtilence at *Montpelier*, in the Year 1630. when they were infected with the Plague, they ſent to me to know what they ſhould do. I remembring that I had read in *Pareus* that the pickle of thoſe little Fiſh called Anchoves, had helped ſome of the plague, I adviſed them to take thereof. One Patient drank a porrenger ful by it ſelf, another took of it mingled with Urine, and both were cured; for there followed vehement evacuation both by vomit and ſtool.

The 453 *Obſervation, or hiſtory, of famous and rare Cures*, etc.

Another Cure of the Plague.

IN the ſame time of Peſtilence, three perſons in one Family, viz. the Husband, his Wife, and her Siſter, were infected, and they drank their own Dung diſſolved in their own Urine and ſtrained through a Cloth, whereupon they purged and vomited moſt violently, and were all three recovered. We read a ſtory ſomwhat like this in *Zacutus Luſitanus*, his 89. Obſerv. of his third Book, where he relates, That in the Weſtern Indies there is a little Beaſt like a Lizzard, frequently to be found in the Fields called *Garit*; the biting whereof is deadly without hope, unleſs the bitten perſon do take in mans Dung. Howbeit, 'tis wel enough known, that many are holpen of the plague, by other kind of Vomits.

The 454 *Obſervation, or Hiſtory of famous and* Rare *Cures*, &c.

Gout-pain

IS quickly eaſed, by fomenting the part pained with the water of Aſhen Leaves ſtilled in a Lead or Peuter ſtill, ſuch as the common People ſtill Roſes in.

The 455 *Obſervation, or Hiſtory, of famous and* Rare *Cures*, &c.

Tooth-ach.

I Have freed an infinite company of People from the Tooth-ach by putting a little Cotton wool wet in Oyl of Box wood, into their hollow Teeth. This Oyl is drawn in a Retort with a reverberating Heat, firſt infuſing the Duſt thereof in white wine twenty four hours, and then ſtilling all together. Firſt there comes away an acid water, which does good in the Toothach only by waſhing the Teeth therewith; after that comes the Oyl, which is to be diligently preſerved.

I have alſo happily uſed this following Medicament.

Take *Seeds of Plantane two drams; of Tormentil three drams; Henbane ſeed four ſcruples. Let all be dried and finely powdered, adding thereto one grain of Opium. Bind the Powder up in little Nodules, which muſt be macerated in the following Decoction.*

Take *Elder Flowers one handful; Red Roſes two pugils: boyl them in Vinegar, and reſerve the ſtrained Liquor for the uſe aforeſaid.*

Theſe Nodules being ſteeped in the ſaid Decoction, are held and gently preſſed between the Teeth, and within a while much moiſture flows out of their mouth, and the pain is taken away.

The 456 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

VVhore-maſters Pox.

HEnry the Third, of that Name, King of *France*, was troubled with the Whore-maſters Pox, and could not be cured by his ordinary Phyſitians. He was informed that *Vena* who practiſed Phyſick at that time in *Paris*, did cure many of this Diſeaſe with a peculier Medicine which he had learned of a Turk: whereupon he commanded him to be ſent for, and he was by him cured. Now the Medicine he uſed was this:

Take *of the Roots of the great Burdock cut in thin ſlices, eight ounces; white Wine, and Spring water, of each two pound. Let them boyl together till half the Liquor be conſumed, adding towards the end, an ounce, or an ounce and half of Senna, according to the Patients diſpoſition. Let the Patient take half a pint of the ſtrained Liquor, and procure ſweat by laying hot flints tied up in Cloaths, one neer the ſoals of his Feet, by each Leg one, by each Thigh one, and by each Shoulder one, and being cloſe covered. Let him ſweat plentifully an hour and half together; and about evening he will have a ſtool or two.*

This Medicine was uſed (univerſal Remedies being premiſed) for the ſpace of fifteen or twenty dayes, and in the mean time inſtead of ordinary Drink, he uſed a decoction of China, or Sarſa Parilla, with a ſuitable diet.

After the uſe of theſe Medicaments, he took every day in the morning, the decoction of Burdock Root, without the Senna, and without any obſervance for a month or forty daies.

The 457 Obſervation, or hiſtory, of famous and rare Cures, etc.

Stoppage of Urine.

AN Apothecary of *Paris*, named *Lafoxilliére*, being troubled with a ſtoppage of his Urine, after many Medicines for four dayes together, taken in vain, he made himſelf this following Medicament, which made him piſs, and cured him.

Take *White Canary Wine four ounces; Juyce of Lemmons one ounce; Spirit of Turpentine two drams. Mix all into a potion.*

The 458 Obſervation, or Hiſtory, of famous and rare Cures, etc.

Of the internal Hemorrhoids.

THe ſaid Apothecary *Lafoxilliere*, did happily cure the internal Hemorrhoids, by injecting with a Syringe in the firſt place this following Decoction.

Take *of the middle bark of an Elm-tree two ounces; of the Root of Tapſus barbatus half an ounce. River water four pints. Boyl all to the conſumption of half the water; and ſtrain out the Liquor for the uſe aforeſaid.*

After the Injection, let a Pill made of Crude Antimony, and Lituridg of Gold, finely poudered, and mixed with Oyntment of Roſes, be put into the Fundament.

The Pill being put into the Fundament, let the compaſs thereof be anointed with this following Oyntment.

Take *Juyce of the greater Houſleek, Plantane, Tapſus barbatus, and Nightſhade, of each four ounces; Hogs Greaſe one pound. Boyl all till the Juyces are conſumed, ſtrain it through a Linnen Cloth; and when it is cold, add thereto the pouder of Gray-fiſh, or River-Crabs dried in an Oven, half an ounce; Tapſus barbatus in pouder, and the pouder of Periwinkle ſhells, of each two drams. Make all into an Oyntment. Continue theſe Medicines morning and evening for eight dayes together.*

The

A wound in the Breaſt.

A Certain Souldier was thruſt with a ſpeare into the forepart of his Cheſt, ſo that the wound peirced into the cavity thereof. Within two houts after he was wounded, the whole Bulk of his body together with his cods was blowne up like a bag-pipe; howbeit the ſaid ſwelling was eaſily cured, with torrified Bran put into divers bags, and ſo applied hot.

The

The 468 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An Impoſtume of the Belly.

A certain boy having his belly ſwelled, was thought to have the dropſie; and when his navil extreamly ſtarted out, it was at laſt opened, and there Iſſued eight or ten pound of wel digeſted matter or Quittor, and ſo he was perfectly cured. Young Artiſts may do wel to take notice, that in children ſuch Impoſtumes of the belly are often ingendred, which appear like a dropſie which if they be ſeaſonably opened by a skilful Chyrurgeon, the patients are commonly freed from death, which would otherwiſe certainly follow.

The 469 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

Another Impoſtume in the belly.

A certain young Maiden had a ſwelling in her belly eight months together, with continual pains, which brought her to extream Leanneſs: and every one judged it was the dropſie. I being ſent for to her, dilligently marking the condition of her belly, I perceived that there was an impoſtume lay concealed between the muſcles of her belly, above the navil; which I opened with a potential Cauſtick, whereout iſſued fifteen or twenty pound of wel conditioned quittor or matter in the compaſs of certain daies; and ſo the patient was perfectly cured.

The 470 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Swelling of the Cods.

A Servant of Mſr. *Ricard*, Councellor to his Majeſty in his ſupream Court of Accounts, having received a kick of an horſe in the lower part of his belly, in the ſpace of four hours there aroſe a ſwelling in his Cod, as big as a childs head and of a black and blew colour. Which after bloodletting, was within the ſpace of ten dayes diſcuſſed with a cataplaſme or Pultis of Barley and Beane Meal, Cummin-ſeeds, Flowers of Chamemel, melilot and roſes, poudered and boyled with Oxymel.

A Man that was wounded with a ſword in his Loines, had the like ſwelling, which was cured after the ſame manner, and in the ſame ſpace of time.

The 471 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A ſtone under the tongue.

A Man forty yeares old was troubled with grievous and frequent defluxions of rheume into his jawes and the almonds of his eares. At laſt it was perceived that there grew a ſtone under his tongue, which was eaſily drawn out, and from that time forward the patient was no more troubled with thoſe defluxions.

The 472 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An Horn growing in the face.

A Certain old woman had growing upon the Bone Zygoma or Cheek-bal under her eye an hard body two fingers breadth long, juſt like an horn both in matter and ſhape, being broad at the Baſis or bottom and ſharp or pointed at the top, which in proceſs of time fel off, by its own accord, and a Cancer aroſe in its place.

OBSER-

Obſervations communicated by Mſr. *Denis Pomaret*, a Skilful Chyrurgeon of *Montpelier*.

The 473 *Obſervation, or Hiſtory, of Famous and* Rare *Cures*, etc.

A ſuppurated Tumor Diſcuſt.

Mary Pomaret, my Daughter, being eight years old, had a ſmal Tumor proceeding of blood and flegm, on the outſide of her nether Jaw, on the right ſide of her Face, which came to ſuppuration. But I fearing that her Face would be blemiſhed by the Scar; before I would open the Impoſtum, I reſolved to try if I could diſcuſs the ſame, leaning upon the Authority of *Guido*, who in his General Diſcourſe of Impoſtums, ſaies that ſuppurated impoſtums are ſometimes cured by diſcuſſion: which is alſo confirmed by a ſolemn experiment of *Pareus*, who avers that he cured a ſuppurated Impoſtume, with crude Mercury mingled with Diapalma Plaiſter, which diſcuſſed the ſame. In imitation of whom I mingled one dram of the ſaid Mercury, with an ounce of Diapalma Plaiſter, and laid it upon the ſuppurated Tumor, which within four daies ſpace was perfectly diſcuſſed.

For to diſcuſs ſuppurated matter, theſe following Conditions are requiſite. 1. That the matter be little in Quantity. 2. That it be thin and wheyiſh. 3. That it be in the Skin and ſurface of the Body, and not in any deep part. 4. That it be in a ſtrong youthful body, and ſoft fleſhed. 5. That it be in the Summer Seaſon of the year.

The 474 *Obſervation, or hiſtory, of famous and* Rare *Cures*, &c.

A Flegmatick tumor.

MY ſaid Daughter had an œdematous or flegmatick tumor, crude and not come to ſuppuration, upon the Region of her Loyns, as big as the Palm of ones hand, which was diſcuſt within a few daies, by the foreſaid Plaiſter.

The 475 *Obſervation, or Hiſtory, of famous and Rare Cures*, &c.

A VVenn.

A Capuchine Fryer of the Covent at *Montpelier*, twenty five years old, had a Wenn upon his Knee, which he had carryed about a long time, ſo that at laſt it was grown extream ſoft, in which reſpect I adviſed him that it ſhould be opened, becauſe the matter contained within, ſeemed wel digeſted. But he refuſed, ſaying, he had ſeen juſt ſuch Wens diſcuſſed, with the Leaves of Sorrel wrapped in a wet paper and roaſted in the Embers, which was afterward incorporated with ſifted aſhes into the form of a pultis. This Medicine he applied divers daies warm, and the Tumor vaniſhed wholly away; which I exceedingly admired, and have ſince that time cured two ſuch Wenns in the ſame part with the ſame Medicine. *John Guerinus*, ſixty years old was troubled with one of thoſe Wenns, and the Wife of *Timothy Coula* a Carpenter of *Montpelier* had the other.

The 476 Obſervation, or Hiſtory, of Famous and Rare Cures, etc.

Of the Tumor *Ecchymoſis.*

THe Wife of *Petrus Laiardus*, a Merchant of *Montpelier*, fifty years old, fel down the ſtairs, and received a bruiſed wound upon her Head, ſo that there aroſe a Tumor cauſed by the blood which was ſhed out of the Veſſels, which kind of Tumor is called Ecchymoſis, as big as an Hens Eg. After the firſt Application of a white of an Egg mixed with Oyl of Roſes and after blood letting, I began to think of opening the Tumor with my inciſion Knife or bringing the ſame to ſuppuration; according to that of *Hippocrates*, in the 20. Aphoriſme of his 5. Section, If blood be preternaturally ſhed into the belly, it muſt needs ſuppurate. Hereunto concurred the ſtore of matter, the Age of the Patient, the hardneſs of the Skin of the head, and the winter ſeaſon of the year. But becauſe the Patient would not hear of Inciſion, and I deſired to avoid the pains and other trouble which would come by ſuppuration, I reſolved to try a few daies if I could diſcuſs the Tumor, though I had very ſmal Hopes. Now I went this way to work. Firſt I fomented the part affected twice a day with hot water, half an hour at a time. After the Fomentation, I ſhaved the part with my Razor againſt the Hair, that the pores might be the more opened. And that al filth ſticking to the part might be wel clenſed away; and at laſt I applied Oyl of Lillies and Chamemel, of each a like quantity, laying thereupon Cotton wool perfumed with the Smoak of Aromatick pouders and wel heated, and ſo the ſwelling was perfectly diſcuſſed.

The 477 Obſervation, or hiſtory, of famous and Rare Cures, etc.

A Carbuncle.

TOuching Carbuncles, I have noted two things worthy of Obſervation, the one is, that though Carbuncles are wont alwaies to have a Feaver accompanying them, by reaſon of the great Inflamation which we ſee in them, as *Galen* teaches in his ſecond Book *ad Glauconem*, in theſe Words. *Whenever blood very hot and thick ſhal ſuddenly flow into any part, it burns the ſame and cauſes an Ulcer with a Cruſt; and the parts round about are thereby brought into a burning Inflamation, and vexed with grievous pain.* Howbeit ſince the time that I have addicted my ſelf to Chyrurgery, it has been my hap to ſee three Carbuncles, which have run through their times without any Feaver, and whithout any other grievous Symptome, ſo that the patients continually followed their Employments, one was in the Cheek, the other in the Neck, and the third under the lower Eye-lid of the left Eye. Al which were cured with the ſame medicines, wherewith we are wont to cure potential Cauteries, viz. Such as procure the falling of the Eſchar.

My other Obſervation touching Carbuncles is, That in that moſt cruel Peſtilence which raged at *Montpelier*, in the years 1620. and 1639. there appeared Carbuncles attended with quite different ſigns from thoſe deſcribed by *Galen*, *Guido*, and late Writers. Which was the Cauſe that very many Phyſitians and Chyrurgeons, yea of the moſt skilful did at firſt Erre in their Diagnoſis of theſe Carbuncles. Now the different ſigns appearing in them were, weakneſs, final pulſe, the part on which the Carbuncle roſe did not ſwel, A little inflamation incompaſſed the Puſtle, the extream ſoftneſs of the Eſchar arguing putrefaction rather than aduſtion, freeneſs of motion in the part affected and no perception of heavyneſs, which in vulgar Carbuncles is ſo great, that the part ſeems tied in bands.

The 478 *Observation, or History, of famous and Rare Cures, &c.*

A fleshy Excrescence on the Right Leg.

A Young man named *Claparede*, had a fleshy Excrescence, which the Greeks cal *Sarcoma*, in the inner side of his right Leg, four fingers above the Ankle, of the shape of a rowling Pin or Cylindre; the length of it was four fingers breadth, and it was as thick as the Arm of a new born Infant. This Tumor was nourished by an Artery which was carried unto the Basis thereof, which being very broad could not be bound. If the patient happened at any time to hit the Tumor with his other Leg, it would fal to a bleeding as to endanger his Life. Mr. *Samuel Formius*, an old skilful Chyrurgeon was called to consult with me, and it was resolved upon between us to take away the Tumor by the Roots, and to avoid effusion of blood, we sought the *Arteria Poplitea*, which when we had groaped out, in the upper and inner part of the Leg, we made a bolster hard and compact of linnen Cloaths closely folded together in the shape of a Cylindre or rowling Pin, which being wet with the juyce of nettles and smeared with the common Astringent Medicine, we laid upon the Artery al along according to the length thereof, swathing it very many times about with a fillet or swathband very fast. Then we applied other Bolsters unto the whol Leg and the extremity of the Thigh smeared with the foresaid Astringent, and swathed very close and strait. Also actual cauteries were had in a readyness, to stop the flux of blood, in case, notwithstanding the foresaid ligatures, it should break violently forth. Al things being thus in a readiness, I took hold of the tumor with my left hand and drew it outwards, and with my incision Knife in my right hand, I cut it out by the Roots, without any profusion of arterial blood. Soon after I applied an Astringent Plaister to the wound, which was left sticking twenty four houts after. Which being taken off there followed no bleeding at al, nor at any time afterward. And because some superfluous and unsound flesh remained upon the part, it was consumed away by gentle Corrosives. The ulcer yielded wel conditioned matter, and at last by detergents, Epuloticks, and such things as bring the Scar together, it was perfectly cured.

The 479 *Observation, or historie, of famous and rare* Cures, &c.

A Stone in a Mans Throat.

A Priest sixty years old, of a sanguine complexion, was oftentimes troubled with an Inflamation of his Throat, especially when he strained himself more than ordinary in singing; which inflamation was cured with blood-letting and a Gargarisme of Vinegar and Water mixed together. In the last coming of the said Inflamation while I was busily viewing the part affected, I saw an extraneous matter fastened to his Throat, near the end of the lower jaw-bone of the right Cheek, like a Musket buller, which I easily drew out, and having carefully washed it, I found it to be no other than an hard and compacted stone, shaped like a wild pear, the Tail whereof had been fastened in the Muscles called *Masseteres*, or the Champers. There remained a found mattering ulcer, which was cleansed with Honey and Wine, and healed up.

The 480 *Observation, or History, of* Famous *and* Rare *Cures, &c.*

Wound of a Gum.

Mr. *de Roques Junior*, surnamed the Knight, at the siege of *Salsa*, was Wounded with a shot, in the upper and middle part of his breast bone, which was carryed Obliquely unto his Back, and went out six fingers breadth distant from the Back-bone. Presently after he was wounded he perceived most sharp pricking pains in the *Oesophagus*, or mouth of his Stomach, as if there were thorns sticking there, and because he was choaked with blood, he endeavoured

endeavored ſtrongly to caſt it out; and at laſt after many and frequent ſtrainings, and much voidance of blood, wherewith many baſins were filled, the pricking pain of the Oeſophagus wholly ceaſed. After many daies, the patient going to ſtool, found the like pricking pains in his Fundament, which he had felt in his Stomach, and feeling with his finger what the matter was, he found a ſolid pricking ſubſtance; which by little and little he drew out, and preſently voided another like the former. Now theſe were two thin fragments of a bone broad and flat like the Leaves of a Tree, on the one ſide ſmooth, on the other ſide rough; and the ends were ſharp and cutting like the edg of a Knife. It was judged that the bullet had razed off theſe two fragments from his breaſt bone, and violently driven them into his Oeſophagus; whence aroſe that pricking pain of that part, ſo long as the ſaid fragments remained faſtened in the part. But after many ſtrainings to vomit, they being removed and thruſt into the Stomach, the pricking pain ceaſed; but after ſome daies, thoſe fragments ſlipping into the Guts, the ſame pain aroſe in the Fundament. Theſe fragments were as broad as ones little finger, but longer than the ſame.

The 481 *Obſervation, or hiſtory, of famous and Rare Cures,* &c.

Kings-evil Swellings.

A Certain Country woman, having very many Kings-evil ſwellings in her Neck and Head, coming to me ſhewed me two Ulcers upon the *Os Petroſum*, and two ſoft tumors in her Head, one upon the right bone of the *Sinciput*, and the other upon the *Os Occipitis*, being diſtant three fingers breadth one from another. I opened the Ulcer by Inciſion, and found the Os Petroſum beginning to periſh. And becauſe I feared ſome ſuch thing lay hid under the foreſaid tumors, I thought good to open them with a potential Cauſtick; which being done, and the Eſchars removed, under both the Tumors (ſtrange to tell) the Skull was perforated, as if it had been done with a Trepan, and the holes were as big as Farthings, by means of which, the motion of the brain might eaſily be diſcerned in its Coats, upon which ſome purulent matter floated; and I could not find any the leaſt bit of a bone. Some daies after the poor miſerable Patient, weary of ſo many ſores and ſufferings, threw her ſelf Head-long into a pit of water, and drowned her ſelf.

Here is to be noted the wonderful malignity and ſharpneſs of that humor which cauſes the Kings Evil, which is able to melt and diſſolve bones.

The 482 *Obſervation, or Hiſtory, of Famous and Rare Cures,* &c.

Phrenſie.

A Certain Husband-man named *Poulet*, by reaſon of a burning Feaver, fel into a Phrenſie, and continually raving without ſleep, he cried out that he was damned, and that he deſired to die. Now I cured him by this policy. I contented and told him that I would kil him, and divers Horſ-leeches being faſtened upon his forehead, and blood running down from the wounds which they had made; I ſhewed him my Razor, wherewith I told him I would cut his throat, and ever and anon with the haft of the ſaid Razor I ſcrape his throat very hard; and in the mean while the Razor is al bloodied with the blood that came from his Forehead. Whereupon ſhewing him the bloody Razor, I told him that he was kill'd, and preſently I cover his Face with Linnen Cloaths, and ſhut the windows, ſo that no light could be ſeen in the Chamber. He ſuppoſing himſelf to be dead, never ſtirs, and a while after is taken with a deep ſleep, and ſo is freed from his Phrenzy.

The 483 *Obſervation, or Hiſtory, of Famous and rare* Cures, &c.

Slipping down of the womb.

A Certain woman troubled with falling down of her womb, with great force crowded into her womb a round piece of wax as big as an hand-ball; which ſhe carried ten years in her womb, never troubled with that Diſeaſe. Which I found after her death by diſſecting her body, ſhe dying of a continual Feaver; for I found the foreſaid ball in her womb, and her Siſter affirmed that it was thruſt in more than ten Years ago, and had abode there ever ſince.

The 484 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Tumor cauſed by ill opening a Vein.

AN honeſt Virgin named *Magaret Varſaline*, of *Villa Nova*, being let blood by an unskilful Chyrurgeon, had an Aneuriſma happened unto her, by reaſon of an Artery opened with the Vein, which having Reſolving Medicines applied unto it from the beginning, grew to a great bigneſs. Advice being taken, it was reſolved that the Tumor ſhould be opened, the Artery being firſt tied in the upper part, to which opinion the Patient would not conſent. But leaving her former Chyrurgeon, ſhe came to me, and entreated me to try the Cure with outward Applications. I, endeavoring to ſatisfie her, do apply bolſters to the part, wet with an aſtringent Decoction, and bind them cloſe down. Which being continued for ten or twelve daies, the ſwelling was much abated. Afterwards the Patient returned to *Villa Nova*, where uſing no Medicines, and ſtirring her Arm with divers works, ſhe raiſed the ſwelling again to a great height, with great pain, watching, unquietneſs, feaver, headach, thirſt, and other Symptomes. For which cauſe ſhe ſent for me, and Mir. *Formius*, an Ancient Chyrurgeon. We conceived it beſt to open the Tumor, the Artery being firſt bound with ſtrong bolſters, as we did in the Operation upon *Claparedus* aforeſaid, but the Patient would by no means hear of it. After twelve daies the Tumor opened of it ſelf in the ſame place where the Vein had been opened; and by the hole, which was but ſmal, there came out thin black blood, which did not ſtink; and the following daies there iſſued matter or quittor wel conditioned, but in ſmal quantity, and at laſt the Ulcer was brought unto a Cicatice or Scar, and the Patient perfectly healed. Only this inconvenience remained, that ſhe was not able to ſtretch her Arm forth, but was fain to carry it half bent.

The 485 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

Pain of the Colick.

THe Wife of Mſr. *Sartreus*, Councellor to his Majeſty in the Court of Accounts, Subſidies, and the Exchequer, had a grievous pain in her belly for a month together, and having uſed many Medicaments in vain. At laſt I applied a great Cupping-Glaſs to her Navil, wherewith ſix or ſeven ounces of wheyiſh Humor were evacuated, and the Patient freed from her pains.

The 486 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Pleureſie.

THe Footman of Mſr. *Demanſe*, General Treaſurer of *France*, being very hot with running, and al wet with ſweat, drank plentifully of cold water, and a little after he was taken

ken with a grievous pain in his ſide, with ſuch difficulty of breathing that he ſeemed to be choaked. I being preſently ſent for, let him blood in a large quantity, and as the blood iſſued out, the difficulty of breathing, and the pain of his ſide, were by little and little abated, and when the blood-letting was finiſhed, both the ſymptoms perfectly ceaſed, and the ſick perſon was wholly cured.

The 487 *Obſervation, or Hiſtory, of* Famous and Rare *Cures, &c.*

A Tooth pluckt out, and faſtened in the Gum again.

A Certain Virgin dwelling in a Neighboring Village, being tormented with the Toothach, which ſhe thought was cauſed by one of her Grinders which was rotten, ſhe ſends for a Chyrurgeon to draw her Tooth. He plucks out the next Tooth being ſound, and ſuddenly perceiving his Errot, draws out the rotten Tooth: and ſoon after having waſhed the hole of the former Tooth with Wine, he thruſt in the ſound Tooth again; and preſcribed an aſtringent Gargariſm of red Roſes, Balauſtians, Pomgranate Rinds, Lentisk wood, and Allum boyled in water and harſh red Wine, which the Patient often uſed. And he bad her for certain dayes to uſe only ſupping meats, and to abſtain from all chewing. And to the Tooth which had been pulled out, was faſtened in its place again.

The 488 *Obſervation, or* Hiſtory, *of* Famous and Rare *Cures, &c.*

The Whore-maſters Pox.

CHyrurgeons are wont ſomtimes to err in the Cure of the Lechers Pox, when after the ordinary Remedies conveniently practiced, they imagine the Patients are not perfectly cured, becauſe ſome Symptomes attending the ſaid pox, do as yet appear, whereupon they do ſomtimes caſt their Patients into freſh torments, and at laſt force them Headlong into an Atrophy or a Conſumption. Whereas thoſe Symptomes are wont to go away of themſelves after a ſhort time, or elſe are cured with ſome light Topick Medicines outwardly applied.

While I was at *Paris* with Mr. *Helot*, a very skilful Chyrurgeon, a Gentleman of *Paris*, of a Melancholick Conſtitution offered himſelf to be cured, who beſides pains in the Night and other Symptoms of the Whore-maſters pox, had a ſwelling in his Neck bred of flegm and melancholy. After he had been anointed with Mercury, he was abundantly fluxed, and all tokens of the ſaid pox were wholly taken away, excepting only the Tumor, of which two third parts were diſcuſſed. The patient thought that he was not cured becauſe of the Tumor remaining. But another Elder Chyrurgeon being called, perſwaded him that he was cured; and *Vigo* his Plaiſter with the Mercury quadruplicated being laid on, it was diſcuſſed in the ſpace of a month.

Another Gentleman committed to my care, after that I had fluxed him, thought that he was not cured, becauſe there remained an Ulcer in his Neck, and in the Region of his Oeſophagus. Howbeit this Ulcer was cured with ordinary Remedies, in a month, without any Medicine proper to the Whores pox.

I had another in hand, who among other Symptomes had a great pain in his Shin-bone. He was of a Cholerick Complexion, and had been four times ſmeared with Mercurial Unguents; which had brought him extream lean. He uſed a moiſtening Diet for a month together. Afterwards he was ſmeared all over with the Mercurial Unction, and with this friction alone his pain was taken away. He was fluxed, and voided for a months ſpace that way, Humors thin, yellow, and very ſtinking, for a month together, afterward for fifteen dates he voided thick flegm. Which Evacuation continuing too long, I was forced to expoſe him to the open Air, that it might be ſtopped the ſooner. At laſt, Inciſion was made upon the place where the pain had formerly been, and corruption was found in the bone, which was taken away by an Actual Cautery, and Pulvis Caragmaticus, and the Patient perfectly Cured.

The

The laſt Example ſhall be of a certain Knight, who was cured of the Whore-maſters pox, by the ordinary Method. Yet there remained extream pains in all his Joynts, that he could not move his Limbs without crying out. Mſr. *Delort*, the Kings Profeſſor at *Montpelier*, and very wel exerciſed in the practice of Phyſick, diligently enquiring into the cauſe of theſe pains, conceived that they came not from the Letchers pox; but rather from a dry diſtemper, poſſeſſing the Ligaments conjoyning the bones, and the Nervous parts annexed to them. And taking his Indication from the ſaid diſtemper, he preſcribed him a moiſtening diet, and bathing, by the continual uſe of which, he was perfectly cured.

Obſervations communicated by Mſr. *Oſias Aimar*, a Famous Chyrurgeon of *Grenoble*.

The 489 *Obſervation, or Hiſtory, of famous and rare Cures*, &c.

A contuſed wound in the Eye.

THe moſt renowned Mſr. the Lord of *Servien*, who is at this preſent, Plenipotentiary Ambaſſador at *Munſter* about making of peace, many years ſince in a Tennis-Court at *Paris*, was wounded in his left Eye with a Tennis ball, whereupon grievous pains aroſe. The Learned and Experienced Chyrurgeons of *Paris*, uſed al Medicines and Remedies which ſeemed neceſſary for the Cure of this Accident according to the Rules of Art; and among other things when they perceived an *Ecchymoſis*, or ſwelling upon the *Conjuctiva*, they endeavored by light Scarrifications to draw away the extravaſated blood. Howbeit, the pain continued as it was. He therefore, finding himſelf to grow worſe and worſe, reſolved to come to *Grenoble*, that he might ſubmit himſelf to my Care. And I, by many blood-lettings, Cupping-Glaſſes, and many Topical Medicines applied to the part affected, endeavored to qualifie and mitigate the Diſeaſe. But when al would do no good, I perſwaded him at laſt, to ſuffer one to look into his Eye, which before he would never grant, becauſe of the Extream pain, which the light coming into his Eye, did put him unto. Having therefore opened his Eye, I ſaw a white ſubſtance covering the whol ſight of his Eye, which I conceived to be that which Authors call *Hypopion*, and judged that it ought to be opened, to evacuate the matter contained therein, which cauſed continual pains. Having therefore made a light Inciſion, a ſmal clot of blood came out, which outwardly was white, and within red. Which being gone, all the pain ceaſed forthwith, and within a few daies the Patient began to endure the light, and ſhortly after was reſtored to perfect Health.

The 490 *Obſervation, or hiſtory, of Famous and Rare Cures*, &c.

An ulcer with rottenneſs in the Breaſt-bone

Mſr. *Speaute*, General Treaſurer of *France*, had a ſcirrhous or hard ſenſleſs tumor on his Breaſt-bone, which after a year was paſt did open of it ſelf. I ſearching the ulcer, found the bones underneath periſhed, unto which I applyed many actual Cauteries, and at laſt with detergents and Epuloticks I brought the Ulcer to a ſcar, not omitting univerſal Medicines reſpecting the antecedent Cauſe.

The

The 491 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Ribbs infected with Rottenneſs.

A Certain Matron forty years of Age, being vexed with a vehement pain on her left ſide, with a ſlow Feaver and extenuation of her whole body; after that for a year together ſhe had tried many remedies to no purpoſe, in a village where ſhe dwelt, twelve miles diſtant from *Grenoble* at laſt he came to *Greenoble* & committed her ſelf to my care. I preſently examining the pain'd ſide, find there an Impoſtume ſuppurated, & having made a large inciſion croſswiſe, I drew out two porringers full of very uneven and moſt ſtinking matter. The which being evacuated, I found three ribbs much corrupted at the ends, viz. the fourth, fifth, and ſixth Ribs, reckoning from the loweſt to the higheſt. I was compelled to cut off thoſe ribs the length of three fingers breadth, applying afterwards to their extremities an actual Cautery. Here the Providence of Nature was admirable, for ſhe lined and armed the pleura or membrane compaſſing the ribs, underneath thoſe ribs infected with rottenneſs, with much fleſh, to Roborate the ſame, and ſo to ſupply the defect of the ribbs. This Matron by a reſtorative Diet, and the uſe of Milk, was afterward reduced to perfect health.

Mſr. *de Peſſin*, Captain of a band of Souldiers, had for a long time a ſcirrhous or hard ſenſeleſs tumor in his left ſide upon the true Ribbs, viz. the fifth, ſixt, and ſeventh. A certain Chyrurgeon opened the tumor with an actual Cautery, out of which there came very little matter, and there remained very greivous pains in the part; which compelled him living in the country to come to *Grenoble* and emplore my help. I found the ulcer as big as the palm of ones hand, and the ribs underneath infected more than half their length with rottenneſs. Premiſing therefore univerſal Medicaments, I cut off the extremities of the ribbs the Quantity of four fingers breadth, applying afterward an actual Cautery to their extremities. Finally with Catagmatacal pouders, I procured a ſeparation of the burned parts, and with detergent and incarnating Medicines I did heal up the ulcer, and bring it to a ſcar.

The 492 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A Fracture of the temple-Bone.

A Man forty yeares old was wounded on his right temple, and the bone beneath received a great fracture. Being called unto him, and finding that it was neceſſary to uſe the trepan, I made a Croſs-faſhioned Inciſion upon the temporal Muſcles, without any ſupervenient Symptome, although Authors do much fear the wounding of thoſe muſcles, as being of moſt dangerous conſequence. I applied my trepan, replaced the depreſſed bones, and all things being rightly adminiſtred, the patient was happily reduced to his former health.

The 493 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

The aſpera Arteria wounded with gun-ſhot.

THe Maid-ſervant of Mſr. *de Viviers*, his Majeſties Secretary in the Parliament of *Grenoble*, was wounded with a Piſtol charged with three ſmal bullets, in her throat under the Larynx, and the three bullets ſhe voided at her mouth, out of three holes in her Aſpera Arteria or wind-pipe, the wind came out with a noiſe and hiſſing. And although that cartilaginous and griſtley part does heale with great difficulty: yet dilligent care being taken thoſe wounds were perfectly healed up.

The

The 494 *Observation, or History, of Famous and Rare Cures, &c.*

An Empyema through a wound of the Epigastrium.

AN Occitanian Gentleman was at *Grenoble* wounded with a dagger in his Belly above his Navil, the wound growing into the cavity of his Belly, without hurting his Guts or his stomach. In short time this wound was healed up. Howbeit two months after he comes to me oppressed with a great shortness of breath, and with sense of weight in his breast and a continual stink in his mouth. These symptomes caused great suspition of Quittor or purulent matter collected in his Chest. But I looking for the scar of his former wound, and finding it in the upper part of his Belly, I admired how a wound inflicted in the Belly, could cause a collection of matter in the Chest. At last enquiring in what posture the Patient was when he was wounded; he said he was then upon a pair of stairs in a certain house, & he that wounded him stood upon a lower stair, & so struck the dagger into his Belly. Whereby I came to conjecture, that the wound taking its passage from beneath upwards had pierced the midriff, and had come into the cavity of the Chest, by which meanes matter might easily proceed from the blood shed out of the veines of the wounded diaphragma or midrif. I opened his side between the fourth and fifth true ribs, reckoned from the lowest upward, four fingers breadth from the back-bone. A portion being made there came out white Quittor very stinking: at the first bout I took away three portingers, the day after as much more, and so by little and little al the purrulent matter being voided the Patient within two months was perfectly cured.

The 495 *Observation, or History, of Famous and Rare Cures, &c.*

A Gangræne of the Perinæum, Fundament, and Cods.

Mr. *Pourroy*, Master of the Chamber of Accounts at *Grenoble*, sixty yeares of age, had a swelling in Perinæo [that is, the space between the Cods and fundament] which an Apothecary only had in Cure. A Gangræne invaded those parts, to the Cure whereto I being called, I find that it possessed the Cods, the Perinæum, and the fundament. Presently I made many Scarifications, and those pretty deep, And I often wash the parts with vinegar, salt, aquavitæ, unguentum Ægyptiacum, and mercury sublimate mixed together. Howbeit these things did not hinder the progress of the Gangræne, so that I was forced to have recourse to actual Cauteries, by help whereof the gangrene was stopped. So great a stink came from those parts that it poysoned the by-standers. A great Quantity of corrupted flesh fel away. The urethra was wholly detected, and had two holes eaten through it, by which the urine came out. Nevertheless al those parts are united, incarnated, and happily healed up.

The 496 *Observation, or History, of Famous and Rare Cures, &c.*

A desperate Rupture cured by Cutting.

A Certain Proctor of *Grenoble* named *Baro*, by reason of the slipping of his gut into his Cod, fel into the illiack passion, because his gut was filled with dung, which being very much hardened did hinder the reposition of his Gut. After many remedies practiced nine dayes together, al in vain, I am called to consultation with Mrs. *de Ville-neuve*, and *Duvins*, renowned Physicians. Delivering my opinion, I said that the part was to be opened til we came to the production of the peritoneum, which did choak the Gut, howbeit it was to be Feared least the Gut by reason of the long continuance of the disease were gangrenated: and yet it was good to follow the saying of *Celcus*, viz. that it is better to use an hazardus remedy, than

than to leave the patient to a certain deſtruction. The renowed Phyſitians were of the ſame mind. Wherefore having placed the patient in a convenient ſcituation, I made an inciſion in his Groyn, til I came to the Peritonæum, being very careful not to hurt the Gut. Afterward I thruſt a ſilver Pipe round on the one ſide, and hollow on the other, into the production of the Peritonæum, and upon the Cavity of the Pipe, I opened the ſaid production, ſo wide as that I might reſtore the diſlodged Gut. Then I thruſt the Gut gently into the belly, ſowed up the production, and the wounds of the other parts I perfectly healed with the Suture Gaſtrorapha and Conglutinating Medicines.

The 497 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

An Impoſtume of the Loyns reaching unto the Kidneys.

A Gentleman of *Grenoble*, had a Tumor in the Region of his right Kidney, which came to ſuppuration, and it being opened a great quantity of Wheyiſh matter Iſſued forth. Some daies after there came out of the ulcer two ſtones as big as Almonds. Which made me to admire. But marking the deepneſs of the Ulcer which reached four fingers breadth, and ſeeing other ſtones as big as beans come forth of the Ulcer; I was made to beleeve that thoſe ſtones came from the Kidney which was likewiſe Ulcerated. This was more credible, becauſe there flowed continually out of the Ulcer a great quantity of Wheyiſh Excrements, infecting the Cloaths within a few hours, with ſo much moiſture, as if they had been ſoaked in the water. Alſo purulent matter came ſometime away with his Urin, at the Yard. This accident happened ten years ago; and the Ulcer came to be a Fiſtula, which oftentimes is ſhut up three or four months together, and then it is opened again and ſends forth a certain bloody matter, and then it ſhuts again of it ſelf. The Patient lives very conveniently in that condition, and freely performs al the ordinary actions of a Man.

The 498 *Obſervation, or Hiſtory, of Famous and Rare Cures, etc.*

A rare kind of Convulſion.

Mſr. *de Bollon*, a Soldier, by the bullet of a piece of Ordinance was wounded in his right Arm, and the bullet took his whol Arm away, only that part next his ſhoulder was left as much as four fingers breadth. His Arm being cured and the wound perfectly healed up, he was taken with a kind of Convulſion, which drew his head backwards towards the right ſide. And it frequently agitated his Jaws; ſo that he was fain to have linnen Cloth alwaies between his Teeth, which ever and anon he was wont to bite and grind with his teeth. He called many Conſultations of Phyſitians and Chyrurgeons, who al were of opinion, that in the extremity of the bone which was taken away by the bullet, there was ſome ſharp point, which pricked ſome Nerve and cauſed this Convulſion; and that therefore the extremity of the bone muſt be again opened and diligently made ſmooth and even. This work being diligently performed, did no good, but the patient was vexed after the ſame manner, which took from him al hope of Cure. By great hap I met him, and he told me his trouble: it came into my mind that ſome hidden venom of the Whores-pocks, might peradventure cauſe this Accident. And I asked him preſently, whether or no when he was wounded he had any Whores pock Diſeaſe upon him, or whether he had formerly had any? He anſwered, that a little before he was wounded, he had been troubled with a grievous Gonorrhea, which notwithſtanding had been perfectly Cured. This encreaſed my conjecture, ſo that I adviſed the Patient to try ſuch Medicines as are given againſt the Pocks: whereunto, being very deſirous of help, he willingly ſubmitted. Premiſing therefore Univerſal purgation, and a Sudorifick Diet drink, I rubbed him with Mercurial Unguents, by which he was fluxed; and after the third day of his fluxing was over, thoſe contractions and Convulſions ceaſed, and he was never troubled with them again.

Obſervations which I Learned here and there by accident.

The 499 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

An Ulcer of the Kidneys.

I Have been told that an Emperick cured an Ulcer of the Kidneys, only by anointings with a Mercurial Unguent.

The 500 Obſervation, or hiſtory, of famous and rare Cures, &c.

A Crooked Back.

Mſr. *Franciſ Ranchinus*, Chancellor of the Faculty of Phyſick at *Montpelier*, told me the manner how he cured a Luxation or disjoynting of the Back-bone, of the moſt renowned Lady, Madam *de Montmorancie*, which proceeded from a Catarrhe falling from the brain upon the Back-bone, by which two of the Vertebræ in the middle of the Back-bone were disjoynted. He therefore, after univerſal Remedies, to reduce the Vertebræ, firſt he made uſe of a preſs, ſuch as Barbers uſe to preſs their Trimming Linnen. Which did much good, for he put one board to her breaſt the other to her back, and ſo ſhe was preſſed by little and little, the little bolſters of Linnen being put between the wood and her body. But this Remedy was found inconvenient, for by preſſing of her breaſt it made her have a difficulty in her breathing. At laſt he uſed ſuch an Inſtrument as they have in Coaches or Waggons to lift them up, when they ſtick faſt in an hollow way, and is called in French a *Cric*, to the circular end whereof he faſtened a piece of wood which was to be ſet to the diſlocated Vertebra, a little pillow being between. The other end of this inſtrument was ſet againſt the Wal, and then the patient was held faſt by her ſhoulder blades, and the Inſtrument gently forced, til ſhe could no longer endure the Pain, and then they ceaſed. And this was done twice a day, and ſo by little and little the ſaid Luxation was perfectly Cured.

The 501 Obſervation, or Hiſtory, of Famous and Rare Cures, etc.

Inflamation of the Eyes with filth.

A Child new born was troubled with redneſs of the Eyes, and much filth which came from them like Quittor; the Diſeaſe continued three months, and many Oyntments and Eye-Salves were applied which did no good. At laſt by preſcription of a Certain Phyſitian, Cotton wool was every night laid upon each Eye, being firſt diligently dried over the coals, and well teazed and pulled aſunder with the fingers, and afterward each Eye was covered with a little Cotton in manner of a Bolſter, which was ſwathed down. In the Morning the Cotton Wool was taken off much fouled with the foreſaid matter. This Remedy being continued divers nights together, the Infant was perfectly Cured.

The 502 Obſervation, or Hiſtory, of famous and Rare Cures, &c.

Falling-ſickneſs proceeding from the Mother.

THe Wife of Mſr. *Polemarchus de Sumenes*, was many years together vexed with many Symptoms of the Mother, which reſembled fits of the Falling-ſickneſs; ſhe tried many Medicines preſcribed by many Phyſitians, but al in vain. At laſt by the adviſe of a Woman, ſhe took the fleſh of a Wolf reduced into pouder, and wore a piece of the ſame fleſh ſalted, continually about her; after which ſhe was perpetually freed from the ſaid Symptoms.

The 503 Obſervation, or Hiſtory of Famous and Rare Cures, &c.

A Tertian ague.

A Certain Emperick Cured many of the Tertian Ague, by once purging them with a gentle purge, and afterward letting them blood in the beginning of their fit. The fit was reſtrained and appeared very little, and afterward returned no more.

The 504 Obſervation, or Hiſtory, of Famous and Rare Cures, &c.

A wound in the Cheſt hard to Cure.

Mſr. *Henry Bachaman*, an expert Phyſitian of *Avinion*, told me that the Son of Mſr. *Dorſan*, twenty years old received a wound in his Cheſt, penetrating into the Cavity thereof, which could not be Cured by many and divers Remedies applied thereunto, and continued three or four months, whereby the patient was much emaciated and brought unto a Conſumption. At laſt he adviſed him to ſuck the Milk of a Woman out of her Breaſt, and injections were made of the ſaid milk into the wound, and with this only Remedy, he was healed of his wound, and brought from the Leanneſs into a good habit of body.

The 505 Obſervation, or hiſtory, of famous and rare Cures, &c.

Cholick Pain.

A Certain Citizen of *Narbon*, told me he had been ſubject to pains of the Cholick many years together, which was wont often to torment him, and that he was freed from the ſaid Diſeaſe, with the following Remedy, taken only once, ſo that he never fel into the ſame any more, and that many others had been freed from the ſame Diſeaſe to whom he had communicated the ſaid Remedy. Now this Medicine is the Cork ſtopple of an Hogs-head of Wine, which has been many years ſo employed, and conſequently is wel drencht with Wine, it muſt be burnt to aſhes, and a dram of the Aſhes taken with white Wine, when the pain is Urgent.

The 506 Obſervation, or hiſtory, of famous and Rare Cures, &c.

A Dropſie.

A Certain Credible perſon told me that he had ſeen many Cured of the Dropſie Aſcites, or Bottle-belly Dropſie, by this following Medicine.

The Whiteſt flints muſt be gathered, which are found about the Brooks and running Waters, and being broken are tranſparent like Chryſtal, theſe being heated red hot were quenched

in White Wine: the Patients took a Cup of this Wine every morning til they were Cured, which was performed in a Months ſpace.

The Salt of ſuch flints Calcined, will, if I miſtake not, work more happily.

The Salt of thoſe Bugs called *Millipedes*, and in Engliſh Sows, is happily uſed by a Famous Phyſitian in this Cure, which he mixes with juleps and other aperient Remedies, purging them firſt with the juyce of our Country Orice, which if the Patient caſt up, he takes him to be paſt Cure.

The 507 *Obſervation, or Hiſtory, of Famous and rare Cures,* etc.

Another Dropſie.

ANother Dropſied perſon was cured only with the uſe of Sal Prunellæ in his ordinary drink for a month together, in which ſpace al the water in his Belly was Evacuated.

I conceive this Cure happened not only by reaſon of the Diuretick Vertue of the Sal Prunellæ, but becauſe the Dropſie was cauſed by an hot diſtemper of the Liver, which was extinguiſhed by the Sal Prunellæ, being a moſt potent Cooler.

Another Hydropick perſon was cured with a Decoction of the Topps of Oaken boughs, a Cup whereof he drank fifteen daies together.

The 508 *Obſervation, or hiſtory, of famous and* Rare *Cures,* &c.

Kings-Evil.

A Bretagner named *Daniel*, thirty years of Age, a Country man of a wel fleſhed and ſtrong body, had Kings-evil ſwellings many years together, both about his Neck and under either Arm-hole, who being hated by al his friends and acquaintance becauſe of that loathſome Diſeaſe, betook himſelf to the Hoſpital of Charity in *Paris*, as unto the true temple to *Æſculapius*, perſwaded that he ſhould there find a certain cure for his Malady, neither was he deceived by his Hope, for he was forthwith viſited by the moſt Illuſtrious Mr. *Gabriel Hardvinus*, of St. *Jacques*, ordinary Phyſician of that Hoſpital, who premiſing univerſal Remedies, applied a Cataplaſme of the Leaves of wild Cowcumber called *Cucumis aſininus*, upon the ſwelled parts, and preſcribing him a thin Diet and gently drying, the day following he ordered for him this following Opiate.

Take *Turbith, Hermodactyls, of each two ounces. Of the Roots of both ſorts of Scrophularia or Pile-wort, one ounce. Roots of the greater Angelica, two drams. Senna, half an ounce. Scammony unprepared, four ſcruples. Make al into a pouder and mixe them with Syrup of Damask Roſes into an Electuary. Let the doſe be two drams, adding to every doſe Mercurius dulcis, twenty grains. The which being taken every other day fifteen times, and the Cataplaſme being continually renewed, al the Knobs and ſwellings went away, without any inciſion or Eradication, ſo that he ſent the Man home ſafe and ſound in the year* 1641. *This I had from Mſr.* de Leſeq; *Dr. of Phyſick at* Montpelier, *ſomtime a Scholer of the foreſaid Phyſitian Mſr.* de St. Jacques.

The 509 *Obſervation, or Hiſtory, of famous and rare Cures,* &c.

Tooth-ach.

Mſr. *Leſeq*, the Dr. of Phyſick aforeſaid told me that he had ſeen the Tooth-Ach Cured with Salt of Aſh wood, with which a Womans Thimble or ſome ſuch tool is filled and applied to the Artery of the Temple where the pulſation is felt: and within a ſhort time it makes a Knot in the Artery whereby the flux is intercepted.

The

The 510 *Obſervation, or Hiſtory, of* Famous and Rare Cures, &c.

The Knotty Gout.

Mſr. *Chomel*, the *Annonæenſian* Phyſitian, writ me word that he lately ſaw a Goury perſon ful of Ulcers in divers of his joynts, out of which more than two hundred ſtones had come, bigger than peaſe, and ſo hard, that an Hammer would not break them. And which is ſtrange to ſay, the Quittor, Sanious and Wheyiſh matter which did flow unto the Ulcers, after a little abidance in the part, did preſently unite it ſelf, and grow into the hardneſs of a ſtone. He obſerved likewiſe this rarity in that Patient, that ſuch outward applications as did good to one part, did hurt another, and contrarywiſe.

The 511 *Obſervation, or Hiſtory, of* Famous and Rare Cures, &c.

Pain of half the Head.

Mſr. *Genton*, the younger, told me that he had been troubled with a pain poſſeſſing the half of his Head for many years together, and after many Medicines tried in vain, he was Cured by the ſmoak of Amber, which he received in at his mouth and Noſtrils for half an hour together, when the pain was upon him.

The 512 *Obſervation, or Hiſtory, of* Famous and rare Cures, &c.

A Rupture.

THe ſame perſon related that he was troubled with a Rupture in his belly for many years together, and was cured by three Plaiſters given him by a certain Emperick, each of which he bad him wear nine daies with a truſs: they were al made of the ſame material and very ſtinking: and when they were taken off, al the matter was conſumed, ſave that upon the leather appeared a little pouder, like to poudered Glaſs. By the uſe of the firſt Plaiſter no Effect appeared; after the ſecond was laid on, the Urins came plentifully, and of divers colors, ſomtimes green, ſomtimes black, and ſomtimes with pain. After the twenty ſeven day, the three Plaiſters being conſumed, the parts ſeemed withered and lean, ſo that al the fleſh and Fat, ſeemed quite conſumed. By reaſon of the ſtink I conceive this Plaiſter was made of Galbanum, which having an exceeding faculty to attenuate, was able to diſſolve and liquifie the Humors which fel into the part affected, and were perhaps congealed about the ſame, ſo that Nature might afterwards void them, partly by Urin, and partly by Tranſpiration.

The 513 *Obſervation, or Hiſtory, of Famous and Rare Cures, &c.*

A Dropſie with Bladders.

A Certain Countrey Man being Hydropick, had an Impoſtume aroſe on the right ſide of his Belly, which being opened, there came out na almoſt infinite number of little Bladders ful of water, more than two hundred were reckoned, and that for the ſpace of many daies together. And ſo he became perfectly Cured. By this Obſervation that Hiſtory related by *Schenchius*, is confirmed, of a certain Hydropical perſon, whoſe body being opened after his Death, his belly was found ful of bladders of water, ſticking to the Peritonæum, and other parts.

F I N I S.

SELECT MEDICINAL COUNSELS,

Of the Renowned

JOHANNES FERNELIUS,

Doctor of Phyſick in the Univerſity of *Paris*; Chief Phyſitian to the Kings Majeſty.

Being *Pick'd* and *Choſen* out of *Four Hundred Conſultations* and *Advices* for Sick People; of which, theſe are the Flower and Cream.

The I. Counſel.

Touching the Alopecia, *or falling off of the Hair of the Head.*

The Diſeaſe is propounded to Fernelius, *by another Phyſitian in behalf of his Patient, an Out-landiſh Perſon.*

A Young Man well fleſht, and exceeding Healthy, twenty Years of Age, has often complained to me, that ever ſince he was an Infant, his Head has been apt to be deformed by bald patches where the Hair is fallen off: Having purged his Body, I applied ſuch Remedies, as I found commended by the Ancients to cauſe Hair to grow; but al to no purpoſe. If you (Sir) have by long Experience, found any thing very effectual in this Caſe, I earneſtly beſeech you again and again to communicate the ſame to me. Farewel, and have me ſtill in your Love, as formerly.

The Anſwer of Doctor Fernelius.

The truth is, theſe bald patches when they are not contracted by any ſickneſs, nor through fault of any Humor, but from the firſt riſe and ſeed, they hardly admit any Cure. For the faults of the Seed and Nature can hardly be corrected by any Art. But if there be any Cure, I ſuppoſe this muſt be it. Let us not meddle with purging, nor bleeding, thereby to diſturb his

his Body, seeing no Humor is cause of the falling of the Hair. But because the bald parts seem over dry, it is good to loosen the skin with emollient Fomentations, and to draw the moisture from the neighboring parts thereunto, that there may be fit matter sufficient to make the hairs. First of al therefore, let the Fomentations be made of Marsh-mallow Roots, and Lilly Roots, of Mallows, Violets, Pellitory of the wall, Annis seed, Lin-seed and Fenugreek. Afterward, when the part shal seem softer, some Fomentation will be good that may draw in the matter, made of Sage, Betony, Stechados, Maidenhair, Southernwood, Nettle seed, and Mustard seed, boyled in water, and a fourth part of white Wine. Presently after the Fomentation, the bald places are to be anointed with Bears Grease, which questionless is of very great vertue. When fifteen daies are over, let his Head be rubbed morning and evening with bruised Onions, til it become very red, and then smear Honey thereon in place of a Catapla sm. If during this course, the Hair break not out, in the last place must be applied an Oyntment of Thapsia, and Bears Grease, which as it has a mighty name in the writings of the Ancients, so have I found it most efficacious in such cases. Now the true Thapsia is here with us commonly to be had, a dram whereof will be sufficient to mix to an ounce of the Grease. It by vertue hereof. If this make not the Hair to come, the Case is in a manner desperate.

The II. Counsel.

Of Nummedness of the Joynts.

BY the long Bed roll of Symptomes wherewith this Gentleman out Patient is troubled, I conceive there are two chief causes to which they may be referred. The one is an hot distemper of the Liver and Kidneys, whereby the whol mass of blood is also heated, and the whol body lean and fallen away; by the adustion whereof the Patient seems inclined to Melancholy. The other is a weakness of the Brain, Nerves, and Joynts, with a cold distemper, by which there is a great encrease of flegmatick Excrements, which flow from the brain into sundry parts, and moisten the processes of the Nerves. Hence arises a nummedness which possesses almost al his Joynts, flowing into, and assailing sometimes one part, then another. Which is not a little furthered by anointings with Quick-silver, long since immoderately used, whose nature is to cool the Brain and Nerves, and weaken the Joynts. These, truly, are the Rudiments of grievous Diseases to follow, as of the Gout or Palsey, or other Diseases of the Head, portended by the swellings and inconstant motions of his Eyes. For the prevention of all which, after a gentle purgation of Rhubarb, Sena, and Diacatholicon, I conceive it will be good to let him blood in the middle Vein of his left Arm; or if you would rather have him bleed in the right Arm, it matters not much. And then his Diet is to be ordered, which ought to be in a manner temperate, so as not to cool or heat, nor moisten or dry overmuch. And herein a chief Care is to be had of his Wine, that it be very weak, and well tempered with Water, lest it offend by its heat, or work too much upon the Brain and Nerves, by its vapor and exhalation. For I have known many fall into a nummedness of their whol bodies, only by the immoderate use of strong and unmixt Wine, wherewith the Skin only seemed to be affected, without any fear of a palsey. Also his whol body must be rubbed every morning; and his Head must be dryed with bags of Salt, Millet, bran, Annis seed, Fennel seed, and Bay-berries roasted or fried. And then flegm must be brought away through his Nostrils, either by Sneezing pouders, or Errhines, that is to say, Liquors to be snuffed up into his Nose: to which purpose also it will be good for him to lie upon his belly, and to avoid lying upon his back, which causes Humors to flow into his Joynts and Nerves. A moderate exercise of al parts of his body alike, will be good before meat: as that which strengthens the Nerves Muscles, and Joynts, and frees them from Excrements. After meals, it will be good to repress the vapors of his meat, with Coriander seed, or some convenient pouder. And besides al these things which consist chiefly in matter of Diet, it will be necessary frequently to move his belly, sometimes with a Clyster which has a little Hiera picra in it, sometimes with a convenient Syrup, or Pills. Let the Decoction of the Syrup be made with such things as are proper for the Liver, Brain, and Nerves, wherein Senna, Agarick, and Rubarb, must be infused, each in its convenient Dose. Let his pils be made of

Aloes

Aloes waſhed in the Juyce of Endive, with Agarick and Rhubarb. Every eighth day let him take the one or the other, but moſt frequently the Syrup, which wil be beſt for him. In the intermediate daies, give him ſome Methridate with Conſerve of bugloſs, or of Acorus, or make him a peculiar Electuary of the ſpecies of trion ſantalon and diamargariton. When fifteen or twenty dayes are over, a drie bath wil be very convenient, made of a decoction of roots or herbs, good for the brain and nerves, that in the ſweats cauſed thereby, ſuperfluities may be voided and his nerves and joynts ſtrengthened. And before theſe ſweatings, if the diſeaſe be rebellious, and ſeem not ſufficiently abated, by iterated purgations; the Patient muſt keep houſe about eight daies, and uſe a thin diet with a decoction of Lignum Sanctum, ſweating twice every day: after which notwithſtanding the foreſaid vaporary or dry baths may profitably be uſed.

The *III* Councel.

Of a Cattarrhe, with pain of one ſide of the Head, and their cures.

AS near as I can gather by your Letters, thoſe flegmatick tumors, which now for theſe many years have quartered upon your face and Cheeks, do ariſe from a diſtillation flowing from the top of your head into the ſaid parts: and becauſe the catarrh falls ſo frequently into the ſame place, 'tis like the place itſelf has ſome infirmity which intices the fluxion to it. But there can thence be no certainty gathered, unleſs the ſeat and ſort of the diſeaſe be firſt throughly konwn. But that ſame Hemicrania or pain of half the Head, touching which your laſt letter deſires advice, is a diſtinct and different diſeaſe, which requires a peculier method of Cure. For the immediate cauſe thereof, is a vapour which ariſing from choller flowing out of the Liver into the ſtomach, does ſmite and twitch the membranes of the Brain, yeilding matter peradventure to the diſtillation. That ſame catarrh with which by its oft returning you are ſo grievouſly afflicted, muſt be ſtopped with one dram of the Maſs of *Pilulæ ſine Quibus* (which are moſt proper both for your Age and Temperament) eſpecially if for eight or ten dayes laſt paſt, you have taken no medicine againſt the Catarrh. The next day after bags as hot as can be endured muſt be applied to the crown of your head being ſhaven morning and evening before ſupper: which may draw the matter out from thee in moſt parts and reſolve the ſame, and they muſt abide on for the ſpace of half an hour, or thereabouts, and be continued for certain daies, til the fluxion be ſtopt. Moreover an aſtringent plaiſter to ſtop the paſſages, muſt be applied to the temples, or to thoſe parts through which the humor goes; which muſt be renewed every other day, and not taken away til the fluxion ceaſe. And if it ſhal no longer run down by the mouth and cheek-bone; yet that the gums and inner parts of the mouth may not ſo eaſily receive the fluid humor, let them be waſhed three or four times a day, with an aſtringent and ſtrengthening Gargariſme. And becauſe al the matter of the catarrh is not ſo ſoon dried up, ſome portion of this gargariſm muſt be drawn by little and little through the mouth & noſtrils, through which the cavity of the brain may be purged, morning & evening before ſupper. Keep in the meane while a fitting diet; live frugally, uſe meates of good juyce, and thin wine very wel allayed with water, partly becauſe of the cold diſtemper of your brain, and partly becauſe of the hot diſtemper of your Liver. Abſtain from immoderate drinking, broaths and other moiſt meats; the wind, the cold, and the raine; excerciſe your ſelf moderatly in the morning, long before dinner. When you go to bed cauſe your Arms, Back, Thighs, and legs to be rubbed downwards. Let your belly be alwaies ſoluble, either of its own accord, or by artificial meanes, as clyſters, or ſuppoſitories, leaſt your body abound with excrements.

Here are the diſcriptions of your medicamens.

Take *Of the Maſs of* Pilulæ ſine Quibus *two ſcruples*; *of Pils of Agarick one ſcruple. Worke them together anew with ſyrup of ſtœchados, and forme ſeven pils.*

Make the uſual bags of annis-ſeed, fennel-ſeed and bay-berries each two drams; of milet half a pound. Common ſalt ſix drams Apply them to the crown of the Head.

Alſo, Take *Unguentum deſiccativum rubeum half a dram*; *maſtich poudered one dram: Make them into a plaiſter and apply it to the temple of the pained ſide.*

Item, Take *Sage one handful, maſtick bruiſed half a dram, Harts-horn three drames*

Boyl them in wine and water, of each a ſufficient quantity. Then ſtrain it, and let him therewith waſh his mouth and Gums, three or four times in a day.

Make him the ordinary head-purge.

Give him the ordinary Clyſter.

The IV. Conſel.

For a noble Matron vexed with the Tooth-ach, tranſlated out of French.

THat ſame Tooth-ach, which does ſo extreamly torment you, ariſes from a cold diſtillation, which falls from the left ſide of your head, into the Jaw-bone of the ſame ſide, and the nerves of the teeth, and ſometimes as far as the ſhoulder blades. To prevent the ſame, firſt the flux of rheum muſt be ſtopped, and the cauſe thereof totally removed. And that may be done by theſe pils taken once a month; or with this potion, if it be ſummer, or the ſeaſon hot. The day following your firſt purgation, your head being ſhaven muſt be rubbed with theſe ſeeds incloſed in a doubled cloth, which muſt be done the ſpace of fourteen or fifteen days; Which being over, your body muſt be purged as before. Then the day after, your Head, the left ſide eſpecially, muſt be fomented with a little Aqua vitæ, every morning, the hair being ſprinkled after the fomentation, with the following pouder. Mean while care muſt be had of your teeth, which being wiped three or four times a day, long from your meales, hold in your mouth and chew this maſticatory, which is to draw down the rheum from the whol body of your brain, but eſpecially out of its ventricles by the funnel into your mouth and pallat. Moreover let your gums be waſhed oft every day with this decoction. Meane while uſe meats of a good juyce, and live ſoberly; drink not between meales. At meales drink moderatly; abſtain from moiſt things; keep the cold from your Head, Teeth, and feet. The Remedies hereunder preſcribed, muſt be long and diligently continued, becauſe the diſeaſe is Inveterate.

Take *Of the Maſs of pil cochy, and de Agarico, and Aſſajenth, of each one ſcruple. Make ſeven pills.*

Take *Of the waters of Sage and Betony, and white wine, of each one ounce. In which infuſe of choice rhubarb, agarick trochisked, of each one dram. In the expreſſion diſſolve diaphœnicon two drams; Syrup of maiden-hair half an ounce. Make al into a purging potion.*

Take *Millet one pound; common ſalt half a pound; anis ſeed and fennel-ſeed, of each two drams, Bay-berries bruiſed one ounce. Make al into a very fine pouder; ſprinkle it on her ſhaven Head.*

Take *Pellitory of Spain, Staphyſacre, Ginger, Cardamoms, Styrax calamita, of each half an ounce. Make a moſt ſubtil fine pouder, for the uſe aforeſaid.*

Take *Maſtich one ounce; Pellitory of Spain half an ounce; Cubebs two drams. Incorporate them in a ſolid forme with Honey of roſemary flowers: and make a Maſticatory.*

Take *Of ſmal ſage one handful; myrtle leaves half an hand-ful; Maſtich bruiſed half an ounce. Boyl them in fountain water, and white wine, of each half a pint.*

Strain them, and reſerve them in a vial for to waſh her mouth.

The V. Counſel.

In a Catarhe and moiſtneſs of the Brain, with a bad Diſpoſition of the Bowells.

THe Brain being naturally cold and weak, is over whelmed with great Incomes of excrements, which, their natural courſe being ſtopped, they ruſh into ſundry parts preternaturally. Into the optick Nerves where by the dimneſs of the patients ſight they threaten blindneſs; into the jawes and teeth, whereupon they often cauſe pains, as alſo thoſe which fal upon

the

the Neck and Shoulder-blade. Alſo a portion of the ſaid Excrement, remaining within, brings Ringing in the Ears, and heavineſs of the Head, and Renders al the functions of the Brain lazy. There are alſo other Symptoms, proceeding from fault of the Liver and nutritive parts; Heart-pain or heart-burning, and frequent inclination to vomit, a filthy color of the Face and whol body, largeneſs of the belly, a bloat and ſomwhat ſwoln habit of the Feet, Face, and whol body, which foreſhews a Cachexy. None of which Symptoms, can come without the obſtruction and impurity of the Bowels.

To help al theſe infirmities together, a ſlender Diet muſt be preſcribed, twenty or thirty daies together, in which the patient muſt drink nothing but a Decoction of Guajacum, and that ſimple, and not very ſtrong of the wood; but of another ſtronger Decoction he muſt take at five a clock in the morning, and at four in the after noon, ſo that he muſt dine at nine a clock in the morning, and Sup at ſeven at night. And then his meat muſt be ſparing, dry, and of good juyce. His drinks therefore ſhal be thus ordered: his ſtrong Decoction after our uſual form of a ſimple Decoction; the more dilute Decoction he ſhal uſe for his ordinary drink at meals, and to quench thirſt at other times. This kind of Diet, though it attenuate the Humors and digeſt a portion thereof into ſweats, yet can it not perfect the Cure, nor reſtore health, but other Remedies muſt be uſed in this order.

Take *Betony, Sage, Hops, of each one handful. Cordial flowers, of each one pugil; Senna Leaves, three drams. Make a decoction for one doſe; in the ſtrained Liquor, infuſe Choice Rhubarb, four ſcruples. Agarick Trochisked, one dram; Cinnamon half a dram.*

In the ſtrained Liquor diſſolve half a dram of White Sugar, and make a potion: let him take it when he begins his Diet drinks, and repeat it once in eight daies.

If at any time it work but faintly one dram of Diaphœnicon may be added.

In the intermediate daies if he ſhal be at any time coſtive, he muſt have an Emollient Clyſter. As ſoon as ever ſweat ſhal begin to break out, every morning his ſhaven Head ſhal be rubbed with theſe bags very hot.

Let the common bags be applied exceeding hot in his ſweat.

Item, Take *Nigella Romana, Styrax Calamitæ, Benzoin, of each three drams; Mace, Cloves, of each one dram. Make al into a groſs pouder for a fume, let him uſe it twice a day, after his Head is wiped and dryed. Alſo dayly in the morning, and before Supper, let him uſe the common Head purgers,* [Maſticatories ſo called, it ſeems.] *which if they ſhal not bring away Rheum enough, half a dram of the Root of Artanita may be added. Let him perſiſt in the uſe of theſe things til he be perfectly wel. And leaſt for time to come through Intemperence, or Careleſſneſs he ſhould fal into the like Diſeaſes, every month at leaſt, his Body muſt be purged, with this Syrup which I have fitted for al theſe Infirmities.*

Take *Roots of Smallage, Parſly, Fennell, and Capars, of each half a dram; of Endive, Maiden-hair, Egrimony, Dodder, Ceterach, Betony, Sage, Stechados, Marjerom, of each an handful; Cordial flowers, Epithymum, of each one pugil. Make a decoction to twenty drams. In the ſtrained Liquor infuſe four drams of Senna; White Agarick, two drams; Gummy Turbith ſix drams; Ginger two drams; Choice Cinnamon, half a dram.*

Let them Boyl a little after they have infuſed, and preſs out the Liquor, and diſſolve therein one pound of White Sugar. Make a Syrup perfectly boyled, not Clarified. Let him uſe it once or twice in a month.

The VI. Counſel.

Of a diſtillation into divers parts, with a diſeaſed Spleen, for a noble Virgin.

THere are in this Virgin evident tokens of a Diſtillation, which fals from her Head, eſpecially the left ſide thereof, into her ſide, Lungs, and Neck behind her Ears, and into her left ſhoulder blade, and into ſundry inferior parts, with wheezing, and ſhortneſs of breath, which is a beginning of the Tiſſick. Hereunto is added the pain of her ſtomach, which ſeems to proceed rather from ſome fault of the Spleen than of it ſelf. For I have a great ſuſpition of that bowel, though peradventure it may communicate its illneſs to the Liver, and be the original of the infirmity of the left ſide of her Head. Her left Hypochondrium muſt therefore be obſerved and felt.

The Cure of theſe intertwiſted Diſeaſes muſt be endeavoured by frequent Evacuations, which muſt ſomtimes be accommodated to the Head, ſomtimes to the bowels. In the laſt quarter of the Moon, before her Head-ach comes, let her purge with theſe Pils.

Take *of the maſs of Pill Cochy, one ſcruple; of Pills ſince Quibus, two ſcruples. Make five Pills.*

For three or four daies after, her Head muſt be rubbed in the morning, with bags of Miller, Salt, Annis, and Fennel-ſeed, fried in a frying pan. Then alſo the Rheum ſhal be drawn out at her mouth and Noſtrils, to remove the threatning diſtillation. And afterwards her Head muſt be dried and ſtrengthened chiefly by outward Applications, and Fumes: and that Humor which is already lodged in her Lungs muſt be fetcht out by pectoral Medicaments, but eſpecially with Syrup of Hiſſop and Maiden-hair, ſomtimes by way of a lick-pot, other whiles as a Julep being mingled with convenient Liquor, that ſo ſome conſideration may be had of moving her Courſes. Alſo other Syrups pectoral may be prepared, which among other things ſhal contain the Roots of Elecampane, Polypody, Colts-foot, Scabious, Hyſſop, Savory, with Dates, Figs and Raiſons.

The Narration of the foregoing Diſeaſe written by Claudius Melinus, *deſiring the advice of* Fernelius.

A Virgin three and twenty years of Age, low of ſtature, of a compact and thick habit of Body, is vexed with theſe Symptomes. For this five or ſix years, three or four daies before the laſt quarter of the Moon, ſhe has an huge pain in her Head, both before and behind, but chiefly on the left ſide. She feels alſo a very great pain in her Stomach, when ſhe eats but a little more than ordinary, or when ſhe eats cold meats, vulgar Herbs, and moiſt meats. She Wheezes in drawing her breath, and is ſhort winded in cold and moiſt weather. She is pained all her body over, but eſpecially that part which reaches from the lower part of her left ſhoulder-blade to the top of her left Dug. She is vexed for want of reſt, nor does the morning bring her to ſleep. She had once the palme of her hand al ſcabbed. Her body is bound, and her purgations monthly do not keep a conſtant Courſe. For ſometimes they come not til three months are over, and ſomtimes after ſix weeks, and that ſparingly.

The VII. Counſel.

Of the Falling-ſickneſs.

AS Lawyers from the Knowledg of the Fact, underſtand what is Law and right in the Caſe; ſo muſt we fetch the whol way of our Cure from the right knowleg of the Diſeaſe.

Not long ſince I was told of a kind of fainting, expreſſed by uncertain ſigns common to other Diſeaſes:

Diſeaſes: which I conceived to intimate a Syncope or ſwouning. But you avouch by undoubted ſigns and inform me, that the Diſeaſe is the Falling-ſickneſs, ariſing not properly from the Brain, but by Sympathy with the Stomach, and that it has its certain times of coming, and that they are commonly in the Wain of the Moon. Things being thus, the Cure muſt be thus undertaken. Six or ſeven daies before the coming of her fit, ſhe muſt have a Cliyſter, which beſides other convenient things, muſt have in it half an ounce of *Hiera Picra*, and half an ounce of Diaphænicon. The very ſame day let her feed very ſparingly with a thin Diet, and prepare the Humor to be purged, with Oxymel ſimple or Compound.

The day after purge her with the Infuſion of Rhubarb and Agarick, of each one dram: in which two drams of Hiera Diacolocynthidos, muſt be mixed. Or if that Medicine be not to be had with you; diſſolve therein of Heria ſimple and Diaphænicon, of each one dram and an half. But you indeed your ſelf conſidering the ſtrength of your patient, and greatneſs of the Diſeaſe, may better Determine of the Quantity of the Medicaments.

The Third day let her ceaſe from al Evacuation and other Medicaments, unleſs peradventure you may think fit to give her a dram of the beſt Mithridate.

On the fourth day, vomit her, which is moſt efficacious, and moſt proper in theſe Diſeaſes, and in reſpect of the waies to be purged, the Humors having a long time ſtuck faſt in the ſtomach and neighbouring patts.

Now that wil be moſt effectual, if made of two ſcruples or one dram of Azarum Roots, diſſolved in Hydromel, or a Decoction of Raiſons, with a little Cinnamon and Syrup of Violets.

The following daies til the ſuſpected time of the fit be over, give her every morning four ſcruples of this Opiate.

Take *Conſerves of Roſemary, and Betony flowers, of each one ounce. Old Mithridate, two drams and an half. Venice Treacle, four ſcruples. Miſſleto of the Oak, Peony ſeeds, Mans Skul poudered, of each two ſcruples. Mix them. Let her take it by it ſelf, or in Betony water. If you can get male Peony, you ſhal find nothing better, either the ſeed or the Root gathered in the Wane of the Moon, one dram in weight. And al theſe things muſt not be once only uſed, but three or four times, near the time of the fit.*

The VIII. Counſel.

For a Boy eight years old, long ſince taken with Falling-ſickneſs, and loſs of Memory and Reaſon, in a manner.

TAke *Leaves of Betony, Roſemary, Marjerom, Stechados, Sage, of each one handful. Of the Cordial flowers, each a pugil. Boyl al in two pints of Water. In the ſtrained Liquor ſteep all night Epithymum, two drams. Senna, four ounces; Ginger two drams. Choice Cinnamon four drams. In the moring; Boyl them a little and preſs out the Liquor, wherein diſſolve of the beſt Honey and whiteſt Sugar, of each half a pound. Make al into a Syrup indifferently boyled, that is to an indifferent height. Let him take once in a week one ounce and an half; with the Water wherein Betony has been boyled.*

Item, Take *Conſerve of Bugloſs and Roſemary flowers, each one ounce. The beſt Mithridate and Treacle, of each half a dram. Seeds and Roots of male peony, Miſſleto of the Oake, Mans Skul, Harts-horn poudered, of each two drams. Mix al into an Electuary with a Sufficent Quantity of Syrup of Violets. Let him take one dram or four ſcruples, three or four mornings together after his purgation, three or four hours before Dinner. Let him drink no Wine at al, and let his drink be ſimple water, in which Harts horn has boyled with a little Ginger. Let him abſtain from fruits, eſpecially ſuch as wil not keep, from milk and al made thereof, from Beans, and Peaſe, and fiſhes.*

The

The XI. Counſel.

For the Falling-ſickneſs.

THis moſt grievous Diſeaſe of the Falling-ſickneſs ariſing from a ſtrong and inveterate cauſe in an impure and now ill habited body, wil hardly admit of any Cure. Moreover the patient is ſo weak, that no part is freed from diſorder excepting the Lungs. His Head is vexed with pain, ſwimming, Melancholy, and the Falling ſickneſs, his Bowels are exceeding impure, by which means the reſt of the Body is infected, his Urins are thick and gravelly, arguing an obſtruction and heavineſs in his Kidneys. Nor is his old pain in his Thigh as yet gone.

In ſo great a Concourſe of Diſeaſes the Cure muſt begin with purging, which becauſe it can ſcarſe ſafely be performed by purgatives, we muſt endeavour to do it rather by a thin drying Diet with Guajacum. Let him therefore firſt be purged, either with the Syrup, which I formerly preſcribed him, or by a Medicine of the Infuſion of Rhu barb and Agarick, with two drams of Diaphænicon.

The third or ſecond day after let him begin his thin Diet, in which let him feed ſparingly only on roaſt meats: and let him drink a ſimple Decoction of Guajacum wood without the bark, that he may the better accuſtome himſelf to it. Let him ſup at ſeven in the evening; and at five or ſix in the morning, and again at four in the afternoon, let him drink a Cup of pure and ſtrong Decoction, made of the Wood and bark of Guajacum, and of Polypody, with Sage, Betony, and Stæchados: and this in the firſt daies ſhal be inſtead of a Preparatory Apozeme, nor let him be forced to ſweat.

When ſix or ſeven daies are over, and the Humors thus prepared and ſtirred, let him be purged again, with the former, or ſome like Medicament, or to which Senna and Epithymum are added.

And then let him begin to ſweat with the Decoction aforeſaid, that the inner parts of his belly being Evacuated, the upper parts may conſequently be disburdened of Superfluities.

When the ſweat ſhal liberally Evacuate and purifie his Body, ſo that it ſhal become extenuated and leaner, it wil be time to uſe Topical Medicaments.

And then attenuating and diſſipating fomentations muſt be applied to his Thigh, which was the firſt cauſe of al his weakneſs, and after the fomentations a Cataplaſme muſt be applied, of the crude Roots of Briony and wild Cucumber, with Muſtard ſeed and the pulp of Figs, mingled together in a convenient proportion, which though I ſhould expreſs to a Novice, I need not to you. If theſe things ſhal ſeem to you not to have done enough towards the Cure, at laſt a Phænigmus muſt be applied of Leaven and Cantharides, til the Roots of the Diſeaſe be plucked up. For you ſhal do more by theſe ſtrong drawers, than with a very long ulcer or Iſſue, which only receives the Humors, but does not draw them.

And then you muſt alſo open the Hæmorrhoid Veins, either with the Juyce of Mercury Leaves, or of Figs: or with a ſuppoſitory of Hiera ſimple, with the Root of round birthwort, but ſo as an Emollient Fomentation be premiſed. Or if they cannot be ſufficiently opened or wil not run, it wil be good to open the Vena Saphæna in his left Foot, and to let him bleed as his ſtrength wil bear.

While you apply theſe Topicks to the Cure of his Thigh, you may likewiſe ſet about the Application of Topicks to his Head. And in the firſt place Errhina, which may ſtrongly draw ſnivel out of his Brain. Then uſe frictions of his Head, with bags made of diſcuſſing Seeds, millet, and Salt, fried. After which his Head being ſhorn to the Skin, lay on a Plaiſter of Roots of Florentine Orice, with Hermodactils and Muſtard-ſeed: which being poudered muſt be made up with Melilote Plaiſter, and a ſufficient quantity of Tupentine. And afterward uſe a ſtronger, if need require, and to the ſame purpoſe Cupping-Glaſſes, ſometimes without, ſometimes with Scarrification, may be faſtened to the hinder part of his Head. And you muſt perſiſt in the uſe of theſe things, with the foreſaid Diet of Guajacum, til both the inward

inward and outward parts of his Body ſhal appear ſufficiently cleanſed from bad Humors.

Setons in the Hinder part of his Head, Iſſues in the coronal Suture, have not that drawing Faculty, as I ſaid before, nor can they as I find by experience perform, that which the other Remedies are able to do, and they many times moſt miſerably torment the Patients to no purpoſe.

When the whol body and al its parts have been thus provided for, if any ſuſpition of the Falling ſickneſs ſhal ſeem to remain, thoſe Medicaments may ſeaſonably be uſed, which are reported by their whol ſubſtance and hidden properties to cure the ſaid Diſeaſe.

The X. Counſel.

For dimneſs of the Eyes, in the Wife of Mſr. de Riou.

THe dimneſs of both the Eyes, and blindneſs thereby threatned, both by reaſon of the remaining Ophthalmia in the right Eye, and that which has ſince ſeized upon the left, have their firſt efficient Cauſe in the Brain. For therein ſtore of Excrementitious Flegm is wont to be bred and ſtored up, and that by reaſon of the cold and moiſt diſtemper of the ſick Gentle-Woman, and by her immoderate way of living. For as that is the chief cauſe of the Gout, when it goes into the hinder parts; ſo when it flows into the former parts, and through the optick Nerves, it breeds in the Eyes ſuch Symptoms as theſe hindring the ſight. For the dilatation of the pupil alone without the cauſe aforeſaid, is not ſufficient to produce blindneſs.

And here I am at a ſtand, doubting where this obſtructing Humor, which is the *Cauſa continens*, and immediate procurer of this Diſeaſe, is lodged: Whether in the Optick Nerve, or under the inner parts of the Pupil, in manner of a ſuffuſion, or whether it be powred out externally upon the Cornea of the pupil, in form of an Albugo. For theſe things are diligently to be conſidered and diſtinguiſhed, without which the Cure, if any be to be hoped, cannot be performed. And therefore I deſire to be diligently by you certified touching the premiſes. If nothing can be perceived in the Eye before the pupil, the cauſe is in the Optick Nerve, which is perhaps obſtructed: for there is no ſuſpition that the Faculty of ſeeing is hurt, or that part of the Brain wherein it is lodged.

If any obſcure thing be ſeen before the pupil, it muſt be conſidered, whether it lie deep under the Coats, or outwardly about the Tunica Cornea: the former is a Suffuſion, the latter an Albugo.

But in the mean while, til we ſhal be certified of theſe things, a general Cure is to be begun, which is alike common to al theſe infirmities. Firſt a drying and attenuating Diet muſt be injoyned, ſo that ſhe Eat no moiſt, ſupping or liquid meats, but only roaſt and dry, and that very ſparingly, only ſo as to preſerve her ſtrength. Let her abſtain from wine, twenty or thirty daies: and let her drink be a decoction of Lignum Vitæ without any other addition. And if with another ſtronger and ſharper decoction, at five in the morning and four in the afternoon, you ſhal endeavour to bring ſweat out of her whol Body, eſpecially out of her head, you ſhal do much towards the Cure.

On the third or fourth day of this Diet, when the Humors ſhal appear to be in agitation, ſhe muſt be purged with pilulæ Lucis, and Sine quibus, or by any other that you have found by experience more agreeable to her body.

Theſe pils muſt be repeated every eight or tenth day, nor muſt ſhe ſweat on that day.

In the intervenient daies, if ſhe be Coſtive let her have an Emollient Clyſter.

Every morning, chiefly towards the End of her ſweat, her head being ſhaven or polled, bags muſt be applied, of miller, Salt, Annis, and Fennel ſeeds, and bayberries, fried, which being in bed let her endure on as hot as may be, for the ſpace of half an hour, that by them the clammy Humor of her Head may be drawn forth, and the brain, the fountain of al her Infirmity, may be ſtrengthened more than the other parts. For in this Caſe the bags are more effectual,

effectual, than either plaisters, or Sinaphysmes though, never so hot.

The Bag being taken away cover her head with dry tow, which must be smoaked with storax, Benjamin, cloves, and such like, a little before dinner and supper. And at the same time flegm must be drawn out of her Head, by chewing Masticatories made of mastick and pellitory of Spain: or by a Gargarisme made of some convenient decoction, dissolve in a pint whereof a dram of pellitory poudered. These things must be constantly used in the mean while, til I can more certainly know what the disease of her eye is, whether an Albugo, a suffusion, or an obstruction of the optick Nerve. For the weakness cannot spring, from want of spirits, or dissipation of her natural strength.

Which when we shal understand, we shal endeavor our utmost to effect the Cure.

The XI. Counsel.

For Msr. Lastier, *almost blind with an Obstruction of his Optick Nerve, being sixty years old.*

THis same Hinderance or depravation of sight, which threatens either a suffusion or blindness has for its Cause, not only a thick vapour, but also a thick and clammy humor, which slipping out of the brain into the optick nerve, does not yet fil the whole capacity of the nerve. This humor if it shal sal before the chrystaline humor and the pupil, it wil cause a suffusion: but if continuing where it is, it encrease and grow thick together, it wil cause only a blindness wherein nothing can be seen amiss in his Eyes. And therefore we must hinder any more matter from flowing thither afresh, and that by a good diet, which may moderately nourish his body, but not moisten the same, nor fil it with excrements.

Twice, or once at least in a month, he must purge with pils *sine quibus*, and *Lucis magores*: and in the intermediate daies, if he be bound, with pils of Aloes.

His Head must be every morning dried with fomentations of salt, milet, and discussing seeds Fried.

Frictions also must be used towards the hinder parts of his head, downwards, which wil be very profitable.

Flegm must be frequently drawn out of his Head by Apophlegmatismes; Errhines are not so safe, Sneezing-pouders stark naught, because they turn the Course of the Humors to the place affected.

By these therefore, and such like means, his head wil gather few excrements, and they wil be brought away for the most part through the natural passages.

The other intention of the cure is, that the humor which has long since gotten into the optick nerve, may either wholly, or as much as is possible, be drawn out, and brought back to the original of the fluxion. Which though it be an hard and very difficult task, yet we must try nevertheless, what we can do.

Therefore we must often apply Cupping-glasses, especally the day after his purgation, and some daies after that, to the Hind part of his Head, on each side, at the original of his neck, without scarification.

He must be ordered to lie on his back; and so lying it wil be good sometime to shake his Head gently, that the fast sticking humor may be removed out of its place.

I like not of those setons as they cal them of the Hinder-part of the Head and neck, having observed that they do little good, and many times great hurt.

But Experience has taught me that the most effectual and safe Revulsion, is from the optick nerve into that Cavity, which is in the root of the Ear, and in the Connexion of the jaw-bone behind the lowest part of the Ear. For through that runs a branch of the jugular Vein, which enters the optick Nerves on both sides, and accompanies them as far as to the eyes. Thereupon therfore a smal plaister must be applyed as big as a Mans nail, either of that sort which consists of an equal portion of black soap and common salt beaten.

Or of that which consists of mustard seed and cantharides, of each one dram. Strong leaven

one

one ounce. But these things must be prudently used, and with the greatest Art Imaginable. But if it be feared that the humor to be revelled, is not sufficiently inclined to move, it must be prepared with a remollient and attenuating fomentation, of a decoction of marsh-mallowes, Vervain, Eyebright, Rew, fennel, and fenugrick seeds.

With the vapour of this decoction applyed with a soft and tender spunge his eyes must be fomented about the Evening, especially whilst the plaisters stick under his ears, that it may at least by its warmness soften and make thin the peccant humor.

But it will be in vaine to use eye-salves, because their Vertue cannot penetrate to the place affected.

Nevertheless he may profitably eat fennel seeds oftentimes, or after meals take a pouder made of coriander, annis-seed, Fennel seed, Eyebright, Liquoris, and Cinnamon: for the vapour and steame of those things is carried out of the mouth and stomach, to the fore part of the Eyes.

I know some will in this case command and commend exceedingly the decoction of Guajacum, which nevertheless without the Remedies aforesaid, will be in vain, and do no good at al.

The XII Counsel:

The Answer of Fernelius *to the Letters of Msr.* Du Perat, *a Gentleman of very great Note in the Emperors Court, or of* Beucherius *his Physitian.*

YOur Letter to *J. Silvius*, most learned *Beucherius*, did sufficiently acquaint me with your remarkable Learning, and now at last I am confirmed in the opinion thereof by your Letter to my self, wherein also you declare your ingenuous and extraordinary affection to me. Least therefore you should have any suspition of my writings or prescriptions as not safe enough, I have, not perfunctorily, but very diligently read over & perused your former Letter to *J. Sylvius*, wherein there being many things with prolinity of words obscurely delivered, you seemed to discourse not onely of the gout in the feet, but sometimes also of other Joint-pains, whose original you attributed sometimes to the brain, sometimes to the veins, of which it you now doubt when you aske my advice, doe you not seem to give me also an occasion of doubting? But, if so be we are now both of a mind, that these pains spring from rheum, and that it fals down form the Head into the joynts, the Gentleman need not doubt or make any scruple to follow that method of cure, which you long since did usefully prescribe, and which in my letters I have very much commended, and imitated exactly, though with other kind of Medicaments, as every one has his own way of practise, and every one is commonly wont most of all to commend those things, which he himself has happily experimented. Howbeit, I make no question, but those things which you have prescribed wil do good, if the patient persevere in the use of them. But I come now to your Queries.

If the Gentleman shal resolve to use the decoction of Lignum Vitæ, it can do no hurt, in the winter, sometimes, but not alwaies to mingle therewith a like or less quantity of weak wine. And here I desire you to take notice that there are many kinds of this wood, or at least many degrees: nor must you use that, which makes a sweetish decoction like whey, but that which is aromatical, the decoction whereof tickles the pallat and throat with its biting acrimony. When he shal take that second and medicated potion of Lignum Vitæ, if he swear, let him keep house that day, and not commit himself to the coldness of the Aire, least his skin being open and loose, the cold get in, and smite and vex his nerves. When his fit begins, and he feels the first grudgings of pain, he must be exquisitely purged, not expecting any concoction. For the humor when it flows into the joynts, is thin and watery, which is easily purged out. But when it has quartered sometime in the joint, it grows thick, and wil hardly follow the medicament; nor is it those humors, which *Hippocrates* bids us not to purge before they be concocted. These are perhaps those things, which you (most learned Sir) do admire as paradoxes, which you desire me to explain, and to answer your arguments to the contrary. And though few physitians are wont to render a reason of what they say or advize: yet because you desire the same, after so ingenuous and fair a man-

ner, least I should seem to have spoken rashly and at adventure, I shal briefly explain my self in this case, which nevertheless would require a large discourse. Now I shal insist upon al your objections, not intending to teach and inform you, but to answer to your questions. In the first place therefore, you say the cause of a cold gout, is thick and clammy flegm. And that, I say, being simply and absolutely understood, is false; for at first it is thin and watery, such as sometimes runs out a mans nose by cold-taking; nor being thickned would it easily fal down and slide into the joynts, and external parts of the body, but would stick by the way. But, indeed, in tract of time, by force of heat, it wil become thick in the joints, and as *Galen* saies by you cited, cannot be resolved but in a long time. And at length, if it be let alone, it grows into an incurable stony hardness, of which the Poet.

Solvere nodosam nescit Medicina podagram.

When Gouty Humors into stones convert,
They jeere the Doctors, and despise their Art.

You must therfore distinguish the times of diseases unless you wil make Authors contradict themselves. Of the differences of this flegme, I have written according to the judgment of best physitians, in my first book of the natural part of medicine. Afterwards, not allowing that the brain is the spring of this disease, you aske me why every internal cause which moves a catarrh, does not produce the gout? You should likewise have asked, why every distilation from the the brain does not cause a Cough? You know (worthy sir) that every distillation holds not one and the same course, also several humors encline several waies. And as some parts are weaker and looser than others: so the humors accordingly run this way or that way into this or that part. Moreover you tel me, there is no passage betwixt the brain and feet, by which the humor might fal thither; and the more to prove what you would have, you gather, that it can neither come in by the Spinal marrow, nor by the nerves. Which I confess, truly, and I cannot beleeve any one is so simple, as to think of such passages. Yet you say the brain may communicate its Excrement to the Veins: seeing you are very skilful in Anatomy, I would have you shew me the way by which the Excrement can go back out of the Ventricles of the Brain (which *Galen* in his book *de usu partium*, tells us were made to receive Excrements) into the Veins. Can the Excrement return upwards from those inmost Ventricles into the Veins again? But if it sometimes fal into the Stomach, and obstruct the Liver, that is nothing to our purpose. I conceive there is no need of these waies or passages, for a distillation in the Joynts, but that some come out of the Ventricles of the brain, others out of the external parts, and slip down even by the Neck and Shoulders, which gaining the parts under the Skin which are loose, and being for the most part thin, it slips along leisurely without sence of pain, till it stop in the solid and more compacted Joynt, and abide there, whose Ligaments, Tendons, and Membranes, it stretches, not without pain. This I perswade my self to be the cause of the cold Gout, which being ill explained, most Physitians have left it as incurable. But the Authority of the Ancients shal never fright me from making Inquisition, neither in these, nor in any other Operations of Art, though I have not hitherto neglected any, no not the least Writer: yet I find by experience I have profited more by my own Inventions than by them. And now I return to you, where you endeavor to perswade me, that these flegmatick Excrements, do fal out of the Veins; and therein (you bid me be plain) you are many waies over-teen. For you never saw any such Flegm drawn out of the Veins by Medicaments, but what ever flegm is brought away by purgers, it comes al either from the Brain, or the Stomach, or the Guts, and it causes the Cholick: nor does that which in the Cholick, or in Feavers is vomited, come out of the Veins into the Belly, but was collected in these places. You are also mistaken when you say, that you have seen much thick flegm, and not unlike that which is bred in the Stomach, come out of a Vein with the blood, in phlebotomy. For that same whitish matter which is sometimes seen to float in the Chyrurgeons porrengers, and grows together by vertue of the fibres, is called blood, flegmatick blood, and such as abounds in Leucophlegmatick bodies. I verily, among vulgar Errors, do reckon this for a most grievous one, that usual Feavers, and whatever other Diseases, they make al faults of the Humors to be in the Veins, and that there can be no place found in the body for bad Humors besides; and when

we

we diſcourſe of Humors, they never think of Superfluous Humors, but underſtand al, only of theſe Humors mixed with the blood in the Veins. But of theſe things I ſhal find a time to ſpeak more largely. And as for thoſe other things you ſay, how that out of the Veins Mouths, many matters iſſue, either into the Skin or other outward parts of the Body which are weak, which cauſe the Scab, the Itch, puſtles, Inflamations, and ſomtimes hot Gouts: al this with you I acknowledg and confeſs.

Of Joynt Pains, for the ſame Mſr. du Perat.

What I am able to underſtand touching the Diſeaſe of the ſick Gentleman and its cauſe, and concerning the prevention and Cure thereof, is as follows. The Age of the Patient, being ſixty years, his temperament cold, the habit of his body corpulent, plenty of clammy and thick flegm, in his brain, ſtomach and Guts; finally, many other ſigns, which I have collected up and down out of the writings of others, do demonſtrate that this joynt-pain we ſpeak of proceeds from a cold diſtillation, rather than a hot, which the Nature and long-laſting of the pain does confirm: but into what joynts the Humor chiefly fals, is not expreſſed. Though the knowledg thereof, is of no ſmal moment towards the Cure. Nor do I find that any notice is taken, whence that cold and flegmatick diſtillation does fal into the joynts, which notwithſtanding is the chief point of the Cure, to which al the Counſel of the Phyſitian is to be directed. I verily can never beleeve, either that the thick flegm which is purged away by ſtool, or that which flows into the joynts, can come out of the Veins. For both theſe Humors are ſincere and Excrementitious, ſuch as is no where contained in the Veins, but the former, which comes out of the ſtomach, and Guts, is bred there by the Nature of the Place: and the latter fals into the joynts from the Brain and the whol Head, whoſe proper Excrement nevertheleſs it is. Theſe things being thus declared, I haſten to the Cure. As ſoon therefore as the patient ſhal be freed from his preſent pain, or at leaſt two or three months during the time of his Health let him accuſtom himſelf to this Diet. Let him feed on meats of good juyce, Capons, Pidgeons, Partridges, ſmal Birds, young Hares or Leverets, Veal, Mutton, and ſuch like, alwaies roaſt, never boyled, and avoid al ſuppings and al fiſhes, and cheeſe, Peaſe, Beans, and al fruits, eſpecially ſummer fruit that wil not keep. He may conclude his meals with raiſons of the Sun, or Marmalade of quinces. For thus by a dry and moderatly warm Diet, we muſt take care that little or no flegm breed in his body. And to that end, it wil be alſo good, to take an hour or two before meals, one lozenge of Aromaticum Rotatum according to the deſcription of *Gabriel*, or a little preſerved Ginger: let him take heed of hotter Medicaments, ſuch as diatrion pipereon, Diagalanga, Diacalamintha, and ſuch like: for they hurt by their heat, nor can they correct the Errors of his Diet. But after meals, let him ſuppreſs the Vapors of his ſtomach with this pouder.

Take *Coriander ſeed prepared two drams; choice Guajacum, one dram; choice Oriental pearl one ſcruple; Sugar of Roſes, two ounces. Make al into a pouder, let him take a ſpoonful after his meat. Let him eat twice a day, and that very ſparingly, and at ſuch diſtances of time as may ſuffice for perfect concoction. For it will be good for him, ſomtimes to endure hunger, for the digeſtion of crudities. Let his drink be white wine or pale claret; each moderately allaied with water. Smal beer is good for one draught, but let him not drink thereof immoderately, and alſo al water, if it be ſeaſoned with much ſpice, leaſt he increaſe ſerous Humors, which he is apt to breed. He muſt drink ſparingly, not above thirty ounces in a day. And if he delight to have ſome other kind of drink; that is fitteſt of al for him which is made of Lignum Vitæ, and cuts Flegm, makes it thin, and ſcours it off the parts; and it opens obſtructions better than any thing elſe, and digeſts them in the remoteſt parts; it dries up and conſumes many crude and Superfluous matters, to which the force of other Medicaments cannot pierce, ſo that it is much conducing to the health of this Patient. Moreover he may drink as much as he wil of this drink. Now it may be made very grateful after this manner.*

Take *Chips or ſhavings of Lignum Vitæ half a pound. Infuſe it in ſix pints of luke warm water twenty four hours. Then boyl it to three pints putting in towards the concluſion, raiſons ſtoned two ounces; Choice Cinnamon three drams; Cloves, one dram; ſtrain out the Liquior. Let him uſe it at meat inſtead of wine, or at leaſt for his firſt draught, in place of beer.*

When his Belly is costive, let him use a suppository or an emollient Clyster. Also it will be good to give him this Clyster twice a week, which scours off thick flegm, and draws it forth by stool.

Take Roots of Marshmallows and Elecampane, and Polypody of the Oak, of each half an ounce: Century, Wormwood, Rue, Chamomel flowers, and Melilote flowers, of each one handful: make a decoction to a pint: In the strained liquor dissolve Hiera Picra simple, and Turpentine, of each half an ounce: Honey of Roses and of Rosemary, of each one ounce: Oyl of Rue and Chamomel, of each half an ounce: make of all a Clyster, give it him after he has been at stool.

Every fifteenth day let all the rest of his body be purged, but especially his brain and joynts, with this easie and gentle Medicament:

Take Water of Sage and Hyssop, each an ounce: infuse herein two drams of Agarick newly trochisted: in the strained liquor dissolve choice Rhubarb duly infused, four scruples, with half a dram of the best Cinnamon: Electuary of Carthamus two drams, Syrup of Stœchados, half an ounce: make al into a Potion.

But if he shall be better pleased with Pills, these truly are good and fit:

Take the mass of Pill sine quibus, and Cochie, of each half a dram: with syrup of Stœchados make six Pills.

Now this course of life is not burthensome, and such as he cannot endure a long season, but yet very profitable and fit for him. Howbeit, if the Patient be willing to be ordered; and would for the time to come be safely cured of this joynt disease, 'tis necessary he undergo greater matters, so as quite to change his old and vicious habit of body, which gradually and without trouble, thus he may effect: Having finished his first Month in the diet aforesaid, in the Month following which is next the Fit, let him wholly abstain from Wine, and instead thereof drink the decoction of *Lignum vitæ* aforesaid, keeping (during the said time) somwhat a thinner and more exquisite diet, though of the same kinds of meat before mentioned: Then let another more Medicinal drink be made, which may more potently digest and consume the already prepared humors, which let him use as a Medicament in the morning, and before supper. And let it be made after this manner:

Take Lignum vitæ, or Guajacum, half a pound; of the bark thereof two ounces: infuse them two dayes in six pints of lukewarm water, then boyl them to two pints; towards the end putting in of true Acorus root, and Elecampane root, and Polypody of the Oak, of each half an ounce: Smal Sage, Stœchados, Betony and Rosemary flowers, of each a pugil: Galangal three drams, Cloves and Mace, of each one dram: make a strained drink as is fitting. Let him take three ounces for a dose, in the morning at five a clock, and three hours before supper, lying on his bed wel covered with cloaths, so as he may sweat; for thus, whatsoever vicious humor is spread abroad among his Nerves and Joynts, it wil be by little and little digested and consumed.

And because the Brain is the fountain and original of this distillation, it is fit to apply more Remedies to that part, than to any other. Having therefore his sweat wiped off, let his head and neck be soon after warmed with these *Bags*, whose vertue is to dissolve the Reliques of the noxious humor, and to strengthen the brain.

Take leaves of Sage, Marjoram, Stœchados, of each one pugil: Annis-seed, Fennel-seed, and Fenegreek, of each an ounce: Milet one pound: common salt half a pound: Fry al in a frying-pan, put them into two little bags, apply them to the fore-part of his head and neck hot, and let them lie on till they wax cold, and repeat them warm oftentimes, if you shal think fit.

These things being acted, move him to sneez; also with Errhins and Apophlegmatisms let the flegm be drawn out of his brain, through his mouth and nostrils: with the continual use hereof of these Medicaments, the fountain of the disease must be exhausted till it be drawn quite dry. About the end of the month, when by diet, sweat, purging, apophlegmatisms, and bags, his brain shall be now sufficiently dried and strengthened, and there shall no sign appear of the dominion of Flegm; then verily, al his limbs, nerves, and joynts, must be strengthened and made firm, that they may not hereafter so easily admit the defluxe of humors, to which purpose a bath is effectual, which is made with a decoction of Roses, Balaustians, Sage, Stœchados, and Myrtle, adding a good quantity of Allum; in which (being blood warm) let

him

him ſit a good while faſting, ſo as neither heat nor ſweat may be cauſed thereby; but that only his looſer joynts may be thereby ſtrengthened, and let him do this three or four dayes one after another; after which he may ſafely return by little and little to his uſual free courſe of diet, which nevertheleſs muſt come as near as poſſible to this here preſcribed: Let his head be rubbed every morning with the Bags, and let the flegm be daily drawn out at his mouth and noſtrils: Finally, Let him altogether avoid lying on his back, and rather lie on his belly; for lying on his back makes the excrements flow into his neck and joynts; but lying on his breaſt will make them encline towards his noſtrils and mouth. Moderate exerciſe is good in an open and dry air. Hard fridions of his limbs, will be very good for him when he is newly awaked.

Theſe things being obſerved, I am confident the Patient wil be cured of this diſeaſe. But in caſe, omitting ſomewhat or other, he happen to be again taken, when his Fit begins let him be exquiſitly purged with a good ſtrong Medicament: For when a gentle Purge is given, it exagitates the humors, and yet it purges not, and conſequently augments the diſtillation and the pains, and oftentimes makes them twice as great as before, which makes many afraid and to forbear to purge, at the beginning of the pain. And therefore to the Medicament before preſcribed, for a dram of Diacarthamum put in two drams, or ſo much as the diſcretion of his Phyſitian preſent ſhal think fit: with this alone I have often cured beginning pains. And ſoon after the Purgation, let dry fridions be uſed on his head and neck, and that with the Bags preſcribed, very hot; that by theſe the remainders of the diſtillation may be ſtopped, and digeſted, leſt it fal into the joynts. But if ſo be nevertheleſs the fluxion of humors continues and poſſeſſes the joynts, and at the beginning of the pain redneſs and heat appear (ſuch as is attendant ſometimes at the beginning of a cold Gout, whereby many are deceived) firſt you muſt apply things moderately cold, then pain-aſſwagers, laſtly digeſters. Cold things I ſay, which do not drive the humors inward, but ſtop them when they are in motion, and extinguiſh the Heat. Of this ſort is the Mucilage of Quince ſeeds, extracted with Nightſhade water, with which being warm, let the pained part be bathed, and let it be covered with cloaths dipped therein. If this do not ſufficiently mitigate the pain, ad an eighth part of Vinegar; and if ſo, the pain grow not milder, ad a little Camphire, or a little white Trochisks of *Rhaſis*.

Let him then abſtain from Oyls, Oyntments and fat things whatever, becauſe the pains are inflamed and doubled by hot things. When by help of the premiſes, the vehemence of the pain, and al the ardour, ſhal be exciguiſhed: theſe and ſuch like Anodines, wil be convenient as follow.

Take *Oyl of Lillies, and Chamomel, Mucilage of Fleawort extracted in Sage Water, of each one ounce: Saffron ten grains: Wax a little. Make all into a Liniment, wherewith to anoint the pains, twice or thrice in a day.*

After the Anointing, apply this following Cataplaſm.

Take *Crums of white Bread, ſteeped in new Milk, one pound: Saffron twenty grains: Chamomel Flowers, and Melilot Flowers poudered, Meal of Lin-ſeed, and Fenugreek, of each half an ounce: Oyl of Lillies, a ſmal quantity: Make all into a Cataplaſm.*

There are many things of this kind, as the pulp of Caſſia Fiſtula, Cows dung applied, or Water diſtilled therefrom, Oyntment of the Juyce of Dwarf Elder; and innumerable other things, which the vehemency of pain, and neceſſity has found out. Many torment themſelves, and cudgel their brains to find out new Medicaments. Yet verily, I conceive the Gout is more eaſily and ſafely cured by a good Method, than by multitude of Medicaments. The pains being ended, or moſt what abated, the reſt of the Humor, is to be digeſted, leſt in the Joynt it grow into a ſtony kind of hardneſs.

Take *Pine-tree Gum, Tar, Emplaſtrum Oxycroceum, of each one ounce: Live Brimſtone, Hermodactyls poudered, of each half an ounce: Oyl of Turpentine as much as will ſuffice. Make all into a Plaiſter according to Art.* Apply it after the anointing.

The

The *XIII.* Counſel.

Containing the Cure of the Gout, and all Joynt-pains, for Msr. Albertus *Junior, Marques of* Brandenburge.

AS ſoon as ever any man is taken with pains in his Joynts, he muſt abate half of his ordinary Diet, both in Meat and Drink, and he muſt be enjoyned to follow a thinner and purer Diet, that the immoderate bulk of his body and Humors, may be abated; he muſt drink no Wine, the heat and vaporous faculty whereof, provokes the defluxion of Rhewm, and exaſperate the pains. His drink muſt be ſmal beer, or Water ſweetned with Sugar, or ſome other Liquor that without any harm doing may pleaſe his pallate. Al Salt and ſpiced meats muſt be avoided, and ſuch things which trouble the Head, as Garlick, Onions, Water-creſſes, Muſtard; eſpecially when the pains are moſt raging. He muſt uſe little ſupping meats or broaths, and eat roaſt meat rather than boyl'd, that his Body may by all poſſible means be dryed, and a good quantity of Humors conſumed. Theſe therefore are the chief, and moſt obſervable Rules of Diet, which his ordinary Phyſitian may unfold more at large. And becauſe ſo cruel a Diſeaſe cannot be put to flight only by diet, theſe Medicaments muſt be added, whereby I am wont quickly to put an end to theſe pains. As ſoon as the pain ſhal ſeize upon him, if his belly be bound, it muſt be ſoftened with a Clyſter, which muſt have in it Hiera picra ſimple, or Diaphœnicon, with other things uſual in ſuch caſes. The day after, his body muſt be purged with a ſtrong purgation, or elſe it will rather ſtir than evacuate the Humors, and ſo encreaſe the defluxion; alſo it muſt be ſtrong that it may draw the Humors out of the ſtrongeſt and remoteſt parts: Now ſuch a purge, I commonly preſcribe after this manner.

Take *of the ſtilled waters of Sage and Bettony, and of white wine, of each one ounce. Infuſe therein of the beſt Rhubarb, and Agaric newly Trochisked, of each four ſcruples. In the ſtrained Liquor diſſolve Electuarium Diacharthami, two drams; Syrup of Violets or Maiden-Hair, half an ounce. Make al into a potion, and let him take it in the morning four hours before dinner.*

This Electuary of Diacarthamum by reaſon of the Hermodactils and Turbith, is proper for the Gout: whoſe doſe muſt be fitted to the nature and ſtrength of the Patient. No preparation is to be premiſed before the purge, becauſe the Humor being at firſt, thin, wateriſh, and fluid, does eaſily follow the drawing of the Medicament. If one purge ſhal ſeem not to have drawn away a ſufficient quantity of the Humor, and the pains continue as before, or by means of a new fluxion are grown worſe, you muſt purge him the ſecond time with a purge like the former, yea, and the third time if occaſion require: but interpoſing ſome daies of reſt betwixt purge and purge, that the patient may not thereby be weakned: which muſt be left to the judgment of an experienced Phyſitian. Now the pains muſt even before purging, at the very beginning be aſſwaged, with this following Medicament, which by gentle cooling reſtraines the influxion, and yet does not drive the Humors more into the joynt.

Take *of the ſtilled waters of Nightſhade, and plantain, of each three ounces: ſteep therein, Marſh-Mallow ſeed and Quince ſeed, of each half an ounce. Make a Mucilage, and ſpread it luke warm on clean Linnen cloth, or upon tow, and apply it, renewing the ſame as ſoon as it begins to grow dry, that the part may alwaies be moiſt, til al the redneſs, heat, and pain, be taken away.*

This is a moſt effectual Medicament in the Feet and Hand Gout. If the Inflamation ſeem to be great, add an ounce of Vinegar. In the other joynts, when a more grievous pain ſhal ariſe, as in the Elbow, the Knee, and Hip, that the force of this Medicament may pierce the deeper, add Camphire, eight grains. When the pains begin, neither Oyls, nor Fats, nor Mineral or Metallick Medicaments do any good, but are found exceeding hurtful in many reſpects. When the heat and redneſs being extinguiſhed, the extremity of the pain ſhal abate, the remainders thereof wil be chaſed away with this following Oyntment.

Take *Mucilage of the Seeds of Line and Fœnugreek extracted in Sage water three ounces. Oyl of Worms, of Chamomel and Lillies, of each one onuce. Fox and Gooſe greaſe, of each*

half

half an ounce. Hermodactyls finely poudered, two ounces. Marrow of an Hart, or of a Calf, and Wax, as much as ſhal ſuffice. Make an Oyntment and anoint therewith the pained and ſwolne part, twice or thrice a day, and wrap warm Linnen about it.

Alſo it will be good to apply this Plaiſter to the part affected, preſently after it is anointed.

Take of *the Oyntment preſcribed, five ounces: Round Birthwort root, Frankincenſe, Myrrh, Galbanum, Opopanax, of each half an ounce: Turpentine three drams; Wax as much as ſhal ſuffice: make all in Plaiſter rowls.*

If the matter of the pain be ſo tenacious, that theſe Remedies cannot mollifie nor root it up, apply this Plaiſter at laſt:

Take *Pine tree-gum one ounce: black Pitch two ounces; Wax one ounce: old Axungia one ounce: Hermodactyls poudered, and live Brimſtone, of each ſix drams; make a Plaiſter, which muſt dayly be renewed and continued til al the ſwelling ſeem to be taken away, and til the joynt may be freely moved.*

But if the perfect Cure be neglected, ſomewhat will be left in the joynt it ſelf, which at laſt hardening, will grow into a ſtony ſubſtance, and quite take away the motion thereof.

This is a certain and very ſafe way to Cure Joynt-pains when they are freſh, which if rightly adminiſtred wil never fail thee; nor need you ſeek far & near for other empirical Medicaments, wherewith we are often deluded. For the Cure of this Diſeaſe muſt be accompliſhed by Art and Method, and not by empirical Receits. Howbeit you muſt obſerve and be very circumſpect in this Cure, that when a new humor and a new defluxion ſhall ariſe, the Patient be ſtil purged afreſh.

But for to Cure ſuch as cannot go by reaſon of an old Gout, and whoſe feet are contracted and weakened as to going, if the infirmity be not exceeding old, it may be Cured after this manner:

Every morning let the Patients feet be held in this decoction, as hot as it can be ſuffered, about an hour.

Take *Juniper berries, Elecampane roots, and marſh-mallow roots, of each two ounces: leaves of Lawrel, Myrtle, Sage, Betony, Stœchados, Origanum, Calamint, Marjoram, Rosmary flowers, of each one handful: Line-ſeed, and Fœnugreek-ſeed, of each one ounce: Boyl al in a clear Lye made of Vine-branch aſhes, in ſuch a quantity as may ſerve to cover the feet. If you would have this more effectual, add one pound of common ſalt.*

Afterward, the Patients feet being wiped, let them be anointed with this Oyl.

Take *Roots of Pelitory of Spain, Ginger, Nutmegs, Cloves bruiſed, of each two drams: Flowers of Sage, Hyſſop, Roſemary, Stœchados, ſpikenard, of each one dram, or half a dram: Round Birthwort Roots, and Hermodactyls poudered, of each one ounce. All being mingled together, pour on a pint of Aqua Vitæ, and let them ſteep an whole day; then add Turpentine one pound and an half: put al in a Glaſs Alembick: diſtil them with a ſlow Fire: Keep the water and Oyl apart for the uſe aforeſaid.*

The Patients feet therefore being wiped, let them be aneared with this Oyntment and Oyl, and wrapped in Linnen clouts: Then let the Patient lie down wel covered. Apply to the ſoles of his Feet red hot ſtones quenched in Wine, and let them be til the ſweat ſtarves out on his Legs and Feet. And when the Patient ariſes, let him al the reſt of the day and the night following, arm himſelf wel againſt the cold: and thus his feet will obtain a free motion. And theſe are the Remedies wherewith the Gout, and other pains of the Joynts, may be ſoon allayed and driven away.

Now I ſhal briefly ſhow how they may be prevented.

How to prevent the Gout, or other pain in the Joynts.

When the Pains being ceaſed, and his feet ſtrengthened, the Patient ſhal feel himſelf reſtored to his health; for a month or two, before the uſual pains return, he muſt uſe ſuch Remedies as may prevent the ſame: And to that end, if his body be impure and ful of ſuperfluous humors, he muſt uſe the more ſparing Diet, and it muſt be drying and attenuating. He muſt drink no Wine, if his age, and the weakneſs of his ſtomach will permit the forbearance, and he muſt

muſt ſo order the matter, that his body being disburthened of part of the bad humours, may grow lean.

And ſeeing Diet alone cannot do that ſufficiently, he muſt be purged every ſeventh or eighth day, ſometimes by ſuch a like Potion as was before deſcribed, and ſometimes with Pils of Agarick, and Cochia. In the dayes intervenient, he muſt uſe Clyſters, if he be coſtive.

After the ſecond or third Purgation, if the Body ſhal be ſufficiently purged, it wil be ſeaſonable to move ſweat, either with Guajacum, or any other Heaters; that the Humors wherewith the Nerves and Joynts are preternaturally ſoaked, may be attenuated, and ſo perfectly diſcuſſed.

Then alſo muſt ſuch Remedies be applied to the Head, as exhauſt the whole fountain of this Infirmity, wherefore the ſweat being wiped off, every day, if you pleaſe, before ſupper, his head being ſhaven, apply theſe pouders very hot, that they may diſcuſs the humors, and by drying, confirm and ſtrengthen the brain.

Take *leaves of Sage, Marjoram, ſtœchados, of each half an handful: ſeeds of Annis, Fennel, and Cummin, of each two ounces: bay-berries bruiſed half an ounce: Milet one pound: common ſalt half a pound: Fry al in a frying-pan, put them in bags, which may be applied exceeding hot to the Head and Neck, til they grow cold of their own accord.*

Then cover his head with cloaths which muſt be ſmoaked with this Fume,

Take *Nigella Romana, Storax, Benzoin, Amber, Maſtick, of each half an ounce: Cloves two drams: make al into a groſs pouder to ſmoak his head-cloathes.*

If haply under the skin of his head ſome humor be manifeſtly diſcerned, his head muſt be often waſhed and fomented with a Lye, wherein the Cephalick, or Head-herbs, have been boyled.

And if neither, ſo the ſuperfluous humors of the head ſhal be dried up, let his head be ſhaven, and thereon let this Plaiſter be laid, which is of great force to diſcuſs.

Take *Pulp of Figs, old Leaven, of each two ounces: muſtardſeed bruiſed three ounces: emplaiſter of Mucilages four ounces: ſoften and incorporate them: adding a little Turpentine if need be. With this Plaiſter let his head be covered, and let it lie on, til it have evacuated al the ſuperfluous humor: ſtronger Plaiſters cannot ſo ſafely be uſed; we muſt therefore content our ſelves with this.*

The fountain of the diſeaſe being drawn dry, and the head quite freed from excrements, and ſtrengthned, for the laſt part of the Cure, all his limbs and looſe joynts muſt be knit and ſtrengthned by ſuch a bath as this that follows:

Take *leaves of Myrtles, Balauſtians, red Roſes, Plantane, Vervain, Bay-berries, Origanum, Calamint, Penny-royal, Time, Sage, Roſemary flowers, of each two handfuls: Juniper berries four ounces: Roch Allum four pound: boyl al in a ſufficient quantity of water for a bath, and let him bide therein two or three hours (but let him not be forced to ſweat) that his limbs and joynts may be better ſtrengthned: and let him uſe it three or four dayes one after another, in the morning, faſting.*

This excellent way of Cure, does ſo pluck up both the cauſes of the Gout and joynt-pains, as well that which cauſes the excrement, as the joynts weakneſs it ſelf, that the patient is thereby made perfectly ſound and whole. But yet he muſt not be ſo confident of the Cure, as to take liberty to return to a temperate courſe of diet. But keeping ever after a more moderate diet, every Spring and Fall let him take a Purge a little before the uſual time of his fits. And for three dayes after let him waſh his head with the formerly preſcribed lye. Alſo let him uſe the Bath, unleſs he be very much averſe therefrom, as counting it troubleſome. This is a ſure and no wayes deceitful Cure, which every Phyſitian can accommodate to any kind of Gout or joynt-pain. And I ſhould have illuſtrated the ſame with many other preſcriptions, and thoſe very effectual, in caſe the particular ſpecies or ſort of the Diſeaſe had been expreſſed unto me, by its proper ſigns, and ſymptoms.

The

The *XIV.* Counsel.

Concerning extream Pursineſs in a Corpulent Man.

The Diſeaſe is propounded by Dr. Melinus, *to Dr.* Fernelius, *for* Mſr. de Boiſ-dauphin.

Claudius Lavallenſis, whom you are acquainted with, is now the ninth month here as Ambaſſador for the moſt Chriſtian King, and at laſt is fallen into a Diſeaſe, which he cals an heavineſs or purſineſs of his body; but I cal it a Plenitude or Plethora of Humors more than his ſtrength can bear. Moreover, he has now already had twice a Looſneſs, by which 'tis probable he voided ſuch Humors as did burthen him, ſeeing he bore it well certain daies together, and was better after it. Now the Excrements which Nature freely expelled, were brown for the moſt part, and very ſtinking, uneven, and among the reſt, a little flegmatick, clammy matter. He aſſiſted the voluntary flux of his belly, by a dram of Senna, ſteeped in the broath of ſtewed Prunes, and preſſed out. And therefore, ſeeing he is perſwaded that he needs purging, and does ſufficiently conſide in me, and the Practitioners of this place; he referral to you and your Authority, of whom he is very confidently opinionated. Two things chiefly argue a Plethora, or Plenitude *ad Vices*, the Heavineſs of his Body, and becauſe he finds much good by light purgations now and then uſed.

The Anſwer of Doctor Fernelius.

With ſuch faithfulneſs and diligence I ſee the Infirmity of your Lord, Mſr. *de Boiſdauphine*, expreſſed in your Letter, that you do as it were ſet before my Eyes, and reduce into my Memory, how I have my ſelf found the ſame, when I have been with him. A Corpulent habit and vaſt bulk of Body, becauſe it cannot be maintained ſave by liberal and ful diet, cauſes ſtore of Excrements; now eſpecially, his Age inclining, he living a ſedentary life without Labor or Action, the Air being cold, and the Soil moiſt. And though my Lord Embaſſador ſeem full of cold and flegmatick Excrements, yet he has withal good ſtore of Choler, which I ſometime remember did of it ſelf come away by ſtool with violence, and every day give him three Stools at leaſt, keeping his body alwaies very ſoluble. Now in caſe abundance of ſuperfluous Humors are grown up in his body beſides his Nature and Cuſtom; what wonder is it, if his body being weighed down with the bulk thereof, is become heavy, and unfit to perform its wonted functions? Now leaſt hereafter any worſe thing ſhould happen, we muſt endeavor, that look what ſuperfluity of humors, a thin and ſpare diet has not been able to rid away, it may be purged forth by phyſick: ſeeing we find, that the Looſneſs of his belly, whether coming by Nature, or procured by Art, does him much good: but it muſt be done leiſurely, and by little and little, becauſe gentle things do move him, and ſeeing it is in no wiſe ſafe, violently to ſhake ſo great a confluence of Humors, leſt we bring an old houſe upon our heads: The moſt convenient purgation therefore wil be by pils of Rhubarb, and Aloes, of each two drams; Agarick a dram; Cinnamon and yellow Sanders, of each half a dram, made up with Syrup of Cichory. And thus he ſhal uſe theſe Pils. Firſt let him take a ſcruple in the morning, an houir, or an hour and half before dinner. And two or three daies after, let him take half a dram, or two ſcruples, two hours before dinner. And thus muſt this purgation be often repeated, at ſhort diſtances of time, ſtil encreaſing the quantity, and continuing the ſame, till it appears that all the bad Humors are purged out, and he have recovered his former health and ſtrength of body.

The *XV.* Counſel.

Of the prevention and Cure of the Gout, for Msr. de Valletot, *the Kings Muſitian, tranſlated out of Frenth.*

THat you may (Sir) rightly preſerve your health and prevent thoſe pains, which are wont to afflict your feet, knees, limbs, and other joynts. Firſt you muſt purge four or five times in a year; viz. After Eaſter, and about the month of *Auguſt*, with the under written potion. But after the feaſt of al Saints, and about Candlemas, with the pils likewiſe under-written. And if need be, the day before you muſt take an emollient and preparatory Clyſter. And four or five dayes after your purgation, or longer, if you pleaſe, it wil be good to rub and dry your head, with a bag ful of ſeeds, under-written, exceeding hot. And when theſe dayes are over, it wil be good, eſpecially in the Summer, to waſh your head with a lie made of convenient herbs hereafter let down, and after to dry the ſame very wel with hot cloathes. Moreover, ſix or eight dayes after your purgation, it wil be good to dry and ſtrengthen your brain, towards night or when you goe to bed, to uſe the fumigation here deſcribed. But to the Medicaments preſcribed, one principal thing muſt be added, viz. Your courſe of diet. Wherein five points are cheifly to be obſerved. Firſt, That you eat not nor drink two much of any meat or drink whatſoever. Secondly, That you muſt not uſe ſtrong and vaporous wine, but ſuch as is very wel allayed with water. Thirdly, That you abſtain from ſleeping in the day-time, and that in the night you lye not on your back, but upon one ſide. Fourthly, That every morning you diligently combe your head, and void al the excrements of your brain, and endeavour to go to ſtool. Fifthly, That you uſe moderate exerciſe, and keep your head mean while from cold. If happily the remedies preſcribed ſhal not hinder, but that a new addition ſhal be made of pain or defluxion, at the firſt groveling of the pain you muſt apply the oyntment here deſcribed, eſpecially if it be joyned with redneſs, ſwelling, and heat. And if this oyntment ſhal not ſuffice, another muſt be added. The heat being extinguiſhed, and the pain much what aſſwaged, the plaiſter following muſt be applyed to the ſame part, which muſt be ſo often renewed, either every day, or every other day, that no ſwelling, redneſs, nor Inflamation may remain.

The Solutive Potion.

Take Waters of Betony, Sage, and white wine, each one ounce. Infuſe in them rhubarb four ſcruples, Agarick one dram; cinnamon ten graines. In the ſtrained liquor diſſolve one dram and half, or two drams of diacarthamum. Syrup of ſtachados ſix drams. Make al into a potion. Take it in the morning.

The Doſe of Pils.

Take of the maſs of Pil Cochiæ, and of Agrick pils, each one ſcruple; of Alephangine pils one ſcruple; ſyrup of violets as much as ſhal ſuffice. Make five pints; let him take them at three of the clock in the morning.

For the Bag.

Take Annis-ſeed, fennel-ſeed, Cummin-ſeed, and bayberies, each two ounces. Millet one pound, Common-ſalt half a pound. Beat them, and fry them, and put them in bags made of thin wove cloth, for the uſe aforeſaid.

The Fume.

Take Nigella Romana, Styrax, Benzoin, Ambar, of each half an ounce. Let them be dry and groſly poudered, and ſo put into a Box, for a fume pouder. Or a Cucupha, or quilted cap may be made therewith to weare upon the patients Head.

The

The firſt Oyntment or Smear.

Tke *Waters of night-ſhade and plantane, each half a pound. Vinegar two ounces. Infuſe therein ſeeds of Quinces, and flea wort, of each half an ounce: extract a mucilage over the warm embers, and therewith lukewarm foment the pained part, with linnen cloathes.*

The ſecond Ointment, truly ſo called.

Take *Oyntment of populeon three ounces; Dialthæa one ounce and half; let them be incorporated together to anoint the pained part, after the fomentation aforeſaid.*

The Plaiſter.

Take *Florentine Orice root, Hermodactils poudered, of each ſix drams. Emplaſtrum oxycroceum, and de Mucilaginibus, of each two ounces. Pine-tree gum one ounce. Soften them with a ſufficient Quantity of oyl of worms, and make a plaiſter-rowle, ſpread ſome upon leather for the pained places.*

Diet-Drink.

If he cannot be perfectly cured with theſe remedies, it wil be good for him to abſtain from wine, and to drink twice a day the former decoction of Lignum vitæ with the bark, which has been by Mſr. *Fernelius* formerly deſcribed.

The XVI. Counſel.

Of trembling of the members.

YOU (moſt learned *Orpheus*) out of your own Ingenuity and candor, do adorn me with ſuch praiſes, as I am loth to acknowledg, or raſhly entertain. But in that, out of the honeſty and ſincerity which becomes a Chriſtian, and a Phyloſepher, you bear a loving affection towards me; I give you al poſſible thanks, and ſhal be ready upon al occaſions to requite your love, if by any means I may aſſiſt you by my endeavors or Countenance. And that I may now ſatisfie you as to the buſineſs in hand; that ſame trembling which you propoſe, in the ſtrongeſt age of a man, cannot ſpring but from very grievous and preternatural cauſes. And becauſe I do not underſtand that the patients brain is remarkably affected, nor that flegm does any where abound, there muſt be ſome extraordinary cauſe of this ſymptome. Conſidering the patients by-paſt life, and the conſtitution of his body, I am with you induced to think, that his nerves and ſollid parts, are weakened by immoderate uſe of ſtrong unmixt Wine, and of Venery, and that they are now become ſo feeble that they connot performe their natural and wonted office; neither being able firmly to move, nor to hold the joynts ſtedfaſt. Hence is trembling cauſed, which is then moſt urgent, when the patient is put in fear, either by the preſence of great perſons, or upon ſome other occaſion as is uſual.

And ſeeing that this trembling has its original, rather from the dryneſs than repletion of the nerves, it wil hardly admit of cure, even as a convulſion ſpringing from emptineſs. Yet if you are minded to make trial, you muſt endeavour the Cure, neither by purgations, or immoderate evacuations, but by the contrary Cauſes, and a good courſe of diet. But nevertheleſs if you ſhal perceive any crudity to ſtand in the way, that may ſafely be removed, either with a clyſter, or with a potion of rhubarb and agarick, you may do it.

Yea, and if alſo you ſhal think fit to purge pure choller, which adounding about the the midrife, is many times obſerved to ruſh into the nerves of the ſpinal marrow; and ſometimes to cauſe trembling, other whiles nummedneſs and palſie: the ſelf-ſame, or ſome ſuch potion ſhould be repeated, every tenth day. Alſo he ſhould be prepared two or three dayes before his purging, by apozemes: and in the intervenient dayes, if he be bound, he muſt have a clyſter, with a good deal of Hiera ſimple, and Honey of roſemary.

This Method of Cure is to be continued, to the thirtieth or fortieth day, or at least till his tremblings do begin to go away. At which time he must wholly forbear Wine, the only abstinence whereof, has cured these Diseases. And let his Drink be, either Barley Water, or ordinary Prisan, in which Cinnamon or Nutmeg are steeped; or a dilute Decoction of Guajacum, which they call a *Bochet*; or Metheglin wherein Sage has been steeped. Let him use Meat of good juyce, and sparingly, sometimes roast, sometimes boil'd, that it may neither altogether dry, nor over-much moisten. When by means of good Diet, and the foresaid Medicaments, his Body shall seem not so much to tremble, and the Humor wil be prepared, and the Antecedent cause evacuated; then it will be good to use baths, wherein Cephalick Roots and Herbs are boiled, or vaporaries thereof compoled, wherein for some daies together, in the morning his body is to be rubbed, til the sweat runs down. And when he is dried, let him be laid in a warm chamber, wherein al his Back-bone must be anointed with this Oyl:

Take *Stœchados, Rosemary flowers, Sage, Marjoram, Primroses, of each one handful*; *Bay-berries, and Juniper berries, of each half an ounce*; *Nutmeg, Ginger, Cloves, Pellitory of Spain, of each three ounces. All being bruised, sprinkle thereupon a pint of Aqua vitæ. Then pour thereon common Oyl a pint and half. Let them boyl together over a gentle fire, till all the water be drunk up. Press out the Oyl, and reserve it for the use aforesaid.* And never leave this course, til his trembling be quite gone.

If haply during the Cure, any suspition of a Distillation shal arise, which may concur to foment the trembling; it, also, must be dried, with Milet, and other fried seeds, and with a fumigation. Or if it prove very troublesom, it may fitly be derived by Errhines, or Nose-liquors.

The *XVII.* Counsel.

Of Trembling and Heavineſs.

A Letter of the Provoſt of Pertica, *propounding the Caſe.*
Translated out of the French.

From the Year, one thousand, five hundred, and fifty, I began to feel a great illneſs, with a trembling of all my Members, especially after meat and sleep. A pain goes from the middle of my Hip, directly to the brain, comprehending all the right side of my back-bone, and reaching into my Arm on the same side; and all my members remain heavy, so as not to be moved, and to desire nothing but sleep, especially after meals. And I feel through the whol habit of my body, a certain fluxion under my skin of waters, which sometimes make a tumult like a swift torrent; and sometimes they run slowly, so that you would say it were only the elevation of a thick vapor, through the Nervous parts, as far as to my Gums. Now my Head is frequently vexed with coldneſs, as also other outward parts of my body: nor can I long stand upright, nor endure to lie still; and the right side of my body seems absolutely fallen away, and pined.

The Answer of Dr. Fernelius, *to the foresaid Letter.*

A Frequent distillation falling upon the Muscles, Nerves, and Membranes, especially on the right side, is one, if not the only cause, of al those Symproms, which are at large declared in your Letter, as of heaviness and pain, which is my your back, Arms, Hands, and right Hip: whereunto is added a weakness of your Body, by reason of the ill Constitution of your Stomach and bowels. For they are obstructed and impure, nor do they conveniently nourish the body; and the Causes are, frustration of Concoction, and the Head especially, but the whol body withal, clouded with Vapors, and wonderfully burthened. In this variety and contrariety of Infirmities, a light and gentle Cure must be undertaken, which may cleanse the Head and Nerves, as little offending the Stomach and Bowels as may be. In the first place therefore the whol body must be purged with this following Syrup, twice a month, which is compounded with respect to al the premises.

Take

Take *a Syrup made of Head, Liver, and Spleen-reſpecting ingredients, with three ounces of Senna, and two drams of Agarick.*

Five or ſix daies together after purging, take faſting, at leaſt two hours before meat, one of the following Lozinges.

Take *pouder of Diamargaritum frigidum, and Electuarium lætificans Galeni, of each half a dram: ſhavings of Ivory and Harts-horn, and choice Cinnamon, of each a ſcruple: white Sugar diſſolved in Roſe water three ounces. Make an Electuary in Tables or Lozinges weighing three drams apeice.*

Alſo theſe dry Remedies following, are to be uſed to purge and ſtrengthen your Head.

Flegm muſt be drawn out at your Noſtrils by the Juyce of Marjoram and Betes, or ſome ſtrong Sneezer.

Your Head muſt be dried and ſtrengthned by the ordinary Bags. And as for the coolneſs and weakneſs of your Nerves, if any thing help you, it muſt be a decoction of Guajacum, uſed at meals inſtead of Wine, in the morning to ſweat upon: which ſweating if your ſtrength wil not bear, at leaſt your whol Body muſt be rubbed, ſoon after ſleep, pretty hard, with hot and dry linnen cloaths; and afterward, with moderate exerciſe, let al your Joynts be long warmed and ſtrengthened. And after you have been purged two or three times by the Syrup, if your Joynts prove not ſufficiently firm and ſtrong, uſe dry Baths, or bath-ſtoves, which have a mighty faculty to dry and ſtrengthen the Nerves. They muſt be made after this mannner.

Take *Juniper berries, Roots of Acorus, and Elecampane, of each two ounces: Sage, Betony, Marjoram, Stœchados, Bayes, Wormwood, Origanum, Calamint, Rue, Chamemel, Melilote, Dill, of each a handfull: Annis-ſeed, Fennel-ſeed, of each half an ounce: Boyl all in water and white Wine. Pour the decoction on a hot Tile, and receive the vapor in an Hogshead, or other covered bathing veſſell til your Body grow hot and the ſweat run out. If you cannot eaſily endure the ſtove: at leaſt lie in your bed in the morning very wel covered, and let hot ſtones extinguiſhed in the foreſaid decoction, be laid to the ſoles of your feet. And thus as you lie, you may gently ſweat, and let the ſweat be wiped off.*

And this courſe muſt be continued, til al your Nerves be ſufficiently firm and ſtrong. As to diet eat but twice a day, and that ſparingly, that your weak bowels may not be overwhelmed. Let your meats be of good juyce, and eaſie of digeſtion, ſuch as al men are wont to commend.

Eat no fiſh, or very little, but no beans or peaſe, or the like. Abſtain alſo from Fruits and herbs that are raw; from all ſuppings and broaths, and from al thoſe things, which overmuch fil and moiſten the Body. Uſe Wine that is neither very vaporous nor ſtrong, but thin and plentfully allaied with pure water, leaſt it trouble the Brain and Nerves. Abſtain from all other drink, and uſe *that* ſoberly and ſparingly. Becauſe nothing does more cool and moiſten the Nerves and oppreſs the whol Body with heavineſs, than overmuch pouring in of drink. You muſt ſleep long after meales, and avoid Noon-day Sleeps.

The *XVIII.* Counſel.

Of pulſation and hiſſing noiſe al the body over, and of Corpulency.

A Senator of *Carnote*, fleſhy and ful of blood, being thirty four years old, having a great Burgomaſters belly ſticking out, as he was lying in his bed, thought he heard a certain hiſſing noiſe, and pulſation as it were, which being evenly ſpread al his body over, did not reſt peculiarly in any one part, nor could be perceived by the touch, but only was heard both by the patient and thoſe that were with him, if they diligently liſtned. Now though this man was not troubled with any pain, nor any horrible ſymptome appeared, yet he was afraid leaſt he ſhould die ſuddenly. This Symptom as we have it declared unto us, is a vehement pulſation of al the Arteries, which is moſt of al, obſcurely heard, about the Head and Temples, as he lies in bed. And it proceeds from plenty of ſpirit and hot blood, which growing hot without putrefaction and working, ſtretches the veins, and fills the Arteries with thin and vaporous

vaporous blood, causing a sence of that same swelling, great and vehement pulsation. An argument hereof is, that if his blood either by intemperate diet, or immoderate exercise, or the fire, be a little heated and stirred; these symptomes of his are exasperated and grow worse. And therefore this is only the effect of abundance of Heat of blood, nor does it argue any more greivous evil to lurk within, nor does it threaten any worse evil, provided timely remedies be applyed. The first and cheifest way of prevention and cure does consist in point of diet. And the sick Gentleman must use very little wine, and that must be such as is weak, and wel allayed, that it may retain very little taft of wine, He must eat boyled flesh rather than roast, and dip both in juice of sour Grapes or Vinegar, or juice of Sorrel, or of Lemmons, or Pumgranates. He may profitably eat Fish, especially if they be of hard and solid substance: yet let him eat thereof, but sparingly and frugally. Sometimes especially on Fish daies, let him sup with barly Cream. Let him shun al salt and peppered meats, or otherwise spiced, and sharp, as Garlick, Onions, Mustard, Water-Cresses. Also vehement exercise of his body must be avoided, and over heating the same, also wrathfullness, and sadness; finally, al disturbances and over much intention of the mind. If by this course of Living, in the space of about twenty daies the trouble shal not cease, the weather being warm he may take some physick: and in the first place give him an emollient Clyster, the day after, purge his body with this medicament, which is also accommodated to the pain in the kidny.

Take *Pulp of Cassia six Drams*, *Diaprune Laxative one dram and half*; *Rhubarb poudered one dram*. *With Sugar make a bolus.*

On the third day, open the inner vein of his left Arm, and take away blood as his strength will beare, to ten or twelve ounces. The following daies, give him in the morning one dose of syrup of Cichory simple, and syrup of vinegar simple: out of a double quantity of water wherin Cichory and Sorrel Roots have been boyled. Moreover, let the prescribed course of life be continued, til that same vhement pulsation be quite gone, and the danger of fullness be avoided. And also nothing wil be more useful for the health of his body, than long to hold that same cooling order of diet prescribed.

The *XIX.* Counsel.

Of a Consumption of the Lungs, for a Citizen of Roan.

THe disease described is the Consumption, caused, not only by a distillation, but through fault of the Lungs, which have been long time apparently oppressed with shortness of breath, and are now so weakned that their proper substance, does not only consume, but corrupt and rot. An argument whereof is, a soft and flegmatick swelling of his foot and thighs. Moreover his now spitting of Quittor and purulent matter, argues the Consumption to be confirmed. And therefore the disease is now become uncurable, nor is there any hope. Howbeit, the life of the Patient must be lengthened as long as by Art is possible, by gentle and debonair Medicaments, which may mitigate the disease without weakening the Patient. And therefore abstain from any further blood-letting. And in case blood happen at length to break out again, it will be better suppressed, by a dram of choyce Rhubarb poudered.

Or if it shal any waies seem fit to purge, it wil be sufficient to give him Cassia Fistula, or an Infusion of Rhubarb. And his spitting must be furthered with Lenitives and Detersives, which do not vehemently open, such as Jujubes, Sebestens, Figs, Raisons, Polypody, Coltsfoor, Pimpinel, Hysop, with good store of Sugar, made up in manner of a Lick-pot. Also Electuarium resumptivum wil be good, and Unguentum resumptivum, wherewith his whol body must be anointed, evening and morning. So also in the beginning of the Spring, he must use Asses Milk, artificially prepared, which must be given him in the morning when his stomach is empty, four hours at least before meat: or if he cannot easily have the use thereof, Barley Cream, and Sugar of Roses, must in like manner be given him at the same hour. I doubt not but the rest of his Diet has been prescribed, according to the Rules of Art. Let him use meat easily to be digested, a little at a time, and often. Least he over-whelm his weak Nature, and encrease Crudities, which are the Cause of the Flegmatick Swelling.

The

The *XX.* Counſel.

The Hiſtory of the Diſeaſe written by Mſr. Crab, *the Kings Phyſitian, to the Phyſitians of* Paris, *for the Lady* De le Aubeſpine, *enclining to a Conſumption.*

THis moſt noble Lady had been now ſix months with child, ſtil ſubject to defluxions from her Head into her Breaſt: whenas after a long ſtay in the Sun, and acrimony of blood contracted by paſſions of mind, ſhe fel into a ſpitting of blood, which was much in quantity, hot, and of a flouriſhing colour, al which ſigns, ſhew, that it came from no other part ſave the Lungs, and rather by opening the mouth of a veſſel, than by breaking the ſame, or fretting it in ſunder, as things going before and following after do perſwade us. Now this ſymptom ceaſing, only by medicaments and thoſe but few, which did abate the fervencie of blood, and furniſhed with an aſtringent and ſoddering faculty, the phyſitian who was with her thought fit to abſtain from blood-letting, and other ſtronger Remedies accomodated to her diſeaſe, til being brought to bed, ſhe might more eaſily beare them through increaſe of ſtrength. But a Feaver ariſing after ſhe was delivered, which after a cholerick and putrid looſneſs, without any other phyſick, ſave an apozem to move her purgations, went away; ſhe complained of a pain in the right ſide of her Cheſt, and how ſhe could not endure to lie on that ſide of her body, with ſhortneſs of breath, and a ſence of weight if ſhe lay on the other ſide. But a few daies after, ſhe, after a little coughing, fel to ſpit blood again, and that frequently; wherefore finding her in good ſtrength, we thought fit to proceed to the cheifeſt and beſt remedies of that diſeaſe. This Method therefore we reſolved exactly to follow. Having clenſed her belly with a gentle Glyſter, out of the inner veine of her right Arme we tooke three ounces of blood. The day after we did let her blood again. And becauſe by both the bleedings thick ſlimy and half putrefied blood was voided, the ſame day, ſome houres after, we drew ſome out of the ſame vein: which Finding to be purer and more ſincere, we thought fit to ſtop it.

After Blood-letting we purged her, having Firſt given her a julep. Now her purgation was exceeding gentle, of a dram and half of Rhubarb in the infuſion, with half a dram thereof in pouder, and half an ounce of ſyrup of dried roſes. After purging we ſet our ſelves to ſtrengthen her brain, and to draw the vapors through the ſutures of the Skul, applying to the coronal ſuture, emplaſtrum ex Ammoniaco, and Pidgeons dung.

In the meane while, we did not neglect the part affected. In the firſt place therefore, we preſcribed a Clyſter, and ſtoppers of blood. And ſuch things as might heal the wound if any were, and that the thin and ſharp defluxion being thickned, might ſtop. Among which kind of Medicaments is the ſolid electuary of Terra Lemnia, and Bole-Armeniack, red Coral and Blood-ſtone, conſerve of roſes and ſyrup of poppy being added, with ſpecies of Diatragacanthum frigidum, rejecting the hot ſpecies of diapenidium as unfit in this Caſe. But that the humor allready in her Lungs, might more eaſily be purged out, preſcribed an attenuating and deterſive Cheſt-ſyrup, which might move ſpittle. Alſo a March pain made of new pine-kernels and almonds with Sugar and roſe water made up with an infuſion of gum tragant, torrel ſeed, plantain ſeed, and porſlain ſeed; which March-pain beſides that it makes one eaſily expectorate, by its aſtringency it likewiſe glues and Sodders. We added that which every body commends, the uſe of Aſſes milk, with pouder of ſugar of Roſes.

So that now we doubt not but that this noble Lady does recover by the uſe of the preſcribed remedies, nor do we fear any miſchance as long as ſhe wil follow good advice, and ſhal not neglect that courſe of diet, which ſhe hath hitherto obſerved. But in caſe by external Injuries, or ſome vehement motion of mind, a ſtrong and loud contentious ſpeaking, or untimely watchings, the diſeaſe ſhal return upon her, we adviſed her to uſe the ſame Remedies. But for prevention of this evil, we account moderate blood-letting and purging with an Infuſion of Rhubarbe, when the Spring enters, and in Autumne, to be the moſt ſpeedy and convenient Remedies in the the world, and we do exceedingly commend the ſame.

The

The Answer of Fernelius.

Hot and fresh-colour'd blood many times by fits brought up with coughing, is indeed rightly judged to come from the Lungs. But because the most noble Lady our Patient, has a soft and tender body and weak Lungs, and has been long time subject to a distillation and cough, it is very much to be feared, that a vein is not only opened, but fretted asunder (for I find no reason to think that it hath been opened by violence) yea, and seeing upon the last voidance from that part, an evident pain arose in her right side, with shortness of breath and a sharp cough, also with a certain pain of heaviness and weight, especially when she lies on the contrary side, unless she had then a true pleurisie, we have great reason to suspect, both that her Lungs are ulcerated, and that there is such a collection of matter as threatens an Impostume. Howbeit the Remedies of Art have been so accurately and diligently applied to these evils, that the sick Gentlewoman seems now to be in a good and safe condition, without any danger of a Relapse: which is to me the best and most acceptable news in the world. And therefore I conceive she ought to persist in the use of these Remedies, by help whereof she has recovered, and especially of the Milk and Barley Cream. But nevertheless, because these kind of maladies are wont to be most dangerous and deceitful, and commonly to lie long hid, under a counterfeit appearance of health, til at one time or other upon some light or no occasion, they gather Head afresh; wary observation must be made, whether any of the old malignity remain in her Breast or no, and whether she is not sometimes vexed with her cough, or troubled with a lingring Feaver, or shortness of breath. For if these things be observed, it may haply seem fit beside her morning milk, and course of diet prescribed, to give her such things as are gently lenitive, and mildly purge and strengthen the Lungs.

The disease before described, brought the Lady de l' Aubespine *to her death. For she was consumed with a lingring Feaver, the pain of her side came again, and spitting of blood, with greater shortness of breath. Her body being dissected, her Lungs were found putrified, cleaving to her Ribs, with sundry Ulcers.*

A Writing of Mr. Fernelius, *when he was to Reason with other Court Physitians, about the Sickness of* Madam de l' Aubespine, *when she came first to this City.*

When she was with child in her sixt Month, without any violence betiding her, without any distillation or foregoing cough, she began of a sudden to bring up from her breast, and spit out blood, with wheezing, but no great straining. At the same time she began also to bleed at the nose, and sometimes the blood would run back into her throat, whereas during this time of her being with child she had not before bled at the nose, though her veins did swel with fulness, and formerly she was alwaies wont to bleed, when she was great. When five daies were over, her spitting of blood stopt and went away, yet a dry cough continued without wheezing or rattling, without any difficulty in breathing in her child-bed, little or no purgations brake forth, which were afterward provoked with Syrup of Hyssop. The fift day after she was brought to bed, a most burning Feaver held her for two daies, by force whereof a light pain was raised in her right side. After this a lingring Feaver held her, scarce discernable, and a settling into her right side. A few daies after, a grievous distillation fel into her right shoulder, and into her shoulder-blade, and into that part of her side, which before had troubled her. Being the third time let blood after a purge: the pain of her shoulder and shoulder-blade, ceased. But it continued in her other side as it does stil. After which she alwaies found it troublesome to lie on her right side, and was short breathed, though she voided no blood. By all which it may appear, that the first eruption of blood, came neither from the breaking nor fretting of a vein, but only a Vein was opened through immoderate plenty of blood. And that was only in the right side of her Lungs, from which she felt blood to drop, when she lay on her right side. After which came the distillation, which falling on her right side, caused that pain; so that there is a conjunction of two diseases, the one in her Lungs, the other in her right side. And besides these diseases, her Liver is also over hot and obstructed, with a light pain and hardness, and her right Kidney is sometimes afflicted with Nephritick pains.

THE

The XXI. Counſel.

Touching ſpitting of blood from the Lungs with a cough. For Mſr. de Baumont *fifty yeares old. Tranſlated from the French,*

THat you may receive ſome eaſe of your ſhortneſs of breath, and that it may be hereafter prevented, leaſt you fal into a Cough and ſpitting of blood, and that in ſo great quantity as lately happened: you muſt uſe al diligence in ſhunning vehement exerciſe, great heat, wrath, and other perturbations of mind. Alſo you muſt abſtain from ſtrong wines, and hot meates, ſalted or ſpiced, and al other occaſions, which may over-ſtir or heat your body. Nor muſt you eat or drink liberally. Moreover four times in a year, when the ſeaſon is moſt convenient and on ſome fitting daies, your body muſt be purged with the underwritten bolus, and it wil be good to take conſerve of roſes frequently, when you are going to bed. But if your ſpitting of blood ſhould happen to returne; it wil be convenient after a gentle lenitive to open the baſilica Vein in your Arme, which is beſt for the fluxion into your ſide. And the day after to drinke a little potion with roſted rhubarbe in it. And frequently to uſe every hour, a familiar opiate ſuch as was long ſince preſcribed for you, til the ſpitting of bood ceaſe. And in the mean ſpace to abſtain from wine, and quench your thirſt, with the Julep of roſes, or with ſyrup of myrtles, or of porſlane.

The Bolus.

Take *Pulp of Caſſia new drawn ſix drams. Rhubarb poudered one dram and half. Electuary of Diatragacanthum frigidum or white ſugar, as much as ſhal ſuffice. Make al into a bolus.*

The Potion.

Take *Rhubarb toaſted one dram and half. Syrup of dryed roſes ſix drams. Plantan water four ounces. Mix them into a potion.*

The Opiate.

Take *Conſerve of dried roſes one ounce. Bole-Armonick three drams. Terra Sigillata two drams; red coral, amber, harts-horn burnt, of each half a dram. Syrup of myrtles as much as ſhal ſuffice. Make al into the forme of an Opiate, or of a Lick-pot.*

Alſo for Prevention, though you void no blood, you muſt often take of this Electuary,

Take *Conſerve of roſes and comfrey, of each half an ounce. Trochiſks of amber and of Terra Sigillata, of each one ſcruple. Red coral, choice pearl, of each half a ſcruple; Sugar of roſes, as much as wil ſuffice. Make al into an Electuary. Let him take a ſpoonful, an hour before meales.*

If blood ſhal breake out again, the uſe of Bole-Armenick, wil be very profitable. And afterwards, when it is ſuppreſſed, your Lungs muſt be ſtrengthened, gently purged, and cleanſed with this following Syrup.

Take *Stoned Raiſons one ounce; Polipody of the oake, ſcraped Liquorin, of each two drams: Colts-Foot, Scabious, pimpinella, Knot-Graſs, of each one handful. Seeds of Marſh-mallowes and of cotton, each one dram. Make a decoction to a pint, in the ſtrained liquor diſſolve nine ounces of white ſugar. Make it into a ſyrup of an indifferent body. Let him uſe it every hour and at all times out of a ſpoon, without any waters. It ſtrengthens and cleanſes the Lungs.*

For another in the same Disease.

Against his thirst, let him use the julep of roses, with four times as much boiled water mingled with it, or Syrup of Juniper, myrtles, and purslane, after the same manner.

Also, *Take Of the powder of Electuarium Diatragacanthi frigidi, one dram and half; Yellow sanders Harts-horn, of each two scruples; Choice rhubarb two drams, white Sugar dissolved in rose water, three ounces and an half; Make all into Lozenges or tables. Let him take one of them, one houre before supper.*

Also, *Pils of Rhubarb are good, and a fumigation when he goes to bed. Likewise Conserve of Comfrey and Roses, each one ounce. Trochisks of bole, half an ounce; Syrup of myrtles as much as shall suffice. Make all into an opiate.*

The XXII. Counsel

For Mr. Sigismund, troubled with extream shortness of breath, called Orthopnæa.

UNderstanding by your Letters (most renowned *Sigismund*) that you earnestly desire the recovery of your health, and that you place great confidence in me to that end; I find my self vehemently allured and provoked, according to my slender Learning and experience in the Art of physick, to endeavour all I can to help you. I account it verily a miserable and sad condition, for a man truly ingenuous in his manners, and of remarkable learning, most apt for employment in the Common-wealth, in the prime of his youth, to be so tormented and insnared by the cruelty of one disease, as that he is thereby taken off from all excellent Employments whatsoever. I have therefore sought out, and devised for you a very easie method of Cure, and a few remedies, which by Gods blessing may deliver you from this grievous bondage, and that sweetly and gently, according to your desire, without any offence, either of your brain or Lungs. The Disease propounded, is that which we cal Orthopnæa, returning at certain seasons, the distances whereof I wish I had been acquainted with under this disease, the Lung-pipes are already somewhat obstructed, with thick and clammy flegm, wherewith the very substance also of the Lungs seemes to be stuffed in some Measure. And as often as any new distillation from your Head fals thereon, it doubles the obstruction, fils the windpipes, stops the breath, and makes very great shortness of wind, which persists so long, til the newly fallen fluxion is either dissipated, or concocted and spit up. There are therfore two principal scopes of the cure: one that the distillation may be driven from the lungs; the other that the lungs may be freed from that wherewith they are already stuffed. To attain the former, our cheif care must be to diminish the matter of the distillation, and to endeavour that hereafter, as little as may be come in the place thereof. Now this may be done, if a thin, Sparing, drying diet be observed, and you eat but twice a day, not of suppings, broaths, and such like liquid meates, but of dry and solid things, most commonly of roast flesh, such as is of good juyce, and easie of digestion. You must abstaine from all fruites, excepting from raisons, figs, prunes, and almons. Let your drink be white wine or thin claret, not too strong nor Vaporous, and sufficiently allayed with water that it may not flie into the Head, and fil the same. Never eate so, as to satisfie your self; drink very exceeding sparingly and oftentimes endure thirst; that by this course of diet, all superabundant humors may be drawn out, and your whole body grow lean, and your head it self, the fountain of this evil, become dry. You must by little and little accompany your self to these rules, wherein the chief force as wel of cureing as preventing the Orthopnæa is placed. It wil be exceedingly conducing to your health, to continue and most punctually to observe the same al your life. Nothing is so grievous and molestful, which custome wil not render easie. And because diet alone, though punctual enough, can hardly draw out al the impurity of a body which has been now a long time crazy, purgation must also sometimes be used; especially at the Beginnings of the four quarters of the year. It may be in the beginning of winter and spring, with pils of Agarick and pils cochy; but about the beginning of Summer and Autumne, by such a like potion as this.

Take

Take *Sage and betony water, and white wine, of each one ounce; infuſe therein choice rhubarb, Agarick trochiſked, of each four ſcruples; in the expreſſed liquour diſſolve diacarthamum two drams; Syrup of Hiſop half an ounce; Make al into a potion; Let him take it in a choſen day and hour.*

If the time of the future fit be certain and fixt, the purge is to be taken eight or ten daies before. Or if peradventure it ſet upon a man on a ſudden; at the very beginning of the fit he muſt be ſtrongly purged, that the matter which flowes in may be rooted out, before it faſten it ſelf into the Lungs, and if one purge cannot do the deed, another muſt alſo be given, til the whol defluxion be rooted up and ſtopped. Every morning your head muſt be dried and rubbed, either with rough Linnen Cloaths, or ſomtimes with ſuch bags as follow.

Take *Aniſeed, Fenel and Cumin ſeed, of each two ounces. Bayberries bruiſed one ounce. Milet one pound. Common ſalt half a pound. Frie them in a frying pan; then put them preſently in a bag, wherewith your Head muſt be rubbed hot.*

After the rubbing of your head, let flegm and ſnevil be every morning drawn out of your noſtrils, and with the vulgar and common medicaments uſed to that end. Somtimes you muſt move ſneezing, that a revulſion to your noſtrils may be made of ſuch humors as are wont to fal into your throat, and Lungs. You muſt uſe moderate recreation, eſpecially in the morning, and before ſupper, or at leaſt, inſtead of exercise, hard and rough frictions of your body are to be uſed. Let afternoons ſleep be avoided, and ſleep but little in the night. Lie never on your back, but only on one ſide that the excrements of your brain, fal not into your throat and wind pipes, but may run to your noſtrils. Shun the Aire when it is moiſt and cold, cloath your head wel in the winter, that it may not feel the Injuries of cold. Alſo your head may be ſmoaked with odoriferous materials, hot, drie, and ſtrengthening, as Nigella Romana, Storax, Benzoin, Ambar and Roſes. Theſe few precepts therefore of regulating your ſelf, muſt be obſerved after your cure, al your life long, that you may not ſo eaſily ſlip into this diſeaſe again, whereunto you have been accuſtomed. And now I come to the proper and peculiar Cure, which by the help of medicaments may remedy the vitious conſtitution of your body. To this Intent you muſt chuſe a time between your fits when being delivered from one, you did not feare to fal immediately into another: and this time of cure ought to be about thirty daies. In the firſt place therefore, the former courſe of life being undertaken and punctually obſerved, your belly muſt be looſned with a Clyſter, of an emollient Decoction, with Hierapicra ſimple, and diaphenicon, each one ounce. Honey of roſes and roſemary, of each one ounce. Oyle of Anis-ſeed three ounces. The day after purge with that potion, which I before deſcribed. After that, the remaining humors muſt be purged, with this Apozem.

Take *Polypody of the Oake, Carthamus ſeeds, Roots of Elecampane and Fennel, Raiſons cleanſed, of each half an ounce. Savin, Betony, Stechados, Hyſſop, Savory, Coltsfoot, Time, of each one handful. Seeds of Annis, Marſh-mallows, and cotton, and of Lycorice, each two drams. Make an apozem for four doſes, clarified and aromatized, with a dram of choice cinnamon. Let him take it twice a day, two hours before meals.*

This Apozem muſt be continued five or ſix daies, and the mean time if your belly be bound, looſen it with a Clyſter. And at laſt purge again, either by a potion, or by pils. Now ſuch a potion as this wil be exceeding good being fitted both for the head and lungs.

Take *Polypody of the Oake, Carthamus ſeed, Elecampane roots, cleanſed raiſons, Senna, of each three drams. Make a decoction for one doſe, in the ſtrained liquor infuſe agrick trochisked one dram and half. In the expreſſion diſſolve diaphenicon two drams. Syrup of hyſſop half an ounce. Make it into a potion, take it faſting, four hours before meat.*

When by theſe medicaments, and a ſparing courſe of diet, he ſhal appear ſufficiently emptied; remedies proper to the head may be then ſeaſonably applied. Being therefore polled to the skin, every morning and an hour before ſupper, it muſt be rubbed with ſuch bags as I formerly deſcribed exceeding hot, and they muſt be endured til your whol head feel hot: and then if it may not ſeem troubleſom, it wil be very good for you to uſe the decoction of Guajacum for eight daies. And that is to be took in the morning, and three hours before ſupper; and when by force thereof you find your ſelf to ſweat, then the bags very hot may moſt ſeaſonably be applied to your Head. Your ſweat being wiped off, before you take meat, let the ſnevil and theume be drawn out of your head after this manner.

Take *Sage, Betony, Marjoram green, of each an handful; Orice root an ounce; beat them together, and at last pour on white Wine and Hydromel of each two ounces.* Squeeze out the Juyce, snuf it up into your Nostrils, having first blowed your Nose, and if this shall not draw enough, make use of this more potent Errhine following.

Cut two peices of the root of Bindweed like two plugs or stopples, two fingers broad in length, steep them in Aqua vitæ, and put them into your Nostrils, first into the right, and then into the left, and suffer them there to abide til the Rheume run down abundantly on either side.

Also sneezing may likewise be provoked, by the violent motion whereof, the excrements of your brain may be derived into your Nostrils, and all the evacuation of your Head drawn that way. To which intent neither Cupping-glasses nor Apophlegmatisms wil much avail: for the former do very little purge the Brain, and the use of the latter is not very safe, because they bring the Rheume into the Throat, from whence it should rather be revelled. When for the space of about eight daies your Brain shall be sufficiently purged, shave your Head, and lay on this plaister, which powerfully stops and dissipates all fluxions.

Take *fat Figs and sharp Leven, of each half a pound; seeds of Agnus Castus, and Water-cresses bruised, of each one ounce; Mustard seed bruised two ounces; of the plaister of Mucilages, four ounces: soften and incorporate them, adding Oleum irinum as much as shall suffice. Spread hereof a plaister upon leather and lay it all over your Head, and let it be renewed every morning.*

It will by little and little draw al the moisture out of your Head, which neither Cantharides applied to the Hinder-head, nor an Issue made in the fore part of the Head at the lunure, nor letting blood in the Fore-head Vein, can effect. While you wear this plaister, the Cure may be directed to the latter scope or Intention, and the stoppage of your Lungs opened by this Apozeme.

Take *roots of Elecampane, Polipody of the Oak, Carthamus seeds, cleansed Raisons, of each half an ounce; Hyssop, Savory, Time, of each one handful; Senna one dram and half. Make a decoction to half a pint, adding towards the End Agarick trochicked half an ounce: Orice root of Florence three drams. In the strained liquor dissolve white Sugar, the best honey, of each one ounce. Make an Apozeme of three doses. Let him take it every other day, four hours before dinner.*

When you have tooke the Apozeme, take off the Plaister, and keep your Head very warm, and let the rest of the Cure consist in the use of those things which smooth and comfort the Breast and Lungs: such as is this Cough-syrup following.

Take *Jujubees, Sebestens, fat Figs, five of each: Polipody of the Oak, Carthamus seeds, Raisons stoned, Elecampane roote, of each half an ounce: Origanum, Calamint, Hyssop, Savory, Time, of each one handful: Seeds of Marsh-mallows and cotton, of each three drams. Make a decoction in Hydromel to a pint. Make a Syrup perfectly boiled, clarified, and aromatized with Guajacum and Florentine orice Root, of each two drams. Use it often in a spoon, licking, and swallowing it down by little and little.*

For the same intent and purpose, this following Wine is excellently good, and profitable, which being taken in the morning, does also strengthen all the faculties of the body.

Take *the best white Wine, Hydromel perfectly boiled, of each one pound: Infuse therein, Elecampane root, and Polipody of the Oak cut smal, of each two drams: Let them so stand, and after twenty four hours, let him take every day four or five ounces, at least three hours before Dinner.*

This Course of Cure, though easie, nor intangled with difficult and burthensome Medicaments, wil yet be sufficient to chase away this stubborn Disease. But if nevertheless any shadow thereof shal happen to return, at the very beginning, you must strongly purge with the foresaid Medicaments, and in the very fit the bags must be applyed very hot to your Head, and lick Oximel Squiliticum, and sometimes a little Aqua Vitæ: for this readily helps, especially if your purge have brought away good store of watry and serous excrements. And because stubborn and long lasting maladies, can be hardly universally and suddenly rooted up, if any thing shal remain after the Cure, let it be by little and little taken away, with the good Diet before prescribed, and such purgations as are accommodated to the several seasons of the year. These things verily wil hinder you from easily relapsing into your former Infirmities, as commonly it happens.

THE

The *XXIII.* Counsel.

Touching the Asthma, *or Tisick, for a Spaniard of* Bridges.

This old *Asthma*, as it is represented to me, proceeds from two causes; the one is a pertinacious obstruction of the Lungs and Wind-pipes, caused by degrees through flowing in of Rheum, which is now so hardened, that the greatest part thereof resembles hail or pretty hard cheese; another Cause is a distillation from the Brain, falling plentifully at certain periods upon the Lungs, by which the straitness of the Lungs is for the most part obstructed, and then respiration is rendred exceeding difficult, and a true Asthma, or it may be an Orthopnæa happens, which continues two or three daies, til a portion of the distillation be voided by cough and spitting. The Prevention therefore of the Fit, and the Cure of the whol Disease consists in these things following. The third or fourth day preceding the suspected Fit, we must purge him with a good strong purge, which may evacuate all the humor which causes the fluxion out of the Brain, and other parts; such as this following.

Take *Sage and Colts-foot Water, and white Wine, of each one ounce. Infuse therein choice Rhubarb four scruples: Agarick trochisked one dram, Cinnamon half a dram, in the liquor squeezed out, dissolve a dram, or two drams of diaphenicon, and half an ounce of Syrup of Hysop. Make all into a Potion, give it on a day and hour convenient.*

The day following, derive the excrements of the Brain through the Nostrils, with this Errhine, or Nose-liquor.

Take *Betony, Sage, Marjoram, of each one ounce: Orice root half an ounce. Beat all together. Then pour thereon four ounces of white Wine, squeeze out the juyce, and make an Errhine, or Caput-purgium.*

Let him use it in the morning and before supper, and let him so accustom himself, to derive the flegm of his Brain, through his Nostrils by frequent and continual errhines. To bring it by Apophlegmatisms through his palate is not safe, because that way is near to his Throat, by which the fluxion and distillation fals into the Lungs. Nor can Setons, so called, or Ulcers raised in any part, though they flow never so long, bring any useful derivation (for so I have known many deluded) but the most effectual, and most profitable one, is that which is made the natural way, and according to the custom of Nature, by the nostrils. At the same time, his Head being also shaven, or close shorn, must dayly be rubbed with such things as dry, and dissipate cold excrements, and corroborate the brain it self, that it may not hereafter breed so many excrements.

Now it may be done after this manner:

Take *Sage, Betony, Stœchados, Rosemary flowers, of each one handfull: Juniper berries two ounces: Seeds of Annis, Cummin, bay-berries bruised, of each an ounce: Millet one pound: Common Salt half a pound. Fry all in a frying pan, and then put them in a bag, which must every morning be applied hot to his Head.*

If after three or four daies, the signs of a distillation shal appear, or the sick Person shal not be sufficiently purged, give him the same purge again. And if neither by these Remedies, the fit can be kept off, but that it wil return as formerly, or more weak; give him in the Fit it self Syrup of Hysop, or Oxymel of Squils, or Conserve of Elecampane. Anoint his Breast with Oyl of Lillies, of sweet Almonds, and Dil, with a Mucilage of Fœnugreek, extracted in Scabious water. And let his Head be rubbed, and his neck, with the bags prescribed, very hot. Give him very sharp Clysters, with a thin and attenuating Diet. We conceive 'tis best for him to abstain hereafter from blood-letting; for though it sometimes help the Symptome, yet it is a very great Enemy to the Cause, and the cold distillation. These therefore are the chief Remedies, wherewith we help the Head, as being the Fountain that sends forth the Humor. And that the other Cause of the evil may be removed, which is rooted in the Lungs; when the Patient shal be free from his Fit, let him mollifie the thick flegm of his Lungs, and cut, and scour the same away, with this Syrup:

Take

Take *Marsh-mallows, Elecampane, Polipodie of the Oak, Carthamus seeds, Raisons stoned, of each half an ounce. Jujubes, Sebestens, fat figs, of each five in number. Hyssop, Savory, Origanum, Calamint, Pimpinel, Coltsfoot, Maiden hair, Scabious, of each one handful; Seeds of Marsh-mallows, Mallows, Cotton, Lycoris shaved, of each two drams: boyl them al to fifteen Ounces. In the strained liquor dissolve fifteen ounces of white sugar, make a syrup perfectly boyled. Let him take it every hour out of a spoon in manner of a lick pot without waters.*

The humors being prepared, let him every fift or sixt day, gently purge them forth, with this other syrup.

Take *of the decoction of the foresaid syrup, fifteen ounces; wherein infuse Senna, Agrick, each three ounces; white Ginger one dram. Orice roots of Florence, half an Ounce. Then Boyl them a little and strain out the Liquor, wherein dissolve fifteen ounces of white sugar, and make al into a syrup perfectly boyled. Let him take two ounces for a dose in Barley water.*

Also during the whol time of cure he must keep a convenient diet, wherein al such things must be avoided as breed a thick juice, as oxe flesh and swines flesh: the feet and remote parts of animals, and in a manner al Fishes and Cheese. Al windy things, as Beans and Pease, much use of of herbs, crude fruits, such especially as wil not keep, such things which treasure up watery humors, and the matter of the distillation, as cheifly immoderate drinking, much and frequent supping; so that by al means the body may be made dry and less excrementitious. He must therefore use fleshes of good juice, and they roasted, rather than boild: must drink very sparingly, and abstain from water, because it breeds crudities and cold humors, and fastens the humors which are setled in the lungs and other parts; he must resume the use of wine which he had omitted, and use that sort which is least vaporous, and does not trouble the head, and allay it wel with water. Other things which may be desired as to point of diet, may easily be collected, from what has been said, which must al encline rather to heat than to cold, unless there be great suspition of a hot Liver. When the patient shal have diligently continued in the use of what has been prescribed for forty or sixty daies together, and rid away the grosser part of the morbifick matter; that the remaining root may be quite plucked up, it wil be very profitable to put him upon a diet drink of Lignum Sanctum, but let it be made after this manner.

Take *Shavings of Guajacum or Lignum Sanctum half a pound. Bark of the same two ounces. Infuse them twenty four hours in six pints of water, then make a decoction to two pints, adding towards the end Betony, Sage, Marjorom, Stœchados, of each one handful. Polipodie of the Oak, Raisons stoned, of each half an ounce. Straine out the liquor. Let him take five ounces for a dose blood-warm, at five a clock in the morning, and at four in the afternoon, wel covered in his bed: and let him eat three hours after.*

Also, Take *Shavings of Guajacum half a pound, Infuse them twelve hours in ten pints of water. Then make a decoction to five pounds; strain out the Liquor, let him use it at his meals, and when he is thirsty, instead of wine. When he shal use this course of diet, he must be purged every fift or sixt day, with the syrup aforesaid, and that day abstain from the foresaid drink. Also as he lies in bed, he must have the hot bagg applied to his head, that he may procure Heat if not sweat in that part. Also he must frequently use the Nose-liquors or Errhines.*

The *XXIV.* Councel.

Of the Cough.

THis frequent and molestful Cough, which brings up thick putrid, stinking, and oftentimes bloody matter, and is attended by a non-nutrition and falling away of the body, argues a grievous disease of the Lungs, viz. either an impostume, or an ulcer, which brings a man to a true phthisis or Consumption of the Lungs; in which respect, the Issue of this disease, is not only doubtful, but ful of feare and danger, which can be by no Art avoided. Seeing, he has been divers times let blood, I conceive 'tis best to abstain from phleborotomy hereafter

after, leaſt his languiſhing ſtrength be too much abated. When his ſpitting of blood ſhal prove more immoderate than ordinary, it muſt be ſtayed by a potion, of four ſcruples of choice Rhubarb, half an ounce of ſyrup of dried roſes, with three ounces of Lambes-tongue-plantaine water: and the ſaid potion wil be much more effectual if the Rhubarb be toſted. Other aſtringents of Bole Armeniac, and Coral, and Bloodſtone, and ſuch like, are not now uſeful; but al endeavor muſt be uſed, that his ſpittle and flegm may come up moſt eaſily, with ſyrups and other Cough-medicines, very ſmooth and gentle, and with meates and al matter of diet, of like nature. For al ſharp, ſalt, biting things, are to be avoided, and whatever lie tickling, or through its acrimonious quality may exaſperate his Cough: alſo wrathfulneſs, loud ſpeaking and outcries, with immoderate exercile, becauſe theſe are the things which tear aſunde the Lungs, and rub open the ulcer.

The XXV. Counſel.

Of the Palpitation of the Heart.

THis palpiration of the Heart (as it is largely, plainly, and faithfully deſcribed) ſprings not from over great ſtore of Blood; not from a watry humor preternaturally ſhut up in the Pericardium or Heart bag, not from any ſmal bunch growing thereto, or any other of thoſe cauſes celebrated by the Ancients, which preſs the Heart by their weight; but from a diſeaſe in the left hypochondrium, out of which I have for the moſt part perceived this diſeaſe to proceed. For there lies both the ſpleen, and the ſweet-bread under the bottom of the ſtomach, and other neighboring parts are ful of naughty humors, not ſimply melancholick, which is as it were the dreggs of the blood, but rather black cholerick; which have grown together by little and little; of yellow choler aduſt, and caſt into thoſe parts: which as often as by Anger, Exerciſe, ſtrong wine, or hot meats, it comes to be ſtirred, it breaths out an ugly and melancholick ſpirit, which entering into the Arteries (of which there are many al the ſpleen over) it eaſily creeps into the neighbouring Heart. The heart being vexed and provoked by the malignity thereof, endeavors by palpitation to caſt from it ſelf that which is hurtful and troubleſom, even as the brain does in the falling-ſickneſs. Part of the vapor being carried higher into the Brain, breeds watchings, dreams, frightments with Hobgoblins, ful of feare and ſorrow, as if there were ſome admixture of Melancholy: and the truth is, this diſeaſe, which is the original of al the evil which the patient complains of, is very like that which cauſes hypochondriacal melancholy. For Crudity of ſtomach, ſour belchings, abundance of winds breaking out above and beneath, rumblings of the belly, and ſuch like ſymptoms, which do moſt of al ſhew themſelves in the patient when he eates any hot meats, are in no wiſe cauſed by a primary fault in his ſtomach; but by conſent, and through plenty of black choler aboundidg in the left hypochondrium, and about the ſtomach; in which parts, peradventure a man may feel, ſomwhat contracted or bent hard, painful, or pulſative. Hence alſo did precede that ſame great extenuation of body, long feaver, lingring, continual, and like an Hectick. But the ſureſt ſigne of al is, that al the ſymptomes grow milder and the patient is much bettered by medicaments purging burnt choler, by looſneſſes, and breaking out of the Hemorrhoides. That therefore by imitation of theſe the reſt of the cure may be compleated, I advize that he uſe frequent and gentle purges, ſuch as the ſyrup now preſcribed. To which nevertheleſs ſomtimes a dram of Rhubarb may be mixed: and that ſame purgation, which he is ordered to take twice a week, wil be more effectual and profitable if he ſhal take it two dayes together one after another; if his ſtrength permit, he may take it oftener; but if not, when he is coſtive let him at leaſt uſe a lenitive clyſter. The day after his purgation, four or five hours before meat, you muſt give him one dram of old Mithridate, mingled with a like portion of conſerve of Bugloſs. And that the Evacuation of the hurtful humor may proceed the better, it wil be good (eſpecially if any ſuch thing ſhal be found there as aforeſaid) to foment the left hypochondrium, every morning, and perhaps before ſupper alſo, with this preparatory decoction.

Take *Roots of Althea, Lillies, Fennel, Capars, of each one ounce. Mallows, Violets, Ceterach, Wormwood, Mints, Melilote, Chamemel, Dil-tops, each one handful. Seeds of Anis, Line, Fenugreek, each half-an ounce. Cyperus, Calamus aromaticus, each two drams. Make of al a little bag; boyl it in a ſufficient quantity of water, wherein*

let

let a new and ſoft ſponge be ſteeped, to foment his left hypochondrium. If the place being wiped be afterward ſmeared with this following Liniment, it wil alſo not a little help.

Take *Oyl of Violets, Lillies, and Chamomel, waſht in Vinegar, of each half an ounce, Mucilage of Fleawort ſeed, and Fenugreek extract in Bugloſs water, one ounce. Wax a little quantity, make al into a Liniment.*

Moreover he muſt continue that Electuary, which he has already happily experimented, to mollify the ſymptomes of choler; and that only on thoſe daies, in which he neither takes ſyrup nor mithridate. And for the ſame purpoſe, and to quench his thirſt (if he have any) this ſyrup may be made, which wil alſo be exceeding good, as often as either ſwouning, or palpitation of Heart troubles him. Now it muſt be mingled with three or four times ſo much diſtilled water.

Take *Juices of Bugloſs, Borrage, and Sorrel, of Lemmons and Pomgranates, of each three ounces; white ſugar ſixteen ounces. Make a ſyrup, boyled to an indifferent height, over a gentle fire, and aromatized with two drams of yellow ſaunders.*

As to matter of diet, the patient muſt be warned, to be very ſpare in the uſe of wine, which muſt be neither vaporous nor generous, and allaied with much water wherein Bugloſs flowers have been ſteeped. He muſt wholly abſtain from things ſalted, peppered, muſtard, garlick, Onions, and from al hot meat: alſo from Milk and al things made thereof, and what ever meats are ſoon corrupted. Suppings are eſpecially good of the broath of good juiced fleſh, which muſt be altered with Bugloſs, Borrage, Lettice and Sorrel. He ſhal ſometimes ſup with Almond milk made of barley creame, and tweened with ſugar without drinking any wine before or after. For by this means the Humors become mild and gentle, and good juyce comes in place.

The *XXVI* Counſel.

Nummedneſs or Inſenſibility of the Stomach.

THe cheif ſymptomes whereof this patient complains, are weakneſs of body, and inſenſibilty of ſtomach. Moreover, this weakneſs muſt needs have its cauſe in ſome principal bowel: and that ſame bowel wherein that cauſe quarters, is the ſtomach, by fault whereof, the body is not nouriſhed. For that ſame nummedneſs or Inſenſibility, whereby the goodneſs and comfortableneſs of the meat is not perceived, ſhews that the ſtomach is grievouſly diſordered; and that either by thick, clammy and vicious flegm, ſticking to thoſe inner coates or from a cold diſtemper, whereby the ſence thereof is laid aſleep as it were and dulled, and the latter opinion is the more probable. For when as the ſtomach is ſcoured many times with accommodated medicaments, and perfectly cleanſed, and yet its natural ſence is not reſtored, but the ſame diſpoſition remains, and preſently the ſame plenty of flegmatick humors grow there again, it muſt of neceſſity be concluded, that it is benummed, by a cold diſtemper; by which the greateſt part even of good meat, is turned into a clammy, roaping, and very crude humor.

The Cure.

Let his diet be hot and dry, wherein let him abſtain from ſuppings, and al boyled and moiſt meats and barly broaths; yea and from Gellies too; alſo from al fruits, excepting Raiſons of the Sun. Let him uſe the fleſh of little birds, Partridges, and Capons cut into bits, out of a preſerve or ſawce which has a little cinnamon and nutmeg, and let al be roaſted. And if he cannot bear theſe ſolid meats, let him take the juice ſqueezed out of roaſted Capons. Let his wine be ſtrong, that it may warm his ſtomach. Let him uſe no other purging medicament but aloes; and of that let him take half a dram with ſyrup of wormwood, reduced into three pils, an houre before meat, twice a week. In the daies between, let him take a clyſter, which beſides other things, has ſix drams of Hiera ſimple. Alſo on ſuch daies as he ſhal not uſe his pils, let him take the quantity of a nutmeg of green ginger, in the morning, and an hour before ſupper.

Item

Item. Take *Wormwood, Mints, Red Roſes, of each one handfull: Calamus Aromaticus, Cyperus, and Ceterach, of each two drams. Boyl them in water, adding in concluſion half ſo much white Wine.*

Foment his Stomach herewith, morning and evening with a new Spunge. Alſo noint the Region of his Stomach with Oyl ot Nutmegs: and then apply a convenient Plaiſter. And if theſe things ſhal not do the deed, apply to the Region of his Stomach, a cloth dipt in ſpirit of Wine, and heated: for that is judged the moſt excellent Medicament in a Nummedneſs and Palſey.

The *XXVII.* Counſel.

Of a Windy pain in the Stomach.

THis vehement pain of the Stomach coming by fits, proceeds from much wind, which when the pain is going away, does wont to break out with belchings. Now crudity ingenders this wind, which the Stomach plentifully gathers in time, and which ſomtimes it caſts out by vomit. But the weakneſs of the Stomach alone, is not the total cauſe thereof. But the Cauſe is to be ſought higher in the Liver, for it is both wholly diſtempered, and much obſtructed, and has a Vein broken or eaten aſunder, out of which blood came in times paſt, and not many daies ſince, and was voided by vomit. By which Cauſes al digeſtion is corrupted, and many Diſeaſes uſually threatned to the Stomach and whol body. But this Diſeaſe, if it be not diligently cured, is the fore-runner of a Dropſie, or Cachexy, or ſome more grievous Diſeaſe. Many Remedies may, truly, be propounded againſt Crudity, which nevertheleſs I dare not allow in this Caſe for fear of hurting the Liver. For neither ſtrong Openers, nor Deterſives, nor Medicaments of Hiera, or of Aloes, are fitting in this caſe, becauſe they grate upon the Veins, and open their Mouths; out of which afterwards the blood iſſues. Therefore, I conceive no Medicament ſafer than Rhubarb, which purges both crude flegm and choler, opens Obſtructions, and ſtops the blood, if every third or fourth day, half a dram, or two ſcruples thereof be given, reduced into moſt fine pouder, in white Wine, or Plantane Water: or in form of Pils two hours before meat. No purgation wil be found ſafer, and more efficacious for to prevent the pain. It wil alſo ſomtimes be good to ſoften his belly with a Clyſter. Alſo this following Electuary, wil wonderfully ſtrengthen the Stomach, and the good digeſtion of the Liver.

Take *Red Roſes, yellow Sanders, Cinnamon of the beſt, of each four ſcruples: Choice Pearls, Red Coral, Harts-horn, of each one ſcruple: Sugar diſſolved in Roſe water, four ounces. Make all into Lozenges, weighing two drams apiece.* Let him take one in the morning, another in the evening before Supper.

If peradventure his pains ſhal return more violent, they muſt be aſſwaged with a Fomentation of Roſes, Balauſtians, Mints, Wormwood, Chamomel, and Annis ſeed, boiled in Water and white wine. Other Medicaments muſt not be uſed, unleſs great neceſſity require, for fear of thoſe things formerly expreſſed. Among other things pertaining to his courſe of Life, let him ſhun labor and immoderate Exerciſe, whether by running or hard riding; let him ſhun baths, liberal and over much eating, and drinking of wine: alſo al meats very hot and biting.

The *XXVIII.* Counſel.

Touching pain of the Stomach, for Mſr. De Lauzun.

THat Symptome which moſt of al troubles the Patient, is a long laſting pain of the Stomach, more frequent and tedious in Summer than in winter. Searching out the Cauſe hereof, beſides thoſe things, which I am informed as touching the ſigns, I obſerved with my hand a mighty hardneſs, ſpread out from the bottom of the Stomach to both Hypochondria. Suſpecting this to be the cauſe of the pain, I thought good to try what matter it was that cauſed this tumor: and having given, after a Clyſter, a Medicament only of Rhubarb, the ſtools

came away firſt thick, reſembling pitch; then like diſſolved Caſſia; afterwards red, very like to thick and dreggy blood: which when they had continued of their own accord, two or three daies, it was by the Judgment of al concluded, that they were not melancholick, but bloody dejections proceeding from ſcorched and burnt blood, which eating aſunder, or opening a Vein, was fallen into the hollow part of the Liver, and the Pancre. or Sweet-bread. This blood congealing without the Veins, and putrefying, has cauſed both the tumor and the pain, the fainting Fits, and the lingring Feaver, and other Symptoms. Nor verily, can I after diligent Inquiſition, find any other cauſe of theſe pains and ſymptomes. That ſame black and burnt blood being voided, the pains abate by little and little, and the Gentleman ſeemed without pain, above twenty or thirty daies. But happening to exerciſe himſelf more vehemently than ordinary, and to grow extream angry, ſoon after he began to be vexed with new pains, like the former. And then giving him another Medicament to purge, the like black Stools came away, reſembling burnt blood, which ceaſing, his pains ceaſed likewiſe. Hence the Cauſe of the pain was evidently known, and it was apparent, that blood came by little and little out of ſome Vein, eſpecially when the Patient was heated, or fel into any vehement perturbations of body and mind; which being gathered together into ſome certain place, and clottering and putrefying, by its malignant ſubſtance and vapor, it cauſed al theſe Symptoms; to which cauſe alſo ſtore of winds is added, being ſhed forth into ſundry parts of the body. This Diſeaſe, if it be not timely cured, threatens ſudden death, or the Dropſie. The beſt way of prevention is, for the Gentleman to abſtain from al thoſe things, which make the blood hot or thin, or which violently move the ſame, or by any means make it break out of the Veins. Such are, Vehement and unſeaſonable exerciſe of the body, anger, wrath, fear, and other diſturbances of the mind: thin and ſtrong wine, muſtard, ſalt things, and al things which are peppered, and al Sawces made thereof. Alſo heating the body, either by extream heat of weather, or by the fire, or baths, or by any great commotion. He muſt therefore abſtain altogether from al theſe things, that very little or no blood may hereafter be ſhed out of the veins. But if al this wil not ſerve to prevent the Diſeaſe, ſo that ſome Rudiments of the Swelling and pain may hereafter appear, as it were in a ſet courſe or period of time; then al ſpeedy help muſt be applied: Firſt with an Emolient Clyſter, and then with a purge of Rhubarb only, or ſometimes Senna added thereto. Let him abſtain from Agarick, and eſpecially from aloes, or Hiera Picra, that they may not open the mouths of the Veins. To which Remedies if the Diſeaſe give not way, a Vein muſt be opened in the inmoſt part of his Arm, and that for revulſions ſake, yea, and though the Diſeaſe ſhould not trouble him, it would be good, twice every year to open a Vein, at the beginning of the ſpring and Autumne, to abate the boyling fervency of the blood. To the ſame purpoſe alſo thoſe Syrups are good which we have preſcribed, of the juyces of Endive, plantane, Knot-graſs, Roſes, Sorrel, and ſour Grapes: or if a more effectual ſtopping of blood be requiſite, give him that pouder which I preſcribed in form of an Electuary, and theſe things are good to reſiſt the cauſe. But the grievouſneſs of the pain we muſt leniſie and aſſwage with a Clyſter, which wil draw away the winds, which I know are ſomtimes mingled with the principal Diſeaſe. Sometimes we muſt foment his ſtomach with ſuch things, which both ſtrengthen and expel wind; and ſomtimes anoint it with an Oyntment of the ſame faculty. The matter or Compoſition whereof, I ſhal not at preſent ſet down, becauſe it is by it ſelf largely elſewhere declared.

The

The XXIX. Counſel.

Concerning a Feaver, with grievous Symptomes for the Counteſs of Ales.

A Letter of Her Phyſitian in ordinary.

I Hear (moſt learned Sirs) that the noble Counteſs of *Ales*, being troubled with a vehement and long Diſeaſe, was Cured by your care and diligence. Now the Diſeaſe was a continual Feaver, which growing ſomwhat gentler on the thirtieth day, became afterwards more violent, with unquietneſs, watchings, looſneſs, raving, ſhortneſs of breath, want of appetite, and thirſt, in a thin body, which you did not only overcome, but the whol conſtitution of her body, was made much better than it had been before her ſickneſs. For her ſtomach had ſwelled two years before with winds, and with a certain wheyiſh moiſture, diſtending the coats thereof, which brought a Diſeaſe, by fits very much reſembling the Palpitation of the Heart. Her Womb was grown cold and hard, and her hope of Iſſue very little; but with juleps, and gentle Medicaments, pouders, fomentations, liniments, as ſetting al right again within, you have ſo ordered, the matter, that her womb preſently conceived. And I doubt not but ſhe might have been an happy Mother of a perfect Iſſue, if ſhe had kept her ſelf quiet, and ſtudied by a more plentiful kind of diet to encreaſe and reſtore her ſtrength. But, ſhe being more intent to certain controverſies ſprung up about her eſtate, than mindful either of her ſelf or her Child; ſhe fel into that Charybdis which *Hippocrates*, has preſaged to thin bodied women with Child. *Whatſoever Women, quoth he, preternaturally Extenuated do conceive with Child, they ſuffer abortion before they can recover their wonted Fleſh.* For it was in the ſixt month after her Conception, when reſolving to return home, ſhe travelled every day twenty miles, til ſhe was received into her Siſters Houſe at *Albigniac*. In which place, preſently, either ſmitten with the Heat of the Sun, or of the Journey, or wearyed with the ſhaking of her Horſelitter; ſhe began to loath al kind of meat, to vomit up what ſhe had eaten, to be vexed with a pain in her kidneys and hips, and to be frighted with fear of an Abortion. Al which being by our aſſiſtance allaied, ſhe fel again into a continual Tertian ague: the Exacerbation whereof every third day, did laſt above twelve hours. On the ſixt day, being frighted with the vehemency of the Symptoms, which afflicted her in the Exacerbation, we took away three ounces of blood, after which al Symptoms were better and milder: but ſhe voided her Child on the ſeventh day, with three little round bals Crooked beneath, as big as a mans fiſt. Hereupon the continual Tertian turned into an Intermittent; which again ſome daies after became a double Tertian, for the cure whereof, after light purgations, we took away four ounces of blood. At length I obſerved a ſwelling beneath the Skin of her Legs and Face: yea, and when we ſaid that her belly was alſo ſwelled, the ſick Lady told us, that ſhe had ſuffered abortion two years before, and that ſhe had the ſame Symptoms thereupon. The ſwelling encreaſed by degrees. Alſo a looſneſs followed the ſame. At laſt the looſneſs being ſtopt, there remained a Tranſparent Tumor which would ſound like a drum; and therefore I am very much afraid, leaſt her ſtrength ſuddainly failing, ſhe chance to drop away.

The Anſwer of Mſr. Fernelius, *and Mſr.* Du Mouceau.

Seeing (moſt learned Sir) the moſt illuſtrious Counteſs of *Ales* was a little while ſince afflicted with many and moſt grievous maladies, and now having ſuffered abortion, and overcome ſo Manifold a feaver, and her looſneſs being ſtopped, and other Symptomes repreſſed, there ſeems now to remain only a ſuſpition of the Dropſie: if her ſtrength fail not, we hardly think ſhe is in ſo much danger of death. For ſhe has been long ago ſubject to this Diſeaſe, from which ſhe has been delivered ſomtimes without any help only by the benefit of Nature; and other whiles by the directions of Art and ſome ſlight Medicaments. We conceive, her womb is not the cauſe of the ſwelling, nor that the light Errors of her Childing

did give begining to ſo grievous a Diſeaſe: but the faults chiefly of the Liver, and then of the Spleen. For in thoſe bowels we long ago obſerved hard Tumors, that reſiſted the Touch of ones hand, which our Medicines had not perfectly cured, at what time ſhe conceived with Child: and it is alſo credible, that in the time of her being with child, they did not a little encreaſe, and being by degrees augmented and filled with Humors, they were the cauſe both of thoſe various Feavers, and of this Dropſie. And this truly the pain of her right Hypochondricum does conſtantly ſhew, which we hear to be ſo grievous, that ſhe cannot endure the leaſt touch of a finger. And therefore we conceive that in the firſt place al the Cure is to be directed to this bowel, and that gently, and by degrees, that not the leaſt violence may be offered to her natural ſtrength. For theſe bowels being opened, and their Diſeaſes cured, we hope al the Tumor of her Belly wil be abated. And becauſe you being moſt expert in practice, cannot be ignorant of the kinds of Remedies, wherewith the premiſes may be accompliſhed, yet we have preſcribed certain forms to the Apothecary, which he may alter by your direction as you ſhal judg the Nature of the Diſeaſe, and patients ſtrength do require.

Take *Endive Water, three ounces; White Wine, one ounce and an half. Infuſe therein choice Rhubarb, half an ounce; choice Cinnamon, two drams; In the expreſſion diſſolve Syrup of the juyce of Cichory, half a pound. Let her take it at four times, every third or fourth day a doſe.*

Take *of the Electuary Trionſantalon, the Rhubarb being encreaſed fourfold, two ounces. Let her take thereof ſomtime, inſtead of the former Syrup.* Item,

Take *Ivory, one dram; pouder of the Electuary of Cubebs, half a dram; of Trionſantalon, Diarbodon Abbatis, and Diamargaritum Frigidum, each one ſcruple. White Sugar diſſolved in wormwood water, three ounces. Make al into Lozenges weighing three drams apiece. Let her uſe them in the intermediate daies.*

The XXX. Counſel.

Of a Diſtillation and the Looſneſs of the Peritonæum, complicated with ſundry Diſeaſes; for a Senator of Burdeaux.

Diſeaſes quite different and disjoyned one from another, are met in a body long time ill diſpoſed. One is a diſtillation from a cold and Excrementitious head, ſomtimes into the Jaw-bones, the Neck, and Shoulder-blades: otherwhiles into the Lungs, and lower parts, with a cough and ſhortneſs of breath, which portends a Tiſſick. Another is a Nephritick pain, vexing by fits, proceeding from gravel or a ſmal ſtone; although at preſent I ſee no ſign of a ſtone bred, & ſticking in the left kidney, which either alters and twitches the kidney, or foreſhewes Nephritick pains at hand. The third Diſeaſe is an over great looſneſs of the Peritonæum, in the right groin, or a tearing the ſame in ſunder by force of Coughing, which threatens a Rupture of the Guts. That evil habit of body, which you gather from its ſwelling, and dul color, has its original from the Impurity and obſtruction of the Liver and Spleen.

Now Diſeaſes ſo variouſly implicated, cannot be cured without very great art and diligence. In the firſt place a Diet muſt be uſed of very good juyce, and the patient muſt eat Capars, young Hares, Partridges, ſmal birds, veal, and ſomtimes Mutton, and al theſe rather roſted than boyled. Suppings, broaths, and much drinking muſt be avoided; alſo the eating of figs, and ſuch things as are of bad juyce; fulneſs, ſurfetting, and over much crudity. And his Diet muſt be very ſpare and drying, that by conſuming the ſuperfluous moiſture, his body may be dried and leſs ſubject to diſtillations, Cachexy, and other Diſeaſes. To this end alſo, moderate exerciſes wil conduce: leaſt his body growing dul by eaſe and idleneſs, ſhould be oppreſſed with plenty of ſuperfluous Humor. The uſe alſo of Medicaments is neceſſary, both to cure and prevent the foreſaid infirmities. And twice a month his body muſt be purged with this Syrup, which is accommodated to the Head, Liver, and Lungs.

Take

Take *Roots of Cichory, ſorrel, butchers-broom, Aſparagus, and parſley, each half an ounce. Agrimony, Endive, Dodder, Ceterach, Betony, Stœchados, Hyſſop, Colts-foot, Burnet, ſaxafrage, each one handful. Seeds of Endive, Dodder, Marſh-mallowes, and Muſk millions, alſo liquoris ſhaven, each two drams. Make a decoction in a ſufficient quantity of watter, for four doſes, to be taken as ſhal be ſaid.*

When there ſhal be more need of purging, and the diſtillation ſhal appeare over violent, or the body too heavy, if a ſlender diet wil not help, ad to the firſt doſe two drams of Diaphenicon. That matter which is already got into the Lungs, muſt be waſhed out and ſcoured away, in the intermediate dayes free from purging, by the frequent uſe of this following ſyrup, which is alſo very good for the Kidnies.

Take *Roots of Elecampain, polypody of the Oake, ſeeds of carthamus, Raiſons of the Sun, each half an ounce; Jujubes, Sebeſtens, Fat Figs, four of each; Hyſſop, ſavory, Colts-Foot, Betony, Saxifrage, of each one handful; Seeds of Marſh-Mallows, and Cotton, and ſhaved liquoris, each three drams; Make a decoction to a pint and half. In the ſtrained liquor diſſolve nine ounces of white ſugar, and four ounces of the beſt Honey. Make of al a ſyrup wel boiled, and Aromatized with Florentine orice, and Cinnamon, each two drams.*

Let him take thereof frequently in a ſpoon, in manner of a Lick-Pot, and ſometimes mingled with barly water.

Item, Take *Of the pouder of Electuary Diatragacanthum Frigidum, Diaireos ſimple, each two drams; Aromaticum Roſatum one dram and half; Seeds of Parſly of Macedonia, Saxifrage, and Baſil, each half a dram; white Sugar diſſolved in pellitory water four ounces. Make all into Lozenges or tables, of two drams weight apiece. Let him ſometimes eat a Lozenge in place of the Syrup far from meales.*

Now his looſe Groin, muſt as he lies on his back, be fomented with ſuch a decoction as this.

Take *Piſidia, Balauſtians, Cypreſs nuts, Galls, each an ounce. Allum three ounces. Boyl them in bean-water for a fomentation. Then lay on the Rupture plaiſter mixed with the former pouders.*

Such ſmaller matters as I mention not, may be gathered out of the Counſells and Writings of others.

The XXXI. Counſel.

Touching a Cachexia, or ill habit of Body beginning.

SEeing not onely the Head or womb alone, but al the body beſides, is grievouſly affected, badly nouriſhed, dead and ugly colored, al the joynts are looſe and languiſhing, and not able to perform their office, & the patient is exceeding weak, frequently fainting away, with ſhortneſs of breath, eſpecially when her body is more than ordinarily ſtirred: the ſick gentlewoman ſeems to be affected as thoſe are, that are going into a Cachexy, or are leucophlegmatick. And therfore the cauſe of al theſe infirmities muſt be ſought, not in her head or womb, but in the principal bowels, eſpecially in the natural, as the ſtomach, liver, ſpleen, & adjacent parts, by whoſe help the whole body is wont to be nouriſhed. Theſe therefore are very impure and ful of ſuperfluous humors; by whoſe ilneſs and impurity, al meat be it never ſo good, is corrupted, whereby this variety of ſymptoms is cauſed. In ſo great Impurity of the bowels, obſtructions are much to be ſuſpected, and obſervation muſt be made, whether her midrif or parts about her belly, be not ſwoln, pained, or hard. Unſeaſonable and immoderate eating of milk and fruites, was the occaſion of al theſe maladies: nor can either her Head or womb be rightly cured, before care be taken of her bowels, being the fountain and fomenters of their Infirmities. This diligent method of cure muſt therefore be cheifly followed, after which we may ſeek to help the parts and ſymptomes, if they ſhal not be ſufficiently abated.

Take *Roots of Cichory, parſly, Fennel, and capars, polypody of the Oake, Carthamus ſeeds, each half an ounce. Hyſſop, white Hore-hound, Origanum, Agrimony, Ceterach, Dodder, Maiden-haire, each one handful. Seeds of anis, fennel, Endive, Muſk-millions,*

each

each one dram; Make a decoction to fifeeen ounces. In the ſtrained Liquor infuſe al night four ounces of ſenna, white agarick two ounces. Epithymum half an ounce. Ginger two drams. Let them boyl a little in the morning, and preſs out the liquor, and diſſolve therein one pound of white Sugar; make of al a ſyrup, indifferently boiled, not clarified. Let her take every fift or ſixt day two ounces, with a like quantity of barley water or white wine.

To this doſe 'twil be good to ad ſometimes one dram of choice rhubarb. If at any time on the dayes betwixt the takings of the ſyrup, ſhe be coſtive, let her take of theſe following pils.

Take *Of the beſt aloes, pouder of Hiera picra ſimple, choice rhubarbe, agarick trochisked, each one dram; with ſyrup of wormwood, make them into a maſs. Let her take two or three pints at a time an hour before meat.*

When ſhe uſes neither the ſyrup nor the pills; a decoction, or wine of Roman wormwood wil be good, mingled with a decoction of Cichory. Or if ſhe loath that, ſhe may uſe this Electuary, which is both ſtrengthening and preparative.

Take *pouder of the Electuary of Aromaticum roſatum, and diamargaritum frigidum, each two drams. Ivory and Harts-horn, each one dram; white Sugar diſſolved in Roſe-water three ounces. Make al up into Lozenges weighing three drams apeice.*

Let her take one in the morning, and another an hour before ſupper. Let her ſtomach and parts about her midrif be fomented with the oyntment.

Take *Oyl of nutmegs, oyl of mints, oyl of wormwood, and oyl of bitter Almonds, each half an ounce. A little wax. Make a Liniment.*

Anoynt the parts aforeſaid, in the morning, and before ſupper, and lay on a cloath quilted with cotton wooll.

Let Her diet be of good juyce, attenuating, moderately heating, and not very ful, leaſt her weak faculties be over whelmed with plenty thereof. And therefore ſhe muſt abſtain from much ſuppings, and moiſt meates, becauſe they fil too much, breed crudities, and hinder the Cure. But above al ſhe muſt abſtain from overmuch drink: and if thirſt trouble her, it muſt be artificially deluded, becauſe it is not true and natural, but counterfet. Let her eate twice or thrice aday, and little at a time, no more than ſhe can eaſily digeſt. The Event wil ſhew what is afterward to be done.

The *XXXII.* Counſel.

Touching a Cachexy, and beginning Dropſie, for an Ambian Gentlewoman.

THis Gentlewomans diſeaſe, ariſing from ſlight beginnings, is by little and little grown to a Chachexy, and a dropſie, wherein her belly is not very big, but the greateſt ſwelling is in her feet and legs: yet that ſame old and ſtif hardneſs of her liver which now is neare to a ſcirrhus, is very conſiderable, with ſtomach-ſickneſs, vomiting, want of appetite, and unquenchable thirſt. For theſe things argue that ſome part of the humor is putrified in that bowel. Since therfore by fault & corruption of theſaid humor, her ſtomach is defiled, that muſt be in the firſt place cleanſed, that the foreſaid ſymptomes may abate. She muſt be often purged with a medicament made of rhubarb, ſenna, & Agarick, which muſt be ſteeped in a convenient decoction, adding ahe ſyrup of damask roſes. And ſhe muſt take ſuch a like potion every 8 or 10 day. And that ſhe may not think it a trouble to take the ſame potion ſo often, a laxative ſyrup may be compounded for the ſame purpoſe, wherin ſomtimes the juyce of damask roſes may be mingled, or the juyce of dwarf elder, clarified by ſettling, eſpecially when we would purge the watry humor. But I conceive we ought to abſtain from the juyce of Iris or Gladiolus, becauſe it is exceeding biting, and oftentimes exulcerates the inner parts. And withal in the intermediate daies, when ſhe ſhal be bound in her body, a ſtool may be moved not only by a clyſter, but alſo by pils of aloes and rhubarb; or ſometimes with a ſyrup, made after this manner.

Take *Syrup of the juyce of Cichory, and of damaske Roſes, of each three ounces; choice rhubarbe infuſed in borehound, or fennel water ſix drams. Mix them. Let her take an ounce hereof every other day.*

In

In this Cure the chiefeſt care is to be taken of her diſordered Liver. Fomentations, ointments, plaiſters, which ſoften the hardneſs of the Liver, muſt be repeated as often as may be, the ſtrength thereof being ſtil preſerved. Make her an Electuary of the pouder of Diacubebs, and Trionſantalon with Ivory. The ſwelling of her Legs and Feet proceeding from flegm, muſt be diſcuſſed with whey and Lie, boyled with the Roots of Dwarf-Elder, Elecampane, Roſemary, Marjoram, Time, Laurel, Origanum, and ſuch like things. If the ſwelling of her Belly ſeem to fal into her Legs and Feet, eſpecially after walking; it were good to raiſe bladders, in the moſt ſwoln places, with leven, pulp of figs, and a little Cantharides, which being opened, al the Humor which ſwels the belly, has been ſeen to come out that way. Let her Diet be ſparing and dry, and let her drink very little.

The *XXXIII.* Counſel.

Concerning the Dropſie, for an Ambian Gentleman.

TOuching the Conſtitution of the Gentleman our patient, I told you before, that he was troubled not only with a Cachexy, but the beginning of a Dropſie: whereby both his belly was inmeaſurably ſwelled and ſtretched, and his Face bloated and diſcolored. The beginning of the Miſcheife was from his Liver, with which the Spleen does confederate. For both thoſe bowels are found to be ſwoln, ſtif, and hard, and to make ſhew, not only of an obſtruction, but of a Scirrhus.

I endeavouring the Cure of theſe maladies, ordered him to keep a moderate and dry courſe of Diet; I gave him a purge; I ſtrengthned his Bowels with an Electuary which moderately opened; and having uſed theſe things only four daies, he ſeemed ſo much holpen, that he took himſelf to be already cured. But verily, that which cauſes and foments his Malady, lurks ſtil within, viz. a Scirrhus of both the Bowels, which I would thus Cure. Every tenth or twelfth day, you ſhal purge him with a Medicament that brings away choler, Melancholy, flegm, & watry humors. And if in the interim he be bound, give him a Clyſter; alſo in the ſaid interim you ſhal endeavor to open obſtructions, both by Apozemes, and alſo by aperitive and deterſive Syrups; and with Oyntments externally applied, you ſhal ſoften his liver and ſpleen, being ſtil careful to preſerve their ſtrength. Following this Method of Cure thus generally propounded, you wil reſtore the ſick Gentleman to his former health, whom therefore I leave to your Care and Ordering.

The *XXXIV.* Counſel.

For the Chancellor of the Emperor Charles *the Fift, ſick of a Dropſie.*

THe Patient having naturally a very hot Liver, by continual working of his mind, by cares, watchings, and immoderate labors, and peradventure by ſome diſorders in his Diet and courſe of life, he has added an acquired diſtemper to that which was natural. And theſe Cauſes getting head, it is come to paſs, that the Liver being ſo hot, is become as it were roaſted, and hot Choler does after a more inſolent manner abound. Hence comes that ſame violent burning Feaver: and after that, wandring uncertain Feavers, and an Eryſipelas with thirſt, watchings, unquietneſs, and other furious Symptoms of Choler, which upon every light occaſion have vexed the patient. And theſe things happened then chiefly, when only a diſtemper, and the fervency of Choler did urge. But afterwards the miſchief grew higher. For the liver has been long obſtructed, with the redundancy of Choler and other Humors, and at laſt is hardned with a Scirrhus. Moreover, the proper ſubſtance thereof is depraved, and the inbred heat much waſted. For the token of its obſtruction, is the laſting of the Diſeaſe, and the pale and whitiſh Excrements of the belly. And the ſign of a Scirrhus, is, that he can lie longer, eaſier, and with leſs trouble on his right ſide, than his left: for on this ſide, the Liver lying, does by its bulk preſs and ſtifle the ſtomach as it were, & hinders the motion of the Precordia or Midrif, and the fetching of breath. If there be no reſiſtance to the touch, but al his belly ſeems

ſoft,

soft, the Cause is a watry Humor shed out under the Peritonæum, and placed before the Liver, which makes that a Man cannot feel his Liver. Moreover, that the substance of the Liver is weakened, and its natural heat wasted and dulled, so that it is now no longer fit to nourish the Body, the Atrophy or non-nourishment of the Limbs and whol body is a sign, so that the whol body does as it were melt away. Also the Crudities long since observed, frequent weakness and decay of strength, old pains of his Feet; after that, swellings, of his Legs first, and then of his Thighs, caused by flegm; a Collection of waters about his belly, which argues not only a cachexy, but a true Dropsie, and of that sort which is termed Ascites.

This truly is the end of al these infirmities, towards which they long ago conspired, and which might have been foreseen, by many things preceding long ago. Now therefore there is an evident Dropsie, which though it do not much distend his belly, yet seeing it is not bred by immoderate use of cold drink, nor by any effusion of blood, or fault of the Spleen; but has gone further, having so grievous a Cause as I said before, and that so manifold, contracted by little and little a long time in the Liver, and deeply rooted, it wil very hardly be rooted out. Truly, when I consider with my self so long a series of causes, and the continuation of so many effects, which have introduced both a leanness and consumption of the body, a feeble pulse, and great weakness, if I shal not judg the Case desperate, yet I dare hardly promise a perfect cure, thinking it sufficient, if some of the infirmities be removed, and others asswaged, that life may be as much as possible prolonged, and with as little Tediousness as can be to the patient. Which how it may be effected, I shal here set down. The Cure, such as can be hoped, must be performed two waies, viz. By removing the cause, namely the Diseases of the Liver, and by purging out the water. The greatest care is to be had of the cause, which alone may at last bring the patient to his end, and in the last place we must look to the water. For though al the water should be drawn away, yet more wil breed, as long as the cause continues. Now the Remedies to both intents shal be thus ordered. If his strength wil bear it, he must be frequently purged with one dram of Rhubarb steeped in Horehound or Fennel Water, with half a scruple of Cinnamon, adding thereto Sugar, or Syrup of Cichory. For so Choler being voided by little and little, without weakning the patient, his thirst wil not only be asswaged, and his Stomach-sickness taken away, and appetite provoked, but his Liver also being strengthened, wil breed less water. Nor would I venture to give him any stronger purge, in regard of his so great weakness. In the intermediate daies, if his belly be bound, give him a convenient Clyster. If peradventure abundance of water shal stretch his belly, it may twice a month be purged forth with a convenient Medicament. And in this case, we must not allow the juyce of Iris, because it burns the throat and gullet, nor yet wild Cucumer nor Chamelæa, because it offers violence to the body. I commend Danewort or Dwarf-Elder, the juyce whereof gently purges water, without offence. Beat an ounce and half in a Morter, and pour on Wine or barley water, and then strain it and give it him, when he has no looseness. His faculties and bowels wil be strengthened by the frequent use of an Electuary made of the pouder of the Electuary of Cubebs, Trionsantalon, and Ivory, with Sugar dissolved in Horehound water. I would not burthen the sick Gentleman wasted by his Disease and old Age, nor oppress his wearyed faculties: only I would refer the greatest part of the Cure to a good Diet, which is of greatest moment, in this case. Let his meat be flesh of good juyce, easily digested, for the most part roasted, never boyled, or very seldom. Let him abstain from supping meates, and al moist things: yet I allow him sauces to provoke his Appetite. It is good for him to eat frequently a little at a time, three or four times a day, that his weak faculties may not be over burthened, and his meat wel digested. Let him drink exceeding sparingly, that for want of drink the parts being dried, the Reins may exhaust the superfluous waters; and the matter of bowels themselves not being hindred by impertinent Humors, may purge, amend, and strengthen it self. Let his drink be, not pure Wine, which most order in these cases, but such as is wel allayed with water, which may both soon asswage his thirst, and temper the Heat of his Liver. And if his Age and stomach did not advise the contrary, I should bid him drink cold water, which does asswage thirst, and resist the Cause, better than Wine, and yet it does not more encrease watery Humors. For it is an extream hard thing in so mighty thirst, to content himself with little drink. But he must endeavour with al his might to do it, as a thing which has cured many:

many: uſe and cuſtome wil make it eaſie to him. For when he forbears drink, yet his mouth may be moiſtened, by Humors drawn from other parts. Howbeit a very fit Remedy may be provided for this Inconvenience, if maſtich or any thing of like faculty, be continually chewed; for it wil draw much water to the mouth, not out of the Head alone, as ſome think, but out of the Stomach and belly: and ſo it wil be good in many reſpects. Some like of vomits to this Intent. Theſe I conceive to be the chief Heads of this Cure, to which much may be added by thoſe learned Phyſitians to whom the whol Care of his perſon is committed. I can hope for no good from the Lucenſian waters, becauſe they are nde remarkable for any ſenſible qualities, nor have any taſt but that of our ordinary waters. Some have gone to thoſe waters, and others have had them brought to them, but to no purpoſe; though they have drunk ſeven or ten pints in an hour, and ſwet upon it, and diligently obſerved al the Rules preſcribed, by the magneſiers of thoſe Baths.

The *XXXV.* Counſel.

The Cure of a Cachexy, or ill habit of the Body.

ALL the Symptomes are deſcribed, do appertain to the obſtruction of the Liver and Spleen, with their hardneſs or ſtretching, with whom the ſtomach does neceſſarily conſent. For, ſo great is the impurity of the bowels and bordering parts, that al digeſtion being hindred and depraved, the whol body is become foul, and being over whelmed as it were, with bad Humors, it is fallen into a kind of Cachexia, or evil habit. The ſame impurity of the bowels is cauſe of Inflation or puffing up, Suffocation, Stomach-ſickneſs, and wandring winds, with rumbling and ſundry pains. Finally, it is the cauſe of faintings and decay of ſtrength, and it makes the patient ſo frequently deſire meat: for he endeavours to prevent the fainting fit at hand, by quelling the acrimony of the Humor by the debonaire quality of the meat. 'Tis hard to cure theſe old infirmities, unleſs the patient punctually follow the Phyſitians advice. In the firſt place he muſt live very ſparingly, eat only three times a day at juſt diſtances, and meat of thin and good juyce. He muſt abſtain from ſuppings and broaths, al liquid things, and immoderate drinking, becauſe the natural heat is over whelmed with plenty of moiſture, and the concoction hindred. He muſt chooſe a thin and dry Diet; thin Wine and wel watered, moderate excerciſe, and ſomtimes ſtrong, as his ability of body can bear. Moreover, his obſtructions muſt be removed by Medicaments, and al the bad Humor, muſt by little and little be drawn away into his belly, and that by way of Epicraſis, after this manner. Let him have an Apozeme for three doſes. Then let him take of Pilula de Tribus. In the intermediate daies when he ſhal not purge, his Stomach and Guts muſt be ſtrengthened, with this Electuary.

Take *Shavings of Ivory and Hearts-horn, of each two ſcruples. Choice Cinnamon, choice Perles, pouder of Aromaticum Roſatum, and Trionſantalon, of each one ſcruple: with four ounces of white Sugar, make an Electuary. Every morning and an hour before ſupper, let him foment his Stomach, and parts about his Midrif, with this Liniment.*

Take *Mucilage of Fenugreek ſeed, extract in Endive water, one ounce. Oyl of Wormwood, Roſes, Mints, and Capars, of each half an ounce. Mace, Cloves, Red-roſes poudered, of each one ſcruple. A little wax. Make al into a liniment. Now theſe gentle purgations muſt be given him ever and anon, and continued til al the Tumor, and reſiſtency be taken away, and til al the Symptomes be aſſwaged, which I cannot hope before two months be over.*

The XXXVI. Counsel.

The Cure of a long and often returning Feaver for one of the Emperours Court.

THis plain and distinct Enumeration of al the signs and symptomes, observed in this sick Gentleman, has set before mine eyes the very expres Nature of the disease, and al its causes both internal and external. His forme, figure, habitude, and whol constitution of body, and the Integrity of his functions, both natural and animal, do shew a laudable natural temperament: but in that the largeness of his veins argue that it enclines a little to heat, this is happned by course of time and his Age, which by little and little has made his body hotter. And now at last, the heat has exceeded the bounds of Nature; by reason of great perturbations of mind, watchings, cares, troubles, which this Gentleman has undergone in the mannagement of great Affaires. From these and the like evident causes, his Liver is inflamed, and enclined to breed much choler; which being augmented in tract of time and coming to work and boyl, is the efficient cause of all the symptomes described. This, even in his health time, causes sudden and vehement Passions of mind, and frequent Wrathfullness. The same is the cause, why his belly being bound, his head is offended with a sharp vapour, and the rest of his body not having the benefit of transpiration, is somtimes hot; and somtimes cold, and the palms of his hands, and soles of his feet are burning hot, which is also a signe of an hot Liver. And therefore choler so much abounding in the by-past yeares, has caused that the whol body as it were melting, is fallen into a certaine leanness, and also that choler not being timely purged, but kept in, and now and then putrefying, has many times caused cholerick Feavers: and that much more often in his latter yeares, wherein a greater quantity thereof has been collected, and when his body has been so disposed and prepared, that upon the lightest occasions of heat, cold, Labor, Passions of Mind, and diet, it is wont to fal into these kind of Feavers: which is an argument truly of the inner Cause abounding, so as to be burthensome and very troublesome to nature. Moreover, the sort of Feaver, and the manner of its Invasion, do demonstrate and expres the inner Cause for shaking at the first, a biting heat, redness and Inflamation of his face, with a light raving, a quick pulse, and respiration quick likewise, urine red, and thick cholerick stooles towards the end of the disease, are al signs of superabundance of yellow choler, which by permistion makes the blood most thin and Fervent.

And therefore both the Feaver, and the cause of al the symptoms related, can be referred to nothing else but to the exuperance of choler, and the immoderate heat of the Liver. And thereto belongs the Cure of the Erysipelas, and al fluxions which fal into his thighs: because the Erysipelas presently follows the feaver, as a certain Indication thereof, since it arises from the same humor that causes the feaver. But if so be any œdematous or flegmatick tumor of the feet shal seem to have discussed the Erysipelas, though he was wont to have it during his Health, and was thought to be familiar; yet ought it to be suspected, and we should feare least it be the forerunner of a Cachexy shortly to follow. For commonly the Liver being obstructed with much thick choler, does contract obscure rudiments of a scirrhus, while by degrees and insensibly they gather Head, they cast a man headlong into a Cachexia and dropsy. And though these frequent returns of Feavers and defluxions into his thighs are inveterate, and the Age of the Patient does now decline. Yet he that shal take time and diligence, he may in that so lusty and vigorous old age of the patient, promise either a perfect cure, or very great ease: especially, if nothing shal be perceived hard, nor resisting the touch in the right Hypochondrium, nor any trouble shal be perceived when he lies thereon. Now the scope of the Cure must be, to open the obstructions of the Liver, to purge out the superabundant choler thereof, by degrees, and to coole and strengthen the bowel it self. Which things he that shal seasonably performe, he shal verily take away al the Cause of the Feaver, draw drie the fountain of defluxions, and lengthen the patients life yet many yeares. In the first place therefore give him a purge of the infusion of two drams of Rhubarb, rightly prepared, whereby al that superfluity of crude and half-putrid humors. Fluctuating in the stomach, and about the veins of

the

the Meſentery, may either be expelled or corrected. In the next place the obſtructions of the Liver and Spleen muſt be removed by theſe remedies, which whiles they extenuate and open, they do withal draw the matter of the obſtruction into the belly, by little and little. Such an one is ſyrup of Cichory compound, which for a doſe may have two ſcruples of Rhubarb. This muſt be given every other day, or every third day, three hours before meat, without any obſervance. If you ſhal intermit too long, al our labor wil be in vain, nor ſhal we attain the effect we expected. For ſo by frequent purging, the waies being opened and looſened, nature wil be gradually accuſtomed to carry the choler into his belly. A ſyrup againſt burnt choler.

Take *roots of Cichory, Sorrel, Graſs, Aſparagus, each half an ounce. Agrimony, Ceterach, Dodder, Hopps, Adianthum, Maidenhaire, of each one handful. Senna leaves clenſed three ounces. Make a decoction to half a pound. In the ſtrained liquor, diſſolve clarified juices of bugloſs, Borrage, Fumitory and Sorrel, each one ounce and half. White Sugar one pound. Make of al a ſyrup perfectly boyled. And when it is boyled ad to it the expreſſion of ſix drams of Rhubarb infuſed in Endive water, with two drams of choyce Cinnamon. Let him take twice a week one ounce and an half, or two ounces, for a doſe; with barly or baum water, without any obſervance of keeping within, &c.*

On the intermediate days let him be kept looſe, with a Clyſter. Againſt the crudity of flegm, which ſomtimes happens in the winter.

Take *Choyce Rhubarb one dram and half. Of the beſt aloes, hiera picra ſimple, agrick newly prepared, each one dram: with ſyrup of wormwood make al into a maſs.*

Theſe kinds of purgation wil leiſurely void al ſuperfluity of choler by ſtool, not ſufferiug the Feaver to be kindled, nor the fluxion to fal down into his thighs; nor wil they weaken, but rather ſtrengthen his natural faculties and powers, while they eaſe nature of the burthen of hurtful humors. In the remnant of this ſummer, while the humors of the body are fluent by reaſon of the heat, and melted as it were, you muſt ſet upon the cure. The other ſcope of the cure, wil be to cool, and to ſtrengthen the whol body: and that muſt be done by courſe of diet rather than by medicaments. Let the patients diet be therefore ſpare, at the beginning of the cure, which may moderately cool and moiſten: Hens-broath boyled with Lettice, Sorrel, juice of unripe Grapes, or verjuice, Bugloſs, borrage. Let him dip his roaſted meats in a cooling ſawce, as juice of ſorrel, ſour juice of Grapes, juice of pomgranates, Citrons, or Orenges. Let him avoid ſalt things, things peppered and ſpiced, which burn the Liver and humors; al ſugared things which moſt readily turne to choler: Garlick, leeks, onions, muſtard, watercreſſes, and al things of like nature. Let him alſo avoid ſtrong wines, and let him mix water with weaker wines, not fearing the weakneſs of his ſtomach. Beer is ſomtimes good, but it muſt not be too ſtark and hard, nor too thick and new. His body being made purer by phyſick, his meat may be encreaſed in quantity, keeping the ſame quality. Twenty daies being ſpent in the Cure, let him drink in the morning barly broth duly prepared; and after it let him ſleep if he can, and continue the uſe thereof two or three months, or if he wil al his life long, after the example of thoſe, who are wont to uſe this, much to the advantage of their Health. I conceive nothing is to be applied to his thighs, except waters or juices of night-ſhade, Plantain, and Roſes, with an eight part of Vinegar, provided as much as may be that he do not let them hang down.

The *XXXVII.* Counſel.

Of a painful Ague.

THe ſick Woman mentioned in the Letter, being afflicted by a grievous Ague, with frequent vomitings, with Faintings, & an exceeding weakneſs of her whol body, but eſpecially of her bowels, becauſe ſhe has neglected al uſe of phyſick, and not timely uſed ſuch medicaments as were advized her, is juſtly fallen into moſt cruel pains of her belly, with which ſhe has been long and vehemently tormented. For the morbifick Cauſe of the Feaver, out of the Bowels (where the root of al agues Lies) is fallen into the ſpace between the membranes of the Belly and Peritonæum, and ſo finiſhing the Ague, has brought theſe pains. And when afterward

it could not fal out of theſe membranes, nor could find any ready paſſage, whereby it might ſlip into the belly, becoming as it were furious, it takes at length its courſe another way, and ſo leapes over into the head, and limbs of the body, where alſo it moves new torments. 'Tis to be feared, leaſt at laſt occupying the Nerves, and the tendons, it ſhould breed a kind of palſie, which *Paulus* ſaies, is bred of the colick pain, and of which I have obſerved many things in my writings. Theſe verily are of al diſeaſes the moſt grievous, which are wont to happen after Agues neglected, or il cured. But we muſt now come to the remedy. And though purgations wil not now do ſo much good as formerly they might have done, yet they muſt be preſcribed, and thoſe ſufficiently ſtrong, that they may revel the noxious humor out of the extream and upper parts, into the belly: or if the woman wil not take the ſtronger, give her at leaſt ſuch weak ones as ſhe has been accuſtomed unto, frequently repeating them. After purgations pain aſſwaging ointments muſt be applied, and diſſcuſſers to the pained part, which may be made of oyl of worms, Oleum Irinum, and Oyl of Turpentine, adding ſuch things as are good for the palſy; alſo bathes wil be good, wherein are boyled Cephalick herbes, but much more dry baths or Vaporaries, if the ſtrength of the Patient can beare them. Moreover, a moſt ſtubborne diſeaſe in a diſobedient patient, does commonly portend a doubtful, or bad Concluſion.

The XXXVIII. Counſel.

Of a Lingring Feaver, and divers other Diſeaſes. Out of the French.

THat I may returne a wel grounded Anſwer, to thoſe queſtions ſent me touching a lingring Feaver, twil be worth the labor to enquire the true cauſe and original thereof: which ſeeing it has followed other intermitting and uncertain Feavers, I am of opinion that the root thereof lies either in the kidneys, or in ſome bad quality of the Liver or ſpleen: for it is ſymptomatical, and therefore to judge diſtinctly thereof, we muſt conſider the urines. For if they be thick, groſs, white, matteriſh; or if formerly they have been bloody, it is a ſign that ſome Impoſtume or ulcer lurks in the kidneys.

But if there be no diſorder in them, we muſt ſeek the cauſe, in the Liver and ſpleen. For I cannot think that theſe infirmities are the conſequences of the colick or nephritick pain, wherewith the patient has been troubled. His thirſt, and deſire to drink wine rather than beer, his loathing of meat, eſpecially that which is moſt ſtrong and nouriſhing, belching, rumbling in his guts, wind, noiſe of his ſtomach, and abſurd digeſtion thereof, and ſwowning fits, do argue that the fault is in and from the ſtomach, both by its own proper Infirmity, and its vicinity and ſympathy with the Liver and ſpleen. Nor muſt we regard a defluxion ſo much (if any do fal upon the ſtomach) for a Catarrh alone, does not bring forth ſo cruel accidents. The remedies both for the Feaver and other diſeaſes, muſt be gentle and gradual, the Age of the patient and his weakneſs, with the length of the diſeaſe muſt be conſidered. Every other day therefore, if his belly be bound, give him this following Clyſter.

Take *Marſh-mallow roots one ounce. Chamemel flowers, Melilote, Dil, Wormwood, courſe bran, each one handful. Annis-ſeed and Fennel ſeed, each two drams. Make a decoction. In a pint of the ſtrained liquor diſſolve two ounces of honey of roſes, Common oyl three ounces. Make a Clyſter. If it ſhal not ſufficiently purge thick and clammy flegm, ad biera ſimple five drams, or an ounce.*

Let him take weekly of this following ſyrup, that his ſtomach may be by degrees ſcoured, and thoſe other parts which foment this diſeaſe. And in caſe he ſhal uſe it more often, it wil do him the more good, for it does in no wiſe weaken, yea verily it luſtily ſtrengthens.

Take *Roots of ſorrel, Cichory, Graſs, Parſly, and polypody of the oake, each half an ounce: Agrimony, Ceterach, Dodder, each one handful. Sena two ounces. Make a decoction to half a pound: in the ſtrained liquor diſſolve a pound of white ſugar. Make al into a ſyrup perfectly boyled, whereto as it boyls ad, the expreſſion of two drams of choyce Rhubarb, infuſed in white wine, with one ounce of pickt Cinnamon.*

Let him take one ounce and half for a doſe with barly water, in the morning, three hours and

and no more before meat. Sometimes inſtead of the ſyrup, he may uſe theſe following pils.

Take *Of the beſt aloes, of choyſe Rhubarb, of hiera picra ſimple, each one dram. Agrick prepared half a dram. Soften them with ſyrup of wormwood, and make them into a Maſs.*

Let him take a dram in five pils, in the morning four hours before dinner. In the intermediate daies, to ſtrengthen his ſtomach and vigorate his bowels, it wil be good for him to take liberally of this following Conſerve.

Take *Citron peeles preſerved one ounce. Preſerved myrobalans, conſerve of roſes, each half an ounce. Pouder of aromaticum roſatum ten grains, choyce cinnamon, yellow Sanders, ivory, Harts-horne, each one ſcruple. Sugar of roſes, as much as ſhal ſuffice. Make al into an Electuary or Preſerve, covered with Gold. Let him take a ſpoonful in the morning, and an hour before ſupper.*

To quench his thirſt let him drink of ſuch a Julep as this.

Take *Roſewater, half a pint. Juice of Pomgranates three ounces, Of Lemmons two ounces. White ſugar eight ounces.* Mix *all into a julep. Let him uſe it in his thirſt, far from meal times, with three or four times ſo much boyled water. Nor let him pleaſe himſelf with other drink, or give himſelf to a plentyful uſe of water, vulgar ptiſan, or beer: but let him content himſelf with the foreſaid julep, or with ſyrup of pomgranates, or the juice of citrons, Orenges, both at, and betwixt meales.*

But if he ſhal be taken with fainting fits, 'twil be much better to give him what has been before preſcribed, than to give him wine. Yet he may at his meales, taſt a little, ſo as no thirſt may thereby follow. But, to aſſiſt his ſtomach buſied in the digeſtion of meat, it wil be good to give him a plain diet, and a little at a time. And if his meat be ſolid, let it be ſprinkled with the foreſaid juices. Nor let a cooling diet fright you, for this mans Infirmities wil better beare cooling than hot things.

The XXXIX. Counſel.

Of a Quartan Ague, for Queen Leonora.

FRom her tender years and firſt childhood the patient has been found to be ſubject to the Tiſſick, becauſe when the Aire is moiſt, and there is a new Moon, a new diſtillation does more vehemently vex her. She has been often taken with great and dangerous fits of the mother; wherein both her underſtanding and al her ſences periſh; and by vehemency of the ſuffocation, the ſmal veines of her neck, eyes, and Face, do gape, ſo that red ſpots do long after remain in thoſe parts. But ſhe is eſpecially troubled with thoſe numorous obſtructions of the Liver, by meanes of which ſhe has often fallen into long feavers, and many times into a very ſtubborn jaundice. Her conſtitution being as aforeſaid, ſhe paſt over al the laſt year in Idleneſs, abating nothing of her diet, which was wont to be exceeding plentiful. Hence comes a large Harveſt of crude humors and al kind of excrements, and obſtructions doubled, which have cauſed at length, that ſhe has not her Courſes nor Hæmorrhoides ſo largely, nor in ſo due ſeaſon as formerly. By which means, her whol body began at laſt to grow Heavy; and fifteene dayes before ſhe was taken with this diſeaſe, ſhe was troubled with a ſtrange kind of wearyneſs, comming of its own accord. Withal, ſhe perceives her appetite dejected, though with divers ſauces, and delicate provocatives of appetite, ſhe endeavoured to quicken the ſame, that ſhe might live as intemperately as formerly ſhe had done. Hereupon the quartan ague ſeized her, on the ſecond of *September*, of it ſelf, without any other diſeaſe foregoing: but with ſo ſmal and obſcure beginnings that hardly any body could perceive the ſame. The Second fit, gave manifeſt proof of an ague, wherein al kinds of vomiting appeared: and then we began to prepare the humors of her body, both with ſyrups, and clyſters, and a ſpare diet. Howbeit, the third fit, was much more vehement than the former, both in point of cold, vomiting, and choaking (by reaſon of the tiſſick mingling therewith) and tumbling and toſſing of her whole body, and thirſt. And therefore, in the middle

ſpace

ſpace between the fits, we purged her gently, as alſo on the day, after which was her beſt day And although ſhe had every way plentiful evaccuation of flegm and choller, cauſed by art and nature; yet her ague manifeſtly encreaſed, and had a fourth, fift, and ſixt fit exceeding ſharp and laſting, ſo that now no wellneſs or intermiſſion can be diſcerned. For no ſweat has broke out to finiſh the fit. Seeing therefore it partakes of a continual feaver as wel as of a Quartan Ague, leaſt it ſhould degenerate into a worſer Kind, we thought it good to open the baſilica Vein of her left arme, out of which eight ounces of corrupt blood were taken, which did her much good, and ſhe bore it wel. For beſides the ſuſpition of a continual feaver, the ſuppreſſion of her Courſes and hæmorrhoides, did perſwade us to let her blood, with her intemperate diet, idle life, redneſs of face, and huge ſwelling, fulneſs of veins, by means whereof, her noſe did frequently bleed. After that ſhe had been let blood, her body ſeemed to be more ſtrong, her ague perfectly intermitting; but the fits were wel-nigh as vehement as before, with loathing of meat, ſtomach-ſickneſs, vomiting and bitterneſs of her mouth. Which ſymptomes, when they would no be tamed, either by diet, ſyrups, more clyſters, we thought good to purge her the ſecond time, after a new fit. After which, the other fits following were more gentle, and they grew leſſer and leſſer gradually, ſo that ſhe was not troubled either with cold or hot fits; and therefore in the whole month of *October*, we plyed her only with a convenient diet and emollient clyſters; ſave that once when ſhe had a grievous illneſs in her ſtomach, we boyled ſome ſena in her broath, and a few daies before for a light cough proceeding from a diſtillation, we gave her Syrup of jujubes. Whatever hereafter ſhal ſeem requiſit for the remainder of the Cure, thoſe that have the Care of her, may in imitation hereof, of themſelves prudently determine.

The XL. Counſel.

For a Quartan Ague intangled with a Diſtillation.

SEEing the worthy Gentleman our patient had been long vexed with many and ſundry infirmities, and with a perpetual diſtillation for the moſt part, I conceived that I was to bend my Care not only to the quartan Ague, wherewith he is troubled, but alſo to other intangled diſeaſes, becauſe while they were preſent, the Quartan ague could hardly be cured, and if it were, yet would the patient be ſtil liable to many Infirmities whereof to Complain. Having therefore, with al my might, diligently conſidered al things, I conceive the Cure ought not to be deferred, but diligently to be undertaken, ſuch a cure I mean, as both by medicaments and diet, ſhal cure the old Infirmities, and change his preſent il conſtitution of body.

Let his Diet be very dry and attenuating, and moderatly hot, that it may correct this cold and ſnotty habit. Let him abſtain from al ſuppings, al liquid things, boyled fleſh, fiſh, cheeſe, fruites, and immoderate drink. Let him feed on fleſhes of good juyce, and al roaſted, or ſeldom boyled, which if he pleaſe he may dip in ſawces, of peper, ginger, cinnamon, nutmeg, and ſometimes Muſtard. Let his Wine be rich and not vaporous, white pale claret, thin, not over much allaied with water, and let him drinke thereof ſparingly at meales. Let him exerciſe in the mornings, and let his exerciſe be much and ſtrong, til his body grow hot or begin to be weary, and let him diligently avoid cold-taking. When he wakes from ſleep, let him be rubbed a long time together with dry and courſe cloathes, or ſometimes with a dry hand. Let him frequently uſe gentle medicaments, ſuch as draw away raw and hurtful humors, by little and little without violence. Let him frequently take clyſters, with hiera picra ſimple and diaphenicon, of each ſix drams; Honey of roſemary two ownces; oyl of rue, and of dil, each one ounce and half, mixed up with an emollient decoction, every ſixt or eight day. The day before his fit, give him pils, made of hiera picra ſimple, rhubarb, aloes, and agarick, which muſt be made up, each a like Quantity, with ſyrup of wormwood, and let him take one dram for a doſe, or four ſcruples. Sometimes inſtead of the pils, let him be purged with this ſyrup.

Take *roots of Smallage, Parſly, Fennel, and Cappars, Polypody of the oake, Carthamus ſeed, each half an ounce. Agrimony, Betony, Hiſſop, Origanum, Hops, Ceterach, Thyme,*

Thyme, Epithymum, each one handful. Seeds of Annis, Fennel, and Muſkmillions, of each one dram and half. Make a decoction to fifteen ounces. Infuſe therein, al night, Senna four ounces. White Agrick two ounces: Ginger two drams, let them boyl a little in the morning, and ſtrain out the liquor, and therein diſſolve white ſugar a pound. Make al into a wel boyld ſyrup, not clarified. Let him take two ounces for a doſe, with borrage or ſome other convenient water. It is good ſometimes to diſſolve therein the expreſſion of a dram of choice rhubarb infuſed in white wine, that by little and little al kinds of humors may be ſeparated and vorded forth.

Thus therefore their uſe is to be continued every other day, that hardly a day ſhal paſs, but that the day before he took a clyſter, ſome of the ſyrup, or ſome pils. The ſick Gentleman muſt not be much wearied with preparitive ſyrups but every preparation muſt be endeavoured, by a duly ordered diet. And becauſe ſometimes he is forced to drink in his fits, inſtead of priſan, or barley water, or other cooling drink, which renders the humors more compact, you muſt give him *Galens* Oxymel ſimple, or ſyrup of vinegar mixt with good ſtore of water: But 'tis good for him to drink as little as may be, which makes al diſeaſes ſhorter; but to drink plentifully, buſies nature, and cals her from the digeſtion of the humors.

The XLI. Counſel.

For a Quartan Ague complicated with a Looſneſs.

THis Quartan Ague cannot be ſimple, nor have its Original only from melancholy juyce, but from a mixture alſo of yellow Choler, which being burnt, affords matter thereunto. By the ſuperabundance thereof vomitings were at firſt raiſed, and when al the Humor could not be purged that way, at length it broke into the belly, bread a Diarrhœa rightly ſo called, which threatens either a Tenetmus, or a Dyſentery. It is accompanied with Appetite dejected, weakneſs, and great falling away of the body; all which are ſigns and ſymptoms of raging yellow Choler. And becauſe al theſe threaten greater danger to the ſick Gentleman, than his Quartan Ague, we ſhal in the firſt place, and moſtly, ſet our ſelves againſt them, not neglecting the Feaver in the mean time. The Looſneſs therefore muſt be ſtopped, not with ſuch things as wholly bind and ſtop, leſt by that means his Ague encreaſe; but with ſuch as help the hot diſtemper of the Liver, and withal reſtore his Appetite and ſtrength. The Pain-aſſwaging Clyſters preſcribed, which wil keep off the bloody flux, muſt be frequently injected; to which your Learned ſelf may ad Mucilage of Quince ſeeds, or Starch, or bean meal, as need ſhal be. When he thirſts betwixt meals, Syrup of Lemmons, and Oxyſaccharum ſimplex, wil be good for him; Syrup of ſowr Grapes, and ſuch like, mingled with a good quantity of water. Sometimes the inſide of a Pomegranate, or Juyce of Citrons, or a Quince Juyce; wherein, or in Verjuyce, or Wine of ſowr Grapes, he may dip his meat, or it may be ſteeped therein, that by theſe things, and a convenient cooling Diet, and moiſtning, the fervency of Choler may be abated, and the diſtemper of the Liver corrected ſo as to preſerve the ſtrength thereof. Almond Milk made with barley water, and Sugar of Roſes, every day in the morning, at leaſt four hours before the ordinary hour of dinner, is exceeding effectual. Externally apply to his Liver, either a cooling and ſtrengthening Epithem, or Ceratum ſantalinum, and let him wear it a long time. Beſides theſe, if his ſtrength permit, give him a little Rhubarb at convenient diſtances: and I would rather he ſhould take a dram thereof in ſubſtance, than the Infuſion. If having uſed theſe Remedies about fifteen daies together, the ſymptomes are not ſufficiently tamed, you muſt forbid him al uſe of Wine, and give him any other drink rather. For I have this Year experimented, that many cannot be freed from ſuch like ſymptomes, and the Quartan Ague, til they leave wine: and they were ſtronger with the uſe of water, than when they drank wine.

The

The XLII. Counsel.

For a Swelling of the Spleen.

THe Symptoms related declare, that the Patients Spleen has been long affected, though perhaps neither swelling or pain were perceived. But that pain also of the shoulder is the fruit of a diseased Spleen, which distending and plucking asunder the Membranes, is often found to bring such a pain; even as when the Liver is inflamed, the pain reaches to the Jugulum. The Disease of her womb seems to have risen from the Impurity of the Spleen, which has by little and little discharged it self into that part, but so that the womb it self is at last infected, and the Humor by its Acrimony, has burnt the neck thereof, and of the bladder. Which is the cause that she cannot admit the carnal imbracements of a man. And therefore that Impurity of the Spleen collected by little and little, and at length purrefying, is grown hot, and has bred the tumor and symptoms aforesaid. Now this tumor, though it be troublesom by its heat, yet is it no Phlegmone, much less an Imposthume, because this bowel is not liable to such kind of swellings. Moreover, this Tumor can by no other means be taken away, than by stool; and that way it may be derived by a Syrup, which consists of buglos, burrage, Fumitory, tops of Hops, &c. with Senna and Rhubarb.

The intermediate daies let her belly be Loosned with a Clyster, of an Emollient Decoction, half an ounce of Diacatholicon, and three ounces of Honey.

To mollifie the Tumor, make an Emollient Fomentation, and corroborating, of *Mallows, Violets, Pellitory of the wall, some Hop-tops, Cappar roots, Red Roses, betony. Let them boyl in water, and ad a little Vinegar.*

Also a Liniment may be made of the same vertue.

Suppurators must not be applied, because al Impostumes in the Liver and Spleen are deadly. Let her drink no wine. Let her use Syrup of Vinegar, and Syrup of Maidenhair.

The XLIII. Counsel.

Of Hypochondriacal Melancholly, for Mſr. de Maligny.

I Hear that the most Illustrious, and Prudent Mſr. *de Maligny*, is besieged with many and sundry Symptomes, and those grievous and dreadful; but al which concur in the signification of one, and the self same Disease. For, though the said Symptoms have more vehemently raged a few daies since, by reason of the exceeding heat of Summer; yet they seem to have now a long time had some Rudiments and Foundations. Sadness and Fear without occasion, which have frequently troubled the Gentleman, Solitariness, deep and serious Cogitation, troublesom sleeping, molested with Apparitions, and sundry Frightments, do al proclaim Melancholy, not that primary sort, which comes through fault of the brain alone; but that other which proceeds from the Hypochondria, or parts about the Midrif and short Ribs, and is therfore called Hypochondriacal. For a manifest sign therof, we have, in that swelling, which is observed about his Spleen, and Pancreas or Sweet bread. Nor do I conceive the continent Cause thereof to be Natural Melancholy, which is the dregs of blood; but another adust sort, which is bred of yellow Choler over burned, and which we by a peculiar name, term *Bilis atra*, black Choler. For this having been now a long time by little and little heaped up in the Hypochondria, is for the most part perceived to boil and work thereabouts, and then it sends from out it self malignant vapors, which being forced against the Midrif, do in a manner stop and hinder the breath. If they go into the Heart, they cause strong palpitation, and sometimes Syncope: if they hap to go into the brain, they produce Dotages next to Madness, and they joyned with a certain fear and sadness. For which causes, the sick Gentleman, being as it were danted in his mind, is very much afraid of himself, and can hardly be raised into any good

good hope of Health. The Cauſe therefore of his palpitation of heart, and fainting fits, is not in his Heart or Pericardium, but only in his Hypochondria or Præcordia, out of which the filthy vapor, carried up through manifold Arteries gets into the Heart; and produces theſe bad Symptomes common in a manner to al Hypochondriacal perſons. Yea, and moreover, if you diligently feel his left Hypochondrium, where it inclines to the Navil, you ſhal, I conceive, find much ſuch a palpitation there, as is in his Heart: for they both ariſe from one and the ſame Cauſe. Moreover, flatulent belchings, rumblings in the belly, ſtomach-ſickneſs, frequent ſpittings, and other ſigns of a crude Stomach, are common to al Hypochondriacal perſons, and proceed from the Nature and condition of black Choler.

Now the evident and foregoing cauſes, are theſe: This renowned Gentleman being naturally very Cholerick, hath by Cares, deep Thoughts, hot Diet, and Intemperance therein, heaped up a great quantity of yellow Choler, which alſo once put him into a kind of Jaundice. At laſt, not being timely purged out, and the foreſaid cauſes continuing, it turned into black Choler, which is now the continent and immediate cauſe of al the foreſaid Symptomes. Touching the Prognoſtick, I may ſay thus much; That though this Diſeaſe be grievous in reſpect of the Swouning fits, and other Symptomes, and ful of terror, yet wil it admit cure, rather conſidering the Age and ſtrength of this Gentleman: eſpecially if he follow and obey the Counſels of his Phyſitians: for otherwiſe, if he continue the ſame, he wil either die of a ſwouning fit, or through weakneſs, or he wil be taken mad, with that kind of madneſs we cal *Mania*; or if he avoid theſe evils, he wil hardly at length eſcape the inconveniencies of a Dropſie. His Infirmities are many and different, but becauſe the whol Cure of al, does chiefly conſiſt in two things; the firſt, and chiefeſt whereof is, that the inward cauſe, which as we have ſaid, is black Choler, be quite rooted out; the other, that the ſwouning fits, and other grievous accidents, be ſo long kept off, til the Cure be performed. The Cauſe aforeſaid, though it ſo much abound, that it overwhelms the patient in a manner, yet ſeeing his Natural forces do extreamly languiſh, and are oppreſſed by the cruelty of the ſymptoms, it ought to be drawn away leiſurely, and by little and little, and with ſuch moderation, as his weakneſs may eaſily bear: to which intent, ſuch an Apozeme as this, wil be convenient.

Take *Roots of Bugloſs, Sorrel, and Cichory, of each half an ounce: Agrimony, Dodder, Ceterach, of each one handful: Senna one ounce and half. Make a Decoction to a pint, adding towards the end, of the three Cordial flowers, of each one pugil. In the ſtrained Liquor infuſe choice Rhubarb three drams: Cinnamon four ſcruples. Preſs out the Liquor again, and diſſolve therein two ounces of Syrup of Violets. Make it an Apozeme not clarified, in three Doſes. Let him take it every other day, in the morning, four hours at leaſt before meat.*

The uſe of this ſweet and gentle Apozeme, wil be exceeding ſafe, nor muſt he take any ſtronger Medicament, but continue in the uſe hereof, for without offence, it wil take away al the Cauſe of his Infirmity, and by little and little, reſtore his ſtrength. Having finiſhed this Apozeme, let the Gentleman reſt four daies, only a light detertive Clyſter being injected, if peradventure he be bound in his body. But afterwards let him take again the ſaid Apozeme, having alwaies regard to the ſtrength, and wel bearance of the Patient.

On the daies intermediate, when the Patient is not purged, give him a Syrup to prepare the Humors, and allay the Symptoms, made after this manner.

Take *of the clarified Juyces, of Bugloſs, Borrage, Sorrel, Fumitory, ſweet ſmelling Apples, and Pomegranates, of each two ounces: white Sugar half a pound. Make a Syrup indifferently boyled. Let him take twice a day two ounces at a time, with a like quantity of barley water, at leaſt two hours before dinner.*

And theſe two Medicaments ſhal be interchangably taken; one, one day; and the other the next. And in the interval (which I told you muſt be four or ſix dayes) let him uſe this Confection twice a day, which wil recreate his Faculties, and abate the acrimony of the Humors, and the violence of the Symptoms.

Take *Conſerve of bugloſs one ounce: Conſerve of Roſes, Citron peels preſerved, of each half an ounce: Ivory one dram: Harts-horn, Harts-heart-bone, choice Guajacum, of each half a dram: Oriental Pearls, Lignum Aloes, of each one ſcruple: Red Coral, Criſtal fine poudered, of each ten grains: White Sugar as much as ſhall ſuffice. Make all into a Confection covered with Gold. Let him take a ſpoonful an hour and half before meat, and*

drink a little tempered Wine after it. To this may sometimes be added a smal quantity of Confectio Alkermes; though the use thereof, as of all other hot things, is in this Disease, if in any, much to be feared. For nothing does so much exasperate this Disease, as the use of hot meats and medicaments. And therefore we must content our selves (as I said before) with these Remedies, nor can we pass over to hotter or stronger without mischief, or at least dammage.

Now the use of those four aforesaid Remedies, must be continued, viz. Of the Apozeme, the Syrup, the Clyster, and the Preserve, just as I have before expressed, til the Patient find himself perfectly cured.

I must speak also of Bleeding. It wil be exceeding good to open a Vein, if it be done seasonably, and conveniently. For much blood is contained and imprisoned in the Veins, being very hot and burned (though the Urins seem to tel another tale) which requires to be cooled and sobed: nor have the Ancients devised any thing more wholsom, than this Remedy of Phlebotomy. And therefore after the third purgation by his Apozeme, if his strength seems sufficiently recreated and constant, let him blood boldly out of the middle, or inmost Vein of his Arm, and that to the quantity of eight or ten ounces, unless he faint away, which seldom happens. For, more frequently, the Natural strength is found to grow vigorous and lusty, upon discharge of the burthen of blood.

How to asswage the symptoms.

In very deed and in truth, al symptomes cease, when the disease shal be throughly cured. But nevertheless, if during the time of the Cure, they shal vehemently rage, they must be pacified with a peculiar remedy, especially his palpitation of Heart and his fainting fits. As often therefore, as either of these shal happen, rub his belly, loins, and thighes downwards, that a revulsion may be made of the vapour creeping upwards. Also let a large cupping-glass be fixed to the lower part of his belly without scarrification. Let his belly be provoked with a suppository if it be bound. And Apply to his Heart and left Hypochondrium this following Epitheme.

Take *Distilled waters of Plantane, Roses, Purslane, Bugloss, Baume, Carduus, Vinegar, each two ounces. In these dissolve, of the three sanders, of red roses poudered, of amber, each three drams; Trochisks of camphire, half an ounce; Make an Epithem, and apply it blood-warm.*

Let him take inwardly, the juice of a sowr pumgranate, which is a most speedy remedy in these fits. In want thereof, use the juyce of a citorn, or a Quince, or of barberies. For by these the biting quallity, and also the malignity of the humor is blunted, whereas contrariwise, 'tis provoked and exasperated with hot things; and if in the fit, there wil be leisure to give him some of the Confection, aforesaid, it wil do him much Good.

His Diet.

A good course of diet is of no mean force, both to cure the disease and asswage the symtpomes, without which, scarcely any thing worth speaking of, can be effected in this disease. He must wholly abstain even by the counsel of *Galen* from al hot an fervent qualitied meats as most adverse to him; seeing they both encrease the fomenting cause of al the mischief and malady, and exasperate and provoke the symptomes. He must therefore eate cold and moist meates though the crudity of his stomach, seemes to perswade the contrary, as Veal, Kids flesh, Capons, Chickens, and young Pigeons; and these boyled with lettice, Purslane, Sorrel, and Borrage, rather than roasted; or if haply he shal delight to eate these meats roasted, or Partriges, or little birds roasted, let him dip them in some cooling and astringent juices, as of sorrel, sowr grapes, Pomgranates, or quinces, or also Vinegar. For by these, the humor is dulled, and the swowning fits kept off, as they are by sugared things exasperated. He must abstain from salt and aromatick things, let his bread be neither salted nor too much fermented. Let his wine be pale red, somwhat cast, & moderately astringent, that it may strengthen the mouth of his stomach, & drive away his fainting fits; and let it be allaied with good store of water, least it provoke vapours. Let him shun al rich, white, thin, vaporous wine, as most hurtful for him. Yea verily, if he

he would be perſwaded once to leave the uſe of al wine, and to drink inſtead thereof, either juyce of pomgranates mingled with water, or a decoction of barberies, or of ſowr cherries dried (which moſt people keep for other uſes) nothing would conduce more to the Cure. And even by this one Remedy alone, many have recovered. And above al things, he muſt drink ſparingly, becauſe too much fluctuation of humors, and rumblings of the belly, and winds, and ſpittings, and crudities are encreaſed by overmuch drinking. Let him content himſelf, with two ſpare meales in a day, viz. one at nine in the morning, the other at four in the afternoon. And at midnight, it wil be very good for him to drink almon milk made with barly water, becauſe it exceedingly bridles the fury of the Vapours and Humors. And in the hours betwixt thoſe two meales, let him neither eate nor drink, but attend the uſe of ſuch medicaments as have been before deſcribed. Let him ſhun al diſturbance of body and of mind, as anger, warth, cares, troubleſome cogitations, alſo ſtrong motions of body, ſuch as cauſe panting of the heart. Let him not ſo much as riſe to ſtool, but uſe a bed-pan, &c. Cool air is better for him than extream hot, and the northern winds are better than the ſouthern. Nor muſt the patient be kept in a cloſe ſmothering chamber, but in one that is aery, with the windowes many times ſet open to pureſie the ſame. Towards the end of the Cure, when the Gentleman ſhal begin to walk abroad, a bath of ſweet freſh water wil be exceeding good, not to provoke ſweat, but to the intent that his body now long time heated and dryed, may thereby be cooled and moiſtened. Theſe are the chief precepts belonging to the whol Cure. In imitation whereof, may eaſily be underſtood, what is to be done, in caſe any thing elſe happen in the mean while.

The *XLIV.* Counſel.

Touching Hypochondriacal Melancholy.

THis Symptome, as the ſtory is related, is hypocondriacal melancholy, which has long taken root, in that age that is moſt ſubject thereunto. Now it ariſes from burnt choler, which by little and little has a long time been collected in the patients Hypochondria, or parts about the ſmal ribs and midrif: and which nature has failed timely to void by ſtool, or vomit. The which does ſo offend the ſtomachs digeſtion, that it turns the greateſt part of what is eaten, into winds, which do much weary the patient both with belchings, and ſtretchings. But withal, from the ſaid aduſt and ſcorched humor, there frequently ariſes a vapor like a miſt, and creeps up into the brain, cauſing feare, penſiveneſs, and ſundry frightments with apparitions of Hobgoblins, &c. and when it takes its courſe into the whol body, it cauſes many pains, which nevertheleſs are ſoon allaied. The Cure of the diſeaſe, which is now to follow, muſt be thus performed.

Take, *Bugloſs, Borrage, Baume, Betony, Burnet, Hops, Dodder, Ceterach, Endive, each one handful. Roots of Cichory, Polypody of the Oak, Raiſons of the ſun ſtoned, each one ounce. Of the four cooling ſeeds, each one dram. Of the cordial flowers and Epithymum, each one dram. Make a decoction to fifteen ounces. In the ſtrained liquor, infuſe three ounces of Senna, two ounces of Agrick, two drams of Ginger. Boyl them a little and make an expreſſion, or ſqueezing out of the Liquor, and therein diſſolve one pound of white Sugar. Make a ſyrup perfectly boyled, not clarified, let him take every ſixt day two ounces, for a doſe in barly water.*

It wil be good of the ſelf ſame ingredients to make a ſyrup which is not purgative: which let him uſe every morning faſting to prepare the humor. But if at any times his body ſhal be bound in the intermediate days, between his purgings; it may be looſened with this Clyſter.

Take *Mallows, Violet leaves, Pellitory of the wal, Marſh-mallows, root and branch, Chamemel, melilote, dil, Worm-wood, Origanum, each one handful. Seeds of Annis and Line, each one ounce. Make a decoction to a pint. In the ſtrained liquor diſſolve ſix drams of Catholicon, honey of roſes, & of roſemary flowers, each one ounce. Common oyl three ounces. Make a* Clyſter.

His body being thus gently purged four or five times, let him continue the use of this following Conserve.

Take *Conserve of Bugloss and violets, each one ounce. Pouder of Electuarium lætificans Galeni, one scruple; Shavings of Ivory and Harts-horn, each two scruples. Choyce pearls half a dram. White Sugar as much as shal suffice. Make of al a confection, let him take a spoonful in the morning, and another an hour before supper.*

When the disease shal seem now a little to incline, & al the symptoms shal appear more mild, but especially towards the end of winter, baths of good sweet water, such as may be drunk, wil be exceeding useful, wherein let him sit a long time fasting, and continue them about ten or twelve daies. And let them be used at such a time as they may not provoke any manifest sweat nor heat: nor may exagitate the body, but only cool and moisten the same. Meane while, daily fictions of his whole body wil be useful, and that then especially when the fits shal urge. Let his diet be wholly moistening and cooling: wherein let him altogether abstain from hot things, but especially from strong and unmixed wine: for he must drink his wine very much allayed with water, and that sparingly, because much fluctuation encreases winds and belchings. Suppings wil be good, wherein cooling herbes have been boyled. Also barley Creame is convenient, and al kind of meates, which are of like faculty: let him wholly abstain from cares and businesse: Keep him from seriousnes, exhilarate him with jests, and hunting, and taking the fresh Aire.

The XLV. Counsel.

Of a distillation with Melancholy.

THis Gentleman is frequently troubled with a distilation, sometimes into his Neck, otherwhiles into his shoulders and Armes, somtimes into the hinder part of his back; but he is troubled with a more grievous symptom than al these, which is hypochondriacal melancholy. For since the time he has been freed from the quartan Ague, he was taken with a pain in his left Hypochondrium, and has ever since been so tormented with a disease in his spleen, that he was never able to lie upon his left side: and from hence the Concoction of his stomach is offended by way of contagion. His appetite has been long time much dejected. He is much troubled with belchings, and much spittle comes out of his throat into his mouth. Hence also fancies, and dreadful dreames; also feare and sadnes, and a certain clownish kind of bashfulnes, alwaies apt to blush, and false and absurd imaginations of sad and sorrowful things.

The Cure,

Take *roots of Grass, Parsly, Fennel, Smallage, each half an ounce. Bugloss, Borrage, Hops, Agrimony, Ceterach, Dodder, Adianthum, Maiden-hair, Hyssop, Origanum, each one handful. Seeds of Endive, Dodder, and Musk-melons, Liquoris shaved, each two drams. Cordial flowers, Epithymum, each one pugil. Make a decoction to fifteen ounces. In the strained liquor, infuse al night leaves of Senna clensed four ounces, white agrick two ounces. Turbith bruised half an ounce. Ginger two drams. Let them boyl a little in the morning, and make an expression, wherein dissolve one pound of Sugar. Make a syrup perfectly boyled. Let him take once a week two ounces in water wherein Bugloss has been boyled.*

And once a month, especially when the Moon is in the last quarter to purge away the matter of the distillation, ad to the foresaid dose, diaphenicon one dram and half. In the daies between, you shal strengthen al the principal parts especially the spleen, with this Electuary.

Take *Pouder of the Electuary Lætificans Galeni, shavings of Ivory, each one dram, pouder of Diamargaritum frigidum, and Trion Santalon each half a dram. White Sugar dissolved in Bugloss water four ounces. Make al into lozenges of three drams apiece.*

Take *Oyl of Lillies, and of Cappars, Mucilage of Marsh-mallows drawn in bugloss water, each six drams. Wax a little.* Make *them into a Liniment.*

Item. Take *Gum ammoniacum dissolved in strong vinegar one ounce. Arthanita and orice*

orice roots, each half an ounce. Plaiſter de Mucilaginibus, and de Melilot, each one ounce. Make al into a plaiſter for his Spleen.

If the diſeaſe ſhal ſtubbornly continue, the inner veine of his left Arme muſt be opened, the next ſpring, if nothing diſſwade. His diet muſt be ordered of good and thin juice, which ſhal incline ſomwhat to coldneſs. For al hot things, are therefore moſt contrary, becauſe they whet this ſame black choler bred of yellow choler over ſcorched, they ſet an edg upon it, and by encreaſing the ſame alſo, do raiſe more grievous ſymptomes. Let him therefore avoid al ſalt things, and peppered things, and muſtard, and ſtrong wine, and unmixed wine: And let him chuſe things of a contrary nature to theſe.

The *XLVI.* Counſel:

Of letting Blood in caſe of the Itch.

The Letter of Mſr. Melinus *a Phyſitian, to* Mſr. Fernelius, *propounding the Queſtion.*

I Am not ignorant of the multitude of your Employments and troubles. For al that are troubled with any very grievous diſeaſe, do flie to you for help, as to an *Æſculapius*, or Terrene Deity: which thing would peradventure have ſcared another man from writing to you. But I who know the Fruitfulneſs of your wit, and how eaſy a thing it is for you to anſwer any queſtion propounded in the Art of Healing, do know alſo, That ſame gentleneſs of your manners; which gives eaſie acceſs to all in a manner: and therefore I would not ſuffer my ſelf to be longer vexed with that ſcruple, whereof I informed you in my laſt Letters. Which it wil be more eaſy for you to take out of my mind, than offer it to me to be taken out: which now I entreat you again and again, that you wil be pleaſed to do. The former Winter I fel into an ulcerous wearineſs, which came of it ſelf, which practitioners (if I miſtake not) do cal *Pruritus*. A while after I diſburthened my Liver and ſpleen with a gentle purge. Since that time, puſhes have riſen in ſundry parts, very dry, and ſticking very cloſe, which being ſcratched off, black and thick blood came out. At laſt a furunculus or felon riſing upon the lower part of my right Leg, as alſo an Herpes, or tetter, I was provoked in my mind to uſe ſtronger remedies. Whereupon I open a veine, and take away about three ounces of blood, and after the uſe of whey, prunes, tamarinds, and ſuch like things, I purged twice or thrice luſtily, with Catholicon, Senna, Confection Hamech, ſometimes adding Rhubarb. By which meanes and a few topicks, I was cured. Yet about eight daies after, the former bloodletting, I again opened my baſilica veine, and took away about two ounces of blood. But the Chyrurgeon which *Claudius Lavallus* Embaſſador from the moſt Chriſtian King, had ſent for to pleaſure me, and the Phyſitians, were of opinion, that I ſhould loſe much blood. Their reaſon was this: my blood is very bad, and my age and ſtrength are in their prime, or not much declined: moreover they daily uſed ſuch a kind of blood-letting, and that with good ſucceſs. But I following the Mind of *Galen* in his fourth Book of preſervation of Health, where he diſcourſes of Ulcerous wearineſs coming of its own accord, of the Itch and Scabbineſs; I maintained that I was to loſe very little or no blood at al; and that for revulſion ſake rather than evacuation. For thus he ſaies. *When there is a coming ſhort of blood, or a proceeding beyond the ſame, a man may boldly let blood*: which place of *Galen* I thus interpret, when the blood by under or over boyling is either crude or cholerick, then there is no danger in large evacuation thereof. But there were none of thoſe ſigns in my urine, which *Galen* a little before ſaid were arguments of crudity. Moreover, the laſt winter foregoing, I did eat for the moſt part only once a day: therefore that ſmal crudity, could not perſwade me to draw much blood. Moreover my blood is not cholerick, or defiled with black choler: which is argued both by my temper and Age which is now declining, and the color of my whol body which is yellowiſh lead-colored; alſo my by-paſt labors, cares, and long ſtudies, and therefore I ought not to bleed. For *Galen* alſo preſently adds to the ſpeech foregoing; *Where there is more we muſt act more warily; where there is very much, in ſuch we muſt not let blood at al.* And by and by after, he ſaies like-wiſe: *It is good alſo to view the quantity: as for examples ſake; if there be little*

good

good blood, and of the reſt of the Juyces very much; verily, in ſuch perſons, we muſt abſtain from blood-letting. But if other Humors are little in quantity, and blood plentiful, we may boldly let blood. This ſaying of *Galen*, has wonderfully afflicted me, to this very day. For when blood comes away impure, thick, black, or otherwaies faulty, moſt Phyſitians and Chyrurgeons are wont to take away a great quantity: but when it is pure and florid, they ſpare it: unleſs there be over plenitude in the Veins, becauſe dayly experience does ſhew 'tis good to let blood in that caſe. And therefore either there is now another way of curing an Ulcerous wearineſs coming of its own accord, than there was in the daies of *Galen* (which indeed is true, if we conſider what *Galen* has written of indifferent friction, that which is ſtow, and that which is interrupted with pauſes, alſo of baths, anointings with Oyl, and other things of that Nature.) Or elſe men that are ſeated far from the Æquinoctial Circle can endure more blood-letting, than thoſe that inhabit nearer the ſame.

But I am not ignorant that you are wholly taken up with ſundry and weighty imployments: but I know withal, that if you pleaſe to beſtow a quarter of an hour upon me, you may without any trouble to your ſelf, free me from this trouble, and explain this doubtful Queſtion.

The Anſwer of Mſr. Fernelius, *to the Queſtion propounded.*

You are fallen accidentally into a ſubtile and hard doubt, which has tortured wel-nigh al Practitioners underſtandings. Now this is ſtarted out of the writings of *Galen*, whereof there is ſo great variety, and in them ſo little conſtancy, and for the moſt part ſo many diſcords, that hardly any man has yet been able to underſtand his mind in this point. But neither he himſelf, if I am able to judg of the queſtion in hand, had ever any ſetled and reſolved judgment in his mind: as being a Man that ſpent al his life in ſtudy and Meditations, rather than in finding the right method of practice and exerciſing the ſame. I ſhal not here play the interpreter, nor endeavour to reconcile the ſayings of this Author, which are diametrically oppoſite one to another: but what I have rooted in my mind by long experience, I ſhal at your requeſt briefly open in a few propoſitions, which wil take this ſcruple quite out of your mind. Al plenitude of the Veſſels, is to be cured with blood-letting. For a plethora which is properly ſo called, is only cured by this remedy: but an impure, conſiſting of much bad Humor, though it may be after ſome ſort abated by purgation, yet can it not be ſafely nor ſpeedily done. But immediately upon the opening of a vein, the dangers attending by reaſon of plenitude, are preſently avoided, without any dammage to the ſtrength of the Patient. And therefore as oft as you meet with a wel conſtituted body, with large veins ſwelling with much blood, you may boldly open a vein: and if the blood ſhal ſeem pure, take away the greater quantity, but if it be impure take away the leſs, letting that out at ſeveral times rather than at once. A dangerous plenitude being removed, the reſt of the impurity and Cacochymie may be taken away by purging. But when there is a ſmal quantity of impure Humor in the veins, which they cal *Cachochymia ſine plenitudine*, a Cacochymick or badneſs of humors, without their aboundance, it requires not blood-letting, but purging. For the latter takes away the offending bad Humor; but the former removes not only the bad humor, but al humors alike, and takes away plenitude where there was none, to the great decay of the patients ſtrength. But then does blood-letting moſt harm, when badneſs of juyce is contracted (as for the moſt part it is) through fault of the Spleen or Liver, as in the jaundice, a Cachexia, a Leucophlegmatia. For blood being taken away, though impure, yet there comes impurer in the place by much. This I ſuppoſe is enough to anſwer your queſtion, which point nevertheleſs I have debated more largely in a work of mine. Al that you bring out of *Galens* fourth Book *de ſanitate Tuenda*, is agreeable to what I have ſaid. Thoſe opinions that differ, do build upon that which *Galen* ſaies, in his third Book *de Locis affectis*, of the parts affected. How that in Melancholy the middle vein in the left Arm is to be opened, and that good ſtore of blood muſt be let out, if it be black and thick, but it muſt be ſpared and ſtopped if it be pure and thin, and that which he ſaies in the 11. of his Method, that it is exceeding wholſom in al Feavers cauſed by a putrefied humor to let blood. And becauſe in the firſt Book of the Art of Phyſick to *Glauco*, he permits blood-letting in a quartan Ague; and in this Book of blood-letting he cures Diſeaſes

ariſing

ariſing from a Cacochymia as wel as thoſe which ſpring from fullneſs, by blood-letting. But I have confuted theſe things, and eſtabliſhed the former opinion, in a little Book which I cal, *de Vacuandi Ratione*. I cannot enlarge, being variouſly taken up with buſineſs.

The XLVII. Counſel.

Containing the Cure of a Cachexia, or Ill-habit of the whol Body, for Mſr. Malvenda, *Chaplain to the Emperour,* Charls *the fift.*

THere is a very great mixture of the Symptoms propounded, yet ſuch is their order and connexion, that I conceive they are al in a manner derived out of one and the ſame fountain. The heavineſs of his Head, the noiſe in his right Eare, ſuffuſions and darkneſs of his Eyes, and a Vertigo or diſſineſs and ſwiming of his head beginning; an unability to ſit conſtantly at his Study, are al ſigns and ſymptomes of an Head and brain ill-affected. And the perſeverance of the ſymptoms, and continuance of the whol Diſeaſe, do argue that in this Gentleman, it is not only by ſympathy and conſent of the lower parts, that his Head is affected, but by a diſeaſe proper thereunto, and bred immediately therein: ſeeing it muſt needs be, that the Head ſhould in time be altered by the habit and humor of the lower parts, and partake of their faults. But nevertheleſs, hard and ſlow digeſtion, frequent making of water, ſtomach-ſickneſs, light fainting fits, do belong, and are to be referred to the ſtomach rather; and eſpecially the upper mouth thereof; wherein ſome ſence alſo of pain is perceived, if one touch the ſame. Whence it is (doubtleſs) manifeſt, that the coats thereof are ſtuffed with many, and thoſe naughty Humors. There are alſo no few ſigns of an il conſtituted Liver, which being exceeding hot, has been many years diſpoſed to breed Choler. Which ſomtimes breaks out with vomiting, and cauſes fainting fits; and getting into the mouth, it commonly cauſes bitterneſs: and the ſame humor being ſomtimes kept in, and putrefying, it has cauſed ſuch Feavers as we have heard. By abundance of the ſaid Choler growing thick, and of Crudities, his Liver was firſt obſtructed; and at laſt al the ſubſtance thereof ſoaked with bad humors, and raiſed into a tumor, and if it continue ſo long without Remedy, it wil turn to a Scirrhus.

I make the Liver, therefore, to be the firſt Fountain of his Malady, out of which being ful, the naughty humor redounds into the Spleen, Sweat-bread, Meſentery, and Stomach, and other neighboring parts, whoſe ſwelling, which may be felt with the hand, is hereby known to proceed from plenty of humors, becauſe he is very much purged by ſtool, with a very ſmal Medicine. Now theſe parts being thus diſpoſed, ſeeing not only the Head, but al the reſt of the body, is in a languiſhing and ſickly condition; a Cachexy wil come at laſt, and after it a Dropſie, if you take not diligent heed. Theſe are the Evils which I foreſee; but which may be nevertheleſs prevented, as al the Diſeaſes already bred may admit of Cure in time. Now a gentle and light Cure muſt be applied, that by little and little, and with much time and leiſure, it may pluck up what has been long in rooting. Alſo exceeding great Care muſt be had of his Diet, and meats muſt be choſen of good juyce, ſuch as have few Excrements, and do not much fill, but may in ſmal quantity preſerve the Body in ſtrength, that by their uſe Nature may not be diſtracted, and called away from her concoction of bad humors. Let him eat there ſuch fleſhes as are tender and ſoft, as thoſe of young Beaſts, and of Birds, which haunt the Mountains and Thickets, and not the Waters. Let them al be roaſted rather than boyled, and ſauced with Capars, or ſuch like ſawce. Let him refrain broaths and ſuppings, and whatever things fill much. Alſo fiſhes, unleſs thoſe of firm fleſh; and yet their hard Roes will do no hurt. Al Fruits are bad, ſaving Dates, Almonds, and Marmalade of Quinces: theſe he may uſe to ſhut up his Meals. Let him drink wine that is white, ſweet, and not harſh, ſuch as is your Rheniſh wine, that is neither pitched nor brim-ſtoned. His wine muſt be allayed with much pure water, that in a ſmal quantity it may aſſwage his thirſt, and not encreaſe the Heat of his Liver. It wil be ſufficient for him to eate twice a day, but in ſuch rule and meaſure, that neither the meat burthen his ſtomach by the weight, nor his drink cauſe fluctuation

and

and belchings. For this Counsel wil preserve his strength, and neither encrease it, nor the bulk of his body, but rather extenuate the same, that so a portion of the vitious Humor may be withal exhausted, and the ramainder prepared for future Evacuation. And 'twil be therefore good for him to endure hunger and thirst, and to omit suppers. Morning frictions and moderate exercises, when he is fasting, wil be good, which also spend somwhat of the body, and provoke the Natural heat to action. Let him sleep moderately, long after meat. This course of life must exactly be followed, and to an hair, til his body be perfectly cured. And if he shal accustome himself thereto longer, his health wil be more firm and constant. Now the cure which is to be performed by medicaments must be thus ordered. Let him frequently take Clysters, which in an Emollient and detersive Decoction, shal have half an ounce of Diacatholicon, with a fit portion of Honey and Sugar. Also the self same day let him begin with his Clysters, and the fore going order of life. The day after, the crude and superfluous Humors, which fluctuate, in the stomach, first passages, and belly, shal be purged with this following Medicament.

Take the expression of two drams and an half of choice Rhubarb, infused in Ciehory water and white Wine, with half a dram of choice Cinnamon. Therein dissolve Syrup of mints, half an ounce. Make of al, a dose. Give it at six a clock in the morning. The daies following the rest of the Humors must be concocted and prepared, and that by an electuary rather than by a Syrup, or an Apozeme. In Imitation of *Galen*, who in such Diseases as these, and in the winter, gave pouders rather than Liquours.

Take Shavings of Ivory poudered; Aromaticum Rosatum, of each two scruples. Pouder of Triosantalon, and of the Electuary Lætificans Galeni, of each half a dram. White Sugar dissolved in four ounces of Rose water. Make al into Tables or Lozenges weighing three drams apiece. Let him take one in the morning, and one before Supper, and continue the use thereof long, if not interrupted with other Medicines. And in case somtimes, he shal be forced to drink betwixt meals, thereby to quench his thirst, seeing neither water, nor prisan, nor beer is good for him; nothing is more excellent than Oxymel, either made by *Galens* prescription, or of a Decoction of Parsly and Fennel Roots, and a little Hyssop. After eight daies use of this course of life and of these preparatives; purge him gently the second time, with the following Syrup, which we have thus accommodated to that purpose.

Take Roots of Cichory, Sorrel, Grass, Parsley, Fennel, Cappars, Polypody of the Oake, Carthamus Seeds, Raisions clensed, of each half an ounce. White Hore-hound, Agrimony, Ceterach, Maiden-hair, Bugloss, Borrage, of each one handful. Annis-seed, Endive, Seed of Dodder and Musk-Melons, of each two drams. The three Cordial flowers, of each one pugil. Make a Decoction to fifteen ounces. In the strained liquor infuse four ounces of Senna, white agarick, two ounces, white Ginger two scruples. Choice Cinnamon half an ounce. After a smal boyling, press al the Liquor out. Wherein dissolve fifteen ounces of white Sugar. Make a Syrup perfectly boyled, adding at the end of boyling, the expression of an ounce of choice Rhubarb, only infused in Endive water and white Wine. Let him take one ounce and an half at a time in barley water.

With this Syrup he must purge every eighth day, augmenting or diminishing the dose, as need shal require. In the intermediate daies, if peradventure his belly shal be costive, 'twil be better to move the same with these pils than a Clyster.

Take the best Aloes, choice Rhubarb, of each two drams. Aromaticum rosatum pouder one scruple: with Syrup of Mints make al into a soft Mass. Let him take two pils, an hour before meat.

After he has been purged the second or third time, for the more effectual preparation of the rest of the Humors, which are wont to be both more earthy and more stubborn than ordinary; besides the electuary and Diet aforesaid, First a fomentation wil be good, which Molifies those, which wil soften, melt, and make fluid the said Humors, and by al means possible open the obstructions of the Bowels, preserving their strength. Now it shal be made after this manner.

Take Roots of Marsh-mallowes, Cichory, Elecampane sliced, of each half an ounce. Red-Roses, Balaustians, Agrimony, Mints, Wormwood, Chamomel flowers, Dil, each one handful and an half. Annis-seed Lineseed, and Fenugreek seed, of each half an ounce. Squinanth. Cyperus, Calamus Aromaticus, of each three drams. Make of al a little bag, and

boyl

boyl it in a pint of water, adding towards the end white wine two pints. Make a fomentation thereof for his ſtomach and Hypochondria, to be applyed in the morning and before ſupper with bread and new ſpunges, ſqueezed out, and heated three or four times over.

His belly being liquid, clean, and dry, this plaiſter wil be good to lay on.

Take *Ointment of Marſh-mallows two ounces; Ceratum Santalinum, and Ceratum ſtomachicum, each one ounce and half. Mix them together, and ſpread thereof a plaiſter on leather. Apply it after fomentation is over.*

The *XLVIII.* Counſel.

Touching a Chachexia in one of Burgundy.

BLear eyednes, dullneſs of ſmelling, ſtore of ſpittle and flegm proceeding from the mouth, ſwelling of the Legs towards night, are ſigns of extream Crudity abounding in the whol body. Which being accompanied with the Livers heat; as appears by the heat of the patients hands and feet: it argues a cachexy very near at hand, and peradventure a dropſie alſo; which having ſo manifeſt rudiments and beginnings in this flouriſhing age, when he comes to decline and grow old they wil bring him to his end: they muſt therefore be oppoſed with al poſſible care and diligence. And in the firſt place let his Diet be pure, and let him abſtain from Inwards, and Tripes, and Feet of Beaſts; and from much Fiſh, and Cheeſe, and all clammy roaping meats; and for about two months let him uſe no ſupping things. Let him avoid glutting himſelf, nor let him eat ſo greedily as he has been accuſtomed. He muſt by al means live more temperately, and pine himſelf, whatever come of it, and omit his ſuppers. And let his wine be little and temper'd wel with water, and let him commonly uſe ſuch as is white and thin. Let him uſe frequent and ſtrong exercile: which if he cannot perform, let him ſupply the defect therof with a thin diet. Nor can diſeaſes which have been long a gathering in the body be cured by diet alone, unleſs the uſe of ſome gentle medicaments be added. Now theſe following wil be moſt fitting for his condition.

Take *roots of Smallage, Parſly, Fennel, Cappars, Polypody of the Oak, Carthamus ſeeds, Rayſons, each half an handful. Hyſſop, Origanum, Calamint, Maiden-haire both the kinds, each one handful. Ceterach, Hops, each one pugil. Seeds of Annis, Endive, Dodder, and Melons, and Liquoris ſhaven, each two drams. Senna four ounces, Agrick two ounces, Ginger one dram. Choice cinnamon half an ounce. Boyl them a little, then preſs forth the Liquor, and in the ſame diſſolve fifteen ounces of Sugar. Make al into a ſyrup perfectly boyled. Let him take once a week two ounces, mixed with a little white wine.*

In the interceeding daies, when haply his belly ſhal be bound, both to looſen the ſame, and to purge and ſtrengthen his ſtomach, let him uſe theſe pils.

Take *the beſt Aloes two drams. Choice Rhubarb one dram. Aromaticum roſatum halfe a dram. Syrup of Wormwood as much as ſhal ſuffice. Make al into a ſoft Maſs. Let him take two pils thereof or four at a time, one houre before ſupper without Cuſtody or obſervance to keep houſe, &c.*

On the daies in which he purges not, an hour and an half before meat let him take a table or Lozenge of Aromaticum roſatum, both to reſiſt crudities and help the digeſtion of his meat. For the fretting or eating that is in his lower gum, which is laſt of al deſcribed, mix, Ginger pouder one ſcruple. Burnt Allum one dram; Honey of roſes one ounce; Herewith, as with a liniment rub his gum very hard, twice or thrice a day.

The *XLIX.* Counsel.

For the Cholick and Pain in the Back-bone, in behalfe of a German Noble-man.

AS these pains are most grievous, and hard to cure, which do so cruelly torment this renowned Gentleman: so I perceive there is doubting touching their cause, and the place affected, about which the renowned Physitians cannot agree. For though the pains are spred far and neare, yet we must think there is some primary and peculiar seat thereof, whereout it breaks into other parts. This controverted question, being thereto intreated, I shal briefly discuss, that the seat of the pain being known, some proper remedies may be fitted and applied thereto. In the first place therefore, his Urines being good both in substance and color, and like to such as are natural (save that by continual lying of the patient they are somwhat yellowish) without any gravil or flegm, does shew that the Cause of the pain, does neither belong to the ureters, nor the kidneys. Nor verily has the pain propounded the appearance of a Nephritick pain, nor was it ever known that a pain continued in the kidneys three yeares together, without the coming away of any matter. Nor can this pain be any waies referred to the spleen, Liver, or Mesentery, because these parts have little or no sence, and that very dul. But as touching the Guts, whose sense is very great, I see some reason to doubt, especially because in the left Hypochondrium by the Gut Colon, a croaking noise is heard, as also in the whol belly; and because the pain is unsettled, running sometimes into the right, otherwhiles into the left side, and because it gets sometimes into the right stone, and for that the belly seems much blown up and distended. And al these symptomes grow worse when his belly is bound. Contrary wise, when the wind breaks out, or he goes to stool, his belly falls, pain ceases, til new wind be raised. These are (I confess) cleare arguments of a certain pain arising from winds shut up, and imprisoned in his guts, which has both a fomenting and peculiar cause there, viz. thick, clammy, snotty flegm, sticking close to the Guts, especially the Cæcum and Colon, such as has been often observed in this patient, to come from his belly, either by it self or with the excrements. Being therefore by these reasons induced, I cannot but confess that one Cause of these pains is thick and clammy flegm sticking fast to the thick Gutts. But this, verily, I count the slighter and smaller cause, and only concomitant and attendant on a greater. For as this pain is of many sorts intangled, so is the seat and cause thereof manifold. For besides that pain which is like the Cholick, and comes from wind and flegm in the Gutts, another and more principal springs from the part of the Back which is next the Heart, and from the loines, out of which, it is both diffused into the Muscles of the Epigastrium or part of the belly above the Navil, and there is no smal suspition that it reaches as far as the vertebræ of the back-bone. From this so great variety of causes, I conceive the difficulty of the cure has arisen. And therefore the pain which goes along his back and Loines, and reaching from thence for the most part into the sides, and also into the fore parts of the belly, and straitly binding the whol body as it were with a girdle, does shew that al these parts are beset with the pain, & that the pain of the belly is the cause why it cannot be contracted & straitned so as to exclude the excrements. Moreover, credible it is that the cause of so far spred pains, has been some cold distillation, which if not out of the Brain, yet at least out of the head has fallen down into the Muscles of the back and Loines: And at first on the left side; afterwards on the right. Hereupon it crept afterward by reason of the continuation of parts into the Muscles and Membranes of the Abdomen. Peradventure some part thereof, has also insinuated it self between the spondyles or vertebræ of the back, as commonly it happens, when these Infirmities last long. Yet I must here advise you in regard of the premises to see and consider, whether or no the spina be in situation and figure according to nature or no? whether he can freely bend himself this way and that way, and whether the parts on each side the back bone, do feel any pain, when they are touched or prest some what hard? For I have had no smal suspition that his back-bone has been either dislocated or otherwise hurt, since the Gentleman our patient, upon the strong bounding of his Horse, felt his back-bone bent violently backwards, and prickt with a vehement pricking which strooke through his whol body.

The

The Prognoſtick.

Seeing there are two pains complicated, having different cauſes and ſeats, one belonging to the guts, which may be termed the collick, the other to the back-bone and Loyns: the removal of the former may, truly, be hoped, eſpecially if it be ſingle, without any Infection of the Guts themſelves. And that the greateſt of its cauſe may be the better eſtimated, I would have the whole region of his Belly felt, whether or no there is any preternatural hardneſs therin, remembring what I have ſeen and written, viz. How that many times in the guts thick and clammy flegme does grow together and harden, into the ſhape of a gut, and ſhut up the paſſage to the winds and dung. The Cure of the latter pain is more hard, and the event thereof is doubtful, eſpecially if by long continuance, it ſhal drive it ſelf deeper into the back-bone. Yet it wil do wel to endeavour the Cure of both, and to omit nothing which according to rules of art, may rationally be thought helpful.

The Cure.

In purging out theſe grievous pains, diet is of no leſs moment than phyſick; becauſe that it conſumes many ſuperfluities, which wil hardly give way to medicaments. Let therefore his diet be of good juyce, drying and attenuating, very ſpare; let him eat the fleſh of Capons, Pigions, Turtles, Partriges, little Birds, young Leverets, and ſuch like, and theſe roaſted rather than boiled. Alſo ſawces wil do wel, eſpecially with nutmeg, ginger, and a little pepper in them. Wine though it be thought to help by its heat; yet becauſe with its Vapor and thinneſs it ſmites the brain and Nerves, we muſt count it moſt hurtful in this caſe. That which is reddiſh, and lightly aſtringent, muſt be choſen rather than that which is white, and it muſt be allaied with much boyled water, wherein ſage has been ſteeped. If the gentleman our patient, is ſo coragious, that he wil perform al that has been ſaid touching diet by undergoing a Courſe with Guajacum, I have great hopes *that* would much further the Cure, and bring it to perfection. Yet are not ſweats preſently to be provoked, but a ſtronger decoction muſt be given in the morning and three hours before ſupper, inſtead of an attenuating Apozeme, and another ſmal one he muſt uſe at meals inſtead of wine. If in the progreſs of the Cure ſweat ſhal readily flow out, you muſt let it have its courſe, and gently provoke the ſame, and wipe it wel off. Every ſeventh or eighth day, ſetting aſide the Guajacum, he muſt take ſuch a like purge as this.

Take *Stœchados, Betony, Sage, Roſemary, Epithimum, each one pugil; Polipody of the Oake, leaves of ſenna cleanſed, each three drams. Make one decoction for a doſe. In the ſtrained liquor infuſe agarick trochiſked one dram and half. In the expreſſion diſſolve diaphenicon or diacarthamum one ounce*; Syrup *of Hyſop, half an ounce. Make of al a potion; give it in the morning four hours before meat.*

Al theſe things are Univerſals, nor muſt any evacuation be indeavoured by blood-letting, as which wil be in this caſe very hurtful. But the chief cure wil lie in topicks. And in the firſt place, to root up the colick pain, every day three hours after dinner, a clyſter muſt be adminiſtred, made after this form.

Take *Flowers of Chamomel Melilot, Dil, Rue, Origanum, Wormwood, Centory, each one handful; Anis-ſeed, Fennel-ſeed, Bay-berries bruiſed, each two ounces; Make a decoction; and in a pint of the ſtrained Liquor, diſſolve hiera ſimple, Honey of Roſes and Hony of Roſemary flowers, each one ounce. Oyl of Dil three ounces. Make a Clyſter, give it as has been ſaid. Sometimes inſtead of hiera ſimple you may diſſolve therein Hiera diacolocynthidos.*

And thus by way of exchange, the uſe of Clyſters muſt be augmented and continued, til the groſs phlegm of the Guts be quite purged away, which is the material cauſe of the colick, and til this paine falling down upon the belly and guts, ſhal manifeſtly abate. And when the guts ſhal be ſufficiently purged; that the vitious quallity which has been long contracted in them may be removed, and ſtrength reſtored, let injections be frequently made, of a pint and half of ſome generous red, or other aſtringent wine, and that without any water in it, and blood-warm. Wherein ſomtimes two drams of caſtor may be diſſolved, & afterwards they may be made pure,

and without Castor. Let these kind of Injections be long continued, for they wil do no hurt at al though they should continue in the guts, and not come away. By these remedies therfore I hope, that al the cause of the former pain wil be taken away. In this time of Cure, if pains or other Symptoms shal more vehemently be troublesome, let them be asswaged with such fomentations and other remedies, as have formerly been successfully used to that end. The cure of the latter pain, may then be successfully undertaken with topicks, when the former shal begin to asswage. Let stil continuing the diet with guajacum; for nothing hinders, but that the cure of both the paines may be undertaken and endeavoured at the same time. In the first place therefore, the sweat being wiped off, which now towards the end of the diet with Guajacum, wil breake forth; every morning, the whole region of his back-bone, his back, and Loins, must be fomented and anoynted with these remedies, which may cut and attenuate the impacted and deeply rooted morbifick matter, and by any meanes prepare the same. Make therefore a fomentation, of a decoction of Elecampane roots, of juneper berries, and Stoechados, of leaves of Betony, Sage, Laurel, Rue, Marjoram, Rosemary, Origanum, Calamint, Centory the less, al which must be boyled in simple water, adding towards the end three or four ounces of white wine. Apply it to his back-bone exceeding hot, with a piece of cloth or a long spunge, which must be steeped in the said decoction and squeezed out, and when by frequent repetition thereof, the place shal be wel heated, wipe it dry and anoynt it with this Oyntment.

Take Flowers of Stoechados, Rosemary, Lavender, and sweet Marjoram, each one handful. Saffron one dram. Bay-berries bruised one ounce. Pellitory of Spain, Ginger, Nutmegs, Cloves, Castoreum, each three drams. Reduce al to pouder. Mix them and poure on eight ounces of the best aqua vitæ rectified shining transparent Turpentine one pound. Put al up in a Glass allembick, and make a distillation with a slow fire. First receive the water, then the oyl, and keep it by it self for the use aforesaid.

If the use of a fomentation be not easie, and it cannot al reach the pained parts, change it into a bath to sit in, made of a like decoction, into which al the affected parts may be plunged. When by continuation of the foment and Unguent, in the mornings and before supper, for about five or six dayes, the humor should be thought sufficiently attenuated, six Cupping-glasses of a middle size on each side al along his back-bone, to the end of his loines, without any scarrification: or six great horns, which are frequently used among the Germans, that by their help, the humor or any other matter, may be forcibly pluck'd up from the lower parts and brought into the skins top. Let not these remedies be anoynted, til the pain of his back and loynes appeare to be mitigated, and al their motion be more free and Expedite. Or if peradventure, their continuance be molestful and grievous, let a resolving or discussing plaister be provided, such as may be made of the grounds of the former distillation to which gum ammoniacum and wax must be added, and incorporated in such a dose and quantity, as may seem requisite to the form of a Ceratum. These are therefore the remedies, by the administration and Methodical continuation whereof, the perfect Cure of both the pains may be hoped for, unless peradventure either his Back-bone be dislocated, or the pained parts at last corrupted by continuance of the disease. For when these things are so, there is none, or very little hope of health.

The *L.* Counsel.

To Facilitate Conception, for the wife of the Provost of Mariemburge. *Out of the French.*

THat I may propound a remedie for al these maladies declared by you to me; to the end you may obtain your wished desire, I have prescribed a syrup purgative compounded with extraordinary Art, which you are to use eight daies before the time of the breaking out of your courses, every other day, in three doses, two ounces or four silver spoon fuls at a time, in a like quantity of barly water, or allayed white wine, four hours before meat. And in the meane time you must keep house, and live soberly and temperately. And you must expect

the

the breaking out of your courſes, and uſe no other means, ſave that you may with white wine and water, or the uſe of ſome other opening drink, provoke the ſaid Courſes. When they are come and over, you muſt have this confection which I ſend you in a readyneſs, and take thereof four mornings together the quantity of a Cheſnut, four hours before dinner, and drink a little white Wine allaied with water after it. Which done, and having taken another doſe when you go to bed, you muſt receive into your womb the ſmoak of a pouder which I have ſent you, which you muſt caſt upon burning coals, and ſit over it, ſo covered that it may go up into your body as much as may be.

And theſe things being done, you muſt abſtain from all other Remedies, til the end of the Month: and then repeating the former Courſe, a little before the time of your expected courſes, you muſt uſe the Syrup and Electuary aforeſaid after the ſame manner, and ſo you ſhal continue doing, for four months together, from the end of winter to the beginning of the ſpring. But if you ſhal not obtain your deſired end, if you wil certifie me touching the ſtate of your body, I wil ſend you another kind of Counſel, which ſhal be moſt convenient for that ſeaſon. Let your Diet in the mean while be dry and of good juyce. If in the Intermediate daies, your belly ſhal be bound, or your ſtomach ſomtimes oppreſſed, it wil be good to uſe pils of Rhubarb, Agarick, and Aloes.

The Apozeme.

Take *Sage, Marjoram, Nep, Baum, Feaverfew, of each half an handful; Senna one ounce and an half. Boyl al to half a pint, adding towards the end, Agarick, half an ounce; choice Rhubarb three drams, Cinnamon two drams. In the expreſſed liquor diſſolve Syrup of Maiden-hair, one ounce and an half. Make a clarified Apozeme; indifferently boyled.*

The Fume pouder.

Take *Nigella, half an ounce. Storax, Benjamin, Florentine Orice, of each three drams. Cloves, Maſtich, of each two drams. Mix them.*

The Electuary.

Take *Eringos Roots, one ounce. Seeds of Nape, Onions, and Bulbus, of each three drams. Pellitory Root, half a dram. Ginger one dram and an half. Roots of Biſtort or Snake weed. The Reins and Tailes of the Scincus, of each half an ounce. Syrup of Mug-wort or de Artemiſia, as much as ſhal ſuffice. Make al up into an Opiate or Electuary.*

The LI. Counſel.

For a Woman troubled with fits of the Mother.

A Woman of ful and ripe Age, had for many years been without the company of a Man: by which means it came to paſs, that her ſeed being collected and retained beſides the courſe of Nature, did putrefie, yea and attained a Maligant quality, ſuch as both the courſes retained, and any other Humors putrefying in the womb are wont to acquire. Whereupon, filthy and Malignant Vapors being raiſed into the upper parts, cauſed gripings and rumbling noiſes in her belly, with pain, after that, ſubverſions of her ſtomach, belchings, Hiccupings, and ſundry vomitings. But when they oppreſs her midrif and Lungs, her breath is ſhort, with wheezings and rottling; or if the ſaid Vapors ſmite her Heart, ſhe fals into palpitations of the heart, or ſwowning fits. But if the Vapor creep up into her brain and mind, ſomtimes it cauſes fits of the Falling-ſickneſs, otherwhiles raving, ſomtimes darkneſs of her Eyes, and interception of her other ſenſes, and otherwhiles other Symptomes of her animal faculties ſeize upon her.

Take

Take Hyssop, Horehound, Nep, Baum, Saint Johns-wort, Betony, Mugwort, Feaver-few, of each one handful; Roots of madder, and of Peony, Misseltoe of the Oak, polypody of the Oake, Carthamus seeds, each half an ounce. Flowers of Rose-mary, Sacbados, of each two pugils. Seeds of Peony and Lovage, of each one ounce. Parsnep seed two drams. Senna three ounces. Make a Decoction to nine ounces, adding towards the end, Agarick, one ounce and an half; Ginger one Scruple. In the strained liquor poured out, dissolve nine ounces of Sugar. Make it into a Syrup, duly boyled, and when it is boyled, add the expression of half an ounce of choice Rhubarb, infused in Betony water. With spicknard and Cinnamon, of each one scruple. Let her take thereof every third or fourth day.

In the intermediate daies, let her use a Decoction of Lignum Sanctum, and use her self to it by little and little. And at first let her use at meales a Decoction made only of three or four ounces of the wood, to four ounces of water. You may boyl Raisons of the Sun there if you please, with Sugar and Cinnamon. When three daies are over, give her a stronger Decoction morning and Evening, two hours before Supper, with some of the ingredients of the Syrup Boyled therein. Let her Diet be indifferent, of a middling Nature. Apply great Cupping-Glasses without Scarrification to the inside of her Thighs. It wil be good likewise to Rub her Thighs and Legs to draw the course of the Vapors downwards. Make fomentations and Vaporations of some of those things in the Syrup, adding penyroyal, Origanum, Calamint, Rue, and Sabine. Make pessaries of Hiera Picra, and juyce of Mercury leaves. A little Cochy pils may be added or Bindweed Roots, or wild Cucumer, that by them the filthy superfluities of her womb that cleave fast thereto, may be drawn away. If these things shal not succeed according to our desire, let an expert Midwife at the coming of the fit put her Finger noynted with Oleum nardinum or Muscellinum into the Neck of her Womb, that either by tickling the same, she may provoke the putrified sperm to come out, or may extend the Neck, which in the fit (as *Galen* saies) is very much drawn upwards. If you would purge her womb more forcibly, when her fit is over make injections of a Decoction of those Herbs which I mentioned in the fomentation, adding Agrimony, Wormwood, or also a little Aloes. And to prevent the fits before they come, give her a potion of waters of Nep, Bawm, & Cichory, sweetned with Sugar and Cinnamon, or a dram of parsnep seed, she may take in the said waters, or in Feaver few water. And seeing the greatest part of her fits come from her womb, make a Cataplasme of Ferne, Lovage, Worm-wood and Hyssop, boyled and steeped in equal portions of red wine and water, wherewith her whol belly may be covered, or 'twil be better to go round about her, and to bind it fast on, that it may repress the ascent of Vapors. Sweet smels must be applied to her privy part, and stinking to her Nostrils.

The LII. Counsel.

For a Woman when with Child, and in Child-bed, being sick in her Womb.

A Woman of an indifferent fleshy habit of Body, of a middle Age, having an hot Liver, a cold stomach, is wont to be taken with fits of the Mother, privation of sence, and convulsion as it were, together with pains of the Cholick. She was likewise troubled with a Semi-Tertian Ague two months when she was with Child. At last she was brought to bed. She could not go to stool, without the help of Art: also great store of flegm came away with her stools, and sometimes of it self: She did not sweat, nor voided any Excrements of her Brain, nor did any thing come away in her Urins. The question therefore is, what Cure is to be used, that she may not again be troubled with those Chollick and Womb pains.

The

The Anſwer of Mſr. Fernelius.

It muſt needs be a very great cauſe, which vexes the Patient with ſo many and ſuch grievous Symptomes; and I judg it to be twofold. The former is in the firſt Region of her body, Viz. In her ſtomach, Guts, Meſentery, and hollow part of her Liver. For theſe parts are filled and obſtructed with thick Excrementitious flegm, which is the cauſe of her ſo long coſtiveneſs. For ſomtimes it grows together in the Guts, eſpecially in the Colon, out of which we ſee it ſomtimes drawn, by force of a biting Clyſter. Hence therefore proceed the Cholick pains, which poſſeſs the whol Region of her belly. The other cauſe is in the beat of her Liver. For it breeds much Choler: which becauſe it cannot be voided forth by the natural paſſages, becauſe of obſtructions, it flows with the blood into the whol body. And that ſome of it is ſhed into the ſtomach, appears by her vomitings, in which bitter and Cholerick Excrements do ſomtimes come away after the Flegmatick. This Choler in a flegmatick body breeds a Semi-tertian Ague, which ending by ſweat, leaves behind it Ulcerous or Flegmonous wearineſs. For the blood of her great or leſſer Veins, which are in the habit of her Body, is not at al purged, but is defiled with flegmatick Choler, which is the Cauſe of theſe wearyneſſes.

The Intention of the Cure, is to purge her body of theſe Excrements. You muſt therefore prepare the flegm with Oxymel wherein Hyſſop, &c. is boyled, with an eight part of Vinegar and a fourth part of Honey. Alſo apply an extenuating and emollient fomentation to her Belly. Let her take every day a ſharp Clyſter, wherein diſſolve Hiera Diacolocynthidos and Diaphœnicon, each half an ounce, with honey. Somtimes give her a gentler Clyſter, to ſoften the dung and to make her Guts ſlippery. Once in a week give her a potion, made of Rhubarb, Hiera ſimple, and Diaphœnicon. For Diaphœnicon is neceſſary to bring away thick and tough flegm, and without it, Rhubarb wil not avail. Let her uſe at meals thin Wine allayed with water, and betwixt meals a Decoction of Guajacum, or Wormwood, with Wine and Water. When her firſt Region ſhal be cleared, the ſecond and third muſt alſo be freed, with Remedies not much unlike the former. Howbeit, I do not think it neceſſary to revel the humors out of the habit of her Body into her belly, but that this Region is to be clenſed by ſweating, with a ſtrong Decoction of Guajacum, or other mixt Remedies. Let her Diet be dry and extenuating, wherein let her abſtain from al moiſt things. Her whol body being wel clenſed, her womb wil be cured. But if nevertheleſs ſomwhat ſhal ſeem to remain therein, it may be removed, either by a ſuffumigation, a peſſary, or other things accommodated to that end.

The *LIII.* Counſel.

Touching a Legitimate Birth.

COncerning a Child born on the two hundred and ſecond day after Marriage, ſeeing it was perfectly ſhaped, and likely enough to live, a doubt and queſtion has been raiſed; Whether or no it were not conceived before the time of Marriage, and ſo had fulfilled the compleat time of nine months? Secondly, Whether a Child born within ſuch a compaſs of daies, is to be judged a ſeven months birth, and of a juſt and good Age?

To the former Queſtion, Mſr. Fernelius *anſwers.*

That the Age of a new born Child cannot by any ſigns or tokens, certainly be known; and Abortive Children which come before their time, are ſomtimes to be ſeen compleatly formed and perfect; other whiles they have no Hairs, Nails, Lips, nor Eye-brows, their Ears being hardly ſeparate from their Heads. Whereas I have likewiſe ſeen an Abortive Birth, forty daies old, as big as half a Finger, with al its Members diſtinct; and ſomtimes I have ſeen one in the third month, repreſent a rude and undigeſted Lump; the Cauſe whereof is, the variety of the ſeed, and the ſtrength or weakneſs of the Formative Faculty which is therein.

The

To the latter Question he Answers.

That a Child born in the two hundred and second day, is to be counted a seven months Birth. For *Hippocrates*, and the Ancient Greeks, both Phylosophers and Physitians, who diligently searched into this matter, were unacquainted with the Roman Months; for they measured them, as the Hebrews did by the course of the Moon: and a month consists of twenty nine dayes and an half, which is the ordinary space betwixt two Moons. According to this Computation of the Year, which must be principally and punctually observed, in the going of a Woman with Child, in the Decretory, or Judicatory daies; in a word, in al Medicinal Observations, this Child, touching which the Question is moved, was born on the twenty fist day compleat, of the seventh month. Nor is it necessary (that it might be counted a seven months Birth) for it to abide in the Mothers Womb seven months compleat: and seven daies over or under break no squares, in this way of Account. For so *Ptolomæus*, and other most renowned Astrologers, have delivered in their Writings, viz. That the forces of the Stars which govern us, do not consist in a moment, but are contained within these Limits, and therein have power to work their Effects. And that a Child born in the seventh month wil live, besides that it is celebrated by the Authority of *Hippocrates*, and al Physitians, I have likewise by long Experience observed the same to be true. The Reason whereof must be demanded of the Astrologers, who place the first month of Conception under the Dominion of *Saturn*, and the seventh under the power of the *Moon*, which bestows life and strength upon all Living Creatures.

The *LIV.* Counsel.

In the Case of Hæmorrhoids.

THose Hæmorrhoids by you described, which flow without pain, are blind and inward: and I conceive none of them is to be seen outwardly. And they, seeing they have been very long accustomed, viz. twelve years, to flow liberally, they ought not by any means to be quite stopped, least those Inconveniencies should follow, which *Hippocrates* mentions and fears. But seeing at this time their immoderate running does weaken the body, and very much cool the Patients Liver, by which means the Jaundice, and perhaps a Chachexia, does now appear, and shew it self at hand: it seems not only profitable, but very necessary to stop them. Yet so that every third or fourth month, somwhat may be suffered to run.

They may profitably be stopped in this Constitution of our Patient to me described, not by revulsion with blood-letting from the Arm, or by Cupping Glasses fixed to the Hypochondria; not with Pouders, Electuaries, or Potions which are astringent; but with these very light Remedies, which wil do the deed, I question not. And therefore, if any Purgation shal seem necessary, none wil be fitting but what shal be made of Rhubarb.

Take *Waters of Roses, and Lambs-tongue Plantane, of each one ounce. Infuse therein four scruples of Rhubarb, one scrupie of choice Cinnamon. In the strained Liquor dissolve choice Rhubarb poudered, two scruples; Syrup of dried Roses half an ounce. Make a Dose.*

Take *Plantane, Knot-grass, Red Roses, Balaustians, of each one pugil. Make a Decoction in Milk. In the strained Liquor dissolve Bole-Armeniack, Bean meal, of each one ounce and an half. Make a Clyster in form of a Pultis, which he must keep a long time: and it must be repeated, twice, thrice, or four times, if the first shall not sufficiently stop the Flux.* If you would have it more compounded, ad thereto Dragons blood.

Also 'twil be good externally to apply a Cataplasm to his Fundament, of the best Bole-Armeniack, which must be dissolved in Vinegar, with Lambs-tongue Plantane, and the white of an Egg; or in juyce of Plantane and Knot-grass. Which things wil be likewise good in a Clyster.

In

In courſe of Diet, 'twil be good to avoid ſtrong Wine, and very thin; and al meats that inflame the blood. He muſt eat ſparingly, leſt his ſtrength now much impaired, ſhould be oppreſſed with too much food, and that blood encreaſe not too faſt upon him. He muſt avoid vehement Exerciſe, Anger, Sadneſs, and Sorrow, and whatever things inflame and agitate his blood and ſpirits.

The LV. Counſel.

Concerning an Exulceration of the Kidneys, and Urinary Paſſage, with a fleſhy Knob growing therein.

THis Gentleman is troubled with two Diſeaſes, which are very near of kin one to another: The one is an Exulceration of his Kidney; the other is a light Exulceration of his Yard or Urinary Paſſage, with a fleſhy Knob growing thereto. That one, or both his Kidneys are exulcerated, is known by his Urine, which is white, thick, and matteriſh, in which the matter or quittor is ſeen to ſettle in the bottom. Alſo becauſe the laſt Summer, after vehement Exerciſes and Labors, he voided bloody Urines. For then the Ulcer was bred, and that (as I conjecture) by a ſtone fretting his Kidney, which a few months before, grew in his Kidney. Now the Ulcer being grown fouler, inſtead of blood, there comes quittor. The ſigns of the Ulceration of his Urinary paſſage, are, that ſame heat and ſharpneſs which vexes him when he makes water, and in that many months before he had been vexed with the foul and virulent Gonorrhea, which is wont to exulcerate this paſſage. And that to the Ulcer ill cured there grows a fleſhy Knob, is known by the difficulty of his making water, which comes away in a ſtream no bigger than a very ſmal thred, and becauſe ſomtimes his Urine is quite ſuppreſſed. To cure theſe intangled Diſeaſes perfectly, is no eaſie matter. An Ulcer of the Kidney does hardly ever heal, becauſe it is a Spermatick part: and the Fleſhy Knobs which grow in thoſe parts, are with great difficulty, and very hardly cured. Yet ſomtimes a Purgation does good, either of Caſſia alone, or ſomtimes with an addition of Rhubarb. The day after, two drams of waſhed Turp entine wil be good. Alſo to ſup in the morning, a Decoction of Marſh-mallow Roots, and Red Vetches, with Honey or Butter, wil cleanſe the Ulcer in his Kidney. Hydromel ſimple wil do the ſame, if either he drink it to quench his thirſt, or take a draught at the beginning of his meals inſtead of Beer. I do not approve of more vehement Remedies. The fleſhy Knob muſt be rooted up, by frequently thruſting in a Catheter, that by the roughneſs thereof, ſome portion of the ſaid Knob may be gradually worn off: for this kind of Cure is ſhort and ready. Which nevertheleſs, if the Patient cannot endure, a Wax Candle muſt be thruſt in, which wil dilate the paſſage, and flatten the Knob. And it may ſomtimes be ſmeared with a pouder, which wil both conſume the Knob, and ſodder up the Ulcer; ſuch as is this following.

Take *Cuttle bone, Tutty prepared, of each two drams: burnt Harts-horn, waſh'd Aloes, of each one dram: burnt Allum half a dram. Make them into a pouder. Let him uſe it dry, or mixt into the form of an Oyntment, with Honey of Roſes.*

Alſo frequent Injections will be good, of compounded and diſtilled Allum Water: ſuch as is uſual in this caſe.

Take *Crude Allum two ounces: Juyce of Plantane and Purſlane, of each a pint: Roſe and Plantane Water, of each three ounces: beat all together with the whites of three Egs. Put them in a Glaſs Alembick, and diſtill them with a ſlow fire.*

In theſe contumacious Diſeaſes, there needs great Diligence, Conſtancy of Mind, and length of time.

The *LVI.* Counſel.

Concerning Mattery Urine coming from the Kidneys.

THat Urine which we perceived to be made thick and white, is truly mattery: For upon ſetling, white, ſmooth, and even quittor, is ſeen in the bottom of the Urinal; which is a ſign of an Impoſthume, or an Ulcer. Which nevertheleſs is neither in the Yard, nor in the Bladder, nor in the Ureters. But ſeeing it is without any ſence of pain, we thereby gather that it is in the Kidneys alone. And from them pretty large ſtones, and bloody Urine have often proceeded, which did then declare that an Ulcer was cauſed by the grating of ſtones upon the Kidney. And now that which comes away, is ſordid and purulent. A perfect Cure is hardly to be hoped for, and diligent heed muſt be taken, that the quittor be not ſtopt nor kept in; for by that means redounding and flowing back into other parts, it becomes the Cauſe of grievous Symptomes. The beſt way will be gently to purge the Ulcer, and to procure a continual and free paſſage for the quittor. Let him therefore abſtain from al vehement motion of his Body, and exerciſe; from ſalt, hot, and biting things, leſt the Ulcer be exaſperated. It wil be good for him to uſe Hydromel for his Drink, eſpecially to make his firſt draught thereof, and ſometimes inſtead thereof, a Decoction of Barley wil be good. Afterwards let him uſe theſe following Medicaments.

Take *The Pulp of caſſia fiſtulæ ten drams, with ſugar or Electuarium diatragacanthi frigidum, make it into a bolus. Let him take it on a choſen day, two hours before dinner.* Or thus.

Take *Pulp of caſſia new drawn ſix drams; pouder of rhubarb one dram; With ſugar make them into a bolus.*

Item, Take *cleare Venis turpentine two drams and half. Waſh it in water of roſes or of winter cherries. Let him take it the day after his purgation, out of a ſpoon, with ſyrup of Maidenhair.*

When his belly is bound, or his kidnies burthened, on other dayes give him this clyſter.

Take *Of the foure emollient herbs, chamæmel, melilote, and Dill, each one handful. Seeds of anis, Line and Fenſgreek, each half a dram. Make a decoction in to a pint. In the ſtrained liquor diſſolve Hiera picra ſimple and diacatholicon, each five drams. Honey of roſes, red ſugar, each one ounce. Oyle of violets three ounces.* Make al into a *Clyſter.*

When the Moon is in the wane, three or four mornings together, let him take of this Decoction.

Take *Red vetches three ounces; marſh-mallow roots one ounce. Tops of coleworts one handful. Boyl al to half a pint. In the ſtrained liquor diſſolve two ounces of the beſt clarified hony. Let him ſup it up.*

The *LVII.* Counſel.

For Pain in the Kidney. Out of the French.

THat you may prevent the Pain of your kidnies to which you have been long ſubject: in the firſt place you muſt avoid al groſs and obſtructing meates, from ſwines-fleſh, Beef, and Veniſon, eſpecially when they are ſalted. Alſo from al fiſh that have no ſcales, and which breed in muddy waters; from beanes and peaſe and al cruſts, dough-baked bread, Cheeſe, and al raw fruites; alſo from black and thick wine, and that which is rough or ſweet. But you may eate of light meates, and ſuch as are eaſie of digeſtion, as the fleſh of yong creatures roſt or boyled. Let roots of parſly or Fennel, be boyled in your broathes. Alſo ſometimes, but ſeldomer, they may be made with Cappars, Aſparagus, and hops. Alſo you may uſe ſallets of burnet, ſaxifrage, garden Swines-creſſes, and other like herbs, wel ſeaſoned with oyl and vinegar. Drink white wine rather than Clarer, eſpecially which is high colored, not ſtrong,

but

but thin and weak, and indifferently allayed with water; not neglecting the Care of your whole body. Eat and drink ſoberly: for fullnes is dangerous, in this and other diſeases. It wil be ſufficient to eat thrice a day. And at breakfaſt it wil be good to eare oftentimes new butter with bread untoaſted or toaſted, and to ſprinkle ſugar upon it, and drink white wine after it. If you can ſometimes ſwallow certain bits of unſalted butter, they wil help both your belly and kidnies. Alſo broaths made of the foreſaid roots wil be good; nor wil it hurt you, an hour after ſome ſuch kind of food, to exerciſe your ſelf moderately, for the ſpace of an hour, and to do ſo likewiſe before and after ſupper. 'Tis not good to ſleep in the day time, nor in the night to lie on your back, nor heat them internally or externally, either with bedcloathes, or the fire.

But beſides theſe rules, ſome particular medicaments wil be good, and in the firſt place I have preſcribed a pouder, a ſpoonful whereof is to be taken two hours before broath, either alone, or in white wine, and that once a week, eſpecially when you are coſtive. But there is nothing wil do you more eminent ſervice, than if ſix dayes before the laſt Quarter of the moon, you ſhal take this Clyſter.

Take *Roots of Marſh-mallows one ounce; Roots of Elecampane half an ounce. Mallows Violet leaves, pellitory of the wal, betes, Mercury leaves, each one handful. Flowers of Chamomel, Melilote, tops of Dil, each one pugil. Seeds of Anis, Fenel, Carway, and Cumin, each three drams. Make of al a decoction. In a pint of the ſtrained liquor diſſolve biera ſimple ſix drams; diaphœnicon three drams. Honey of roſes two ounces. Oyl of chamomel and Dil, each one ounce and half. Make of al a clyſter. Take it in the morning, when you riſe from bed, on the day aforeſaid.*

The day following, a purging Potion wil be good, made after this manner.

Take *Pellitory Water two ounces: Infuſe therein choice Rhubarb three ſcruples: beſt Cinnamon half a dram. In the Liquor ſqueezed out, diſſolve the Expreſſion of two ſcrupies of Agarick trochisked, in Betony Water infuſed: Diaphœnicon one dram: Syrup of Maiden-hair half an ounce. Make all into a Potion for a Doſe.*

The day following, take a Clyſter. And the daies being over, wherein you are to reſt; on the fourth, fift, and ſixt daies, which wil be the three laſt of the Moons courſe, you ſhal take every morning three or four hours before meat, one dram of the Mas of Pills, which I have preſcribed for you, made up into five pils. Or if the bitterneſs be not too troubleſom, diſſolve it in white Wine; nor need you keep your bed therefore.

Take *Choice Gentian Root one ounce; reduce it into very fine pouder; of which, with Syrup of Maiden-hair, make a ſoft maſs of Pill-ſtuff. Wrap it up in Leather, and keep it in a box for the uſe aforeſaid.*

Theſe three daies being over, which are the laſt of the ſix aforeſaid, it wil not be amiſs, if you pleaſe, to make a Decoction of Vetches, and Marſh-mallows, which I formerly advised, and to drink it four or five daies together. In the mean ſpace you muſt keep an exact courſe of Diet, according to what has been formerly ſaid, and al the foregoing Remedies muſt be repeated neer the ends of three months one after another, if you look for a perfect and compleat Cure.

The *LVIII.* Counſel.

For a Duke of France *troubled with the gravil in his Kidneyes.*

THe voiding of Gravil in Urine, and the beginning of the ſtone in the kidneyes, in a conſtitution of body very cholerick, and the blood whereof being thick and earthy, is for the moſt part over ſcorched; ought thus to be prevented; ſeeing thick and clammy blood is the matter that breeds the Gravil, and the heat of the Liver and Kidneys is the efficient cauſe by burning the ſaid blood and ſo turning the ſame into Gravel and Stones. He muſt keep a cool and moiſt diet, which does withal ſcour and moderately extenuate, without manifeſt heat. The fleſh of Chickens, Pigeons and Veal, boyled with lettice, Marſh-mallows, Mallows, or French-barley, and the broath thereof taken in the morning is exceeding good, and ſometimes barly cream with Sugar. And at other times he may eat fleſh roaſted or boyled, and ſteeped

or dipped in the juice of Lemons; which if it be not to be had, juice of ſour grapes, or of Sorrel, and ſometimes vinegar may ſupply its place. Let his wine be thin and weak and very wel tempred with water. For many profeſs they have been cured of theſe Infirmities, by abſtaining from wine and drinking only water. To rub the back and Loins in the morning, alſo ſtrong exerciſe, and riding on a trotting horſe, diſlodges the Gravil and Stones, and ſuffers them not to grow together in the kidneyes. Howbeit, inaſmuch as diet alone cannot ſufficiently prevent this diſeaſe, ſomtimes he muſt alſo take phyſick, which being moderate in heat and dryneſs, may bring away the morbifick cauſe by ſtool, and temper the heat of the kidneyes, and bring away the Gravel by urine, with eaſe. Now they muſt be compounded after this manner.

Take *Roots of Butchers-broom, Aſparagus, Graſs, Marſh-mallows and Parſly, each half an ounce. Clary, Betony, Burnet, Saxifrage, Pellitory, Maidenhair, each one handful. Seeds of Baſil, Parſly of Macedonia, Gromwel, Broom, Burdock, Mountain Oſier, Liquoris ſhaven, each two drams. Raiſons ſtoned, polypody of the oake, each one ounce. Make a decoction to fifteen ounces. In the ſtrained liquor infuſe, new cordial flowers, each two pugils, Senna leaves three ounces, agrick two ounces, White ginger two ſcruples. Let them boyl a little, and then preſs out the Liquor, and diſſolve therein one pound of white Sugar. Make al into a ſyrup perfectly boyled. Let him take every tenth day one ounce for a doſe with barly water, or a decoction of Annis-ſeed.*

Of the ſame ſimples, the purgers being left our, make another ſyrup, which he muſt take in the mornings of the intermediate days mingled with barly water, to purge his kidneys. I allow not the uſe of Turpentine, becauſe of the heat of the patients liver, whereby it wil be eaſily inflamed. If haply he ſhal loath the frequent uſe of the ſyrup, inſtead thereof let him uſe this Electuary.

Take *of the four great cool ſeeds cleanſed, Liquoris ſhaven, each one ſcruple. Seeds of burnet, baſil, Parſly of Macedonia, Nutmeg, each half a dram. Aromaticum roſatum two ſcruples. White Sugar diſſolved in winter cherry water three ounces. Make al into Lozenges or tables, weighing three drams apeice. Let him take one in the morning, three hours before meat, and drink after it a little tempered wine.*

Let his Kidneys in the ſummer time be cooled with this fomentation.

Take *ſtilled waters of Lettice, Water-lillies, and Roſes, each three ounces. Vinegar two ounces; Mix them. Foment his kidneys therewith morning and evening blood-warm.*

In the winter this following Liniment wil be more convenient.

Take *Oyl of Violets, water-lillies, and roſes, waſhed in vinegar and roſewater, each one ounce. Mucilage of Marſhmallows drawn in pellitory water, ſix drams. A little wax. Make a Liniment to ſmeare his kidneys morning and evening.*

If peradventure his kidney-pains ſhal returne, give him ſuch a clyſter, as that by me preſcribed. Which being come away, apply a fomentation to the part pained, of the decoction of the bags preſcribed. And if this ſhal not do the deed, apply a large cupping-glaſs to the part pained, without ſcarification. And if neither by this means the pain grows mild, let fitting Cataplaſmes follow, and bathes to ſit in, whoſe power to aſſwage pains is moſt effectual.

The *LIX.* Counſel

For the Strangury.

THis ſame Strangury wherein the Patients Urine is ſaid to come away troubled and impure, with very great pain, whether the ſetlings at laſt be matteriſh, or ſnotty and flegmatick, is neither cauſed by the Crudity of the Stomach, nor by that flegm, which has been wont to fal into his Joynts. For ſo thick a redundance of Excrement could never flow from the upper parts through the Kidneys (being ſound) into the Urinary Paſſages. Seeing therefore his Kidneys are not known to be as yet diſeaſed, it muſt of neceſſity be, that this impure matter comes either out of the Bladder, or out of the Yard and Spermatick Veſſels; and that conſequently, either there is a ſtone in the Bladder, or an Ulcer in the Yard, and the Neck of the Bladder. And becauſe theſe Infirmities have ſome ſigns common to one as wel as another, we

muſt

muſt ſeek for proper ſignes to diſtinguiſh them by: nor muſt any peculiar cure be undertaken, til it be certainly known which of theſe Diſeaſes it is. And therefore we muſt obſerve whether the patient feel any ſence of weight in his Perinæum or ſpace betwixt his Cods and Fundament, which troubles him in his going? Whether he be not ſometimes pained in his Fundament, with a deſire to make water and go to ſtool? Whether his Urin come away in a ful ſtream? Whether it be not ſtopped in the middle of its courſe? For theſe are ſure ſigns of a ſtone, eſpecially if the patient have been at any time troubled with a pain in his Kidneys. But if none of theſe ſignes have appeared, you muſt ask him, Whether or no there comes not filthy ſtuf ſomtimes from his Yard without ſenſe, and when he makes not water? If before or after the ſwelling of his Teſticle, the ſick-man have been at any time infected with the virulent Gonorrhæa? Whether his water come away in a ful ſtream, or like a ſmal thred as it were? If in the erection of his Yard, or when it is handled, either any pain or Tumor is perceived; for then is a filthy and Fiſtulous Ulcer in the Neck of the Bladder, or in the paſſage of the Yard it ſelf. And that the conjecture which is taken from theſe ſigns, may be ſearched out and confirmed by the Judgment of ſence, a Catheter muſt be gently thruſt in, that ſo the immediate and continent cauſe may be more certainly known.

The place affected being at length known, and the proper original of his Malady, peculiar Remedies muſt be accomodated thereunto, and ſuch, as 'tis hoped, wil do him good. And if any demur ſhal happen, his pain in making water, muſt be aſſwaged with an emollient fomentation, or ſuch as ſhal aſſwage pain, applied to his privy parts, and ſomtimes with a fomentation of lukewarm Milk. Alſo with an Oyntment, which is of the ſame faculty, the part muſt be lenified, and by an injection of the Mucilage of ſeeds of Fleawort and of Quinces, drawn in Plantain water. Alſo the Actimony of his Urine muſt be mitigated, with Syrup of violets, of Marſh-mallows, of Lemmons, or other cooler, and with wine very much allayed, if the ſtrength of his Stomach wil bear it.

The LX. Counſel.

For an Ulcer of the Sphincter of the Bladder. Out of the French.

THat we may apply Remedies to an inveterate Ulcer, and which has contracted a Callus, which by certain ſigns, and by the catheter, is found to be in the bladder of the Patient, without any fleſhy Knob: in the firſt place the part underwritten muſt be three or four times a day fomented with Mollifying and pain aſſwaging fomentations.

Take *Roots of Marſh-mallowes, and lillies ſliced, of each two ounces. Mallows, Violets, Pellitory, Water-creſſes, Origanum, Calamint, Wormwood, Flowers of Chamomel, and Melilote, of each one handful. Line-ſeed, and Fenugreek ſeed, of each one ounce. Put them in a bag, and boyl it in water and white wine. Foment therewith his Yard and Perinæum, three or four times a day. After this fomentation has been continued five or ſix daies, omit the ſame two daies, and then purge his Body with Caſſia and Rhubarb after this manner.*

Take *Caſſia Fiſtula new pulped, ſix drams; Rhubarb very fine poudered, four ſcruples; with Species of Electuary of Diatragacanthum, make al into a Bolus. The day after his purgation let him take Venice Turpentine thus prepared.*

Take *clear Venice Turpentine, waſht in Roſe and Pellitory water, two drams. Then he muſt returne to his former fomentations for three or four daies, or til the foreſaid Ulcer be ſoftened and aſſwaged.*

Then with a ſmal ſyringe this Decoction underwritten muſt be ſquirted in, to the part affected, three or four times a day.

Take *Red-roſe leaves, Plantan, Barley, Wormwood, of each one handful. Centory the leſs, half an handful. Make a Decoction to a pint. Diſſolve therein Aloes, two drams; Myrrh, one dram; Ariſtolochia, half a dram. Make of al an Injection.*

The Ulcer being by this means wel ſcoured and clenſed, that it may be more and more dried, make an Injection of an Aluminous water made after this manner.

Take

Take *Raw Alum four ounces; juyce of Plantane and Purſlane, of each eight ounces; ſtir them al together and diſſolve them with the whites of three raw Eggs; and then put them in a Glaſs Limbeck, and ſtil them.*

And that the Ulcer may afterwards be covered with a ſcar, and cloathed with Skin, this laſt injection muſt be uſed.

Take *Plantane water, one pound. Diſſolve therein the white Trochisks of Rhaſis with Camphire half an ounce. Make thereof an injection.*

Or inſtead of Trockisks, make it after this manner.

Take *Litteridg of Gold, Ceruß, Bole-Armeniack, of each two ounces; with the Plantane water make an injection.*

In his Diet he muſt abſtain from ſalt and ſpiced meats, ſtrong Wines, and other things which make the blood thin. In their ſtead let him uſe cooling broaths, Prunes, and other meats which engender moderate blood. Sometimes betwixt meals and during the time of his Cure, it wil be good to drink one draught of Hydromel wel boyled, or of Barley Water.

The LXI. Counſel.

For making of flegmatick Urine.

A Certain man did render thick Urine and troubled, wherein there ſetled flegm thick and clammy. He was troubled with extream pain and Heat while he made water. His maſter thought, it was becauſe he had a ſtone in his bladder, but the Chyrurgeons uſing their Inſtrument did not perceive any ſtone. It did therefore follow that it proceeded from the weakneſs of his bladder. For the Cure whereof theſe following Remedies were preſcribed.

Take *Polypody of the Oake, an ounce; Roots of Ruſcus, or Butchers Broom, Aſparagus, Graß, and Fennel, of each half an ounce; Agrimony, Ceterach, Dodder, Pimpinel, Betony, Clary, Saxifrage, Wallrue, Maiden-hair, of each one handful. Seeds of Aniſe, Melons, Burbock, Parſly of Macedonia, Liquoris ſhaved, of each two drams. Make a Decoction to twenty ounces. In the ſtrained Liquor infuſe four ounces of pickt Senna, white Agarick, two ounces; Gummy Turbith, half an ounce; Ginger, two drams. Boyl them a little together, and ſtraine and ſqueeze out the Liquor, and therein diſſolve white Sugar, one pound. Make a Syrup prefectly boyled. Let him take every tenth or fifteenth day, an ounce and an half, or two ounces; for a doſe, with a little portion of Pellitory water.* Alſo,

Take *the beſt Aloes, half an ounce; choice Rhubarb, two drams and an half; Agarick, trochisked four ſcruples; Pouder of the Dukes Electuary two ſcruples. Make of al a ſoft maß with Syrup of Marſh-mallows. Let him take one dram at a time in five pils, without obſervance of keeping Chamber, &c.*

On other daies, when either his belly is bound, or flegm troubles him.

Take *the four greater Cool ſeeds, Seeds of Baſil, Burnet, Saxifrage, Parſly of Macedonia, of each one dram. Choice Cinnamon, Nutmeg, of each half a dram. Diarrhodon Abbatis, one dram. White Sugar diſſolved in Pellitory and Clary water, ſix ounces; make of al Lozenges, or tables, weighing three drams apiece. Let him take one in the morning, at leaſt three hours before meat, on the daies in which he takes neither Syrups nor Pils.* Item.

Take *Roots of Marſh-mallowes, Elecampane, Juniper berries, of each one ounce. Centory, Origanum, Wormwood, Chamomel, Melilote, Dill, of each one handful. Seeds of Annis, Fennel, and Fenugreek, of each half an ounce. Make of all a bag. Let it boyl in a ſufficient quantity of Water, putting thereto in concluſion a quarter as much white Wine. Foment therewith being hot, his ſhare, Privities, and Perinæum.*

If this be not enough, let the Flegm be made thin and melted. Of the ſame Ingredients a Bath may be made to ſit in, wherein being hot, let him ſit up to the Navil.

The

The LXII. Counſel.

For unvoluntary letting go of the Urine, Hypochondriacal Melancholy, and Inflamation of the Leg.

THe Diſeaſe which has been largely and clearly unfolded, although by a various mixture and unuſual concourſe of Symptomes, it ſeems to be very obſcure and new; yet if we ſhal more deeply ſearch into the force and Nature of the ſigns, both wil become apparent, and the cauſe of the Diſeaſe wil be found by compariſon of other Diſeaſes. The Cauſe of theſe Symptomes is not one ſimple Diſeaſe, but comparing and weighing their Natures, we ſhal find three Diſeaſes intertwiſted. The one is an inflamation of the Legs returning by fits. For redneſs and heat are ſigns of an inflamation, which they term *Phlogoſis*. Yet it cannot be counted an Eryſipelas, ſeeing it does not poſſeſs the Skin alone, but the fleſh under the ſame, and the whol part ſwels into a great bulk. It remains therefore that it is a Flegmonous inflamation of the Legs. The immediate and continent cauſe whereof is thin and fervent blood, which offends the part not only by its redneſs and heat, but alſo by its immoderate quantity. Which being not confined to one place, it does not cauſe that ſort of Phlegmon, which at laſt ends in an Impoſtume; but being equally diffuſed al the Legs over; it cauſes a Phlegmonous Tumor, which Continues ſo long, til that fervor of the blood being repreſſed, it is al either manifeſtly or inſenſibly diſſipated and exhaled. Now this blood flowes down from the whol body, but eſpecially from the Bowels, and out of al the Veſſels, wherein at certain periods of time it is wont to be collected and to ſuperabound, and that by means of the natural conſtitution of the patient. For ſeeing both his temperament and habit of Body, his Diet and courſe of Life, do argue him to be ſanguine and apt to breed much blood, it happens at certain ſet times, that his whol body is ſurcharged with blood. Which becoming troubleſome and burthenſome to Nature, it is either by Nature driven, or fals of its own accord, out of the veins into the Legs, being by ſome means or other become weak. Even as in thoſe that are of like Conſtitution, it breaks out in ſome at the Noſe, and in others by the Hemorrhoid veins, and in others by other waies. And the very truth is, unleſs in this Gentleman the Patient, this ſuperfluity of blood did fal into his Legs, he would be in danger, either of ſudden choaking, or of the breaking of a vein: ſeeing we ſomtimes hear of great quantities of blood vomited up, nor without the opening or breaking of a vein, which comes either from the Liver or other neighbouring parts and places into the Stomach. Now that this flux of blood into his Legs, comes from the whol body and al the veins thereof, it plainly appears by ſuch things as we are informed do happen at the beginning of the fit; viz. heavineſs of his whol body, a diſtending wearineſs, ſhortneſs of breath, Head-ach, working and burning of the inward parts, Anxity of Mind; al which are Symptomes of ſuperaboundance of het blood.

The other Diſeaſe which troubles the ſick Gentleman, is Melancholy, the Companion of Inflamation, and that kind of Melancholly, as I conceive, which we cal Hypochondriacal. For the pain which is wont to ſettle on his left ſide, under the ſhort Ribs, and the Palpitation of thoſe parts reaching as high as his left pap, Anxity of mind, Sadneſs, Solitude, variety of troubleſome dreams, duſneſs of underſtanding in adminiſtration of affaires, and in diſcourſing, with weakneſs of memory: are ſigns which cannot be referred to any thing but black Choler, whoſe vapors gliding into the Heart and Brain, are wont to cauſe ſuch Symptoms as theſe and far worſe. Seeing a very great heat of his inner bowels and Humors, has continued ſo many Years; it can hardly be, but that a very great quantity of yellow Choler is burnt and turned into black choler, which being ſent into the Spleen its proper receptacle, it ſhews the force of its Malignity.

His third Diſeaſe is the involuntary going away of his water, which happens commonly in his ſleep, ſo that he never perceives it. Nor is this any effect of the Inflamation or Infirmities aforeſaid, nor need he to fear hereafter ſuch a painful making of water, as has formerly tormented him: but the cauſe of this paſſing away of his water, is the hurting of the

Sphincter

Sphincter Muſcle, which cloſes the Neck of the Bladder: for by putting in of the Catheter, it is ſtretched and torne, by which occaſion, alſo much blood came away. And being thus hurt, it cannot perform its office of ſhuting the bladder. And ſo much for the knowledg of his Diſeaſes, and their cauſes. The premiſes therefore conſidered, a perfect cure may be hoped for of all theſe Diſeaſes, provided the patient in this flouriſhing age wherein he is, and in the height of his ſtrength be ſo diligent as is requiſite.

The Method of Cure.

The laſt Diſeaſe of Involuntary making water becauſe it is very ſingle, and he voides no filthy matter with his Urine, it may be Cured only by aſtringents and ſtrengthening things. Such are the fomentation of his Privities with roſes, Balauſtians, Plantane, Pomgranate peels, and ſuch like things, boyled in ſmiths-forge water. And alſo Plaiſters of the ſaid materials, and of metallick ſimples, as Litharidge and Alum, Bole-Armeniack, and Maſtich, made up with Myrtle Oyl, and Vinegar. And if theſe things externally applied, do not help, they muſt be injected with a Syringe, that they may touch the part affected. For ſo their uſe wil be found much more effectual.

The other two Infirmities becauſe they are in ſome ſort complicated, and the one is the effect of the other, there is in a manner one and the ſame Cure for both. That ſame inflamation of his Legs coming by fits, may poſſibly be hindred and cured, only by obſerving a good Diet and courſe of living. But the Melancholy infirmity requires ſome Cure. Therefore, to puriſie his blood and whol body, every fift or ſixt day purge him with a Syrup made of juyce of Bugloſs, Borrage, Fumitory, Hops, Sorrel, and ſuch like, adding to every pound of the juyces four ounces of Senna, and half an ounce of Cinnamon, and a pound of Sugar. The doſe whereof muſt be two ounces tempered with Whey. If he ſhal be much troubled with Melancholy Symptomes, give him on the daies between his purging, the like Syrup made without the Senna. Alſo preſcribe him an Electuary of the *Species Lætificans Galeni*, *Diambra* et *de Gemmis*, made into Lozenges with Sugar diſſolved in Buglois water. Uſe no ſtronger purge, nor open hereafter any Vein, unleſs ſome greater neceſſity ſhal happen. But the Hemorrhoide Veins may ſafely and very profitably be opened, if they happen to ſwel, or are fuller than ordinary, and apparent in any meaſure; and that either with a Lancet or Leeches, or Medicaments. Add hereunto ſuch a Diet as may breed good, thin, moderately cold and moiſt juyce, namely ſuch as al men commend in the caſe of Hypochondriacal Melancholy. Now the cure of the Inflamation of his Leg returning by fits, does chiefly herein conſiſt, viz. That he live ſparingly, and with a thin Diet, pine himſelf with hunger and thirſt, and keep his blood and Humors in a moderate quantity, ſo as not to burthen and trouble Nature. Let him therefore uſe meats of good juyce, cold and moiſt, and of indifferent Nature, and let him eat leſs by half than he has been accuſtomed to do. Let him (if the ſtrength of his ſtomach wil give leave) abſtain from Wine two or three months. And inſtead thereof let him drink either ſmal beer, or water ſeaſoned with Cinnamon, or a Decoction of Guajacum. If alſo he procure himſelf to ſweat, and make his body more open, I conceive it wil do him very much good. In the whol courſe of his life, let him ſhun ſtrong wine, ſurfetting and ful feeding. For al the hope of his cure does conſiſt in a cooling and ſpare Diet. I do not approve of their judgment that would have him drink Aſſes milk, becauſe milk in an hot and Cholerick conſtitution is ſoon corrupted, nor does the patient fal away in his fleſh. Much leſs do I like of the uſe of Baths; becauſe they by melting and diſſolving the Humors cauſe fluxions: now his body is afflicted with divers defluxions already. Now that the Humors may not hereafter ſo readily fal into his Legs, it wil be good to ſwath them very cloſe with ſwath-bands, or with ſtockins which are with us made of dogs leather for the ſame purpoſe.

The

The LXIII. Counsel.

For the Gonorrhœa, and the Gout.

THis Gentleman is troubled with two diseases, the Joynt pain, and the Gonorrhœa. The latter is newly befallen him, being onlie of three months durance, without sharpness of urine, without any ulcer or difficulty in pissing. The former is more old, which did this year grievously trouble him, and six yeares since gave a testimony of its Intentions to visit him. 'Tis a wonder truely, that this pain at the very first coming should seize all his Joynts alike, and leave behind it stony knobs in his fingers, hand, wrist, and other places. This is a signe of a most grievous Gout to come, which wil in a few yeares catch the whol man and bind him with fetters and manacles, unless it be in good time prevented. Which he foreseeing and fearing, does implore help, which because I cannot afford him, in this my wandering and unsetled condition of following the Court, I thought fit to commit him to your care, that you may in his Cure follow that way and method which you have sometimes seen me use. And that you may in like manner accommodate your cure to the virulent Gonorrhœa; in the first place you shal give him a clyster, which shal have in it hiera simple, and diaphenicon, each half an ounce; honey of roses and rosemary, each one ounce, &c. The Day after purge him with a medicament of rhubarb and agarick, each foure scruples, infused in waters of hatany, endive, and white wine, each one ounce. In the strained liquor, dissolve electuary of diacarthamus one dram & half; syrup of maidenhair half an ounce. The third day give him two drams and an half of Turpentine, with syrup of maden-hair out of a spoon, four houres before meat. The fourth day let him rest. On the fift day, he must begin the diet with Guajacum; and he must have a double decoction, the one strong of half a pound of the wood and two ounces of the bark, adding about the end of the decoction, Elecampane, polipody of the oak, and Carthamus seeds, each one ounce. And let him use it twice a day, three or four hours before meat. The other must be weaker, made only of the wood, which he must use at meales instead of wine. His diet must be in the mean time spare, attenuating and drying. If his belly be costive, provoke it with a clyster. On the seventh or eighth day, let him be purged again with such a like medicament. After his purgation first of al apply topick medicines to his head, as little bagges of seeds which may more effectually provoke the sweat. And when the sweat is wiped off, let him use every day errhines, first weaker, then stronger. When the humors of his head shal seeme for the most part dissipated, you shal apply such medicaments to his neck and back-bone, which I know you have copies of, written down. And for the stony knobs on his Joynts, certain plaisters which you may remember I prescribed at large for Mr. *de Chauvigne*. When by the continuance of these remedies, you have quite cured al the joynt paines and the knobs, and pluckt up the disease by the roots; in the last place his joynts must be strengthened with medicines provided to that end: of which likewise you have good store. But before the cure come to that forwardnes, I hope I shal see you again. If by these remedies the gonorrhœa shal not be quite rooted up, such things must be conveyed into his yard as wil dry up the reliques thereof. The materials whereof, if need shal be, I wil hereafter set down more at large. Mean while, during the cure, the immoderate heat and working of his kidnies, may be represt by anoynting the same with oyl of lillies, and roses, washed in plantane water, or with oxymel, rose water, plantane and night shade waters, each two ounces; Vinegar one ounce. Wherein also if necessity require, dissolve two drams of trochisks of camphire.

The *LXIV.* Counsel.

For a Rupture of the Guts. Out of the French.

TO cure the disease propounded; first the patient must keep his bed at least twenty daies together, and lie upon his back, and stretch or stir his body very little, especially his legs,

nor vex his mind with wrath, or other passions, nor laugh or cough. In the mean while he must live soberly and temperately, with meates neither windy nor moist; and endeavour that his belly be neither swoln nor dryed, and to have every day a stool by nature or by art with a glyster or suppository. First let his body be purged with the medicament here underwritten: which also may be repeated after fifteen or sixteen dayes are over.

Take *Of the four emollient Herbs, origanum, calamint, Wormwood, Chamomel, Melilote, Dil, each one handful. Seeds of annis, Fennel, each half an ounce. Honey of roses, and rosemary, each one ounce. Oyl of rue and dil, each one ounce and half. Make of al a Clyster.* Item.

Take *Great and middle comfry, roots of Osmund royal, each half an handful. Leaves of senna clensed three drams. Make a decoction for one dose; in the strained liquor dissolve choice rhubarb poudred one dram and half, Syrup of dryed roses six drams. Make al into a potion.*

On the first four daies of the Cure, let the tumor be fomented, as hot as he can endure, with a spunge indifferently moistened with this following decoction: and five or six times as hot as he can suffer he must cover the pained part lying on his back and bind it with a bolster and cloather between, with swath-bands, viz. in the morning, and at one a clock in the afternoon. Let the fomentation be this that followes.

Take *Roots of marsh-mallowes, dwarf elder, and fresh orice, each two ounces. Mallows, Violets, Pellitory, water-cresses, Wormwood, Origanum, Calamint, Centory, each one handful. Seeds of Fennel, Line, and fenugreek, each one ounce. Make of al a decoction in water sufficient to make a fomentation.*

After four dayes you shal again foment his rupture with the bath which I have given you wet with red wine and heated over the fire. And after eight daies more dip the second bag in a Lie made of smyths-forge water and oake ashes. After which bags applied twice a day, the bolsters and swathes must be again used. Which things being performed, he may for two months abstain from other remedies, excepting a truss fitted to his rupture. Also let him forbeare al straining himself either on horse-back or on foot. On the fourteenth day of the Cure he shal take a quantity of this following pouder out of a spoon, in the morning, and eveing an houre before supper, and continue the use til he be perfectly cured.

Take *of the myrobalans Indian, and Chebulan, each one dram and half. Water Cresses, Porslan, Plantane, Sumach, each half a dram. Red coral, bloodstone, amber, each one scruple. Choice cinnamon foure scruples. Sugar of roses four Ounces. Make al into a pouder.*

The LXV. Counsel.

For Pains of the Hip, and other Joynts.

THis young maid is troubled with many and grievous infirmities, of al which there is one original and one fountain springing from her Head. An old œdematous swelling, which she was troubled with in her younger yeares, and frequent and unseasonable washing of her Head, have left a cold distemper and weakenes thereof, which perpetually gathers plenty of cold excrements. By these meanes a cold flegmatick humor was collected and abounded of old, and fel into the kernels of her Neck like the kings evil, and not many yeares since rushing into the right side of her body, it besieged the joynts of her neck, shoulder, Hip, thigh and leg. Nor does it trouble only the external parts of her body, but it has lately set upon the inner parts so great a defluxion falling upon her lungs, as caused not only a cough, but wheezing and a troublesome shortnes of breath, whence it is apparent, that the cause of al her troubles is a cold and flegmatick humor, which occupies wel neere al the parts of her body; and that the first original thereof is from her head. Unless her strength be much decayed, some hope there is of cure, especially now in the flowre of her age, and the approach of the spring. Many things have been by rules of art prescribed for her, wherewith she has been eased, but by reason of the length and stubbornes of the disease she

can

can as yet receive no perfect Cure: and that makes me ſuſpect the fountain of her diſeaſe is not yet drawn dry. But that there is a frequent defluxion of rhume, both into her lungs and joynts from her head, which nouriſhes this long infirmity.

The cheif ſcope of the Cure muſt be, to cleanſe the Head of excrements, or that ſuch as cannot be hindered from breeding, may be derived through the noſtrils, or digeſted by the power of topicks. Wherefore every tenth or twelfth day according to her ſtrength, purge her with a potion or pils, which may be able ſtrongly to draw from the diſtant parts of the body. Her hair being cut off, every morning and an houre before ſupper, fry in a frying-pan ſeeds of aniſe, fenel, carway, cumin, bay beries, millet, and ſalt, and put them in a little bag, and lay it on her head as hot as ſhe can endure it, until the heat pierce inward, or the ſweat run down her face. When it is taken off cover her head with tow heated and ſmoaked, with a perfume by you preſcribed. After this apophlegmatiſmes wil be uſeful and errhines, at firſt ſuch as are mild, and without hellebore. And that her body may not be too much ſhaken by the violence of sneezing 'twil be ſufficient to add to three ounces of juyce of Betony or ſweet Marjoram, two drams of orice, and a dram of root of bindweed. Let al her neck be compaſſed with a plaiſter three fingers broad, which is made of two ounces of maſtich, and one ounce and half of the plaiſter againſt ruptures. Let her by any means forbear lying on her back, but lying on her belly is good for her, becauſe it enclines the rhume to her noſtrils. Let her diet be drying and extenuating, avoiding al ſuppings, fiſh, and imoderate drinking; let her eat roaſted fleſh, drink very ſparingly, and endure thirſt. The uſe of al theſe remedies muſt be ſo long continued til the head of the patient be freed from heavineſs and pain, and may be on al ſides handled, without trouble to her. And when about twenty dayes are over that both the reliques of the diſtillation and the humors, which have fallen both into her joynts and Lungs, may be attenuated and diſſipated, it is good to order her a drier drink of guajacum, which does much leſs weaken the body, and is ſafer than an hot houſe. Now let the decoction be ſtrong, and boyl towards the end therein, polipody, ſeeds of Carthamus, Sage and Hyſſop; and 'twil be very good for her, if by Vertue of the ſaid decoction ſhe may be made to ſweat in the morning and before ſupper. While this is in doing, ſhe muſt nevertheleſs perſiſt in the uſe of thoſe remedies now deſcribed. She muſt be nouriſhed with a pretty ful diet, leſt her ſtrength by time and labor come to faile her. If the paines of her joynts ſhal not be aſſwaged by the foreſaid meanes; finde out in her hip, the part where her greateſt pain is, and faſten there an indifferent great Cupping-glaſs, without ſcarrification, being repeated three or four times at convenient diſtances, til the pain go away. For it plucks out the pain more ſtrongly than any plaiſter. And for her knee make vaporaties of wine or vinegar, putting therein a peice of a milſtone red hot; or with baths of the Lie of Vine branches, wherein are boyled roots of Acorus, and Elecampane, Polipody, Bayes, Time, Stœchados, Sage, Betony, Marjoram. The ſtoppage of her Lungs, wil be opened by oxymel Scyliticum, Oxymel ſimple, ſyrup of Hyſſop, or any other compounded of cough medicines, inſtead of a Lick pot.

The *LXVI.* Counſel.

For a Scirrhous Tumor.

YOur Judgment truly, agrees very wel with the relation you make of the Caſe. For if at firſt there was vehement pain, without redneſs, without any pulſation or heat; and now the pain being gone the tumor is increaſed, it muſt needs be, either that an œdematous tumor is turned into an abſolute ſcirrhus, or if the tumor be not very hard and reſiſting, that the fleſh has grown above meaſure, the membrane of the muſcles being broaken, and ſo there is become a Sarcoma or fleſhy tumor ſo called, void of pain. Howbeit the former opinion is more probable.

Seeing the patient has received no good by theſe excellent remedies which have been applyed, I conceive her body muſt be extenuated, and thoſe vitious humors diſſipated by a decoction of Lignum vitæ: which ſhe muſt be conſtrained to uſe with a thin and dry dier, for at leaſt twenty daies. Every eighth day ſhe muſt be purged with a medicament made of Senna, Agrick,

diaphenicon, that it may draw out the groſs humors already prepared: nor muſt ſhe ſweat that day. On other daies when her ſweat is wiped off, you muſt apply the plaiſter of *Phylagrius*, or *Emplaſtrum filij Zachariæ*: for they are both very fitting to mollify and diſcuſs hard Tumors. Theſe things being continued, and not helping, apply this moſt effectual Cataplaſme or pultis.

Take *Roots of Bryony, wild Cucumer, orice, St. Maries ſeale, raw, each two ounces. Roots of Marſh-mallows, of Lillies roaſted under the coals, each three ounces. Seeds of muſtard, Nettles, Water-creſſes, each one ounce. Beat them al together, adding freſh Gooſe-greaſe eight ounces. Oyl of ſweet almonds as much as ſhal ſuffice. Make al into a Cataplaſme.*

The *LXVII.* Counſel:

For the *Engliſh Plague, or ſweating-ſickneſs*; *the Counſel of* Fernelius, Hollerius, *and* Sylvius, *for the* Engliſh *Embaſſador.*

THe Engliſh Plague, which has been known but of late yeares, is of al other the moſt acute. It has got its name of the ſweating ſickneſs from its moſt remarkable ſymptom; and whether it proceed from corruption of the ſpirits, or humors, or both, it is doubtleſs an epidemical diſeaſe: and the conſtitution of the Aire being corrupted, either by winds, or exhalations out of the earth, or ſome other venemous infectious cauſe, it exerciſes its cruelty moſt of al (as other peſtilences do) and moſt dangerouſly, upon bodies that are moiſt and excrementious. If therefore you would either hinder the reception of that venemous quality of the Aire, (which were moſt to be wiſhed) or drive it away when received; you muſt diligently reſiſt both the external cauſe, viz. The contraction and commiſtion of corrupted aire, and the preparation of the body whereby it is apt to receive the ſame. You ſhal hinder corrupted and peſtilent Air, and ſuch as is vitiated in its whol ſubſtance from being received into your body, if you keep your ſelf far diſtant from al ſuch places where the Aire is infected. Or if buſineſs do require your Lordſhips preſence in ſuch places; the Aire muſt be ſtirred and agitated with fans, and driven from you, or corrected with ſuch things as hinder putrefaction: and the Aire which is not as yet putrified, muſt be by the ſaid things preſerved, ſuch are, fire in your chamber, and the whol houſe beſides, yea, and round about the ſame, of dry woods, and odoriferous plants, as Sage, Roſemary, Juniper, Bays, Marjarom, Leaves of dried Time, Flowers, Seeds Berries, Cloves, Nigella romana, the ſeed and root of pæony, eſpecially the male, Schenanth, Lignum aloes, Storax, and juice of Angelica, and trochiſks, made of theſe things, to perfume, adding thereto alſo Ambar-greece, if you pleaſe, and muſk, and other Alexipharmaca. And be careful that this aire ſo ſtudiouſly prepared be not defiled by mens breaths, leſt there happen to be ſome among them that are infected with this diſeaſe.

Moreover, you ſhal defend your body, being of conſtitution ſomwhat hot and moiſt, from the infection, and render the ſame inconquerable, if you keep it free from putrid excrements, or ſuch as are ready to receive putrefaction, and make it wholly perſpicable, the pores thereof being kept open. Both which may be effected by a few evacuations, and a fitting courſe of diet. Now the Evacuations ſhal be ſuch as theſe. Alwaies the firſt day, before you go out of *Paris*, take Pulp of Caſſia new drawn ſix drams, choyce Rhubarb not very fine poudered one dram and half. Cinnamon ſix grains. Take it in the morning, three hours before meat with ſugar or bugloſs water. The day after about ſix a clock in the morning take away about ſix ounces of blood, from your baſilica veine, or if you diſlike blood-letting, diminiſh your blood by a ſpare diet. And ſeeing our bodies are apt even of Meats not offending in quantity nor quality, to breed ſomtimes ſuperfluity of excrements, 'twil be healthful for you, once or twice in a week to ſwallow an hour or two before meat, two or three of theſe pils.

Take *Choyce aloes half an ounce; the beſt Myrrh two drams; Safron ten grains, Dittamus leaves, the roots of falſe dittamus, wild Betony, Tormentil, Bole-Armeniack, Terra lemniæ, each half a dram; with freſh oyl of ſweet Almonds drawn without fire, and with ſyrup of Lemmons, make al into a ſoft maſs, rowle it in Leather.*

And

And although theſe purges do alſo ad ſtrength to our principal parts, wherein are our cheife faculties, whole action is our life: yet muſt they be armed as it were with their proper Antidotes, that they may give no place to this malignant contagion of the aire. And ſuch are theſe two moſt excellent ones, invented and approved by reaſon and experience.

Take, *Conſerve of Bugloſs*, Borrage, *Cichory*, *Maiden haire*, *each two ounces*. *Conſerve of Roſes*, *Citron peeles preſerved*, *each one ounce and half*; *Leaves of true dittamus*, *roots of falſe dittamus*, *of wild betony*, *and Tormentil*, *each two drams*. *Seeds of Cardus*, *of Citrons*, *of Sorrel*, *each three drams*. *Zedoary Gentian*, *each half an ounce*, *old Mithridate*, *Treacle*, *each three ounces*. *Pouder of Diamargartium fridgidum*, *de Gemmis*, *Diarbodon Abbatis*, *and Trionſantalon*, *each half an ounce*; *liquor of the decoction of two capons*, *altered with Sorrel*, *Porſlane*, *Scabious*, Bugloſs, *borrage*, *Marygolds*, *ten pints*, *with thirty leaves of the fineſt Gold*. *Diſtil it artificially in a glaſs Alembeck over the embers*, *and keep it in a Glaſs*. *Take thereof every morning two hours before dinner*, *with Sugar and Cinnamon*. *And if you be taken with the ſickneſs*, *you muſt have twice or thrice in the fit two or three ounces at a time*, *warmed a little*. *In the morning your body being diſburthened*, *exerciſe al the parts thereof with gentle motions*, *after which if gentle ſweat follow*, *wipe it off with ſoft cloathes*.

And when the heat of your body is over, eat meate eaſy of digeſtion, but a little more ſparingly than ordinary. Such meats are Thruſhes, Quailes, Partriges, ſmal birds, fed Capons, Hens, Pheaſants, Leverets, Rabbits, Kids, Roaſted rather than boyled, with juice of ſoure Grapes, or juice of Sorrel, Lemmons, Orenges, with plain Vinegar, or Vinegar of Roſes. Or if you deſire to eate of theſe, or ſuch like meats boyled, let them be qualified with Porſlane, Borrage and Bugloſs, and let them be eaten with the foreſaid ſpices, but ſo ſparingly, that you muſt riſe from table with your belly but half ful. If you deſire to eate fiſh, let them be ſuch as after boyling have their ſubſtance ſhort, dry, and crumbling, with plenty whereof your Country of *England* is richly furniſhed. Let your wine be in the ſummer of indifferent ſtrength, in color either white or fity; in the winter ſtronger and redder, provided it be not too vaporous or hot, or need much tempering with water, which we allow not, becauſe it moiſtens too much, nor yet your Country beer, which engenders a thick and melancholick juice, be it made how it can. Nor do we approve of your Ale which is like your beer, nor of milk, which is too apt to be corrupted; nor of whey of milk turned and mingled with white wine. Cheeſe, though it be good in as much as drying, yet becauſe old cheeſe is hot, and new is cold and crude, and apt to obſtruct, it muſt be forborne, eſpecially the frequent and large feeding thereon. Al ſummer frutes diſpoſe the body to putrifaction, Dates and Raiſons we permit, nay, we enjoyne the eating of them, alſo dried Figs, becauſe they ſcoure the bowels, open obſtructions, and reſiſt poyſon, ſweet Almonds, Cappars, &c. preſerved Citron peels, Conſerve of Roſes, of borrage, of bugloſs, of Milk-waſt, of Scabious, of Cichory, Tormentil roots, wild bettony, and the like, we highly eſteem, and would have them frequently uſed, at al hours in a manner, either before or after meats; unleſs they bind the belly too much. You may ſometimes take two hours before break-faſt, the quantity of an hazel-nut of this mixture.

Take *Conſerve of Roſes*, *borrage*, *bugloſs*, *Citron peel preſerved*, *each one ounce*. *Treacle of Venice*, *or old Mithridate three drams*. *Bole armeniack*, *Terra lemnia Sigillata*, *each two drams*. *Make al into an opiate*, *after a ſmal quantity whereof*, *let him drink two ounces of diſtilled wine*.

You may alſo take a quantity of the phyloſophical Egg, which moſt Phyſitians have deſcribed. If the plague ſhal ſeize upon you unawars, it wil wonderfully ſtrengthen your nature, in the ſweat it ſelf, to drink ſome of your diſtilled water, and to take of your Electuary twice or thrice, and to ſuch a peice of bread ſteeped in wine allaied with Bugloſs water: and this recreates our principal parts themſelves, which are the cauſes of our faculties, and the faculties themſelves which govern our bodies, and ſooner dries the peſtilent conſumptive venome out of our ſaid bodies. And therefore it makes the fit ſafe and ſhort, and frees the body from thoſe cruel ſymptomes, which are wont to attend this diſeaſe.

The LXVIII. Counſel.

Of the Elephantiaſis, or Diſeaſe ſo called.

SEEing the learned Phyſitians do not agree as concerning the ſymptomes appearing in the face of *John Rocquiret*, ſome ſaying that he looks horribly, has Lyons eyes, eyebrows without haire, a thin beard, ſwollen noſtrils, and deformed with many puſhes within and without, with an ulcer beginning; and that his breath is ſhort, his almonds of his Eares ulcerated, with an hoarſe and obſcure voice. And others ſay that ſome of theſe tokens are not to be ſeen, and that the puſhes, if any be, are red. It muſt of neceſſity be, that the ſigns about which the renowned Phyſitians are at variance, are very obſcure and deſerving little credit, nor muſt we from them conclude any man to have the morbus Elephantiaſis, or diſeaſe ſo called; nor if al the tokens mentioned did appeare muſt we therefore judge that it is therefore the begining of the Elephants-Mange or Elephantiaſis; eſpecially ſeeing his body is wel nouriſhed, and there is no numneſs, ſwelling, or coldneſs of his feet or hands, which is wont preſently at the very beginning to accompany the Elephantiaſis. Nor in caſe there were the beginning of that diſeaſe, ought the patient to be therefore ſhut up from the ſociety of Men, ſeeing neither his body as yet, nor breath do ſtink, nor is there any ſuch contagion as may infect his neighbors. Thus therefore we underwritten Doctors of Phyſick do judg of this matter in controverſie, viz. that *John Roquiret* having a ſuffuſion of thick and melancholick blood through his skin, and deformed with dark red puſhes, is not yet to be reckoned amongſt ſuch as have the Elephantiaſis or Elephants-manginеſs, nor is to be ſhut up from the ſociety of Men.

But if hereafter no courſe of diet or Phyſick can overcome the diſeaſe, ſo that it ſhal grow worſe, and afford more evident ſigns and tokens, it wil be then time enough juſtly to determin what is fit to be done in this caſe. The Cure muſt be undertaken in the ſpring. Let his diet be cooling and moiſtening. Let him every week be purged with an Apozem. Let him drink no wine. Let him avoid al hot and venemous medicaments, both purging and Ancidotary, ſuch as ſcammoniated Medicaments, Mithridate, Venice Treacle, &c. which are ſo far from helping the diſeaſe, that they burn the humors, and double the ſame.

The LXIX. Counſel

Of the Elephantiaſis beginning.

The Diſeaſe propounded.

A Gentleman of fifty yeares of Age, of a fleſhy, but ilfavoured habit of body, ſomthing like that of thoſe which have the jaundice, his face of a blewiſh red, ful of thick and black blood, wherein ſomtimes aroſe black or livid ſpots, as alſo in the reſt of his body, having little or no fence in them. Howbeit this Gentleman is not troubled with thirſt, loathing of meat, or any other more grievous ſymptomes. He has taken a thouſand potions, and has exhauſted his body by ſweating in hot baths, to the prejudice of his Health. For he feares he ſhal have the Elephantiaſis, or Elephants-manginеſs, whereof this ſeems the beginning.

Mſr. Fernelius *wrote back theſe Remedies*

Take *Roots of Sorrel, ſharp pointed dock, and Elecampane, Polypody of the Oake, Seeds of Carthamus, Raiſons ſtoned, of each half an ounce. Endive, Cichory, Plantane, Bugloſs, Borrage, Hops, Fumitory, Dodder, Ceterach, Chamædrys or ground Oake, Ground pine, of each one handful; Violet flowers two pugils. Make a Decoction to ſixteen ounces. In the ſtrained liquor ſteep al night Epithymum, half an ounce. Senna five drams; Agarick two ounces; Ginger, two drams. In the morning let them boyl a little and make an expreſſion of the Liquor, and therein diſſolve, of the clarified juyces of Fumitory and Plantane, of each three drams. White Sugar one pound and an half. Make of al a Syrup perfectly boyled. Let him take two ounces, or two and an half at a time, in Whey, every fift or ſixt day.*

Take *Conſerve of Bugloſs and Borrage flowers, of each two drams; ſhavings of Ivory and Harts-Horn, of each a ſcruple. Old Mithridate, two drams. Mix them for two doſes after his purging, three hours before meat.*

After the third or fourth purging, open the inner vein of his left Arm, and take away ten ounces of blood. Afterwards, if poſſible by any means, open his Hemorrhoid veins: firſt with emollient and altering fomentations, afterwards with ſuppoſitories of Hiera ſimple with juyce of Mercury or with Gall: or if they be conſpicuous outwardly and ſwollen, apply Leeches to them. That by this means the black and Melancholy blood may flow out.

When therefore his body ſhal be diligently prepared and evacuated, the uſe of bathing wil be exceeding profitable in ſweet potable water, continued many daies together, in the morning faſting. But ſo that the Baths be not hot to cauſe ſweat, but only lukewarm, to moiſten his Body.

He muſt keep a cooling and moiſtening Diet; barley cream wil be very good for him in a morning, eſpecally when there is no need of Medicaments. Broaths alſo made of Chicken, Veal, or mutton, with bugloſs, borrge, Sorrel, Lettice and Plantane. If he leave off Wine in the Summer, it wil be exceeding wholſome for him to drink inſtead thereof Barley water, or any other drink prepared for him; If any parts in the Skin appear black, or black and blew, void of ſenſe, fix Cupping-Glaſſes thereupon and make Scarrification, and that a good depth. That the blood may flow out, and the ſence be recalled.

The *LXX.* Counſel.

A Letter from a certain perſon, that with a thin Diet, and a Decoction of Guajacum, did cure a Diſeaſe.

MY Diet was very ſpare, conſiſting of Raiſons and Dates, and I ſo abſtained from wine, that I cannot endure the ſmel of it, my belly is in good caſe as to going to ſtool. My morning potion makes me ſweat indifferently, mine evening potion makes me not ſweat at al. I have no ſhortneſs of breath, but my old pain alwaies ſticks in my breaſt. And within this ſix daies I have felt a new pain over againſt the old, between my ſhoulder-blades, which herein differs from the old pain, in that the new one is felt by touching, the old one only upon vehement motion. Since yeſterday I have been twice as bad as formerly; My ſtomach (which has been alwaies naturally weak) doth continually paine me, yet without loathing of my meat, &c.

To the premiſes, Mſr. Fernelius *thus anſwers.*

You do, truly, exceeding wel, and take a very good courſe to vanquiſh this long laſting and rebellious Diſeaſe; howbeit, I fear leſt your ſtrength wil at laſt fail you, by reaſon of your ſo thin a Diet: you muſt ſee to preſerve them, and ſuſtain them with a little more liberal

ral allowance, that they may hold out til the end of the Cure. I perceive you have new pains riſen; but that is the Nature of the potion, that if any Humor did lurke ſilently in the body, it wil at the firſt bring it to light, and many times exaſperates the pains, which do afterwards end. And whereas a new pain vexes your Stomach it comes from the ſame cauſe; for vicious Humors being ſtirred in the bowels, they break out preſently into the ſtomach: and therefore I thought fit by any means to purge them with an accommodate Medicament, the deſcription whereof I have ſent you. The day wherein you take it abſtain from your other potion, and afterward uſe it more liberally, that you ſweat luſtily from al parts. And if the ſweats wil not be otherwiſe provoked, lay ſome hot thing to the *Soles* of your Feet.

The Counſel of *Johannes Capellanus* Senior, Renowned Phyſitian to the *Queen* Mother of the moſt Chriſtian King, *Francis* the Firſt of that Name, King of *France*.

THe Peſtilence is an aery Veſome, or the Air poyſoned by admixture of putrid Vapors, and qualified with a diſpoſition moſt pernicions to mankind. For the Air thus affected, through neceſſity of reſpiration, does firſt enter into the receptacles of the Heart, and by and by the infection is by the Arteries ſpred into the whol body. So that both the Heart the Fountain of Life, and the ſpirit the next Organ of the Soul, being by this cruel contagion rendred unfit for the functions of Life, a man muſt needs ſoon come to his end, if ſpeedy remedies be not applied. And that we may prevent ſo ſudden a miſchief, we ſhal firſt ſpeak of the point of Diet; and then I ſhal preſcribe medicaments, both for prevention and Cure.

Seeing this Infection of the Air proceeds from watry vapors mingled and confounded therewith; ſuch an Air muſt be choſen, as is far from lakes and pooles, which for want of motion do putrifie. Let the windows be ſet open to the Eaſt and North. For thoſe are dry quarters, and none of thoſe humidities come from them which moiſten and infeſt the Air. The North-wind is eſpecially good, which is therefore cald the broom of Heaven, becauſe it cooles and tempers the boyling Air, and corrects the putrifaction thereof. You muſt uſe the wholſomeſt water you can get. Let your meat and drink be temperate, not only in quality, but in quantity alſo, ſo as they may not collect ſuperfluous Humors, and may be hard to be corrupted. Such are al meats that are not of an immoderate or bad juyce; ſome tart things, as Citrons, Barberries, Raſpberries, ſour Grapes-liquor, and Vinegar, wherewith your other meats are to be ſawced. Let your Wine be allayed with water, wherein red hot Gold has been quenched. For there is a ſingular Sympathy and conſent betwixt Gold and Wine, and betwixt Wine and the vital ſpirit. Alſo avoid ſleeping in the day time which hinders the body from perſpiration. Grievous, ſad, and troubleſome perturbations of the mind muſt be abandoned, which deſtroy the natural ſtate of our Temperament. For the mind moves the bodies bulk, as the Intelligences move the heavenly bodies, not only with local motion, but alſo with the motion of alteration, by the ſpirit its Organ. Alſo vehement exerciſes do the ſame, and weaken the forces of the body, and render them weak for action. But moderate exerciſes, do empty the habit of the whol body of Excrements, ſtrengthen all the Members, and make the faculties of the Body more chearful, in the performance of their Functions.

As for Medicinal Remedies to prevent the Plague, when you awake from ſleep, perfume your Chamber with Frankincenſe, juniper Berries, Citron Peels dried, or leaves of Gold. For a perfume made with theſe things, does not only purge the Air, but alſo your cloaths

and

and garments, do thereby carry away a quality in them, contrary to the infection. Let your mouth and hands be waſhed with water and a little vinegar mingled with it. It is good to carry ſuch things about one, as have an antipathy againſt al deadly venomes, as the Garnet or a kind of Carbuncle ſo called, which though it be of ſmal price, is counted to be of greateſt virtue among precious ſtones, having an eſpecial friendſhip to the heart, as the Smaragd to the brain, the Saphire to the Liver, Coral to the ſtomach. Alſo an Hyacinth is carried and worn in a ring to the ſame purpoſe, and held in the mouth. Some alſo hang quick-ſilver about their Neck, which is contrary to other Poyſons, by a hidden and peculiar Antipathy. Shut a bit of Spunge wet in vinegar in a box with holes, and ſmel frequently thereunto. Hold a piece of dried pomegranate rind in your mouth, or a leaf thereof and of baies. Alſo Zedoary, which *Galen* and *Paulus* do term *Arnabo*. For al theſe things by an occult propriety and certain inviſible rates, do drive away peſtilent Aire; even as *Palma Chriſti*, drives away the viper Dracontius, Polemonium drives away the Scorpion, the herb Looſe-ſtrife kils Serpents, and drives away flies. If your belly be not looſe of its own accord, ſo that you go not to ſtool al the day, an hour before Supper ſwallow one of theſe pils following.

Take *Aloes, two drams*; *Rhubarb and Agarick, of each one ſcruple*; *Ginger and Cinnamon, of each ten grains*; *with Juyce of Citrons or vinegar make al into a maß of Pil-ſtuf.*

Aloes preſerves bodies both dead and living from corruption: Rhubarb draws away flegm, Choler, and Melancholy, and Agarick does the ſame. Cinnamon reſiſts Poyſon, Ginger ſtrengthens the Bowels, and quickens the ſluggiſh Lazyneſs of the purgers.

When you are to go out in the morning, take the quantity of a Wal-Nut of this following Electuary.

Take *Bole-Armeniack waſht in Scabious Water, one ounce*; *Conſerve of Water Lillies and Bugloß flowers, of each two ounces*; *Citron Peels preſerved, and Conſerve of red roſes, of each one ounce*; *Cinnamon, one dram*; *Citron ſeed, Pearls, Red-Coral, of each one dram*; *Ambar, two ſcruples*; *Camphire one ſcruple. Mix them with the Juyce of a Citron or a Pomegranate into an Electuary.*

Bole-Armeniack, is a peculiar Remedy for the plague, which is alſo a preſent help for the Lungs any way oppreſſed. The Arabians ſince *Galens* time have found by long experience that water Lillies are wonderfully good for the plague. Bugloſs is a friend to the ſpirits ſo far, that wine in which it is ſteeped drives away ſadneſs and Cheeres the drooping ſoul. The Peels of Citrons ſtrengthen the ſtomach, and their juyce extinguiſhes the Feaver and removes putrefaction from the blood. Pearls clear the Eye-ſight, and diſſipate ſooty vapors. Ambar is good for infirmities of the brain, heart, and breaſt. Camphire does that in the body of man, which Boreas or the North wind does in the viſible world. For it purges and cleanſes the Aire of our Bodies, and extinguiſhes the Peſtilential Fervor and heat of the ſpirits. To conclude al in a word, thoſe things that are good to uſe in the plague time, muſt have in them theſe three faculties, viz. They muſt help putrefaction, ſtrengthen the ſpirits, and when they are diſſolved and diſſipated, collect and reſtore them; and laſtly they muſt have a Bezoartick or antidotary faculty, or a certain Antipathy whereby they reſiſt venome. And therefore as much as may be we muſt ſearch out Medicaments that have theſe faculties. Moreover care muſt be taken to purge out thoſe humors which are apt to receive the peſtilential Infection.

And to that end three or four of theſe Pils are to be ſwallowed, which are by *Paulus Ægineta* cited from *Ruffus*.

Take *Ammoniack Gum, two drams*; *Myrrh, Aloes, of each one dram. Make them with Honey into a Maß. Ammoniacum and Myrrh do further the bringing up of Flegm, and help the faults of the Cheſt, which part is moſt ſubject to Peſtilential injuries*; *and they do cauſe the breath to come and go eaſily.*

There is alſo an Herb called Myrrhis, Mock-cheveril or ſweet Cicely. which thoſe that drink in Wine, are thereby preſerved from the Plague, in their ſtead, theſe Pils following may be uſed.

Take *Aloes, two drams*; *Rhubarb, Agarick, of each half a dram*; *Maſtich, one ſcruple*;

Zedoary, Ginger, of each ten grains; with Juyce or Syrup of the juyce of Citrons make al into a Maſs.

Maſtich ſtrengthens the ſtomach, which has great affinity and Sympathy with the Heart.

As ſoon as ever a Man is taken with the Plague, becauſe of the ſudden danger (ſeeing it kills the patient in a dates time) you muſt make more ſpeed in application of Remedies. Open therefore a Vein in the Arm (provided there be no ſwelling in the groins or neighboring parts) ſo as the parties age, ſtrength, and habit of body wil permit, taking more or leſs blood. For by this means in the Veins primarily and in the Arteries by conſent and communication the boyling of the blood is prohibited, or allayed, and the Peſtilent Vapor is by the ſame means averted from the heart. Blood being taken away, let him take of the foreſaid Antidote double the quantity preſcribed for preſervation, adding four grains of Camphire: and becauſe the ſickneſs commonly rages in the ſummer time, you muſt in that hot ſeaſon add the more Camphire. And that the reſt of the Humors beſides blood, which are ſettled in the ſtomach, Guts, and firſt paſſages, may be voided forth, give him ſome Pils of the ſecond Compoſition, two hours before ſupper, if the vein was opened in the morning; or next morning if he was let blood in the Evening. And if the Patient wil not away with Pils, give him this that follows.

Take *Rhubarb four ſcruples: Agarick two ſcruples: a few grains of Ginger: Mix them with half an ounce of Conſerve of Bugloſs, and a little Oxymel.*

But if he deſire a potion, diſſolve the ſaid things in a Decoction of Tamarinds, which cools, quenches thirſt, takes away loathing of meat, breaks the acrimony of choler, and reſiſts putrefaction. Nor muſt the Belly be purged with ſharper Medicaments, leſt the peſtiferous venom ſhould be drawn back to the bowels, from whence Nature endeavors to Alienate, drive, and force the ſame away. And when ſhe drives the venemous Humor into the outer parts, or parts near the principal, ſhe muſt be aſſiſted by Art. For ſo, the Phyſick and Nature mutually aſſiſting one the other muſt needs drive out the Morbifick cauſe. To which intent Cupping-Glaſſes with deep Scarrification are good, alſo burning, diſſection, Cauſticks. If the Patient be burned with a Feaver and tormented with thirſt, he muſt not be kept too much from drink. But let his drink be ſuch, as is very cooling, apt to quench thirſt, and reſiſt putrefaction, as Oxymel made with Sugar and allaied with much fair water, or Syrup of the Juyce of Citrons, or Barberries, or of ſour Grapes. And if the infected Humor ſhal have recourſe to the ſtomach, ſo as to incline to vomiting, you muſt provoke the Patient to vomit, with juyce of Reddiſhes and Oxymel. For the Radiſh reſiſts al Poyſons. This ſubject would require a larger diſcourſe: but my intent is not to ſet down al that may be ſaid, but ſuch things only as are moſt worthy to be known.

Counſel for a Gentlemans Son troubled with divers Infirmities.

A Certain boy ſix years old, born in Britain, is taken with a continual Feaver accompanied with Eruptions into the Skin. They were very many, and his whol Body, yea the inſide of his mouth ſeems to be but one continued Scab. His Eyes are very much ſwelled, and do ſtick out as it were: and at laſt his right Eye has quite loſt its ſight, and the ſight of his left Eye is become more dul, as if it were troubled with a ſuffuſion. This dulneſs ſeems to depend upon ſome obſtruction of the Optick Nerve, ſome ſuffuſion which is yet but weak, being joyned thereto. Somtimes his Ear did run with a Sanious and quittoriſh matter, and the paſſage of an Humor from the Ears to the Nerves of the Eyes is eaſie.

The Obſtruction hints the uſe of opening, and deobſtructive medicines.

If there be a ſuffuſion; the Humor which is gathering or gathered in the Cornea Tunica, or Chryſtalline Humor, muſt be diſſolved and diſcuſſed.

For prevention, the Remedies are, Diet, Vacuation, Diverſion, ſtrengthening the parts affected.

After

After meales let him take a pouder of Coriander comfits, ſugar of Roſes, Pearls, and a little Cinnamon.

Take *Seeds of annis, fennel, cinnamon, each one dram. Coriander ſeeds prepared two ounces. Sugar of Roſes half a pound. Eye-bright two drams. Make all into a pouder.*

In the morning when he riſes let him take of this following pouder.

Take *Seeds of Fennel, annis, and eye-bright, each one dram. Cinnamon two ſcruples. Nutmeg, Maſtick, each half a dram. Sugar three ounces. Make a pouder to be uſed by it ſelf, or with fennel water.*

He muſt uſe often rather than ſtrong medicines, becauſe of his tender age.

Apophlegmatiſmes are good for him, but not Errhines; and grains of maſtick ſhut up in raiſons of the Sun.

Smal pils of rhubarb and agarick are commended.

When the ſpring approaches, make a ſyrup thereof adding Head and Eye ſimples.

To apply a Cauſtick to his left Arme wil be good and to the hindermoſt part of his head.

Manardus advites a third iſſue in the confines of the formoſt ſutures, made with an actual Cautery of gold or iron.

For the ſtoppage of the optick nerve and dimneſs of ſight, nothing is better than a Lie of the aſhes of vine branches, wherein cephalick herbs and ſenna have been ſteeped.

Theſe things ſtrengthen the brain and Eyes, viz. Myrobalans chebulan preſerved, eaten in the morning, and the ſtones held in the mouth, Nutmeg, Comfits of Fennel-ſeed, Eye-bright frequently chewed, Fennel-ſeed ſteeped in Vinegar and then dryed. Ad Cinnamon and ſugar, and a very uſeful pouder may be made of the ſaid ſimples. The ſight of green things, eſpecially the ſmaragd ſtone, Blew colour refreſhes the wearyed eye. Contrariwiſe, the eyes are hurt by ſuffering, New-wine, Beans and peale, and ſuch like, Coleworts, Raddiſh, Garlick, Leeks, and other ſuch things, Great fiſhes, the ſight of bright things ſwiftly moved. Some youth with a ſweet breath having wel waſht his mouth in water wherein fennel ſeed and nutmeg have been ſteeped an hour, muſt breath into the Lads eye. Alſo he may lick his Eye, having firſt chewed ſeeds of fennel or eye-bright.

The Gals of Beaſts are commended, eſpecially of fiſhes, & principally of a skat or thorn-back: of land fourfooted beaſts, the gals of Lambs, Swine, and Kids which are not paſt ſucking.

Fomentations are not much approved, becauſe they draw more humors than they digeſt, unleſs both the body and brain, be firſt diligently purged. In ſuffuſions not yet inveterate, this water does wonders.

Take *Juice of Fennel half a pound; juyce of clary and celondine, each an ounce. Green eye-bright two handfuls. Vervaine, Marjoram, each one handful. Syrup of roſes four ounces. The beſt honey half a pound, Tutty prepared, Lignum aloes, each two drams.*

Put al into an alembick, and ſtil them with a ſlow fire; with the water waſh the eye, and drop a little gently thereinto. And though his age be very tender: yet the decoction of guajacum cannot but be good in a very weake decoction, with Liquoris, raiſons, and fennel ſeed.

This counſel was given by *Tagaultius, Sylvius, Alkakia and Flexellius*, Famous Phyſitians, when *Fernelius* was living.

Six Counsels of *Simon Petreus*, a most renowned Physitian of *Paris*.

The first Counsel.

To Cause easie deliverance of a Woman in Labour.

IT is hard to judge of the causes of that good womans difficult labour, concerning whom you write to me. For besides that the causes of hard labor are sometimes manifest, as the over largeness of the Child, and the narrowness of the wombs neck, and the weakness both of the child and Mother: they are sometimes so hidden and obscure, that the best Physitian cannot find them out. And sometimes it happens through a peculiar nature of the womb, that the child is not therein rightly situate, though the woman hath not transgressed in external things, as to straitlacing of her self, violent motion of mind or body and such like. And when I seriously meditate of the causes of that same hard labour wherewith this gentlewoman is troubled, I find it to be a peculiar nature of her womb, whence it comes to pass, that when by the mixture of both seeds the child is shaped, it comes to have a depraved situation. For your letters to me do not mention any external or internal manifest causes, which might bring this hard labour; unless peradventure we should blame the weakness of the child, whereby it is not able to assist the labours of the mother to bring it forth. And there is, truly, some reason to conjecture the weakness thereof: seeing you signifie in your letters, that her womb settles downwards, now when she is gone but four months and an half, at which time the child is not so great as to be a burthen to her. But whence this weakness of the Child should arise, I cannot easily judge, not being by you acquainted with the manners or course of life of this good gentlewoman, whereof when you shal certifie me, I shal send you more certain advice touching this business. The premises considered I conceive this gentlewoman should be advised to use such remedies as may strengthen her womb, and hinder it from settling downwards. To which purpose it wil be good to apply *Emplastrum pro Matrice* to her loines.

Moreover her belly must be borne up, and her womb strengthened by convenient swath bands fitly and duly applyed by skilful Midwives. And that the womb may bear upwards, she must use cordial lozenges, with ambar greece, Civit, bistort rootes and coral in them. Also tie about her neck a nodule which may touch her stomach, made of pouder of sanders, saffron, ambergreece, & civit, by the pleasing vapor whereof the womb may be allured upwards. And when the womb shal be stronger, and not settle so much downwards, I do very much approve the Expression of two drams of choice rhubarb, infused in rosewater, adding half an ounce of sugar of roses; which she may repeate once or twice, if she find good by it, especially in her fift and sixt months. Touching blood-letting I cannot certainly tel what to advise, her womb being so weak, and falling so much downwards. Yet if there appear the signs of blood abounding, you may take away two smal poringers. As to the latter end of your letter, wherein you desire of me such remedies as may cause easie Labor, then when nature shal set her self to exclude the Child. I have alwaies judged that emollient clysters are of great force; and then certain Liniments and softening oyls, to noint her belly and loyns. To the same intent, a syrup made of Cinnamon, Saffron, and pouder of date-stones, with trochisks of mirrh is very effectual. *Galen* commends Castorium in this case, which is able to bring away the dead child. The Ancients have commended the stone Æetites, or Ægle stone, to facilitate womens labours, being applied to their thigh; and to hinder abortion, being applyed above the Navil.

The

The ſecond Counſel.

Of Mother-fits, to a Phyſitian called Gravellanus.

I Received your letter (Moſt Learned *Gravellanus*) whereby you have acquainted me with a moſt grievous Symptom, wherewith your brothers wife is vexed, viz. Suffocation of the womb, whereof your ſelf, this preſent month of *January*, have been an obſervant Eye-witneſs, after which a trembling of her head, and ſomthing like the falling ſickneſs did follow. Which Diſeaſe, though you have adminiſtred fitting remedies, has not yet quite left her, but is wont to trouble her by fits at uncertain diſtances of time. Now you conceive the original of this diſeaſe, is to be referred to her womb, in the cavity whereof, ſome portion of corrupt ſeed being retained, does ſend ugly vapours into the uper parts, wch according to the variety of parts by them afflicted, are wont to cauſe various ſymptomes. For when through the arteries they ruſh into the Heart and Lungs, they cauſe ceaſing of the pulſe, and of reſpiration; if they poſſeſs the Coates of the brain, they cauſe convulſions, ſuch as you have ſeen in this patient. I approve of this judgment of yours, touching this grievous ſymptom; but I conceive withal, that the depraved quality of melancholly juyce wherewith ſhe abounds, is a concomitant Cauſe. For her womb and ſpleen are confederate to do her miſchief. And therefore if you would cure her, you muſt bend your Care to both thoſe parts. And in my former Letter, I briefly ſhewed how to correct and tame the malignity of the Melancholly juyce: I ſhal now only ſet down what may tend to free her womb from this ſymprom. And therefore as oft as this fit ſhal ſeize upon her, repeat thoſe remedies which you have uſed, and then apply Cupping-glaſſes to her thighs. Let the midwife put her hand anoynted with butter and a little civit into the neck of her womb, and rub the ſame, that it being provoked by that titillation, may caſt forth the corrupt ſeed: this is the advice of *Matthæus de gradibus*, a good Author. Moreover, lay to her navil a plaiſter of Treacle and Methridate, with a little civit. Give her ſharp clyſters made of ſimples reſpecting the womb. Open the ſaphæna vein after her feet have been waſhed in an hot decoction.

And when this paroxyſme or fit is over, that it may not come again, her whol body muſt be cured by purgation, and ſuch remedies as I have deſcribed as prevalent againſt the melancholly juyce. Sweet ſmelling things muſt be conveyed into the Neck of her womb, eſpecially in the fit, which may provoke the womb to expel the ſeed; nor muſt cordials to recreate her ſpirits be forgotten or neglected.

I do very much approve of bathe to ſit in, made of ſoftening ſeeds and herbs, and ſuch as reſpect the womb; that the paſſages thereof may be drawn back.

Theſe are the things (friend *Gravellanus*) which I conceive fit to drive away this ſymptom. If any new accident ſhal happen, as ſoon as you acquaint me therewith, I ſhal write to you again.

The third Counſel.

Concerning Hypochondriacal Melancholy, to a certain Phyſitian.

THis honored Gentleman, of whoſe Nature, and ſundry ſymptomes, wherewith he is wont to be tormented, you have accurately written to me; ſeems to me troubled with hypochondriacal melancholly, which I conceive is quartered not only in his Hypochondria, but in his veins in general. And it is to be feared, leaſt that at laſt, it turne to a more grievous ſort of Melancholly, of which he had ſome rudiments, about twenty years ſince, as I am informed by you. I conceive the cauſe of this rooted diſeaſe to be not only an hot diſtemper, but a certain cachexy or evil habit of his Liver, whereby out of meats of good juyce, it breeds bad, cholerick and melancholick humors, by which hypochondriacal melancholy is fomented, and thoſe ſymptoms raiſed, whereof he complains, as that inward bone-pain of his whol body, but eſpecially of his legs, which after his firſt ſleep, he perceives to be extreamly cold unleſs peradventure, wheyih tumors from his head where they abound, do flow into his legs, and cauſe that ſenſe of coldneſs. The premiſes conſidered, and the whol Order of his body (as

you

you wil judg) being weakened by this Contagion: he must at the beginning of the spring be diligently plied with those kind of remedies which are by you described, avoiding strong and drying medicaments. Let him therefore frequently use two kinds of clysters, the one of which must be purging of an emollient and carminative decoction, wherein diacatholicon may be dissolved. The other must be fatty and oyly to moisten and slipper his gutts, without any purgative in it. Then let him take Diacatholicon and pulp of cassia, each half an ounce. And when with this medicament his stomach is wel purged: make Apozems of a decoction of simples proper to the spleen and liver, with violets and hops. And when he has used the said decoction for four or five dayes together, after eight days the weather being temperate, give him two drams of Rhubarbs infusion, with an ounce of syrup of violets. Concerning blood-letting, this is my judgment: I do not approve thereof, in this very leane and thin habit of body, nor at this season. But if in *April*, his urines argue any inward heat, then it wil be seasonable to let him blood, provided you take away but one smal Chyrurgeons porrenger.

After his body has been prepared by these remedies and wel purged, the use of Asses milk wil be good for him, observing such rules as a Skilful Physitian ought to observe. In the use whereof he must so long continue, til he find himself holpen thereby. And when he shal begin to loathe the same, give him then cooling broaths, made of Veale or Chicken. And when the Aire is temperate, and in the summer time, I very much allow your judgment, touching the frequent use of fresh water bathes, provided that sweat be not thereby caused. Nor must he omit the use of syrup of sweet apples, Bugloss, and Borrage, which he must use this Summer if his stomach wil beare them; as also the syrup of Apples of King *Sapor*, may be prescribed when the weather is temperate. And because there is evermore joined with the melancholy juice a malignant quality, which bears a deadly feud to the vital spirit and noble parts of our body, they must be armed against the same with cordial lozenges and electuaries, in the prescription whereof, you must have respect to the stomach, which seems in this patient very weak, and distended with many winds, for the dissipation whereof you shal prescribe some convenient pouder for him to take after meales, such as is that vulgarly used, made of common dredge pouder, with coral, roasted bread, and Sugar of roses. Let his diet be of good juice, such as can hardly be used in this time of Lent, unless he eate eggs soft boyled, and pikes with other fishes that haunt stone places of Rivers. When Lent is over, he may freely use such meats as are fit to breed good juice. As for the cold which he feels a nights, after his first sleep he wil easily avoid the same, if he shal cause two large stone bottles to be filled with boyling water and wrapped up in linnen cloaths, and laid at his feet in the bed. For by this means, the heat wil come into his legs and dissipate the cold. And if this remedy shal not turne the cold, a liniment may be made of hogs grease, washed in Sage water, and mixed with oleum Irinum and aqua vitæ, wherewith his legs must be anointed and covered with cotton wool.

The fourth Counsel.

Concerning a Flux of Rhume into the Lungs.

BY the relation of a most skilful Physitian, I understand that a gentlewoman of about six and thirty yeares old, who has bore many children, has this three yeares been troubled with a fluxion of Rheume into her Lungs, which causes her to cough, and is like sometimes to choak her, especially then when her courses begin to flow; which fluxion, though it have continued long, yet there appeare as yet no signs of her Lungs being corrupted, especially seeing she is not at al fallen away in her body, nor is there any appearance of a Feaver, nor is the strength of the natural faculty wanting in digestion and other actions thereof. But it is now to be feared, lest humor putrifying, or becoming more sharp, should exulcerate the Lungs. And that is most of al troublesom, that she feels a perpetual coldness in her head, of which she vehemently complains. For to stop this defluxion, most learned physitians have appointed very many medicaments; whereby they have provided both for the health of her whol body, as also of the parts affected, her head and Lungs; howbeit there is as yet no good done, the same symptomes continuing, which did before trouble her: and therefore she desires remedies from me, to stop that old defluxion of Rheum into her Lungs, and to free her from these inconveniencies, she is subject unto. Which that I may do it more conveniently, we must consider

the

the cauſe thereof, that the ſame being known, may by convenient remedies be oppoſed. I conceive the principal cauſe thereof to be a cold and moiſt diſtemper of the brain, which as wel from the reliques of its aliment, as from the vapors ariſing out of the parts beneath into the head, does breed many wheyiſh humors, which by the ſtrength of the Brain, are driven out into the Lungs. This cauſe is peradventure aſſiſted by a diſtemper of the Liver being ſomwhat over hot, eſpecially in a body not enjoying the benefit of tranſpiration, ſuch as is the body of a very fat woman. And ſeeing the Lungs have along time received this defluxion, they are now thereby filled, and ſo a period-holding tiſlick is cauſed by fits, which come at uncertain diſtances of time. And that I may give advice for the old infirmity, al our endeavor ought I conceive to aim, that in the firſt place, the humor collected in the head may be hindred from falling into the Lungs; and ſecondly, that what is already collected in the Lungs, may by convenient remedies be wel brought up by coughing and ſpitting. Both theſe intentions may be performed, if her whol body be purged this fal of the Leafe with ſuch pils as are good for the Head, viz. Aggregative pils, and ſine quibus, agrick being added to them: which let her take twice a month, after her firſt ſleep. But before the uſe of the pils, her body muſt be purged with a decoction, of Sena, made in a pectoral decoction wherein agrick and rhubarb muſt be infuſed, and an ounce of ſyrup of roſes added to the ſtrained liquor. To theſe may be added the frequent uſe of clyſters; and her body being purged open the baſilica veine of her right Arm, and take away two ſmal porringers of blood. Let her head which ſends the defluxion into her Lungs be cured with a cephalick fomentation, made of a Lie of Vine branches, wherein orice root of Florence, calamus aromoticus, Schenanth, betony, marjoram, ſage, with Senna leaves have been boyled, adding at the end of the decoction a fourth part of red wine. With this her head muſt be fomented, in the morning, for the ſpace of an hour, and then being dried it muſt be anointed with Nard oyl and chymical oyl of Turpentine, with a little Aqua vitæ, a long time together, laying cotton wool thereon, filled with pouder of Florentine orice, Marjoram, and Sage. Which if it do no good, and the coldneſs continue, provide her a plaiſter de Betonica of the larger compoſition, adding thereto Benjamin, Storax, pitch, and hot cephalick pouders, as of orice root, Cypreſs root, Marjoram, with a little Turpentine, to lay to her head, the hair being firſt ſhaven off. From theſe we muſt come to cauteries, which muſt be applyed to the top of her head, avoiding the ſutures. Let her in the winter continue her Cucufa and head coverings, which have been ordered by faithful Phyſicians. Let her noſtrils continue open; and if they hap to be ſtopped, ſhe muſt firſt uſe light Errhines or noſe-liquors, then more ſtrong ones, which are to be refuſed in this ſort of diſeaſe.

To ſtrengthen her head, make an opiate, of conſerve of roſemary flowers, treacle, mithridate, preſerved citron-pills, preſerved Nutmegs; mixt with conſerve of Colts-foot, and borrage, and al made up with ſyrup of ſtæchados into the forme of an Electuary.

And her Lungs in whoſe windpipes very much flegm is contained, muſt be cured with pectoral or cough decoctions, made of the roots of Elecampane, Florentine orice, dragon, with betony, Hyſſop, Savory, and other Cough medicaments invented by skilful Phyſicians.

Alſo a Lohock ſhal be provided of the root of Arum or Cucko-pintle, and of Dragon roaſted under the embers, whereunto being beaten, the pulpe of ſebeſtens, jujubes, raiſons of the Sun, with Diatragacanthum frigidum muſt be mixed, al being made up into a Lick-por, with ſyrup of Maiden-haire, which let her frequently take from a liquoris ſtick. The pouder of Fox lungs may be added thereto. It wil alſo be good for her with open mouth to ſuck in the ſteame of a pectoral decoction. The Other formes of cough-medicaments preſcribed by her very learned Phyſicians, I exceedingly approve of.

The fift Counſel.

Touching an Impoſtume in the kidney.

BLoody Urines coming away with certain ſcrapings or ſmal fragments, do ſhew that this good woman is diſeaſed in her kidney, of the pain whereof ſhe complains in her Loins; ſo that I much feare an Impoſtume in her kidney, eſpecially ſince ſhe has voided Flegmatick urines, or rather ſuch as have a ſhew of quittor in them, the whol body disburthening it ſelf into

into the weak kidny. Which mischeif, unless timely prevented, 'tis to be feared, least it bring her at last into a consumption. Now the way to prevent the same, is to give her frequently emolient clysters, and then boles of the pulpe of Cassia fistula, sometimes alone, and sometimes with rhubarb. Afterwards, when the hot weather shal be abated, open the basilica veine of her Arme on the pained side. And when by these remedies her whol body shal be provided for; we must then think of clensing and strengthening her kidneys. To clense her kidneyes, in the first place almond milk made with barly and liquoris wil be good, and after that the use of the hydromel made with a large proportion of water, when the wether shal be temperate; an opiate of conserve of violets and roses, with Electuarium diatragacanthum fridgidum, pine apple kernels hulled and steeped in rose water, al made up with syrup of Marsh mallows. To the same intent broaths are good, made of cooling herbs, as lettruce, porslane, violet leaves, Marsh-mallows; also barley broaths taken in the morning. The last shal be Asses milk, which she must use a month or two in the morning, sweetned with Sugar of roses. Her kidneyes being scoured she must use the Trochischi Gordonij with diatragacanthum frigidum, dissolved in hydromel. Her kidneys must be strengthened with unguentum rosatum. In September, when the aire is temperate, let her use a decoction of China with raisons and liquoris, that the humors which flow from her whol body into her troubled kidney, may take their course another way. The course of life and diet prescribed by her learned and skilful physitian must be diligently observed by her. In mentioning the Remedies to clense her kidney, I have overpassed the use of Venice Turpentine, which wonderfully helps to scoure the kidneys, being taken with diatragacanthum fridgidum.

The sixt Counsel.

Touching swellings which had the apperance of Cancerous Wenns.

SEEing these two tumors, which appeare at the brink of her left Arme-pit, have the shew of certain Cancerous Wenns, as you have informed me by your Letters, I conceive you ought to deal very gently with them; nor must you use strong softners or digesters, least they grow worse, but gentle ones, such as is an ointment made of a little diacalciteos dissolved in juice of Plantane and Nightshade, al beaten together in a leaden morter. Nor must you desist from that medicine til you see what good it can do.

Howbeit the use of external remedies wil be then more convenient, when you have provided for the good condition of the whol body of this ingenuous damosel, which because it is tender and dry, as I understand by her Father, it must be gently handled. And therefore it must be purged with Cassia Fistula, Diacatholicon, or King *Sapors* syrup newly made, half the Saffron being left out. Which let her take twice or thrice in a month, with whey wherein Epithymum and fumitory have been infused. And because her nature seems inclined to breed melancholick juice, even of the best meats, through fault of her Livers distemper: we must fight against that juice with a syrup made of juice of buglos, Borage, Baume, Endive, sweet prunes, whereof let her take amornings with boyled water. To the same intent Asses milk wil be good, which let her use every morning with a little sugar. At the approach of spring and Fal, her body being purged, let her left basilica or median veine be opened, and take two smal porringers of blood. Finally, make an Issue in her left Arme, neare the muscle Deltois. This summer time let her frequently use a bathe of sweet fresh water, to correct the drines of her body. Moreover let an opiate be made for her of Conserve of violets, Lillies, Roses, Buglos, Borrage, Citron peel, Confectio alkermes, that by the use thereof the malignant force of the melancholy juice may be amended and the patients natural strength restored.

Let al her diet and course of life tend to moistnes, and moderately to cool; refusing al meats that breed melancholick juice.

Let her use ptisan instead of wine, or a decoction of corriander with Raisons. And when the heat of the weather shal be more remits, you shal order her wine wel allaid with water, which in this extremity of summers heat I do not allow.

These Counsels, being the Reliques and Monuments of my Father, I have gathered together

and

and treasured up very religiously, and now (most learned Sir) I commit them to your Learning, Fidelity, and Prudence, that with some commendatory mention of him, they may be published unto the world: yet so that you give al men to understand, that they were written by a man much employed, rather for the private benefit of the sick, than to be transmitted to the Memory of Posterity. Farewel.

Your Friend, and most respective Disciple,

SIMON PIETRE.

The Counsel of a certain most Learned Physitian, touching divers infirmities of the Kidneys.

WE have communicated our minds one to another touching persons troubled with the stone, in our former letters; somwhat more briefly than to satisfie either of us. And I have promised that I wil briefly handle some certain heads or points, which though common, are far from vulgar.

They are far I say from vulgar, because I know not what for an opinion has gotten head touching the use of Diureticks and such like things, which *Hercules* himself is not able to pluck up by the Roots. Which work is so much the harder, because some principal Women, and who are highly esteemed by the common People, do Magnifie their Diuretick pouders and simples, and offer them to the Diseased freely of their own accord, so that it seems now to have the force of a Law. But as one excellently wel said, *They conceive witty, Rich and wealthy persons, and of aged experience, worthy to be beleeved and trusted, wherein peradventure they are mistaken: but the opinion of the vulgar people can hardly be changed, and thereunto they square al things; both those that judg, and those that follow their fancy.* Wherein consists a great Error, and of very large extent far and wide. But especially in this Disease the foresaid Error holds. Which nevertheless is a Disease of so great consequence, that 'tis reputed the Cross and torment of Men; and wherein many times the Industry of the Physitian languishing and becoming quite mute, we see in him rather a stupid blockishness, than the new invention of a profitable Remedy. And yet who does not profess the Art of driving out Gravel, and of wasting the stone. No old wife but has in her Desks and Boxes, stone-breaking and stone-forcing pouders. Yet there is nothing wherein the common people are more blind and Ignorant, and wherein the Industry of the Physitian grows cold. But if possible, let us become wiser than others. Now certain Heads there are to be by us debated. 1. Whether the vulgar use of Diureticks be safe or not? 2. What that same mevil and flegm is, which grows in the bladder of those troubled with the stone, and which they void? 3. Whether it be safe to scoure that flegm away by stone-breakers, or it be not better to let it alone? 4. Whether it is best to temper the sharpness of Urine or not, seeing Acrimonious Urine has certain faculties of its own; for it is of a scouring power? 5. We are to enquire what means that of *Hippocrates*, *apalunai cai Malacunai*, to make tender, and to soften? Whether it be not only intended before the use of Hellebore, to avoid Convulsions: and contrariwise whether it be not dangerous to soften and weaken the body of the Kidneys, with fomentations? 6. The last question is touching the consent of the Kidneys with the upper or lower parts: Why the left Kidneys do not so usually ake as the right? why there is not in like measure an equall Sympathy of the Kidneys with the upper as with the lower parts, seeing they lie in the middle of the Body? And first as touching the diureticks or Urine forcing Medicines. *Galen* confutes their opinion, who give hot and biting things promiscuously to all persons troubled with the stone. For the body is to be considered, and the matter it self, and the efficient cause. If the body be very fat, intemperate, given to Gluttony, a man must deal otherwise, than he would do, if his Patients body were lean, Cholerick, ful of hot and dry Heat. For a gross and fat

body, fasting, and the use of attenuating things is good: but to an hot and Cholerick person fasting is not good, nay it is dangerous, as causing more matter to be heaped up. And the use of Diureticks is very good in the others, but in these latter dangerous. And the same Author distinguishing Arthritick and Diuretick Medicaments; will have them to be Diureticks, which are of forcible heat and Acrimony, and they do dissolve, melt and separate. And both of them do the same thing to persons that have the stone as to persons Diseased in their Lungs, and therefore they are forbidden to them both. But in the Diseases of the Lungs, because while they melt and separate the serous or wheyish substance they render that which remains more stif and hard to be brought up. Secondly, when Milk provokers are distinguished from such things as move the Courses, the latter must be more biting and hotter, because the womb draws not to it self: contrariwise milk provokers ought to be less hot, because both blood of it self goes to the dugs and is drawn thither: and why then do we use things so hot and biting to purge the Kidneys, seeing they have a most strong attractive faculty? It is one thing to be absolutely Diuretick, another to have the power of moving Urin, another to have the power to wast and wear the stone, or to cut the matter. Such as cut stoney collections, though they cut, yet ought they not to be very hot. For too much heat contracts and renders the stone hard and compact by drying it, but does not cut the same, nor divide it. And therefore those things which dry not and moderately heat, do breed milk; such things as heat more, and dry not very much, provoke the Courses: and both provoke urin: as also such things as heat and dry: and they are termed Diureticks, not because they alone move Urins, but because they move nothing but Urins, neither Milk nor Courses. But sometimes Diureticks are to be used, other whiles Ureticks: and these latter when we would lenifie, moisten, and dissolve the body of the stone, but not to melt and dissolve it by taking away the thinner part, and rendring the thicker more stubborn and rebellious to work upon. For things that moisten and cool, and withal in some measure move Urine, because they correct the dryness, they remove the occasion of more contumacious concretion or growing together of the stony matter. The Author of the Book of Kidney diseases, who ever he were, wasts the stone with things of a luke warm temper. *For hot Urine-provokers harden the stone, but lukewarm things by little and little diminish the same, and make it not harder. For seeing the stone is gathered and compacted by over much heat, lukewarm things are good, as being contrary to those things which did breed the stone. But Diuretick and very hot things do make the stone harder. But when there is as yet no stone, or it is not great, yet obstruction is caused by gravel, and by thick and clammy Juyces, then you may safly administer hot things, and such as open obstructions.* Which is the Counsel of *Galen* when he explains those two words, *Leptunai*, and *Hapalunai*, to attenuate and to soften, so as *Leptunai* to attenuate is to be referred to the Humors, *Hapalunai* to soften, is to be referred to the solid Members. Although saies he we do not give Hellebore, it is good that the Humors be thin, and the body of the Kidneys soft, that the Humors may easily pass through them. *For the stone wil never begin to breed if a man shal have his Humors alwaies thin, and the body of his Kidneys soft.* And that I may couclude, it is one thing to consider, the sand it self and gravel to be voided, and Another to consider the stone, which either is made or in making. For the gravel and against obstructions, Diureticks, and things somwhat sharp, as the detergents or scourers wil be good: but for the stone in making, such as hinder its encrease, as scour away the adhering gravel, cut and attenuate the glue that sodders the stone. But for the stone already made, such things are good as soften and have a certain lukewarm faculty, especially that the sharp, biting, and dry heat may be tempered, which is the compacter and baker of the stone. If the Law of Contrariety is to be observed, a Physitian must oppose what is thick by such things as attenuate, what is hard by things that soften, what is clammy and tough, by things which divide and cut. Now openers and Diaphoreticks have mixt forces; for openers have a mixture of the powers of things which divide and make thin, and Diaphoretick of the powers of attenuaters, aperitives, and detergents; for so the waies being opened, and the humor attenuated, that wil be scoured off which was faulty, and forced into the Skin, to be driven out by sweat and exhalation. And now for that same snevil or Flegmatick matter which grows together in the bladders of such as are troubled with the stone, whence comes a Flegmatick snottie Urine. And Mſr. *Fernelius*, reckons, that such an Urine proceeds either from an Ulcer, or a stone contained in the bladder. It resembles starch

which

which women uſe about their Cloaths, or rather the mucilage drawn out of ſeeds infuſed in lukewarm water. 'Tis incredible what a deal of this mucilage is voided by one that has a ſtone in his bladder. Nor ceaſes it to breed in a bladder with a ſtone, til the ſtone be taken out. But when the ſtone is taken away, its no longer voided. The Cauſe whereof, is known to few, and requires more time and leiſure to ſpeake of. It is bred alſo in thoſe who have had a malignant gonorrhea, whence breeds the fleſhy knob in the pits-pipe. For while that which is thin is voided forth, and the thick ſettles to the bottom, and nature becauſe of its thickneſs and the ſtraitneſs of the paſſages cannot ſoften it; hence, ſometimes a ſtone is bred. Sometimes the Urine is ſtopped; Hence the whole bladder almoſt is ſometimes taken up, whiles it ſticks to the wals of the bladder and there encreaſes: hence the patients have a continual provocation to make water, and many are brought to their laſt end. The Queſtion is, whether it be ſafe to ſcour off and cleanſe away the foreſaid flegmatick ſnevel by the uſe of detergent or ſcouring medicaments? For in the firſt place according to *Hippocrates* it is as it were a glew whereby the gravel is combind and united into the forme of a ſtone. Moreover it ſuppreſſes the Urine; and thirdly it fils ſomtimes by its abundance, the whol bladder, whence neceſſarily death muſt follow.

Now ſometimes it is convenient to cleanſe the ſame away, and ſomtimes the ſnevil is ſerviceable to aſſwage the pain. For it daubs and covers the ſtone with its clammineſs, whence its roughneſs is made ſmooth, and cauſes leſs trouble. Alſo it blunts the ſharp corners of the ſtone, by daubing and clamming the ſame. And therefore it makes the patients life more ſweet and eaſeful. And haply (if my conjecture may find place) Nature by an inconſiderate and fortuitous prudence, doth ſuggeſt this ſlimy matter, that the ſtone may be made thereby leſs offenſive. Nor is there any need to ſcoure away this flegm and mucilage, which would otherwiſe mitigate the patients pains. For as long as it is not in ſo great quantity, as to fil the cavity of the bladder, ſo much profit comes thereby, that the ſtone being daubed therewith, becomes familiar to the bladder, and by that meanes much leſs pains doe happen in makeing water. As touching the urin, whether or no it ought to be lenified, and tempered, may be reaſonably queſtioned: for what need have we to ſeeke detergents and ſcourers from abroad, when we have an equivalent remedy at home. For the urine does purge, ſcour and waſh away. Yea and ſome ſtone-cutters after they have taken out the ſtone, doe judiciouſly forbeare to put any detergent and purging medicaments into the ulcer, becauſe the urine coming that way, doth by its cleanſing faculty ſupply their place. And when in perſons ſubject to the ſtone, the Urine is tempered to avoid pain, it loſes ſo much of its cleanſing faculty. But I leave this to the conſideration of others. 'Tis now time to come to the laſt Queſtions. Concerning the proper ſenſe of the words *Apalumai* and *Leptunein*, I have already ſpoke, occaſionally. *Hippocrates* ſeems to require a certain ſoftening of the kidneys when they are too hard, and an exact attenuation or thin making of the humors, but that principally becauſe he ſpeaks of an heleborate medicament, which is uſeful in young bodies and old diſeaſes, which cannot be ſtired without a Lever. Now this ſoftning of the more ſolid bodies, therefore procured, that the patient may not incur the hazard of ſuffocation, and that there may be no great occaſion of a convulſion. But *Galen* does more largely extend the ſenſe of thoſe words of *Hippocrates*. And though we uſe no hellebore, yet he thinkes the more ſollid body of the kidneys ought to be looſened and mollified. But in fomentations, bathing, and ſoftening, great caution muſt be uſed, for three inconveniencies follow. In the firſt place frequent fomentations effeminate the fleſh: alſo, by cauſing weakneſs, it weakens the expulſive facculty eſpecially, ſo that it cannot ſo wel quit it ſelf of what is moleſtful. Thirdly, though I grant there may be great occaſions to uſe theſe medicaments; yet when the body of the kidnies is made effeminate and ſoft, they become more apt to receive excrements from the whol body, whence a relaps is occaſioned. But the phyſitian muſt uſe ſuch care and providence, that when there is uſe of baths and fomentations, before he diſmiſs the patient, he may again ſtrengthen the parts, which have been for a time looſened, and ſoftened: leaſt (as *Galen* ſpeakes) they be brought to a rheumatick diſpoſition, which is nothing but a facility and proneneſs to receive excrements, flowing thereto from the whole body. But how far the uſe of theſe ſofteners muſt extend, it belongs to the prudent and diſcreet phyſitian to conſider. Moreover, the laſt queſtion, has a certain latitude. For the matter propounded, is the conſent of the kidnies, with the upper and lower parts. Why the left parts, when the left kidney is troubled, are more vexed, than the right parts are, when the right Kidney is diſeaſed? Whether the upper and lower parts do equally ſympathize with the

diseased kidney seeing it is seated in the middest betwixt both. And in the first place when parts are diseased, it is very good to know, whether they are affected of themselves, or by sympathy with some other parts. And *Hippocrates* did not impertinently at first admonish, that the differences of the pains in the sides or brest, and other parts was to be observed, as in some the parts behind the midrif and the shoulderblades are pained; in others the thigh is nummed; yea and in the same part, there is a difference of the paines, for one pain is dul, the other sharp, in which case the prudent consideration of the Physitian is desired. For the comon people and some unskilful physitians, do frequently by mistake attribute the cause of the pain to a catarrh, when it wholly belongs to the kidneyes, and al the cure is to be applyed to them. And therefore *Hippocrates*, an excellent Teacher, thus writes; *Those who being diseased in their kidnies, have paines about the muscles of their back-bone; if they arise about the external parts, expect an impostume outwards, &c.* Whereupon, the most learned *Arculanus*, among signes of an impostume in the kidnies, especially in the coates of the said kidnies, reckons a difficulty in bending of the back, a troublesome cough, and that the patient cannot easily stand or go upright. And yet many so affected, have been by physitians cured as if they were troubled with a Catarrhe, whereby they have lost al their labour. And amongst the rest diligent attention ought to be given to what *Hippocrates* writes, touching the sundry sorts of diseases which molest the kidneys. In explicating whereof, he writes that among other concomitant signs of diseases in the Kidneys, are pains in the brest and thighs. Yea verily many have been cured for the Pleurisie, whenas the cheif cause of the disease was the Kidney, either having a stone in it, or otherwise diseased. *Hippocrates* celebrates two humors as chief causes of kidney diseases, viz. flegm, and choller. And it is to be observed, that great care be had, least the greatnes of the kidney deceive us, especially such a greatnes as som long & hidden disease has caused. For a physitian is often thereby deceived, beleeving that it is a tumor in the spleen, and that those paines which arise often under the bastard ribs, are from the spleen, whereas they proceed wholly from the growth of the kidney. For dissection alone after the patients death declares, that which the Prudence of Physitians could not attain unto. And therefore in the same part there are sundry sorts of pain. In the Kidney an heavy pain, and two waies heavy; for that is truly heavy which carries with it a sence of heavyness, and *bareia odune*, an heavy pain, is *Oxeia*, a sharp pain. For both these paines happen. The truly heavy, if the stone lie in the substance of the Kidnies, also if the substance of the kidneys be inflamed. An acute paine, when other parts than the substance of the kidnes are pained, as the Coat incompassing the kidnies (and it may be pained by a stone contained in the substance of the kidnies by distention, in case the sollid substance of the Kidnies be distended) the inner cavity of the Kidney, the Veins and arteries which are terminated into the Cavity of the kidnies, and the originals of the Ureters. This is the true Judgment of *Galen* concerning the causes of pain in the kidnie. Concerning which three occasional questions may be asked. First, Whether the kidney may be inflamed, without inflamation of other parts? viz. The veins and Arteries, because he saies there is an heavy pain, that is with a sence of heavines joyned therto, when the substance of the kidnies is inflamed, which would not happen if the veines and arteries were inflamed: for the pain would then be accute or sharp. Secondly, Whether or no when the veins and Arteries are inflamed the pain is accute? For it seems not. Thirdly, Whether or no to make an acute pain, it be necessary that al the foresaid parts be affected together at one and the same time? viz. the inner cavity of the kidney, the mouth of the Ureters, the Veines, Arteries, and also the coat it self; or that they be affected severally? of which I shal dispute no more in this place, but leave this scruple in the minds of the readers. I come now to the nummedness.

There was long since a prime Physitian (as a mans reason and understanding is apt to mistake) who applyed remedies to one that had a numness in his leg, as fearing that he would fal into the palsie; until a more quick-sited Physitian, declared the numness to be no beginning of the palsie, but a signe of a disease in the kidney of the same side. And at last the truth was discovered. I see *Galen* and the Author of the book of kidny diseases, doe a little vary, for thus saies *Galen*. A numness is caused in the thigh by reason of the conjunction of the vessels resting upon the back, viz. The vena cava, and the great Artery with the Kidnies and the thighs: for they shoot very large into the Kidneys, but into the loines they are not inserted large. But those who conceive the kidneyes are coupled to the thighs by the Urinary passages, or membrains, or nerves, or the peritonæum, are unskilful in Anatomy.

This

This is the opinion of the other Author; when the ſtone is bred in the kidneys; that veine is affected which deſcends unto the thighs: for they are both from one branch of the vena cava, which nature has diſtributed to the lower parts. Now the vein which goes into the thighs being filled, the nerve or muſcle is compreſſed, whereupon the animal ſpirit does not paſs unto the thigh. Here mention is made of the Nerves, but in the other not. And one thing is to be noted, which the ſame Author obſerves, viz. That in the diſturbance cauſed by a ſtone in the kidney, one or other of the teſticles is drawn back, according as the right or left kidney is affected. And how that comes to paſs, they ſhew from Anatomy. It remaines that we reaſon about the ſubverſion of the ſtomach, and difficulty of breathing. The kidneys (ſaies he) are placed beſides the back-bone, behind the guts and ſtomach. Therefore a certain violent diſtention being made in the kidneys, by the mutuall ties, the diſeaſe paſſes to the guts and ſtomach, and thence the diſorder aſcending the ſtomach is made ſick. And how happens that ſame painful diſtention, ſeeing the kidneys by reaſon of their ſolidity are not ſtretched. For there is a certain contrary endeavor, when the veſſells are ſtretched, and the body of the kidneys by reaſon of their ſolidity does not give way. Alſo they conceive, that a certain ſhortneſs of breath ariſes, by reaſon of the midrif, which in its lower part is furniſht with the peritonæum, a coate which appertains unto the kidneys, and above with a membrane, which is ſtrecht out before the ribs. In that the midrif ſuffers with the kiddneys, being an Inſtrument of free breathing, it is a cauſe of ſhortneſs of breath. But certaine Anatomiſts (as nature ſports her ſelf with variety in ſeveral bodies) while they diligently follow the propagation of the nerves, have found a remarkable part of thoſe nerves ariſing from the ſixt pair, inſerted into the kidneys: which part paſſes through the middle of the Midrif, and reaches as far as to the Claviculæ or Chanel-bones. Hence ariſes difficulty of breathing, and a ſort of orthopnæa. Whereupon a perſon of quality being troubled with a diſeaſe in his kidneys and having withal the Orthopnæa, moſt men accuſed an hidden diſeaſe of his Lungs: others of more underſtanding, judged all came from his kidneyes, and that there was no fault in his Lungs. They let themſelves to cure his Kidneyes, and he recovered. And true is that ſaying of *Hippocrates* Touching moſt hard and un-apparent diſeaſes, opinion judges rather than Art. As for the conſent of upper and lower parts, let us hear only *Arculanous*: There are other ſymptomes when the right kidney is diſeaſed, others when the left. When the right is troubled the liver is affected and the upper parts rather than any others: if the left, the evil is communicated rather to the lower parts. Is this true? Do they differ in ſituation? Or are they equally placed betwixt the upper and lower parts? The Anatomiſts muſt reſolve us in this particular. I ſhall ſpeak of one thing by the way which ſome have obſerved. When there is a like cauſe of paine in both kidneys, more and greater troubles ariſe from the left kidney diſeaſed, than from the right, becauſe as they ſay, the gut colon where it touches the left kidney, is much narrower than where it touches the right kidney. Of which conſult Anatomy. And becauſe leſs ſerious and ſporting matters are ſomtimes to be joined to ſerious; that the leſs ſerious may ſomwhat lighten the labor taken to underſtand the more ſerious, I will alledg one thing from *Hippocrates*, which ſeems in ſome ſort to be reckoned among miracles. A certane Man named *Moſchus* was exceedingly given to breed ſtones; a little ſwelling broke out upon his upper eye-lid, which was the occaſion of the breaking away of his lower diſeaſes. From this place it ſeems the ſwelling which roſe on the eye-lid, a part far diſtant from the kidneys, did cure the man of the ſtone. Which is a kind of a monſtrous thing. One Interpreter refers the cauſe thereof to the Brain, from whence he draws a certain original of ſtones; becauſe the brain affords a cold matter, which is the cauſe of the ſtones growing and being congealed together. Which matter when it drives not downwards, it breeds ſomthing reſembling ſtones in the eyelids or other bordering parts. And he brings an example from his own Father: who being troubled with the ſtrangury and ſtone, cauſing himſelf to vomit, and diligently purging his brain, he was freed from thoſe troubles. I do not condemne the opinions of others: every mans judgment is his own, and free. And it is better to invent ſome reaſon or other, than paſs over an Authors text unexpounded. But I expect ſome others will give light to that obſcure place, with more accurate judgment. But to diſcourſe overlong and over accurately to an Artiſt, were to bring Owls too *Athens*, or Coals to *New-caſtle*, according to the Proverb. *Farewel.*

F I N I S.

OF THE FRENCH POX.

CHAP. I.

Of the Name and original of the Veneral Diſeaſe.

AMongſt contagious diſeaſes, next to the Peſtilence, and Leproſy of Arabians, the French Pox doth challenge the firſt place; but it is called by ſeveral names: the moſt common name is the French Pox, which was therefore impoſed, becauſe it firſt of al in Europe appeared amongſt the French. For in the yeare of our Lord 1493. and 1494. When *Charls* the Eighth, King of *France*, warred with King *Alphonſus* at *Naples*, this diſeaſe firſt appeared and began to rage in the Camps of the French, and therefore by the *Italians* was firſt of al named the French diſeaſe. For whereas *Antonius Benivenius de abdit. morb. cauſ. cap.* 1. relates that it happened in the year of our Lord 1496. that doubtleſs is thus to be underſtood, That now this diſeaſe did no longer contain it ſelf in *Italy*, but as he ſpeaks, had almoſt ſpread over al Europe, and began to diffuſe it ſelf abroad through the reſt of its provinces; for al other Authors agree in this, that this diſeaſe did firſt of al appeare at the foreſaid time in the French Camp at *Naples*, and there was called the French diſeaſe. But the French that they may remove this diſgrace from themſelves, and retort the injury upon the Italian, cal it the Italian, and Neapolitan diſeaſe, becauſe it was firſt known in *Italy* at *Naples*. Others becauſe it was brought by the Spaniards into the Fench Camp, cal it the Spaniſh diſeaſe, and others the Indian, for the writers of the Indies do report that in that part of *America*, whoſe longitude ends towards the North, and which they cal *Florida*, this diſeaſe many ages ago was epidemical; and they write that it did generally invade, and ſuddenly ſeize on many without any manifeſt cauſe, without contagion, and eſpecially if any one had copularion with a woman in the time of her Courſes. *Fracaſtorius* cals it Syphilis, ſome the gout of the privities, ſome the great Pox, becauſe puſtles and ſwellings do every where break forth like thoſe of the ſmal Pox. Moſt men now adays without any injury or diſgrace to any Nation, do cal it the Veneral diſeaſe, becauſe it is chiefly contracted by a contagion from Venery, and lying with unwholſome bodies.

The Names of the french diſeaſe.

The French Diſeaſe.
The Italian.
The Neapolitan.
The Spaniſh
The Indian.

Syphilis.
Pudendagra.
The great Pox.

But Authors are wont here to make this Quærie, Whether that diſeaſe ſprung up at *Naples* about the yeare 1494. were a new diſeaſe, or whether it were known to the Ancients? *Franciſcus Valleſius.* 1. *Epidem. com.* 1. And *Hieron Ruſnerus de Scorbuto exercit.* 1. and the ſome other moderns, are of opinion this diſeaſe was unknown to the ancients, and they think that *Hippocrates* did not ſhadow it

The Veneral Diſeaſe: Whether it be a new Diſeaſe.

 out

out by his pencil, but ſet it forth to the life in 3 Epid. Sect. 3. (they are the words of *Reuſner*) whenas he reckons up there divers ſymptomes, which are ſeen in the veneral diſeaſe; as impoſthumations and ſuppurations of the fleſh, the lying bare of the nerves and bones, and great fallings forth, fluxions collected not like unto matter, but far worſe, a baldneſs of the head and chin, with and without a Feaver, St. Anthonies fire with ſmal Ulcers and inflamation, filthy and putrid fluxes, pains of the limbs, ſwellings about the jaws, inflamations of the tongue, impoſtumations, about the teeth, ſtammering, corrupt, and perplext ſpeech, enterings into conſumptions, burning Feavers, and which is worſt of al, ulcers about the pubes and privities.

But *Hippocrates* in that place never ſo much as dream'd of the Veneral diſeaſe, but deſcribes a moſt grievous peſtilence, according to the judgment of *Galen* and al interpreters, and the evidence of the Hiſtory it ſelf witneſſing the ſame. For that diſeaſe for the moſt part invaded with a Feaver, which is not ſo in the Veneral diſeaſe and was epidemical, whenas the Veneral diſeaſe is diſſeminated only by contagion, and no other way, and the method of curing that diſeaſe was far different from the cure of the veneral.

Dodoneus alſo hath obſerv'd upon the alleaged place of *Benivenius*, that a long time agoe ſome men have contracted ſome hurts from uncleane and filthy women, as *Guilielmus Saliceus*, *Gordonius*, and *Valleſcus de Taranta*, do teſtify, the laſt of which lived in the year 1418. but *Saliceus* flouriſht in the yeare 1270. *Gordonius* in the time between them both. Nay holy writ doth teſteſy that he that followeth harlots, ſhal have wormes and moths for his reward: but I do not think that thoſe diſeaſes were the ſame with the Veneral diſeaſe of this time which firſt of al appeared at the aforeſaid time in *Italy* in the Camp of the French. Therefore though *Paracelſus*, *lib. de tumorib. et ulcer. morb. Gal. cap.* 3. Writes that this hapned in the yeare 1478. and *lib.* 1. *de cauſa luis Gal. cap.* 3. In the yeare 1480. yet he differs from the relations of al others, ſince al agree in this, that this diſeaſe was not known in Europe, before the yeare of our Lord 1493. although it were endemious in the weſt *Indies* a long while before, and was brought by the Spaniards out of *India* into *Italy*. For when *Chriſtopher Columbus* in the yeare 1492. in the month of *September* undertook his firſt voyage into the weſt Indies, and ſpent almoſt two years in that expedition, he returned into *Spain* in the yeare 1494. whoſe Souldiers being infected with that diſeaſe in *India*, and afterwards ſerving in the *Italian* expedition, did ſow amongſt them this diſeaſe. For as *Gabriel Falopius* writes of this buſineſs *de morb. Gal. lib.* 1. (Who reports his Father was in that warre) whenas the Spaniards by reaſon of the dearenes of proviſin did drive out the unſerviceable multitude, the French did privately entertain their harlots, being allured by their beauty, and ſo infected with their contagion contracted this diſeaſe, which afterwards was firſt of al ſpred through their camps, & hence throughout Europe.

The Original of the Veneral diſeaſe.

Yet in ſome Countries it hath and doth yet ſpred more frequently, in others 'tis more rare, to enquire into the cauſe whereof, it being a thing hateful we ſhal forbeare; yet this I think is certain, that there are fewer ſick of this diſeaſe in *Germany*, than in ſome other Countries. *Gabriel Fallopius* makes mention *de morb. Gal. cap.* 76. Of *Jacob Carpus*, who was the firſt almoſt that uſed the way of cure by unction of Quickſilver, who by this cure alone grew ſo rich, that he left beſides Silver, 40000. Golden * Scutatoes. And *Capivaccius* reports in *tract: de lue Vener. cap.* 12. In fine, that he hath gotten by the cure of the French Pox only above 18000 Crowns of Gold. And *L. Septal. l.* 7. *animad: n.* 186. writes that at *Millaine* in *Brolius Hoſpital*, there is oftentimes cured ſeventy in the ſpring only, and at other ſeaſons alwaies two hundred. But I confeſs ingeniouſly, that within theſe 34 yeares which I have practiſed at *Witeberge*, and by Gods bleſſing I do it not without profit, that I have not gained by the cure of this diſeaſe ſo many crowns,

* *A Coin.*

Crownes, as *Capivaccius* hath got thouſands of them, by reaſon of the fewneſs of them that are ſick of this diſeaſe in this place.

Yet others differ concerning its original, and think that this diſeaſe was not only diſſeminated by contagion from the Spaniards, but think it was contracted by the fault of the Ayr, as epidemick diſeaſes are; when as many every where in diverſe countries began to be ſick of this diſeaſe without any contagion; of which hereafter.

Chap. II.

A Hiſtory of the Veneral Diſeaſe.

BUt concerning the original of this diſeaſe we ſhal ſpeak more hereafter when we ſhal treat of its cauſes: now let us enquire into its nature, which that it may ſucceed more happily, and that it may appeare, where lyes the controverſy, I wil firſt propound its deſcription and hiſtory out of creditable Authors which then lived eſpecially *Hieron Fracaſtorius*, and *Anton. Benivenius*. When this diſeaſe was firſt made known, there roſe puſtles of divers kinds in the genital parts, ſomtimes alſo the head, principally in the hairy part, ſomtimes alſo the forehead, neck, breaſt, duggs, armes, and other parts, and from thence did ſpred over the whol body, in ſome indeed they were flat and low, but rough on their ſurface, when the ſcales were fallen off, of a color ſomwhat red, and the fleſh under them appeared callous; in others they were like to warts, of a round figure, which grew to the magnitude of an acorn cuppe whoſe figure alſo they reſembled, and from theſe the lighter ſcales falling off did hang forth a more ruddy fleſh, from wch did flow forth a virulent ichor and of a ſtrong ſmel; but ſome were taken with larger puſtles, which did not ſwel above the skin, which had thicker ſcales, from which alſo did flow a more plentiful virulent matter, and the ſcales being caſt, the fleſh appeared more dark and ſomwhat livid. Some having white ſcales taken off, there remained ſomwhat like unto a skar, from which blood ſometimes flowing, did ſhew the difficulty of the cure, and it repreſented the likeneſs of a dry ſcabb, a diſeaſe worſe than al the reſt. For though it did corrode leſs, yet for ſpreading it was worſe than the reſt, and was diffuſed into divers places. Beſides thoſe external puſtles there did riſe others in internal places, as in the mouth, jawes, noſe, and the obſcene parts, which turned to malignant and creeping ulcers which eat away the parts under them, and in ſome eat up the Noſe, in others the lipps, in others conſumed the Uvula, and perforated the palate, which cauſed their voice to be hoarſe; neither did this evil ſpare the bones, but cauſed rottenneſs in them, whence ſome had their skul, others other bones ful of holes. Neither did thoſe puſtles and ſigns of the diſeaſe appear only in the external parts obvious to the eye, but it was obſerved in ſome, that thoſe puſtles & filthy ulcers had poſſeſt their very bowels. They that had this evil about their upper parts, had vitious diſtillations, which did ſomtimes eat their palate, ſomtimes the jaws and tonſills, in ſome their noſe, and in others their eyes. Furthermore for the moſt part certain gummoſities grew on their limbs in great deformity. For oftentimes they were prominent the bigneſs of an egg, oftentimes the ſize of a Loaſe, which being opened, there appeared a white mucilaginous mucous: that tenacious callus, happened moſt of al in the Arms and Thighs, in ſome it was exulcerated, ſomtimes it continued whole until their death. There came alſo cruel pains with exceeding torment, which were exaſperated towards night: but thoſe pains did ſhew themſelves about that part of the bones where is no fleſh in the Leggs, ſhoulder-blade, about the collar-bone, in the ſhoulders, head, about the forehead and temples, ſomtimes alſo in the breaſt bone, but not in the very joints, but about the muſcles and nerves. In which caſe notwithſtanding there was great variety. For ſome had pains without puſtles, ſome puſtles without pain, the greateſt part was affected with both, and truly thoſe pains ſomtimes went before the puſtles,

ſomtimes followed, and ſometimes roſe together with them: in the interim al parts languiſhed, the body pined away, the appetite was dejected, watchings, ſadneſs, and continual anger, and deſire of repoſe poſſeſt them; ſometimes a ſmal Feavor accompanied them, but ſeldome: their blood, if a Vein were opened, was mucous, and corrupt, their urine thick, fat, and ſomwhat red without a Feavor, they went hardly to ſtool, and the excrements were mucous and dry. The ſhedding of the Hair is frequent in this Diſeaſe, eſpecially in the Head, about the Temples, and the hinder part, alſo of the eybrows, and of the Beard in men; oftentimes alſo Buboes break forth in the groin, therefore called Veneral and Gallical, which ſometimes vaniſh again, ſomtimes grow hard, ſomtimes ſuppurate; there riſe alſo in the privities of Women knobs, and in men in their Arſe-hole, beſides ſomtimes there happen chops and cleſts in the hands and feet, and the thick Skin in the palme of the hands departs from the skin under it; ſometimes alſo the nails fal off: At laſt there happens ſometimes, that in men a virulent matter flowes through their yard, in women through their privities, which flux of virulent matter is commonly called the Gallical or virulent running of the reins, although indeed it is not ſeed, by which flux of the yard, the inward paſſage is exulcerated, and certain caruncles do grow in the urinary paſſage, whence they piſſe hot, and there is cauſed a dropping of the urine with pain. And this was the face of that diſeaſe at its firſt riſe, wch as *Hieron Fracaſtorius* relates, ſince that time ſeems to be alered. For almoſt twenty yeares after its original there began to appear fewer puſtles, but more gumoſeties, and the puſtles became dryer, and the paines more cruel. Six yeares after again there was another change, for now there were very few puſtles ſeen, and almoſt no pains, or much gentler, but many gumoſeties, and which ſeemed wonderful in al, the ſhedding of the haire made men almoſt ridiculous, ſome appearing without beard, ſome without hair on their eyebrowes, others with bald pates, from which change *Fracaſtorius* had good hopes, and did think that the old age of this diſeaſe was now entring, and that ere long it would come to paſs, that it could not propigate it ſelf by contagion, becauſe the matter grew dayly thicker, in which both fewer, and weaker ſeminaries are produced: but his hopes did much deceive him, and this diſeaſe laſt even in theſe times, nay as ſome think, 'tis wel nigh worſe than it was of old.

CHAP. III.

Of the Nature of the Veneral Diſeaſe.

SInce then ſo great a Hodge-podge of diſeaſes and Symptoms appear in this affect, we muſt diligently enquire what the nature of it is, of which divers Authors have their divers opinions, and as *Epiphanius Ferdinandus* writes of this buſineſs, in *Hiſt. Med. Hiſt.* 17. the Authors which have writ of this Diſeaſe, although they amount to the number of eighty (and perhaps more) are al almoſt differing concerning the Eſſence of this Diſeaſe, and every one defines it at his own pleaſure; for whenas this Diſeaſe was unknown to the Ancients, nor deſcribed by them, nor they had not, as is uſually wont to be, the opinions of the Ancients to inſiſt upon, every Modern uſing his own liberty hath propoſed his own Opinion. Truly I think this is not doubted, that 'tis a Contagious, Malignant and Venenate Affect; neither doth it ſeem to want any great pains to prove it, for it appears ſufficiently by this, that in ſo ſmal a quantity of matter, by which this Diſeaſe is contracted by contagion, there is ſo great force and power of action, as no firſt quality, or the temperament made up of the firſt qualities can have; and the variety of Diſeaſes and Symptomes in this evill is ſo great, that it cannot be reduced to any manifeſt cauſe; therefore as in peſtilent conſtitutions, ſuch as that Attick one was in *Thucidides*, and that which *Hippocrates* hath deſcribed, 3. *Epid.* there was ſo great a multitude of evils, that they were forced to fly to occult qualities and a venenate cauſe; ſo alſo, there being ſo great a filth of diſeaſes and ſymptomes in the Venerous Diſeaſe,

The Veneral diſeas, is from an occult quality.

Diſeaſe, that the original of them all cannot be refer'd to any manifeſt quality, here alſo we fly to a malignant and occult quality.

But although theſe things be thus, yet Authors differ ſtil of this, whether that malignity conſiſt only in the cauſe, or whether there be alſo ſome malignant Diſeaſe preſent. *Capivaccius, de Morb. Gal. Cap.* 1. thinks this affect not to be the Diſeaſe, but the cauſe, while he defines the Veneral Diſeaſe, that it is an excrement wholly preternatural, able to hurt man many waies, produced out of humane ſubſtance by its like. *What it is.* *Capivaccius opinion*

Thus alſo *Hercules Saxonia, de lue Vener. Cap.* 1. writes, that the Veneral Diſeaſe is the Cauſe, not the Diſeaſe nor the Symptome, therefore, becauſe it can exiſt out of mans body in Linnen, or other ſuch kind of vertues, beſides in the ſweat, Seed, and Blood, being ſeperated from the body; but within mans Body it infects and poſſeſſes alſo thoſe parts which are not living, and are not ſubject to Diſeaſes, viz. the humors and ſpirits. *Hercules Saxony.*

Aurelius Minadous de virulentia Vener. holds that 'tis neither the diſeaſe, nor the cauſe, nor the ſymptom; nor the diſeaſe for this cauſe *cap.* 17. becauſe 'tis neither a diſtemper, nor evil Compoſition, nor a ſolution of unity: but he denies it to be the cauſe of the Diſeaſe, *Cap.* 9. ſince that is properly the preternatural, the cauſe between which and the Action there fals a medium, viz. the diſeaſe whenas the diſeaſe is that which doth next of al hurt the Action, but the cauſe doth hurt it by intervention of the Diſeaſe; but between the Veneral virulency and the action hurt he thinks there fals no medium, but that of it ſelf by its own ſtrength doth primarily and immediately vitiate and hurt the operations; but that the Veneral virulency doth of it ſelf and primarily hurt the operations, he thinks this is conſeſt amongſt Phyſitians, and therefore deems it to be preſuppoſed, and unleſs this virulency did of it ſelf and primarily hurt the operations, ſo many Phyſitians would not have labored in ſearching out its nature. He proves it is no Symptome, *Cap.* 18. beauſe it is no action hurt, nor quality changed, nor excrement altered. That it is no action hurt, he proves by this, becauſe the veneral virulency it ſelf is that which hurts the actions; neither is it any quality changed, becauſe the qualities changed do follow the actions hurt, and beſides ſo many diſeaſes are ſeen in this virulency which are not Symptomes. But *Aurelius Minadous* himſelf, when he had rejected al the opinions & definitions of others, at length he fits himſelf to make a perfect definition and to explain the nature of this evil. But firſt of al Chap. 16. he preſuppoſes this as the ground of his opinion, viz. that the French Diſeaſe ought not to be defined by a quality, but rather by the name of a body, for this reaſon, becauſe it paſſeth from one body to another, which is the propriety of bodies not of qualities, and becauſe it toucheth other bodies, for none but bodies can touch, and be toucht again, as *Lucretius* hath it. Again, if it were a quality, it were either manifeſt, or occult, no manifeſt one, as he proves rightly by many Arguments; but that it is no occult quality he brings no ſpecial Argument, but repeats the general one, becauſe 'tis moved from place to place, and toucheth other bodies. *Aurelius Minadous.*

This preſuppoſed, afterwards Chap. 30. he affirmes the Veneral virulency to be ſomwhat corporeal internal, and truly a ſpirit or a vapor, for this reaſon, becauſe 'tis carried, commuicated, and participated in a very ſhort ſpace of time. Yet he holds it to be ſuch a vapor which is endewed with an occult quality and vertue from its whol ſubſtance, or the whol mode of its nature, by reaſon of which quality it cannot only infect any humors of the body, but alſo al parts of the body, and corrupt them & turn them to its own likeneſs: but that this evil conſiſts in a ſpiritual ſubſtance, he further proves, becauſe ſome are infected not only by the act of Venery, but alſo by a Kiſs, or the uſe of garments: next of al, becauſe ſome have felt no other hurt from this evil, than only the falling of their hair, becauſe the roots of the hairs were gnawed off by the acrid vapors. Thirdly, becauſe ſome only by vehement exerciſe have diſcuſſed this virulency. Yet he denies that vapor or ſpirit to be properly an excrement, Chap. 20. whenas that is properly an excrement, which redounds from nouriſhment, & which is caſt off from another: although he grants there that

that is commonly called an excrement, whatſoever is ſuperfluous in the body, whether it be a ſpirit, or humor, or ſome other ſolid body, whether it be uſual, or unuſual, whether according to nature or preternatural; furthermore he holds this vapor to be wandring, thin, and viſcid, Chap. 21. and to be raiſed from a ſpirituous, humorous, ſolid ſubſtance: but he proves Chap. 22. by many Arguments that this vapor is contrary and preternatural by its whole ſubſtance, of which we ſhal ſpeak hereafter; and at laſt Chap. 27. he defines the Veneral virulency, that it is a vapor by its whol ſubſtance inimicous to the natural faculty, working by degrees. And that he might unfold his mind more clearly, and not leave the Reader doubtful, to what kind of things preternatural this virulency ought to be referred, whenas he had ſaid before, that it was neither the Diſeaſe, nor the cauſe, nor the Symptome, yet it primarily hurt the actions; at length Chap. 28. he holds that 'tis an externall error, and he endeavors to prove it by this Sylogiſme, whatſoever doth primarily hurt the operation, and is not of the conſtitution of the body, is an external error, but the Veneral virulency doth primarily hurt the operation, and is not of the conſtitution of the body, therefore 'tis an external error.

Some that they may briefly quit themſelves, and hold with al men, ſay that this diſeaſe is a heap of al evils, Diſeases and ſymptomes.

The Veneral diſeaſe depends on an occult quality.

That we may clear our ſelves out of this difficult controverſy, firſt of al 'tis already proved, and ſhal be proved more at large hereafter, that they are in the right, who do here admit of an occult quality, and a power depending on the whole ſubſtance, as they commonly ſpeak; neither can they hold any other waies, Since 'tis without doubt, that 'tis a contagious and malignant diſeaſe while it is ſuch. It performes two things, to wit, it alters the body by which it is received and changeth it to its owne ſimilitude, and indeed it alters it not by the firſt qualities: as ſhal be ſaid by and by, ſince it is not expeld by the firſt qualities; neither is that change alwaies with putrefaction, whenas putretaction is not induced but by a long time, but this change is made in a moment as it were; neither is it an aduſtion as *John Baptiſta Montanus*, and ſome others do hold, whenas there is not alwaies a hot & dry diſtemper preſent, neither is it cured by cooling and moiſtening things, and oftentimes there is a ſordid putrefaction, in which there is no exuſtion.

'Tis a diſeaſe.

But whereas they hold this malignity is only in that matter ſeated without the living parts, and that there is no ſuch diſeaſe preſent, in this they erre very much. Indeed we willingly grant, that that contagious inquination, ſent forth from the body infected with the veneral diſeaſe, may adhere to the garments; neither do we deny this, that the humors in our body may be tainted with the ſame, yet in the interim it doth ſcarce follow, that the living parts remain free and ſound; for as in a putrid feaver, though the humors and ſpirits do firſt grow hot by the feaveriſh heat, yet afterwards the living parts are ſeized on by the ſame diſtemper, ſo though the humors in the Veneral diſeaſe are firſt infected by that occult malignity, yet there is no cauſe why the ſame fault may not be communicated to the living parts.

Not hot and dry.

But though ſome do acknowledg that this cauſe cannot be idle, yet whenas they know nothing beyond the manifeſt and firſt qualities, they endeavour to reduce alſo the effects of the veneral virulency to manifeſt cauſes. *John Baptiſta Montanus* as was ſaid even now, thinks the eſſence of this evil conſiſts in a hot and dry diſtemper, but the cure tels otherwiſe, whenas 'tis cured by hot and dry Medicines, as by the Decoction of Guajacum and the like: beſides, becauſe there is a great putrefaction in the Humors, which doth not proceed from a hot and dry diſtemper.

Not cold and dry.

Nicolaus Maſſa de Morb. Galli. Cap. 5. ſaith it is a coldneſs of the Liver, declining to a little drineſs with an occult quality: but as concerning the occult quality he writes truly, but that it is no cold diſtemper, the effect doth teach us, as the Ulcers, rottenneſs of the bones, and the like; and what other diſtemper ſoever they alleage. Yet they produce nothing agreeable to the Diſeaſes and Symptomes,

Symptomes, which appear in this Diſeaſe, nor to the Cure.

Therefore when as the action of the veneral virulency can be referred to no manifeſt quality. We may wel ſay that by that is induced an occult quality: For firſt of al every efficient cauſe is ſaid to be a cauſe from the nature of its efficiency, and therefore this malignant quality doth not only alter and change the humors, but alſo the living parts into its likeneſs: again, though the morbifick cauſe be taken away, and this diſeaſe ſeem now to be overcome, yet unleſs that malignant diſpoſition be deſtroyed the man recovers not his perfect health. For it hath been obſerved that the Veneral Diſeaſe hath ſomtimes growa freſh after thirty years paſt, which doubtleſs happened not becauſe the Vitious Humors lay ſo long hid in the body (for theſe would have ſooner diſcovered themſelves by their ſigns) but becauſe that malignant diſpoſition impreſt on the body was actually there, which afterwards, by degrees produced vitious humors, and corrupted, and ſo broke forth into act; and *Trincavellius*, *Lib.* 11. *de curand. rat. particul. affect. cap.* 11. reports, that a certain Woman brought forth a Child ſick of the French Diſeaſe, and every where ful of crufty Ulcers, whenas ſhe her ſelf never had any ſign of that Diſeaſe contracted, but was alwaies wholly wel, and on the contrary it may happen, that one may have a French Ulcer, which yet, when that Malignity is diſtroyed, is no longer rightly ſaid to be Gallical, but is cured by vulgar Medicines as other Ulcers. *But occult.*

Al which being thus, we conceive the the Veneral Diſeaſe, doth not only exiſt in the Humors, but alſo in the living parts, and that it doth conſiſt not only in the change of the firſt qualities, but alſo there is an occult malignant quality imprinted on the parts, and therefore the veneral Diſeaſe is to be referred to diſeaſes, and thoſe of occult qualities. Which are called by *Fernelius* diſeaſes of the whol ſubſtance, but not on every part rightly explained, as we have ſaid before, the which if *Capivaccius*, and *Saxonia* had known, the one would not have deſined this evil by the excrement, nor the other by the cauſe. if the ſame alſo had been known to *Aurelius Minadous*, he would not have endeavoured to maintain that this evil was no Diſeaſe, but an external error. For whereas he endeavors to prove that the veneral Diſeaſe is not a Diſeaſe of the ſimilar parts, becauſe it is not a diſtemper, nor an evil compoſition, nor a ſolution of unity, in this proof he labors to no purpoſe, for al this we willingly grant; but this he ought to prove, that there is no other kind of Diſeaſe in the ſimilar parts beſides the diſtemper of the firſt qualities; but that there are ſuch diſeaſes, which *Fernelius* calls of the whol ſubſtance, we more rightly, of occult qualities, is ſufficiently proved above, *part* 1. and this very Diſeaſe, as all other venenate Diſeaſes do ſhew, that it can be referred to no other kind than to malignant qualities; & this follows from *Minadous* his own ſuppoſition, and confeſſion, which he hath *Cap.* 20. where he writes, that the Veneral virulency hath power not only to infect al Humors, but al parts of the body, and to corrupt and convert them to its own ſimilitude. The ſame *Minadous* if he had known theſe Diſeaſes, had not taken ſo much pains, to what kind of preternatural things the veneral virulency ought to be referred. For firſt of al there was no need of excluding from the number of cauſes, thoſe vitious Humors, which are found in the bodies ſick of the veneral Diſeaſe, and have power to alter and change the Humors themſelves and parts of the body. For whereas he ſaith, that is properly the cauſe, between which and the action hurt the diſeaſe doth interceed, that is true of the next cauſe, but the antecedent cauſes alſo may do hurt, as they have the Nature of a vitious object, and external Error: and in this very Diſeaſe whiles the virulent Humors do imprint a malignant quality on he parts, between them and the action hurt that Malignant diſpoſition and occult quality doth interceds. Therefore whereas he thinks that Humor or venenate vapour in the veneral diſeaſe, doth imediately hurt the action, 'cis falſe, unleſs that humor have the nature of an external error. For al hurt actions in the Veneral diſeaſe do happen, whiles between them and the humor, or malignant vapor, *An examination of Aurelius Minadous opinion.*

vapor, a midling diſeaſe doth intercede, to wit, that of occult qualities.

The Veneral diſeaſe is not a Body.

But whereas he denies the Veneral virulency to be a quality, and holds it to be a body, firſt of al he confounds the cauſe and the diſeaſe, next of al he doth not diſtinguiſh between the quality and its ſubject. For whiles we ſay the Veneral evil, we underſtand either the diſeaſe it ſelf, or its cauſe: if the diſeaſe, that is a quality, as al diſeaſes are, to wit a preternatural diſpoſition of the parts, and indeed an occult and malignant quality: but if the veneral evil be taken for the cauſe, either with without, being communicated doth induce this diſeaſe; or which is in the body, which raiſeth divers diſeaſes and ſymptomes, and can infect others, we grant that cauſe may be called a body. But we muſt take notice, that thoſe humors or vapors are not ſaid to be cauſes, as they are bodies, but as they have an occult and malignant quality, which *Minadous* himſelf cannot deny, while *Cap.* 20. he writes, That that vapor or ſpirit, which he cals the veneral virulency, is endewed with an occult quality and vertue, depending on its whole ſubſtance, by which it is able not only to infect any humors of the body, but al its parts, and to corrupt and convert them to its own ſimilitude. For what ſimilitude is that I pray, to which the Veneral virulency converts not only the humors, but alſo the parts of the body, unleſs it be that occult quality with which that vapor is endewed?

Whereas laſt of al, *Cap.* 38. he refers the Veneral virulency to external error, becauſe it primarily hurts the operation, and is not of the conſtitution of the body. But before denied it to be either the diſeaſe, or cauſe of the diſeaſe, or ſymptome, in vain doth he multiply things, preternatural; for there are not more preternatural things, than the diſeaſe, cauſe, and ſymptome; and the Veneral virulency, as he deſcribes it, doth wholy belong to the cauſes two manner of waies, for either it induceth the like diſpoſition into the parts of the body, or it raiſeth other diſeaſes while it eats and exulcerates the parts. But whenas he ſaith the Veneral diſeaſe taken for the cauſe, is a vapor or a ſpirit, that is rightly to be underſtood; for indeed it can no way be denied, that it is a humor alſo, whenas in copulation 'tis rubbed againſt the body, and ſticks in the cloaths: yet ſuch is its nature, as 'tis alſo of other contagious humors, that though it be reſolved into vapors and the leaſt bodies, yet every one of them contains its whole eſſence, and hath power to affect others: and this thing may be declared by muſk, caſtor, and the like. For thoſe things, though they be bodies, and humorous too, yet are ſuch, that though they be reſolved into the leaſt bodies, nevertheleſs they retain their ful ſtrength. After the ſame manner it is in the Veneral diſeaſe, and other contagious diſeaſes, in which though the malignant and contagious humor, be reſolved into the leaſt bodies, yet every one of them obtaines the ſame eſſence, and vertue, and power to infect others. But whereas he thinks that humor and vapor is not to be called the cauſe, but an external error, in that alſo he is miſtaken: for an external error belongs unto the cauſes, from whence the Symptomes ariſing from an external error, are called the ſymptomes of the cauſe; where this alſo is to be obſerved, that Phyſitians do not vouchſafe the name of the cauſe to the next cauſe only, but alſo to the antecedent, which do not yet effect the diſeaſe: therefore there is bad nouriſhment by reaſon of vitious humors, although they have not yet imprinted a diſtemper, and vitious diſpoſition on the parts: but whereas he denies the Veneral virulency, conſidered as a vapor to be the cauſe, becauſe it hurts the actions not by the mediation of a diſeaſe, but next of al, and imediately, he preſuppoſeth that which is not yet granted, and ſo begs the queſtion: for this ſpirit or vapor hurts the very conſtitution of the ſimilar part, and imprinteth on it a malignant quality; the which he himſelf cannot deny, whiles *Cap.* 23. he holds, that by this diſeaſe of venery many actions are hurt, but not al in al people; but the hurt of the natural faculty is common to al, and that there is none, that is poſſeſt with this diſeaſe who is not troubled with ſome fault in his natural actions, and hence proceeds al that filth of excrements, and the gummoſities ariſing from thence, tumors, puſtles,

Whether it be a Vapor or a ſpirit.

by

pains, running of the reins, ulcers, rottenneſs, and ſuch like evils; and that the Veneral virulency hath a peculiar enmity, and diſcord with the natural faculty, and is inimicous to it by its whol kind, that is, by its form, by its ſpecifick faculty, by its whole ſubſtance, and occult propriety: but he further deſcribes the enmity againſt the natural faculty, that it is by its nature deſtructive to the natural ſpirit, that the Veneral virulency hath unſpeakable qualities, hindering the generation of the natural ſpirits, and thoſe not manifeſt, but occult. But whenas there is required to a natural action, the ſoul, the temperament, and the innate heat, or the implanted ſpirit, and the influent heat, he further concludes rightly, that the ſoul is not hurt, as that which can no waies ſuffer, nor the manifeſt temperament, as was proved hitherto, but chiefly the implanted ſpirit or the innate heat: al which whenas they are ſo rightly ſpoke, and the Veneral virulency is an enemy to the implanted ſpirit, and truely not by manifeſt qualities, but by its form, by its ſpecifick faculty, by an occult propriety, by which it indeavours to change not only the humors, but alſo the living parts, and the implanted heat in them into its own ſimilitude, certainly the like malignant quality, is induced into the parts: which vitious & malignant quality, what other thing I pray is it, than an occult & malignant diſeaſe?

The Veneral evil is an occult & venenate Diſeaſe.

Al which being thus, we rightly conclude, the Veneral evil is an occult and venenate diſeaſe; for it is induced by cauſes of that kind, and immediately exerciſeth ſuch effects which cannot be referred to any manifeſt diſtemper, but onely to an occult quality; neither is it cured by medicines that work by manifeſt qualities, & correct known diſtempers, but by proper and ſpecificks, which al Phyſitians at this day, and eſpecially thoſe who lived at the beginning of this diſeaſe have teſtified, and to their own and patients damage have found it true. For when they followed the common way of cure, and could do no good for the cure of this diſeaſe, they began to be deſpiſed by many, til the Spaniſh Phyſitians ſhewed them medicaments brought out of the *Indies*, and bold Chyrurgeons ventered upon Quick-Silver.

What is the ſubject of the Veneral Diſeaſe.

But that al this may be made cleare, we muſt enquire what is the ſubject to this diſeaſe, concerning which phyſitians do differ. Some have thought the privities are firſt infected: for by theſe parts for the moſt part, this evil is contracted by impure copulation, and the footſteps of this diſeaſe, unleſs it be perfectly cured, do chiefly appear about the privities; the nut is eaſily excoriated in venery, the fleſh oftentimes remaines callous for a long time, with a running of the reines, and breaking forth of buboes in the groin. But though it cannot be denied, that oftentimes the original of this evil is from the privities, and doth chiefly diſcover it ſelf in that place. Yet that doth not happen alwaies, but the ſame diſeaſe may be contracted by kiſſing, ſwear, embraces, veſtures, nay infants alſo may be infected by the milk they ſuck from their nurſe, & they that are infected after this manner, have not this diſeaſe appearing in their privities.

Not the Privities.

Some, as *Leonicenus* do hold, ſay that the skin is the ſubject of this evil, as in the ſcab, retter, and the like affects: but the skin alone is not alwaies affected, but other parts alſo, the privities, the jawes, the bones which become rotten, nay ſometimes alſo the internal parts. *Hercules Saxonia de lue Vener. Cap.* 3. maintains a threefold ſubject; one in the beginning; another in the middle; another in the diſeaſe confirmed: in the beginning he holds that the natural ſpirit is affected or the vaporous part of the maſs of blood, then the juyces and excrementitious humors, at laſt the alimentary humors, but in proceſs of the diſeaſe, aduſt humors; and the parts affected are the ſtomach & liver, & thence chylification & ſangification are hurt; but when the evil is old, flegmatick humors are the ſubject of it, & the parts affected are ſimelar, bones, nerves, membranous bodies: but we willingly grant, that as the diſeaſe is new, or old, ſo and alſo ſometimes more, ſometimes fewer parts are poſſeſt and corrupted; as we deny not this neither, that the excrementitious humors are eaſier corrupted than the alimentary, whenas nature doth alwaies more defend the profitable humors, than the excrementitious, into which without any difference this evil doth eaſily almoſt diffuſe it ſelf, but indeed the queſtion is not here, what may be infected by that virulency; but this is the Querie, what is the ſubject of this diſeaſe, which we have

Not the skin.

demonſtrated to be; for as in putrid feavers the ſpirits and humors wax hot, yet are not the ſubject of the feaver; ſo alſo though a malignant quality from the Veneral virulency be imprinted on the humors; yet they are not the ſubject of the diſeaſe, but only the living parts, and which of them is the ſubject of this diſeaſe is the queſtion: and whiles that he ſomtimes holds the Liver and ſtomach, ſometimes the ſimilar parts to be the ſubject of this diſeaſe, in that he is wavering, for whether the diſeaſe be new or old, the ſubject is the ſame.

Not the ſpermatical parts.

There were ſome others alſo, who held thoſe parts we cal ſpermatical, the nervous and membranous, were the ſubject of this diſeaſe; but not only the membranous and nervous parts, but alſo the fleſhy parts are affected in this diſeaſe.

Whether the liver.

Others hold the Liver to be the chiefe ſubject of this diſeaſe, and this opinion is moſt conſonant to truth, but when as many other parts are affected, 'tis conveniently to be explained, as ſhal be ſaid by and by.

Whether al the parts.

Aurelius Minadous de virul. Vener. Cap. 34. firſt of al preſuppoſeth this, that there is no peculiar member in our body, which is alwaies affected in the Veneral virulency, which is true in its way, whiles ſomtimes this, ſomtimes that part is affected; next of al he holds that this viulency is chiefly an adverſary to the natural actions, or rather to their faculties, which natural power when as it is in al parts the veneral virulency is not an enemy to one part in ſpeice, but to al, in which that power is. In the third place he adds this, That that natural vertue implanted in the natural parts, doth performe its operations without any influx, and that there is no natural faculty influent, as there is an animal influent; ſecondly he confutes them in particular, who hold the Liver to be the firſt and perpetual ſubject of this diſeaſe, for it may come to paſs ſaith he that one after an impure copulation may preſently ſuffer an exulceration in his privities, whom certainly no body wil deny to be infected with the Veneral diſeaſe, whenas yet in him the Liver is not affected: and the ſame reaſon is for other parts, which are firſt affected by contagion; nay he holds, that one external part being infected, the humors in the body may be infected without any hurt of the Liver. In the interim he cannot deny this, that this evil doth moſt properly and chiefly appear, when the Liver is affected, when as the operations of the Liver are neceſſary to the whol body. The ſame Author *Cap.* 4. endeavors to prove, that the Liver is not the ſubject of the Veneral diſeaſe, whenas the face ſaith he is the index and trueſt glaſs of the internal affects of the body, yet eſpecially the affects of the Liver doe appear in it; therefore if the Liver were perpetually affected in the Veneral diſeaſe, alſo the color of the face ſhould alwaies appeare vitious, the which we have found falſe by experience; for we have ſeen both men and women infected with this diſeaſe, who notwithſtanding have had a freſh color in their face, and the evil hath been in their privities: again he thinks, that by carnal copulation the privites may firſt of al be affected, and from thence the evil may creep through the veins, and by the ſpirits, to the other parts of the body, and as one part is more apt and diſpoſed than another to receive the infection, ſo ſomtimes this, ſomtimes that is infected, but not alwaies the Liver.

The Authors opinion.

That we may cleare our ſelves of this controverſy, firſt of al we muſt enquire from the actions hurt what part is affected, and what faculty is oppreſt; but though divers actions hurt that part in the veneral diſeaſe, yet al of them cannot bring us to the knowledg of the firſt and proper ſubject. It happens indeed ſomtimes, that there are pains felt in the head about the muſcles and bones, but that is not alwaies. Somtimes alſo the hurt happens in the external and internal ſences, but this alſo is ſeldom: ſomtimes putrid vapors are inflamed, and hence a Feaver is raiſed, which ſome cal a French Feaver, but this alſo happens ſeldom. In like manner 'tis in other diſeaſes and ſymptomes. One action is hurt which is common to al that are ſick of the veneral diſeaſe, viz. nutrition is corrupted; hence we ſee that in thoſe who are poſſeſt with this diſeaſe, the color of their body is changed and ſulled, and ſometimes turns black, ſomtimes of a lead color, ſomtimes livid. There ariſe every where in their body divers kinds of ſwellings and bunchings out, alſo ulcers, the bones rotten, the hairs fal off, al which proceed from corrupt nutrition. From which we conclude that the

the veneral diſeaſe is primarily an enemy to the natural faculty: but 'tis no wonder that this poyſon is only an enemy to the natural faculty, whenas there are other poyſons, which are inimicous to other faculties: thus the poyſon of the peſtilence and many others are enemies to the heart, cantharides to the bladder, mad nightſhade and opium to the animal faculty. *The Veneral diſeaſe is an enemy to the natural faculty.*

Whence that we may briefly conclude the buſineſs, this evil indeed may be contracted by one member, yet if it be ſpread into more from that one, that comes to paſs becauſe the Liver is infected: yet becauſe this poyſon hath principally an enmity with the natural faculty, and the fountaine of that, or chiefe ſeat is the Liver, that alſo is primarily infected with this virulency, and through that the reſt of the parts contract this evil. Therefore whereas *Minadous* objecteth, the color of the face is ſometimes freſh, therefore the evil is not yet communicated to the Liver, but ſtil ſticks in the privities which were firſt of al infected, and the force of this virulence is ſometimes greater, ſometimes leſs; from whence alſo 'tis ſometimes ſooner, ſometimes later communicated to the Liver. Beſides, this evil conſiſts not in the firſt qualities, but in occult, whence 'tis no wonder, that that malignity may conſiſt in the blood, which to the appearance is good; but al thoſe things wil be yet made clearer by the diſcovery of the cauſes.

Chap. IV.

Of the Cauſes.

BUt concerning the cauſes of this diſeaſe, two things are to be explained, the firſt is how at this day the Veneral diſeaſe is contracted; the other is, what was its original when it firſt appeared. At this day indeed I think this evil is no otherwiſe contracted, than by contagion, and that 'tis manifeſt that every Veneral pox is not contagious. *Hercules Saxonia, lib. de lue Vener. cap.* 3. Holds that every Veneral pox is not contagious, and that which is old and confirmed is for the moſt part leſs contagious, than that which is new, and of a middle age, and that which diſcovers it ſelf by knobs, is not contagious; and he endeavors to prove it, firſt of al by reaſon, becauſe the contagion is placed in a hot and movable excrement, but when nothing breaths forth from the part affected, which can be communicated to another, the diſeaſe then is not contagious, and therefore becauſe in the knobs there is no ſuch excrement contained, or if it be contained, it is not carried to the genicals, therefore that diſeaſe ſhal not be contagious; next of al by experience, for he writes that a certain noble man of *Padua*, who had uſed Guajacum almoſt twenty times, and was thrice anointed with quickſilver, yet could never be cured, and though he lay with Virgins yet he never infected them: and out of *Antonius Muſa* he relates of one, who had a wife poſſeſt with the Veneral diſeaſe about her breaſt, yet he never contracted the diſeaſe. *The Veneral diſeaſe is contracted only by contagion.* *Whether it be alwaies contagious?*

But here we cannot aſſent to *Saxiona*, but we hold that every Veneral diſeaſe is in its manner contagious; but whereas he objects againſt us experience, it doth not follow, that if one ſick of the Veneral diſeaſe doth not actually infect another; that the diſeaſe it ſelf is not contagious; for that an effect may follow, there is neceſſary both an agent, and a diſpoſition required in the patient. Hence we ſee that many do converſe with thoſe ſick of the Plague, and are not infected, yet we muſt not conclude from thence, that that Plague was not contagious: & *Gabriel Fallopius de morb. Galli. Cap.* 22. makes mention of twelve Schollars, that had to do with one whore, yet of al them, three only were infected. And *Saxonia* himſelf affords an anſwer to this argument, while he writes, That this diſeaſe is not contagious if nothing breath forth from the part affected, which may be communicated to another, the which may happen in the knobs and calloſities; or if any thing do breath forth, and be not received by another. Therefore though

one have an ulcer in his head, or a knob in his thigh, but the Genital parts be found, 'tis not necessary he infect her he lyes with. But whereas he teacheth that the inveterate Veneral disease is less contagious, than the new, or middle aged it may in its manner be granted; and from that very thing we may collect, that the Veneral disease is not only the cause, but also the disease. For when as this disease is communicated by the cause or contagion, it may come to pass, that the cause may be for the most part taken away, which doubtless happned in him who so often used the decoction of Guajacum, and was thrice anointed; and such men indeed, if the disease be stil upon them, but the corrupt humors being for the most part emptied by sweaters and unctions, they are not so contagious, as those, who were lately infected with this out of whom those malignant humors have not yet been emptied.

Therefore we conclude, though for certaine reasons, those who are sick of this disease do not alwaies infect others; yet at this day there is no man taken with this evil, but who hath been infected by contagion from another, and so this evil at this day is propagated only by contagion.

The first original of the veneral Disease.

But how, and from what causes this Disease was raised, when it first appeared in Europe, Authors are diverse in their opinions; and whenas they themselves, who lived about the rise of this disease, could not agree in this business, by much less shal we which are now removed above an age from that time, be able to reconcile them; therefore we shal only reckon up their opinions. The most learned *Leonicenus*, and *Fracastorius*, and certain others, were of this opinion. That this disease at its first rise was epidemical, and proceeded from a common cause, when at its first beginning, boyes, men, old folks, Girles, women, were infected, and as *Hieron. Fracastrius* writes *de morb. Gallic. cap.* 7. Though the greatest part of mankind hath contracted this disease by contagion, it hath been observed, that a number of others infected by themselves without any contagion, have suffred this disease. Besides *Fracastorius* thinks it impossible, that in so smal a time, contagion which of it self is slow, nor is not easily received, could spread it self over so many lands, being first brought by one fleet of the Spaniards, when it is plain that either at the same time, or very neere it was seen in *Spain* and *France*, in *Italy* and *Germany*, and almost al *Scythia*; which if it be so, there is no reason, why we should not grant this disease to have been first of al epidemical: yet this makes me doubtful because that no German Physician, nor of the neighboring places, hath taken notice, that this disease was knowen in Germany about that time. In which it appeared in *Italy*, when notwithstanding they have most diligently described, the English sweating disease, the disease in *Hungary*, and the like diseases newly sprung up.

Whether it were first of al an epidemical disease.

But what was the cause of that epidemious disease, if it were such a one, those Authors themselves do differ in opinion; indeed they agree in this. That it had its original from the fault of the ayre, but whence the ayre contracted that fault, therein they differ. Some were of opinion, That this disease had its original, from the great inundation of Tiber, and other Rivers, which hapned in the time of *Adrian* the sixt, Pope of *Rome*: for the Summer following they think by that corruption and filth left by the waters, the ayre was infected with putrefaction, and thence this disease did proceed. But truly this evil cannot be imputed to that inundation of waters, since that happned chiefly at *Rome*, but this disease first appeared at *Naples*: besides, those inundations of waters are wont rather to cause pestilent diseases, and there has often happned such inundations before, yet such a disease was never caus'd by them before. Others do more probably (if this disease were at first epidemious) refer the cause to the Stars. And *Fracastorius* writes concerning this business, *lib.* 2. *de morb. contag. cap.* 12. That it ought not to seem wonderful, that new and unusual diseases do appeare at certain times, and he proves it by examples and histories of divers diseases; and to pass by others, in the memory of our Grandfather that malignant Feaver raged, which is commonly known by the name of the English sweat, the like of which we have not read in any History before, wherefore he thinks it is not strange, if also the French disease not known before through many ages in our Orb, did now first of al break forth. And there wil come (saith he) other

new

new and unuſual ſickneſſes, when time ſhal bring them; as there was the thing our amongſt the Ancients, which afterwards was ſeen no more. This ſame diſeaſe wil dye and be extinguiſht, and by and by again wil be renewed, and ſeen again by our Nephews, even as in former Ages, it is to be beleeved, it was ſeen by our Anceſtrors, for which there are no ſmal ſigns yet evident. A certain Barber a friend of mine, had a book of certain experiments, very ancient, amongſt which was written one amongſt the reſt, whoſe title was, For the thick ſcabb, which happens with the paines of the joints; he therefore when the diſeaſe was very freſh at firſt, remembring this medicine, asked counſel of ſome Phyſicians, whether he might uſe that medicine in that new contagion, which he thought was ſignified by that thick ſcabb: but the Phyſitians viewing the medicine, ſharply forbad him, becauſe it conſiſted of quickſilver and ſulphur. Happy man if he had not conſulted with thoſe phyſitians, being like to be very rich with an incredible gaine; but he obeyed them, nor durſt not make tryal of his medicine, which at laſt he did try, and finding it to be excellent good, he was very ſorry, that he had uſed it too late, the profit being now carried away by others. Thus far *Fracaſtorius*.

But he refers the cauſe of this diſeaſe newly ſprung up, to the conjunction of *Saturn*, *Mars*, and *Jupiter*, which hapned at that time. Others hold that in the yeare, 1483. In the Ides of October at two of the clock after noon, That there was a conjunction made of *Mars*, *Jupiter*, the *Sun*, and *Mercury* in *Libra* in the eight houſe, which is the houſe of Sickneſs, and that *Jupiter* was burnt; and furthermore the ſame yeare on the Calends of November in the ſame houſe and ſigne, there was a conjunction made of *Mars* and *Venus*, alſo of *Jupiter* and *Venus*. Others as *Nicolaus Maſſa de morb. Galic. cap.* 6. refer that diſeaſe to the conjunction of *Saturn*, *Mars*, and *Venus*, which happened in *Scorpio* about the rife of this diſeaſe. But as it is not impoſſible, for certain configurations of the Stars to induce certain diſeaſes, ſo no man is able eaſily to render the ſpecifick cauſe of this diſeaſe, if it were epidemious. Truly al the effects of the Stars are good and benigne, and nothing evil in it ſelf doth proceed from them; yet by accident it may come to paſs, whiles they alter the ayre & the bodies of men after this or that manner, that they may produce evil diſeaſes, whenas in their way they are Authors of the generation and corruption of natural things, but that they could produce this diſeaſe in ſpecie, I think is not yet explained; and *Fracaſtorius* had hopes indeed, that this diſeaſe was in its old age in his time, and that in a little while after it would ceaſe in the alleaged place; as alſo in his *Syphilis*, in theſe Verſes.

For when the Fates ſhal pleaſe again, you'l ſee
Ere long, that in dark night 'twil buried be.

But his hopes hath deceived him, whenas now it hath laſted above a hundred and forty yeares, and hath bated nothing of its cruelty, as moſt are of opinion.

Others on the contrary think this diſeaſe was not epidemious, but ſporadical and contagious; and firſt of al this perſwades many, becauſe it hath laſted even unto theſe times, whenas epidemious diſeaſes, which have been raiſed by the influx of the Stars, have ceaſed a little while after. And therefore they do not think this diſeaſe ought to be accounted for epidemical, whenas it hath already laſted above 140. years; unleſs perhaps this reaſon may be given for the continuance of this diſeaſe, becauſe the infection of this diſeaſe is not ſhunned, as that of the peſtilence. For if the Plague begin to ſpread any where, al people, as much as they are able, and 'tis poſſible for them, do fly from the converſation of the ſick, and reject al infected houſehold ſtuff; nay in *Italy*, if the Plague begin to ſpread in *Germany*, or other neighbouring Countries, they ſtop up al publique waies, and deny al ſtrangers that are ſuſpected, any admittance into *Italy*; But many men knowingly and willingly have to do with ſuſpected Harlots, and publique Stews full of infected whores are tolerated; therefore if the ſame diligence and curioſity, which is uſed in ſome places in the time of the peſtilence to exclude the infected and ſuſpected perſons, from the ſociety of others, were made uſe of to reſtrain that rambling whoring;

perhaps

perhaps this diſeaſe alſo though it be contagious, might be rooted out.

How the Veneral diſeaſe was brought into Europe.

Yet the ſame men who think this diſeaſe is not epidemous, but ſporadical, and contagious, are againe divided into divers opinions concerning its original: For ſome were of that opinion, that firſt of al it had its riſe at *Valentia*, in *Hiſpania Tarraconenſi*, where one ſick of an Elephantiaſis, bought a night's lodging of a noble Whore for fifty peices of Gold, and infected her; and thence it came to paſs, that others who had to do with her were infected, and ſo in a ſhort time this evil was diſſeminated amongſt a many. But the Idea of an Elephantiaſis is one, and of the Veneral diſeaſe another, and therefore one ſick of an Elephantiaſis could not raiſe this diſeaſe.

Others think this diſeaſe was firſt brought out of *India* by the Spaniards into the French Army at *Naples*, who maintaine that this diſeaſe was epidemical in *India*, of which we ſpake before, *Cap.* 1. But for what reaſon 'tis epidemious in ſome Countries in *India*, whether by the fault of the aire, or water, or proviſion, is not yet explained by Hiſtorians.

Leonhardus Fioravanti his opinion of the Veneral diſeaſe.

Leonhardus Fioravanti, a famous Empirick in his time in *Italy*, hath a peculiar opinion of the original of this diſeaſe, which I have met with'n no other writer. For he in his book written in the Italian Tongue, which is entituled, *Capricci Medicinali di M. Leonardo Fioravanti, Libri tre*, writes thus of the original of this diſeaſe, both amongſt the Indians, and in the French Army at *Naples*, *lib.* 1 *Cap.* 26. When ſaith he, there was War between the French and Spaniard at *Naples*, and there was great want of proviſion, eſpecially of fleſh, thoſe evil imployed merchants who brought victuals to the Camp, had privately prepared the Carkaſſes of dead ſouldiers into divers kinds of meates and diſhes, and ſold them every where about to the army, which fleſh, whanas they had eat of it a long time ignorantly, moſt of them were taken with this diſeaſe, and became ful of puſtles and paines, and many alſo had their hair fal off; and he writes, that he knowes the buſineſs was ſo, from one *Paſchalis Gibilottus*, a Neapolitan, an old man, of ninety eight yeares of age, who hath told him, that at that time when *John* the Son of *Renatus*, Duke *Andegavenſis* waged war againſt *Alphonſus* King of *Naples*, about the yeare 1456. that he hath often heard from his father, who was ſuch a Merchant in the Army of King *Alphonſus*, that in want and ſcarcity of victuals the Souldiers on both ſides by eating of mans fleſh, which they fed on for a long time, contracted this diſeaſe, and the ſame *Fioravanti*, adds, that he might be the more certain of this buſineſs, he bred up a Sow in his houſe, and added to al her meat ſomewhat of hogs fleſh, and that within few dayes her briſtles and hairs fel off, and ſhe became ful of puſtles; then, that he fed a dog for two months only with dogs fleſh, which afterwards became ful of pains and puſtles, and loſt his hair. From which experiments he concludes, that every living creature if it be nouriſht with the fleſh of its own ſpecies wil be taken with this diſeaſe, which at this day is called the French: and he thinks this is the very cauſe, that this diſeaſe is epidemious in the *Indies*, becauſe there are thoſe man-eaters, which do feed on mans fleſh.

But truly I do wonder that ſo many Italians and French, who have writ of this diſeaſe have made no mention of this cauſe, neither does the relation of that old *Neapolitan* ſeem to fit with the time. For that diſeaſe was not known in the year 1456. at which time *John* the Son of *Renatus*, *Duke Andegavenſis*, waged War againſt *Alphonſus* King of *Naples*, but in the War which *Charles* the eight King of *France*, waged with *Alphonſus* King of *Naples* about the yeare 1493 or 94 then grant it be, that if a creature nouriſht with the fleſh of thoſe of its own kind, be taken with puſtles and pains, and ſuffer the falling off of the hair, yet the queſtion ſtil would be, whether that diſeaſe be the very Veneral diſeaſe, and ſuch as may be transfered by contagion to others, and eſpecially by Venery. For the eſſence of the veneral diſeaſe doth not conſiſt in puſtles, and the failling of the hair, but in an occult malignity, by which alſo its ulcers do differ from other ulcers. Yet it is eaſy for any one to make tryal, of that which *Fioravanti* experienced. And if the

buſineſs

buſineſs ſhould be confirmed by experience, that if an animal nouriſht with the fleſh of its kind, do contract this diſeaſe, thence a reaſon may be rendered, why this diſeaſe is endemious to the people of *India*, to wit, becauſe its inhabitants do feed on mens fleſh: although here we meet with a doubt, for al the people of *India* are not men-eaters, and therefore we muſt enquire out of the Hiſtories of the *Indies*, whether this diſeaſe be endemious amongſt the men-eaters only, or amongſt the other people of the *Indies* alſo.

Andreas Cæſalpinus, *lib. 4. de morb. Cap.* 3. writes that he hath another Hiſtory of the original of this diſeaſe, delivered by them who were preſent, to wit, from an Aretine ſoldier, who ſerved in that war; he related that there is a town in the *Veſuvian* Mount which is called *Suma*, where there is plenty of generous wine which is called Caudy wine, which was privately left by the Spaniards in the night, when the French had beſieged it, but they infected their wine by the mixture of blood which they drew from them which were ſick in the hoſpital of St. *Lazarus*; and the French men entering in, when they had filled themſelves with that wine, began to be ſick of diſeaſes and ſymptomes, like unto the Elephantiaſis. But if this were true, rather the Elephantiaſis than the veneral diſeaſe had been thus raiſed. *Andreas Cæſalpinus.*

Aurelius Minadous de Virul. Vener. Cap. 30. propounds a peculiar opinion, & holds that this virulency did firſt break forth from the moſt filthy wombs, of moſt impure Harlots, and for this cauſe, becauſe no body that hath lived cleanly, or that hath converſed with a cleane woman, is taken with this evil: but he thinks this evil proceeded firſt, when women were made very unclean, when they had received a various mixture of ſeeds. For as ſaith he one ſort of meat, is the cauſe of health in a good ſtomach, but variety of meats doth oppreſs the ſtomach, and breeds an acid and nidorous crudity, and every where heaps up excrements; ſo one ſeed only is familier and wholſome for one womb, and cauſeth fruitfulneſs, on the contrary the multitude and variety of ſeeds, doth ſo affect the womb, that by its corruption it produceth bad, nay the worſt of excrements, and from that ſordid ſubſtance there is a corruption hard to be explained, or putrefaction which doth generate ſuch venenate excrements. But when as he might eaſily underſtand, that thoſe rambling luſts were in uſe not only in the war at *Naples*, but long before when there was publique Brothel Houſes at *Rome*, and yet there was no ſuch diſeaſe raiſed; he would have his opinion to be underſtood not of any women, but only of the *Indian*. For they by the mediation of the Heaven, Air, Waters, and thoſe places, by their peculiar form of feeding did contract this poyſon, which afterwards by *Columbus*, and the Spaniſh Army was diſſeminated in *France*, and hence through the whole world. But though it muſt not be denied, that the conſtitution of bodies is divers in divers Countries, and I remember that I have read in the Hiſtories of Navigation, That when certain people of *Europe*, had found certain Ethiopian laſſes playing on the ſea ſhore, and had layn with them, preſantly ſome of them died; yet how the buſineſs is in *America*, is worthy of further inquiſition: and if there be any ſuch fault in thoſe women, 'tis probable that comes to paſs, not ſo much from the commiſtion of divers ſeeds, but rather as many Authors report, from this, That if any one have to do with a woman in *India* whiles ſhe hath her courſes, he his taken with that diſeaſe; for that whenas 'tis every where unwholſome, and therefore alſo was peculiarly and ſeverely forbidden the Jewes by God in holy Writ, may in a ſpecial manner be hurtful in the Indies. *Aurelius Minadous.*

Therefore letting theſe paſs, let us hold faſt this, which is granted by al, that this diſeaſe at this day is no otherwiſe contracted, but by contagion, and chiefly by lying with thoſe that are infected, whence deſervedly doth *Gabriel Fallopius de morb. Gallic. Cap.* 13. Wittily deride thoſe women, who when they were ſick of the Veneral diſeaſe, nevertheleſs did boſt themſelves to be chaſt, and ſaid they contracted this diſeaſe by ſprinkling themſelves with the holy water which was infected. *The Veneral diſeaſe is contracted only by contagion.*

But this contagion, by which only now adayes, we ſay this diſeaſe is diſſeminated, is received divers waies. For ſometimes 'tis transferred with the ſeed and menſtruous *How many waies the contagion may be contracted.*

Somtimes 'tis Hæreditary.

ſtruous blood from the Parents to the Child, and the Diſeaſe becomes Hæreditary; for when the blood, out of which the Seed is generated, is infected and vitious, the like Diſeaſed ſeed is generated, alſo the Mothers blood being impure, with which the Child is nouriſht, it Pollutes that, which pollution afterwards in thoſe brought into the World doth ſooner or later ſhew it ſelf, according to the greater or leſſer ſtrength of that virulency: which manner of original of this Diſeaſe, if any one wil deny to be properly by contagion, becauſe it is not by the contract of two bodies, viz. a ſound and a ſick, he may for al me; yet let him know this, that then that malignity in the body of the infant is not generated, but from the infected parents by the ſeed, or the Mothers blood is communicated to the off-ſpring.

But by thoſe that are born into the world, the ſame evil may be contracted two waies: the firſt is, when with the nouriſhment and milk, the evil is communicated to infants by impure Nurſes; which way indeed is the powerfulleſt of al: for whenas the milk they ſuck is changed into blood, and that is the nouriſhment of the whol body, the poyſon this way is diſperſed into the whol body, and inſinuates it ſelf moſt intimately with it, and therefore thoſe that are this way infected, are ſeldome cured, and not without a great deal of Difficulty.

The other way is by contagion ſo called properly, and in ſpecy; where firſt of al 'tis enquired, whether there be any contagion in the Veneral Diſeaſe at a diſtance, ſo that if one do neither touch with his body one infected, nor the fuel which conteins in it the contagion, yet nevertheleſs may be infected with the Veneral Diſeaſe; truly there is no example given of this cauſe, but what *Manardus* teacheth, Lib. 7. Epiſ. 3. and alſo ſome others affirme that there is a French Ophthalmy: but when as this Diſeaſe of the Eyes in other caſes is oftentimes contagious, it is no wonder, if one converſing with a ſick man that is troubled with a French Ophthalmy, and earneſtly look upon his Eyes, that he alſo may contract ſuch an Ophthalmy. Yet this cannot be granted, that as the Plague may be transferred by the Air to others in diſtant places, ſo alſo the Veneral Diſeaſe may be communicated; for dayly experience doth Teſtefie, that Phyſitians and many others, do familiarly converſe with thoſe infected with this evil, yet are not infected by them.

Whether it can infect at a diſtance.

Therefore this evil is chiefly contracted by contact, and truely moſt frequently by whoriſh Copulation, when that virulence is communicated to the naked genital parts being ſoft, and porous, from the genitals of the other infected perſon; after which manner this Diſeaſe was firſt brought out of the *Indies*, by the Spaniſh Souldiers infected by the *Indian* Women which were ſick of this Diſeaſe, into *Italy*, and diſſeminated through the French Camp, and hence ſpred throughout all Europe, as we ſaid before according to the opinion of many Phyſitians. And though ſome as we ſaid even now, who have been infected with this Diſeaſe, endeavour to renounce the Cauſe of it; yet many if they live not chaſtly, yet they live cloſely, and *Gabriel Fallopius*, not without a Cauſe *de Morb. Gall. cap.* 10. ſcoffs at certain chaſt Matrons, as they boaſted themſelves to be, who ſaid they contracted this Diſeaſe by ſprinkling them with holy water which was polluted; he that beleeves this, let him beleeve that too, which *Averroes* writes, 2. *collect. cap.* 10. that a woman was got with Child in a bath, from ſome ſeed which wicked men had ſpent there: or with *Valleſius* let him correct the Aphoriſme, 36. Sect. 6. becauſe many Monks have been ſick of the Gout before the uſe of Venery.

How the Veneral diſeaſe may be contracted.

How men are infected by women in Copulation.

And truly men contract this evil from Women that are infected, becauſe in the act by reaſon of the concourſe of ſpirits, and the motion, the Womb being heated, Vapors are raiſed from the Malignant Humors in the womb, which are ſuckt in by the mans yard being of a porous conſtitution, and are received into the veins. But the man being infected, may infect a ſound woman, either by his yard, if that be infected and exulcerated, or by his ſeed, although his yard be not ulcerated, or both waies: for though the ſeed in men is not always wholly corrupt, whenas we ſee many men infected with this diſeaſe do get children; yet it is altered & infected, from whence not only

How Women by men.

the

the Iſſue contracts this evil, but alſo a Woman may be infected by it.

But though this evil be moſt frequently contracted by whorish Copulation, yet by contagion it may be derived to others, other manner of waies, viz. by ſweat, if any one ſleep in the ſame bed with one infected with the Veneral Diſeaſe, and be wet with his ſweat; then by the filth and Excrements, or that flowing from Ulcers, and ſticking on the Linnen, bed, or ſhirt, and garments, if any one lie in them, or put them on. The ſame Diſeaſe alſo may be communicated by ſlaver or ſpittle, ſo lovers are infected with the Kiſſes of Whores ſick of this Diſeaſe, and infants by their Nurſes, or if any one drink out of a Cup, or ſup out of the ſpoon, which one ſick of this Diſeaſe did uſe a little before; beſides, infants may be infected another way, to wit if, they touch the breſts of an impure Nurſe with their mouth, and that for a double reaſon, either becauſe they ſuck the infected and corrupted milk, of which I ſpake before; or becauſe the breaſts and nibbles of the Nurſe are exulcerated: on the contrary, Nurſes may be infected from infected infants, eſpecially if they be troubled with Malignant puſtles, or ſome Ulcer in the mouth; for the Nepples of their breaſts whiles they are ſuckt by the Infant, grow hot, and their pores are more opened, whereupon they ealier receive in that virulence. *Other waies of contagion*

But no body is eaſily infected by the breath, as was ſaid before, and without danger we may be converſant in the ſame chamber with thoſe that are infected; neither are thoſe Chyrurgions and Phyſitians which cure the veneral Diſeaſe, and dayly converſe with the ſick, any way infected; and if this Diſeaſe were contagious by breathing and at a diſtance, the whol world would ere now have been French, and the Diſeaſe would be more than Epidemious, as one writes; yet if any one ſleep in bed with one infected, that he do receive his breath very neer, I wil not promiſe him free from this evil; whenas I know, Wives that have been infected by their Husbands ſick of the Phthiſick, and afterwards died of it.

This contagion after 'tis received into the body, ſtaies not in thoſe parts in which it was firſt received, but after the manner of other poyſons, penetrates into the innermoſt parts of the body: and truely oftentimes diſcovers it ſelf preſently, within a few daies, ſomtimes lies hid a long while. And *Fernelius* writes, *de abdit. rer. Cauſ.* Lib. 2. *c.* 14. That it doth ſomtimes returne and revive after thirty years paſt, and for ſo long ſpace the fewel of the diſeaſe does lie hid as dormant, and nevertheleſs they who think themſelves free from al hurt, and that they are perfectly ſound, do corrupt thoſe with whom they lie, and beget an Iſſue poſſeſt with that Diſeaſe. The ſame is witneſſed by *John Philippus Ingraſſias.* And *Hercules Saxonia de lue Vener. cap.* 11. relates that he cured an Illuſtriſſimo, who had knobs of the French Diſeaſe came out upon him, five and twenty years after he had taken the Diſeaſe. *How the Veneral virulency doth penetrate into the body.*

But what parts this virulency doth principally aſſault, we ſaid formerly Authors did diſagree, where we treated of its ſubject; many indeed do hold, that this virulency is chiefly an adverſary to the Membranes, becauſe the pains do moſt of a ariſe about the Perioſtia, and external parts, where are many Membranes, in the head, Legs, Arms, breaſt-bone, and in them the perioſtium being eaten off, are raiſed knobs. But not only the Membranous parts are affected, but others alſo, as the Buboes, Tumors, Ulcers in divers parts, rottenneſs of the bones, falling of the hair, running of the Reins do teſtefie. And therefore we muſt enquire for a more common ſubject, which we ſaid above was the Liver, and the ſimilar parts dedicated to nutrition, and that have conſent with the liver; for after the contagion hath pierced as far as the Liver (though in the interim it may corrupt the parts neer unto that, by which the Contagion was received) and hath imprinted a Malignant diſpoſition on that, Sanguification is hurt, and a Malignant quality is imprinted on that blood, which is generated in the Liver, and ſo with the blood are generated Malignant Humors, which whenas they are troubleſome to Nature, they are thruſt forth to the Circumference of the body, and ſo *What parts are chiefly affected.*

not only pains are raiſed in the Membranes, but divers Diſeaſes and Symptomes alſo in other parts; and whereas the bones are not free, but they are oftentimes affected with rottenneſs, it is no wonder that the neighbouring perioſtia are affected, and moſt cruel pains raiſed.

The manner of the generation of the veneral diſeaſe.

From al which it doth eaſily appear, what is the manner of the generation of this Diſeaſe, to wit, When the contagion of this Diſeaſe is communicated from one ſick of the Veneral Diſeaſe, either by the ſeed and blood of the parents, or by the ſucking of infected milk, or by Copulation, or by ſpittle, or by meat and drink, or by garments and Linnen, to any part of a ſound body, firſt of al the part which receives the contagion is affected and hurt, hence through that, the evil creeps into the Veins, and by them penetrates to the Liver, which when it hath put on an evil diſpoſition, and contracted a Malignant Diſeaſe, it generates vitious blood, containing in it the Seeds of the veneral Diſeaſe, which whenas it is an enemy to the body, by the expulſive faculty 'tis driven from the more noble parts to the Circumference of the body. And from thence the nouriſhment in the whol body is hurt, from whence are raiſed ſpots, Tumors, and divers bunchings out, Ulcers, falling of the hair, pains, and other evils

The definition of the veneral diſeaſe.

At length out of al thoſe things which have been ſaid hitherto of the Nature and cauſes of the veneral diſeaſe, we make this definition of this Diſeaſe. The veneral evil is an occult Diſeaſe, and peculiarly Malignant, taken by infection, and is infectious, chiefly an enemy to the Liver and nutritive faculty, and therefore nutrition being hurt in the whol body, it raiſeth divers Diſeaſes and Symptomes.

CHAP. V.

Of the Differences of it.

The Differences.

BY ſome indeed there are reckoned up very many Differences of this Diſeaſe, and by *Braſſavola*, 234. but many of them unprofitable; the moſt neceſſary and profitable are theſe.

First of al, as concerning the very eſſence of the Diſeaſe whenas that is unknown, from that of it ſelf, we can raiſe no difference: yet becauſe its activity depends on that eſſence and occult quality, theſe differences are fetcht from thence, becauſe the activity of this diſeaſe is ſomtimes greater, ſomtimes leſs. And Phyſitians have obſerved, that ſomtimes after unwholſome Copulation, the French Symptoms have preſently come upon men, but ſomewhat gentle, and a little while after have ceaſed again, without the adminiſtration of any remedy; but ſomtimes moſt grievous Symptoms have preſenly come on them, and the evil hath been rebellious, and could by no means or very difficultly be cured. And the writers of this diſeaſe report, That this Diſeaſe when it firſt appeared, had far more grievous Symptomes, than now it hath: but what was the Cauſe of this buſineſs, is not ſo clear. That might happen firſt of al, from the diſpoſition of the bodies that were infected. For whenas it appeared firſt in the Camps at Naples, and there was a great ſcarcity of proviſion, and a famine, doubtleſs in thoſe bodies alſo, there was proviſion of evil Humors for Diſeaſes, on which when this contagion fel, there it took ſtrength and increaſed: beſides this might make ſomwhat to that buſineſs, that in the beginning, the cure of this Diſeaſe was not ſufficiently known, whence it came to paſs, that this malignity alwaies grew worſe. This happens alſo in the Plague, of which the more there die, the poyſon alwaies grows the more vehement. For the malignity is fermented as it were, and exalted in the bodies of the ſick, unleſs it be oppoſed and overcome by Alexipharmacal means.

At its firſt riſe this diſeaſe was more grievous.

Secondly,

Secondly, its Differences are taken from the cauſes and manner of contagion while ſomtimes the Veneral Diſeaſe is hæreditary, and is derived with the ſeed and blood from the parents to the Iſſue: but ſomtimes after the birth, is communicated by Copulation, Kiſſing, Milk, Garments, and the like.

Thirdly, the third Difference is taken from the Diſeaſes and Symptoms ſupervenient, that this Diſeaſe is ſomtimes with Buboes, ſomtimes with running of the Reins, ſomtimes with falling of the hair, ſomtimes with pains of the joynts, ſomtimes wich other Symptomes; neither do the Symptomes which follow it, and ſhal afterwards be reckoned up amongſt the ſigns, alwaies appear the ſame in al people: and *Euſtachius Rudius* writes, *Lib. 5. de Morb. occult. Cap. 9.* That he hath obſerved a thouſand times, that many young men have on the ſame day copulated with one and the ſame whore, and yet notwithſtanding one hath been taken with the running of the Reins, another with a Bubo, another with rottenneſs, another with pain in the Head, another with falling of the hair, and another with another different preternatural affect; which doubtleſs happens, by reaſon of the various indiſpoſition of bodies, and weakneſs of parts, and variety of Humors. For weak parts do more eaſily receive vitious Humors, than the ſtrong. And one body is more clean, another more foul, and abounds with theſe, or thoſe Humors, which when they are corrupted by the venenate Humor, do cauſe theſe or thoſe Diſeaſes and Symptomes: therefore if we ſhould number up the Differences according to the variety of Diſeaſes, and Symptomes, which are ſomtimes joyned together and complicated, ſomtimes Fewer, ſomtimes more, we might make very many indeed, of which as was ſaid even now, *Braſſavola* reckons up 234. more Nicely than profitably.

Fourthly, the fourth Difference is from the time, that this Diſeaſe is ſomtimes new, ſomtimes inveterate, one in the beginning, another in the augment, another in the ſtate, and another in the declination.

Out of which, and eſpecially from the Difference of time, and the variety of Diſeaſes, and Symptomes that accompany this Diſeaſe, *Julianus Palmarius*, doth commodiouſly conſtitute four dergees of this Diſeaſe, *de lue Vener. Lib. 1. cap. 4.* The Firſt and lighteſt degree is, when only the hairs of the Head and beard do by little and little fal off, without any other hurt of the body. The Second degree is worſe, when the whol Skin is ſpread over with many ſpots not bunching out, and thoſe ſomtimes ſmal, like to a lentil ſpeck; ſomtimes much broader, and both, ſomtimes red, ſomtimes yellow. The Third degree is yet more grievous, when not only ſpots but true puſtles and bunches break forth, firſt of al indeed about the forehead, and Temples, and behind the Ears, then every where in the Head, and at length in the reſt of the body. The Fourth degree is, when now the Diſeaſe being inveterate, it aſſaults and corrupts the ſolid parts, the bones, Ligaments, Membranes, and Nerves. In which there are collected many thick, glutinous, and maligne Excrements, which when they reſt about the tendons, or the Perioſtia, and prick and pul the Membranes from the bones, there are wont to be cauſed implacable pains, growing worſe towards the night, from which Excrements alſo by degrees do grow hard knobs, with far greater torment which are equally hard as the bones. Which if they be fixt in the bones, they do ſo enlarge and diſtend them, that the bones oftentimes become of a monſtrous bulk and figure: moreover that malignity and Acrimony doth by degrees eat away, and with rottenneſs conſume the bones, and for the moſt part not hurting the Skin that lies over them: and *Palmarius* writes there, that he hath ſeen many in whom the Pericranium, and the Skul under it, hath been found wholly eaten away with putrefaction, and conſumed with rottenneſs as far as the dura mater, the Skin of the Head not being hurt at al, without any Feaver, and

Degrees of the veneral diſeaſe.

without vomiting, of which one or two have been seen living without a Skul. Of which by and by shal be said more in the Diagnostick and Prognostick signs.

CHAP. VI.

Of the Diagnostick Signs.

BUt though out of those things which have been spoken before of the History of this Disease, the Diagnostick signs of this Disease might easily be fetcht, yet in this place the same are to be propounded in specy. But first of al, we must remember this, those signs as *Galen* teacheth, 1. Aphor. 17. and else where, which ought certainly to denote a Disease, which are commonly called Pathognomonical, ought to be not only proper but inseparable, so that where they are, there is the Disease, and they being taken away the Disease is removed. But though as in many other diseases, so in the Veneral, there is not one sign, by which the Disease may be known, yet a concourse of signs, may do the same. Yet what that concourse is in the Veneral Disease, is not easie to define: whenas in this Disease there is a great Accumulation of Symptoms and Diseases, and therefore this Disease hath affinity with other Diseases. Which thing doth cause, as was said before, that many when they saw almost the same concourse of signs, in that Epidemious disease, which *Hippocrates* propounds, the 3. *Epid.* they thought the Veneral Disease was described there, and others referred it to the Elephantiasis, but the reason why it is hard to define the concourse of signs in this Disease, is this, because the Liver and nutritive faculty of the whol body is chiefly hurt. For when the heart or brain is hurt, their hurt actions do easily appear, being such as are simple, and restrained to few parts. But when as the Liver affords nourishment for the whol body, from thence if nourishment be hurt, do happen divers Diseases and Symptomes; for though the nutriment of the whol body be one, that is blood, yet almost an innumerable variety presents it self in every part, according to the variety of the parts which are nourisht, whenas 'tis necessary that every part do peculiarly assimilate its nourishment; yet if we consider the precedent causes, those things which are present, and what things are helpful, what hurtful, or the Remedies, neither can this Disease lie undiscovered.

The diagnostick signs of the cause.

As concerning the causes, first of al if the parents be, or have been sick of this disease, and some signs in the infant present themselves, which argue the Veneral disease, there is scarce any reason to doubt of the Disease. In like manner 'tis, if an infant have sucked a nurse sick of this disease.

But if any one born of sound Parents, and nourisht by the milk of a sound Nurse, yet have diseases and some Symptoms, which give suspition of this Disease, we must diligently enquire, whether he hath had to do with infected persons; which if he confess, the case is plain, and there need no further doubt of the species of the Disease; but if, as it often fals out, one to preserve his Honor and reputation, deny that he hath acted any such thing, then we must enquire into the condition and course of the life past, of the husband or wife, if the party be married. For from these things sometimes we have no slight conjectures of the infection. But if there be no ground for such a conjecture, we must further enquire, whether he hath slept in the same bed with one infected with that Disease, or hath used his garments. But if out of al these there can be had no firme conjecture of this Disease, the present state of the patient is diligently to be considered, which indeed is one in the beginning of the Disease, another in the increase, and another when 'tis inveterate; whence also the signs of this Disease, beginning, encreasing, inveterate, are wont commonly to be delivered. And truely to know this Disease when 'tis Inveterate, is not very difficult, as

shal

ſhal be ſaid by and by: but whiles it yet lies, and is in the firſt blade, then to know it, is not ſo eaſie. For as plants and trees when they are at ful growth, are known by the vulgar, but to know them at their firſt appearance, is the part only of an artiſt and good herbariſt. So alſo this Diſeaſe, when it diſcovers it ſelf by diverſe Diſeaſes, and Symptomes, 'tis known even by the vulgar, but when it lirks in obſcurity, 'tis not diſcovered but by experienced Phyſitians.

The ſigns of the veneral diſeaſe in its beginning.

Yet there are ſome ſigns, which may diſcover this Diſeaſe, even at the firſt beginning; the firſt is, that they who are taken with this Diſeaſe do preſently (without the appearance of any ſigns of a Feaver imminent) perceive a kind of weatineſs and heavineſs in their whol body, and ſomtimes a drowſineſs after ſleep. There is a vehement and wandering pain, which is felt ſomtimes in the Head, ſomtimes in the Muſcles, ſomtimes about the joynts, and this pain is more troubleſome towards night than at other times of the day. The freſh color of the Face is changed ſtrangely, and ſome write, that there is a Livid circle appears under their Eyes, ſuch as we uſually ſee in Women that have their Courſes: there is added to theſe a ſadneſs, fear, and thoſe that before were merry and jeſting, become ſad and penſive without any cauſe. All which ſigns are of greater force if the ſigns of the Veneral Diſeaſe did go before, and vaniſh without any convenient, and ſufficient means. And truely if this evil be contracted by Copulation, and hath not yet plainly poſſeſt the Liver, but ſticks yet in the Privities, then chiefly this Veneral Diſeaſe at its beginning, diſcovers it ſelf by the running of the Reins, Ulcers in the Privities, and buboes, for when that Malignant vapor, is firſt of al communicated to the Teſticles and genital veſſels, the ſeed is corrupted, and the generation of ſeed is depraved in the genital veſſels: whence inſtead of good ſeed there is generated a ſtinking and corrupt Humor, which doth irritate Nature to expulſion. From whence alſo the Gonorrhæa, although improperly ſo called, is eaſily diſtinguiſhed from that running of the Reins which is not French, becauſe this gallical is joyned with a great heat, and pain, ſomtimes alſo with an Inflamation of the Teſticles, and Veſſels reſembling a varix; the matter which is caſt forth is far different from ſeed, viz. Yellow, green, Acrid, corroding the glans; neither doth it yeild to thoſe Remedies, with which a true Gonorrhæa is cured. Next of all there appeare puſtles in the Privities about the bigneſs of a grain of Millet, and ſomtimes they compaſs the whol Ring, which when they are broken, there remain white Ulcers which in proceſs of the Diſeaſe grow deep and callous, of divers colors, and with pain joyned with them. Thirdly, alſo Buboes ſhow forth themſelves in this Diſeaſe; for though ſomtimes the Buboes do precede an Eryſipelas or a Roſe, yet then there went before thoſe cauſes which do effect a Roſe, as fear, frights, anger, and the bubo is extended towards the Thighs, as it were by a red line, and a little after the Eryſipelas breaking forth, it vaniſheth; but if the Bubo be Veneral, 'tis not extended according to the longitude of the Thigh, but rather obliquely, and imitates the ſituation of the ſpermatick Veſſels. For in unwholſome Copulation the ſeminal veſſels are eaſily firſt of al infected, which whence they have their Original from the Vena Cava not far from the Liver it ſelf, that virulency is eaſily communicated to the Liver, which being affected drives it back again by the ſame waies from it ſelf, from whence are cauſed both the Buboes, and the running of the Reins. And thus theſe two Diſeaſes are for the moſt part complicated, and being Joyned are a ſure ſign of the veneral Diſeaſe, and one failing, the other is of force; but if this evil be contracted without whorifh Copulation, and if by kiſſing, there are Ulcers raiſed about the mouth, if by giving ſuck to an infected infant, there are inflamations about the breaſts, puſtles, and clefts; if from Garments and common lying together, there are puſtles every where raiſed in the Skin.

But

The signs of this diſeaſe increaſing.

But if the evil do now increaſe, and grow more grievous, and the virulency it ſelf be already communicated to the Liver, and thence the nutrition in the whol body be depraved, diſeaſes and ſymptomes of al kinds, ſuch as were reckoned up before, *cap.* 2. in the hiſtory of this diſeaſe, do ariſe, which indeed though ſingly by themſelves they afford not a proper and inſeparable ſigne of this diſeaſe, yet if they be taken together, and their peculiar condition be diligently conſidered, they may clearly enough detect this evil. For there is ſcarce another diſeaſe, in which there is a concourſe of al theſe, nay there are many of them ſo proper to the Venral diſeaſe, that they are found in no other diſeaſe after that manner. How the buboes which are ſeen in the beginning, and ſometimes in the increaſe of this diſeaſe, may be diſtinguiſht from other buboes, was ſaid even now; the veneral puſtles are ſome of them cruſty, others without a cruſt, the cruſty are chiefly the ſigns of this diſeaſe, and ſometimes they are eminent, that in the head and forehead they reſemble the horns of a Ram, under which ſomtimes is contained matter. Somtimes none, and they appeare in the face, head, beard, whol body, but eſpecially about the privities and hips. And *Fallopius* writes that theſe kinds of Veneral tumors, may be diſtinguiſhed from thoſe which are not Veneral after this manner; That the Veneral if they be rubbed and the skin taken off, three daies after they appear unchanged, but benign puſtles if they be rubbed, are increated by the attraction of blood, and that good, and alimentary. So the the tumors which are commonly called Gummoſities, if they be joined with a ſwelling, or do firmly adhare to the parts void of fleſh, and the bones, eſpecially if they be in the head, forehead, in the fore part of the Leggs, are a moſt certain ſigne of the Veneral diſeaſe: for the Veneral matter hath an eating virulency even in a craſs humor, and joined with paine, the like of which is not in other tumors, which do proceed from a thick matter. But though ulcers do happen alſo in many other diſeaſes; yet if they riſe chiefly in the yard, and eſpecially on the foreskin, and about the nut, and towards the end of the yard, or alſo in the mouth and palate, the uvula or jawes, and thoſe to putrid and ſtinking, and there was no inflamation of thoſe parts precedent, nor ſigns of the ſcurvy, they are alſo ſigns of the French Diſeaſe; alſo the falling of the hair cauſeth no light evidence of the diſeaſe; for if after childhood, no other diſeaſe foregoing, which is wont to be accompanied with the ſhedding of the hair, the hairs of the head, and eſpeciaſly of the beard and eye-brows fal off, and alſo there appear ulcerous puſtles, or a filthy Scab, this is altogether a ſure ſigne of the French Diſeaſe. In like manner Chapps and clefts in the Palms of the hands, and ſoles of the feet, if no other cauſe preceded, are an undoubted ſign of this evil, ſo alſo thoſe bunches ſomtimes low and broad, ſomtimes ſomwhat long, and thoſe excreſcencies which they call ficus, condylomata, and cruſts, if they appeare in the privy parts, or about the Arſe-hole, do ſurely enough diſcover this diſeaſe; pains of the head, although they happen in many other diſeaſes, yet if their bunchings out, and gummoſities in the skin, if there was a Gonorrhea and it be ſtopped, if a bubo and it be vaniſht, thoſe alſo are ſure ſigns enough of this diſeaſe; paines alſo in other parts may likewiſe diſcover this diſeaſe, for if the paine be not in the very joints, but in that part which is in the middle of the bones, and neer to the Joints, as upon the skin, or upon the ſhoulder bone, which is between the head and the joint of the elbow, and they be moſt cruel and ſharp, and are exaſperated towards the evening and night, they are alſo ſure ſignes of this diſeaſe. There is familiar alſo with this diſeaſe, ſuch a diſtillation, by which there is emptied by the mouth, and noſe, much flegm and watriſh matter, by which the parts through which they paſs are exulcerated; but in the firſt place the ſure ſigne of this diſeaſe is that French Gonorrhea, of which was ſpoken before. Laſt of al this alſo is a ſure ſigne of this diſeaſe, if the aforementioned diſeases and ſymptomes be not taken away, or made more gentle, by medicines that do work by manifeſt qualities, applyed according to art, but rather do grow worſe, but are mitigated by thoſe proper and ſpecifick remedies.

Leaſt

Laſt of al, if this evil be inveterate, diſeaſes and ſymptomes of al kinds may happen, callous, fiſtulous, and cancerous ulcers, knobs in divers parts of the body, rottenneſs of the bones in the Leggs, Armes, eſpecially in the Skul, the bone of the Palate and Noſe, a Hectick Feaver, Conſumption, Pthiſick, evil habit of the body, Falling-ſickneſs, falling of their teeth, Deafneſs, Blindneſs. *Vidus Vidus, lib. 2. de curat. membrat. cap.* 18. reports that he ſaw at *Barciconia* a Spaniſh Souldier, who by the French Pox ſuffered a rottenneſs of Skul, and afterwards fel into an epilepſy, that filth diſtilling from his rotten skul, and pricking the membranes of his brain, from which notwithſtanding he was freed by cauterizing his Skul with a hot Iron; and *Foreſtus lib. 7. Obſervat. 9. in ſchol.* relates of one infected with the French Pox, though he ſeemed to be wel cured, yet was afflicted with a long and continual paine of his head, which could be cured by no remedies, til at laſt his Skul being opened, there was found under it, upon the dura mater ſo nwhat black like a wevil, which worme wh en it was taken away, that pain ceaſed, nor returned no more. And *Johannes Schenckius ex* D. *Georg. Garneci obſervat.* relates of one ſick of the French Pox, that was il cured, who was taken with a great inflamation in his palate, in the five-like bone, in his uvula, and al the neighbouring parts, which preſently turned to a Gangrene, and that to a cancer, that every day he voided ſomwhat, of thoſe corrupt and putrefied parts, and the uvula, and next parts, being firſt of al caſt forth, at laſt he ſpit through his mouth his very brain with a moſt noyſome ſtink. And *Felix Platerus, lib. 1. obſervat.* makes mention of an Abbot who by the French Pox was made blind, deaf, and dumb, who could no otherwiſe underſtand and perceive the meaning of others, but if they with their finger or a peice of wood drew letters, expreſſing ſome ſentence upon his bare arme, from al which ſingly perceived he made a word, and from many words a ſentence: God the juſt Judg doth ſomtimes puniſh wandring luſt, with ſo grievous and horrid a puniſhment. *Signs of an inveterate Pox.*

As concerning the differences of this virulency, although its formal eſſence be unknown, yet there is a certain difference. According to its manner of acting and its vehemency, which is known from its effects; for ſomtimes more, ſomtimes fewer: ſomtimes the contagion and active power is great, ſometimes leſs: and *Euſtachius Rudius* reports *de morb. occult. lib.* 5. *cap.* 10. that he knew ſome whores infected with ſo powerful a French Poyſon, that al who had to do with them were not only preſently infected with the ſame evil, but were wholly poſſeſt with moſt grievous ſymptomes, which could not be removed nor mitigated, by any remedies, or art, nay ſome of them not long after died. But we know the vehemency of this evil, if as was ſaid even now, ſome be preſently infected, if the pain be moſt cruel, if the eroſion pierce to the bones, if many putrid and ſtinking excrements proceed every where from the body. For by how much the evils are the more, and more grievous, by ſo much the power of this virulency is the greater. *Signs of the differences.*

CHAP. *VII.*

Of Prognoſticks.

BUt that we may know, what hopes there is concerning the event of this diſeaſe, we muſt enquire whether the diſeaſe is like to be ſhort, or long, whether eaſy or hard to be cured, and at laſt what end it ſhal have.

But firſt of al concerning this diſeaſe, 'tis wont to be queſtioned amongſt ſome Phyſitians in general, whether it ſhal once have an end? *Fracaſtorius* indeed did hope for it, as was ſaid before, and thought, that even in his time this diſeaſe grew aged and that a little while after it would wholly die, chiefly for this reaſon, becauſe he thought it was epidemious, and took its original from the Starrs, which impreſſions of heaven do not laſt alwaies, but in proceſs of time are changed, and becauſe he *Whether this diſeaſe ſhal ceaſe.*

ſaw this diſeaſe did grow more mild. For as *Jul. Palmarius* writes of this ſubject *lib.* 1. *de lue Vener. Cap.* 5. it was reported, that this diſeaſe at its firſt rife was ſo filthy, that that which reigns now is ſcarce thought to be of the ſame kind; for there were innumerable ulcers, rough and ſtanding out, in the figure and bulk of an acorn, a filthy humor flowing from them, and ſuch a ſtink exhaling that his noſe that it reached, was beleeved preſently to be infected. The colour of the puſtles was between black and green, as much tormenting the ſick with the ſight of them, as with their pain. Therefore al people did ſhun the ſight of them, and ſo abſtain from touching them, as in no diſeaſe beſides. But *Fracaſtorius* his hopes deceived him, for as yet we do not ſee this diſeaſe grow old, much leſs ceaſe, and though the filthineſs of the ulcers and puſtles be more tolerable, yet in pains and torments it is grown more cruel, as the ſame *Palmarius* writes. It is more likely, that as long as thoſe copulations and converſings with infected people, and wandering luſts ſhal indure, ſo long alſo this diſeaſe wil laſt, and be propagated by contagion. For ſuch is the nature of this poyſon that it doth not ſuddenly kil a man, in the interim thoſe who are ſick of that diſeaſe, are infectious thoſe waies, of which we ſpake before. Whenas therefore there are every where many, who are poluted with that diſeaſe, and others converſe with them, there is yet no hopes that this diſeaſe ſhould ceaſe ere long, whenas the effect doth not ceaſe, unleſs the cauſe be taken away. Neither is that reaſon firm enough, which ſome who are of a contrary opinion do alledg; for they ſay whenas this diſeaſe is a contagion preternatural and violent, it muſt neceſſarily have an end, whenas thoſe things which are preternatural and violent have not perpetual cauſes, and therefore muſt needs ceaſe to be; but the anſwer is eaſie; nothing indeed that is preternatural and violent, is of it ſelf perpetual, yet if the cauſe be perpetual, that alſo may be perpetual. Therefore though as the plague is ſometimes extirguiſhed, ſo this diſeaſe alſo might be, if the ſame diligence were uſed, which is in preventing and curing the plague, as was ſaid before: yet becauſe there are alwaies men, who are ſick of this diſeaſe, and can infect others, and others do not abſtain from their ſociety, even this diſeaſe ſhal continue ſo long, as that contagion ſhal laſt. And therefore *Euſtachius Rudius* rightly of this ſubject, *Lib.* 5. *de Morb. occult. Cap.* 11. writes, if there were one prince of the whol world, or one conſpiracy of many of them againſt this diſeaſe, by the help of phyſitians this diſeaſe might be wholly rooted out; viz. if they who are ſick of this diſeaſe, were al committed to phyſitians to be cured, in the interim were removed from the ſociety of other men, and the ſame were done with the infected with this diſeaſe, as is wont to be with thoſe infected with the plague or leproſie, there were hopes this diſeaſe might be extirpated; & for this cauſe too, becauſe the Veneral diſeaſe is not contagious at a diſtance as the plague is, but for the moſt part is communicated by copulation, ſomtimes by kiſſing and garments. But here is no diligence uſed, and as the ſame *Rudius* ſaith, Theeves, robbers, and murderers, and other wicked perſons are ſharply puniſhed, but publique whores ful of this diſeaſe, and who daily deſtroy more than a thouſand men, & polute whol Families and Cities, are cheriſht, ſmoothed up with flateries, and kept gallantly. But leaving theſe, let us ſee what may be foretold of every particular diſeaſed patient.

Prognoſticks.

1. The Veneral diſeaſe for the moſt part of it ſelf, is a diſeaſe of long continuance, for this reaſon, Becauſe the liver principally, and the nutritive faculty is infected in it. But *Galen* teaches rightly, 5. *de lo. affect. Cap.* 2. That of diſeaſes of the heart al people die moſt ſpeedily, of affects of the brain more ſlowly, but the life is longer protracted when the natural actions are hurt; and though the veneral diſeaſe be alſo malignant, and is not undeſervedly reckoned amongſt poyſons in its kind, yet its power in acting is far ſlower, than that of other poyſons: yet the vehemency or weakneſs of this poyſon in this or that body, and the diſpoſition of the body, may make ſomewhat to the length or ſhortneſs of this diſeaſe; for if the poyſon be more vehement, the diſeaſe is the more dangerous, as ſhal be ſaid by and by: if alſo the body before did abound with viticus humors, the evil is

increaſed,

increaſed, and made longer: and indeed ſometimes the ſtubbornneſs of this diſeaſe is ſuch, that though it ſeem ſometimes to be wholly extinct, yet it hath been obſerved that it hath ſometimes grown freſh againe after many, nay, thirty years, as was ſaid before.

2. But whether this diſeaſe wil be hard or eaſie to cure in any patient, muſt be judged from the greatneſs of the diſeaſe, and ſtrength of the patient, as in other diſeaſes. Firſt of al, as concerning the nature of the diſeaſe it ſelf, though this diſeaſe be far more gentle, than other venenate diſeaſes, yet becauſe it is not of the number of them which depend on manifeſt diſtempers, but malignant and contagious, it may infect al the humors in the whole body, nay it may pollute al the Similar parts, and hence it is hard to be cured.

3. Yet this diſeaſe when 'tis new is eaſier to cure, than when 'tis inveterate; for in that new malignant quality, it only affects thoſe parts, by which 'tis propagated and for the moſt part the privities, but in the inveterate diſeaſe, that very malignant quality is imprinted alſo on the liver, and from the liver again is communicated to the blood, and by the blood to al ſimilar parts; for it is falſe, as appeares out of thoſe things which have been formerly ſaid of the nature of this diſeaſe, that the liver here is hurt in ſanguification, by no diſeaſe, but only by reaſon of an evil object, which mixt with the blood and other humors, does pollute them, deprave and make them vitious, and convert them into its own nature: indeed 'tis not to be denied, that vitious humors alſo do corrupt the good, in the interim from good chyle alſo in a liver evil diſpoſed is generated bad blood, which appears even from this, that through every part the nutrition a little while after is infected through the whol body, which could not be, unleſs the liver were hurt.

4. *Epiph. Ferdinandus* writes, Hiſt. 17. That he hath learned by experience, and that other phyſitians have obſerved the ſame, that thoſe who being once cured are again infected with this diſeaſe, are either never, or with a great deal of difficulty recovered.

5. Although the nature of this virulency doth not conſiſt in any manifeſt diſtemper, yet if it light on a body hot and dry, and eſpecially endewed with a hot diſtemper of the liver, 'tis more difficultly cured. For whenas pock-wood, Sarſaparilla, and the like, are hot and dry, that hot and dry diſtemper is increaſed, and ſo, though this very diſeaſe be not increaſed, yet another damage is brought upon the body, and whenas thoſe proper medicines cannot ſafely be adminiſtred, unleſs the body before were very wel purged, by theſe means 'tis heated and dryed the more.

6. For the ſame cauſe, a hot and dry ſeaſon of the yeare, as that of the ſummer is, is not ſo fit for the cure of this diſeaſe, whenas the ſtrength is then Exhauſted.

7. If alſo the ſtrength be feeble, that it cannot undergoe thoſe ſtrong medicines which are neceſſary, or if the ſick, out of cuſtom or peeviſhneſs, wil not admit of neceſſary medicaments, 'tis made hard to cure.

8. If alſo a feaver, or conſumption, or other grievous ſymptom, or diſeaſe be joyned, which may hinder the cure, the diſeaſe cannot eaſily be removed, as was ſaid even now, of a hot diſtemper of the liver, and of the whol body.

9. If there appeare in the joynts, callous, Schirrous, and hard tumors, and thoſe commonly called gummoſities, the evil is hard to be cured, and is not rooted out, by moſt powerful remedies: for ſuch tumors never appear, unleſs the evil be inveterate, and hath taken deep root, moſt of which are fixt in the bones under them.

10. Buboes in the groins if they be hard, and are not eaſily ſuppurated, and thoſe which ſometimes break forth, ſometimes vaniſh, are hard of cure, becauſe they ſignifie a ſtubborn matter, and a weakeneſs of nature in expelling it: but if they be eaſily ſuppurated, and the ſtrength be firm, and eſpecially the liver ſtrong, they are ar-

guments of a more benigne Diſeaſe and matter; and ſuch Buboes, if they be kept open along while, may bring perfect health.

11. A roughnes of the jaws which is attended with hoarſneſs, or an obſcure, or no voice, do ſhew the evil to be antient and ſtubborn, and which wil ſcarce be cured.

12. Ulcers that are new in the Yard are eaſily Cured, but in the Arſehole, or about it, made difficultly, for they ſhew the evil is now inveterate: and ſuch Ulcers are continually moiſtned by the Excrements, and Medicines cannot conveniently enough be applied to them.

13. Ulcers alſo in the joynts and other parts are moſt hard to cure, becauſe they ſignifie an evil now inveterate, and which hath invaded the whole body.

14. Ulcers in the mouth and jaws are not eaſily cured, becauſe alſo they argue the evil to be ancient, neither can convenient Medicines be applied to them, and they are continually moiſtned, by the Excrements falling from the brain.

15. If the bones of the noſe be eaten, and there be alſo a ſlow Feaver, it ſignifies an evil incurable, whenas now the diſeaſe is communicated to the brain it ſelf, or its Membranes.

16. Bunchings cut in this diſeaſe, eſpecially the broader, are not eaſily cured, and they argue an evil hard to be cured.

17. The colour of the Skin depraved, and the falling of the hair, if convenient means be applied, are not very hard to cure.

18. Pains eſpecially in the Head, and upon the Shins, are oftentimes very ſtubborn, that they yeild to no Remedies, or at leaſt not under a long time.

19. Vertigoes and falling ſickneſſes are moſt grievous and pertinacious, for they ſhew that the Veneral Virulency, hath now poſſeſt the brain it ſelf.

20. Diſtillations alſo are laſting, becauſe they alſo happen, only when the evil is inveterate, and the brain is affected; the which are more dangerous and grievous, if they fal on the breaſt and Lungs, and exulcerate them.

21. Alſo the noiſe in the Ears is for the moſt part laſting, and ſcarcely removed, whenas there are divers windings in the Eares, and their expulſive faculty is weak, neither can medicines penetrate thither.

22. The running of the Reins alſo for the moſt part is laſting, or if it be ſtopt grievous evils are wont to follow, and moſt heavy pains of the Head and Joynts.

23. But chiefly the Nature of the Contagion it ſelf, from which the ſick contracted the diſeaſe, doth manifeſt the force and greatnes of the diſeaſe; for this poyſon hath ſomtimes a greater, ſomtimes a leſs activity, and Phyſitians do relate who have often had ſuch Patients in cure, that ſomtimes of ten ſtrong yong men, who have had to do with the ſame Whore, not one of them hath ſcaped, therefore if it be known, from what he or ſhe, this evil was contracted, the Phyſitian may the eaſier judg of the event of the diſeaſe.

24. Other things being alike, this evil is eaſieſt cured, which is contracted by Whoriſh Copulation, but that is harder to Cure, which the Infant hath ſucked in with the milk, whenas the virulency goes into the ſtomach with the milk, and hence in the Liver there is generated a virulent blood, which afterwards runs through the whol body, and Pollutes that. But the Hereditary evil is hardeſt of al to Cure, and that which is communicated from infected Parents, with the Seed and blood.

25. As for the parts affected, if the Liver only be affected, the evil is the eaſier Cured, whenas it hath a ſtrong expulſive faculty, and Medicaments can eaſily penetrate unto it: but the Spleen, Kidneys, Womb, and external joynts are not ſo eaſily Cured, but hardeſt of all the Brain, and the Lungs, becauſe they have a weaker expulſive faculty, and Medicaments do not eaſily penetrate thither.

26. From al which 'tis eaſily collected, what wil be the event of the Diſeaſe, for by

by how much the more, and more grievous diſeaſes and Symptomes are joyned with the Veneral diſeaſe, by ſo much the more the ſick are indangered; by how much the fewer, and lighter, by ſo much the leſs: and thoſe chiefly die, who to their putrid and Malignant Veneral Diſeaſe, have ſupervenient thoſe Feavers they call Gallical; for the Veneral Virulency whiles it corrupts the Humors, and induceth a Malignant quality into them, makes the Feaver worſe, and alſo debilitates the innate heat, whence neither the Feaver, nor that Malignant diſeaſe can be overcome by Nature.

27. Very many alſo die of a waſting of the body, and a hectick Feaver, or rather a ſlow, and putrid one: for both the Veneral virulency it ſelf, and the pains, watchings, and other ſymptomes do debilitate the innate heat, hurt nutrition, whence follows a waſting of the whol body, to which is joyned a ſlow putrid Feaver raiſed from the evil Humors.

28. Sanguification alſo being hurt, ſome die of a Dropſie.

29. Many alſo die by reaſon of Catarrhes, falling down on the jaws and Lungs, hindering and taking away their breath; or the Veſſels of the Lungs being eaten by a ſharp Catarrhe, and firſt of al ſpitting of blood being raiſed, then a Phthiſick, they die.

30. Somtimes the Veſſels being eaten in two by the acrimony of the Humors, and Vomiting of blood cauſed, the ſick die by too great a Flux to the ſtool, or by the Womb.

CHAP. VIII.

Of Prevention.

WHenas 'tis ſafer to prevent a Diſeaſe, than to cure it, ſome Phyſitians endeavor to teach, by what means one may keep himſelf clear, though he have had to do with an infected Woman. Of which buſineſs *Fallopius* treats in the whol Chapter, 89. *de Morb. Galli.* and he writes that he ſhould ſeem to have done nothing unleſs he teach, how one ſeeing a handſome Woman, and lying with her though ſhe be infected, may be preſerved from the French Diſeaſe: and he cals the immortal God to witneſs, that he hath made tryal of it in ten thouſand men, and none of them was infected: and he propounds there two medicaments, by which the Contagion received may preſently be drawn forth, diſſipated, or dryed up. *Hercules Saxonia*, propounds the ſame, *de lue Vener. cap.* 16. and does very much commend them, and as *Aurelius Minadous* ſpeaks of this buſineſs, many confide that being guarded with thoſe Medicines as with a buckler, they may enter the moſt infected whores, and freely ramble al the world over. *Euſtachius Rudius*, alſo propoſes the like Medicaments, *Lib.* 5. *de morb. occult. cap.* 13. But indeed I do not beleeve, that thoſe things can be taught with a good conſcience, by which ſo many men are encouraged to luſt, whom perhaps the fear of this Diſeaſe might have frighted from it; and therefore we wil ſay nothing of theſe Medicines; but *Aurelius Minadous* thinks they themſelves are deceived, that teach ſuch things, *Cap.* 31. *de Virulentia Venerea.* Where he overthrows *Fallopius* foundation, who thinks that this Diſeaſe is only communicated by the leaſt purulent bodies, which if they be wiped away, extracted, diſſipated, this Diſeaſe may be turned off, and he teacheth that the Contagion doth not only enter by the external parts of the Privities, but alſo chiefly by the internal, and runs through the Body, and that the infected Vapors, and ſpirits do paſs through the internal poroſities, and are admitted by the Veins; and therefore no man can promiſe himſelf health and ſafety from waſhing, which only reaches to the external parts, nor from other Medicaments outwardly applied, neither can ſuch external Medicaments take away the Pollution conceived within. The ſafeſt way therefore to avoid this Diſeaſe is to abſtain from whores, and to *Prevention*

remember that Whoremongers and Adulterers the Lord wil judg, who yet is wont alſo to puniſh them in this Life, with that moſt filthy Diſeaſe.

Yet *Jul. Galmarius*, hath another way of prevention of this Diſeaſe, to wit, by internal Medicaments, and he writes that he hath found out an antidote or a Mullet, by the uſe of which mens bodies are rendered ſafe againſt this Diſeaſe, yet he entreats and conjures al Phyſitians and Chyrurgeons, that they do not communicate and make known that Medicine in obedience to luſtful people, and that they make not themſelves foſterers of luſts, but to them only who muſt neceſſarily converſe with thoſe that are ſuſpected or defiled. But he deſcribes that Antidote, *Lib.* 1. *cap.* 8. and this is it.

Take *of the Amulet for the Pox, and of old Mithridate, by* Galens *deſcription, of each ſix drams; Conſerve of the flowers of Bugloſs, of broom, of Roſemany, of each three drams; mix them, give one dram, or a dram and an half, or two drams at the moſt, in the morning two hours before meat, eight or ten daies together.*

But if any one ſuſpect himſelf to be infected, he admoniſheth that he earneſtly uſe a greater care for prevention: therefore let him take of the Alexipharmacal Medicine even now deſcribed, ſwallowing a dram, or a dram and an half in the morning and before ſupper, for eight or ten daies together, whoſe Vertue that it may reach the eaſier to the more remote parts, when they have ſwallowed it, 'tis expedient they drink preſently after it ſomwhat of this Julep, by which as its vehicle it may be carried into every part.

Take *of the water of bleſſed thiſtle, burnet, Devils-bit, of each two ounces, of Syrup of the juyce of Sorrel, of Lemmons, of each an ounce and an half. Make a Julep for two doſes, to be drank preſently after the taking of a dram and an half of the Amulet, in the morning, and two hours before ſupper.*

But whenas al thoſe ſimple Medicaments, which are in that Antidote, are not proper to this Veneral Diſeaſe, we muſt conſult with experience, whether their vertue be ſo great, as *Palmarius* cries it up for.

CHAP. IX.

Of Indications.

Indications THoſe Indications which are in other diſeaſes, are found alſo in this; to wit, That which is taken from the Diſeaſe, called in ſpecy Curative: That which the cauſe doth afford, Preſervatory, whether alſo are referred urgent Symptomes; and laſt of al the Vital, for they deſervedly challenge a place in this diſeaſe, yet in the explaining of them Authors vary much, and as every one thinks of the Nature of this Diſeaſe, ſo alſo he teacheth concerning its indication and cure. We inſiſting on thoſe things which we have formerly prepoſed of the Nature of this Diſeaſe, and have ſtrongly proved, think thus of indications in this Diſeaſe.

Firſt of al, whenas this Diſeaſe is occult, and Malignant, chief enemy to the Liver and nutritive faculty, therefore it affords a kind of genercial indication, but no ſpecifical and profitable one can be had from thence, and therefore only experience, which hath found out Medicines working by an occult quality, hath adminiſtred profitable Medicines in this Diſeaſe: and unleſs the Spaniards had received from the Indians ſuch Medicaments, as Lignum Sanctum, Sarſaparilla, China Root; and the boldneſs of Chyrurgions, and eſpecially *Jacob Carpus*, had not fallen upon the uſe of Mercury, either by chance or by argumentation, whiles they read that *Avicen*, *Meſue*, and *Theodoricus*, made uſe of quickſilver, in certain puſtles, and a cruſty Scab, perhaps even to this day the true Remedies of this Diſeaſe would lie hid. But though the Remedies of this diſeaſe, were not found out ſo much by indication, as by experience; yet a Method in curing of it is not wholly excluded, but hath its

place

place alſo, whenas 'tis neceſſary that thoſe Medicaments found out by experience be rightly applied; and beſides alſo Tumors, Ulcers, and the like Diſeaſes ſpringing from the corruption of Humors, have their Method, by which they are cured. Yet in this caſe we muſt have a care, that we do not look more on the manifeſt qualities, and known diſeaſes, than on the occult Nature of the diſeaſe, in which buſineſs notwithſtanding many do fail, who are tedious in curing of divers diſtempers, preparing the Humors, and directing their cure to theſe or thoſe diſeaſes. Whenas yet 'tis plain by experience, that in a hot, and in a dry diſtemper, and in an exuſtion of the Humors, as they ſpeak, and in a Conſumption it ſelf, we do moſt happily uſe pockwood, and the like hot and dry things, and the Malignity being overcome, the reſt do eaſily vaniſh.

Secondly, as concerning indication preſervatory, here we muſt chiefly have reſpect unto that Malignity and virulency imprinted on the Humors, and that is to be deſtroyed by proper and Alexipharmacal Medicines. Yet if there be any other faults in the Humors, it wil not be unprofitable alſo to mend them. And whenas the body is either burthened with a Plenitude, or abounds with vitious Humors, the malignity is the eaſier diſſeminated into it, and there is more plentiful matter prepared for putrefaction, and the force of the Alexipharmacal means is dulled, it is expedient to empty either the ſuperfluous blood, or the vitious Humors, that the other Medicines afterwards may be adminiſtred more ſafely, more commodiouſly, and with greater benefit. *Preſervatory.*

Thirdly, the Diſeaſe and various Symptomes, which ſupervene to the principal diſeaſe, and ariſe from the corruption of Humors, are al to be removed in their proper manner. *Curative.*

Fourthly, the ſtrength is to be preſerved, for as no other diſeaſe can be cured, unleſs there be ſtrength of body, ſo nor this; and al attempts are in vain, unleſs at leaſtwiſe we have Nature willing. *Vital.*

And ſo there are four things chiefly to be done in this diſeaſe: Firſt of al, if blood abound, that muſt be diminiſhe, and if any vitious Humors abound, they are to be prepared and emptied, and if there be any manifeſt diſeaſes, which may be an impediment to the proper Cure, as obſtructions and the like, they muſt firſt of all be taken away. Secondly, the Malignity and virulency as wel that inherent in the humors, as that imprinted on the parts, and principally the Liver, is to be deſtroied by the proper Alexipharmaca of this diſeaſe. Thirdly, the ſtrength is to be preſerved and confirmed, and firſt of al chiefe care is to be had of the Liver, which ſuffers in this diſeaſe. Fourthly, the diſeaſes and Symptomes which are wont to be joyned to this diſeaſe are to be taken away. *Four things to be done in the Cure of the Veneral diſeaſe.*

Here we muſt clear a controverſie, to wit, Whether this diſeaſe may be cured without ſweating? Some are of this opinion, That this diſeaſe may be taken away, though ſweat be not provoked: And firſt of al they prove it thus, Becauſe this evil conſiſts in a certain hidden quality which cannot be taken away but by alteration of the body, whenas contraries are cured by contraries: but that alteration may be affected by the proper vertue of antidotes and decoctions adminiſtred, without ſweating. Next of al they alledge experience, by which it is evident, that by the taking of ſuch Medicaments, ſome have recovered without ſweating. Thirdly, they urge this, That thoſe that drink the decoction of the wood are ſomtimes happily emptied by nature, by urine, by the ſtool, and not alwaies by ſweats. *Whether the cure may be perfected without ſweating.*

Aurelius Minadous, contends againſt theſe, *de Virulen. Vener. Cap.* 39. And firſt of al he writes that he never obſerved, that Phyſitians commanded the decoction to be taken without ſweating, to which al Alexipharmacal things of their own Nature do incline men, neither is the matter it ſelf unfit to be expeld this way, being Vaporous and halituous: neither was there ever any one, who did throughly and wholly overcome this diſeaſe without the help of ſome ſweating, eſpecially if it were inveterate; but why he holds thus, he brings this reaſon, That in his opinion, the eſſence of this evil doth not conſiſt in a quality, but in the body affected

affected with an evil quality: and therefore he holds, as a quality doth indicate alteration, ſo a body indicates Evacuation, which though it may be many waies, yet moſt commodiouſly by ſweating: whenas this very thing is a Vaporous body, and is moſt rightly and eaſily diſcuſſed by ſweat; and he adds this, whenas there is a great quantity of Excrements abounding in thoſe bodies infected with this diſeaſe, not only in one part, but al over the body; but ſweat is an univerſal Evacuation, they are moſt commodiouſly emptied by ſweating: and he holds that ſweats do very much profit the Liver eſpecially. For whenas that is the Forge of Humors, which are carried through the whol body, and they are purged by the benefit of ſweat, and freed from al defilements, alſo the Liver polluted may be this way cleanſed, and though Nature ſomtimes do empty the virulent humors by ſome other part, as by ſtool, or by Urine, and then her endeavor is not to be hindered, but to be helped forward; yet he holds that without ſweating the whol body cannot be freed from that Diſeaſe, and he thinks that ſweat only can empty from al places both internal, and external, quickly, ſafely, and pleaſantly.

The deciſion But neither of theſe opinions doth fully reach the Truth, and both delivers an imperfect Cure. For whenas the Curative indication ſo called in general, is twofold; the one preſervative, which is taken from the cauſe; the other in ſpecy called Curative, which is taken from the Diſeaſe; they who think this diſeaſe may be cured without ſweat, becauſe it conſiſts in a certain hidden and Malignant quality, think right concerning the curative indication, whenas that malignant quality cannot be taken away by ſweating, or other Evacuations, but by proper Alexipharmaca, yet they neglect the preſervative indication, and the cauſe: for whenas it is certain, that in the Veneral diſeaſe, there is not only a vitious diſpoſition, and Malignant, in the parts, eſpecially the Liver, but that al the Humors of the Body are corrupted; there is required then an Evacuation of them, which is moſt commodiouſly done by ſweating, as *Minadous* rightly proves. For though ſomthing be diſcuſſed inſenſibly, yet that inſenſible Evacuation is not ſufficient, and 'tis too ſlow. But *Aurelius Minadous*, thinks wel concerning the taking away of the Cauſe, and the Evacuation of vitious Humors, which is moſt rightly done by ſweating; but he neglects the diſeaſe it ſelf, or that Malignant quality, imprinted not only on the Humors, but alſo on the Living parts: from which it appears, which is diligently to be taken notice of, that the diſpute of occult diſeaſes, is not amongſt thoſe which *Galen* calls Logical, but does conceive the very eſſence of theſe diſeaſes, and that the ignorance of the occult diſeaſes, doth not only breed Errors in theory, but alſo in practice. Therefore though we do grant, that the Evacuation of Humors is wel ordered by ſweating, yet Alexipharmaca are neceſſary alſo, againſt that malignant diſpoſition in the parts, eſpecially in the Liver, and *Fernelius*, whom *Palmarius* follows, for this very cauſe do add peculiar Alexipharmaca, as ſhal be ſaid, that that Malignant diſpoſition may be pulled up by the Routs. For though al the vitious Humors be emptied, and al other diſeaſes and Symptomes do ceaſe after their emptying; yet unleſs that Malignant diſpoſition be taken out of the parts, the evil grows freſh again, and oftentimes a long while after. And this I think is the cauſe, that not only the decoction of Pockwood, Sarſaparilla, and the like, is given in the morning to provoke ſweat, but alſo without ſweating is taken as common drink; for the very ſame proper Medicines, which do deſtroy the occult cauſe and malignity in the humors, and do empty the vitious humors by ſweat, are able alſo to Eradicate the diſpoſition imprinted in the parts.

Laſt, of al this muſt not be paſt over, that the indications propoſed before, are not neceſſary to be obſerved in every French diſeaſe, but only in that, which hath almoſt invaded the whol body, and eſpecially hath poſſeſſed the Liver. But if the evil be new, there is no need either to let blood, or to give purges, whenas the fault is not yet communicated to the humors, but it is enough to wipe off, or cal forth the contagion received, which alſo is ſufficient in the ſcab newly contracted by contagion, where yet we muſt obſerve, whether thoſe puſtles, and French rottenneſs, as they

they cal it, do immediately proceed from contagion, and whoriſh copulation, for then external medicines do ſuffice, or whether they do ariſe from the Liver now affected, for then there is need of evacuations and alexipharmaca.

Chap. X.

Of the Cure. And firſt of bleeding.

FIrſt of al therefore as concerning indication preſervative, or the removing of the cauſes, and bleeding at the beginning; truly the cauſe of this diſeaſe properly and next of al is not taken away by letting of blood; yet if blood do abound in the body, and that eſpecially be too hot, the proper remedies of this diſeaſe, which are hot and dry, cannot be ſafely adminiſtred unleſs the abounding blood be firſt diminiſhed.

And truly if the virulent matter have no peculiar motion to any part, the baſilick veine may firſt of al be opened: but if the matter have motion to ſome particular part, as to the groin, and nature thruſt forth a bubo, bleeding is warily to be uſed: for if the bubo tend to ſuppuration, we muſt not let blood, and eſpecially in the Arme, leſt nature be troubled in her expulſion, and the matter be recalled to the inward parts. And it hath been obſerved, that many from the bubo opened, and the matter a long while emptied by it, have become perfectly ſound; on the contrary from unſeaſonable bleeding, the evil hath been prolonged; therefore in bleeding we muſt attend the motion of nature, and when the tumor doth not afford hopes of ſuppuration, a veine muſt be opened in the lower parts, for ſo the the matter is retracted towards the lower parts, and by reaſon of the efflux of hot blood, 'tis afterwards more eaſily ſuppurated. After the ſame manner a veine is to be opened in the yard, if there be rottenneſs in the privities, or a running of the Reines, and wholly if the parts below the Liver be affected: but if the matter ruſh to the head, and there cauſe moſt vehement pains, filthy ulcers, falling of the haire, the cephalick veine in the Arme is moſt commonly opened.

The other precepts which are propounded in general concerning the right adminiſtration in bleeding, are here alſo to be obſerved; which whenas they are not proper to this affect, we ſhal no further propoſe them here.

If the ſtrength wil not beare bleeding, inſtead thereof the hemorhoidal veines of the Arſe, may be opened, or Cupping-glaſſes be applied in convenient places.

Chap. XI

Of the preparation, and purging of vitious humors.

NExt of al if the body be cacochymical, the vitious humors muſt be emptied and prepared with convenient medicaments; whenas in an impure body alexipharmacal meanes, and proper remedies of this diſeaſe, do profit little, nay they may bring hurt, and though that diſeaſe be overcome, may render the body obnoxious to other diſeaſes. For vitious humors collected about the bowels cannot al be diſcuſſed and diſſipated by ſweat, but the thinner part being diſcuſſed the thicker is left, and grows dry, and is faſtened in the bowels, and oftentimes contracting an acrimony, doth weaken the ſubſtance of the veſſels: from whence that diſeaſe grows ſometimes more ſtubborn to cure, and there ariſe obſtructions of the Liver and Spleen, and ſchirrous tumors, hypochondriacal diſeaſes, and creeping ulcers. *Preparation and purging of humors.*

Not yet is purging only to be uſed in the beginning, and before the proper cure of the diſeaſe, but alſo the whol time of the cure, if vitious matter be collected again,

'tis

'tis to be emptied by intervals: yet if the evil be now inveterate, and stick principally in the external parts, the vitious matter is not rashly to be recalled to the inward parts by strong purgers, least the *Liver*, Stomach, and other bowels be hurt and weakned, but 'tis to be emptied by convenient places, where nature tends.

But concerning the preparation and purging of humors, though many Authors are large enough, yet whenas those things which are spoke by them, concerning an universal preparation and purging of humors, are not proper to this disease, but are common to al depending on a cacochymy: it seems not worth our labor, to dwel upon those generals, which are already known by the cure of many other diseases. We shal only admonish you of these things; first of al when the disease is new, we must observe, what vitious humors abound in the body, and especially in the second region, and those must be prepared and emptied. But if the evil be now inveterate, because in that for the most part, thick and adust humors are collected, the medicins are first of al to be directed against them. Next of al this is to be observed, that we have respect also to the distemper of the bowels, and if they have contracted any distemper, that must be corrected, and they must be strengthened with proper medicaments. Thirdly, it is necessary, that we alwaies ad somwhat to our preparatives and purgers, which doth resist the Veneral virulency by a specifick faculty; and therefore concerning common purging medicines we wilad nothing, whenas they are every where obvious and known, but this that many physitians do testify, That Mechoacan, to which belongs Jallop, is given not only for its purging faculty with benefit in this disease, but also because 'tis an enemy to this evil by a peculiar power, so that it is numbered by some amongst the antidotes of this disease. Then by the Chymists mercury prepared is chiefly commended for the curing and purging of this disease, of which shal be spoken hereafter in particular.

Chap. XII.

Of the proper remedies and antidotes and alexipharmaca of the Veneral Disease in general.

After the body is emptied in convenient manner, the greatest hopes of this cure is in the proper antidotes of this disease, as from which only perfect health can be hoped for so indeed, that though divers other diseases, arising from the corruption of humors, be often joined with this disease; yet if that malignity be taken away, a little while after either they vanish of their own accord, or are easily cured, but without the help of these remedies, no perfect cure can be hoped for by other medicines, under what name soever: and this too is observed by many that these kind of medicaments though by their manifest qualities they seem to be adversaries to a hot and dry distemper, yet these hot and dry medicaments have been used with most happy success by many, who were endewed with a hot and dry distemper of the Liver, nay of the whol body, and who had a leane habit of body, nay we e almost plainly consumptive, from which very thing appeares, that in this disease, we ought rather to take care of the occult malignity, than of the manifest distemper. And therefore as soon as the body is in some sort prepared and emptied, we must maturely hasten to those Alexipharmaca of the Veneral disease.

Alexipharmaca of the Veneral disease are necessary.

But though some Physitians would advance and extol the vertues of those medicaments which shal preferrly be reckoned up, whiles they hold, that the decoction of Juniper wood, of the Olive tree, Box, Beech, and other trees may performe the same, as the decoction of Guajacum, so that a most slender course of dyet be used, as is wont to be observed with the decoction of Pock-wood: yet experience hath long since taught that that is false: for though it be certain that by a most slender diet some symptomes of this disease do grow more gentle, yet unless proper remedies be administred, a little while after the disease is seen to grow fresh again, and

returne

return more cruel: for ſuch medicines indeed with a ſlender diet, may conſume the vitious humors, but they cannot overcome the malignity: as therefore this diſeaſe is occult, and is not known but by its effects, ſo alſo the remedies which cure this diſeaſe, are not found out by reaſon, but only by experience.

But what thoſe medicaments are, Phyſitians again do not fully agree. Many put their greateſt hopes in Quickſilver, and think that the only and proper Alexipharmacum of the Veneral diſeaſe; others do wholy reject it, of which buſineſs ſhal be ſpoke hereafter. Others, and moſt men indeed, undertake the cure of this diſeaſe with the uſe of Guajacum, Sarſaparilla, China root, Saſſafras wood; and others doubt of theſe very things, nay ſome deny that this diſeaſe can be overcome by the uſe of Guajacum only and the like, and therefore they think their vertue ought to be quickned and increaſed by the mixture of other things. *Jul. Palmarius lib. de lue Vener. cap.* 13. diſtinguiſheth and thinks that Guajacum is not of ſo great force that that alone can wholy extinguiſh the root, and al the deadlineſs of the veneral poyſon; neither that it is ſo weak, that it can do nothing without the help and conjunction of other things; he writes indeed that by the uſe of that alone, the humors being conſumed, al the ſymptomes of the diſeaſe wil at length be allaied, and wholly lie hid, but yet the virulent taint of the diſeaſe, which is already in the ſolid parts, is not overcome, and wholy extinguiſhed in moſt people by that remedy; but that the deadlineſs of the latent poyſon be wholy extinguiſht, and that the return of the diſeaſe be prevented, he thinks other alexipharmaca ought to be adminiſtred, which opinion doubtleſs he received from his Maſter *Fernelius*, for he writes that he, as in *lib.* 1. *de. lue Vener. cap.* 7. did firſt dare to promiſe a perfect cure of the French Diſeaſe without the uſe of Quick-ſilver, and that he took care for the Compoſition of many Alexipharmaca at his Houſe, which he gave againſt this poyſon with Guajacum, and ſomtimes without it, and as he writes in the alleaged *Cap.* 7. two of theſe medicines which he found to be moſt excellent and efficacious, he by the addition of other medicines hath reduced into one, which hitherto never failed any man. *What they are.*

But whenas theſe medicaments are compounded of common Alexpharmaca not proper to this diſeaſe, we ſhal not propoſe them in the firſt place, but hereafter we ſhal ſpeak ſomwhat of them. But in the firſt place, we ſhal treat of thoſe things which moſt Phyſitians have hitherto uſed, and which long experience hath now confirmed to be alexipharmaca of this diſeaſe, by the uſe of which it hath been a long time obſerved, that not only the vitious humors have been emptied, and the ſymptomes deſtroyed; but the very roots of the diſeaſe have been pulled up, that it could no more returne. Of which ſort are your pock-wood, ſarſaparilla, China root, Saſſafras-wood, of which we wil now ſpeak.

Chap. *XIII.*

Of the Indian Wood, and Guajacum.

The Indian wood.

AND firſt of al we wil treat of the Indian wood, as being that which challengeth the cheife place amongſt the remedies of this diſeaſe. For whenas this diſeaſe is reported to be endemious in the *Indies*, the chiefe remedy is alſo fetcht from thence, which they cal the Indian wood; but this ſort of wood, as appeares by *Conſalvus Oviedus* a noble Spaniard, who writes of things in the *Indies*, is two fold; the one which is commonly known, called Guajacum, the other which is called the holy wood. For though by many theſe two woods are taken for one and the ſame, yet the forementioned Author, doth diſtinguiſh them both by their marks and places, concerning which ſee *Fallopius de morb. Gal. cap.* 39. yet whenas both woods have the ſame force to overcome the French diſeaſe, (though it be reported that the holy wood be of greater force againſt articular diſeaſes, and others, and the holy wood is now a days ſeldom brought over to us) we ſhal only ſpeak of Guajacum.

Two fold. Guajacum.

The holy wood.

A mongſt other new Iſlands found out in former Ages, there is one alſo, which the Spaniards the diſcoverers have called by the name of *Hiſpaniola*: whenas the Veneral diſeaſe was reported to be indemious there, and the decoction of a certain wood is eſteemed there the only remedy of that diſeaſe, which at this day is called guajacum, & by the inhabitants is pronounced with gaping Huajacum. The Spaniards infected with the ſame diſeaſe, having found the ſame decoction to be helpful, did afterwards diſcover it's vertue to others: the tree is reported to be leaved like aſh, the color of the wood within is blackiſh, the wood it ſelf is heavy and ponderous, it floares not in water, but ſinks; 'tis ful of rozin, and while it burnes, it ſends forth no ingrateful ſcent, its taſt is ſomewhat bitter, with a light accrimony, pricking the tongue.

The Choice of Guajacum.

There is ſome doubt amongſt phyſicians concerning the choice of it; ſome are of opinion, that which is whitiſh, is to be preferred before the reſt; whenas by how much the leſſer 'tis in years, by ſo much the whiter it is, but the older it is, by ſo much the blacker it is: but that which is older is dryer, and that which is yonger is more moiſt, and more abounding with juyce, and therefore more powerful. But indeed whenas there is a two fould humor in living things, the one primogenious, the ſubject of innate heate, or the implanted ſpirit, apt to take fire; the other alimentary, more watriſh, and leſs apt to be ſet on fire: the vertues of this wood, as alſo of other plants, are not to be judged from the alimentary and more watriſh humor, but from that implanted heat, and primogenious humidity; which whenas in 'its tender age, both in infants, and in plants, 'tis overwhelmed and obſcured by much moiſture, many actions in that age are infirm and weak, which afterwards that moiſture being ſomewhat waſted, and the heat become more vigorous, in progreſs of time they become more ſtrong, and this heat the cheif inſtrument of al actions is wont to conſiſt unchanged til it comes to its ful age, and heigth: and therefore though the ſame innate heat and radical moiſture be alwaies in Guajacum, on which its vertues do depend, yet becauſe in the yong and tender wood, that vertue is as it were over whelmed, and reſtrained by the abundance of moiſture, that wood which is the yonger is leſs efficacious, than that which is now of a ful confirmed growth: and therefore for the cure of this diſeaſe, we muſt not chuſe that wood which is yellowiſh, or that is of a box colour, or that which is cut of a tree not ful grown, or from the boughs, as being leſs efficacious; but rather that which is ſomewhat black, becauſe that is more rozmy, and abounds with that fat and balſomy ſubſtance, in which doth chiefly reſide that vertue oppoſite to veneral virulency. It is good therefore to know the age of this wood, that we may chooſe the moſt effectual. For that indeed which hath the inward part black, and is long waies divided with clefts as it were with certain lines of a duskiſh colour, gathered into blackiſh rounds, that is efficacious, but yet 'tis ſuch as is cut off either from the arms of trees, or certainly hath not yet attained its ful maturity, and therefore 'tis of leſs efficacy: for thoſe kind of Lines do therefore appeare becauſe that fatty ſubſtance, which doth chiefly reſide in the middle trunk of the tree, is not yet ſo plentiful, as to fil up al the internal parts of the wood: but that which is black al over the internal parts, the ſuperficies only being whitiſh, that if it be ſound, weighty, and odorous, and prick the tongue with a light acrimony, and either is not divided with any lines, or elſe with thoſe ful of rozin, and therefore while it burnes beſides the grateful ſmel it ſends forth, it alſo yeelds a blackiſh rozin that hath attained the higheſt degree of maturity, and is cut off from the body of the tree, and is therfore moſt effectual, but if it be divided with lines, and ful of holes, and neither weighty, nor odorous, nor acrimonious, and being lighted yeelds no rozin, it is a ſign that that is now old, and therefore its vertues are grown dul.

How the age of this wood is to be diſcerned

L. Septalius alſo doth admoniſh us here, that there is a certain ſort of Guajacum, which is never to be brought into uſe, which hath no true blackneſs in the middle of it, but is of a ſomewhat darke and greeniſh colour, which makes the decoction very thick, that it wil never be cleare, and by its exceeding acrimony, it cauſeth a heat both

both in the throat and jaws, and by reaſon of its thick and earthy parts, for the moſt part it cauſeth obſtructions in the ſpleen, ſometimes alſo in the liver, Empiricks cal it the wild holy wood: but whereas he finds no where in Authors this twofould difference of domeſtick, and wild; he rather thinks it acquires theſe qualities from the nature of the ſoil.

Alſo if the barke be thick, and cleave ſo to the wood, that it can ſcarce be pulled and parted from it, the wood is good: but if the Bark be eaſily ſeparated from the wood, either 'tis old, or periſht by ſalt water: alſo if the wood appear fatty whiles it is raſped, and that being maſticated doth bite, and leave a bitterneſs behind it; and whiles it is cut, it appeare ſolid with an even ſuperficies, not rough and ful of holes, the wood is good.

The bark of Guajacum.

The Bark of this wood is endewed with great acrimony and bitterneſs, and therefore dries, attenuates, and digeſts more powerfully than the wood; but becauſe that occult vertue which is oppoſite to this diſeaſe, is rather in that fatty and moiſt, and balſamical ſubſtance, the wood is alwaies preferred before the bark; and beſides the bark is not ſo conveniently given in hot and dry bodies.

The vertues of Guajacum.

As concerning the vertues of Guajacum, it is hot and dry, as may be perceived from its taſt, ſmel, and acrimony, and that in the ſecond degree, and 'tis alſo of thin parts, whence it hath power to attenuate craſs things, to cut and cleanſe clammy humors, to open obſtructions, to move ſweat and urine, and to diſſipate and waſt ſuperfluous cold humors: but this pockwood is not chiefly given for thoſe qualities (whenas there are found in *Europe* medicaments endewed with thoſe qualities, that there was no need to tranſport them out of the *Indies*) but principally for that peculiar and occult power. By which it is oppoſed to the Veneral virulency: and truly al phyſitians almoſt doe agree that pockwood doth deſerve the firſt place amongſt the alexipharmaca of the veneral diſeaſe: for though *Fernelius* would ſomewhat leſſen its vertue, becauſe al that are affected with this diſeaſe are not cured by the uſe of it, yet this is no ſufficient cauſe, ſince there is found no ſuch alexipharmacum, or other medicine which can cure diſeaſes paſt hope. But this wood is by an occult quality and propriety oppoſite to the Veneral virulency it ſelf, and is a friend to the radical moiſture, and natural baſtom, which doth moſt of al ſuffer by this virulency inimicous to the nutritive faculty; and doth ſo ſtrengthen it, that it hath been obſerved, that thoſe alſo, who had a liver, and whol habit of body hot and dry, and who have been almoſt conſumed with the veneral diſeaſe, as was ſaid before, by the uſe of the decoction of this wood, though by its heat and dryneſs adverſe to them have been reſtored, and become better habited and more corpulent. Some indeed have dared to write, that the decoction of this wood doth nouriſh as much as chicken broath: but theſe ſeem to me, to be exceſſive in the praiſe of this wood: for though it be a vegetable, and perhaps may leave ſome alimental juyce in the decoction, yet I think no body that is in his right mind wil eaſily deny, that a chicken hath not more convenient nouriſhment for a man, than Guajacum, but that ſome after this diſeaſe become more corpulent, is accidental; for whenas by reaſon of the Veneral virulency nutrition was hurt in the whol body, when that is diſcuſſed and extinguiſht, the body begins again to be nouriſht wel, and to be augmented: the like of which happens alſo in ſome other diſeaſes, eſpecially in feavers, before which whenas men were not wel fleſht by reaſon of evil nouriſhment, the vitious humors being waiſted by the diſeaſe afterwards they begin to be nouriſht wel, and become more corpulent.

Whether pock-wood do nouriſh.

Fr. Arcæus alſo *lib. de curand. vulner. rat.* gives the † Decoction of Guajacum for ulcers of the Lungs, and the priſick; and he writes, that bodies, though they be waſted, are not offended by it, but rather grow fat upon it: nay there are ſome, who attribute a nutritive power to Guajacum, and write that it is no leſs nouriſhing than chicken broath. The ſame vertues alſo others do attribute, * to Sarſaparilla, Saſſafras, and eſpecially to China root, but indeed though it be found by experience, that in the

† *Whether the decoction of Guajacum, Sarſaparilla, Saſſafras China root, do fatten.*

* *The decoction of Guajacum, Sarſa, Saſſafras, China root, nouriſh not but by accident.*

the ptisick, Veneral disease, scab and other diseases, bodies extenuated, have been restored again, and made fat by the use of these decoctions, yet this comes to pass not of it self, because these decoctions have a nutritive faculty, as other nourishments, but by accident, in as much as they take away the cause of leanness. In ptisick bodies the case is plain; for whenas that wasting of the body proceeds from an ulcer of the Lungs, the ulcer being dried up by the use of Guajacum, the body begins to be wel nourisht again: the same happens in other diseases, as the French, the Scab, and the like. For whenas that leanness, and consumption doth proceed from bad nourishment, but bad nourishment for the most part from acrid and salt humors, which do both consume the good blood, and hinder the agglutination of it to the body, those vitious humors being wasted by the decoctions, and discussed by sweats, the bodies begin to be nourisht wel again, nay grow fat.

But this wood hath not only an alterative power, and by its occult quality to extinguish that malignity of the Veneral virulency, imprinted both on the humors, and the solid parts, but also to evacuate, both sensibly by sweating, and insensibly by insensible transpiration: and therefore the way of curing the French disease by Guajacum, and medicines of affinity with that is most in use. For though by reason of the length of the cure, and the pains of sweating, and the slender dyet, it cause some trouble to them: yet it is far safer than that way, which is by quicksilver, where if there be an error, the patient is in no smal danger.

Medicines made out of Guajacum.

But there are prepared out of Guajacum divers medicaments, and those either in a liquid forme, or in a solid, and in substance: but those given in a liquid forme, are most effectual, whenas they are easily deduced into act and penetrate into the whol body, and do irritae the expulsive faculty of al parts to cast off what is hurtful: but in a solid forme, whenas that part in which the vertue of the medicine doth cheifly reside, is not yet separated from the earthy and thick part, 'tis not so easily deduced into act. The decoction therefore as most convenient is most in use: yet if any by reason of the continued use of this medicine be weary of it, and nevertheless do feare least there be some reliques of the evil humor remaining, or their course of life wil no longer admit of the use of the decoction as it ought to be taken, to such, medicines made out of this wood, may be given in another form. Amongst which extracts and spirits, as shal be said, are most efficacious, and far more excellent than pouders.

The manner of preparing a decoction of the wood.

But the manner of boyling this wood is various, both in respect of the liquor in which the decoction is made, and of the quality of the liquor: for some boyl the wood in water, some in Barly water, some in distilled waters, others in wine, others in Whey, and others in broth of Flesh. *L. Sepalius lib. 7. animadu. nu.* 204. reprehends those who deny, that the decoction of this wood may be made in wine only, when as nothing is more fit to extract the faculties of medicines, than wine, and the water of wine (he had spoke righter than the spirit of wine) and therefore he prepares his decoction with wine, which he useth when the disease is inveterate with an evil habit of body, and a cold matter predominant: after this manner eight ounces of the bark of the best holy wood grossely poudered being infused in forty two physical pints of the best white wine, for two days, the wine being first heated and alwaies kept hot those two days in a double vessel, or in the ashes; afterwards with a slow fire boyl it away in a double vessel, to the consumption of the third part, which let the sick make use of, both in the morning instead of a syrup, and for his drink at meales, let him take in the morning seven ounces, & an hour after move sweat: but at dinner, and supper let him not exceed fourteen ounces. But though we grant that wine is most commodious to extract the vertues of vegetables, yet this cannot be denied that by boyling the strength of wine doth vanish, and when the spirit is exhaled, there is left a nauseous phlegme less profitable than plain simple water. And therefore I am of that opinion that either the wood is to be boyled in water, and towards the end, the wine is to be added, or else the wood

Whether it ought to be boyled in Wine.

is

is only to be a long while infuſed in wine, or to be boyled in a double veſſel, that nothing be loſt, but by no means to the Conſumption of the third part.

Therefore moſt commonly and rightly the decoction is made in pure water, which doth both a little correct the Heat and drineſs of the Medicine, and further the diſtribution, and provocation of ſweat, yet if the body, and eſpecially the ſtomach be cold and weak, and the Patient accuſtomed to wine, Wine is not unprofitably mixt with it, as was ſaid even now, and ſhal be ſaid hereafter; for by the admiſtion of Wine the ſtomach is leſs hurt, and the vertue of the Medicine doth the eaſier penetrate to al the parts.

And a different proportion of the wood to the water is obſerved according to the age, conſtitution of the body, and ſeaſon of the year, and they take to twelve pound of water, from three ounces of the wood to twelve: for if the ſeaſon of the year and the body be hot, 'tis ſafeſt, to take a leſs quantity of the wood, and in a longer time to perfect the Cure, than by too ſtrong a Medicine to damnefie the patient, eſpecially at the beginning of the cure, and before the ſuperfluous Humors in the body be abated, and ſweat begin to flow eaſily and exquiſitly, and the patient be accuſtomed to the Decoction, afterwards by degrees you may take more of the Wood, which unleſs it be obſerved, the Patient is eaſily brought into danger. And *Euſtachius Rudius* writes, *Lib. 5. de Morb. occult. Cap.* 13. That he hath ſeen patients who by this error, *viz.* too great a quantity of the wood given on the firſt daies, have fallen into a Feaver, that afterwards they have been forced to abſtaine from the uſe of the decoction, to their great detriment: but where there is no ſuch thing to be feared, in thoſe of ripe years, we commonly add to one pound of the wood raſped or turned ſmal, twelve pound of water, in an earthen Veſſel glaſed, and let it infuſe twenty four hours in a warm place, afterwards the veſſel being wel covered boyle it with a gentle fire, til half, or the third part remain, and let the decoction cool in this veſſel ſtil covered, afterwards ſtrain it.

The proportion of wood to the water.

Fallopius Lib. de morb Galli. cap. 46. diſputes whether it be better to boyle it with an open fire, or in a double veſſel as was ſaid, or in Balneo Mariæ, and reprehends them who hold that the decoction made in Balneo is more dilute, or leſs powerful: and that the decoction made in Balneo, is more excellent than that which is made with an open fire, he endeavors to prove by the example of diſtilled waters, which by the balneum are made moſt excellent, when as there is no aduſtion in them, but the greater eliquation which is made in that hot and moiſt, doth render the decoction more excellent; but experience teacheth otherwiſe, which reaſon alſo doth confirme. For though out of ſome moiſter plants, as Roſes, Violets, Lilly of the vallies, and the like, being freſh, whoſe vertue conſiſts in the volatile part, as the Chymiſts ſpeak, the beſt waters are made in balneo without the affuſion of water: yet in hotter plants, eſpecially in Roots and woods, whoſe vertue conſiſts in the oyly part, their vertue can never be extracted by the too gentle heat of a Balneum, as happens alſo in many ſeeds, but they muſt be diſtilled by a † Veſica through which by the vehicle of the water, thoſe more fixed parts may be elevated: when as then the whol vertue of Guajacum doth conſiſt in that oyly and rozeny part, and there is need of ſtrong boyling that that may be extracted, the gentle heat of a Bolneum cannot do it, but it muſt be boyled in an open fire, which nevertheleſs cauſeth no aduſtion, if there be added a ſufficient quantity of water.

After what manner 'tis to be boyled.

A chymical Veſſel.

Some for the better guſt, and that the bitterneſs and acrimony may be abated, a little before 'tis boyled enough add of Raiſon and Liquoriſh, of each one ounce; and you may add Sugar, or ſome Julep to relliſh it, *Aurelius Minadous, de virulen. Vener. Cap.* 4. holds the Decoction ought chiefly to be Dulcorated with Honey;

Honey; for he thinks that a ſmal quantity of Honey, if it be boyled with it and Skimmed, wil rebate al the bitterneſs, and the Decoction acquire a greater power to cleanſe, attenuate, open, and make fuſil the Humors, and ſtrengthen the parts: which we grant may take place in phlegmatick bodies, and eſpecially in a cold ſtomach; ſo whenas honey doth eaſily turn to Choller, we think it cannot ſafely be uſed, in chollerick bodies, hot and dry, but more conveniently and ſafely Raiſons, Liquoriſh, or Sugar.

Some alſo in thoſe who have a hot and dry Liver, do add towards the end of the decoction a root or two of Succory, one or two handfuls of Endive, Sowthiſtle: but whenas ſuch decoctions are to be continued along while, we muſt have a care leaſt by the admiſtion of ſuch things they be made ingrateful, and provoke nauſeouſneſs in the Patient: beſides whenas for the moſt part there is boyled at one time Decoction enough for many daies, but the addition of ſuch Herbs doth cauſe, that the Decoction wil not laſt ſo long, to prevent this, ſuch herbs are to be added not to the whol decoction, but to about one pound of it.

Some not unprofitably, eſpecially to thoſe accuſtomed to it, and whoſe ſtomach is weak, do add towards the end of the decoction three pound of a ſweetiſh white wine; ſome prepare the whol decoction in wine, but not ſo rightly: for the beſt part of the wine doth evaporate in boyling, and there is left an ingrateful Flegm as was ſaid before.

Aurelius Minadous, alſo doth admoniſh, that the decoction of the wood is to be given with a vehicle, which may direct the vertue of the Medicine to the parts principally affected; and the Head moſt of al affected we muſt mix Cephalick things; the Reins affected, things Nephritical; the Liver, Hepatical; the Spleen, things Splenitick. Which as we do not wholly diſallow of, ſo we do not alwaies think it neceſſary, whenas the vertue of the decoction doth eaſily of it ſelf penetrate into the whol body: but we muſt chiefly have a care, leaſt by the admiſtion of ſuch Medicines, the decoction be rendered nauſeous and ingrateful to the Patient; which when he himſelf alſo conſiders, he admoniſheth rightly, that ſuch Medicines are more commodiouſly taken by themſelves reduced into a pouder, or Bolus, or ſome other forme, than mixt with the decoction; but we ſhal ſpeak hereafter of compound decoctions.

Diſtilled water from Guajaum. The Chymiſts whenas they fear leaſt by the long boyling, which is to the half, or a third part, the Spirituous and ſubtile parts ſhould exhale and be diſſipated, and ſo the vertue of the Medicine be diminiſhed, prepare this decoction another way, ſo that it loſeth nothing of its ſtrength, they take the pouder of Guajacum and put it into a retort, and pouring a ſufficient quantity of water, they place the retort in the aſhes, and apply the receiving veſſel, and making a fire under it, firſt they make a digeſtion, then diſtil it, to the Conſumption of one half of the water they give of the diſtilled water four ounces; yet it were moſt commodious if the diſtilled water were mixed with the reſt of the decoction in the retort being ſtrained; for ſo they would have al the vertue; to that decoction remaining in the retort may be poured more water, and let it digeſt twelve hours, afterwards diſtil it; and the liquor diſtilled may be given for common drink, and whenas it happens ſomtimes, that Infants are born infected with the Veneral diſeaſe, or are infected by their Nurſes, this diſtilled and ſweetned with Sugar may be given them inſtead of Juleps.

The ſecond decoction. Alſo after that the firſt decoction prepared the common way, is ſtrained, twelve or eighteen pound of water again is poured to the wood remaining after the firſt boyling according as the Patient is wont to drink more or leſs, and is boyled to the Conſumption of the third part; and being ſtrained is given for ordinary drink at dinner and ſupper, if they deſire a more pleaſant and ſweeter drink, you may add four ounces or more of Rayſons, or inſtead of Rayſons, one ounce or

two

two of Coriander ſeed prepared, and ſweeten the decoction with two or three ounces of Sugar.

But if any Herbs have been added to the firſt decoction, the decoction for drink at meals muſt not be made of the remainders of the firſt decoction becauſe it would be nauſeous, but you muſt prepare another freſh decoction, but more dilute, or a wine of Guajacum, which is made thus: Take four or five pound of the wood, four pound of white Sugar, ten pound of white Wine, and put the wood into a wooden Veſſel, and heat the Wine and powr it to it. *Wine of Guajacum.*

Some boyl the wood the third time, and uſe the decoction to boyl meat in, the ſame decoction alſo may be uſed to waſh the hands, to clenſe the Noſtrils, and mundifie Ulcers. *The third decoction.*

And ſome give this wood other waies, ſome in the form of a pouder, others make electuaries of it. Thus *Nicol. Maſſa. Lib. 2. de Morb. Gal. Cap. 6.* he takes of the Indian wood moſt finely prepared one pound, and with Syrup of Fumitory boyles it to the form of an Electuary, of which he gives half an ounce or an ounce; or take of the wood of Guajacum, Sarſaparilla, finely poudered, of each one ounce, of the ſpecies of the three ſaunders and Diarrhodon Abbatis, of each two drams; Conſerve of Succory, Roſes, of each ſix ounces; with Syrup of Succory make an Electuary. *An Electuary of Guajacum.*

Others with a convenient Syrup make pills of it.

But others not without cauſe do here admoniſh us, that ſuch Medicines are leſs effectual, and that many, who were newly infected, when as they hoped for health by the uſe of ſuch Medicaments, by that delay and lingring and weakneſs of the Medicine have fallen into a moſt grievous evil: for as was ſaid, ſuch Medicines do leſs penetrate into the body. Yet towards the latter end of the Cure, when the evil is almoſt overcome, and 'tis only feared, that there may remain ſome evil diſpoſition, and the long continued drinking of the decoction of the wood is nauſeous to the patient, ſuch Medicines may be uſed to conſume the reliques of the diſeaſe.

An extract of this wood is more commodiouſly prepared, and out of that pills, or rowles: but after the uſe of it there is need of taking ſome liquor, by whoſe vehicle the extract may be diſtributed and carried into the whol body: nay theſe extracts, according to the opinion of *Hercules Saxonia*, have ſcarce ſo great ſtrength as to overcome this diſeaſe if it be very great and ancient, but the decoction is deſervedly preferred before them. *An extract of Guajacum.*

Hercules Saxonia de lue Vener. cap. 27. writes that the oyl is ſtronger, and he thinks the whol Alexipharmacal power of the wood is placed in this Oyl, and he relates that he hath proved by experience, that by the benefit of this oyl; the greateſt and ancienteſt diſeaſe hath been overcome. But he gives it divers waies, in waſted bodies with milk, in others of a hotter temperament, with Conſerve of Roſes, or whey of Goats; in Melancholly with conſerve of Burrage or Bugloſs, in Flegmatick with Conſerve of Betony, in thoſe that have knobs with Turpentine, and two ſcruples for a doſe. But doubtleſs it was not oyl which *Saxonia* gave, but a liquid extract or Tincture as they cal it. For no oyl is diſtilled from this wood by an Alembick: but that which is diſtilled by a retort, or deſcent by an open fire, is found to be ſuch, that it cannot conveniently be given into the body, nay ſcarce with ſafety. *The oyl of Guajacum.*

I attribute more to the ſpirit of Guajacum, the preparation of which is not every bodies work, for it requires a longer and more diligent digeſtion and fermentation for the preparing of it. *The ſpirit of Guajacum.*

There are ſome alſo who think, the leaves and fruit of this tree being reduced into Conſerves and Electuaries are to be uſed, and they relate, that the Indians infected with this diſeaſe, do uſe them as Medicines; but though the leaves and fruit may do ſomwhat in a light diſeaſe, yet they are not ſufficient in that which is

great

great and inveterate, neither are they able to perform what the wood doth. But 'tis obſerved that the fruit of this Tree hath alſo a power vehemently to looſen the Belly; and whenas a freſh and light diſeaſe is ſomtimes cured only with purges, 'tis no wonder that the Indians may be cured by theſe purging fruits; eſpecial ſince that al Alexipharmacal vertue againſt this diſeaſe cannot be denyed them.

CHAP. XIV.

Of Sarſaparilla.

Sarſaparilla.

NExt to Guajacum, that Root challengeth the firſt place in curing the Veneral diſeaſe, which ſome call Spartam Parillam, ſome Salſam Parillam; the Spaniards Sarſam Parillam, by reaſon of the ſimilitude which it hath with the plant called rough bindweed. By reaſon of its thornes 'tis called Sarſa, (for Sarſa in Spaniſh ſignifies Bryers or Brambles) but by reaſon of its leaves, and boughs, Parilla, that is to ſay the thorny vine. Nay *Fallopius de Morb. Galli. Cap.* 63. is of that opinion, that it is truly the rough bindweed, which grows every where in *Italy*, and he writes that by the uſe of it, he hath with happy ſucceſs freed many from the French Pox. *Dioſcorides* alſo *Lib.* 4. *Cap.* 139. writes thus of the rough bindweed, its leaves and fruit being drank before, and after, are antidotes againſt deadly poyſons; and beſides 'tis delivered that if ſomwhat of them poudered be given to a new born infant to drink, no poyſon ſhal afterwards hurt it. But grant it be ſo, that the Italian rough bindweed can do ſomwhat againſt this diſeaſe, as alſo againſt other poyſons, yet he himſelf grants, that there is no light difference betwixt this and the Indian.

The native place of ſarſaparilla.

But Sarſaparilla grows in *Peru*, in the hedges, as rough bindweed, the white and black Bryony, and hops do in Europe. The Root creeps far up and down by the Earth, that 'tis oftentimes above ſix cubits long, which gathered into bundles is brought over to us. The good and freſh is white, ſolid, but that which is reddiſh, and poudery when 'tis broke, is leſs effectual.

The vertue of it.

Its vertue as I have ſaid is very great alſo in curing this diſeaſe, and 'tis found by experience, that many have been cured by the uſe of it, without Guajacum, and becauſe 'tis more Temperate; and moderatly hot, and without any acrimony, bitterneſs, or aſtriction, or ſmel, but hath a certain obſcure ſweetneſs, it may ſafely be given to al conſtitutions of body, and al Ages; beſides 'tis of thin parts, provokes ſweat, dries eminently, reſiſts putrefaction, waſts ſuperfluous humidity, ſomwhat looſneth the body, and therefore is wont in ſome ſort to weaken the ſtomach; but though Guajacum be more powerful and efficacious, yet Sarſa in this exceeds that wood, that it hath an eminent power to allay the French pains, though never ſo accute and ſtubborn, by reaſon of its exceeding tenuity, penetrating and laxative vertue: and *Jul. Palmarius* writes, that no pain can happen ſo contumacious and ſo continual, which at length it doth not lay aſleep and overcome, if any one uſe the decoction of it for a long time and conſtantly. Nay al knotty French Tumors ſo they be not bony, in what part ſoever they are, are Rooted out by the uſe of it, their matter being melted and caſt forth by ſweats, or at the leaſt waſted and emptyed by inſenſible perſpiration: and *Fallopius* writes in the alleaged place, that if after the diſeaſe is overcome there remain Ulcers, Clefts about the Arſehole, that Sarſaparilla will heal them ſooner by half than the Indian wood, and in a ſhort time alſo the moſt hard knobs are diſcuſſed by it. Yet ſome admoniſh here, that by Guajacum indeed this diſeaſe may be perfectly cured, and that al things are found in Guajacum, which are neceſſary for the cure of this diſeaſe, but that ſarſa doth not alone, but mixt with

Guajacum,

Guajacum, China Root, and Saſſafras wood cure this diſeaſe, and for this reaſon, becauſe it looſneſs the ſtomach, heats leſs, is void of al acrimony, and therefore is not ſo abſterſive, and being inodorous, hath not the power to refreſh the ſpirits. But theſe accuſations fetcht from the manifeſt qualities, ſeem not to be ſufficient; truly that Guajacum doth challenge the firſt place in this diſeaſe, is not to be denied, in the interim it hath been obſerved alſo by many, that ſomtimes this diſeaſe hath been cured by the uſe of this Root only; and if perhaps it do to much lax the ſtomach, that may eaſily be prevented.

The manner of giving it.

But this alſo is given divers waies, for the moſt part as Guajacum in the decoction concerning which we muſt note, they that wil not ſpare for coſt and deſire the decoction ſhould be more effectual, they ought to take only the bark, as which is the more effectual part of the Root, and to caſt away the inner piths as that which is leſs effectual, nay as 'tis delivered by ſome 'tis more cold, and hath a certain aſtrictive faculty.

The decoction.

But the Root of Sarſaparilla is taken being ſliced thin and to one ounce of it is poured two pound of water, or to two ounces and an half of the Root four pound of Water; ſome pour to four ounces of the Root ſeven pound of Water, others to three ounces; ten pound of water. Neither can the quantity of the water to the Root be ſo ſtrictly preſcribed, but it may be varied according to the Nature of the diſeaſe, and the condition of the ſick, and the ſeaſon of the year. For in an inveterate diſeaſe there is need of a ſtronger decoction, in a new, of a weaker. But it is ſteeped firſt of al fifteen hours or twenty, and afterwards boyled to the Conſumption of one half; and reaſons, liquoriſh and other things are added to the decoction, as need requires as in the decoction of Guajacum; and becauſe the decoction of Sarſa doth ſomwhat lax the ſtomach, for the moſt part mint, Betony, or ſomwhat elſe that ſtrengthens the ſtomach is to be added, or what ſeems more commodious, Guajacum, or leaſt the mixture of divers things may breed nauſeouſneſs after the taking of the decoction of Sarſaparilla, they muſt take ſomwhat that ſtrengthens the ſtomach.

The ſecond decoction.

After the firſt decoction is prepared, fifteen pound of water are poured again to the remainders, and are boyled til a third is waſted, and the decoction is uſed at dinner and Supper; ſome alſo add towards the end of the decoction three pound of Wine; yet this muſt be done then only as *Fallopius* thinks, either when the ſick body goes abroad, to preſerve his ſtrength, or when the ſtomach is weak.

Yet there may alſo be prepared out of this Root, pouders, Electuaries, extracts, as are from Guajacum.

CHAP. *XV.*

Of China Root.

China root.

THe Portugal Merchants brought over in the former Age, from the Country of China, a certain Root for the cure of this diſeaſe, which they called China Root; for when as the Venereal diſeaſe had invaded that Country alſo, as the Americans ſhewed the uſe of Guajacum for the deſtroying of this diſeaſe, ſo the people of China uſed this Root to cure the ſame diſeaſe, and taught others the uſe of it. But the Root is a handbreadth long, ſomtimes pretty thick, ſomtimes thinner, knobbed, ſomwhat reddiſh, pretty weighty, which being newly digged up they report is ſo tender, that it may be eaten raw, and boyled, as turnep and rape Roots are with us; the which ſeems not to be very credible, whenas our Turneps, Rape Roots dryed never attain to ſo great a hardneſs: they are brought to us divided.

As concerning its vertues, 'tis neither ſtrong in ſmel, nor taſt, and therefore there is no exceſs of it in heat and cold, but 'tis rather temperate, or if there be any exceſs in it, 'tis rather in cold; yet 'tis dry in the ſecond, of thin ſubſtance, yet with a certain aſtrictive power, and a kind of ſubſtantifical moiſture, ſo that by the uſe of it men do grow Fat. Whence alſo the decoction of it doth eaſily ſowr. When it was firſt brought over by the Portugals into France and the neighbouring provinces, it was wonderfully cryed up by the Merchants, as being of thin parts, and having power to digeſt, to more urine and ſweat, to conſum Excrements of al ſorts, to cleanſe the Bowels, free from obſtructions, clear the blood from corruption, to take away pains in the Joynts, to be good for the Venereal diſeaſe, and becauſe 'tis temperate, it may ſafely be given to any age, ſex; any time of the year, and to thoſe that are feaveriſh; al which faculties whenas they are not in Guajacum, by ſome of that time it was made uſe of not only for the cure of other diſeaſes, but alſo for the cure of the pox it was preferred before Guajacum. Which very thing cauſed that *Charles* the fifth Emperour, being ſick of a moſt grievous Gout, was the firſt almoſt that would make tryal of the uſe of this Root, upon the advice of ſome Phyſitians. But experience afterwards leſſened that fame; and *Jul. Palmarius* writes of this buſineſs *de lue Vener. Cap.* 14. that many to their great detriment have preferred this root before Guajacum, and that he hath found by experience, that alſo in a very ſtrict diet it hath been uneffectual againſt this diſeaſe, oftentimes alſo the ſtomach is ſeen to become ſo moiſt with the uſe of its decoction, and the Native heat oppreſt, that a great Lientery, and crudity hath often followed in thoſe who had but weak Fuell for their implanted heat. Beſides theſe diſcommodities and faults, he writes alſo that it doth oftentimes cauſe ſwelling of the Spleen and hardneſs, in thoſe that uſe it long; neither doth he grant it to have extraordinary vertue againſt this diſeaſe either by its whol ſubſtance or occult quality, when as after the uſe of it, they who thought themſelves wel, do dayly fal into a relapſe of the ſame Diſeaſe. The ſame alſo is confirmed by *Gabriel Fallopius Lib. de Morb. Galli. Cap.* 60. who writes that he hath uſed this Root again and again, for the Cure of this Diſeaſe, but could do nothing with it, in the interim he writes that he hath uſed it with happy ſucceſs for the dropſie, to moderate the mobility of the Humors in hot bleared Eyes, and in a hot diſtemper of the ſtomach and Liver. And other Phyſitians alſo agree in this, that this Root for the Cure of the French Pox is far in feriour to Guajacum and Sarſaparilla, although it be profitable to preſerve and ſtrengthen the heat of our body, and therefore for other diſeaſes. And if by chance any one, who could not be cured neither by the decoction of Guajacum nor by the unction of Quick-ſilver, hath recovered health by the Decoction of China *Jul. Palmarius* thinks this is the Cauſe of it, becauſe Nature rejoycing in the Variety of Remedies and weary of the ſtronger, at length is eaſied by thoſe that are leſs effectual. Yet *Garzias ab Horto*, relates of the Root being freſh, that it doth ſo exceedingly heat, that if any one uſe the pure Decoction of it, or drink it hot, by reaſon of the too great heat of the Medicine he wil fal into exceeding heats of the liver, Eryſipilaes, and Phlegmons, and other moſt grievous Symptoms. But when as 'tis brought over to us inſipid and ſomtimes duſty, there is no cauſe to fear any ſuch thing. Neither doth this only happen in this plant, but alſo in many others, that the Alimental juyce hath far other vertues, then the dryed Plants: and therefore though perhaps this Root being freſh in China may have great vertue to Cure the Venereal Diſeaſe, yet it is not neceſſary, that it retain the ſame with us.

The decoction of China. But divers prepare the decoction of this root diverſly, *Jul. Palmarius* writes that the common way of preparing it is this, that to two ounces of the root, cut into rounds, and put in an earthen pot, there is poured four pound of water and let them ſteep twelve houres, afterwards boyl with a gentle fire to the conſumption of the

the one half. *Fallopius* boyles two ounces of the root in twelve pound of water, to the conſumption of half, but according to the nature of the diſeaſe the proportion of the root and water may be varied: and the root may be boylled from one to three in twelve pound of water. Yet *Septalius* adviſeth us here, that this decoction is moſt commodiouſly prepared, if one ounce of the root freſh and not rotten be boyled in ten pound of water, & two ounces in twelve pound of water. For he writes, though many phyſitians, to ſave charges, whenas many cannot take al that decoction in one day, and they feare if they ſhould keep it another day it would grow ſowre, do boyl half the portion of China in half the quantity of water, and boyl away the half, or two thirds, thinking that ſo they have both ſaved their purſe, and prepared the decoction as ſtrong, yet they are very much deceived, and if they have not loſt their taſte, they ſhal eaſily know, that that firſt decoction is much more powerful, than the ſecond, and the reaſon is ready, becauſe 'tis not enough to give a proportion of the root to the water, but the time of boyling is cheifly to be conſidered, and the action of the heat of the fire, and the reaction of the water. For whenas, foure houres ſpace, imagine, ought to be allowed, to extract the vertue out of a moſt hard roor, and communicate it to the water: how much time wil be ſpent in boyling away ſix ot eight pints of water, if taking but the half quantity, viz. half an ounce of China with ſix pints of water, we ſuffer the half to waſt or two thirds, which wil be conſumed in leſs than two houres ſpace, the water being leſs able to reſiſt the action of the fire? not let any one dare to ſay that we may prevent this inconveniency, by making a leſs quantity of fire, and if it he boyled by a ſlower fire for to extract this vertue out of a more ſolid ſubſtance, there ought alſo to concur a due quantity of fire.

Out of the remainders another drink is prepared by ſome for dinner and ſupper, as out of Guajacum. Yet *Palmarius* thinks that al the vertue of that root is tranſfuſed in the liquor at the firſt boyling, and therefore for ordinary drink he boyles three ounces more of the root in eight pound of water til two pints are conſumed and he ads raiſons and liquariſh, nay ſome alſo drink the firſt decoction, at dinner and ſupper, whenas it is not unpleaſant to the taſt. *The Second decoction.*

Some alſo do admoniſh us, that we provide no more of the decoction at once than may be ſpent in one day, whenas it quickly growes ſour when 'tis cold, therefore they command alſo that it be kept on warm aſhes: but expetience hath taught us that it wil laſt four dayes. Yet becauſe it growes ſour, that very thing tels us that this root hath in it, ſomewhat ſpirituous and alimental, which is the cauſe of fermentation, and hence of acidity.

Conſult concerning this with *Amatus Luſitanus centur.* 1. *curat.* 98. and eſpecially *centur.* 2. *curat.* 31.

CHAP. *XVI.*

Of Saſſafras wood.

THey uſe alſo for the cure of the Veneral diſeaſe that wood which is connonly called ſaſſafras, which is imported form the Iſland called *Florida*: it is of an aromatical taſte like fennel: 'tis hot and dry in the ſecond degree, of a thin ſubſtance and endewed with an opening, diſcuſſive, and attenuating faculty; and therefore is commended by them who have ſailed to the Indies, againſt long tertian feavers, evil habit of the body, and dropſie, and to ſtrengthen the ſtomach, and againſt nephritical paines, it is comended alſo for the gout, to move the courſes, and many other diſeaſes, to treat of which is not proper to this place; 'tis uſed alſo for the cure of the French pox, yet moſt phyſitians agree that 'tis leſs effectual than Guajacum and ſarſaparilla, and the decoction of it is prepared almoſt as that of Sarſaparilla. *Saſſafras-Wood.* *Its vertues.*

Chap. XVII.

Of Sope-wort,

Soapwort. Laſt of al ſopewort is commended by ſome phyſitians for the cure of this diſeaſe which is bitter, acrid, and endewed with an abſterſive and opening faculty, and is praiſed for the French pox and contumacious paines, which cannot be overcome by other remedies. 'Tis reported to be the invention of *Zapata* a ſpanniſh Empirick: tis uſed both in the decoction, and in ſubſtance, the decoction is prepared after this manner.

Its decoction. Take *of green ſopewort two handfuls, infuſe them al night in eight pound of water, than boyl it til the ſopewort is boyled enough, then ſtrain one pound of it with half a pound of water and the herbs now boyled; and ſqueez them, and reſerve it for a mornings draught to provoke ſweat; taking ſeven or eight ounces. But that which remains ſweeten with raiſons or ſugar for drink at meales, in ſummer and Cholerick bodies you may add one handful of Sowthiſtle or baſterd Navelwort.*

But tis a remedy unpleaſing to the taſt, *Euſtachius Rudius* takes of ſoap-wort ſix pugils or more, and infuſeth it in twelve pound of water, and boyles it to the conſumption of half. But as *Septallius* hath obſerved, tis too great a quantity of water to ſo ſmal a portion of ſoap-wort.

The pouder. But the Root Cheifly is uſed in ſubſtance, and *Rudius* doth very much commend it in ancient french pains, and out of it he prepares this pouder.

Take *of ground pine two ounces; of white dittander one ounce and half; of Zedoary ſix drams: of the root of ſoapwort three drams: of pearl prepared half a dram.*

Make a pouder for 9. doſes, but who can take for one doſe almoſt four drams of pouder? and the other medicines do far exceed the ſoapwort, which notwithſtanding ought to be the baſis.

CHAP. XVIII.

Of Compound Alexipharmaca.

Compouond Alexiphbrmaca in the Veneral diſeaſe. But though al the medicines hitherto reckoned up, are good to deſtroy this diſeaſe, yet ſome are more effectual then others, and beſides ſome have other qualities, for the which they are uſeful ſometimes for this, ſometimes for that end, as was ſaid of the ſimples: and therefore ſeldom one of theſe medicines is uſed, but for the moſt part, many of them together. Indeed if the diſeaſe be ſimple, and none of the bowels be affected, nor there is no eminent diſtemper in any part, which may hinder the uſe of Guajacum, that wood is the moſt excellent of al, becauſe it reſiſts this diſeaſe both by its occult and manifeſt qualities: but if any diſeaſe be joyned with it, tis oftentimes moſt proficable to add ſarſaparilla and China and there are added by ſome manny altering medicines, of which whenas we ſpake before, in this place we ſhal ad nothing of them, but this, that we muſt have a care leaſt by the mixture of Succories and endives and cooling medicines which are added to moderate the heat of Guajacum which yet is not to much to be feared, they hinder ſweating which is only to be deſired, and which brings more benefit, then a little heating can do dammage: next of al leaſt by the admixtion of other things the drink be made ungrateful and nauſeous, therefore paſſing by theſe that we may ſpeake ſomewhat of the mixture of alexipharmaca, if the nature of the patient be very hot and dry, and

the

the humors violently fal from the head on the lungs, breaſt or other parts, Guajacum wood is not commodiouſly given alone, whenas it doth farther heat and dry the parts, and by its heat make the humors run and move, but then ſarſaparilla is ſafer, and China more comodious, which doth at once moderate the heat, and hath an aſtrictive power, by which it ſtops defluxions: on the contrary if the ſtrength be feeble, and there be a weaknes of the ſight, ſarſa is not commodious, whenas it looſenſt the ſtomach, and duls the ſight, if there be a great conſumpcion (if ſo be it hath not its original from the Venereal diſeaſe, for then this diſeaſe being taken away as the cauſe, that waſting alſo ceaſeth, and the body begins to be nouriſht better) Guajacum and ſarſaparilla are not ſafe, But then china is far more profitable, as that which moiſtens ſubſtantifically, as they ſpeak. Yet *Ludiciptalus* commends Saſaparilla above al the reſt againſt a conſumption, *lib. 7. animadv. num.* 214. as ſhal be ſaid alſo hereafter in the laſt chapter. So if cruel paines moleſt the patient, or gummous tumors, or exceeding ulcers be joyned with them, Saſaparilla is moſt profitable, which doth diſcuſſe the french knobs, and eaſier appeaſe the pains, then Guajacum. Thus according to the conſtitution of the Patients, and the Nature of the Diſeaſes joyned with it, 'tis good ſomtimes to uſe Guajacum alone, ſomtimes Sarſaparilla, ſomtimes China Root, and ſomtimes to mix al of them, in a greater or leſſer quantity, and ſomtimes the bark of Guajacum is added, ſomtimes three or four ounces weight to one pound of the wood, and they are boyled in fifteen pound of water. For examples ſake.

Take *Of the wood of Guajacum half a pound; of the bark of the ſame, of ſarſaparilla each three ounces: of China root one ounce and half. Infuſe them twenty four houres in twelve pound of water, afterwards let them be boyled to the conſumption of half, for a ſweating drink. Poure on the remainder twelve pound of water, let them ſtand and infuſe eight houres, afterwards boyl them to a conſumption of a third part, for drink at meales.* Or.

Take *of the Wood of Guajacum one pound; the bark of the ſame, Sarſaparilla of each thre ounces. Boyl them in ſixteen pound of water, to the conſumption of half.* Or.

Take *of the wood of Guajacum, China root each one ounce an half; Sarſaparilla one ounce; infuſe them twenty four hours in ſix pound of water, afterwards boyl half away. Poure on the reſidue ten pound of water, boyl it to the conſumption of three pound: Strain it and give it for drink at meales.* Or,

Take *of wood of Guajacum eight ounces; of the bark of the ſame four ounces; ſarſaparilla, ſaſſafras wood each two ounces. Boyl them in twelve pound of water to the conſumption of two thirds that there remains four pound, towards the end ad four pound of wine. Poure to the remainder ſixteen pound of water: boyl it to the conſumption of half, & towards the end ad four pound of wine, make a drink for meales.*

Whether purgers ought to be mixt with the decoction.

In this place we muſt not omit a queſtion, concerning the uſe of purgers, whiles the decoction is drank to wit whether they ought to be mixt with the decoction or to be uſed at the ſame time with the decoction. For ſome do wholy reject them, and hold that purgers are neither to be mixed with the decoction, nor to be uſed apart, for this reaſon, becauſe the bodies are wont diligently to be purged before they come to the uſe of theſe decoctions; next of al becauſe purgers and ſweaters do cauſe contrary motions. Others on the contrary do mix purgers with theſe decoctions, that by benefit of them the blood may be purefied, and the belly conſtantly kept looſe: others do not mix purgers with theſe decoctions, but purge at certain intervals, every eighth or tenth day, or at a longer diſtance, as need requires. which laſt opinion ſeemes to me to be treweſt. For though the body be purged before the uſe of theſe decoctions, yet ſome may eaſily remain, and ever and anon be collected, and ſweating doth purge onely the thinner humors, but leaves the thick, neither after this manner are there cauſed contrary motions; for that day, that purging is ordered ſweaters are not adminiſtred; but if purgers were mixed with the ſweaters then there would be contrary motions. And beſides by the admiſtion of purgers, the decoction being to be uſed ſo many weeks it would become nauſeous and ingratful.

Hercules

Whether purgers may serve instead of sweaters.

Hercules Saxonia also holds *de lue Vener. Cap.* 38. That purging may be ordered every day, to wit in those, in whom sweat cannot, or ought not to be caused: he thinks sweat cannot be provoked in them, who either are of such a hard and thick Skin, that they can by no means sweat, or in those who fal into fainting and swouning fits, as soon as sweaters are administred: but he thinks they ought not to sweat, in whom the Veneral disease possesseth not the Joynts, nor the Skin, nor the superficies of the body, but hath rather taken up its seat about the bowels; but this opinion seems not to me to be agreeable to truth: for whereas he thinks, that some ought to have purgers administred because they cannot sweat by reason of the thickness of their Skin, or because they presently fal into swouning fits, is agreeable neither to reason, nor experience: for scarce any one hath so thick a Skin, that the pores wil no way open for sweat, and though on the first daies sweat doth not presently follow, yet after that the Humors are attenuated by the use of the decoctions, the passages and pores are opened, then sweat succeeds; especially if those Laconick Baths be applied as shal be said hereafter. And the Patient may so moderate his sweating, that he need not fal into fainting or swouning fits: and they that cannot endure sweating, wil not easily endure purging. Last of al purgers cannot performe the same, as those sweaters do. But that in some bodies sweaters are not to be administred, is fall: for though the disease may have its principal seat about the Liver and bowels, yet it cannot be, but also vitious Humors do abound in the whol body, whenas the Liver infected with this disease doth generate virulent blood, and distribute it to the whol Body.

Chap. XIX.

Of the manner of using these Medicines.

The manner of using these Medicines.

AS concerning the manner of using these Medicaments, first of al the decoction of Guajacum is administred, for the most part in the morning, and afternoon two hours before Supper. In the morning 'tis given from five ounces to eight or nine ounces before the evening, from three ounces to six ounces; the pouder is given to two drams, the extract to two scruples. Yet somtimes the evening drauht is omitted, especially at the begining, before the patient is accustomed to the Decoction. For what was said above of moderating the quality of the decoction, that also is to be observed concerning the quantity of the Decoction to be given, that the sick be not offended and overcharged which too much of it; which unless it be observed, it happens somtimes, that the sick fal into Feavers, contract Crudities, and there is caused a loosness, ill habit of body, and a Dropsie.

The dose of the decoction.

After the same manner we must give the Decoction of Sarsaparilla, China Root, and the compound decoctions. For though some do prescribe here divers doses, yet he shal not erre, that shal administer them in the aforesaid manner.

Sweat.

And indeed after the mornings drauht, we must endeavor that the Patient sweat; for experience teacheth, that they that sweat not upon the taking of these Medicaments, are scarce clearly freed from this Disease: but that sweat may flow the easier, let the Patient sleep one hour after he hath taken the Medicine, for so the Medicine is deduced into act. As for the time of sweating, first of al it is sufficient, if the patient sweat one hour, afterwards by degrees let him rise to more. But the manner of sweating is various; most do suffer their Patients to sweat in bed, which that they may do the easier bottles ful of warm water, or hot brick wrapt up in Cloaths, must be placed under the Arm-pits and sides of the Patient. Some provide a wooden Mantle such a one as *Andreas Tenzelius*, hath discribed and set forth in *Exeges. Chymiatre*: which manner of sweating is not a little troublesome. But not without cause most men do prefer before al kinds of sweating in this disease, that which is

The time of sweating.

in

in a bath or ſweating place as that which brings leſs trouble to the ſick, when as weak Patients ſweating in their bed, may uſe a Bath and a ſweating place, and the heat of the bath may be made more intenſe or remiſs at pleaſure, be made dry or moiſt as the condition of the ſick requires: yet a moiſt bath, and gently heated by the Vapor of hot water is moſt commodious; whenas that hot vapor of the Water, doth open and Lax the pores of the Skin, that the ſweat flows the eaſier, and without any trouble to the ſick: but dry baths are altogether laborious, and ought not to be uſed in dry and Melancholy bodies.

Baths two-fold.

But thoſe ſweating baths are twofold, firſt of al thoſe gaeat ones in which a body may walk, ſuch as are our baths ſo commonly called in which many at once may ſweat and be waſhed; ſuch though they be uſed for the cure of this diſeaſe by Barbers in Italy, yet they ought to be eſchewed, whenas if one that is lightly infected, receive that which exhales from another grievouſly infected, he may be infected more, and 'tis more commodious that every ſick body ſweat by himſelf. Then there are baths or ſmal ſweating places in which one alone cloſed up may ſweat: ſuch are made of bords of wood Joyned together, which again are twofold, ſome which can receive a man upright. Without bowing of his body, *Jul. Palmarius* diſcribes it *de lue Vener. Cap.* 17. of a Square figure, ſeven Foot high, and four foot long and broad, whoſe deſcription you may ſee there. With us others are in uſe made up of boards mutually receiving and received by one another, ſquare, but oblong. of that bredth, that a man may without any impediment ſet and extend his Arms, but two ſtories high, one where the Patient ſets, ſo high, that as he ſets he may put forth his Head, through a hole of the bords ſtrictly fitted for the neck, but the lower part is of that depth, that if the Patient ſetting ſtretch forth his Feet, he cannot reach the loweſt board: and it hath a little door, through which the ſick may go into it, and a window behind, which may be opened upon neceſſity: and it hath another little door towards the feet, through which an Iron or braſs Veſſel is put in ful of ſtones or refuſe Iron red hot; and a Pipe in the upper part of it over againſt the Veſſel, through which either plain hot water, or ſome convenient decoction is poured on the ſtones or droſs by degrees, as much as the Patient can endure, from whence the Vapor exhaling diffuſed al through the body doth provoke ſweat: and though after this manner the head be thruſt forth, yet that doth no hurt, neither is it unprofitable, even where the head is affected; for though it ſtands forth, yet that ſweats plentifully enough: in the interim the Patient doth not attract again by drawing in his breath thoſe filthy Vapors which do Evaporate from his body, but the free and pure ayre by which he is refreſht, that he doth more eaſily and happily endure ſweating. But in what bath ſoever ſweat is provoked, after the ſweating is over the bath ought to be opened, that thoſe filthy Vapors may be blown away and diſcuſſed by the free Air.

When we muſt ſweat.

The moſt convenient time for ſweating is the morning, yet ſomtimes we may ſweat after noone, in which caſe the ſtrength of the Patient is to be conſidered for there are ſome who wil eaſily endure ſweating twice a day, other who but once, others who are not able to endure ſweating once every day. But the Medicines which moue ſweat muſt be taken upon an empty ſtomach, and an hour or two after the taking of the Medicine ſweat muſt be urged.

How long.

But we muſt ſweat ſo long as the ſtrength of the Patient wil bear it, and if the patient ſweat in a bath, or ſweating place, and is not able to endure any longer the heat of the bath, he muſt be laid in his bed, in which afterwards ſweat wil flow of its own accord, and without any loſs of ſtrength; the ſweat muſt afterwards be wiped of, aud after ſweating the cold ayre muſt in no wiſe be admitted.

How often.

But how often we muſt ſweat, and how long the uſe of theſe Medicines is to be continued, cannot be defined in general. They commonly teach that theſe decoctions are to be continued for forty daies, yet ſomtimes twenty five daies or thirty do ſuffice: and ſomtimes in a more grievous Diſeaſe we muſt perſiſt in the uſe of theſe

these Medicines til sixty daies and more. For we must sweat so often and so long, til the Malignity of the Disease is overcome, and the vitious and virulent Humors are discussed by sweating, and al the Symptomes cease, especially the running of the Reins and Callous skars. For as long as these last. We must remain in the use of these Medicines. Nay though al the Symptomes do vanish, yet it is good so to continue the Medicines for some daies, that also the Maligne dispositions of the parts may be taken away, that there be no feat of a relapse.

But after noon, though sweat be not moved, yet the same decoction given then, may insensibly discusse the vitious Humors, and destroy the virulent disposition impress both on the parts and Humors.

CHAP. XX.

Of other common Alexipharmaca.

Common Alexipharmaca.

BUt some trust not to those Alexipharmaca alone, as Guajacum, Sarsaparilla, China Root, and Sassafras wood, but add also common Alexipharmaca. This was first done by *Fernelius*, who gave to those that were to drink the decoction, half a dram or one dram of this Opiate, or Alexipharmacal antidote, which is prepared thus.

Fernelius, his antidote. Take *of the Leaves of water Germander, half an ounce; Poley of the mount. Penny royal, white Hore-hound, Origanum, Calamint, St. Johns-wort, centory the less; French Lavender, ground pine, Germander, Spikenard, of each two drams; of the Seeds of Anise, Fennel, Parsly, wild carrot, Libistick, Rue, Basile, Clary, Cresses, of the Berries of Bay, Juniper, of the Seeds of Male Piony, of each half a dram; of the Roots of round Birth-wort, Gentian, Dittander, Valerian, Asarabaccha, of each one dram; of Nut-megs, Cloves, Pepper, Saffron, of each four scruples; of Cinamone, Myrrh, Castor, Styrax Calamite, of each three drams; of good Honey as much as is Sufficient, make an Opiate.*

Jul. Palmarius, *Fernelius* his Scholer followed him, who, as was said before in *Lib. 1. de lue Vener. Cap. 7.* writes, that *Fernelius*, was most averse from the use of Quick-silver, and first dared to promise the Cure of this Disease without the help of that, and did take care for the compounding of many Alexipharmaca at his House, which he administred against the Mischeif of this Disease, with Guajacum and also without it, two of the which, which he found to be most excellent and efficatious, he describes, the first was discribed even now, the other is this.

Take *of Divils-bit, Scabious, Burnet, flowers of Marigold, Mullein, Plantane, Balme, Rue, Broom, Origanum, Rosemary flowers, Red Roses, of each three drams; of the Seeds of Citron, Sorrel, Fennel, blessed Thistle, of the Roots of Dittander, Gilliflowers, Tormentil, round Birthwort, Gentian, Zedoary, Roman Woolfesbane, of each two drams; Hartshorn, Shavings of Ivory, Wood of Aloes, Yellow Saunders, Choice Cinamome, of each half an ounce; Saffron, Cloves, Nutmeg, of each two drams.*

And he relates that he called the first composition, the greater Opiate, the other the less, and that he gave for a dose half a dram of either with the like quantity of conserve of Bugloss and half a scruple of Mithridate, and somtime without Mithridate; bnt that he, after *Fernelius* departed this life, out of them both did compleat one, adding also certain other Medicines, which he found to be prevalent against poysons, and most fit to provoke sweat, the description of which is this.

Take

Take *of water germander half an ounce; of divels-bit, scabious, burnet, Poly Mount, peneroyal, calamint, white sweet smelling Horehound, origanum, mint, St. Johns-wort, centory the leſs, French Lavender, Germander, Ground Pine, Plantane, Balme, rue, Time, Elder, each two drams; of Hyſſop, the leſſer Sage, Oake Ferne, vervin, both speedwels each two drams; Flowers of Betony, Marigould, Mullen, Broome, Roſemary, Jaſmin, Sage, Red Roſes, St. Johns wort, Bugloſs, Burrage, Violets, Water Lilies of each three drams; Seeds of Anis, both Parſleys, wild Carot, Scarlet Grains, St Johns Wort, Libiſtick, Rue, Lovage, Baſil, Berries of Bay, Juniper, ſeeds of both Pionies, Hartwort of each on dram and half; Seeds of citron, Sorel, Bleſſed Thiſtle, Fennel, of each three drams; of the roots of male Piony, Round Birthwort, Gentian, Sweet cane, Flowerdeluce of Florence, Sweet Cyprus, each one dram; of Angelico, Dittander, Gilliflowers, tormentil, Zedoary, Romane Woolfesbane, of each three drams and an half; of choice perle three drams and hal; of Harts horn, Shavings of Ivory each one ounce; wood of aloes, yellow ſaunders, bone of the heart of a hart, both currals each half an ounce; choice cinamon one dram and half; Balſome wood, if it may be had one ounce; of al pretious ſtones, each half a dram; of Nutmeg, mace, loves, myrrh, ſtyrax, Calamite, Benjamin, Saffron, Caſtor, each half a dram; juice of liquoriſh one ounce; oyl of the ſeeds of Fennel, Aniſe, of Sage, mint, juniper, Nutmeg, Cloves, red opobalſamum brought out of America if it be to be had of each one dram.* Palmarius his antidote.

Let al the the herbs, flowers, and rootes be gathered at that time they are of greateſt ſtrength, let them be dryed, and kept in paper caſes, then al of them being reduced into a moſt fine pouder, let them be mixt with wine and honey, and be boyled into an electuary, til it comes to the thickneſs of wel prepared mithridate: yet the flowers may be candied and kept with ſugar, that they may be mixt with the other things towards the end of their boyling, to one pound of honey mix two ounces of the pouder. Let it be kept in a moſt large earthen veſſel, whoſe third part may be empty, leaſt it ſwel up, and grow hot, neither let it come to that uſe we ſhal by and by ſpeake of, before it be three years old. He adds there alſo a cordial water, and an alexipharmacal pouder, their diſcription are theſe; the Cordial water.

Take *Of the leaves of ſage, mint, marioram, rue, hyſop, origanum, the tops of betony each one handful. Bruiſe them al and put them in a great earthen veſſel in a warm place and cover them with the water of bleſſed thiſtle, that they be under it, every day ſtir them with a ſtick, and before they ſoure, (which wil be the fourth or fifth day after) Strein out the liquor and keep it, caſting away the Faces. Again.* Galmarius his Cordiol water.

Take *of plantane leaves, marigold, balme, mullein, St. Johnswort centory the leſs, burnet, each two handfuls. After they have been ſteeped four dayes and ſtreined caſt them away, and take again of water germander, Bivels-bit, fennel, parſly, bugloſs, burage, angelico of each one handful. Which alſo being ſteeped, ſo many dayes ſtreined and then caſt away.*

Take *of the roots of angelico, dittander, tormentil, betony, Zedoary, each half an ounce; of galangal, three drams; Nutmegs, Cloves, each one dram; ſeeds of Fenel, Citron, Sorrel, Bleſſed thiſtle, Juniper berries each two drams; Shavings of Ivory, harts horn, wood of aloes, Yellow Saunders, cinamon each one dram; Safforn half a dram; make a pouder of it and mixe it with the Liquor ſtreined, then weigh out of the amulet againſt this diſeaſe, and of choice mithridate each one pound and half; of old treacle foure drams; and being mixt with the ſaid liquor and pouder, and put up in a glaſs alembich, or an earthen one glazed, expoſe them ſix or eight dayes to the heat of June, til they grow hot, and be perfectly fermented, and at length diſtil them in a double veſſel with a moſt gentle fire. If the ſame ſimples be put into a new pot with the water of baſtard ſaffron and be heated fifteen dayes in warm horſe-dung, there wil be extracted a more excellent Water.*

Take of the aforesaid water three ounces; Syrup of Lemmons and Violets, of each six drams; Make a dose.

A Description of the Pouder.

Palmarius his Alexipharmacal Pouder.

Take of the shavings of Ivory, the younger Harts-horn, Choice Pearles of each half a dram; wood of Aloes, Yellow Saunders, the bone of the heart of a Hart, of each one scruple; Seeds of Fennel, Coriander prepared, of each one dram; the Leaves of Mint, Plantane, Vervain, Burnet, of each two scruples; the Roots of Tormentil, Betony, Zedoary, of each half a dram; the dryed flowers of Betony, Marigold, Broom, of each half a dram; Sugar of Roses three times as much. Make a fine Pouder.

The dose is one spoonful beforemeat, and before a drauft of the sweating drink, if the Patient refuse the use of the Opiate.

And in *cap.* 13. *Lib. de lue Vener.* where he disputes, whether this Disease may be perfectly cured by the use of Guajacum alone, or whether there be need of the assistance of other Medicines joyned with it, at last he concludes with a distinction, that the vertue of Guajacum is neither so great, that that alone can wholly extirpate the Roots and whol malice of the Venereal poyson, nor so weak, that it can perform nothing without the help of others; that by the use of that only, the Humors be wasted, al Symptomes wil at length be allaied, and wholly lie hid, but yet the taint of the disease, which hath already taken possession of the solid parts, cannot in most bodies be wholly overcome, and extinguisht by that remedy.

Rondeletius his Treacle Water.

Rondeletius, doubtless followed these men also, who *de morb. Itali.* commend his Treacle water, which provokes sweat in the inveterate Italian Disease, and takes away the pains, the description of which is this.

Take of Treacle, one pound; of Sorrel, three handfuls; of the flowers of Chamomel, Penyroyal, Pomegranates, blessed Thistle, of each two ounces. Mix them, drain them in white wine and distil them.

Of which waters give three ounces to drink with three ounces of Sorrel and Bugloss water, when the Patient goes into his bed or hot house.

Platerus also thinks that it is confirmed by experience, that the decoctions of other plants, besides Guajacum, Sarsaparilla, China, Sassafras; can performe the same in this disease as they do, and therefore sals into this opinion, but evilly. That the last mentioned Medicines which are accounted alexipharmaca of this disease, do work rather in the cure of this disease, by moving sweat, then by an occult quality, and therefore he thinks that not only a decoction of box wood, Juniper, Cedar, Cypress, and Savin, Agallochus, Rose-wood, but also the decoction, and Treacle water, which are given in Pestilent Feavers, are profitable also here.

Whether treacle be good in the Venereal disease.

Aurelius Minadoes de lue Vener. cap. 53. when he had spoken many things in the praise of Treacle at length concludes, that Treacle also may be used against the venereal virulency, as a most excellent Alexiterum, not as if it were to be numbered amongst them, which of themselves are said to expel this virulency, but amongst them, which expel it by accident, in as much as it doth strengthen the spirits, by a Confortable proportion to them, so that they being now made strong, are able as the principal agents, together with the Treacle as their instrument to overcome the malignity of the venereal virulency.

Trochisks Cypheos.

The same Author *cap.* 14. commends Trochisks Cypheos in this Disease, as being such, which do principally strengthen the Liver, which in this Disease is chiefly affected, and free it from Excrementitious Humors, which are collected in this Disease, being powerful to concoct, cleanse, and dry up the Excrement whatsoever. So *Galen* thought this Composition was to be preferred before al other Medicines written by *Asclepias*, *Andromachus*, and other most Famous Physicians for the affects of the Liver, so he thinks the same is to be used and Magnified beyond al others in this Disease.

But

But as I wil not diſſwade any one from the uſe of ſuch common Alexipharmica in the cure of this Diſeaſe, whereas in other caſes it is a cuſtome, when any one hath drank poyſon, or any waies taken it, and knows not what it is, to give treacle and common Alexipharmaca: ſo I wil counſel no body that he confide only in theſe Medicines, and neglect thoſe proper ones. And I ſee it done by very few Phyſitians, as being taught by experience, that this Diſeaſe cannot wholly be extirpated without Guajacum, Sarſaparilla and the like, neither doth it follow, that therefore, becauſe ſome ſick of an incurable French Pox, could not be cured by Guajacum wood, that we muſt place more hope in theſe Medicaments. For they that could not be cured by thoſe proper Alexipharmaca, wil much leſs be cured by theſe common ones.

CHAP. XXI.

Of the Cure by Quick-ſilver.

Of the cure by Quick-ſilver.

AND this is the chief kind of Medicine for the cure of the Venereal diſeaſe, and this is the chief manner of curing it. For there is alſo another way of curing the ſame Diſeaſe by quick-ſilver, which was firſt brought into uſe by Chyrurgions and barbers, afterwards alſo was applyed by learned Phyſitians. For whereas, as was ſaid before by *Fracaſtorius*, certain Barbars had found out amongſt the Medicines of our anceſtors for the filthy ſcab joyned with the pains of the joynts, unguents compounded of Mercury and Sulphur, other Medicines profiting little, they began to uſe them. The uſe of which being not altogether unſucceſsful, afterwards quick-ſilver was uſed in the cure of this Diſeaſe by many learned Phyſitians.

But though it be not my purpoſe in this place to treat of quick-ſilver, which the Chymiſts cal Mercury, but rather of the uſe of it in curing this diſeaſe, yet I ſhal admoniſh you of a few things in general. Quick-ſilver is reckoned amongſt the mettals, and 'tis called Silver from its color in which it reſembles ſilver, but quick becauſe 'tis alwaies moveable: and its Nature is altogether wonderful, which many learned men admire, and which hath tortered the wits of many Chymiſts, and deluded their pains. For though it be mortified, fixed, or what way ſoever it oftentimes ſeems to be changed, yet it is eaſily reduced to its former quick Nature. And though it be reduced into the ſmalleſt bodies, and tranſmitted through leather, or be otherwiſe reduced into atomes, and a ſtrang form, yet it retaines in them its whol Nature and eſſence, and returns to its former quick body.

Quick ſilver whence ſo called.
Its wonderful Nature.

Naturaliſts and Phyſitians differ concerning its temperament, whiles ſome hold it to be cold others hot. *Matthias Ungerus*, hath collected the arguments of both in *Anatom. Spagyr. Mercu.* to alleage al which at large in this place, is not our intent, for you may conſult with him on that buſineſs in the alleaged place; yet by and by we ſhal make mention of ſome of them: but *Ungerus* himſelf, *cap.* 12. goes the middle way, and holds, that ſome natural things have oftentimes in them diverſe, and wholly contrary vertues and faculties, and ſome of them are maniſeſt, others occult, and that theſe depend on the ſpecifick form, thoſe on the firſt qualities of the Elements, which he proves by the examples of Wormwood, Rhubarb, Vineger, and others: and he thinks Mercury is to be reckoned in the number of theſe which may be conſidered both as crude, and as prepared: the crude he thinks hath mixt qualities, and is partly hot, partly cold, and that diverſity is to be attributed to the divers parts of the matter of which it conſiſts, ſome of which are very thin, Subtile, pure, and Spirituous, but ſome are thick, earthy and feculent: but he thinks that Mercury prepared hath no longer any

Whether Quick ſilver be hot or cold.
Matthias Ungerus his opinion.

cold quality, but they are wholly taken away by the outward help of fire, or by the Application of ele menstrua, and therefore that it is very hot.

Hercules Saxonia. *Hercules Saxonia*, holds the same *de lue Vener. Cap.* 39. Whiles he teacheth, that this Medicine doth exulcerate, and cause heat and inflamation; on the other side it causeth numnes, Palsies, and other cold affects, and that it proceeds from the inequality of its temperament, and because 'tis an imperfect mixt body, and if it be prepared by calcination, that the cold substance doth fly away, and that which is left, is fire.

The authors opinion. But these authors erre very much, indeed it cannot be denied, that there are many Medicines, which have Heterogeneous parts, by vertue of which, they produce divers effects, which parts also may be separated by the help of art: But that Quick-silver hath such parts, is false, neither was there yet ever found any Chymist, who could show the diverse parts in it, and separate them by art: for the whol is Homogeneous, if there be any thing so in Nature, and either it al flies away, or al remaines, and what way soever it is prepared, at last it al revives wholly Homogeneous: and whatsoever Chymist can show any Heterogeneous parts in Quick-silver, as in Rhubarb, shal be in my esteem a great Apollo. Neither is precipitate of another Nature then that which is crude, neither doth Quick-silver loose any thing by its preparation, and that prepared does differ from the crude only in external form which is caused by the admistion of other things, which sometimes are Salt parts as happens in Mercury Sublimate and Precipitate, sometimes only watry as when Mercury is reduced into water by a recort without the admistion of any other thing, as the same *Unzerus* teacheth *Lib. 1. de Anatom. Mercu. cap.* 2. *n.* 4. for this water is nothing else but the Quick-silver resolved into the smalest bodies or Atomes by the strength of the fire, and mixt with watry Vapors, or the moist Air. Yet in that there appeare no effects of cold, but rather of heat, and that very water, as other mercurial waters, wil dissolve gold in like manner, *Saxonia* is mistaken, for Quick-silver is no imperfect mixt body, but a body that hath the most perfect mistion, and cannot be destroied, by any art of the Chymists, but every where retaines its form, neither whiles it is calcined (or rather exposed to the fire, for Quick-silver cannot properly be said to be Calcined) do the cold parts fly away, and the fiery stay behind, but if those parts which are raised up be received, they are of the same Nature with those that remaine, as is wel known to the Chymist.

Quick silver is Homogeneous.

Quick silver is hot. Therefore whenas this Reconcilation is of no force, let us see who is in the righter whether those who hold Quick-silver to be hot, or those that say 'tis cold. But I think that they are altogether of the righter judgment, who think it to be hot; for that appears by its great penetrating and corroding vertue, so that it penetrates and Eats into Metals, and the flesh, nay the very bones are corroded by Mercury precipitate and sublimate. And *Libavius* writes in *tract. de igne natuu cap.* 30. that he knew by the relation of a most learned Physician, that a certain Chyrurgion dying by the too frequent use of Mercurial Medicines, had his bones plainly bricle or frangible.

The answer of the reasons against it.

1. But whenas they object first of al, that whiles 'tis quick and whol it doth not corrode: the cause of that is, because it cannot insinuate it self into the body, and worke upon it, whenas al its parts are most closely knit together, nor cannot be mixed with other bodies; but the Medicines prepared out of it as Mercury sublimate, Precipitate, Oyl of Mercury, and if there be any more of this kind, have a great power to burn and corrode not only by the reason of Salts commixt, which is very little, but because 'tis resolved into the smalest bodies, and being mixt with the Salts it can adhere to the body, and by the benefit of things admixt, most intimately insinuate it self into it.

2. Secondly, whereas Quick-silver appears cold to the touch, that is common to it with steel, Brass, Lead, Wine, things of their own Nature hot, which by accident feel to be cold.

Thirdly,

Thirdly, whereas ſome alſo from the effects would collect quick-ſilver to be cold, in that they are very much deceived; and they attribute thoſe effects to cold, which have their dependance elſwhere. Truly, they that drink the waters infected with quick-ſilver on the Alps, are ſick of divers fluxes, and are taken with a bronchocele. Goldſmiths, and others, who often deal with quick-ſilver, are ſeldom healthful and long lived, but are obnoxious to numneſſes, tremblings, palſies, convulſions, lethargies, ſuffocating, cararrhs, and appoplexies. Thus *Fernelius* relates of a certain Goldſmith that imprudently admitting the vapour of quick-ſilver only, preſently became ſtupid, drowzy, and wholly ſpeechleſs. *Ferdinandus Ponretus* relates that the ſame happend to another, *lib.* 1. *de vene. cap.* 3. And *Foreſtus*, *lib.* 8. *obſer.* 5. writes, That a certain yong man learning the Smiths art upon the atching of a Cup with quick-ſilver, had all the hair of his head fell off, and that his face became extraordinary pale, and all his body tremulous: and many others have obſerved the ſame. And *Jacobus Oethæus*, *in his obſervat.* reports, That a certain yong Noble man troubled with Crab-lice in his Privities, uſed Mercurial Oyntment to drive them away; upon which his Yard grew cold and ſluggiſh, and unfit for Venery. But here is a fallacy of the cauſe, for quick-ſilver doth not do theſe things by cooling, but becauſe it hath a peculiar and occult quality, that is an enemy to the Nerves and Brain, as appears in many other ſtupifying poyſons. 3.

Fourthly, That which is Objected, is eaſily Anſwered; to wit, That the damage brought upon mans body by quick-ſilver, is cured by the uſe of hot things; as Sage, Hyſſope, Origanum, Clary, Rue, Caſtor, and the like: For thoſe Medicaments are not therefore applied to the preternatural affects cauſed by quick-ſilver only, becauſe they are hot, but becauſe they are friends to the Brain and Nerves: and furthermore, as they themſelves grant, by a ſpecifick property are enemies to the Mercurial virulency; and that ſuch things are not therefore applied becauſe they are hot, but becauſe by a peculiar vertue they are friends to the Nerves, it appears by this, becauſe other hot things, as Ginger, Pepper, and the like, which have no ſpecifick property freindly to the Nerves, do not perform the ſame. 4.

But concerning the Occult Vertue and Propriety of Quick-ſilver, we chiefly meet with two doubts; Firſt of all, Whether it be poyſonous: next of all, Whether it be rightly applied for the Cure of the Venereal Diſeaſe.

Concerning the former Queſtion, Whether Quick-ſilver be Poyſonous, we have already treated before, in *tract. de Chym. & Ariſtot. conſenſ. & diſſenſ. cap.* 19. where we ſpeak of Mercury, and we ſaid there, That *Matthias Unzerus de anatom. ſpagyr. Mercu.* did endeavour to prove at large, That Mercury is not poyſonous, with whom others alſo agree; eſpecially thoſe who urge Experience and the Authority of learned Phyſitians. *Avicen*, *lib.* 4. *Fen.* 6, *tract.* 1. *ſum.* 1. *cap.* 2. writes, That Quick-ſilver doth not hurt many that drink it; for that with its qualities goes forth by the ſtool. *Haly Abbas lib.* 1. *pract. cap.* 35. *Rhaſes in no. ad Manſor. de potu argen. vi.* do affirm the ſame. *Braſſavolus* alſo doth teſtifie in *lib. de ſtirp. exami.* That he hath given Quick-ſilver to Infants to expel Worms. And *Fallopius de Metallis cap.* 37. holds, That Mercury may be taken into the body without the fear of any hurt; and he relates that Beaſts do ſwallow quick-ſilver without any harm: For when they abound with Worms, which your Leeches know by their breath, if they ſwallow four ſeveral times half a Filbert ſhell full of Quick-ſilver caſt into their mouths, they are cured, no worſe Diſeaſe ſucceeding it. And he witneſſeth that he hath given to Children in extream danger, whom other means have availed nothing, the quantity of two or three grains of Millet with evident ſucceſs. The ſame Author, *de Morb. Gallic. cap.* 76. writes, That he ſaw a Woman which drank a pound of Mercury to cauſe an Abortion, yet without any hurt. *Matthiolus* alſo reports in *lib.* 1. *dioſcorid. cap.* 170. (which alſo *Euſtachius Rudius* relates, That he hath often obſerved, when he practiſed Phyſick there) That in the Town *Gorritienſis* the Nurſes do give Quick-ſilver to little Children to drink in the quantity

Whether Quick-ſilver be Poyſonous.

'Tis denied.

quantity of two grains of Millet for the Worms in the Belly, without any trouble at all. And the Midwives when great bellied Women lie long in labor, do preſently give to drink a ſcruple weight of Mercury without any inconvenience: and *Georgius Agricola* relates, that a certain Woman did often times fraudulently give Quick-ſilver to her Husband that ſhe might kill him, and nevertheleſs he continued healthful nay it hath been obſerved that ſome thirſty in the night, have in the dark taken up Veſſels ful of Quick-ſilver inſtead of drinking Cups, and with a wide Throat have taken of the Quick-ſilver in a great quantity, yet have caſt it forth again by the ſtool without any hurt. And *Euſtachius Rudius*, *add Lib. 5. de Morb. occult. cap.* 15 that he hath ſeen this, and that others have obſerved it, that ſome bodies have been diſſected, in which no ſmal quantity of Quick-ſilver hath been collected in the Cavities of the bones, from the unction in the French Pox, who notwithſtanding have lived many years after the unction. Which ſeems not poſſible to be done, if it were poyſon by Nature.

'Tis affirmed.

But *Galen*, *Aetius*, the reconciler, *Cardan*, *Fernelius*, *Ferdinandus Ponzettus*, *Jul. Palmarius*, whom I alleaged in the quoted place *cap.* 19. *de conſens. et diſſens. Chymic. cum. Ariſtotele.* do differ from theſe. And experience it ſelf hath brought moſt eminent men into that opinion, by which it is evident, that quickſilver doth no leſs cauſe numneſſes, convulſions, tremblings, palſeys, epilepſies, apoplexies, ſyncopes, than other poyſons, nay ſomtimes death it ſelf. And ſome do report, that they are ſeldom long lived, who digg up the veins of quickſilver; and though they be very ſtrong bodied, and of the beſt temperament, that they can ſcarce hold out in that work to the fifth yeare, but by drawing in the venenate vapors they are taken with a trembling of all their parts.

The Authors opinion.

And the opinion of theſe we think altogether more conſonant to truth as being that which is confirmed by experience it ſelfe: but as concerning the experience of thoſe, who write that quickſilver hath often been drank and given without any hurt, that doth not excuſe quickſilver from its venenoſity. For to the compleating of an action, there is required a right application of the agent to the patient, and ſome ſtay, which whenas it was wanting in the alleaged examples, the quickſilver could do no hurt for quickſilver is given either alive or prepared, if it be taken alive tis 'leſs hurtful, for whenas quickſilver is a body moſt exactly mixt, and the leaſt parts of it do moſt pertinaceouſly cohere to one another, from whence alſo 'tis continually moveable, whiles it is whol and alive it brings little or no dammage to our body, but preſently is caſt forth by the ſtool. For in like manner as a leaden, or other mettallick bullet, if it be ſwallowed whol is preſently caſt forth of the body, and brings no hurt, but if it be reſolved into the leaſt parts, and contract ruſt, may do very much miſchief, as that hiſtory concerning lead doth ſufficiently teach us, which *Fernelius* recites *de lue Vener. cap.* 7. So alſo if quickſilver be taken whol, moveable, and coherent to it ſelfe, and by reaſon of its mobility be preſently again caſt forth of the body, it brings no dammage; but if it be reſolved into the malleſt particles, and eſpecially with the admiſtion of ſalts, and by their help be as it were fixt to the body, and penetrate into it, both inwardly and outwardly applyed, it cauſeth moſt grievous evils, as ſublimate and precipate do ſufficiently teach us, neither is there any reaſon for any one to aſcribe that corroding faculty to the ſalts mixed; for there is no ſalt in the fume which exhales when Silver is gilding over, and yet that very fume is highly hurtful, neither can ſo little ſalt as is mixt with ſublimate or precipitate, cauſe ſo great hurt, whenas ſalt though it be given in a great quantity, doth no ſuch thing.

Mercury prepared.

But as concerning prepared mercury, I know indeed, with how great prayſes ſome do extol mercurial medicines. Some cal precipitate the angelical pouder, and otherwiſe prepared mercury of life. Some commend the flowers of mercury of which we ſpake in *conſens. et diſſens. Chym. p.* 365. others mercurius dulcis, and ſo highly, they write if it be rightly prepared and given 'tis as gentle as manna, tamarindi, caſſia, and therefore they uſe it in the ſlighteſt diſeaſes, which might eaſily

ſily be taken away by more benigne medicines. But theſe commendations are too much, neither is their raſhneſs commendable, who give quickſilver in any diſeaſe, whenas we have every where examples of them, who by the uſe of the medicatments, have not only been caſt into danger of their lives, but have plainly periſht by them. Whereupon *Guiſh. Fabricius* in *Epiſt. ad D. Doringium lib. 3. obſervat. annexa.* thinks that that called mercurius vitæ may ſometimes be called mercurius mortis, and mercury of life eternal. And how much mercurius dulcis, which is counted the gentleſt of al, may ſometimes prejudice, was ſaid in the alledged place; but that quickſilver may ſometimes be given without any dammage coms to paſs, either becauſe 'tis crude, or retaines the nature of that alive: and therefore as was ſaid even now, can work little on our body, of which ſort is mercurius dulcis, and the flowers of ſilver mercury, or becauſe it is in its kind fixt. For as whol mettals though they be taken into the body, they do not affect it unleſs they be reſolved, ſo ſo alſo whenas fixt mercury doth as it were put on the nature of fixt mettals, ſo it doth not hurt, as that which is ſtil volatil, and can eaſily inſinuate it ſelf into the body.

In what diſeaſe prepared Mercury is to be given.

Yet prepared Mercury ought not raſhly to be uſed and be given in every diſeaſe or body eſpecially at the begining, but in thoſe only in whom there is great ſtore of vitious humors, which that may empty, and where the body is ſtrong, for as Mercury ſublimate and precipitate outwardly applied in ſordid ulcers, doth mundefie them, and toucheth not the ſound fleſh as long as there is any filth, but if it be layd on the ſound fleſh it eats that: ſo alſo if quick-ſilver taken into the body do find corrupt humors on which it may work, it doth not eaſily damnefie the more inward parts, but it workes upon the humors, and cauſeth that they be emptied; but if there be no ſuch humors there, it alſo aſſailet the ſound parts. But whenas Quick-ſilver given inwardly is not uſed onely for the Venereal diſeaſe, but to drive away many other diſeaſes, we will ſpeak no more of that here; but let us now inquire concerning it, whether it can, and how it may do good in the Venereal diſeaſe.

Whether quick-ſilver be to be given in the cure of the venereal diſeaſe.

As concerning one of them therefore, to wit whether quick-ſilver ought to be given in the French pox, and whether it may be ſafely, and by what vertue it acts, Phyſitians do very much differ. *Epiphanius Ferdinandus* indeed, *Hiſto.* 17. thinks that amongſt ninety Authors that have writ of the Venereal diſeaſe, that there are onely foure, who have diſallowed of the uſe of Quickſilver in this diſeaſe, viz. Caſparus Torellus, Montanus, Minadous, and Fracaſtorius, but there are many more, which *Johannes Baptiſta Silvaticus* doth recon up *Contr.* 34. which *Silvaticus* himſelf is in the number of thoſe, who denny Quick-ſilver to be an enemy to the eſſence of the french pox. For *Ulericus ab hutten*, a German knight and Phyſitian *Cap.* 4. *in lib. de morb Gall*: writes that in his time ſcarce one in a hundred that was anoynted with Quickſilver did eſcape a relapſe, the benefit of it laſting but for a few dayes. *Sebaſtianus Aquillanus lib. de morb. Galli. Cap.* 4. Cals the cure of this diſeaſe performed by quickſilver, ſophiſtical, and writes that al anointed with it in his age ſuffered a relapſe. *Gaſpar Torelus* biſhop of *St. Juſta*, in his declammation againſt unction with Quickſilver, cals it a pernicious medicine and thinks it is to be ſhunned as the plague. *Joh. Baptiſta Montanus*, tract. de morb. *Gal.* writes that quick-ſilver doth indeed repreſs the diſeaſe for a certain time but does induce an evil quality in the part, and in no wiſe remove it, wherefore in proceſs of time, al things become worſe then they were before. *John Fernelius lib. 2. de abdit. morb. cauſ. cap.* 14. writes that he beleves nothing leſs, then that a medicine made of Quick-ſilver can cure the Venereal diſeaſe, ſince that in his judgment it only takes away the ſimptoms, leaving the root behind. *Victor Favintinus cap.* 7. *de morb. Gal.* thinks the cure of the diſeaſe with Quick-ſilver is falſe, deceitful and daingerous. Neither does *Fallopius* magnefie this cure, as appeares by his book *de morb. Gall. Cap.* 76. *Bernardus Tamiranus* alſo hath openly condemned this cure *lib.* 2. *de morb. Gall. cap.* 13. as alſo ſome others: to whoſe opinion

The negative opinion

as

as I ſaid *John Baptiſta Silvaticus* joynes himſelf, and writes that he doth not beleeve, that quick-ſilver can wholy cure this diſeaſe, and that tis an antidote diametrically repugnant to the Venereal evil: he doth not deny indeed that this medicine may allay ſome evil and vehement accidents of the diſeaſe, but that tis diametrically adverſe to the eſſence of the french pox, which is an occult property, inimicous to the liver, and that it can overcome that, he doth not beleeve. But though at the firſt rife of this diſeaſe, Carpus the Chyrurgion firſt made uſe of this medicine (whome perhaps that biſhop followed, whom *Fracaſtorius* makes Mention of) being moved by this reaſon, becauſe he had obſerved that the ancient Arabian Phyſitians did make uſe of Quick-ſilver againſt the contumacious ſcab, and many other rebellious diſeaſes of the skin; yet experience hath no way confirmed this remedy as the beſt, and therefore it hath been rejected by many phyſitians: for if Quick-ſilver were one of the antidotes of this diſeaſe it would have alwaies and every where anſwered the expectation, and there had bin no need that more effectual remedies ſhould have been ſought for from the remoteſt Countries beyond the Seas, which have hitherto been uſed with moſt happy ſucceſs, that no man doth any farther doubt of their efficacy in this Diſeaſe; and though Quick-ſilver doth heal French Ulcers, yet it doth not follow, that 'tis an Antidote againſt the Virulency of it as neither thoſe Medicines, which heal Buboes, or Carbuncles in the plague, can for that reaſon be accounted for Antidotes. *Aurelius Minadous* agrees with theſe, *Lib. de Virul. Vener. cap.* 39. Who wholy rejects the uſe of Quick-ſilver in this Diſeaſe, moved thereunto by three reaſons; the firſt is, becauſe he never ſaw any reſtored to health by the uſe of it; on the Contrary he hath rather obſerved many that by the uſe of Quick-ſilver have ſuffered worſe Symptomes in ſo much that they have affirmed, they have received greater dammage from the ſuppoſed Remedy, then from the Diſeaſe: the ſecond is, that Quick-ſilver is hurtful by Reaſon of its exceſſive coldneſs: the third is becauſe no body can explain, after what manner Quick-ſilver doth good in this Diſeaſe. To which ſome add a fourth Reaſon, that of it ſelf it is poyſon; and a fifth that many have died by the uſe of it.

The affirmative opinion.

On the contrary many other Phyſitians do very much commend the uſe of Quick-ſilver in this Diſeaſe: and that I may now paſs by others, *Epiphanius Ferdinandus, Hiſtor.* 17. writes that he can make good by Oath, that he hath perfectly cured, leaving no evil Symptomes, a hundred and fifty people Frenchified of al Ages; Sexes, and of diverſe Temperaments, and at divers ſeaſons of the year; and he names ano her moſt experienced Phyſician, *Joban. Laurentius Protopapa*, who hath affirmed to him by Oath that he hath cured above a thouſand men Frenchified with the Mercurial Unguent with moſt happy ſucceſs, and he writes that we ought to give God thanks, that he would make known to wonderful a remedy for ſo great a diſeaſe.

The Authors Opinion.

That we may quit our ſelves of this difficult controverſie, Firſt of al we think the uſe of Quick-ſilver is not wholly to be rejected in the Cure of this Diſeaſe, neither do the reaſons alleaged before by *Minadous*, or others evince it: for firſt of al as concerning experience, here one experience may be oppoſed againſt another, and there are many Phyſitians who taught by experience it ſelf do with wonderful praiſes extol Quick-ſilver in this Diſeaſe. The Second reaſon, that Quick-ſilver is to be rejected becauſe it is cold, is falſe, for the effects of Quick-ſilver as was ſaid before, do teach us that it is rather hot then cold. Thirdly, concerning the manner how it works, and cures this Diſeaſe, we ſhal ſee hereafter. And though that manner could not be found out, yet the experience muſt not therefore be denied; for there are many Medicines that work by occult qualities, whoſe manner of acting cannot be perfectly explained. Fourthly, though Quick-ſilver be poyſonous yet 'tis not therefore wholly to be rejected in this diſeaſe, whenas other venenate things come into Phyſical uſe, as opium, Cantharides, Oyl of Scorpions and others. But Fiftly whereas ſome could not be cured by mercurial Medicaments, this is not to be

aſcribed

aſcribed to the quick-ſilver, but rather to the ignorance of the Phyſitian, who did not rightly apply this Medicine, or to the negligence or diſobedience of the patient, or to the vehemency of the Diſeaſe, which could be overcome by no Medicine, though the beſt that is.

When quick ſilver is to be uſed in the Venereal Diſeaſe.

But as quick-ſilver is not wholly to be rejected, ſo we think it is not unwarily and raſhly to be uſed, but only upon urgent neceſſity, to wit then when this diſeaſe could not be cured with Guajacum wood or Sarſaparilla. For we muſt come to the uſe of quick-ſilver for two cauſes eſpecially, the firſt is when the Diſeaſe is ſo ſtubborn, that it wil not yeild to thoſe uſual Medicines: Secondly when there is ſomething preſent, which doth not admit of the uſe of the Decoction of the wood and Sarſaparilla, eſpecially the heat and inflamation of the Kidneys and Liver. And *Euſtachius Rudius* writes *Lib.* 5. *Cap.* 15. that he hath cured ſome, who if they had uſed never ſo little of Guajacum, though corrected with cold things, were preſently taken ſo with a heat of Urin, that an Inflamation of thoſe parts ariſing, they have hardly eſcaped death; and therefore in ſuch caſes ſomtimes, wil we or nil we, we are compelled to make uſe of quick-ſilver, as the ſame *Rudius* ſpeaketh; and that oftentimes may be done ſafe enough, ſo that he writes he hath anointed with quick-ſilver even infants infected by their Nurſes at ſuck, and hath cured them.

Things prohibiting unction with Quick-ſilver.

Yet we muſt not come raſhly and inconſiderately to this unction, but firſt of al we muſt conſider, whether there be any thing preſent that doth prohibit it: for firſt of al unction with quick-ſilver is not admitted, when the ſtrength is but feeble, and therefore in old men it ſeldom takes place. Secondly, if the body do ſtil abound with many vitious Humors, for then the quick-ſilver doth not eaſily penetrate: and by a commotion of the Humors it cauſeth grievous Diſeaſes and Symptomes, therefore the body muſt firſt of al be emptied. Thirdly, if the Air be too hot, and if it be dog daies. Fourthly, if the body be extenuated, if there be a Feaver, Ulcers of the mouth, and inclination to a quinſie; this kind of Medicine alſo is not convenient for them who before the French Pox, ſuffered numneſs, tremblings, Palſie, and pains in their joynts.

Whether Quick-ſilver be an Alexipharmacum of the Venereal Diſeaſe.

But that quick ſilver may rightly be made uſe of, we muſt firſt of al enquire after what manner it is to be given, and what it can performe, and do in this diſeaſe, on which buſineſs the hinge of this controverſie turnes. Where firſt of al we are not of their opinion, who think quick-ſilver to be an Alexipharmacum of this Diſeaſe. *Quercetan* indeed affirmes it in *Conſil. de lue Vener.* where he writes that Mercury is the only true and ſole Alexipharmacum of this Diſeaſe, eſpecially if it be inveterate. From whom *Felix Platerus* doth not much diſſent, who writes that Mercury by its occult qualities and propriety contrary to this diſeaſe, doth quel the Venenate quality of that diſeaſe, but this cannot ſimply be admitted, for when as there are three things in this Diſeaſe, firſt of al that Malignant quality imprinted on the parts dedicated to nutrition, and eſpecially on the Liver, or an occult Diſeaſe; Secondly, vitious Humors, generated in the Liver evilly affected, and polluted by this Malignity: Thirdly, Diſeaſes and Symptomes which are raiſed every where in the body by thoſe vitious Humors, we do not deny indeed that Quick-ſilver may conduce ſomwhat to the Evacuating of the vitious humors, as ſhal be ſaid here after, and hence alſo to the taking away of the Diſeaſes and Symptomes which do ariſe from them; but that it doth overcome the malignant and virulent diſpoſition it ſelf, which is the property of an Alexipharmacum, is that which we deny. For firſt of al experience doth not confirm it, neither hath that Alexipharmacal vertue of Mercury been hitherto proved by any one, by any ſolid argument; but whatſoever it performes, it doth by ſalivation and violent purging, which is not the property of an Alexipharmacum, for otherwiſe al Medicines purging vitious Humors ſhould be called Alexipharmaca. This rather is manifeſt, that ſome cured by mercurial Medicines, after a long interval of time

have relapſed into this Diſeaſe, that occult and Malignant diſpoſition being left in the body. Secondly, that quick-ſilver is no Alexipharmacum, appears alſo by this, becauſe 'tis no way friendly to our body, but rather hurts the brain, Heart, and other Members, and cauſeth moſt grievous Diſeaſes and Symptomes in the jawes, which *Platerus* endeavors in vain to remove from Mercury, and to aſcribe them to the virulency of the ſpittle. For thirdly, Quick-ſilver cauſeth ſalivation, not only in the French pox, but alſo in other bodies, which are not Sick of the French Diſeaſe, and beſides hurts in the mouth, inflamation, Exulceration, Stinks, injuries of the Teeth, which is obvious for every one to experience and obſerve, but that is more conſonant to truth, that quick-ſilver is to be numbered amongſt Evacuating Medicines, whenas 'tis evident by experience, that by benefit of that, many thick, tough and virulent Humors are emptyed by the mouth, ſomtimes alſo by ſweat, or other waies, and that it doth not much good in this Diſeaſe, unleſs ſalivation enſue: therefore when it is applied, it can be uſed only for this end, to evacuate virulent Humors, which being emptied, whenas the Symptomes cauſed by them do vaniſh, 'tis concluded by many, that it may be adminiſtred for the Mitigation of the ſymptoms, when as yet it doth only mitigate or take away the Symptomes by accident, the virulent Humors, on which they depend, being taken away. Which cure notwithſtanding, as *Fernelius* is of opinion, is the cruelleſt of al, and ſo hard, that many would rather periſh of the Diſeaſe, than be cured with ſo great danger, ſo bitter hazard: but that quick-ſilver may be applied to external and contumacious Ulcers, is known to every body.

How many ways quick-ſilver doth Evacuate.

But to evacuate vitious Humors it may be uſed three manner of waies; either to move by ſtool and vomit; or to cauſe ſweat; or to cauſe Salivation and ſpitting. Concerning the giving of quick-ſilver to move by ſtool or vomit is already ſpoken before, and the Chymiſts are large in the praiſe of it; and do extol it with wonderful commendations: and *Crollius* calls Mercury the Balſome of Nature, in which there is both a vertue incarnative, and regenerative, which doth wonderfully renew, and purge from al impurities, and therefore cals it a divine Medicine: to whom *Beguinus* aſſents, who in *Lib.* 2. *Tyrocin. Chym. cap.* 3. writes that Mercury is the chiefeſt Alexipharmacum againſt al corruption and putrefaction: from whom though *Platerus* do not wholly diſſent, while he teacheth, that this Diſeaſe may eaſily be cured by purging with Mercury, and truly in no long time, but very ſpeedily, being ſcarce drank twice or thrice, from whence is raiſed a plentiful flux of the belly, and alſo vomiting, ſomtimes alſo ſweat and Urin is provoked: yet he cannot deny, that it doth perform this by a violent irritation of Nature, and not without danger.

By ſtool and vomit.

But I would have a Phyſitian rather timorous, than bold and raſh in the uſe of this Medicine, for that which *Pliny* ſaid was the poyſon of al things, *Lib.* 37. *cap.* 6. that wil not ſpare mans body, but offends the ſtomach, Liver, Guts, and al the bowels, and is eſpeciallly an enemy to the Nerves and brain: but though the Chymiſts affirme that being prepared it may grow more mild, and that it may not hurt, they precipitate it, ſublime it, and prepare flowers of it, *Aquilam, Aurum vitæ*, and other things; yet though you expel Nature with a fork, ſhe wil ſtil returne: for as it was ſaid even now out of *Platerus*, it purges violently and not without danger; and as *Fernelius Lib. de lue Vener. cap.* 17. writes of this buſineſs, upon the giving of prepared Mercury, (doubtleſs he meant precipitate) preſently from the compaſs of the whol body, Humors of al ſorts break forth upwards and downwards, with ſo great force, and ſo violent, that the ſpirits being exhauſted, and the ſtrength waſted, the ſick do either die preſently, or lie ſome daies without ſtrength like unto dead men: ſomtimes al the mouth is inflamed, and contracts a Gangreen, putrid Ulcers and very ſtinking, and ſomtimes the jaws ſwel, that the Patient for ſome daies is not able to ſwallow at al: although ſomtimes it work more gently, yet it purges violently enough.

'Tis to be given warily.

Bu

But if it do work more mildely, either it retaines the nature of that which is crude, or being fixt it doth almost put on the nature of a fixt mettal: of the first sort is mercurius dulcis, of which *Angelus Sala* saith in the riper aged it works little, unless it be given in a great dose, to wit thirty five grains, and then it easily raiseth salivation; and that this is true a certain Physitian wel known to me, learnt to his cost and found it so by experience, as we have said *de consens. et dissen. cap.* 18. but if it be more fixt, it doth not move the belly; therefore it must needs be that it have a middle nature, if it ought to purge, that it may stimulate nature, where yet alwaies to hold that medium is very difficult. Yet amongst those medicines, we have nominated of prepared mercury, that which is called mercurius vitæ doth easily challeng the first place, so that I think it would be needless to make mention here of more medicines prepared out of mercury; but we must note this concerning mercurious vitæ, that it is no pure mercurial medicine, but there is conteined in it some part of antimony as appears by the vitrum and Regulus, which may be made out of the mercurius vitæ, but can by no art be prepared out of mercury alone, but that they may be made of antimony is wel known.

When it is to be given in the Venereal diseases.

Yet when we are minded to administer mercurius vitæ, and other mercurial medicines, we must diligently consider *Mesues* rule, that it is a grane of wisdom, not to come to strong medicines, but where weak ones wil not satisfy. If therefore this evil be new and gentle which may be cured by gentler purgers, and by the decoction of Guajacum or Sarsaparilla, we must not rashly come to the use of quicksilver. But if the evil be stubborn and inveterate, and there be many virulent humors in the body, mercurial medicines may be given without danger: for then 'tis not easily to be feared, that it should assail mans body, when it hath vicious humors enough to work upon. And oftentimes necessity compels us to come to the use of quicksilver, and some do hope in vain, to affect the same business by weak medicines often repeated as by stronger taken plentifully at once. For experience hath long since taught us, that we do oftentimes spend our time in vain in such medicines given against pertinaceous diseases. On the contrary that strong medicines, and amongst them quicksilver, after once or more times taking, have happily overcome pertinacious diseases, whose cause was about the stomach, the cavety of the liver, the spleen, pancreas, the cal, and from thence was communicated to other parts.

Sweating medicines made of quicksilver.

Secondly out of quicksilver are prepared sweating medicines, to wit the white spirit of mercury, or the white or red oyl of mercury, one drop of which or two, are given to drink in treacle water and spirits of Guajacum, or some such like decoction to move sweat, as also other preparations and fixt medicaments of quicksilver: and in case that quicksilver performe that, for which end it is given, and move sweat, and discuss the vitious humors by it, 'tis not so dangerous a medicine.

Salivation by quicksilver.

The third way is by Salivation, and many indeed do place al their hopes of the cure of this disease in Salivation, so that *Platerus* writeth, unless that in the cure by quicksilver Salivation be raised by the use of it. And at last be supervenient, the cure doth not succeed, neither is it fitting so much to condemne the use of it and wholly to reject it for the faults which happen in the mouth in this cure, or for other accidents, amongst which convulsions are cheifly to be feared, which are wont sometimes to happen, if there be any great error committed in the use of it, whenas afterwards in the cure the faults of the mouth are easily corrected again. On the contrary *Fernelius de lue Vener. cap.* 6. doth exactly set forth this manner of cure and describes its inconveniences: so great saith he is the cruelty and harshness of this unguent, that the patient presently begins to languish the second or third day; for by its extraordinary tenuity it doth melt and dissolve, whatsoever is in the superficies and whole compass of the body, and at length by its extream cooling faculty with which it is endued, it drives them to the inward parts, from thence into the stomach and breast, from which afterwards it drives them upwards by a continuity of parts to the throat and mouth, with so great and so violent an injury, that the teeth, to which as also to the brain 'tis peculiarly an en-

emy, do inal preſently, grow looſe, and in ſome become blackiſh and al drop out. Some things it diſcuſſes out of the body by ſweat, ſome by its purgative faculty it caſts forth by ſtool, with a great deal of torture. And breifly to comprehend al, al certainly who are thus cured have their jaws exulcerated, their tongue and pallate ſwollen, their gums and teeth looſe, and ſpittle runs through their mouthes without any intermiſſion, ſmelling worſe then any ſtink, with ſo great contagion, that the lipps by touching of that contract ulcers, and the cheeks are ulcerated within: the ſtomach being cooled and diſturbed with the ſtink, the ſick are deſtitute of any appetite to meat, and being tormented with intolerable thirſt, yet they are ſcarce able to drink, their whol mouth being but one ulcer. Beſides their tongue ſtammers, their eares grow deaf, in ſome incurably. Al the houſe about ſtinks.

When unction with quickſilver is to be uſed.

And indeed that manner of cure is bitter enough, that one ought not eaſily to admit of it, and therefore 'tis not be uſed when the evil is new and light, but when 'tis inveterate and contumacious, and when other remedies as the decoction of Guajacum, Sarſaparilla, and the like, have firſt of al been tryed in vain; neither muſt we come to the uſe of that unleſs the body before be diligently purged, leaſt too great a quantity of virulent humors be turned ruſhing to the mouth and jaws; neither is this cure convenient for old men, nor for weak bodies, nor thoſe that are waſted, and are ſick of a weakneſs of the nerves, and have weak heads, and ſubject to diſtillations, leaſt by the quickſilver, it being hurtful for them, theſe parts be more debilitated.

Therefore as *Hercules Saxonia de lue. Vener. cap.* 39. writes of this ſubject, they are neither to be approved of who uſe mercurial unctions without any difference, neither muſt we hold with them, who wholy reject the uſe of them. For ſomtimes this diſeaſe is ſo contumacious, that 'tis not cured with the decoction of Guajacum taken fifty dayes, and twice or thrice a day, but grows worſe; whenas therefore the patients are weary of taking any more decoctions, and alſo of ſweating, and hungring, that they may not be left without al help, 'tis better to adminiſter a dangerous remedy then none at al.

How quickſilver doth raiſe a flux.

But what way quickſilver doth raiſe ſalivation, Authors do differ, *Euſtachius Rudius lib.* 5. *de morb. occult. cap.* 15. diſputes at large of this buſineſs, and firſt of al he worthily derides them who hold that quickſilver by its moſt intenſe coldneſs, or repreſſing faculty doth repel the humors from the external parts into the innermoſt parts of the body; for repelling thinges are of thick and dry parts but quickſilver is of moſt thin parts: neither do other repelling medicines, nay not the moſt cold ayre, or coldeſt water, performe any ſuch thing; neither can here be given any reaſon, why the repulſion ſhould be to the mouth, and not to other parts that are neerer. This therefore muſt be inquired, why quickſilver is moved to the head, and is cheifly purged through the mouth. Many are of opinion, neither doth that diſpleaſe *Platerus*, that quickſilver doth cauſe ſpitting by a peculiar vertue: but he explains not the manner; neither doth this pleaſe *Rudius*. For ſaith he if quickſilver be moved to the head by vertue of its whol ſubſtance, and by a peculiar property, it doth that either by a ſimilitude or contrariety of ſubſtance; it cannot be by a ſimilitude of ſubſtance, becauſe quickſilver doth rather hurt, then befreind the brain and nerves: and therefore as cantharides do invade and offend the bladder, the Sea hare the lungs, ſo alſo in this manner quickſilver ſeems to aſſault the brain. But *Rudius* overthrows that opinion two waies, firſt of al, becauſe he hath proved before mercury, to be no poyſon, ſecondly becauſe he thinks he is able to render a reaſon from the manifeſt qualities, why quickſilver doth aſſault the head; where firſt of al, he ſuppoſeth this that mercury as opium hath heterogeneous parts and that 'tis made up of parts of a different nature, yet ſo, that the hot parts do predominate; and that 'tis compounded of an aery and earthy ſubſtance but very much attenuated with heat, which like unto ſmoak ſcarce enduring the heat, flyes away in fume and is diſperſed. Therfore amongſt al other medicines of this faculty it doth moſt powerfully extenuate the humors, diſcuſs, and convert them to motion,

and

and therefore doth purge by ſweat, by ſtool, by the mouth, and ſo partly by its purgative vertue, partly by the heat of its thin parts doth draw the humors along with it, and that it happens ſo, that the thinner going to the skin are emptied by ſweat; but the thick and unfit to be emptied by ſweat, being extenuated together with the quickſilver turnd into vapor are drawn up into the head and then cauſing diſtillations do fal down again; and at length he concludes, whenas quick ſilver outwardly anointed doth not remain in the ſtomach, as other purging medicines do, but aſſails the head; 'tis no wonder if it principally purge by the mouth.

But indeed he doth not this way ſatisfie the doubt, and this is a great peice of ignorance both in things phyloſophycal and Chymical. For firſt of al that Quick ſilver cannot be cleared from venenoſety, was ſaid before, and proved, and the reaſons for the contrary anſwered. And *Rudius* himſelf in the chapter even now alledged, reckons up ſo many and ſo greate evils, which mercury doth cauſe, that they cannot al be reduced to manifeſt qualities: which that I may compendiouſly reduce, Quick ſilver hath a corroding faculty, cauſeth a trembling and weakneſs of the heart, hurts the animal faculty, weakens the ſubſtance of the nerves and their proper unity, whence are raiſed incurable tremblings and greivous torments, and many uſing of mercurial medicines, have ſuffered cunvulſions, falling ſickneſs, and apoplexy. Nay the ſame *Rudius* reports that ſome after unction have fallen into raving and madneſs: but whereas he endeavors to reduce that operation of mercury by which it cauſeth ſalivation, to the manifeſt qualities in that he laboures in vain, for firſt of al there are no ſuch heterogeneous parts in mercury as he phanſieth, as was ſaid before, neither could any Chymiſt ever yet ſhow them, and whether Quickſilver be burnt, or whether it be reduced to water, or what other external forme ſoever it puts on, it retaines its whole eſſence, and with a litle labour may be reduced to its ancient forme. Beſides *Rudius* renders no reaſon, why Mercury outwardly anoynted on the body, is rather moved to the head then to the ſtomach, and carries the humors thither with it: for whereas he thinks, that it is reſolved into vapour and carried up into the head, tis falſ, whenas it may be collected whol both in the mouth, and in other parts.

The hurtfl of Quick ſilver.

'Tis more agreeable therefore to trueth, that quickſilver is offenfive to the nerves and brain, as the tremblings which it cauſeth do ſufficiently de monſtrate, and therefore that it creepes up by the nerves to the brain, and carries the vitious humors thither with it, which together with the vitious humors whenas nature and the expulſive faculty of the brain doth expel, and caſt down to the jawes, hence follows ſalivation: and quickſilver whether outwardly applied, or inwardly taken, ſtil creeps up to the head, and cauſeth much ſpitting.

Quick ſilver an Enemy to the nerves

But there are divers wayes of uſing Quick-ſilver to raiſe a flux, to wit either 'tis outwardly applied to the body by unguents, plaiſters, epithems and lavatories ſo called, by a girdle, by bracelets and Rings, by ſuffumigations; or tis taken inwardly, by al which ways not withſtanding there is nothing elſe done, but that the Quick-ſilver may be reduced into the ſmalleſt parts that it may the eaſier penetrate into the body yet what way ſoever tis broke into peices, it keeps its nature, and the leaſt parts are eaſily again united to one another and returne to their ancient corpulency, that it hath bin obſerved, that ſometimes a great quantity of it hath bin collected in the veins, and cavities of the bones.

The wayes of uſing quick ſilver

Yet the moſt common way of applying Quick-ſilver is by unction; but that unction may be performed rightly, ſometimes are to be obſerved before unction, ſome in the anoynting, and ſome after unction, before unction the body, if need require, muſt be emptied either with purging medicines or bleeding; for if very many vitious humors abound in the body, tis to be feared, that by the uſe of theſe unctions they ruſh together in a heap to the jawes and ſuffocate the patient, or being rapt up to the brain do cauſe an apoplexy, or palſie, and therefore firſt of al part of them ought to be emptyed. Alſo if their be plenty of blood, leaſt the patient may ſuffer

How the unction with quick-ſilver is to be ordered.

ſuffer an inflamation of his jawes or a feaver, tis good to take away a little blood. *Falopius* alſo, that part of the matter may be conſumed, the bowels ſtrengthened, and not be offended by the Quickſilver, gives the decoction of Guajacum eight or ten dayes before unction.

As concerning the unction it ſelf, the baſis of theſe unguents is Quick-ſilver, which muſt be choſen pure, or vivified by cinnabar, and it muſt be mixed with hogs-greaſe hens-fat, butter, oyl, turpentine that it appeare no longer quick to the ſight, which is commonly called mortifiying of it. Some alſo ad to ſix ounces of Quickſilver, four ounces of red ſugar. Some do mix divers other things to correct the malice of Quick-ſilver, and indeed this or that according to the different conſtitution of the diſeaſe, which notwithſtanding profit little. For thoſe oyly and unctuous things, or other things, do ſtick on the skin and ſuperficies of the body, and cannot follow the Quickſilver into the innermoſt parts of the body, nor correct its malignity. But thoſe things which are neceſſarily mixed, are mixt, to that end, that the quickſilver may be reduced into the ſmalleſt bodies and ſo may the eaſier inſinuate it ſelf into the body. Some alſo in the compoſition of this unguent, think we ought to have reſpect to divers things: and therefore *Hercules Saxonia*, if there be hard knobs, ads thoſe things which do mollifie, as the fat and greaſe of geeſe, ducks, the Marrow of oxe bones, butter, oyle of ſweet almons; if there be ulcers he bids us ad drying pouders, Franckincenſe, Myrrh, aloe, Litharge, white lead, which if they be ill conditioned, he ads Cinabar precipitated. Beſides he commands us to mix medicines, which ſtrengthen, the parts: more over he bids us ad thoſe things, which do reſpect the principal parts, and thoſe that are moſt hurt, and therefore if the joynts be affected he bids us ad ground pine; if the liver, hepatick means; if the ſtomach, things ſtomachical, But beſides the reſt he doth aprove of oyle of Guajacum added to the ointment; all which as we do not wholy diſallow of, ſo they ought to be explained. Firſt of al, if the unction be ordered cheifly for tumors or ulcers, medicines may commodiouſly be mixed with it, but if ſalivation and emptying by ſpittle be cheifly intended there is no need of that laborious compoſition. Secondly Quick-ſilver it ſelf if it be reduced into ſmalleſt parts, doth eaſily penetrate, neither hath it any need of helpers, and there is nothing that can penetrate eaſier then that. Thirdly I can ſcarce be perſwaded, that medicines outwardly anointed, can penetrate to the ſtomach and liver, and ſtrengthen them; this likes me beſt, that he thinks oyl of Guajacum ought to be added to thoſe unguents.

How Quick ſilver is to be prepared.

The Quantity of Quick-ſilver that is uſed, is ſometimes more, ſometimes leſs, according to the vehemency of the diſeaſe, and the patients ſtrength. Yet we muſt not exceed ſeven ounces which is ſufficient for ſtrong bodies, in weak bodies 'tis ſufficient to uſe three foure or five ounces; but every time uſe two or three ounces; of the unguent, or for every doſe take two ſcruples; in tender children for every place ſo much oyntment as is the bulk of a lentil is ſufficient. Such oyntments therefore may be made thus.

The quantity.

Formes of Mercurial Unguents.

Take *of mercury ſix ounces; of hogs-greaſe without ſalt one pound; Kil the Mercury with the greaſe and mix it exactly, then ad of the marrow of an ox leg half an ounce; of Turpentine three ounces; of the oyl of it one ounce, of the oyl of Guajacum two ounces; mix them.*

Or Take *of venice Turpintine one pound, of Quick-ſilver ſeven ounces; mix them diligently, then ad of hogs-greaſe eight ounces; oyl of ſweet and bitter almonds of each two ounces, pouder of cinamon two drams; Muſk ſix granes mix it and make an ointment.*

Euſtachius Rudius commends this form, which he uſed with moſt happy ſucceſs for many yeares at Utine, in the great hoſpital of that City, with ſo much ſafety, that not one of them periſht which he had in cure.

Take *ake of Quick-ſilver one ounce and half; Freſh Sows greaſe three ounces; pouder*

pouder of maſtick one ounce; oyl of maſtick one ounce and half; Saffron half a dram; two Sweet apples of a middle ſize. Firſt of al let the ſows greaſe be moſt exactly mixed with the mercury, then ad the maſtick finely poudered together with the oyl of maſtick and Safforn, and afterwards the aples through ripe cleanſed from the parings and core.

Or, Take *of mercury killed with ſpitle three ounces; old oyl four ounces; of Frankincenſe prepared as common maſtick two ounces, maſtick one ounce; hogs-greeſe two ounces and half; oyl of bayes one ounce and half; virgins wax two ounces; ointment of diachæa one ounce and half; ſagapen one ounce; of wax as much as is ſufficient. Make an Ointment.*

Or Take *of mercury two ounces; of hogsgreaſe three ounces; turpentine one ounce; pouder of orice frankincenſe, maſtick each two drams; oyl of chamemel, white lillies, bayes of each two aunces; Stirax half an ounce; mix them.*

Or Take *of hens, hogs, and beares greace each one ounce; oyl of white lillies, bayes each two ounces; mercury ſix ounces; mix the greaſes in a morter, afterwards ad the mercury, and ſtir them an houre in the morter, then ad of frankincenſe maſtick, myrrh, amoniacum, ſtirax, pouder of Arabick, lavinder each half a dram make an ungnent.*

The Places which are anointed are the joynts and the ſpaces between, and the leſs fleſhy parts in the hands, elbows, feet, knees, ſometimes in ſtrong bodies the emunctories of the liver are anointed, and the backbone. *Fallopius* expects the hands, and firſt of al anoints the feet tranſverſly about the begining of the feet, afterwards the ſpaces between the joynts of the leg, then the midle of the thighs, the middle of the Elbow bones, and the midle of the Armes, afterwards the whol back.

The time for anointing.

The moſt commodious time for anointing, is the ſpring and autum, the winter and ſummer are leſs convenient and the unction is to be performed in the morning, upon an empty ſtomach, in a cloſe and warm place, beginning at the lower parts, and ſo paſſing to the upper unction is ſeldom ordered twice on the ſameday.

The patient anointed muſt either be ropped up in linnen, or the parts anointed be covered with couſe flax or hemp and ſo the patient be placed in his bed.

How long unction is to be continued.

But the unction is to be continued ſo long, til ſalivation or a looſneſs, or ſome other evaccuation ſucceed; and the ſymptomes be leſſened and ceaſe; and truely if a looſneſs follow, it is not ſuddenly to be ſuppreſt, yet we muſt have a care leaſt the guts ſuffer any hurt, caſting in by Clyſter chaly beat milk, or the juyce of ptiſan with milk, or the decoction of barley and afterwards if need require, come to aſtringent meanes.

Some think that ſweat alſo ought to be moved; but if nature tend to ſalivation, tis not convenient to move ſweat, leaſt there be contrary motions cauſed; but if nature of her own accord tend to ſweat, tis not to be hindered, yet unction is ſcarce to be continued above three dayes at one time; ſometimes alſo there preſently follow greivous ſymptomes as great ulcers of the mouth, ſwellings and inflamation of the tongue and jawes, the ſwallowing is hurt, the teeth looſened, an extraordinary flux of virulent humors from the mouth, a diarrhy or dicentery, and then we muſt preſently forbear anointing, yet ſometimes it hapens but very ſildom, that no ſuch greivous ſymptom followes. But only ſweats, and puſtles are multeplied al over the body.

What is to be done after unction.

When unction is now perfected, and the ſpitle runs wel, let the parts anointed be waſht with wine, in which ſage, Arabick, lavender, flowers, roſmary, grownd pine, bayleaves, calamint origanum have bin boyled, afterwards lay upon them ſome plaiſter for the nerves.

At laſt when the unction is paſt, we muſt uſe our endeavor, that the mercury be not left in the body, and that no evil be contracted neither in the mouth nor other parts; and therefore we muſt move ſweat in a Laconick bath keep gold money in the mouth, ſhaveings of gold muſt be dranke, or bullets or pils made up of leafe gold muſt be ſwallowed: for the mercury is imbibed by the gold, and with it is emptied out of the body, and ſo al evil that might happen is prevented.

To

To aſſwage pain, the mouth and jawes muſt be waſhed with warme milk or the Decoction of Barley: to hinder inflamation let the patient uſe the decoction of plantaine or plantaine water, or of Vine leaves, with the ſyrup of Mulberries and dry roſes, the teeth muſt be waſhed with the decoction of ſage, or with Sage, columbine water, or auſtere wine; after unction we muſt not preſently deſiſt from the cure, but the decoction of Guajacum as being the alexipharmacum of this diſeaſe, muſt be drank ſtil for certain days, which if it be intermitted, a relapſe is wont eaſily to follow upon it.

Mercurial plaiſters. Secondly, emplaſters made of mercury are wont to be applyed in this diſeaſe, which though they cauſe leſs trouble, yet they are leſs effectual to empty by ſpitting. They are prepared of the ſame matter of which the ointments are, to which alſo we may ad cinnabar: but quickſilver either is mixt with uſual plaiſters, as diachylum Ireatum, melilot, or new ones are compounded. The plaiſter called de ranis with mercury, is alſo in uſe. Theſe plaiſters are ſpred upon linnen cloth, leather, and are applyed to the ſame places as the ointments, eſpecially to the hands and feet, alſo to the emunctories, and ſomtimes to the back bone, and they are worne continually night and day, and every third or fourth day are renewed: this cure is leſs troubleſome, and upon faire daies the patient may go abroad, yet the cure is not ſo perfect, and therefore muſt be continued longer.

Lavatoris of mercury. Thirdly, Linnen clothes wet in mercury water, are applyed to the ſame places in the forme of an epitheme, and becauſe ſublimate is moſt commodiouſly diſſolved in water, the ſame places which are wont to be anointed, are beſmeared with mercury diſſolved in this manner, which medicines are commonly called lavatories, which are prepared of mercurius ſublimate one ounce, which is diſolved in two pound of ſome liquor.

For Examples ſake.

Take *of Mercury ſublimate one ounce; of Scabious, Roſe, Fumitory water, each eight ounces; Sage water four ounces. Let them boyl and be mixed.*

The uſe of it is this, with a cloth wet in this liquor, let the knees and feet be beſmeared, and the armes from the elbow towards the hands, and that muſt be done in the morning and towards the evening, in a warme place and continued for ten days, til ſpitting follow.

Mercurial girdles and bracelets. Fourthly, Girdles and bracelets are made of Mercury killed with ſpittle and mixt with the white of an egg, which mixture is ſpred upon cotton, and that is ſowed into leather or cloath, and of that girdles or bracelets are made.

Suffumigations of mercury. Fifthly, Alſo this diſeaſe is cured by ſuffumigations made of quickſilver, but this way of cure is more dangerous than that by unction, nay it hath been deadly to ſome, and therefore is not to be made uſe of, unleſs al other meanes have been tried in vain, and only on very ſtrong bodies; for this way of cure is very violent, whenas the patients that do admit of it, every day are wont to voide ten pints of virulent ſpittle; but it takes not place in thoſe that are weak, waſted, endewed with a hot and dry diſtemper, not in thoſe, which are troubled with a difficulty of breathing, or are ſubject to diſtillations from the head on the breaſt, or who ſpit blood, or are taken with a lientery, or dyſentery: but phyſitians do cheifly uſe thoſe ſuffumigations in a contumacious French ophthalmy, and upon an imminent ſhedding of the haire, which cannot be hindred by other medicines; for this ſuffumigation doth faſten the haire. Yet then a particular ſuffumigation may be appointed.

Their difference. For we muſt note here, that there is a difference of ſuffumigations in this diſeaſe; for ſome are univerſal which are received by the whol body, and therefore alſo do empty the whol body; others partitular, which are applyed only to certain parts: again ſome ſuffumigations are prepared of benigne medicines, as frankincenſe, myrrh, oyl, Cinamon, Styrax calamite, ſpikenard, Amber, Ammoniacum, benjamin, wood of aloes, Amber greeſe, Musk, Gallia moſchata, and the like, which though they may be fitted for the uſe of certaine parts, yet they do not deſtroy the venereal diſeaſe.

Thoſe

Thoſe therefore which are proper to this diſeaſe, are chiefly prepared of mercury and of thoſe things made of Mercury, cinnabar, Mercury precipitate, ſublimate.

As concerning thoſe univerſal ones, their baſis as was ſaid even now, is mercury any way prepared; ſome ad the Greeks Sandarach, and yellow arſnick, but whenas they are moſt pernicious poyſons, they are not late enough applyed, neither do they cure this diſeaſe in particular that we may give you ſome formes.

Formes.

Take *Of Factitious Cinnabar three ounces; Myrrh, Frankincenſe, Maſtich, each one ounce; Liver colored aloe, Styrax calamite, Benjamin, each half an ounce: make a pouder.*

Or Take *of Cinnabar three ounces; Myrrh, Frankintence, wood of aloe, Laudanum, Ammoniacum, each one ounce; mix them with turpentine, make pills.*

Or Take, *of Cinnabar three ounces, Mercury precipitate three drams; Frankincenſe, Aloe, Maſtick, Myrrh, Benjamin; Styrax Calamite, each half an ounce: make a pouder. Epiphanius Ferdinandus* reports the following forme is much in uſe at *Naples* in the Hoſpital for thoſe that are incurable.

Take, *of Litharge five ounces; of antimony, Cinnabar, each one ounce; of Pontick Rhubarb ſix ounces; Polipody of the oake three ounces. Sweet cane, Cinamon, Laudanum, Roſes, Mace, Nutmegs, Alum, Verdegrece, Aloe, each three drams; Red lead, the Greeks Sandarache, each one ounce. Gumme caranna, two drams; Water of Roſes and Citron Flowers, as much as is ſufficient, mix them according to art.*

But it ſeemes to me to be a forme made up without al reaſon which containes many things unprofitable, and alſo hurtful.

That is ſafer which *Ferdinandus* himſelf propoſeth.

Take *of Cinnabar, Mercury ſublimate each one ounce; Gumme of the Olive tree Laudanum each half an ounce; Nutmegs, Bay and Juniper berries, each three drams; Marjoram, Coppras one dram and an half; Turpentine as much as is ſufficient to incorporate it, make a maſs.*

The manner of preparing theſe ſuffumigations.

But thoſe medicines whether they be reduced into pouders, or pills or trochisks, are uſed after this manner; firſt of al the patient that he may be able to undergoe this cure (fit ſauce for him, and they are deſervedly thus handled who defile themſelves with luſt) you muſt give him two reare eggs, a morſel of bred dipt in ſtrong wine, and a draught of wine, and a ſpoonful of conſerve of roſes; then let him reſt quiet for a quarter of an houre; in the interim let that Venereal bed, or rather priſon, viz the ſweating place be heated, and in that hot houſe or dry bath prepare a tent, or a pavilion of thick linnen cloath, under which the patient may ſit naked in a low ſeat; under the ſame pavilion place a pot or veſſel ful of burning coales, on which by degrees caſt either the pouder, or the pills, or trochisks, that the fume from thence may be diſperſed through his whol body, and be received by the naked body of the patient; when the ſmoak abates, ſtrow freſh water on the coals, and continue ſo doing for a third or fourth part of an houre, for half or a whol houre, as the ſtrength of the patient can indure it. For we muſt carefully obſerve, that the patient faint not, which doth often happen; if it be collected by his ſtammering ſpeech, he muſt preſently be taken forth and be refreſht with fitting medicines. But that faintings may be prevented, the patient may be permitted to draw the cold ayre by intervals through a reed, and put forth his noſe without the pavilion.

But theſe ſuffumigations are applied either once or twice a day and indeed for three, ſix, or nine or more daies, according as the purgation doth ſooner or later ſucceed, for when this comes, or a looſneſs, we muſt preſently ceaſe from the ſuffumigation. After the patient hath ſweat ſufficiently under his tent. Being wrapt up in linnen he muſt be laid in his bed, that he may there continue his ſweat for an houre or two.

Particular ſuffumigations.

But particular ſuffumigations are not applyed to the whol body, but only to parts

parts exulcerated or affected with pain; but then Salivation is not moved, neither is that the intent, but it is used only to take away diseases and symptomes in the external parts, viz. for the falling of the haire suffumigatons are applyed to head; to the hands and Feet for their paines, and when they suffer Chaps and Clefts.

Internal Medicines causing Salivation. Last of al also a flux may be raised by taking Quick-silver inwards which though it was not known to *Fernelius*, yet it hath been taken notice of by the more modern, and Quick-silver is used to this end by *Rondeletius*, *Platerus*, and others. Such are those Pills called Barbarossa which have Quick-silver in them; but Physitians give Pills made of Mercury so, that at one dose there is given six or seven grains of Mercury, and they give them almost every day, and so long, til a flux followeth, and this cure they continue for thirty daies. Yet *Platerus* admonisheth that this kind of cure is not easily to be admitted, and not unless the Disease be inveterate, when other Medicines premised availe nothing. He also thinks that it is commodious, if it be presently cast forth by stool either by its own weight, or by the admission of other things; but if that be done, doubtless it will not cause Salivation; therefore 'tis better that Mercury what way soever prepared, be given in a less dose, than can cause purging either by vomit, or stool: viz. that the half, or third, or fourth part only of that dose be given, which otherwise is wont to be given to purge. For example sake, precipitate or Turbith Mineral is wont to be given at other times to vomit or purge to the weight of six grains, but if only three, or two, or one be given, by the continued use of it a flux is raised: and therefore he that would use such Medicines, shal do very right, if first of al he give the ful dose of the Mercurial Medicine to purge, the second day half so much, the third day a third part, the fourth day a fourth part, and continue so, til the spittle run, yet he need not so precisely observe it: and tis altogether safer in this disease to give those Mercurial Medicines, which do not move the belly with great violence, nor so great danger, yet by their continued use do provoke spitting.

CHAP. XXII.

Of the Diet to be observed in the Cure of the Venereal Disease.

Diet. The Air. A Diet in the cure of this Disease is strictly to be observed; first of al let the Aire in which the Patient is conversant, be hot, that insensible transpiration may be free, and sweating be not hindred, but rather promoted, yet not so hot, as to make faint. Therefore if need require let the patient keep himself in a warm chamber the whol time of his cure, and let not him expose himself to the free Ayre, unless it be somwhat hot by reason of the season of the year, and then not before noon. Yet they whose course of life wil not allow them to keep at home, let them guard themselves with Cloaths against external cold, and as much as they can shun the cold Air.

The Meat. Whether a slender diet be convenient in the Venereal disease. As concerning their Meat, there is much discourse indeed every where in this Disease concerning a slender Diet: but whenas a slender Diet is that which doth in some sort impair the strength, or which doth little preserve the enfeebled strength, such diet is only convenient in acute diseases, which whenas they last not long, the strength also somwhat debilitated is able to hold out to the end of them: but whenas the French pox is a Chronical disease, and the Cure is extended for many weeks, if the strength be dejected by a slender diet, it cannot hold out til the end of the disease. But that Physicians do chiefly feed their Patients with bread and raisons, I think this is the cause, because they would give the most simple food, and that of good juyce: for whenas variety of meats doth easily supply vitious humors, and flesh, and fish, and the like meats are more easily corrupted, then bread and raisons they

they prohibit the ſick variety of meats and fleſh, and would have them contented only with bread and raiſons: therefore that courſe and form of diet is to be obſerved which may ſuffice for the conſervation of ſtrength, though not to encreaſe it, but muſt no way oppreſs Nature. The meat alſo muſt be of good juyce, and ſimple, and which no waies affords matter for the generation of excrements, nor may call away Nature from reſiſting the Diſeaſe to the concoction of that. And therefore the patient muſt not be allowed above two diſhes, and meat muſt be given but twice aday; therefore when the ſick is prepared for the uſe of Medicines, let his diet be ſuch which may not impair his ſtrength, but rather preſerve it, nay, in ſome ſort encreaſe it, that the patient may afterwards be able to undergo the evacuations that ſhal be ordered, and a more ſlender diet: but when Sweaters or Quick-ſilver is adminiſtred, if the ſtrength wil bear it, we muſt uſe a more ſpare diet, leſt the vertue of the Medicines be hindered by plenteous nouriſhment, and let the ſuperfluous humors in the body be rather waſted, than heaped up, and let the paſſages by which they ought to be expelled, be al kept free and open: but let not the diet be too ſlender, leſt the ſtrength fail, but be able to hold out til the perfect cure of the diſeaſe, which is wont to be long firſt; and though ſomwhat is to be bated of the accuſtomary diet in the cure of this diſeaſe, yet that is not to be done preſently at the beginning, nor that change is not ſuddenly to be made; but the firſt eight daies by little and little, ſomwhat muſt be ſubſtracted from the accuſtomary diet; as alſo the laſt eight daies of the Cure, by degrees he muſt return to the former courſe of diet; yet we muſt alwaies have reſpect unto the ſtrength, and diligently conſider what that is able to endure, and we muſt have a greater care of that, than of the diſeaſe, as without which the Cure cannot be perfected.

But how much concerns the quantity of the meat, we muſt alſo reſpect the ſtrength, and the diſeaſe; for by how much the ſtrength is ſtronger, by ſo much 'tis able to ſuffer the leſs quantity of meat; but the ſtrength is demonſtrated by the habit of the body, the temperament, cuſtom, the age, ſeaſon of the year, the Country, and condition of the ſick; of which we have ſpoke in its proper place. In brief, as much as poſſible may be, ſomwhat muſt be bated of the accuſtomary food, which alſo the people of *India*, from whom the manner of curing this diſeaſe was derived to us, are reported to do; yet ſo, that alwaies reſpect be had unto the ſtrength: For if the patient be ſtrong, his Body of a cold conſtitution, that he can eaſily endure hunger; fleſh is not to be given any more after eight daies, but the patient muſt be content with bread and raiſons: but if the ſtrength be weak, the body ſlender, cholerick, ſome fleſh alſo may be granted, viz. the fleſh of Chickens, Hens, Partridges, Veal, Kid, and tender weather, as alſo Hens Eggs: but Hogs fleſh which is hard of digeſtion and diſtribution, and doth encreaſe the morbifick matter, is chiefly to be eſchewed; as alſo corruptible Fruits, and ſoft fiſhes: and truly the moſt commodious Food in this diſeaſe, is raiſons, and to be preferr'd before al other meats: beſides, they do not eaſily putrefie, and they afford good juyce and nouriſhment, and correct the malignity of the vitious Humors; whence ſome are of Opinion, That Raiſons in this Diſeaſe are not only meat, but medicine too; and eſpecially thoſe greater ones called *Cybebæ*, are moſt proficable, in which there is greater plenty of nouriſhment, and a more abſterſive and ſtrengthening faculty.

What kind of bread is to be given.

Concerning bread here is ſome doubt; many commend Biſket, nay admit of that only, which as we do not diſallow of in ſtrong bodies, which are moiſt and abound with flegm and excrements, being inclined rather to putrefaction, then aduſt, and in thoſe who have ſtrong teeth, and are accuſtomed to it: ſo alſo Bread once wel baked, and not too moiſt, may ſafely be permitted, as a nouriſhment moſt familiar to al Natures, Sexes, Ages and any ſeaſon of the year: neither muſt we cauſe any trouble to the patient, by forbidding common bread, if he deſire that rather then Biſket: nay Biſket ſeems to have its diſcommodities; for it ſtaies longer in the ſtomach, and is not ſo eaſily diſgeſted, and for the right diſgeſting of it there is need of a greater ſtrength of the ſtomach, which notwithſtanding for the moſt part in

thoſe that are ſick of the French Pox is very languid: beſides whenas in thoſe ſick of the Venereal Diſeaſe for the moſt part aduſt Humors do abound, by Bisket they are increaſed, on the contrary by common bread as being more moiſt they are made temperate, and at length more nouriſhment and good blood is afforded from it, as being beſt tempered, and in meats that which is beſt tempered, is to be preferred before that which is intemperate.

Many alſo do weigh out the quantity of the meat, and write that at one meale, four ounces of bread, and two or three ounces of fleſh wil ſuffice; but this cannot be ſo accurately obſerved in al men, but here there is no ſmal regard to be had to Natures and cuſtome.

Their drink. As concerning their drink, Authors alſo do not fully agree concerning that, ſome think nothing is to be given for drink but the decoction of Guajacum and Sarſaparilla, and wholly forbid wine, and think tis as much to be denied in this Diſeaſe, as in a pleuriſie, and are of opinion that wine is not ſo much as to be taſted of, the whol courſe of the cure; and *Fernelius* writes that wine is ſo averſe to Guajacum, as tis to Hemlock, *de lue Vener. cap.* 13, But for this cauſe chiefly they forbid Wine, becauſe the body and Humors which before were aduſt, and which grow hot by the uſe of Guajacum, by the uſe of wine are inflamed. But indeed this reaſon ſeems not ſufficient; for that Second decoction may heat as much, as wine, if it be thin and dilute and moderately drank: therefore the ſtrength is here to be conſidered, and whenas wine hath a notable agreement with our body, and doth ſtrengthen the heart and al parts, and eſpecially the ſtomach, is moſt eaſily diſtributed into the whol body, doth moſt ſpeedily nouriſh, and ſo fortifie Nature, that it may the better be able to oppoſe the Diſeaſe; the uſe of it is not ſimply to be rejected, eſpeciallly in thoſe who are leſs hot, and have a flegmatick body ſtuft up with crude Humors; yet the uſe of wine is ſo to be moderated, that it do no way inflame the body; but thoſe that can abſtaine from wine without any hurt, let them drink that ſecond decoction made of Guajacum and that plentifully at meals, and other times, when they are thirſty, yet they to, may ſomtimes take a drauft of wine to ſtrengthen the ſtomach. After the ſame manner if the Cure be ordered by Quick-ſilver, at that time when Evacuation is not yet made by the mouth and ſpitting, and the patient can chaw meat, he muſt be nouriſht with the beſt bread and good fleſh, and dilute wine muſt be given him: but when Salivation begins, and the Patient can chaw no longer, by reaſon of the louſneſs of his teeth, he muſt be nouriſht with ſuppings, and Barly Ptiſſan, and fleſh broaths with bread in it, and whenas an Inflamation of the jaws is feared, he muſt abſtain from wine. But after the cure is finiſht, though the Patient may reurne to his accuſtomary Diet, yet tis moſt convenient that he be nouriſhed with meats of good juyce, from which the beſt blood may be generated; for whenas the body is extenuated, and the veins emptied, we muſt wholly take care, that the body or Veſſels be not filled with vitious blood, but tis commodious that they be reſtored and filled with good. Neither muſt it be granted, that upon recovery he preſently ariſe from a ſmal quantity of meat, to a great, whenas al change to extreames is dangerous. And when it may be feared, that the Liver be heated by the uſe, of hot and dry Medicines, conſerve of Roſes, Violets, the pouders of the three ſaunders, Diarrhodon Abbat. muſt be given for ſome weeks; and let the courſes of diet, eſpecially in Summer time, be cooler, provided chiefly of Barley, the Whey of Goats Milk alſo is good. But if there be any fear, that ſome reliques ſtil and Malignant diſpoſition of this diſeaſe be remaining in the body,

Wine of Guajacum. give a Phyſick wine made with Guajacum and Sarſaparilla which is moſt commodiouſly prepared at vintage time, if to every Gallon of wine one pound of Guajacum, and three ounces of Sarſaparilla be added, and let cool with the new wine after the accuſtomed manner; but out of vintage time thoſe Medicines may only be ſteeped in Wine.

Sleep. Sleep is not only convenient in the night, but alſo a day times, when the Patients ſweat, it may be granted.

Al

Al violent exerciſe is hurtful; for whenas the ſtrength is impared by it and there is a greater tranſpiration and diſſolution of the body, thence it comes to paſs, that the patient cannot be content with that ſmaller portion of nouriſhment, which is wont to be uſed, in this Diſeaſe. But he muſt wholly abſtaine from Venery, as the greateſt enemy to this Diſeaſe: let ſweating in his Chamber be inſtead of exercile, and frictions which may be done with the ſame labor when the ſweat is wiped of: let the affection of his mind be compoſed to mirth. *Exerciſe.*

We muſt uſe our endeavor that the belly be kept looſe, and whenas by reaſon of the ſmal quantity of meat it is wont eaſily to be bound, it muſt be looſned with Clyſters, and Raiſons with leaves of Seny; nay by intervals to give ſome purgers is not only profitable, but alſo neceſſary: for though thoſe Laxatives do empty the firſt paſſages, yet becauſe they reach not to the more diſtant places, and by ſweaters only the thinner parts are Evacuated, but the thick are left behind, tis good after ſeven or ten daies, or after a longer ſpace, or need requires, to give a purging Medicine agreeable to the body of the Patient. *Excrements*

CHAP. XXIII.

Of the Cure of the Diſeaſes and Symptomes, which are wont to be joyned with the Venereal Diſeaſe.

WHenas divers Diſeaſes and Symptomes are wont to be joyned with the Venereal Diſeaſe, ſome are very large in explaining, what way thoſe Diſeaſes and Symptomes ought to be removed: but whenas thoſe Diſeaſes are for the moſt part manifeſt, and we have treated of their cure in former Books, I think it not worth my pains to treat at large of them in this place: and therefore I ſhal only alleage certain few things, and thoſe principally which are proper to this Diſeaſe, let the reſt be fetcht from their proper places.

Ulcers.

As concerning the Ulcers of the Yard eſpecially, which are very common in this Diſeaſe, we have ſpoke of them in general *Lib.* 3. *Pract. Part.* 9. *Cap.* 11. that we may add a little, the Root of the Yard being guarded with a defenſive Oyntment, the Ulcer muſt be waſht with the Decoction of Scabious, Horehound, and eſpecially Soape-wort, and Guajacum: afterwards let the Ulcer be anointed with ſome convenient unguent; thoſe Oyntments are chiefly profitable, which have Mercury in them, either a live, or ſublimate, or precipitate, or Cinnabar. And in Ulcers of the Yard, and rottenneſs of the Nut, as they ſpeak *Hercules Saxonia* writes there is no Medicine yet found out more profitable then precipitate: yet it ought not to be applied, but where there is a thick filth, but in clean Ulcers tis not to be uſed *Euſtachius Rudius Lib.* 5. *de Morb. occult. Cap.* 19. commends two Oyntments eſpecially. The firſt is: *The Cure of Venereal Ulcers in the Yard.*

Take *of Oyl of Roſes, ſweet Almonds, of each half an ounce; Oyntment of Rozin (which is made of pure oyl, Rozin of the Pine, Turpentine, and Yellow Wax) ſix drams; Mercury Precipitate, one dram; a little Wax. Mix al over the fire, except the Mercury precipitate, and taking them of the fire ſtir them carefully, til they are cool, then add the precipitate; yet according to the Nature of of the Ulcer, and the part affected with it, you may add more or leſs of the Mercury precipitate.* *The Mercurial Unguent.*

The

The other is this.

Take *of* Oyl *of ſweet* Almonds, Oyntment *of Roſes, of each three ounces: new wax, one ounce: Mercury precipitate half an ounce. Mix them.*

And thoſe Oyntments are good not only for the Ulcers of the Yard, but for French Ulcers of other parts, for the Diſeaſe called Ficus, ſwellings in the Fundaments, and Cruſts.

The Balſame of Mercury alſo is good, which is thus prepared.

Take *of Quick ſilver diſſolved in ſpirit of Nitre, to one pound of this diſſolution, pour of* Oyl *of Olives, three ounces. Let them ſtand and digeſt eight daies, afterwards ſeparate the oyl and keep it for your uſe.*

Or, Take *the Yelk of one Egg boyled hard, Honey one ounce. Mix them over a gentle fire, let them boyl, and add of Mercury Sublimate, half a dram.*

After mundification this Oyntment alſo may be uſed.

Take *of the beſt aloe, half an ounce; Crocus Martis, two drams; Frankincenſe, red Lead, of each one dram; Honey, half an ounce; Turpentine, two drams; the Yelk of an Egg. Mix them.*

Hidden Ulcers. But occult and hidden ulcers are wont to lie hid either bound up under the fore-skin, or elſe are in the internal paſſage of the Yard; if the Ulcer be under the fore-skin contracted, either a convenient medicine is to be injected by a ſyringe, and afterwards a tent dipt in oyntment is with a probe to be applied to the part affected or the fore-skin muſt be cut long waies, and neceſſary Medicines be layed to it.

Ulcers in the paſſage of the Yard. But if the ulcers be in the very paſſage of a mans Yard, they are hard to be cured, and have caruncles joyned with them, or fleſhy excreſſences, which hinder the emiſſion of the urine, therefore in a ſlight ulcer, we muſt inject Plantane water, in which Alum, litharge, and white Lead have been boyled, but in more grieous ulcers uſe this Liniment.

Take *of Mercury precipitate, one ounce; Mercury ſublimate, one dram; burnt lead, two drams. Grind them on a Marble ſtone, waſh them often with Roſe-water, and let them dry in the ſhade. Afterwards take of Hogs Fat, ſix ounces; White Wax, two drams. Let them be diſſolved over the fire, and add the pouder, and two ſcruples of* Camphire. *Make a Liniment, which muſt be beſmeared over a Candle made of five ounces of White Wax, and one ounce of Turpentine, and let the Candle be put up into the Urinary paſſage: or let ſome convenient plaiſter wrapt over a ſmal probe, be thruſt in: the Caruncle being taken away a drying and conſolidating oyntment muſt be caſt in.*

In the womb But if there be an ulcer in the womb, and that ſordid and creeping, the evil is incurable: but the ſlighter are cured by injections of Alum waters, in which Guajacum and Sarſaparilla is boyled, or with peſſaries of the juyce of Plantane, with pouder of Aloes, Bole Armenick, white Lead and the like. In a very ſordid ulcer the Oyntment Ægyptiacum may be added, or ſome Mercurial unguent: and at laſt a drying and conſolidating Oyntment may be uſed, as that of Tutty, or the like.

In more grieous ulcers ſuffumigations of the Womb are moſt profitable, but whenas the Pipes are overheated by the coals, theſe candels of *Hercules Saxonia* are good for a fume.

Take *of Styrax, Calamite, Beniamin, of each ſix drams; wood of Aloes, ſeven ſcruples; white Frankincenſe, one ounce; Ladanum, one dram and an half; Orrice, Cloves, of each two drams; Damask Roſes. ſix drams; Cinnabar, two drams; coales of Willow, half a pound; Aqua Vitæ as much as is ſufficient. Make Candels.*

By the ſame Medicines the ulcers of the Guts are Cured.

Ulcer of the Jaws. But to the ulcers of the jaws whenas ſuch Medicines cannot be applied make a Gargariſme of the Decoction of Sarſaparilla, the bark of Guajacum, the Leaves

of

of plantane, ſcabious, mirtle, red roſes, pomegranate pil, ſumach, to which ad a little alume the decoction may be made in water, and towards the end ad a little auſtere wine; after they are waſht, the ulcers muſt be cleanſed with oyl of ſulphur, adding a convenient liquor, or the compound water of alum, which is thus prepared.

Take of mercury ſublimate, roch allum, each one ounce; Grind them on marble ſtone, then ad to them juyce of Lemons three ounces, plantane water one pound and an half; roſe water nine ounces; Boyl them in a glaſs to the conſumption of the fifth part. *The compound water of alum.*

But you muſt have a care, that no part of ſuch medicines be ſwallowed down; butter of antimony ſo called is very efficacious, if the ulcer be gently touched with a piece of cotton moiſtned with the butter; but there is need of the ſame caution here: but whenas it cannot alwaies be prevented, but ſomewhat will ſlide into the ſtomach, and ſo ſuch medicines cannot be given ſafely enough; but on the contrary, other more gentle medicines are of little efficacy, theſe ulcers are hard to be cured, nay oftentimes are incurable; the ſolution of gold is more ſafely applied to theſe ulcers, prepared after this manner.

Take fifteen leaves of Gold, roch alume, nitere, Salt, each one ounce; grind them on marble, and poure to it ſome drops of ſpirit of vitriol; afterwards poure on it ſpirits of wine two fingers breadth above it, and let them ſtand in warm aſhes, laſt of al boyl, that the leaves of the gold may be diſſolved, and the ſpirits of wine grow yellow. Seperate the Spirits of wine by diſtillation, then poure more on again and digeſt it, and do this ſo often, til the ſpirits of wine diſſolve the gold, and the ſalts be left at the bottom; at laſt ſeperate the ſpirits of wine by diſtillation till it be dry, and pour on ſpirits of turpintine and digeſt it eight dayes in a warm place, till the gold be diſſolved, with this ſolution waſh the part affected twice every day.

Ulcers of the noſe are cured by errhines, or infuſions, by powders ſtrewed on it, by ſuffumigations made of Guajacum and cinnabar. *Of the noſe.*

Clefts of the hands and feet.

If there be chaps and clefts in the palmes of the hands and ſoles of the feet, let them be waſht with the decoction of Guajacum, ies barke, ſcabious water, germander, cinquefoile; and if there be hardneſs with it, take alſo marſh mallowes, or the root of wild cowcumber, afterwards uſe an ointment of butter, gooſe-greaſe or hens, ammoniacum, bdellium, apples, to which ad a little of unſlaked loome, or precipitate, or the oyntment propoſed before. *Clefts of the hands and feet.*

Or *Take of hogs-greaſe as much as you pleaſe, and put as much oyl of tartar to it, that by it the oyntment may be made ſharpe.*

If the evil yeeld not to theſe, apply a particular ſuffumigation of cinnabar; *Hercules Saxonia de lue vener. Cap.* 30. writes that he hath obſerved a certain woman who for eight years together had clefts in her hands, and had uſed the help of al the Venetian and Padua doctors to no purpoſe, was in a ſhort time eaſily cured with the juce of an herb, which ſome cal mugwort, others tanſie, being carefully dropt with a feather into al the clefts, and forbearing to waſh her hands at al, and that he hath found the ſame juyce profitable in ringworms and Crufty Ulcers.

Buboes.

Concerning buboes which are wont often to break forth in the groines in the Venereal diſeaſe, we muſt hold faſt this in general, that we do our endeavor, to help the expulſion of that matter, which nature aſſayes and indeavors to thruſt forth to the more ignoble parts; whenas ſometimes by this evacuation nature is wont to free *The cure of buboes.*

her

her self from al that disease; therefore if a buboe break not forth enough, and increaseth but tendeth not to suppuration, we must use our endeavor to draw it forth and suppurate it. Therefore the thigh of the same side must be rubbed, and scarified about the lower part, or else a vein must be opened above that place; but on the bubo it self there must be layd strong drawing medicines. As,

Take *of sagapen, Ammoniacum each three drams; opoponax, Bdellium, each two drams; mustard, pepper, Pellitory of Spain of each one dram; blacke sope half one ounce; mix them and with wax and pitch, make an emplaster.*

Yet if nature be oppresst with the plenty of virulent matter, that it cannot expel it self, then 'tis good to give a purge, that part of the burthen being taken off, nature may the easier expel the rest.

When the tumor hath broke forth enough, we must take care it be speedily opened, and be kept open a long while; that it may suppurate we must lay on it those maturatives, which are wont to be applied in inflamations, of the mucilage of mallows, marsh-mallows, wheat and flax seed, figs, hogs-grease, goose-grease, and the like; or the simples diachyled, or that compound with gums; when 'tis mattered, we must not expect that the bubo should open of it self, but it must be opened betimes, least the virulent humor detained there do hurt other parts; the tumor being opened the forementioned digestives and abstersives must be layd on, to which there will be need sometimes to add a little of mercury precipitate, and the ulcer must be kept open a long time.

Yet in cold buboes there is no such feare, that the matter should ascend to other parts, but if purgers and sweaters, and proper alexipharmaca be applied, sometimes the bubo doth wholly vanish without any danger.

Gummosities and Nodes.

Truely Such tumors and nodes, which do rise in places void of flesh, as the forehead, the skul, and the outward part of the legs, do oftentimes vanish, if the disease be perfectly cured; especially after the use of sarsaparilla, which is most effectual in discussing of these diseases; and after the use of mercurial unctions, which are applied to such tumors yet if after the cure is inded such tumors and nodes remain, things emmollient, attenuating, and digesting must be laid udon them, and that are strong, as the roots of wild cowcumber, bdellium, sagapen, opoponax, and cheifly ammoniacum, or diachylon with gums, or a mercurial cerote; this is good and proved by experience.

Take *Of the plaister diachylum with gums one ounce; simple diachylum half an ounce; mercury killed with spittle one ounce, oyl of guajacum as much as is sufficient make a plaster.*

Or, Take *of Ammoniacum, Opoponax, Gume of ivy dissolved in aqua vitæ, bens and goose grease each one ounce and half; the marow of a calfs leg one ounce ladanum, styrax, calamite, and liquid each two drams; the pouder of hermodactil roots orrice, each three drams; cinnabar one dram; quick silver mix with turpintine six drams; oyl of lillies and wax as much as is sufficient, make a cerote.*

Also the lavatories made of mercury, mentioned before, are good in these tumors.

If these things do not satisfie, the tumors must be opened with caustick, especially if they be not in the joynts, nerves, tendons, and the place must be kept open, and the bone underneath, which for the most part is hurt, must be scraped.

Smal-

Smal Bunchings and puſtles.

Bunchings alſo and ſmal puſtles, thymi, verrucæ, favi, as in other parts of the body, ſo especially they are wont to riſe in the head, about the arſehole, yard and privities in the french pox: which though ſometimes after a univerſal cure they vaniſh of their own accord, yet ſometimes alſo they require a peculiar cure. *Bunchings and puſtles.*

This ſort of bunchings which are in the head, muſt be waſhed often with the decoction of guajacum, and cheifly of the barke of it and ſarſaparilla; ſome uſe oyl of ſcorpions and vipers: to which if they yeeld not, they muſt be anointed with ſome mercurial unguent, or the compound water of allum, prepared of roch allum and mercury ſublimate, which ſome alſo prepare thus.

Take *Of roch allum, Mercury ſublimate each two drams: grind them, ad of plantane and roſe water each one pound: Boyl them in a glaſs to the conſumption of half, afterwards let them ſtand fifteen dayes that the allum and mercury may ſink to the bottom, and let the cleare water be poured off, and kept for your uſe.*

If the puſtles be in the mouth, uſe waſhing of the mouth with the decoction of guajacum, or if there be an inflamation, with chalybeate whey, to which may be added rotes and plantane; and if the puſtles be foule, ad ſcabious and ten graines of alum to every pint of the whey or decoction. The compound alum water even now deſcribed is moſt profitable; yet in puſtles of the mouth, tis not ſafe to uſe that alone, but it muſt be diluted with a treble or quadruple quantity of roſe and plentane water. But the puſtles of the arſehole and yard, muſt every day be often fomented with a linnen cloth wet in the decoction of guajacum and ſarſaparila; for the ſame the alum water even now deſcribed is very good: or if the evil be ſtubborn, ſome ointment muſt be laid upon them, with pouder of precipitate, ſuch as were propoſed before, or precipitate mixt with foure times as much of the white of an eg; wch layed upon ſuch excreſcenſes of the arſehole, in 24. houres ſpace extracts and roots them out: afterwards drying and cooling things muſt be layed on. Some cut off the french warts with Sciſſers, and afterwards take out the root with the medicines even now propoſed: alſo if the extream part of the wart be toucht with oyl of vitriol, it dries up and falls off.

Falling of the Hair.

The falling of the haire wich is joyned with this diſeaſe, doth happen rather from the knawing off, of the roots of the hair, than from other cauſes, both in the head and beard which that it may be cured, generals being premized firſt the hair muſt be ſhaved off, if the patient wil allow it: for al do not admit of it, eſpecially religious men, whoſe diſeales muſt be kept private as *Herculeſ Saxonia* writes *de lue Vener. Cap.* 38. then aſtringent things muſt not be uſed, by the uſe of which the evil is made worſe, and ulcers and paines of the head do follow upon it the matter being retained: but thoſe things rather are to be uſed, which do diſcuſs and cleanſe away that vitious matter which eates of the haires: as a lye in which have bin boyled Guajacum and its bark, ſarſaparilla, leaves of fumitory, betony, ſcabious, ſouthernwood, wormwood penyroyal, aſarabaca, agrick: and if the skin be dry, mallowsmarſhmallowes, pellitory of the wal muſt be added: then the other medicines muſt be applied, which are propounded *lib.* 5. *pract. par.* 3. *ſect.* 2. *cap.* 3. *and* 4. al which if they ſatisfie not, particular ſuffumigation for the head and face, muſt be prepared of quick-ſilver and cinnabar, by which remedy in the ſpace of ſix or nine dayes, the falling of the haire is ſtayed. But for the moſt part, if univerſal purgers, and emptiers be applied, and the matterknawing the haires be taken away and proper lotions be uſed, afterwards haire doth ſucced of its owne accord in the place of that that fel away, ſee more in the place alledged *de Alope. et Capil. defue.* *Falling of the hair.*

Pains.

The Cure of pains. Alſo moſt grievous pains do often afflict thoſe who are ſick of the Venereal Diſeaſe; but they are moſt commodiouſly taken away by medicines proper to this diſeaſe: but Sarſaparilla is chiefly good to take them away; therefore if the pains be very urgent, on the firſt daies you muſt take a greater quantity of Sarſaparilla, and a leſs of Guajacum: and though the matter being diſſolved and melted, the pains be encreaſed til the ſecond week, becauſe Sarſa hath an extraordinary attenuating faculty, without any aſtriction of the bowels; yet we muſt not deſiſt from the uſe of it, but the patient muſt be told of it: afterwards when the pain is ceaſed, we may encreaſe the quantity of Guajacum, and China Root may be added alſo to mitigate thoſe pains: but by intervals, almoſt every week, give proper purging medicines; but to the places pained apply fomentations of Guajacum, Leaves of Penyroyal, Sage, Roſemary, Chamomel flowers: Oyl of white Lillies alſo, of Rue, Scorpions, Vipers, Guajacum, are good: if the pain be very urgent, we may give alſo Laudanum Opiate. Upon the uſe of al which, if the pain depart not, thoſe mercurial Unguents, which we propounded before in the univerſal Cure, muſt be anointed on the places pained; or by the addition of wax make Cerotes of them, and lay them on the parts pained, or ſome other plaiſters above propounded; to which alſo may be added, Caſtor, Hermodactil Roots, Orice, and other Arthritical Medicines; eſpecially *Vigo*'s Cerote of Frogs is of good uſe to lay aſleep thoſe pains: and this Cerot of *Platerus* is good too.

Take *of Quick-ſilver three ounces; ſtir it with one ounce of Turpentine waſht with Aqua vitæ; adding Bears greaſe, the marrow of a Calves Legg, of each an ounce and half: Oyl of white Lillies, Chamomel, Dill, bayes, worms, or Foxes, of each half an ounce: Spike or Turpentine two drams: Euphorbium, Frankincenſe, of each half an ounce: Liquid Styrax ſix drams: Hermodactils two drams: Caſtor one dram: Wax as much as is ſufficient. Make a Cerote.*

Alſo the aforeſaid Lavatories prepared of Mercury, formerly propounded, applied to the parts pained, eſpecially the Legs, do allay the pains.

The Running of the Reins.

The Cure of the Running of the Reins. The Running of the Reins, which alſo is frequent in this Diſeaſe, is not to be ſtopt at the beginning, nor raſhly: whenas Nature doth endeavor to purge the virulent matter through that place, which if it be ſuppreſt flies up to the Head, nay infects the whol Body: but if it do not ſtop when the decoction hath been uſed til the third week, let the Region of the Loyns, and Perinæum, be anointed with aſtringent Oyls, made of Maſtich, Mint, Roſes, Mirtle.

But let Medicines be given of the ſeed of the Chaſt-tree, Lettice, Hemp, to which add a double quantity of the pouder of Sarſaparilla: and thoſe Medicines may be given either in the form of a pouder, or with Syrup of Water of Lillies, be reduced into the form of an Electuary. 'Tis good alſo if every day there be given two or three drams of Water-lillies, with one or two ſcruples of Turpentine: Some alſo do give for this Running of the Reins, green Mercury precipitate, or the Rozin of Guajacum and Turpentine, which is waſht with Violet Water, and adding the Yolk of an Egg, and the Decoction of Sarſaparilla, 'tis reduced into the form of a Potion.

A Conſumption.

A Conſumption. At laſt it often happens, that either by the violence of the Diſeaſe, or the Cure not rightly ordered, the ſick come into a deep Conſumption: For the Cure of which, the common Medicines for a Conſumption wil not ſuffice, but there is need of

of Specificks. Which kind of Remedy *Audovicus Septalius animadverſ. Lib, 7. n. 214.* doth propound, and writes that by it, he hath wholly freed very many from this diſeaſe, and from ſuch a Conſumption. But 'tis prepared thus.

Take *of choice Sarſaparilla cut ſmal, ſix ounces; infuſe it twenty four hours in fifteen pound of warm water, in a warm place, in a veſſel ſhut: afterwards boyl it with a gentle fire till five pound be waſted: then with a ſpoon perforated take out the Sarſaparilla, and bruiſe it in a marble morter: then caſt it into the ſame water again, adding two pound of lean Veal, Coriander ſeed prepared one ounce, or inſtead of it, ſo much of the ſhavings of Guajacum, or three drams of yellow Sanders ſliced, according to the condition of the Patients body and humors: and the veſſel being covered, let it boyl again with a gentle fire, till there remain five pound; and towards the end aromatize it with three drams of choice Cinnamon: then ſtrain it, ſqueezing it hard, and keep it for your uſe in a glaſs or glazed veſſel.*

Of which let the patient take in a morning four hours before meat, ſix or ſeven ounces; but in the evening three hours before ſupper, four or five ounces: And if it be Summer, or a Hectick Feaver is joyned with it, he adds of Barley excoriated or husked, four ounces: and he continues the uſe of this Medicine many dayes, ſometimes to the hundreth day.

Let the reſt be ſought for out of the Cure of the particular Diſeaſes, and out of *Fallopius de morb. Gal.* who hath writ at large concerning the Diſeaſes and Symptomes which are joyned with this Diſeaſe.

FINIS.

Mris. *Culpepers* Information, Vindication, and Teſtimony, concerning her Husbands Books to be Publiſhed after his Death.

SO great are the Afflictions wherewith our Heavenly Father hath been pleaſed to exerciſe me his poor Handmaid, that I have not only lived to ſee my dear Husband, (the Stay and Solace of my Life) taken from me: but it hath been my hard hap alſo to ſee his Reputation, and Memory (which wil be dear to al Poſterity, for the Works he hath written for the Common Good of this Nation) blemiſhed, and Eclipſed, by the covetous and unjuſt Forgeries of one, who, though he calls himſelf Nathaniel, is far from being an Iſraelite in whom there is no guile; who was not content to publiſh a Hodgpodg of undigeſted Collections, and Obſervations of my deer Husband deceaſed, under the Title of Culpeper's laſt Legacy; but to make the Deceit more taking, he ſteeled his Forehead ſo far, and braſed it ſo hard, as not to be aſhamed to forge two Epiſtles, one in mine, and the other in my Husbands Name; of the penning of which, he nor I, never ſo much as dreamed: And yet he impudently affirmeth in my Name, that my Husband laid a ſevere Injunction on me to publiſh them for the general good, after his deceaſe; and that they are his laſt Experiences in Phyſick and Chyrurgery. And in the Title of his Book, he ſaid, They are the choyceſt, and moſt profitable ſecrets, reſolved never to be publiſhed til after his Death. Al which Expreſſions in the Title and Epiſtles, are as falſ as the Father of Lyes; and every word in them, forged and feigned. And he knew wel enough, that no diſcreet, honeſt man, that was a friend to my Husband, or me, would ever have agreed to ſuch infamous and diſhoneſt practices; and therefore I deſire all Courteous Readers of the Writings of my Husband, to take notice of this Deceit, and to aſſure themſelvs that it never entred into his head, to publiſh ſuch an undigeſted Gallimoffery, under the promiſing and ſolemn Name of his Laſt Legacy, and that whereby he gained his Reputation in the World, as the Impoſter makes him ſpeak in his forged Epiſtle. And I deſire any in different Reader, that hath obſerved my Husbands loſty, and Maſculine manner of expreſſing himſelf in his Prefaces, and Epiſtles Dedicatory, whether in caſe he had been minded or diſpoſed to take ſo ſolemn a farewel of the world, as the Forger makes him to do; whether, I ſay, he would have done it in ſuch a whining faſhion, and ſo in the Stile of a Balade-maker, as to ſay, And now, if it pleaſe Heaven to put a period to my Life, and Studies, that I muſt bid al things under the Sun farewel: Farewel to my dear Wife and Child, farewel Arts and Sciences, farewel al worldly Glories, adiew Readers. Certainly my Husband would have been far more ſerious, and materi-al, in ſuch a caſe, as any diſcreet man wil Judg. Neither can it be thought, that in ſuch a ſolemn Valediction, he could poſſibly forget his wonted reſpects to the Colledg of Doctors, to whom he did ſo frequently addreſs himſelf, in divers of his writings.

Courteous Reader, I ſhal ſay no more touching the abuſe of the Book-ſeller, only to prevent (as much as concerns me) thy being abuſed for the future, know, That my Husband left ſeventy-nine Books of his own making, or Tranſlating, in my hand, and I have depoſited them into the hands of his, and my much honored Friend, Mr. Peter Cole, Book-ſeller, at the Printing-Preſs, neer the Royal Exchange (for the good of my Child) from whom thou mayeſt expect to receive in print, ſuch of them as ſhal be thought fit to ſerve thee in due ſeaſon, without any Diſguiſes or Forgeries, unto which I do hereby give my atteſtation. Alſo my Husband left ſeventeen Books compleatly perfected, in the hands of the ſaid Mr. Cole, for which he paid my Husband in his life-time: And Mr. Cole is ready and willing (on any good occaſion) to ſhew any of the ſaid ſeventy-nine Books, or the ſeventeen, to ſuch as doubt thereof.

And if any Perſon ſhal queſtion the Truth of any part of this Vindication, or Epiſtle; if they wil take pains to come to me, I wil face to face, juſtifie the truth of every word thereof, as I have ſubſcribed my Hand thereunto in the preſence of many witneſſes.

I proteſt in the preſence of the great God, the ſearcher of al hearts, before whom Mr. Brooks and I muſt one day give an account of al our Actions: That I have not publiſhed this Epiſtle or Vindication, out of any diſ-reſpect to Mr. Brooks (for I much reſpect the man, and would be glad to ſerve him to my power) but only to cleer my Husband from the folly and weakneſs caſt upon him by the means above expreſſed. And out of tenderneſs to Mr. Brooks, I firſt tried other means of keeping, and afterwards of repairing my Husbands Credit, and then ſtayed long to ſee if he would repair (in any meaſure) the wrong done to my Husband, and my ſelf. I deſire to be:

From my Houſe, next door to the Red Lyon in Spitale-fields, *October*, 18. 1655.

Your Servant (in, and for the Truth)

Alice Culpeper.

Mris. *Culpeper* did the 18. of *October*, ſubſcribe this Epiſtle in Vindication of her Husband's Reputation, before Ten Witneſſes, as ſhe had done another Epiſtle on the ninth of *October*, almoſt in the ſame words with this, except neer the Concluſion.

8 58 NOV

A

PHYSICAL DICTIONARY,

Expounding ſuch words, as being terms of Art, or otherwiſe derived from the Greek and Latin, are dark to the Engliſh Reader.

This Dictionary is of uſe in the reading of all other Books of this Nature, in the Engliſh Tongue.

LONDON:

Printed by *Peter Cole* in Leaden-Hall, and are to be ſold at his Shop, at the ſign of the Printing-preſs in Cornhil. 1655.

A

Phyſical Dictionary.

A

A Pophlegmatiſms, Medicines drawing flegm out of the Head.

Agarick trochiſcated, See the *London Diſpenſatory* in Engliſh.

Apozeme, A Medicine made of the Broth of divers Herbs, and other Ingredients; unto which ſomtimes certain Syrups are added.

Animal Faculties, The Powers of Hearing, Seeing, Smelling, Taſting, Feeling; of Imagination, Underſtanding, Memory, Will, Going, Standing, and all Voluntary Motion.

Aranea Tunica: The Cobweb-Coat, or Tunicle

Abdomen: The Belly, or Paunch

Apoplectick Water: Good for the Apoplexy

Autumn: Harveſt, the Fall of the Leaf

Actual Heat: is Heat that may be felt by the hand, ſuch as is in Fire, and all things heated thereby; or in the Body of one in a Feaver: It is oppoſed to *Potential Heat*, viz. That cannot be felt by the Hand, as the Heat in Pepper, in Muſtard ſeed, in a Flint, in unſlaked Lime: and the contrary of *Actual Cold*.

Affected: Troubled, Diſeaſed: An Affect, a Diſeaſe, Trouble, Diſorder.

Aquæ Acidulæ: The Spaw Waters, like thoſe of *Epſam*, *Barnet*, and *Tunbridg*, with us.

Abſurdities: Unreaſonable things

Acrimony: Sharpneſs, ſuch as in Muſtard, Pepper, and in divers Humors of the Body which cauſe ſickneſs.

Aſcent: Going up.

Apply: lay on.

Actually Cold: ſee *Actual Heat*.

Augment: Encreaſe.

Accidentally: By hap, by chance, upon occaſion.

Adventitious: not Natural, but ſpringing from external cauſes.

Attracting: drawing together, or cauſing.

Attracts: draws to.

Accident: ſomthing that happens upon a Diſeaſe; *vide* Symptome.

Adſtriction: binding together, ſhutting up.

Antecedent Cauſe: foregoing Cauſe, is oppoſed to the Conjunct Cauſe. Abundance of Flegm in the Body is the Antecedent Cauſe of the Optick Nerves being ſtopped by flegm; but the Flegm in the ſaid Nerves, is the Conjunct Cauſe &c. of other Diſeaſes.

Articulate Voyce: A diſtinct Voyce, ſuch as that of Man-kind, termed Speech.

Abſtergent: Cleanſing away filth.

Acceſs: Addition, joyning to, help, or company.

Afflux: flowing to.

Aſtringents: Medicines that bind together, and ſtraiten the Pores and Paſſages of the Body.

Aſtriction: binding, knitting together.

Anodines: Medicines which aſſwage pain.

Anaſtomoſis: an opening of the Mouths of Veins, by which means Blood iſſues.

Aſtringe: bind, faſten, cloſe.

Acute: ſharp, violent: a Diſeaſe is termed Acute, when it quickly changeth to health or death.

Aduſtion: burning: *Aduſt*, burned. Blood is ſaid to be aduſt, when by reaſon of extraordinary heat, the thinner parts are evaporated, and the thicker remain dreggy and black, as if they were burnt.

Aſthmatical: troubled with ſhortneſs of breath.

Atteſt: witneſs, declare.

Aneuriſm: a Swelling cauſed by a dilatation of the Arteries external Coat, the internal being broken.

Axungia: Greaſe.

Atrophy: want of Nouriſhment, when the Body pines away.

Attenuating Medicaments: are ſuch as make thick Humors thin.

Axiom, or *Theoreme*: an acknowledged, undoubted Truth.

Adjacent: lying neer, bordering upon.

Aromatized: Spiced, perfumed.

Anus, the Fundament.

Aſtringe, to bind.

Atomes: ſmal Moats hardly viſible, and that cannot admit of any diviſion.

Adverſe: contrary to, of a contrary Nature.

Augment, is the time of a Diſeaſe, while it grows ſtill more vehement, until it comes to its height, which is called the ſtate of the Diſeaſe, and then the Augment ceaſes, becauſe the Diſeaſe is now at a ſtand, and encreaſeth no more.

Alteratives, are ſuch Medicines as only change

the qualities of the Body and its Humors, by heating, cooling, moistening, drying, &c. they are opposed to such as do cause Vomiting, Purging, Sweating, Transpiration, &c.

Adjuncts of a Disease, are qualities, dispositions, and Symptomes annexed thereunto.

Aliments, are what ever is taken into the Body to nourish the same; as all kinds of Meat and Drink.

Adjuvant Causes, are such as serve and assist the principal Cause; so is the Taylors Boy an adjuvant Cause assistant to his Master, the principal Cause of a Garment. So in Diseases, whatever assists the Primary Cause, is termed an Adjuvant Cause.

Alexipharmical things, are such as resist Plague, Poyson, and all venemous Diseases.

B

Balneum Mariæ; the manner of stilling or digesting, when the Glass containing the Ingredient, stands in a Vessel of Water, with Fire made under it.

Bolus: A Morsel; a Medicine to be taken from a Knifes point.

Bellilucanæ Thermæ: Hot Baths in *France*, so called from the place where they are.

Breathing of a Vein; Blood-letting, properly if but little Blood be taken away.

Bronchia; the hollow gristly Pipes that spread themselves through the Body of the Lungs, being Branches of the Wezand or Wind-pipe.

C

Caruncle; a little bit of Flesh that grows and sticks out on any part of the Body.

Catarrh; a Defluxion or Distillation of Humors from the Brain, into any part of the Body, especially the Lungs, causing Coughs.

Condense, to make thick.

Contention; Digestion in the Stomach, &c.

Cataphora; a deep sleep.

Cupping-glass, is that which Physitians use to draw out Blood with Scarrifying of the Skin, Glasses fastened with lighted Tow or Flax.

Catalepsis; Congelation, or stifness of the Body.

Causticks, are Medicines which burn the Skin and Flesh to make Issues, &c.

Coronal Suture; the Seam which runs through the Crown of the Head, where the two sides of the Skul close.

Crude; Raw, undigested: So Meat not well boyled or rosted, is Crude; and Blood and other Humors not well digested by the Stomach, Liver, &c. are called Crude.

Conjunctiva; a Coat of the Eye, so called because it sticks fast unto the Eye, and keeps it in its place.

Actual *Cautery*, is burning with a red hot Iron.

Congelation, freezing together, stifness with Cold.

Constipation, stopping up.

Chollick, pain and griping of the Gut *Colon*; and because the pain proceeding from the Stone, is very like thereunto, it is called the Stone-Collick.

Cerates, Medicines made of Wax, and other Materials, stiffer than an Oyntment, and softer than a Plaister, to be applied to divers parts.

Cephalick, or *Capital Opiate*, Head Electuary.

Cephalick Pills, Head-pils.

Cephalick Plaister, Head-Plaister.

Collyrium, an Eye-salve.

Convulsion, a drawing together, a shrinking together.

Contracted, drawn together.

Cornea, a Coat of the Eye like the Horn of a Lanthorn. See *Vestingus* in English.

Chyrurgeon, Surgeon.

Circumvolution, turning round like a wheel or whirl-wind.

Compression, thrusting or squeezing together.

Contusion, Bruising, a Bruise.

Cold seeds, See the English Dispensatory.

Compress, thrust together, squeeze.

Condense, thicken, condensing, thickening; a Condensation, a thickening.

Coarctation, a straitening, thrusting together.

Contraction, drawing together, shrinking up, &c.

Contracted, drawn together.

Confirmed, A Disease is said to be confirmed, when it is perfect, setled, and hath taken root.

Couched with a Needle, that is, taken away with a Needle, or pressed down with a Needle.

Centre, is properly the middle point within a Circle, from whence all Lines drawn to the Circumference, are equal; it is taken figuratively for the middle of any thing.

Continuity, the oneness, the joyning together without interruption.

Compact, firmly united, wel thrust and crowded together. So Gold, Lead, and other Mettals, are said to be compact, compared to Cork, Spunge, and light Wood which are not compact, but hollow and pory.

Concocted: An Humor is said to be concocted when it is either turned into good Blood, as sweet Flegm is wont to be; or when it is separated from the Mass of blood, and made fit for expulsion.

Concoction; a boyling, or boyling together: when the meat in the Stomach is changed into a substance like Almond Cream; that change is called Concoction.

Cataplasm; a Pultis.

Cavity; hollowness.

Crisis; by bleeding at the Nose, or by vomit, page 57. that is, a breaking away of the Disease by Natures Conquest of the Cause, which

which she drives forth by the Nose or Mouth.

Crystalline Humor; a part of the Eye which resembles a little Cake of Crystal; if you open a Calves Eye carefully, you may take it out whol.

Conus, is a Geometrical Figure, representing a Sugar-Loaf, or an Extinguisher; which Physiosophers make use of when they teach how the Eye perceives its Object.

Connatural; which is bred with a Man; as he that is born with one Eye, or but two Fingers: such a Disease is termed Connatural.

Convex; bunching out like the back-side of a Buckler or Platter.

Conjunct Cause of a Disease, is the immediate Cause; so Flegm stopping the Optick Nerves is the Conjunct Cause of Blindness; whereas taking of cold, swimming in cold water, eating flegmatick meats, sleeping after Dinner, were the remote, or far distant Causes, &c.

Constriction, a drawing together, a straitening.

Congestion; a gathering together or heaping up.

Cumulation; the same with Congestion. These words are opposed to defluxion. When a a part is diseased by an Humor sent from another part, it is termed Defluxion; when the Humor is first gathered in the part it self, by reason of its own proper weakness, it is termed Congestion or Cumulation.

Conjoyned Matter; see *Conjunct cause*.

Corroding; biting, gnawing, eating.

Consolidation; closing up of a Sore or Wound, &c.

Carus; foulness, rottenness, corruption of a Bone.

Cicatrize; to bring to a Scar, to close up a wound or sore.

Commissura; the Mold of the Head, where the parts of the Skul are united.

Cavous; hollow.

Critical Evacuations by bleeding, stool, &c. are such as Nature procures to drive out her vanquisht Enemy; and are means and tokens of Recovery. Symptomatical Evacuations are such as proceed from the vehemency of the Disease, before Nature hath mastered the offending Humor, and they prove bad tokens.

Calcine; to burn to Ashes in a Crucible, &c.

Corrode; eat, fret; Corroding, eating, fretting.

Cronical; long lasting.

Cacochymical; abounding with evil Humors.

Critical day; See Day of Judgment.

Corrosion; a fretting, eating asunder.

Conjugation; a pair of Nerves is so called.

Cardialgia; Heart-burning.

Crudities; Rawness, indigestion.

Chylus; a Liquor like a Posset, into which all Meats are changed in the Stomach, if the Digestion be good.

Cydoniatum; Conserve of Quinces, or Marmalade.

Cardiogmos; Heart-burning.

Carminating Medicines; are such as do break Wind.

Constringe; draw together.

Carminative; expelling Wind.

Chalibeat Vinegar, and *Chalibeate Water*, are such as have steel quenched in them.

Carabe; Amber.

Cronical Diseases; such as usually last very long, as Quartan Agues, Stone, Dropsies, &c.

Crystal of Tartar; Cream of Tartar.

Consistence; Body, or Substance.

Catheter; an hollow Silver Instrument to thrust into the Bladder when the Urine is stopt by a stone, to thrust back the stone, and let out the Urine.

Complication of Diseases; when divers Diseases are in the Body at the same time, especially if they depend one upon another.

Coalition; healing up, growing together of a Wound or Ulcer; or any Part that ought to be open, as of the Privity in some Girls.

Coincide; is to happen together at one and the same time.

Cachectical Persons, are such as have their whol Bodies blown up with a soft and moist swelling, with the color of the Face white, or lead-colored. Also their Legs especially swell, and their Face is bloated.

Coindicants, are divers things in a Disease or Patient, which plead for one and the same Remedies. So in a putrid Feaver, the person being full bodied, and the season warm also, the person lusty and yong: The Feaver, the fulness of Blood in the Patient, his Age and strength, and Season of the Year, are Coindicants that he must be let Blood.

Contra-indicants, are divers considerations that dissuade a Remedy: As when in a putrid Feaver, old Age, Winter Season, Weakness, are Contra-indicants, that dissuade from Blood-letting; which the Feaver simply considered, doth indicate, or perswade and hint out.

Coction of Humors, is their being separated from the Mass of good Blood, and fitted for expulsion: As when thin Humors are moderately thickened, and tough clammy Humors are cut and divided. This Coction of Humors is known by the Urine, when it hath a light, even, and smooth setling, &c.

Causa sine qua non; The Cause without which a thing cannot be, though it be not the principal Cause thereof: So a Taylors Shop-boord is a Cause *sine qua non*, without which a Garment cannot be made, though himself and the stuff, the shape and the end be principal Causes.

Commemorative; bringing to remembrance what is past.

Cicatrize; is to bring unto a Scar, which is done when Wounds and Ulcers are healed up.
Contumacy; ſtubbornneſs, rebellion.

D

*Diuretick*s; Provokers of Urine.
Diagnoſis; the knowledg of a Diſeaſe.
Diſtillation; a flowing down of thin Humors from the Brain into ſeveral parts.
Decoction; the Liquor wherein things are boyled, the Broth of Herbs, and other Medicaments.
Diagnoſticks; the Signs to know what Diſeaſe a Patient hath.
Defluxion; the ſame with Diſtillation: alſo a running together of Humors into any part, cauſing pain or ſwelling, &c.
Delirium; Dotage, raving, talking idlely, in time of ſickneſs eſpecially.
Diarrhœa; a ſimple Looſneſs, without Inflamation of the Guts, any extream pain, or voiding of Blood.
Diaphœnicon; ſee the *London Diſpenſatory* in Engliſh.
Diacatholicon, Diacarthamum; ſee the Diſpenſatory.
Diet; this ſignifies in many places a Diet drink.
Diminiſhed; Leſſened.
Diminution; a leſſening.
Diſcuſs; diſpel inviſibly: as a Plaiſter that makes a ſwelling go away without breaking, is ſaid to diſcuſs the ſame: becauſe the Matter of the ſwelling is not ſeen to come away; but is turned into ſteems and vapors, and partly drinks up the ſubſtance of the Plaiſter, and ſo vaniſheth inviſibly.
Declination of a Diſeaſe; is the breaking of the Diſeaſe, when it begins to tend to health, which is known by the Symptomes growing more gentle.
Diverting Medicines; which turn aſide the Humor cauſing the diſeaſe, ſo that it flow not into the part offended.
Diſlocation; putting out of its place.
Derived; turned away from.
Diffuſe; ſpread abroad.
Diſſipated; ſcattered abroad.
Demonſtrated; cleerly proved from undeniable Arguments.
Depravations; marrings, ſpoilings, hurtings.
Depreſſed; made flat or hollow, dented in.
Diſtemper; any exceſs of the four firſt qualities, Heat, Cold, Moiſture, Dryneſs. There are reckoned four ſimple or ſingle diſtempers, viz. a Hot, a Cold, a Moiſt, a Dry: and four compound, viz. Hot and Moiſt, Hot and Dry, Cold and Moiſt, Cold and Dry.
Dilated; widened.
Dilatation; widening.
Debility; weakneſs.
Diſtortion; writhing, wreſting, crooking.
Diſſipating: ſpread abroad, driving away.
Derivations: drawing an offenſive Humor from the part diſeaſed, to ſome other part neer it.
Digeſtives: Medicines which prepare evil Humors for to be driven out by Nature.
Diſſolved: melted, conſumed away. It is uſed of ſwellings that are brought down by Oyntments or Plaiſters; and in other caſes when the Humor cauſing the Diſeaſe, is inviſibly driven away.
The *Drum* mentioned in page 96. is a pretty little hollow bone in the Ear, covered with a thin Skin like a Drum, which being beaten upon by another little bone like a mallet, doth cauſe ſounds to be heard in the Ear. See *Veſlingus* his Anatomy in Engliſh.
Diapedeſis; is an iſſuing of the blood through the Pores of the Veins.
The *Day of Judgment*, or *Critical day*: is that day in feavers eſpecially wherein it appears, on which ſide ſentence is given, whether on the Plantifs, viz. the Diſeaſes; or on Natures, the Defendant; ſo that by ſome Evacuation, or ſwelling, or other great mutation to the better or worſe, it appears whether the Patient is like to recover or not.
Diſtention: ſtretching.
Depraved: marred, ſpoiled.
Dilatation: widening, opening.
Diaphragma: the Midrif.
Dyſpnœa: ſhortneſs of breath.
Dyſentery: a Bloody-flux.
Diagrydiates: Medicines that have Scammony or Diagrydium in them.
Diſſolution of Natural Heat: a decay of Natural Heat.
Diaphoretick Sweats: which are cauſed by Nature, oppreſſed with a malignant Humor, and forcibly driving the ſame out by Sweat.
Dung-gate; the Arſe-hole.
Diſtillations by deſcent: are when the Liquor which comes from the Materials ſtilled, doth not riſe up above the ſaid Materials, as in ordinary diſtillation; but falls down under the Materials ſtilled, which are therefore laid upon a Grate, that the bottom of the Veſſel may be empty, and free to receive the diſtilled Liquor.

E

Excrement: the Dregs of Digeſtion in the Body, voided by Dung, Urine, and Sweat.
Evacuation: an emptying or voiding forth, purging.
Epiſpaſtick: a Plaiſter to draw a Bliſter, called alſo a Veſicatory, or any ſtrong drawing Plaiſter.
Errhines: Medicinal Liquors to be ſnuft up the Noſtrils to purge the Brain.

Empyema:

Empyema: Empyems a corrupt matter between the breaſt and the lungs following a Pleuriſie.

Eryſipelas Oedematoſum: a tertian ſwelling ariſing from choller and flegm.

Eliphantiaſis: a leprous diſeaſe, which makes the Patients skin like the Hide of an Elephant.

Electuary: See the *London Diſpenſatory*.

Expulſion: driving forth; as of Excrements, Dung, Urine, Sweat, &c.

Expel: to drive forth.

Eruption: breaking forth.

Extinguiſhed: quenched, put out.

Emunctuaries or *Emunctoryes*; certain waies and paſſages that Nature finds to drive ill Humors into, from the Principal Parts; as certain Kernels behind the Ears; and in the Groins, under the Arm-pits, &c. where riſings happened in time of Peſtilence &c.

Eſſentially ſpringing P. 11. that is primarily and principally, not accidentally or occaſionally.

Ebullition: boiling and working of the blood in the Veins, like New-wine in a Cask.

Extenſion: ſtretching out.

Extenuation: Leanneſs, Conſumption of fleſh. Extenuating making thin.

Expulſive faculty: the power of our body which drives forth Dung, Urine, Sweat, Vapors &c. every part partakes of this Ability, or Faculty.

Eminent: neer at hand approaching.

Eryſipelas: a ſwelling cauſed by choller. *Eryſipelas Phlegmonodes*, or *Phlegmon Eryſipelatodes*. Is a ſwelling cauſed by Inflamation of Choller and Blood.

Emulſions: Almond milkes; and milkes made of cool Seeds, &c.

Electuaries. Medicines made up of Conſerves of Flowers or Herbs; to which is added ſome ſweet Spicy pouder for the moſt part, and ſo with Syrup it is made up in the form of Mithridate or Treacle.

Epithemes: are Medicines applyed in Bags, commonly upon the Heart or Stomach, Liver or Spleen &c. Certain convenient pouders being put in a Bag, or between two cloths, and ſo wet in Wine, or other convenient Liquor, are laid upon the Stomach, Heart, &c.

Eſſential to the Diſeaſe: that is of the very being or ſubſtance, ſo that without that, the diſeaſe could not be. So Heat is Eſſential to a Feaver.

Excrements: dregs and refuſe of our meat and drink after Concoction, voided by dung, Urine, Sweat, aud inviſibly through the Pores.

Excrementitious: of or belonging to Excrements, impure, preternatural humors are ſo called.

Extenuate: make thin.

Expreſſed: Squeezed out.

Epidemical: common to a whol Nation. So the Plague, ſmall Pocks, Looſneſs, Sweating-ſickneſs, &c. when they are riſe all over a Nation, or Country at one time, they are called Epidemical diſeaſes.

Elixir Proprietatis. A Medicine invented by *Paracelſus*. Take of the beſt Aloes, Myrrh & Saffron, of each half an ounce: Pouder them and put them into a Glaſs. Then take Muſcadine made tart with Oyl of Sulphur, and pour upon the pouder, til the liquor ſtand four fingers above the pouder: Let them ſtand and digeſt in a warm place. Then pour off the Liquor and put on more, till all the Colour and vertue be drawn out from the pouder. At laſt ſtill the ſettlings with a gentle fire, and pour that which comes away, to the former Liquor, and let all ſtand and digeſt a Month in a warm place, cloſe ſtopped. The name ſignifies ſuch a Quinteſſence, as hath a ſpecial propriety of agreement with Mans nature, whereby it comforts and reſtores the ſame, in al kind of weakneſs.

Emollient: Medicines that ſoften.

Eroded: eaten a ſunder, eaten up.

Extraction: pulling out.

Exquiſite: perfect, in an high degree.

Eſcharoticks: ſee Cauſticks potential.

Embrochated: moiſtened, bedewed, bathed.

Eroſion: fretting, eating.

Eclegma. See Lambitive.

Extream parts: the Armes and Legs.

Emplaſtick diet: conſiſts of ſuch meats as are of a clammy ſubſtance, viz. Calves Head and Feet, Sheeps-trotters; all Feet of Beaſts, Tripes, Gellys, &c.

Excreta and *Retenta*: things voided out of the Body, things retained, or kept in.

Eradicate, pluck up by the Roots.

Exaſperated: pained, vexed, moleſted.

Equivocal: Signs of a Diſeaſe, are ſuch as are common to it and other Diſeaſes.

The Efficient Cauſe: is the working or making Cauſe, ſo a Tailor is the Efficient of a Garment; The Material Cauſe is the ſtuff, a thing is made of which the Efficient works upon; So the Cloth or Silk is the Material Cauſe of the Garment. The formal Cauſe, the ſhape that makes it a Coat, or Cloak, or Doublet; the Final Cauſe, is the end why it was made, viz. to hide nakedneſs, keep off Sun and Cold, and to adorn the body.

Emulgent Veins: which bring the Wheyiſh Excrement of the blood unto the Kidneyes where it becomes Urine, and is paſſed by the Ureters into the Piſs-bladder.

Evaporation: a ſteeming out of Vapors.

Egreſs: coming forth.

Evaporated: ſteemed away, as Water that ſpends away in boiling.

Evacuators: Medicines which empty out evil Humors, either by vomit, Purge, &c.

Exhalations: Vapors drawn up by the Sun, out of the Earth and Waters.

Eventilated: Fanned, purged as Corn by fanning. So Exerciſe is ſaid to eventilate or fan the Body; becauſe the motion opens the Pores, and drives many vapors out.

Eneorema: that which hangs like a cloud in Urines, eſpecially when the Diſeaſe is breaking away.

Emollient Decoction: a ſoftening moiſtening Decoction, made for Clyſters to ſoften and moiſten the hardened Excrements of the Guts.

An *Eſchara*, or *Eſchar*; is the Core that falls off from a part that hath had a Cauſtick applied thereto.

F

Fumigations: Perfumes and others things, burnt to qualifie the Air in a ſick mans chamber.

Fracture: breaking, as fracture of the Skul or Arm, &c.

Fomentation: when linnen Cloaths or Spunges are dipped in ſome Liquor, and applied to the diſeaſed part, and after renewed.

Functions of the Brain: the Abilities of the Brain, to Hear, See, Imagine, Underſtand, Remember, &c.

Frictions: Rubbings.

Furor Uterinus: Womb-Madneſs; when Women are mad by reaſon of a diſorder in the Womb. See the Chapter of that Diſeaſe.

A *Flux of Humors*: flowing of Humors.

Febris Catarrhalis: a Feaver cauſed by Rheum falling from the Head.

Fabrick: Frame, making up, compoſition.

Frontal Vein: Fore-head Vein.

Fortified: ſtrengthened.

Fiſtula: an hollow, deep, but narrow Ulcer that will not be cloſed up.

A pair of *Forceps*, a inal Inſtrument like a pair of Tongs, to draw forth any thing out of the Ears, &c.

Fluid: apt to run and flow like Water, and other Liquors.

Filtration: ſtraining through a brown Paper, or by means of a piece of cloth hanging out of one Veſſel into another.

Filter: to ſtrain as aforeſaid.

Fermentation: the working of Humors, as new drink works in the Barrel.

A *Feaver Symptomatical*, is a Feaver cauſed by ſome other foregoing Diſeaſe; in reſpect of which Diſeaſe, the Feaver is but a Symptom or Accident.

A *Flatulent* and *Pituitous Chollick*, is a Chollick cauſed by wind and flegm.

Formicans Pulſus; a weak, feeble, quick Pulſe, that feels under the Fingers like creeping Pilmires, from whence it is named.

Form: See Efficient Cauſe.

Fluxive: apt to flow and run like Water and other Liquors.

Friable: is crumbly, ſhort, like coſtly Cake-bread, Pie-cruſt, Puf-paſt, &c. So Fiſhes that have a ſhort crumbly ſubſtance, not clammy or ſlimy, ſuch as Soals, Smelts, Trours, are ſaid to be friable in compariſon of Eels, Carps, Tenches, &c.

G

Gum Animi: Indian Amber.

Gargariſms: that is, Medicines to Gargle in the Throat to waſh ſore Throats,

de Gutteta: a Pouder uſed in Falling-ſickneſs and Convulſion of Children by the French. It is deſcribed page 33. at the bottom.

Going about: by fits.

Generating: breeding, begetting.

Glandules: Kernels, ſuch as are about the Throat, aad are called the Almonds of the Ears, and ſuch as the Sweet-bread, &c.

Gate-Vein: Vena Porta. See *Veſlingus* Anatomy in Engliſh.

Generous Wine: ſtrong Wine, as rich Canary, Muskadine, &c.

Glutinations: Clammineſs like Gum about the corners of the Eyes.

Glutinators: things which glue and cloſe up broken Veins, &c.

Glutinous: clammy like Glue.

A *Gangrene*: is a corruption of a part tending to the utter deading thereof.

H

Hypochondria: the parts beneath the Ribs.

Hemiplegia: the Palſey poſſeſſing one ſide.

Hydreleum: a Bath and Oyntment; that is, of Water and Oyl beaten together.

Hippocras Bag: a Bag of Wool ſhaped like an Extinguiſher, through which Hippocras and divers Medicines are ſtrained.

Hereditary: from Father or Mother, to Son or Daughter.

Hydromel: Honey and Water, Mead, Methegelin.

Hemorrhoids: Veins of the Fundament, to which Leeches are applied.

Head-Herbs: Roſemary, Betony, Sage, Lavender, ſweet Marjoram, Hyſop, Balm, Cowſlips, Roſes, Violets, Lettice, Borrage, Buglos, &c.

Habit of Body: is the whol bulk and ſubſtance thereof.

Humidity: Moiſture.

Holy Fire: a red Inflamation, St. Anthonies fire, the Rote.

Hemorrhagies:

Hemorrhagies: breaking forth of Blood from any part of the Body.

Hyſterical Fits: Fits of the Mother, Womb-ſickneſs.

Hermetical Phyſitians, and *Hermets*: Chymiſts, ſuch as trade with Furnaces, Pots, and Glaſſes, to draw Spirits, Oyls, Waters; to make Salts, Quinteſſences, &c. called ſo from *Hermes Triſmegiſtus*, an old Egyptian Phyloſopher, who is thought to have been a Chymiſt.

Horrors: Shiverings.

I

INfuſe: that is, ſteep.

Inflamation: great Heat.

Indication: is an hinting to the Phyſitian what he is to do. So extream heat is ſaid to give indication of cooling; extream fulneſs of blood gives indication of blood-letting; want of a womans Courſes gives indication of blood-letting, &c.

Jugular Veins: that is, the Throat Veins. See *Veſlingus* Anatomy in Engliſh.

Inſenſible Paſſages: which cannot be ſeen, nor felt, by reaſon of their ſmalneſs.

Influence: flowing in.

Inherent: ſticking faſt within, ſeated and abiding within.

Inordinate: diſorderly, unnatural, and unfitting.

Internal and External Sences: The Internal are, Common Sence, Imagination, Underſtanding, Memory: The External are, Seeing, Hearing, Smelling, Taſting, Feeling.

Intercepted: ſtopped in the middle way.

Internally and Externally: inwardly and outwardly.

Juleps: pleaſant Drinks made of diſtilled Waters, or the broth of Barley, and other convenient things, and ſweetened with Syrups or Sugar; given chiefly in Feavers to cool and quench Thirſt.

Infuſion: a ſtrained Liquor wherein Medicaments have been ſteeped, either hot or cold.

Incraſſate: thicken.

Incraſſating: thickening.

Inſenſible: not to be perceived by the outward Sences, of Seeing, Hearing, Smelling, &c.

Illumination: enlightening.

Influx: flowing into.

Inverſion; turning the inſide out.

Intermiſſion: ceaſing, leaving off.

Inveterate: old, of long continuance, rooted.

Inclination: that is, by holding the veſſel on the one ſide, and ſo powring the cleer from the ſetlings: this is called to clarifie by Inclination, in oppoſition to clarifying with the white of an Eg by boyling, or any other way.

The *Iris*: a party-color'd round Circle in the ſight of the Eye like a Rainbow, from whence it hath its name.

Incarnate: to breed fleſh.

Irritation: provocation, ſtirring up.

Involuntary Tears: which are not ſhed by force of ſorrow working upon the mind, but by force of a bodily Diſeaſe.

The day of *Indication*: is that day in a Feaver on which may be collected what will beride upon the following Critical day. So the fourth day doth hint what is like to happen on the ſeventh; and the eleventh hints what is like to happen upon the fourteenth; and the ſeventeenth what will happen upon the twenty one, and the twenty four what will beride upon the twenty eight. Therefore the fourth, eleventh, ſeventeenth, twenty four, are called daies of Indication, or telling and declaring.

Judged, ſee *Day of Judgment*.

Infirm: weak.

Inſipid: Taſtleſs.

Inciſing Medicaments; are ſuch as cut and divide tough flegm, and other clammy humors, whereby they become fit for expulſion; ſuch is Oxymel, &c.

Inteſtines: the Guts.

Intenſion and Remiſſion: Increaſe and decreaſe, growing ſtronger or weaker.

Injection: is a Medicinal Liquor caſt with a fitting Inſtrument into the Womb, Bladder, or Fundament, when there is ſoreneſs of hemorroids, &c.

Inſerted: faſtened or planted into.

Inſpiſſate Juyce: is Juyce of ſome Herb boyled till it be thick, as Honey.

Illuſtrated: made cleer and manifeſt.

Invaſions of the Gout: fits of the Gout, or of Agues, may be called Invaſions of the ſaid Diſeaſes.

Intenſe: vehement, ſtrong.

Indicate: declare, point out.

Impatted: wedged in, thruſt far in.

Irrigations: moiſtenings, ſprinklings, waterings.

Intervention: coming between, happening together with.

Intermediate: coming between.

Intermitting Pulſe: is that which holds up a while, and then beats again; and then ſtops, and then beats again, which is a ſign of great weakneſs.

Incoctibility: an unaptneſs to be concocted or digeſted, or an impoſſibility thereof.

L

LEnitive: a gentle, refreſhing, cordial Medicine.

Ligatures: or ſtrings wherewith the Joynts of Bones and the Griſtles are compact and bound together.

Lozenges: the ſame with Tablets, being the

form of a Medicine made up.

Luxation: is when one Joynt is looſned from another.

Liniment: Oyntment.

Ligatures: bindings of ſeveral parts to draw the blood and Humors from the part diſeaſed, to the parts bound, by reaſon of the pain of binding which muſt be very hard and ſtraight.

Looſneß of Continuitie: ſeparating and dividing of things cloſed and united. So a wound is termed a looſening of Continuitie; becauſe, it ſeparates theſe parts of the skin and fleſh which were formerly united together.

Laxe: looſe, ſlack, as an unbended Bowſtring.

Livid: black and blew.

A *Lambative* or *Lohoch*: is a medicine to be lickt from a Liquoris ſtick, and to be ſwallowed ſoftly down, being chiefly ordained for the Lungs.

Iron-water: Water wherein Iron hath been quenched. Smiths forge-water.

Laxative: which makes the belly looſe.

Livid: black and blew, Lead-coloured.

M

Meninges: or films of the Brain, coats that cover the brain.

Maſticatories: that is Medicines to be chewed to bring away Rheum.

Meſeraick Veins: little Veins that are thought to carry chyle from the ſtomach to the Liver. See *Veſlingus Anat.* in Engliſh.

Malignity: venemous or poyſonful quality of certain humors and Diſeaſes which make them very dangerous, and for the moſt part deadly.

Matter, or *Quittor*: a ſhotty kind of filth which comes out of Impoſthumes when they break, and out of Ulcers when they are in a good way of cure.

Magiſtral Syrup: is ſuch an one as is invented by a Phyſitian for his Patient, in oppoſition to thoſe Syrups commonly kept in ſhops.

Matrix: Womb.

Membrana: skin or coat of the Arteries, Veins, &c. Membranes, skins or coats.

Mortification: a deading of any part of the body.

Malign: venemous, poyſonful. See Malignity.

Mother: the Womb in Women is ſo called.

Mitigation: abatement, leſſening, growing mild.

The Medium: is that through which we ſee, as principally the Air, which we look thorough upon objects; alſo the Water and Glais, Horn, or what ever is cleer, and may be ſeen thorough, may be termed a medium of ſight.

Mammilarie paſſages, or *productions*: certain little knobby bunchings out of the Nerves, which ſerve for ſmelling, reſembling Teates, called therefore Teat-like productions. See the Engliſh *Anatomy*.

Malax: ſoften. To Malax a lump of Pil-ſtuff, is to ſoften it, that it may work up into Pills the better.

Mercurial Purges: Purges made of Quickſilver, Chymically prepared, ſuch as *Mercurius dulcis*, ſome kind of Precipitate, *Mercurius vitæ*, &c.

Macerate: ſteep.

Meſenterie: the skin which knits the Guts together, and runs all along among them, emboſſed with Fat. See *Veſlingus* his *Anatomy* in Engliſh.

Membranous: of the Nature of Skin or Parchment.

Morbifical, or *Morbifick matter*; is that which is the principal cauſe of any Diſeaſe.

Minorative purgation: is gentle purgation, ſuch as takes away only a part of the matter of a diſeaſe: it is oppoſed to Eradicative purgation, which is ſtrong, and pulls the whol matter offending up by the Roots; as it were.

N

Nutrition: Nouriſhment.

Narcotick medicines: ſtupefying medicines: that dull the ſence of feeling, and cauſe profound ſleep.

Nitre: ſalt Peter, as ſome hold; but *Matthiolus* conceives the true Nitre is rarely found in theſe daies.

Natural functions: actions of the ſtomach, Liver, Spleen, Gal, Kidneyes, in concocting the meat, making blood, and ſeparating and expelling the excrements.

Nauſeouſneß: ſickneſs of the ſtomach enclining to vomit.

Nidorous: ſmelling of burnt fat, or ſcortched Roaſt-meat, or fryed Oyl.

Noxious: hurtful.

Nauſioſis of the Veins: is when the Veins are ſick of bad blood, and doth as it were ſpew it out into the habit of the body: from whence comes ſcurvy-ſpots, morphew, ſcabs, &c.

Neotericks: are late writers in phyſick, or any other Art, ſo called in oppoſition to the Antient Authors.

O

Organs: peculiar parts of the body fitted for ſome notable ſervice of the Spirit, ſuch as the Eye to ſee, the Ear to hear, the Noſe to ſmell, the Skin to feel, the Lungs to breath, Stomach to digeſt.

Os Sacrum: the great bone whereon the Ridg bone reſteth.

Opiſthotones: a Convulſion ſo named, when the body

Body is drawn backward.

Oval forme: that is the shape of an Eg.

Original: beginning, foundation.

Oedema: a swelling caused by flegm, which is soft and whiteish, and has little heat or pain with it.

Obstruction stopping.

Opiate signifies an Electuary: properly it is put for Venice Treacle, Mithridate, Diascordium, &c. which have Opium in them: from whence the name is derived. But secondarily, it signifies any Electuary or Antidote made up in such a body as Treacle, &c. though it have no Opiate in it.

Orifice: the whol which is made by a Surgeon when he lets blood. Also the mouth or passage into the Womb, or Stomach, &c.

Opticks: a Part of Natural Philosophy (though falsly reckoned for a branch of the Mathematicks) opening all the Mysteries of sight, and the reasons of the Deceptions, or mistakes thereof, and teaching to make augmenting Glasses, mutiplying Glasses, Perspective Glasses, burning Glasses, &c.

Oblique: slantling, athwart, crooked,

Obnoxious: liable, or subject unto.

Ophthalmy: an Inflamation of the Eyes, causing soreness and redness.

Os cribosum: the bony Sieve. A bone full of small holes, like a Sieve or colendar, placed above the Nose, through which Snot and Snivil, is drained from the brain.

Occult: hidden, unknown.

Oxycrate: Vineger and water mingled together.

Organical Disease. See *similar diseases*.

The *Systole*, or *diastole* of the Pulse: are the double motion thereof. For when the Artery is extended by the blood, Issuing out of the Heart, and smites the Finger of him that feels the Pulse; that motion is called Diastole, or a widening and stretching of the Arterie: but when the Arterie falls, contracts it self, and sinks from under a Mans Finger, that motion is called *Systole*, a contraction.

Oxyrrhodine: Vinegar of Roses, and Medicines made principally thereof.

P

Prognosis: the foreknowledg of Diseases.

Plethora; a too great fulness of good blood in the body.

Paralysis: the Palsie.

Paraplegia: Parisis, Palsie.

Peripneumonia: an Inflamation of the Lungs, or Lights.

Pericranium: the skins which compasseth the Scul.

A Pugil of Herbs viz. as much as is taken up between the Thumb and the three fore-Fingers.

Physical Regiment; is the right ordering of a Patient, having taken a Purge, or other strong Medicament. As to keep the Patient warm, to give posset or thin-broath after every stool; not suffer him to read, or her to Sow or hold down the head, or to be sad, or to sleep; especially after a vomit, &c.

Phrensie: rageing, Madness joyned with a Feaver. See Chap. 11. Book 1.

Prognostick: foretelling. A Prognostick sign is a sign foretelling what will become of the Disease, and patient.

Privation: loss.

Plethorick: full of blood, too full of blood.

Pores: little holes in the skin, through which vapors and sweat come out. Sometimes they are visible upon the Arm or Leg, being swelled and closed with cold; resembling a Goose skin for roughness.

Preternaturally: otherwise then the Course of Nature requires.

Perspicuous: cleer, that may be seen through, as Glass, fair-water, &c.

Peritonæum: the inner coat of the Belly, which covers the Guts: See the English *Anatomy*.

Poplar Oyntment: in the shops called *Populeon*. See the English *Dispensatory*.

Potential coldness: that is coldness in operation, though not to the feeling. So a draught of Whey in which cooling Herbs hath been boiled, being drunk down warm from the fire; is said to be actually hot, because it is so to the hand and palate; but Potentially cold, because it afterward cools the stomach, Liver, &c.

Pulsation: beating of the Arteries, in any part of the Body.

Precede: go before.

Preparing of humors: is the qualifying of them, so as that they may be fit for expression which preparation consists in separating them from the mals of good blood: in making them thick, if they be too thin and sharp: in cutting them and making them thin, if they be too thick and clammy.

Phlebotomy: blood-letting.

Preternatural: beside the intent or custom of Nature, vide Preternaturally.

Propriety: a pain by propriety, is when the cause of the Pain is in the part pained, so when the Head-ach comes from the Humors in the Head, it is called a pain by propriety; when it comes from Humors in the Stomach, or any other part that sends up vapors; it is called Head-ach by Content. And the like may be said of other Symptoms or accidents.

A *Pyramis*: is a Geometrical figure, broad and angular at the bottom, and growing less and less towards the top, till it come to a point. The Sepulchers of the Egyptian Kings were made in this form, and therefore called *Pyramides*. Naturalists do make use of this Figure to shew

how

how the Eye receives the representations of visible objects.

Pupil of the Eye: is the midlemost round circle, which we commonly call, *the sight of the Eye*, and which in Cats, is seen to widen and contract it self.

Pulse: Beans, Pease, Hastivers, French-pease, &c. called so, because they are gathered by pulling, and not by mowing down, as corn.

Probable: likely, possible.

Profound: deep.

Producing: breeding, causing.

Peccant Humor: the Humor offending, causing the Disease.

A *Phlegmon*: is an Inflamation or swelling caused by blood. If no other Humor be adjoyned, it is a true Phlegmon. If choller be joyned, it is called a *Phlegmon erisipelous*; if flegm, *ædematous*; if melancholly, *Scirrhous*.

Paroxysme: the fit of an Ague, of the Mother, or any Disease that comes by fits.

Perforated: bored through.

Putrid: rotten, filthy, stinking.

Pustula: a pustle, push, or whelk.

Ponderous: weighty.

Peristaltick motion of the Guts: is whereby the Guts do contract and purse themselves together above the excrements, and so squeez them out.

Pomum curtipendulum: an Apple so called.

Pubes: the hairy Hillock above the privities in men and women. The word signifies ripeness, because that hair being grown out, testifies the parties to be fit to engender.

Perineum: the space which runs like a ridge between the privities and fundament in men and women.

Præposterous: unnaturall, undue, unfitting.

Perturbation of the Eyes: a troubled, drousie, frighted look of the Eyes.

Procatarctick Causes: primarie, first working and occasional Causes. So in a Feaver, the next immediate Cause, is putrefied choller &c. but the first working & occasional causes, were the patients taking cold, by swimming in the cold water; whereby the pores became shut, and the Matter of the Disease was retained in the Body. So the Procatarctick Cause of worms in Children, is their greedy eating of Fruit; but the immediate Cause, is putrid humors occasioned by those Fruits; out of which humors the worms breed.

Precipitated: thrown head-long, forcibly cast down.

Palliative Cure: is when a Disease is not taken away, but only mitigated and made more mild, so that the patient may have as much ease as possible. Or if the Disease deform the Body, a palliative Cure, does hide as much as may be that deformity. So an Eye being thrust out, cannot be properly cured; but it may admit of a palliative cure, in asswaging the pain, and other Symptoms, and by putting into the place thereof a Glass or other Artificial Eye.

Potent: powerful.

Perspirable: the Body is said to be Perspirable, when the invisible Pores or holes in the skin, are kept open, so that the vapors arising from evil Humors may freely breath out. See Transpiration.

Pernicious; deadly, causing death, & destruction.

Protraction: is a lengthening out of a Disease and making the same to last long.

Pharmaceutick Remedies: whatsoever kind of Medicines are made by the Apothecary.

Præposterous: disorderly, undue, unfit, the Cart before the Horse.

Quitter.: See Matter.

R

Repletion. over much fulness of blood, or Humors.

Resolution, weakening or dissolving the strength of a part, as when it is palsyed &c.

Revulsion: drawing back of blood or Humors from the part affected.

Repelling: Medicines which draw back the humor from the part affected, Repellers, the same.

Relaxing: Slacking as the string of a bow when the bow is unbent, is said to be relaxed or slackned.

To *Revel*: to draw back Humors from the part diseased.

Remitted: lessened, abated.

Restriction: exception, limitation.

Ruption: breaking, or tearing asunder.

Reliques remainders of an Humor after Solemn purging, bleeding &c.

Retraction: drawing back.

Radical moisture: the fundamental juice of the Fundamental juice of the body, which nourishes and preserves the natural heat, as the oile in a lampe preserves and feeds the flame.

Revelled: drawen back, Revulsives, remedies to draw back the Humor from the Diseased part.

Repelled: driven away.

Retentive: faculty, the power in our body and its parts to hold fast its nutriment and what ever is agreeable thereunto.

Rough Arterie or *Aspera Arteria*, is the wind-pipe or Weasand, which is rough on the out side with circles and gristly rings.

Reduced brought back again.

Refractions: breaking of the Representations of visible objects. a terme used by the Writers of Opticks, or the Art of seeing.

Recruited: repaired, restored, made up, a military

litary term.

Resolving medicaments : are such as loosen and scatter evil humors which are gathered and combined together in some diseased part of the Body.

Repercussives : medicines which drive back the Humors from a diseased part.

Relaxation : loosenes.

Refrigerating : cooling.

Respiration : breathing.

Reflux : flowing back again.

Recipient part, is that part which receives the Humor offending.

S

Suppository : that which is put into the Fundament to cause solubleness.

Sudorofick : that is causing sweat.

Subeth a deep sleep.

Scarefication : is a cutting of the Skin that it may bleed into a Cupping-glass.

Superficies : the outside of any thing.

Stuphes : Stoves or Hot-Houses to sweat in.

Spiritus acousticos : is that portion of the spirit which in the Eares discerneth sounds.

Strangulation : choaking.

Sternon : the breast bone, See Vesslingus Anatomie in English.

Sphinchter : is the Muscle of the Arse.

Stupor : dulness.

Spasmus : cramp or Convulsion.

A Scruple is twenty graines or the weight of so many barley cornes.

Sternutatories : medicines to snuf into the nose to provoke sneezing.

Stupefying : taking away the sence of feeling ; benumming.

Stupid : that is benummed, besotted, hath no feelling or sense, blockish.

Symptomes : evil dispositions of the Body which depend upon and accompany a disease ; as Heat, thirst, Headach, want of sleep, stomach-sickness, faintings, swoonings &c.

Sympathy : fellow-feeling, a disease is said to come by sympathy, when the principal cause is in some other part, with which the part offended hath a fellow-feeling. So paines of the Head caused by evil Humors in the stomach, are said to come by sympathy. And sickness of stomach caused by stone in the kidneys is a disease of the stomach by sympathy.

Nerves Sinnewes, certaine strings carrying the faculties of Motion and sence from the Braine into all parts of the Body see *Vesslingus* Anatomie in English.

Scorbut : the Scurvie.

Steeled in which steel hath bin quenched or infused.

Scorbutick persons, that are troubled with the scurvy.

Spinal : of or belonging to the Back-bone.

Serous matter ; wheyish, like whey.

Sutures : seams of the Head, where the parts of the skull are joined together.

Species of the Objects : representations of things seen. For the visible things themselves do not enter into the eyes, but certain images, and figures of them.

Scituation place or posture.

Species retained in the Mind : the shapes and patterns of things seen or heard &c.

State of the disease : is when it is at the highest and does neither encrease nor decrease.

Saphena : A vein of the foot which is usually opened in woemen ; see Vesslingus Anatomie in English.

Sal-prunelle : salt-peter purified with Brimstone Clean white salt Peter is as good for use, only the Chymists love to mend *Magnificat* and many times take great pains to little purpose.

Sphacelus : deadnes of any part, when the flesh and bone are dead ; sphacelation signifies the same.

Superfluous : over much, unnecessary &c.

Speculum Oris : an Instrument wherewith the Mouth and throat is kept open, that the parts diseased may be seen and dealt with.

Scirrhus : an hard swelling without pain.

Suppurated : an impostume is said to be suppurated, when it gathers matter & enclines to break.

Suppuration : a collection of matter in an impostume.

Suppression : stoppage.

Solution of continuitie : a dividing of such parts as were naturally united ; so every wound and Sore, is called a solution of continuity &c.

Stupes : tow or Cotton-wooll.

Sealed Earth : Terra Sigillata, it is a kind of Medicinal Earth brought out of the straights & sealed in little flatt cakes, to avoid Imposture the Seal is wont to be the great Turks badg viz. the half moon.

Sparadrap : a cerecloath.

Sediment : the settlings and dregs of Urine or any other liquor.

Suppression : stoppage.

Sincere excrements ; are such as are pure and unmixed, as choller alone &c.

Sudorofick : medicines causing Swear.

Suffocating, choaking, Suffocation a choaking.

Z

Zacutus Lusitanus: a famous Physitian; A Jew that practiced at *Amsterdam* in *Holland*. He has wrote divers excellent Treatises of Physick, suitable to the Principles of *Hippocrates* and *Galen*.

FINIS.

The Vertues, Uſe, and variety of Operations of the True and Phyloſophical AURUM POTABILE, *Attained by the Studies of Doctor* Freeman, *and Dr.* Culpeper, *and left with his Widdow, and adminiſtred by a Phyſitian in her Houſe neer* London, *on the Eaſt ſide of Spittle-fields, next door to the red Lyon.*

The Vertues are as follow:

IT Cures all Agues, whether Quotidian, Tertian, or Quartan: as alſo it cured divers people of that moſt horrid putrid Feaver, which ſo violently ſeized on mens Bodies (both before and after *Michaelmas* 1653.) to the great admiration of many; and when the parties Diſeaſed have ben both ſenceleſs and ſpeechleſs, for that neither that, nor any other Medicine or *Panacæa*, though never ſo gentle, could ſafely be adminiſtred into the Body, it hath beyond all hopes, by external application on the ſtomack revived them. It cures the Gout of all ſorts perfectly being adminiſtred as the Phyſitian ſhal adviſe. It cauſeth Women ſubject to Abortion, or Miſcarriage, to goe their time: and yet being given when the time comes it cauſeth a ſpeedy and eaſie delivery. It is an infallible cure for the French Pox and doth it with ſuch eaſe, ſpeed, and Secretneſs, that none of the neareſt relation ſhal take notice thereof. It cures the Green-ſickneſs and all ſorts of Jaundice, It provokes the Terms. It is good for Aches and all afflictions coming of cold. It helps the Rickets. But to what purpoſe do I nominate diſeaſes in particular, when it is an univerſall Remedy for all diſeaſes being adminiſtred as the Phyſitian ſhal adviſe? For its chief aim is exhilarating the vital ſpirits and heart. It both binds and ſtops Fluxes, yet Purges; it both Vomits, and ſtays Vomiting; it cauſes Sweat, yet cures preternatural Sweatings, and performs all its operations as Nature it ſelf would, have it, becauſe it only fortifies her in her Centre.

To conclude, *It* is an Univerſal Fortification for all Complexions and ages, againſt all ſorts and degrees of Peſtilential and contagious Infection, both preventing before their poſſeſſion, and extirpating of them after it.

READer, By reaſon of the miſtakes in the printing of this Book in Latin, there are two words miſ-tranſlated: And by reaſon of the foulneſs of the Engliſh Copy, there are ſome other miſtakes in printing. All which are thus to be amended.
